Overview

The sample set for LMC-MRC Fire Line Leak, SDG 240-106686-1, consisted of nine (9) soil environmental samples and one (1) trip blank. All samples were analyzed for volatile organic compounds (VOCs). No field duplicate samples were included in this sample delivery group (SDG).

The samples were collected by Tetra Tech, Inc. on January 8, 2019 and analyzed by Test America – Canton. All analyses were conducted in accordance with SW-846 methods 8260B and 8260C analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method/trip blank results, surrogate spike recoveries, laboratory control sample results, matrix spike / matrix spike duplicate results, internal standard areas, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The laboratory case narrative indicates that sample TB-010819 was preserved with hydrochloric acid. The VOC analyte 2-chloroethyl vinyl ether is an acid-labile compound that degrades in an acidic medium. The non-detected result for 2-chloroethyl vinyl ether was rejected (UR) in sample TB-010819.

Minor

- The VOC initial calibration verification performed on 11/30/18 @ 10:37 on instrument A3UX8 had percent differences (%Ds) that were greater than the 20% quality control limit for 1,2,4-trichlorobenzene and hexachlorobutadiene. All soil samples were affected. The non-detected results reported for the aforementioned compounds in the affected samples were qualified as estimated (UJ).

- The VOC continuing calibration verifications performed on 01/10/19 @ 3:21 and 3:44 on instrument A3UX8 had %Ds that were greater than the 20% quality control limit for ethyl tert-butyl ether, tert-butyl alcohol, 2-butanone, 1,1,2,2-tetrachloroethane and 1,2,3-trichloropropane. All soil samples were affected. The non-detected results reported for the aforementioned compounds in the

affected samples were qualified as estimated (UJ).

- The VOC initial calibration verification performed on 10/02/18 @ 18:21 on instrument A3UX10 had a %D that was greater than the 20% quality control limit for tert-butyl alcohol. Sample TB-010819 was affected. The non-detected result reported for tert-butyl alcohol in the affected sample was qualified as estimated (UJ).

- The VOC initial calibration verification performed on 8/07/18 @ 12:33 on instrument A3UX11 had %Ds that were greater than the 20% quality control limit for acetone and 2-butanone. Sample TB-010819 was affected. The non-detected results reported for the aforementioned compounds in the affected sample were qualified as estimated (UJ).

- The VOC continuing calibration verifications performed on 01/21/19 @ 10:02 and 10:47 on instrument A3UX11 had %Ds that were greater than the 20% quality control limit for dichlorodifluoromethane, chloroethane, methylene chloride, vinyl acetate, 2-butanone, 1,1,1-trichloroethane, carbon tetrachloride, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, tetrachloroethene, 2-hexanone, 1,1,2,2-tetrachloroethane, sec-butyl benzene, 4-isopropyl toluene, n-butyl benzene, naphthalene, ethyl tert-butyl ether, tert-amyl methyl ether and 1,2,3-trimethyl benzene. Sample TB-010819 was affected. The non-detected results reported for the aforementioned compounds, with the exception of 2-chloroethyl vinyl ether, in the affected sample were qualified as estimated (UJ). The nondetected result reported for 2-chloroethyl vinyl ether was rejected due to acid preservation.

Notes

Non-detected results were reported to the MDL.

Methylene chloride (2.86 ug/L) was detected in method blank 240-364762 affecting sample TB-010819. No validation actions were required as the sample result was nondetected.

Executive Summary

Laboratory Performance: Several initial calibration verification and continuing calibration %Ds were noncompliant for the VOC fraction.

Other Factors Affecting Data Quality: The non-detected result for 2-chloroethyl vinyl ether was rejected due to preservation noncompliance for sample TB-010819.

