Overview

The sample set for MRC Block E/F Mass Discharge, SDG 240-107924-1, consisted of two (2) aqueous samples and one (1) aqueous trip blank sample. The two (2) aqueous sample and the one (1) aqueous trip blank sample were analyzed for volatile organic compounds (VOCs) as listed above. The two (2) aqueous samples were also analyzed for metals, and the miscellaneous analyses alkalinity, bromide, hardness as CaCO3, nitrite/nitrate-N, salinity, sulfate, and total suspended solids (TSS), as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on February 8, 2019 and analyzed by TestAmerica Laboratories Inc., North Canton, Nashville, and Pittsburgh, for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 6020A (ICP/MS) for metals, 6010C (ICP) for metals, 9056A for anions, Standard Method (SM) 2320B for total alkalinity, SM 2340C for total hardness, SM 2540C for total dissolved solids (TSS), SM 2520B for salinity (electrical conductivity), SM 4500 NO3 F for nitrate-N, and MCAWW Method 300.0 for anions, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, ICP interference results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The laboratory narrative indicated that the samples were acid preserved for the VOC analysis. The VOC analyte 2-chlororethyl vinyl ether is known to rapidly deteriorate under acidic conditions. All sample non-detected results for 2-chloroethyl vinyl ether were qualified rejected, (UR), due to the laboratory narrative indicating that the samples were acid preserved.

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control (QC) limit for carbon disulfide, tert-butyl alcohol, vinyl acetate, 2-chloroethyl vinyl ether, cis-1,3-dichloropropene, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, bromoform, 1,1,2,2-tetrachloroethane, and tert-amyl methyl ether for instrument A3UX15 on 02/11/19 @ 10:51 & @ 11:35 affecting VOC sample TB-020819. The sample TB-020819 had non-detected results for the aforementioned analytes which were qualified estimated, (UJ), with the exception of the 2-chloroethyl vinyl ether results which were rejected for the sample preservation issue.

- The VOC CCV %Ds were greater than the 20% quality control (QC) limit for carbon disulfide, methylene chloride, 2-chloroethyl vinyl ether, trans-1,3-dichloropropene, bromoform, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, 1,2,3-trichlorobenzene, ethyl tert-butyl ether, and tert-amyl methyl ether for instrument A3UX15 on 02/13/19 @ 11:48 & @ 12:32 affecting VOC samples MRC-MW149B-020819 and MRC-MW150B-020819. The samples detected and non-detected results for the aforementioned analytes were qualified estimated, (J) and (UJ), respectively, with the exception of the 2-chloroethyl vinyl ether results which were rejected for the sample preservation issue.

Notes

Sample MRC-MW150B-020819 was diluted 2.5X for VOCs resulting in elevated levels reported for non-detected VOC analytes.

The VOC methylene chloride was detected in the method blank MB 240-367892/6. The associated SDG samples had non-detected results for methylene chloride and no action was taken.

Nitrate-Nitrite as N was detected in a continuing calibration blank, CCB @ 13:13 on 02/17/19, at 0.0463 mg/l <RL, affecting both SDG samples analyzed for nitrate-nitrite as N. No action was taken as the samples nitrate-nitrite as N concentrations were >RL.

Samples MRC-MW149B-020819 and MRC-MW150B-020819 were analyzed for iron and manganese using both Method 6010C and 6020A. No explanation was given in the laboratory narrative.

Non-detected sample analyte results were reported to the Method Detection Limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC results were qualified for CCV %D QC limit exceedances.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). The sample and trip blank sample non-detected VOC 2-chlororethyl vinyl ether results were rejected due to sample acidification as noted in the laboratory narrative.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (January 2017) and USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017).

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-107924-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 4500NO3-F Nitrate Nitrite as N analysis was performed at the TestAmerica Nashville laboratory. The 9050A Specific Conductance and the 2520B Salinity analyses were performed at the TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/9/2019 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.0º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-020819 (240-107924-1), MRC-MW149B-020819 (240-107924-2) and MRC-MW150B-020819 (240-107924-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/11/2019 and 02/13/2019.

Methylene Chloride was detected in method blank MB 240-367892/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

tert-Butyl alcohol failed the recovery criteria low for the MS of sample 240-107850-5 in batch 240-367892.

tert-Butyl alcohol failed the recovery criteria low for the MSD of sample 240-107850-5 in batch 240-367892.
1,1,2-Trichlorotrifluoroethane, Dichlorodifluoromethane and Trichlorofluoromethane exceeded the RPD limit.

