CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10949-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.
The Total Alpha Radium and Radium 228 analysis was performed at the TestAmerica Richland Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 05/04/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.7, 2.6, 2.9 and 3.1 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)
Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW6I-050312 (240-10949-2), MSA-DMW6D-050312 (240-10949-3), MSA-DMW7S-050312 (240-10949-4), TB-050312 (240-10949-5), MSA-DMW4I-050312 (240-10949-6), MSA-DMW4D-050312 (240-10949-7), MSA-DMW4S-050312 (240-10949-8) and MSA-DMW2A-050312 (240-10949-9) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/10/2012, 05/11/2012 and 05/16/2012.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-43549/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-43737/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

2-Butanone and 2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-10837-5 in batch 240-43549.

1,2-Dibromoethane and Trichloroethene failed the recovery criteria high for the MSD of sample MSA-DMW2A-050312 (240-10949-9) in batch 240-44226.

2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-11065-2 in batch 240-43737.

Refer to the QC report for details.

Samples MSA-DMW7S-050312 (240-10949-4)[416.67X], MSA-DMW4I-050312 (240-10949-6)[125X], MSA-DMW4D-050312

(240-10949-7)[142.86X], MSA-DMW4S-050312 (240-10949-8)[40X] and MSA-DMW2A-050312 (240-10949-9)[416.67X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW6I-050312 (240-10949-2), MSA-DMW6D-050312 (240-10949-3), MSA-DMW7S-050312 (240-10949-4), MSA-DMW4I-050312 (240-10949-6), MSA-DMW4D-050312 (240-10949-7), MSA-DMW4S-050312 (240-10949-8) and MSA-DMW2A-050312 (240-10949-9) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/09/2012 and 05/14/2012 and analyzed on 05/11/2012, 05/13/2012 and 05/16/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Surrogate recoveries for the following samples were outside control limits: MSA-DMW4I-050312 (240-10949-6) and MSA-DMW6S-050312 (240-10949-1). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data are reported.

Samples MSA-DMW7S-050312 (240-10949-4)[4X], MSA-DMW4I-050312 (240-10949-6)[2X] and MSA-DMW2A-050312 (240-10949-9) [10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 43293, 8270.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW7S-050312 (240-10949-4) and MSA-DMW4S-050312 (240-10949-8) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/09/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-43312/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Samples MSA-DMW7S-050312 (240-10949-4)[10X] and MSA-DMW4S-050312 (240-10949-8)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW7S-050312 (240-10949-4) and MSA-DMW4S-050312 (240-10949-8) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/09/2012 and analyzed on 05/11/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Total Petroleum Hydrocarbons (C10-C32) was detected in method blank MB 240-43296/10-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 43296, 8015.

No other difficulties were encountered during the DRO analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW6I-050312 (240-10949-2), MSA-DMW6D-050312 (240-10949-3), MSA-DMW7S-050312 (240-10949-4), MSA-DMW4I-050312 (240-10949-6), MSA-DMW4D-050312 (240-10949-7), MSA-DMW4S-050312 (240-10949-8) and MSA-DMW2A-050312 (240-10949-9) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/10/2012 and 05/11/2012 and analyzed on 05/11/2012 and 05/14/2012.

No difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW6I-050312 (240-10949-2), MSA-DMW6D-050312 (240-10949-3), MSA-DMW7S-050312 (240-10949-4), MSA-DMW4I-050312 (240-10949-6), MSA-DMW4D-050312 (240-10949-7), MSA-DMW4S-050312 (240-10949-8) and MSA-DMW2A-050312 (240-10949-9) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/10/2012 and 05/11/2012 and analyzed on 05/11/2012 and 05/14/2012.

Several analytes were detected in method blank MB 240-43497/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Barium, Copper and Zinc were detected in method blank MB 240-43699/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Samples MSA-DMW4I-050312 (240-10949-6)[5X], MSA-DMW4D-050312 (240-10949-7)[10X], MSA-DMW4S-050312 (240-10949-8)[5X] and MSA-DMW2A-050312 (240-10949-9)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW6I-050312 (240-10949-2), MSA-DMW6D-050312 (240-10949-3), MSA-DMW7S-050312 (240-10949-4), MSA-DMW4I-050312 (240-10949-6), MSA-DMW4D-050312 (240-10949-7), MSA-DMW4S-050312 (240-10949-8) and MSA-DMW2A-050312 (240-10949-9) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/11/2012 and analyzed on 05/15/2012.