The data for these analyses were reviewed with reference to the USEPA “National Functional Guidelines for Organic Superfund Methods Data Review” (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-106686-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 1/9/2019 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.5º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples SB-MW154-9-10 (240-106686-2), SB-MW154-10-12 (240-106686-3), SB-MW154-12-13 (240-106686-4), SB-MW155-8-9 (240-106686-5), SB-MW155-9-11 (240-106686-6), SB-MW155-11-12 (240-106686-7), SB-MW158-9-10 (240-106686-8), SB-MW158-10-11 (240-106686-9) and SB-MW158-11-12 (240-106686-10) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared and analyzed on 01/10/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Sample TB-010819 (240-106686-1) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The sample was analyzed on 01/18/2019 and 01/21/2019.

Methylene Chloride was detected in method blank MB 240-364762/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 240-364651.

The continuing calibration verification (CCV) for analytical batch 364762 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-010819 (240-106686-1)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following sample was received preserved with hydrochloric acid:TB-010819 (240-106686-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

The samples were analyzed on 01/10/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

OVERVIEW

The sample set for MRC Block E/F Mass Discharge, SDG 240-107706-1, consists of three (3) water environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOC), polychlorinated biphenyl homologs (PCBH), metals, and miscellaneous parameters (alkalinity, bromide, hardness as CaCO3, nitrite/nitrate-N, salinity, sulfate, and total dissolved solids (TDS). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on February 5, 2019 and analyzed by Test America. Analyses were conducted in accordance with EPA SW-846 Methods 8260C (VOC), 6010C/6020A (metals), and 9056A (anions) as well as EPA Method 680 (PCBH), MCAWW Method 300.0 (bromide), and Standard Methods 2320B-2011 (alkalinity), 2340C-2011 (hardness), 4500 NO3 F (nitrite/nitrate-N), 2520B (salinity), and 2540C-2011 (TDS) analytical and reporting protocols. Iron and manganese were analyzed by both Methods 6010C and 6020A - remaining metals were analyzed by Method 6020A only.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, laboratory control sample/laboratory control sample results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, laboratory control sample results, interference check sample results, compound identification, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative report states that 2-chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample, and all VOC samples were preserved in hydrochloric acid. Non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in all samples.

MINOR PROBLEMS

- The VOC continuing calibration verification (CCV) performed on 02/08/19 at 12:55 on instrument A3UX15 had percent differences (%Ds) that were greater than the 20% quality control limit for vinyl acetate, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, bromoform, 1,1,2,2-tetratechloroethane, 1,2-dibromo-3-chloropropane, and naphthalene. All samples were affected. Non-detected results for the aforementioned analytes were qualified as estimated (UJ).

- The VOC CCV performed on 02/08/19 at 13:39 on instrument A3UX15 had a %D for tert-amyl methyl ether that was greater than the 20% quality control limit. All samples were affected. Non-detected results for tert-amyl methyl ether were qualified as estimated (UJ).

- The PCBH CCV performed on 02/21/19 at 16:43 on instrument CMSX had a %D that was greater than the 20% quality control limit for decachlorobiphenyl (PCB-209). Sample MRC-MW159A-090519 was affected. The non-detected results for decachlorobiphenyl and nonachlorobiphenyls were qualified as estimated (UJ) in the affected sample.

- Detected results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Non-detected results were reported to the MDL.

VOC results in sample MRC-MW157A-020519 were analyzed at a dilution factor of 125.

The following metal was detected in the method blanks at the following maximum concentration:

Analyte	Maximum Concentration	< or > RL
Manganese	3.66 ug/L(1)	< RL

1 - Detected in method blank associated with preparation batch 240-367176 and the 6020A analysis affecting all samples.

No qualification was necessary because all associated manganese results were greater than the RL.

Nitrate/nitrite as N was detected in the calibration blanks the following maximum concentration:

Analyte	Maximum Concentration	< or > RL
Nitrate/nitrite-N	0.0463 mg/L(1)	< RL

1 - Detected in calibration blank analyzed on 02/17/19 at 13:13 affecting all samples.