Refer to the QC report for details.

Sample MRC-MW150B-020819 (240-107924-3)[2.5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8260C: The continuing calibration verification (CCV) for analytical batch 307509 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

TB-020819 (240-107924-1)

Method(s) 8260C: The preservative used in the sample containers received is not compatible with the analytes requested. 2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample.

Overview

The sample set for MRC Block E/F Mass Discharge, SDG 240-108064-1, consisted of three (3) aqueous samples and one (1) aqueous trip blank sample. The three (3) aqueous samples and the one (1) aqueous trip blank sample were analyzed for volatile organic compounds (VOCs) as listed above. The three (3) aqueous samples were also analyzed for metals and the miscellaneous analyses alkalinity, bromide, hardness as CaCO3, nitrate/nitrite-N, salinity, sulfate, and total suspended solids (TSS), as listed above. Two (2) of the aqueous samples were also analyzed for polychlorinated biphenyls (PCBs) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on February 13, 2019 and analyzed by TestAmerica Laboratories Inc., North Canton, Savannah, Nashville, and Pittsburgh, for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 6020A (ICP/MS) for metals, 6010C (ICP) for metals, 9056A for anions, Standard Methods (SM) 2320B for total alkalinity, SM 2340C for total hardness, SM 2540C for total dissolved solids (TSS), SM 2520B for salinity (electrical conductivity), SM 4500 NO3 F for nitrate-N, MCAWW Method 300.0 for anions, and EPA Method 680 for PCBs, analytical and reporting protocols.

The data contained in this SDG was validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, ICP interference results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The laboratory narrative indicated that the samples were acid preserved for the VOC analysis. The VOC analyte 2-chlororethyl vinyl ether is known to rapidly deteriorate under acidic conditions. Both sample non-detected results for 2-chloroethyl vinyl ether were qualified rejected, (UR), due to the laboratory narrative indicating that the samples were acid preserved.

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control (QC) limit for tert-butyl alcohol, vinyl acetate, 2-butanone, 2-chloroethyl vinyl ether, cis-1,3-dichloropropene, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, 1,2-dibromoethane, bromoform, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, tert-butyl benzene, n-butyl benzene, 1,2-dibromo-3-chloropropane, hexachlorobutadiene, naphthalene, ethyl tert-butyl ether, and tert-amyl methyl ether for instrument A3UX15 on 02/20/19 @ 10:45 & @ 11:29 affecting all VOC samples. The sample detected and non-detected results for the aforementioned analytes were qualified estimated, (J) and (UJ), respectively, with the exception of the 2-chloroethyl vinyl ether results which were rejected for the sample preservation issue.

- Nitrate/Nitrite-N was detected at 0.0463 mg/l, which was <RL, in a continuing calibration blank (CCB) @ 13:13 on 02/17/19, affecting all SDG samples analyzed for nitrate/nitrite-N. No action was taken for sample MRC-MW154A-021319 because the nitrate/nitrite-N concentration was >RL. Detections of nitrate/nitrite-N in samples MRC-MW145A-021319 and MRC-MW148A-021319 were <RL and were qualified non-detected, (U), due to blank contamination.

Notes

Non-detected sample analyte results were reported to the Method Detection Limit.

Sample MRC-MW145A-021319 was diluted 2X for the Method 6010C iron analysis.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC results were qualified for CCV %D QC limit exceedances. Sample nitrate/nitrite-N results were qualified for CCB contamination.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). All sample non-detected VOC 2-chlororethyl vinyl ether results were rejected due to sample acidification as noted in the laboratory narrative.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (January 2017) and USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017).

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-108064-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The PCB by 680 and NO2/NO3 by SM4500_NO3_F analysis were performed at TestAmerica Savannah Laboratory. The Specific Conductance and Salinity analysis were performed at TestAmerica Pittsburgh Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/14/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-021319 (240-108064-1), MRC-MW154A-021319 (240-108064-2), MRC-MW145A-021319 (240-108064-3) and MRC-MW148A-021319 (240-108064-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/20/2019.