Mercury exceeded the rpd limit for the MSD of sample 240-11088-1 in batch 240-44211.

Refer to the QC report for details.

No other difficulties were encountered during the mercury analyses. All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MSA-DMW6S-050312 (240-10949-1), MSA-DMW6I-050312 (240-10949-2), MSA-DMW6D-050312 (240-10949-3), MSA-DMW7S-050312 (240-10949-4), MSA-DMW4I-050312 (240-10949-6), MSA-DMW4D-050312 (240-10949-7), MSA-DMW4S-050312 (240-10949-8) and MSA-DMW2A-050312 (240-10949-9) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/11/2012 and analyzed on 05/15/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

TestAmerica ICP/MS Data Review Checklist

Run Date: 5-11-12 Analyst: KW Instrument: I8

Review Items

A. Tune/Daily performance	Yes	No	N/A	2nd Level
1. Resolution </= 0.9 AMU full width at 10% peak height, and within +/- 0.1 AMU of true mass?	✓			✓
2. Performance check within recommended specifications? (Be>8000cps) (In >300,000 cps) (Pb >100,000 cps) (Co>100000) (Mg>10000) (CeO/Ce<0.03) (Ba++/Ba<0.03) (Background < 30cps @ Mass 220) CCT Performance Check (In > 75000) (Se< 20 cps)	✓			✓
B. Calibration/Instrument Run QC				
1. Instrument calibrated per manufacturer's instructions and at SOP specified levels? Correlation coefficient > 0.995?	✓			✓
1. ICV/CCV analyzed at appropriate frequency and within control limits? *(ICV: = 90 – 110%) (CCV: 90 – 110%, 200.8 = 85 -115%)*	✓			✓
2. ICB/CCB analyzed at appropriate frequency and within +/- RL?	✓			✓
3. CRI run and recovered within QC limits (+/-50%) or project limits?	✓			✓
4. ICSA/ICSAB run at required frequency and within SOP control limits?	✓			✓
C. Sample Results				
1. Were samples with concentrations > the linear range for any parameter diluted and reanalyzed?	✓			✓
2. All reported results bracketed by in control QC?	✓			✓
3. Were the internal standards within acceptance criteria for all results reported?	✓			✓
4. Sample analyses done within holding time?	✓			✓
D. Preparation/Matrix QC				
1. LCS done per prep batch and within QC limits?	✓			✓
2. Method blank done per prep batch and < RL?	✓			✓
3. MS run at required frequency and within limits?	✓			✓
4. MSD or DU run at required frequency and RPD within SOP limits?	✓			✓
5. Serial dilution done per prep batch?	✓			✓
6. Post digest spike analyzed if required?	✓			✓
E. Other				
1. Are all nonconformance's documented appropriately?	✓			✓
2. Current IDL/LR data on file?	✓			✓
3. Calculations checked for error?	✓			✓
4. Transcriptions checked for error?	✓			✓
5. All client/project specific requirements met?	✓			✓
6. Date/time of analysis verified as correct?	✓			✓

Case Narrative

TestAmerica West Sacramento Project Number G2E050430

WATER, 6850, Perchlorate
Sample(s): 1, 2, 3, 4, 5, 6, 7, 8
In accordance with the requirements of Method 6850, both a Laboratory Control Sample (LCS) and a Synthetic Matrix Check Sample (SMCS) were analyzed with the associated samples. Both are reported on the LCS data evaluation and recovery reports, and are differentiated from one another by their workorder number:

LCS: MTGXH1AC
SMCS: MTGXH1AD

Sample(s): 1, 2, 3, 4, 5, 6, 7, 8
The opening Perchlorate continuing calibration verification (CCV) & minimum reporting limit (MRL) standards had ion abundance ratios outside of acceptance criteria for the native compound. The exceedence was caused by matrix interference from an over-range field sample analyzed immediately preceding the standards. This ratio is used for positive identification in field samples and all samples with positive results demonstrated ion ratios which were within method acceptance limits. The primary ion used for quantitation in samples and QC was within acceptance limits for percent drift in all CCV and MRL standards pertaining to this batch. All other standards and QC pertaining to this batch had acceptable ion ratios for the native compound. Data is reported with no further corrective action.

There were no other anomalies associated with this project.