No qualification was necessary because all associated nitrate/nitrite-N results were greater than the RL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some non-detected VOC and PCBH results were qualified due to calibration noncompliance.

Other Factors Affecting Data Quality: Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA “National Functional Guidelines for Organic Superfund Methods Data Review” (January 2017) and the “National Functional Guidelines for Inorganic Superfund Methods Data Review” (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-107706-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The PCB by 680 and NO2/NO3 analysis were performed at TestAmerica Nashville Laboratory. The Specific Conductance and Salinity analysis were performed at TestAmerica Pittsburgh Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/6/2019 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-020519 (240-107706-1), MRC-MW155A-020519 (240-107706-2), MRC-MW159A-020519 (240-107706-3) and MRC-MW157A-020519 (240-107706-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/08/2019.

Sample MRC-MW157A-020519 (240-107706-4)[125X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 367370 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-020519 (240-107706-1), MRC-MW155A-020519 (240-107706-2), MRC-MW159A-020519 (240-107706-3) and MRC-MW157A-020519 (240-107706-4)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric acid preserved vials: TB-020519 (240-107706-1), MRC-MW155A-020519 (240-107706-2), MRC-MW159A-020519 (240-107706-3) and MRC-MW157A-020519 (240-107706-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples MRC-MW155A-020519 (240-107706-2), MRC-MW159A-020519 (240-107706-3) and MRC-MW157A-020519 (240-107706-4) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 02/19/2019 and 02/26/2019 and analyzed on 02/21/2019, 02/25/2019 and 02/27/2019.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batches 680-558728 and 680-559624.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte . It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D. (CCV 680-559059/21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICP)
Samples MRC-MW155A-020519 (240-107706-2), MRC-MW159A-020519 (240-107706-3) and MRC-MW157A-020519 (240-107706-4) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 02/07/2019 and analyzed on 02/08/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICPMS)

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

OVERVIEW

The sample set for MRC Block E/F Mass Discharge, SDG 240-107850-1, consists of four (4) water environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOC), polychlorinated biphenyl homologs (PCBH), metals, and miscellaneous parameters (alkalinity, bromide, hardness as CaCO3, nitrite/nitrate-N, salinity, sulfate, and total dissolved solids [TDS]). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on February 7, 2019 and analyzed by Test America. Analyses were conducted in accordance with EPA SW-846 Methods 8260C (VOC), 6010C/6020A (metals), and 9056A (anions) as well as EPA Method 680 (PCBH), MCAWW Method 300.0 (bromide), and Standard Methods 2320B-2011 (alkalinity), 2340C-2011 (hardness), 4500 NO3 F (nitrite/nitrate-N), 2520B (salinity), and 2540C-2011 (TDS) analytical and reporting protocols. Iron and manganese were analyzed by both Methods 6010C and 6020A - remaining metals were analyzed by Method 6020A only.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, interference check sample results, compound identification, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative report states that 2-chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample, and all VOC samples were preserved in hydrochloric acid. Non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in all samples.

MINOR PROBLEMS

- The VOC continuing calibration verification (CCV) performed on 02/11/19 at 10:51 on instrument A3UX15 had percent differences (%Ds) that were greater than the 20% quality control limit for carbon disulfide, tertiary-butyl alcohol, vinyl acetate, 2-chloroethyl vinyl ether, cis-1,3-dichloropropene, 4-

methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, bromoform, 1,1,2,2-tetrachloroethane, and 1,2-dibromo-3-chloropropane. Sample TB-020719 was affected. Detected and non-detected results for the aforementioned analytes were qualified as estimated (J and UJ, respectively) in sample TB-020719.

- The VOC CCV performed on 02/11/19 at 11:35 on instrument A3UX15 had a %D for tert-amyl methyl ether that was greater than the 20% quality control limit. Sample TB-020719 was affected. The non-detected result for tert-amyl methyl ether was qualified as estimated (UJ) in the affected sample.