The continuing calibration verification (CCV) for analytical batch 368748 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-021319 (240-108064-1), MRC-MW154A-021319 (240-108064-2), MRC-MW145A-021319 (240-108064-3), MRC-MW148A-021319 (240-108064-4) and (240-108125-B-3)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric preserved vials: TB-021319 (240-108064-1), MRC-MW154A-021319 (240-108064-2), MRC-MW145A-021319 (240-108064-3) and MRC-MW148A-021319 (240-108064-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples MRC-MW154A-021319 (240-108064-2) and MRC-MW145A-021319 (240-108064-3) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 02/19/2019 and analyzed on 02/21/2019.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-558728.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte . It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D. (CCV 680-559059/21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

OVERVIEW

The sample set for LM MRC Block F, SDG 240-107486-1, consists of four (4) water environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOC), polychlorinated biphenyl homologs (PCBH), metals, and miscellaneous parameters (alkalinity, bromide, hardness as CaCO3, nitrite/nitrate-N, salinity, sulfate, and total dissolved solids [TDS]). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on January 29, 2019 and analyzed by Test America. Analyses were conducted in accordance with EPA SW-846 Methods 8260C (VOC), 6010C/6020A (metals), and 9056A (anions) as well as EPA Method 680 (PCBH), MCAWW Method 300.0 (bromide), and Standard Methods 2320B-2011 (alkalinity), 2340C-2011 (hardness), 4500 NO3 F (nitrite/nitrate-N), 2520B (salinity), and 2540C-2011 (TDS) analytical and reporting protocols. Iron and manganese were analyzed by both Methods 6010C and 6020A - remaining metals were analyzed by Method 6020A only.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method blank/trip blank results, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, interference check sample results, compound identification, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative report states that 2-chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample, all VOC samples were preserved in hydrochloric acid. Non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in water samples.

MINOR PROBLEMS

- The VOC continuing calibration verification (CCV) performed on 02/01/19 at 10:52 on instrument A3UX15 had percent differences (%Ds) that were greater than the 20% quality control limit for bromomethane, chloroethane, carbon disulfide, vinyl acetate, 4-methyl-2-pentanone, 2-hexanone, bromoform, 1,2-dibromo-3-chloropropane, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene. All VOC samples were affected. Detected and non-detected results for the aforementioned analytes were qualified as estimated (J and UJ, respectively) in the affected samples.

- The PCBH CCV performed on 02/21/19 at 16:43 on instrument CMSX had a %D that was greater than the 20% quality control limit for decachlorobiphenyl. Samples MRC-MW152B-012919 and MRC-MW140A-012919 were affected. The non-detected results for decachlorobiphenyl and nonachlorobiphenyls were qualified as estimated (UJ) in the affected samples.

- Detected results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Non-detected results were reported to the MDL.

The chain of custody included a sample identification of MRC-MW151A-012919 and did not include MRC-MW152B-012919. As noted in the laboratory case narrative, the laboratory report was revised per client request to change the sample identification for MRC-MW151A-012919. In the database, the sample identification for MRC-MW151A-012919 for iron and manganese by Method 6010C was changed to MRC-MW152B-012919 by the data reviewer.

VOC sample MRC-MW143A-012919 was analyzed at a dilution factor of 166.67.

The following VOC was detected in the trip blank at the following concentration:

Analyte	Maximum Concentration	< or > RL
Trichloroethene	0.14 ug/L(1)	< RL

1 - Detected in trip blank TB-012919 affecting all samples.

No qualification was necessary because trichloroethene results in the environmental samples were greater than the RL.

No qualifications were necessary for matrix spike (MS)/matrix spike duplicate (MSD) percent recoveries (%Rs) that were outside of quality control limits when the sample result was greater than four times the spike amount.

Sulfate in sample MRC-MW137A-012919 was analyzed at a dilution factor of 5. Sulfate in samples MRC-MW140A-012919 and MRC-MW143A-012919 were analyzed at a dilution factor of 10.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some VOC PCBH results were qualified due to calibration noncompliance.