Notes(s):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity, pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

ANALYTICAL METHODS SUMMARY

G2E050430

PARAMETER	ANALYTICAL METHOD
Perchlorate by 6850	SW846 6850

Overview

The sample set for Martin State Airport Groundwater Sampling, SDG 240-11217-1 consists of six (6) aqueous environmental samples and one trip blank. All samples were analyzed for volatile organic compounds (VOCs). Six (6) aqueous environmental samples were analyzed for 1,4-dioxane in the semivolatile organic compound (SVOC) SIM fraction, perchlorate, total and dissolved metals. Two (2) aqueous environmental samples; MW18I-051012and MW18S-051012 were analyzed for gasoline range organics (GRO). Two (2) aqueous environmental samples were analyzed for organic volatile gases (OVG) and miscellaneous parameters which include, ammonia, total dissolved solids, dissolved organic carbon, alkalinity, chloride, nitrate, nitrite, orthophosphate and sulfate. Four (4) aqueous environmental samples were analyzed for diesel range organics (DRO) and gasoline range organics (GRO). GRO is listed on the

form 1s and EDD as total petroleum hydrocarbons (TPH) (C6-C10) and DRO as TPH (C10-C32). One (1) aqueous environmental sample, MW18S-051012, was analyzed for the explosive (EXP), RDX. One (1) aqueous environmental sample, DMW2S-051012, was analyzed for haloacetic acids (HAA). There are no field duplicate pairs included in this SDG.

The samples were collected on May 10, 2012 and analyzed by Test America Laboratories, Inc. Volatile organic compound analyses were conducted in accordance to SW-846 Method 8260C. The analyses for 1,4-dioxane followed SW-846 Method 8270C in Selective Ion Monitoring SIM mode. GRO and DRO analyses followed SW-846 Method 8015B. The analyses for RDX followed SW-846 Method 8330 and perchlorate Method 6850 reporting protocol. Metals analyses were conducted in accordance with SW-846 6020A, 6010C and mercury Method 7470A. The analysis of OVG followed RSK-175. The following analyses followed EPA Methods; total dissolved solids Method 160.1, anions Method 300.0, alkalinity Method 310.1, nitrogen and ammonia Method 350.3 and HAA Method 552.2. Dissolved organic carbon followed SW-846 Method 9060.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, serial dilution, compound identification, chromatographic resolution, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- In the volatile initial calibration of instrument A3UX16 on May 9, 2012 and the continuing calibration on May 23, 2012 @ 13:08, tert-butyl alcohol and vinyl acetate had a relative response factor (RRF) less than the 0.05 quality control limit. The nondetected vinyl acetate and tert-butyl alcohol results were qualified as rejected (UR) in the affected samples.

- The matrix spike/ matrix spike duplicate (MS/MSD) percent recoveries (%Rs) of 2-chloroethyl vinyl ether were 0% in sample MW31D-051012. The nondetected 2-chloroethyl vinyl ether result was qualified as rejected (UR) in the affected samples.

Minor Problems

- The base surrogate recoveries of nitrobenzene-d5, 2-fluorobiphenyl and terphenyl-d14 were less than the lower quality control limit in sample MW31D-051012. The sample was re-extracted outside of hold time. The original sample results were used for validation and reporting purposes. The nondetected 1,4-dioxane result in sample MW31D-051012 was qualified as biased low (UL).

- DRO was detected in the laboratory method blank 240-44281/17-A affecting all samples.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
DRO	417	2085

An action level of 5X the maximum concentration level has been used in order to evaluate sample data for blank contamination. Positive results less than the action level were qualified (B) as a result

of blank contamination. Sample aliquot and dilution factors were taken into account in validation of the data.

- TICs were qualified as presumptively present (NJ) in several samples.