- The VOC CCV performed on 02/13/19 at 11:48 on instrument A3UX15 had %Ds that were greater than the 20% quality control limit for carbon disulfide, methylene chloride, 2-chloroethyl vinyl ether, trans-1,3-dichloropropene, bromoform, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene. Samples MRC-MW144B-020719 and MRC-MW147B-020719 were affected. Non-detected results for the aforementioned analytes were qualified as estimated (UJ) in the affected samples.

- The VOC CCV performed on 02/13/19 at 12:32 on instrument A3UX15 had %Ds that were greater than the 20% quality control limit for ethyl tert-butyl ether and tert-amyl methyl ether. Samples MRC-MW144B-020719 and MRC-MW147B-020719 were affected. Non-detected results for the aforementioned analytes were qualified as non-detected (UJ) in the affected samples.

- The VOC CCV performed on 02/14/19 at 11:10 on instrument A3UX15 had %Ds that were greater than the 20% quality control limit for chloromethane, tertiary-butyl alcohol, vinyl acetate, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, bromoform, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene. Samples MRC-MW156A-020719 and MRC-MW146B-020719 were affected. Non-detected results for the aforementioned analytes were qualified as estimated (UJ) in the affected samples.

- The VOC CCV performed on 02/14/10 at 11:54 on instrument A3UX15 had %Ds that were greater than the 20% quality control limit for ethyl tert-butyl ether and tert-amyl methyl ether. Samples MRC-MW156A-020719 and MRC-MW146B-020719 were affected. Non-detected results for these analytes were qualified as estimated (UJ) in the affected samples.

- The VOC matrix spike (MS)/matrix spike duplicate (MSD) analysis performed on sample MRC-MW147B-020719 had MS and MSD percent recoveries (%Rs) that were less than laboratory quality control limits for tertiary-butyl alcohol. Additionally, relative percent differences (RPDs) were greater than the laboratory quality control limit for 1,1,2-trichlorotrifluoroethane, dichlorodifluoromethane, and trichlorofluoromethane. No qualification was necessary for 1,1,2-trichlorotrifluoroethane, dichlorodifluoromethane, and trichlorofluoromethane, as results for these analytes were non-detected in sample MRC-MW147B-020719. The non-detected result for tertiary-butyl alcohol in sample MRC-MW147B-020719 was qualified as estimated (UJ).

- The following VOCs were detected in the trip blank at the following maximum concentration:

Analyte	Maximum Concentration	< or > Reporting Limit (RL)
Chloromethane	0.21 ug/L(1)	< RL
Tertiary-butyl alcohol	1.9 ug/L(1)	< RL
Trichloroethene	0.17 ug/L(1)	< RL

1 - Detected in trip blank TB-020719 affecting all samples.

The detected trichloroethene result in sample MRC-MW156A-020719 was less than the RL and was qualified as non-detected (U) due to trip blank contamination.

- The following metal was detected in the method blanks at the following maximum concentration:

Analyte	Maximum Concentration	< or > RL
Copper	2.19 ug/L(1)	< RL

1 - Detected in method blank (> LOQ) associated with preparation batch 240-367484 affecting all samples.

Detected copper results in samples MRC-MW147B-020719 and MRC-MW156A-020719 were less than 10x the blank concentration and were qualified as non-detected (U) due to method blank contamination.

- Detected results reported below the RL but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Non-detected results were reported to the MDL.

VOC results in samples MRC-MW144B-020719 and MRC-MW147B-020719 were analyzed at a dilution factors of 142.86 and 200, respectively.

The PCBH CCV performed on 02/21/19 at 16:43 on instrument CMSX had a %D that was greater than the 20% quality control limit for decachlorobiphenyl. No qualification was necessary because no environmental samples from this SDG were associated with this CCV.