Other Factors Affecting Data Quality: Results for 2-chloroethyl vinyl ether in water samples were rejected due to sample preservation noncompliance. Detected results reported below the RL but above the MDL

were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and the "National Functional Guidelines for Inorganic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: LM MRC Block F

Report Number: 240-107486-1
Revised

Revised 3/20/2019. Per client request sample MRC-MW151A-012919 is being changed to MRC-MW152B-012919.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 680 Polychlorinated Biphenyls analysis was performed at the TestAmerica Savannah laboratory. The 4500NO3-F Nitrate Nitrite as N analysis was performed at the TestAmerica Nashville laboratory. The 9050A Specific Conductance and the 2520-B Salinity analyses were performed at the TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 1/30/2019 10:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-012919 (240-107486-1), MRC-MW152B-012919 (240-107486-2), MRC-MW137A-012919 (240-107486-3), MRC-MW140A-012919 (240-107486-4) and MRC-MW143A-012919 (240-107486-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/01/2019.

Sample MRC-MW143A-012919 (240-107486-5)[166.67X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 366440 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-012919 (240-107486-1), MRC-MW152B-012919 (240-107486-2), MRC-MW137A-012919 (240-107486-3), MRC-MW140A-012919 (240-107486-4) and MRC-MW143A-012919 (240-107486-5)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric acid preserved vials: TB-012919 (240-107486-1), MRC-MW152B-012919 (240-107486-2), MRC-MW137A-012919 (240-107486-3), MRC-MW140A-012919 (240-107486-4) and MRC-MW143A-012919 (240-107486-5)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples MRC-MW152B-012919 (240-107486-2) and MRC-MW140A-012919 (240-107486-4) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 02/19/2019 and analyzed on 02/21/2019.

The internal standard response for the following sample(s) was outside of acceptance limits when compared to the area of the CCVIS(continuing calibration verification internal standard). The 680 method allows that the sample also be compared to the average internal standard area of the calibration (ICISAV). Due to limitations in the software, when the areas of the sample are out of control for either the CCVIS or the ICISAV both are flagged. Although a * flag appears on the data, the sample is within the area range for the average internal standard area of the calibration (ICISAV).

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-558728.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte . It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D.

(CCV 680-559059/21)

OVERVIEW

The sample set for LM MRC Block F, SDG 240-107535-1, consists of two (2) water environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOC), polychlorinated biphenyl homologs (PCBH), metals, and miscellaneous parameters (alkalinity, bromide, hardness as CaCO3, nitrite/nitrate-N, salinity, sulfate, and total dissolved solids (TDS). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on January 30, 2019 and analyzed by Test America. Analyses were conducted in accordance with EPA SW-846 Methods 8260C (VOC), 6010C/6020A (metals), and 9056A (anions) as well as EPA Method 680 (PCBH), MCAWW Method 300.0 (bromide), and Standard Methods 2320B-2011 (alkalinity), 2340C-2011 (hardness), 4500 NO3 F (nitrite/nitrate-N), 2520B (salinity), and 2540C-2011 (TDS) analytical and reporting protocols. Iron and manganese were analyzed by both Methods 6010C and 6020A - remaining metals were analyzed by Method 6020A only.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method blank/trip blank results, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, interference check sample results, compound identification, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative report states that 2-chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample, all samples were preserved in hydrochloric acid. Non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in water samples.

- The VOC matrix spike (MS)/matrix spike duplicate (MSD) analysis performed on sample MRC-MW139B-013019 had MS and MSD percent recoveries (%Rs) that were less than the laboratory quality control limits and less than 10% for 2-chloroethyl vinyl ether. The non-detected result for this

analyte was rejected (UR) in sample MRC-MW139B-013019.

MINOR PROBLEMS

- The VOC continuing calibration verification (CCV) performed on 02/04/19 at 12:19 on instrument A3UX15 had percent differences (%Ds) that were greater than the 20% quality control limit for dichlorodifluoromethane, vinyl chloride, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, 2-hexanone, bromoform, and 1,2-dibromo-3-chloropropane. Samples TRIP BLANK-013019, MRC-MW153A-013019, and MRC-MW139B-013019 were affected. Non-detected results for the aforementioned analytes were qualified as estimated (UJ) in the affected samples.

- The VOC MS/MSD analysis performed on sample MRC-MW139B-013019 had an MS %R for tertiary-butyl alcohol that was less than the laboratory quality control limits (but greater than 10%). The MSD %R for this analyte was compliant. The non-detected result for tertiary-butyl alcohol in sample MRC-MW139B-013019 was qualified as estimated (UJ).

- The following VOCs were detected in the trip blanks at the following concentrations:

Analyte	Maximum Concentration	< or > Reporting Limit (RL)
Tertiary-butyl alcohol	180 ug/L(1)	> RL
Trichloroethene	0.16 ug/L(1)	< RL

1 - Detected in trip blank TB-013019 affecting all samples.