- Contamination was detected in the laboratory method blank, preparation blanks, continuing calibration blanks and initial calibration blanks affecting both the total and dissolved metal results.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Molybdenum [4]	0.376	1.88
Cobalt [1]	0.058	0.29
Mercury [2]	0.148	0.74
Antimony [5]	0.211	1.06
Molybdenum [3]	0.851	4.26
Barium [4]	0.843	4.22
Copper [4]	0.521	2.61
Zinc [4]	10.5	52.5
Arsenic [5]	0.711	3.56
Cadmium [5]	0.335	1.68
Cobalt [5]	0.392	1.96
Copper [5]	1.12	5.6
Lead [5]	0.436	2.18
Nickel [5]	0.632	3.16
Selenium [5]	0.586	2.93
Thallium [5]	0.522	2.61
Tungsten [5]	0.507	2.54
Zinc [5]	4.97	24.85

(1) Maximum concentration detected in continuing calibration blank (CCB) 240-44506/48 analyzed on May 17, 2012 @ 11:03.
(2) Maximum concentration detected in CCB 240-44403/11-A analyzed on May 17, 2012 @ 17:47.
(3) Maximum concentration detected in CCB 240-44964/14 analyzed on May 22, 2012 @ 7:51.
(4) Maximum concentration detected in method blank 240-44254/1-A.
(5) Maximum concentration detected in method blank 240-44713/1-A.

An action level of 5X the maximum concentration of contaminant was used to evaluate samples due to blank contamination. Positive results less than the action level were qualified (B) as a result of blank contamination. Sample aliquot and dilution factors were taken into account in validation of data.

- The CRDL %R of lead was greater than 110% in CRI 240-44506/7 analyzed on May 17, 2012 and CRI-240-44805/7 analyzed on May 21, 2012. The positive lead results less than 2X the reporting limit were qualified as estimated (J) due to conflicting directional bias.

- The internal standard recovery for holium (molecular weight 165) was greater than the 125% quality control limit in samples MW18I-051012 and DMW2S-051012. The target metals affected by this noncompliance are antimony (MW 123), barium (MW 137), lead (MW 207), thallium (MW 204) and tungsten (MW 184). The positive and nondetected antimony, barium, lead, thallium and tungsten total and dissolved metal results in samples MW18I-051012 and DMW2S-051012 were qualified as estimated (J) and (UJ), respectively.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Sample DMW2S-051012 was not marked on the chain of custody to be analyzed for perchlorate.

The continuing calibration %Ds for bromomethane and chloroethane were greater than the 20% quality control limit and less than 50% on May 23, 2012 @ 13:08 on instrument A3UX16. No action was taken on the nondetected bromomethane and chloroethane results in the affected samples.

The spectra were reviewed by the data validator for the positive hexachlorobutadiene result in sample MW18I-051012. This sample was analyzed after the MS/MSD, which were spiked with hexachlorobutadiene, on May 23, 2012 @16:12 and 16:35. Hexachlorobutadiene is a heavier VOC and elutes at a later retention time. The positive result was verified in sample MW 18I-051012. It is a possibility that carryover contamination from the MS/MSD affected the positive hexachlorobutadiene result in sample MW18I-051012. No action was taken. A copy of the spectra is included in Appendix C.

The MS/MSD %Rs of 1,2-dibromoethane were greater than the upper quality control limit in sample MW31D-051012. No action was taken on the nondetected 1,2-dibromoethane result in sample MW31D-051012.

The CRDL %R of thallium was greater than 110% in CRI-44964/8 analyzed on May 22, 2012 affecting the dissolved thallium result in sample MW31D-051012. No action was taken on the positive dissolved thallium result because it was qualified due to blank contamination.

The relative percent differences (RPDs) for arsenic, chromium, cobalt, copper, thallium, vanadium and tungsten were greater than 20% in the dissolved metals fraction duplicate analysis. No action was taken on the arsenic, chromium, cobalt, copper, thallium, vanadium and tungsten because the sample concentration was less than 5X the reporting limit.

Chloride was detected in the CCB analyzed on May 11, 2012 @ 11:12.

Compound	Maximum Concentration (mg/L)	Action Level (mg/L)
Chloride	0.332	1.66

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were taken into account when applying the action level. No action was taken because the positive chloride results were greater than the action level.

Ammonia was detected in the CCB analyzed on May 22, 2012 @ 10:48.

Compound	Maximum Concentration (mg/L)	Action Level (mg/L)
Ammonia	0.06	0.30

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were taken into consideration when applying the action level. No action was taken because the positive ammonia results were greater than the action level.

Alkalinity was detected in the method blank analyzed on May 15, 2012 @ 17:33.

Compound	Maximum Concentration (mg/L)	Action Level (mg/L)
Alkalinity	2.9	14.5

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were taken into consideration when applying the action level. No action was taken because the positive alkalinity results were greater than the action level.