Nitrate/nitrite as N was detected in the calibration blanks the following maximum concentration:

Analyte	Maximum Concentration	< or > RL
Nitrate/nitrite-N	0.0463 mg/L(1)	< RL

1 - Detected in calibration blank analyzed on 02/17/19 at 13:13 affecting all samples.

No qualification was necessary because all associated nitrate/nitrite-N results were either non-detected or detected at a concentration greater than the RL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some non-detected VOC results were qualified due to calibration noncompliance. Several metals results were qualified due to method blank contamination.

Other Factors Affecting Data Quality: Results for 2-chloroethyl vinyl ether in water samples were rejected due to sample preservation noncompliance. One VOC result was qualified as non-detected due to trip blank contamination. One VOC result was qualified due to MS/MSD noncompliance. Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA “National Functional Guidelines for Organic Superfund Methods Data Review” (January 2017) and the “National Functional Guidelines for Inorganic Superfund Methods Data Review” (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-107850-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 680 Polychlorinated Biphenyls analysis was performed at the TestAmerica Savannah laboratory. The 4500NO3-F Nitrate Nitrite as N analysis was performed at the TestAmerica Nashville laboratory. The 9050A Specific Conductance and the 2520-B Salinity analyses were performed at the TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/8/2019 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.5º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-020719 (240-107850-1), MRC-MW156A-020719 (240-107850-2), MRC-MW144B-020719 (240-107850-3), MRC-MW146B-020719 (240-107850-4) and MRC-MW147B-020719 (240-107850-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/11/2019, 02/13/2019 and 02/14/2019.

Methylene Chloride was detected in method blank MB 240-367892/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples MRC-MW144B-020719 (240-107850-3)[142.86X] and MRC-MW147B-020719 (240-107850-5)[200X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 307509 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-020719 (240-107850-1)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric preserved vials: TB-020719 (240-107850-1), MRC-MW156A-020719 (240-107850-2), MRC-MW144B-020719 (240-107850-3), MRC-MW146B-020719 (240-107850-4) and MRC-MW147B-020719 (240-107850-5)

The continuing calibration verification (CCV) for analytical batch 367892 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. MRC-MW144B-020719 (240-107850-3) and MRC-MW147B-020719 (240-107850-5)

No MS/MSD in batch due to an incorrect dilution. Batch contained the following samples: MRC-MW156A-020719 (240-107850-2) and

MRC-MW146B-020719 (240-107850-4)

The continuing calibration verification (CCV) for analytical batch 368049 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. MRC-MW156A-020719 (240-107850-2) and MRC-MW146B-020719 (240-107850-4)

Overview

The sample set for MRC Block E/F Mass Discharge, SDG 240-107924-1, consisted of two (2) aqueous samples and one (1) aqueous trip blank sample. The two (2) aqueous sample and the one (1) aqueous trip blank sample were analyzed for volatile organic compounds (VOCs) as listed above. The two (2) aqueous samples were also analyzed for metals, and the miscellaneous analyses alkalinity, bromide, hardness as CaCO3, nitrite/nitrate-N, salinity, sulfate, and total suspended solids (TSS), as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on February 8, 2019 and analyzed by TestAmerica Laboratories Inc., North Canton, Nashville, and Pittsburgh, for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 6020A (ICP/MS) for metals, 6010C (ICP) for metals, 9056A for anions, Standard Method (SM) 2320B for total alkalinity, SM 2340C for total hardness, SM 2540C for total dissolved solids (TSS), SM 2520B for salinity (electrical conductivity), SM 4500 NO3 F for nitrate-N, and MCAWW Method 300.0 for anions, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, ICP interference results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The laboratory narrative indicated that the samples were acid preserved for the VOC analysis. The VOC analyte 2-chlororethyl vinyl ether is known to rapidly deteriorate under acidic conditions. All sample non-detected results for 2-chloroethyl vinyl ether were qualified rejected, (UR), due to the laboratory narrative indicating that the samples were acid preserved.