Trichloroethene results in samples MRC-MW139B-013019 and MRC-MW153A-013019 were less than the RL and were qualified as non-detected (U). No qualification was necessary for tertiary-butyl alcohol because results for this analyte were non-detected in samples MRC-MW139B-013019 and MRC-MW153A-013019.

- Detected results reported below the RL but above the method detection limit (MDL) were qualified as estimated (J).

- The PCBH CCV performed on 02/21/19 at 16:43 on instrument CMSX had a %D that was greater than the 20% quality control limit for decachlorobiphenyl. Sample MRC-MW153A-013019 was affected. The non-detected results for decachlorobiphenyl and nonachlorobiphenyls were qualified as estimated (UJ) in the affected sample.

NOTES

Non-detected results were reported to the MDL.

VOC sample MRC-MW139B-013019 was analyzed at a dilution factor of 20.

The VOC MS/MSD analysis performed on sample MRC-MW139B-013019 had a relative percent difference (RPD) for 1,1,2-trichlorotrifluoroethane that was greater than the laboratory quality control limit. No qualification was necessary because the result for 1,1,2-trichlorotrifluoroethane was non-detected in sample MRC-MW139B-013019.

Sulfate in sample MRC-MW153A-013019 was analyzed at a dilution factor of 5.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some VOC and PCBH results were qualified due to calibration noncompliance.

Other Factors Affecting Data Quality: Results for 2-chloroethyl vinyl ether in water samples were rejected due to sample preservation noncompliance, and one of these 2-chloroethyl vinyl ether results was also rejected due to MS/MSD noncompliance. One tertiary-butyl alcohol result was qualified due to MS/MSD noncompliance. Some VOC results were qualified as non-detected due to trip blank contamination. Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and the "National Functional Guidelines for Inorganic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: LM MRC Block F

Report Number: 240-107535-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 680 Polychlorinated Biphenyls analysis was performed at the TestAmerica Savannah laboratory. The 4500NO3-F Nitrate Nitrite as N analysis was performed at the TestAmerica Nashville laboratory. The 9050A Specific Conductance and the 2520-B Salinity analyses were performed at the TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 1/31/2019 10:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK-013019 (240-107535-1), MRC-MW153A-013019 (240-107535-2) and MRC-MW139B-013019 (240-107535-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/04/2019.

Sample MRC-MW139B-013019 (240-107535-3)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 366634 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TRIP BLANK-013019 (240-107535-1), MRC-MW153A-013019 (240-107535-2) and MRC-MW139B-013019 (240-107535-3)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric preserved vials: TRIP BLANK-013019 (240-107535-1), MRC-MW153A-013019 (240-107535-2) and MRC-MW139B-013019 (240-107535-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Sample MRC-MW153A-013019 (240-107535-2) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The sample was prepared on 02/19/2019 and analyzed on 02/21/2019.

The internal standard response for the following sample(s) was outside of acceptance limits when compared to the area of the CCVIS(continuing calibration verification internal standard). The 680 method allows that the sample also be compared to the average internal standard area of the calibration (ICISAV). Due to limitations in the software, when the areas of the sample are out of control for

either the CCVIS or the ICISAV both are flagged. Although a * flag appears on the data, the sample is within the area range for the average internal standard area of the calibration (ICISAV).

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-558728.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte . It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D. (CCV 680-559059/21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Overview

The sample set for LMC-MRC, Block E/F Waste, SDGs 240-107638-1 & 240-107796-1 consisted of six (6) aqueous environmental samples and two (2) trip blanks. The six (6) aqueous samples were analyzed for Volatile Organic Compounds (VOC), metals, and miscellaneous parameters (alkalinity, bromide, hardness, nitrate/nitrite, salinity, sulfate, and Total Dissolved Solids (TDS). The trip blanks were analyzed for VOC only. One field duplicate sample pair was included in this SDG: MRC-DUP01-020619/MRC-MW142B-020619.

The samples were collected by Tetra Tech, Inc. on February 2 & 4, 2019 and analyzed by TestAmerica, Inc. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A, and 9056A, EPA Methods 680 and 300.0, and Standard Methods 2320B-2011, 2340C-2011, SM 2520B, 2540C-2011 and SM 4500 NO3 F analytical and reporting protocols.