The MS/MSD %Rs of orthophosphate were greater than the upper quality control limit in sample 240-11142-1. No action was taken because this is not a sample included in this SDG.

Nondetected results were reported to the MDL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Tert-butyl alcohol and vinyl acetate had RRFs less than quality control limits in the initial and continuing calibrations. Sample MW31D-051012 had surrogate recoveries outside quality control limits in the SVOC fraction. Blank contamination was detected in the DRO and metals fractions.The CRQL %Rs of lead exceeded 110% resulting in the qualification of positive results. The internal standard recovery of holium was greater than quality control limits in sample MW18I-051012 and DMW2S-051012.

Other Factors Affecting Data Quality: TICs were detected in several samples. Sample DMW2S-051012 was not marked on the chain of custody to be analyzed for perchlorate. MS/MSD %Rs of 2-chloroethyl vinyl ether were 0% in sample MW31D-051012.

The data for these analyses were reviewed with reference to the Region III EPA Functional Guidelines for Organic Data Validation (9/94) and Region III EPA Functional Guidelines for Inorganic Data Validation (April 1993). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

Support Documentation

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-11217-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate and Explosives - RDX analyses were performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/11/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.9, 3.2, 3.9 and 4.6 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-051012 (240-11217-1), MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), MW31D-051012 (240-11217-4), MW18I-051012 (240-11217-5), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/23/2012.

2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample MW31D-051012 (240-11217-4) in batch 240-45083. 1,2-Dibromoethane failed the recovery criteria high.

Refer to the QC report for details.

Samples MW18S-051012 (240-11217-2)[55.56X], DMW10S-051012 (240-11217-3)[10X], MW31D-051012 (240-11217-4)[2X], MW18I-051012 (240-11217-5)[333.33X] and DMW2S-051012 (240-11217-6)[90.9X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) was diluted due to the abundance of non-target analytes: MW31D-051012 (240-11217-4 MS). Elevated reporting limits (RLs) are provided.

The continuing calibration verification (CCV) for analytical batch 45083 exceeded control criteria for Bromomethane and Chloroethane. The samples associated with this CCV were non-detects for the affected analytes. A low level CCV, at the reporting limit, was analyzed and the affected compounds were detected; therefore the data is okay to report per SOP.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), MW31D-051012 (240-11217-4), MW18I-051012 (240-11217-5), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for semivolatile organic compounds

(GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/16/2012 and 05/24/2012 and analyzed on 05/22/2012 and 05/30/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2-Fluorobiphenyl (Surr), Nitrobenzene-d5 (Surr) and Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for MW31D-051012 (240-11217-4). Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for MW31D-051012MS/MSD (240-11217-4MS/MSD).

Refer to the QC report for details.

Samples MW18S-051012 (240-11217-2)[2X], MW18I-051012 (240-11217-5)[5X] and DMW2S-051012 (240-11217-6)[2.5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Surrogate recovery for the following sample(s) was outside control limits: MW31D-051012 (240-11217-4). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. Both sets of data are reported.

The following sample contained one acid and/or one base surrogate outside acceptance limits: MW31D-051012 (240-11217-4 MSD). The laboratory's SOP allows one acid surrogate and/or one base surrogate to be outside acceptance limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/22/2012.

Samples MW18S-051012 (240-11217-2)[2X] and DMW2S-051012 (240-11217-6)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the GRO analyses. All quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 05/17/2012.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No difficulties were encountered during the dissolved gases analyses. All quality control parameters were within the acceptance limits.

HALOACETIC ACIDS (HAAS)

Sample DMW2S-051012 (240-11217-6) was analyzed for Haloacetic Acids (HAAs) in accordance with EPA Method 552.2. The samples were prepared and analyzed on 05/16/2012.

2,3-Dibromopropionic acid failed the surrogate recovery criteria low for MB 680-237485/1-A. Refer to the QC report for details.

The surrogate recovery for the blank associated with batch 237485 was outside recovery limits. All associated sample surrogates fell within acceptance criteria; therefore, the data have been reported.

No other difficulties were encountered during the haloacetic acids analysis. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/16/2012 and analyzed on 05/18/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Total Petroleum Hydrocarbons (C10-C32) was detected in method blank MB 240-44281/17-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 44281.

No other difficulties were encountered during the DRO analyses. All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)
Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 05/16/2012 and analyzed on 05/21/2012.