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control (QC) limit for carbon disulfide, tert-butyl alcohol, vinyl acetate, 2-chloroethyl vinyl ether, cis-1,3-dichloropropene, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, bromoform, 1,1,2,2-tetrachloroethane, and tert-amyl methyl ether for instrument A3UX15 on 02/11/19 @ 10:51 & @ 11:35 affecting VOC sample TB-020819. The sample TB-020819 had non-detected results for the aforementioned analytes which were qualified estimated, (UJ), with the exception of the 2-chloroethyl vinyl ether results which were rejected for the sample preservation issue.

- The VOC CCV %Ds were greater than the 20% quality control (QC) limit for carbon disulfide, methylene chloride, 2-chloroethyl vinyl ether, trans-1,3-dichloropropene, bromoform, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, 1,2,3-trichlorobenzene, ethyl tert-butyl ether, and tert-amyl methyl ether for instrument A3UX15 on 02/13/19 @ 11:48 & @ 12:32 affecting VOC samples MRC-MW149B-020819 and MRC-MW150B-020819. The samples detected and non-detected results for the aforementioned analytes were qualified estimated, (J) and (UJ), respectively, with the exception of the 2-chloroethyl vinyl ether results which were rejected for the sample preservation issue.

Notes

Sample MRC-MW150B-020819 was diluted 2.5X for VOCs resulting in elevated levels reported for non-detected VOC analytes.

The VOC methylene chloride was detected in the method blank MB 240-367892/6. The associated SDG samples had non-detected results for methylene chloride and no action was taken.

Nitrate-Nitrite as N was detected in a continuing calibration blank, CCB @ 13:13 on 02/17/19, at 0.0463 mg/l <RL, affecting both SDG samples analyzed for nitrate-nitrite as N. No action was taken as the samples nitrate-nitrite as N concentrations were >RL.

Samples MRC-MW149B-020819 and MRC-MW150B-020819 were analyzed for iron and manganese using both Method 6010C and 6020A. No explanation was given in the laboratory narrative.

Non-detected sample analyte results were reported to the Method Detection Limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC results were qualified for CCV %D QC limit exceedances.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). The sample and trip blank sample non-detected VOC 2-chlororethyl vinyl ether results were rejected due to sample acidification as noted in the laboratory narrative.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (January 2017) and USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017).

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-107924-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 4500NO3-F Nitrate Nitrite as N analysis was performed at the TestAmerica Nashville laboratory. The 9050A Specific Conductance and the 2520B Salinity analyses were performed at the TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/9/2019 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.0º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-020819 (240-107924-1), MRC-MW149B-020819 (240-107924-2) and MRC-MW150B-020819 (240-107924-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/11/2019 and 02/13/2019.

Methylene Chloride was detected in method blank MB 240-367892/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

tert-Butyl alcohol failed the recovery criteria low for the MS of sample 240-107850-5 in batch 240-367892.

tert-Butyl alcohol failed the recovery criteria low for the MSD of sample 240-107850-5 in batch 240-367892.
1,1,2-Trichlorotrifluoroethane, Dichlorodifluoromethane and Trichlorofluoromethane exceeded the RPD limit.

Refer to the QC report for details.

Sample MRC-MW150B-020819 (240-107924-3)[2.5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8260C: The continuing calibration verification (CCV) for analytical batch 307509 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

TB-020819 (240-107924-1)

Method(s) 8260C: The preservative used in the sample containers received is not compatible with the analytes requested. 2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample.