The data contained in this SDG were validated with regard to for the following parameters: data completeness, holding times and sample preservation, GC/MS tuning, initial/continuing calibrations, ICP interference check sample results, laboratory preparation/method/trip blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas

and recoveries, laboratory duplicate precision, and detection limits. Areas of concern are listed below.

Major

- As stated in the laboratory case narrative, 2-chloroethyl vinyl ether cannot be reliably recovered in an acid preserved samples. All samples in these SDGs were acid preserved. The non-detected results reported for 2-chloroethyl vinyl ether were qualified as rejected, (UR).

Minor

- The VOC continuing calibration performed on instrument A3UX15 on 02/07/2019 @ 09:17 had a Percent Difference (%D) for hexachlorobutadiene and a Percent Drift (%Drift) for bromoform which exceeded the 20% quality control limit. The non-detected results reported for these compounds in the affected sample, TB-020419, were qualified as estimated, (UJ).

- The VOC continuing calibrations performed on instrument A3UX15 on 02/08/2019 @ 12:55 and 13:39 had %Ds for vinyl acetate, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, naphthalene, and tert-amyl methyl ether, and a %Drift for bromoform which exceeded the 20% quality control limit. The non-detected results reported for these compounds in the affected sample, MRC-MW151A-020419, were qualified as estimated, (UJ).

- The VOC continuing calibrations performed on instrument A3UX15 on 02/11/2019 @ 10:51 and 11:35 had %Ds for carbon disulfide, tert-butyl alcohol, vinyl acetate, 2-chloroethyl vinyl ether, cis-1,3-dichloropropene, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, and tert-amyl methyl ether, and a %Drift for bromoform which exceeded the 20% quality control limit. The non-detected results reported for these compounds in the affected sample, TB-020619, were qualified as estimated, (UJ).

- The VOC continuing calibrations performed on instrument A3UX15 on 02/12/2019 @ 10:48 and 11:32 had %Ds for carbon disulfide, vinyl acetate, 2-chloroethyl vinyl ether, trans-1,3-dichloropropene, 2-hexanone, chlorodibromomethane, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, ethyl tert-butyl ether, and tert-amyl methyl ether, and a %Drift for bromoform which exceeded the 20% quality control limit. The non-detected results reported for these compounds in the affected samples, MRC-MW138B-020619, MRC-MW141B-020619, and MRC-MW142B-020619, were qualified as estimated, (UJ).

- The VOC continuing calibrations performed on instrument A3UX15 on 02/13/2019 @ 11:48 and 12:32 had %Ds for carbon disulfide, methylene chloride, 2-chloroethyl vinyl ether, trans-1,3-dichloropropene, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, 1,2,3-trichlorobenzene, ethyl tert-butyl ether, and tert-amyl methyl ether, and a %Drift for bromoform which exceeded the 20% quality control limit. The non-detected results reported for these compounds in the affected samples, MRC-DUP01-020619 and MRC-MW158A-020619 were qualified as estimated, (UJ).

- The PCB homolog closing continuing calibration performed on instrument CMSX on 02/21/2019 @ 16:43 had a %D for decachlorobiphenyl above the 20% quality control criterion. The non-detected results reported for decachlorobiphenyl and nonachlorobiphenyls in the affected samples, MRC-MW151A-020419 and MRC-MW158A-020619, were qualified as estimated, (UJ).

- Trichloroethene was detected in the trip blank, TB-020419, below the Reporting Limit (RL). The detected result reported for trichloroethene below the RL in the associated sample, MRC-MW151A-020419, was qualified as non-detected, (U).

- Nitrate/nitrite was detected in the closing Continuing Calibration Blank (CCB) below the RL. All samples were affected. The detected result reported for this parameter below the RL in sample MRC-MW158A-020619 was qualified as non-detected, (U).

- The Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses performed on sample MRC-MW141B-020619 had Percent Recoveries (%Rs) for tert-butyl alcohol, chlorodibromomethane, and bromoform below the lower quality control limits. In addition, several Relative Percent Differences (RPDs) were outside the quality control criteria. No action was taken for the noncompliant RPDs because the MS/MSD %Rs were acceptable. The non-detected results reported for tert-butyl alcohol, chlorodibromomethane, and bromoform were qualified as estimated, (UJ), in the parent sample.