Several analytes were detected in method blank MB 240-44236/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Samples MW18S-051012 (240-11217-2)[5X] and MW18I-051012 (240-11217-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)
Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), MW31D-051012 (240-11217-4), MW18I-051012 (240-11217-5), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/16/2012 and 05/21/2012 and analyzed on 05/17/2012 and 05/22/2012.

The following samples were diluted due to the nature of the sample matrix: DMW2S-051012 (240-11217-6), MW18I-051012 (240-11217-5). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)
Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), MW31D-051012 (240-11217-4), MW18I-051012 (240-11217-5), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/16/2012 and 05/18/2012 and analyzed on 05/17/2012 and 05/21/2012.

Several analytes were detected in method blank MB 240-44254/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes were detected in method blank MB 240-44621/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes were detected in method blank MB 240-44713/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

The following samples were diluted due to the nature of the sample matrix: DMW2S-051012 (240-11217-6), MW18I-051012 (240-11217-5). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY
Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), MW31D-051012 (240-11217-4), MW18I-051012 (240-11217-5), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/16/2012 and analyzed on 05/17/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY
Samples MW18S-051012 (240-11217-2), DMW10S-051012 (240-11217-3), MW31D-051012 (240-11217-4), MW18I-051012 (240-11217-5), DMW2S-051012 (240-11217-6) and DMW1S-051012 (240-11217-7) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/16/2012 and analyzed on 05/17/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL DISSOLVED SOLIDS

Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for total dissolved solids in accordance with EPA Method 160.1. The samples were analyzed on 05/17/2012.

Samples MW18S-051012 (240-11217-2)[4X] and MW18I-051012 (240-11217-5)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the TDS analyses. All quality control parameters were within the acceptance limits.

ANIONS

Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for anions in accordance with EPA Method 300.0. The samples were analyzed on 05/11/2012 and 05/21/2012.

Orthophosphate failed the recovery criteria high for the MS/MSD of sample 240-11142-1 in batch 240-43653.

The following sample analyzed for nitrite was diluted due to interference from a neighboring chloride peak: MW18S-051012 (240-11217-2). Elevated reporting limits (RLs) are provided.

Samples MW18S-051012 (240-11217-2)[10X], MW18S-051012 (240-11217-2)[20X] and MW18I-051012 (240-11217-5)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the anions analyses. All quality control parameters were within the acceptance limits.

ALKALINITY

Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for alkalinity in accordance with EPA Method 310.1. The samples were analyzed on 05/15/2012.

Alkalinity was detected in method blank MB 240-44227/36 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the alkalinity analyses. All other quality control parameters were within the acceptance limits.

AMMONIA

Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for ammonia in accordance with EPA Method 350.3. The samples were analyzed on 05/22/2012.

Samples MW18S-051012 (240-11217-2)[10X] and MW18I-051012 (240-11217-5)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the ammonia analyses. All quality control parameters were within the acceptance limits.

DISSOLVED ORGANIC CARBON

Samples MW18S-051012 (240-11217-2) and MW18I-051012 (240-11217-5) were analyzed for dissolved organic carbon in accordance with EPA SW-846 Method 9060. The samples were analyzed on 05/29/2012.

No difficulties were encountered during the DOC analyses. All quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Case Narrative

TestAmerica West Sacramento Project Number G2E120412

General Comments
Sample 240-11217-6 was received but was not listed on the chain of custody. This sample was analyzed by method 6850.

WATER, 6850, Perchlorate
Sample(s): 1, 2, 3, 3, 3, 4, 5, 6
In accordance with the requirements of Method 6850, both a Laboratory Control Sample (LCS) and a Synthetic Matrix Check Sample (SMCS) were analyzed with the associated samples. Both are reported on the LCS data evaluation and recovery reports, and are differentiated from one another by their workorder number:

LCS: MTMH41AC
SMCS: MTMH41AD

WATER, 8330/8330A, RDX
Sample(s): 1
There was insufficient sample volume to prepare a matrix spike/matrix spike duplicate (MS/MSD) pair with this batch.

There were no other anomalies associated with this project.