Overview

The sample set for MRC Block E/F Mass Discharge, SDG 240-108064-1, consisted of three (3) aqueous samples and one (1) aqueous trip blank sample. The three (3) aqueous samples and the one (1) aqueous trip blank sample were analyzed for volatile organic compounds (VOCs) as listed above. The three (3) aqueous samples were also analyzed for metals and the miscellaneous analyses alkalinity, bromide, hardness as CaCO3, nitrate/nitrite-N, salinity, sulfate, and total suspended solids (TSS), as listed above. Two (2) of the aqueous samples were also analyzed for polychlorinated biphenyls (PCBs) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on February 13, 2019 and analyzed by TestAmerica Laboratories Inc., North Canton, Savannah, Nashville, and Pittsburgh, for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 6020A (ICP/MS) for metals, 6010C (ICP) for metals, 9056A for anions, Standard Methods (SM) 2320B for total alkalinity, SM 2340C for total hardness, SM 2540C for total dissolved solids (TSS), SM 2520B for salinity (electrical conductivity), SM 4500 NO3 F for nitrate-N, MCAWW Method 300.0 for anions, and EPA Method 680 for PCBs, analytical and reporting protocols.

The data contained in this SDG was validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, ICP interference results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The laboratory narrative indicated that the samples were acid preserved for the VOC analysis. The VOC analyte 2-chlororethyl vinyl ether is known to rapidly deteriorate under acidic conditions. Both sample non-detected results for 2-chloroethyl vinyl ether were qualified rejected, (UR), due to the laboratory narrative indicating that the samples were acid preserved.

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control (QC) limit for tert-butyl alcohol, vinyl acetate, 2-butanone, 2-chloroethyl vinyl ether, cis-1,3-dichloropropene, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, 1,2-dibromoethane, bromoform, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, tert-butyl benzene, n-butyl benzene, 1,2-dibromo-3-chloropropane, hexachlorobutadiene, naphthalene, ethyl tert-butyl ether, and tert-amyl methyl ether for instrument A3UX15 on 02/20/19 @ 10:45 & @ 11:29 affecting all VOC samples. The sample detected and non-detected results for the aforementioned analytes were qualified estimated, (J) and (UJ), respectively, with the exception of the 2-chloroethyl vinyl ether results which were rejected for the sample preservation issue.

- Nitrate/Nitrite-N was detected at 0.0463 mg/l, which was <RL, in a continuing calibration blank (CCB) @ 13:13 on 02/17/19, affecting all SDG samples analyzed for nitrate/nitrite-N. No action was taken for sample MRC-MW154A-021319 because the nitrate/nitrite-N concentration was >RL. Detections of nitrate/nitrite-N in samples MRC-MW145A-021319 and MRC-MW148A-021319 were <RL and were qualified non-detected, (U), due to blank contamination.

Notes

Non-detected sample analyte results were reported to the Method Detection Limit.

Sample MRC-MW145A-021319 was diluted 2X for the Method 6010C iron analysis.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC results were qualified for CCV %D QC limit exceedances. Sample nitrate/nitrite-N results were qualified for CCB contamination.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). All sample non-detected VOC 2-chlororethyl vinyl ether results were rejected due to sample acidification as noted in the laboratory narrative.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (January 2017) and USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017).

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-108064-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The PCB by 680 and NO2/NO3 by SM4500_NO3_F analysis were performed at TestAmerica Savannah Laboratory. The Specific Conductance and Salinity analysis were performed at TestAmerica Pittsburgh Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/14/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-021319 (240-108064-1), MRC-MW154A-021319 (240-108064-2), MRC-MW145A-021319 (240-108064-3) and MRC-MW148A-021319 (240-108064-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/20/2019.

The continuing calibration verification (CCV) for analytical batch 368748 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-021319 (240-108064-1), MRC-MW154A-021319 (240-108064-2), MRC-MW145A-021319 (240-108064-3), MRC-MW148A-021319 (240-108064-4) and (240-108125-B-3)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric preserved vials: TB-021319 (240-108064-1), MRC-MW154A-021319 (240-108064-2), MRC-MW145A-021319 (240-108064-3) and MRC-MW148A-021319 (240-108064-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples MRC-MW154A-021319 (240-108064-2) and MRC-MW145A-021319 (240-108064-3) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 02/19/2019 and analyzed on 02/21/2019.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-558728.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte . It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D. (CCV 680-559059/21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICP)