- Detected results reported below the RL but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The laboratory reported results for iron and manganese via SW-846 6010C. These results were not used in the data validation because these analytes were reported via SW-846 6020A and were removed from the database.

The following samples were analyzed at dilutions:

Sample	Fraction/Parameter	Dilution
MRC-DUP01-020619	VOC	5X
MRC-MW138B-020619	VOC	25X
MRC-MW141B-020619	VOC	1000X
MRC-MW142B-020619	VOC	4X
MRC-MW158A-020619	Sulfate	5X

The RLs of the non-detected results were elevated in the VOC fraction.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: VOC continuing calibration %Ds and %Drifts exceeded 20%. A PCB homolog continuing calibration %D exceeded 20%. Nitrate/nitrite was detected in a CCB.

Other Factors Affecting Data Quality: 2-Chloroethylvinyl ether results were rejected due to sample preservation. Trichloroethene was detected in a trip blank. MS/MSD %Rs were low for three compounds. Some samples were analyzed at dilutions. Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017) and the "National Functional Guidelines for Inorganic Review" (August 2017). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-107638-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 680 Polychlorinated Biphenyls analysis was performed at the TestAmerica Savannah laboratory. The 4500NO3-F Nitrate Nitrite as N analysis was performed at the TestAmerica Nashville laboratory. The 9050A Specific Conductance and the 2520-B Salinity analyses were performed at the TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/5/2019 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.6º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-020419 (240-107638-1) and MRC-MW151A-020419 (240-107638-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/07/2019 and 02/08/2019.

The continuing calibration verification (CCV) for analytical batch 367131 exceeded control criteria for Bromoform and/ or Hexachlorobutadiene. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-020419 (240-107638-1)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric preserved vials: TB-020419 (240-107638-1) and MRC-MW151A-020419 (240-107638-2)

The continuing calibration verification (CCV) for analytical batch 367370 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. MRC-MW151A-020419 (240-107638-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Sample MRC-MW151A-020419 (240-107638-2) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The sample was prepared on 02/19/2019 and analyzed on 02/21/2019.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-558728.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte

. It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D. (CCV 680-559059/21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E/F Mass Discharge

Report Number: 240-107796-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The PCB by 680 and NO2/NO3 by SM4500_NO3_F analysis were performed at TestAmerica Savannah Laboratory. The Specific Conductance and Salinity analysis were performed at TestAmerica Pittsburgh Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 2/7/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-020619 (240-107796-1), MRC-MW138B-020619 (240-107796-2), MRC-MW141B-020619 (240-107796-3), MRC-MW142B-020619 (240-107796-4), MRC-MW158A-020619 (240-107796-5) and MRC-DUP01-020619 (240-107796-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 02/11/2019, 02/12/2019 and 02/13/2019.

Methylene Chloride was detected in method blank MB 240-367892/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples MRC-MW138B-020619 (240-107796-2)[25X], MRC-MW141B-020619 (240-107796-3)[1000X], MRC-MW142B-020619 (240-107796-4)[4X] and MRC-DUP01-020619 (240-107796-6)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 307509 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. TB-020619 (240-107796-1)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. The following samples were received in hydrochloric preserved vials: TB-020619 (240-107796-1), MRC-MW138B-020619 (240-107796-2), MRC-MW141B-020619 (240-107796-3), MRC-MW142B-020619 (240-107796-4), MRC-MW158A-020619 (240-107796-5) and MRC-DUP01-020619 (240-107796-6)

The continuing calibration verification (CCV) for analytical batch 367672 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. MRC-MW138B-020619 (240-107796-2), MRC-MW141B-020619 (240-107796-3) and MRC-MW142B-020619 (240-107796-4)

The continuing calibration verification (CCV) for analytical batch 367892 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required. MRC-MW158A-020619 (240-107796-5) and MRC-DUP01-020619 (240-107796-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)
Sample MRC-MW158A-020619 (240-107796-5) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 02/19/2019 and analyzed on 02/21/2019.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-558728.

The SOP for the 680 Method allows that for soils the CCVIS has a limit of <30%D for each analyte and for liquids <20%D for each analyte . It also allows that the capping CCV for soils has the limit of <30% average %D with no analyte >60%D and for liquids <20% average D with no analyte >40%D. Due to software limitations for this method, the limits are set at <20%D. (CCV 680-559059/21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICP)

Iron was detected in method blank MB 240-367336/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