Notes(s):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity, pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

GC/HPLC ICAL Checklist

Instrument ID: LC10 ICAL ID: 04192012C Method: 8330A/B

Analytes Included in curve (with dates): 8330 All + NG, PETN, 3,5DNA + EGDN

A. Included Sections of ICAL	Analyst	Reviewer	N/A
1. ICAL Summary included (for both columns if applicable).	✓	✓	
2. ICAL Runlog included.	✓	✓	
3. ICAL's are in chronological order.	✓	✓	
4. PEM meets requirements and is included for 8081.			✓
5. Alkane Marker included for 8015 TPH.			✓
6. ICAL Raw Data included for all analytes.	✓	✓	
B. ICAL Summary			
1. All analytes meet %RSD or linear regression requirements.	✓	✓	
2. ICAL meets requirements stated in SOP.	✓	✓	
2. Any levels dropped are reviewed and appropriate.			✓
3. All analytes in ICAL are in the ICAL summary.	✓	✓	
4. RFs are calculated correctly. Perform Manual calculation.	✓	✓	
C. ICAL Analysis			
1. Manual Integrations reviewed and appropriate.			✓
2. All peaks correctly identified.	✓	✓	
3. No analytes have saturated peaks.	✓	✓	
4. RT windows set correctly (8015 TPH).			✓
5. ICV meets requirements and is run after the ICAL.	✓	✓	
6. Standards used in ICAL are current.	✓	✓	
7. ICAL is copied to source method.	✓	✓	

Curve Valid for:	Yes	No	Criteria
Standard SOP	✓		RSD ≤20%, r≥ 0.995 (intercept <1/2RL for 8081,8082, NQ, 8310) and (<RL for 8330) and r>0.990 (intercept <RL for 8015), ICV≤15%, PEM ≤15%
DOD QSM V3	✓		RSD ≤20%, r≥ 0.995, ICV≤20%, PEM ≤15%
AFCEE 3.1	✓		RSD ≤20%, r≥ 0.995, ICV≤15%, PEM ≤15%
AFCEE 4.0	✓		RSD ≤20%, r≥ 0.995, ICV≤20% (8081, 8082, 8015) and ICV≤25% (8330,8310), PEM ≤15%

Analyst: [signature] Date: 4/20/12

Reviewer: [signature] Date: 4/23/12

Comments:
MRL for EGDN was analyzed after samples had already been analyzed. As MRLs were passing + S/N was greater than 5:1 on ICAL and on RL level analyzed after samples there is no further action.

CLIENT		JOB NUMBER	
Lockheed-MSA		SDG 240-11217-1	
SUBJECT	Sample Calculation		
BASED ON		DRAWING NUMBER	
BY	CHECKED BY	APPROVED BY	DATE
Ann Cognetta			June 20, 2012

I. VOC; Sample MW18I-051012; Trichloroethene

$$\frac{1536018}{1626937} * 333.33 * \frac{10\ ug/L}{0.2745} = 11,464.6\ ug/L$$

II. SVOC; Sample MW18S-051012; 1,4-dioxane

$$\frac{382109}{229229} * 2 * \frac{4\ ng/uL}{0.5688} * \frac{2mL}{1030mL} * 1000 = 45.5\ ug/L$$

III. GRO; Sample DMW2S-051012

$$\frac{153371983}{350359.609} * 5 = 2188.8\ ug/L$$

IV. OVG; Sample MW18S-051012; Methane

$$\frac{2708362}{1492 6.0108} = 181.5\ ug/L$$

V DRO; Sample DMW 10S-051012

$$\frac{23029176}{186\ 529.226} * \frac{5mL}{990mL} * 1000 = 623.3\ ug/L$$

Overview

The sample set for Martin State Airport Groundwater Sampling, SDG 240-11319-1 consists of six (6) aqueous environmental samples and one trip blank. All samples were analyzed for volatile organic compounds (VOCs). Four (4) aqueous environmental samples were analyzed for 1,4-dioxane in the semivolatile organic compound (SVOC) SIM fraction and perchlorate. Two (2) aqueous environmental samples; MSA-DMW3S-051412 and MSA-MW5-051412 were analyzed for diesel range organics (DRO) and the explosive (EXP), RDX. One (1) aqueous environmental sample was analyzed for gasoline range organics (GRO). GRO is listed on the form 1s and EDD as total petroleum hydrocarbons (TPH) (C6-C10) and DRO as TPH (C10-C32). One (1) aqueous environmental sample, MSA-DMW3S-051412, was analyzed for haloacetic acids (HAA). There are no field duplicate pairs included in this SDG.

The samples were collected on May 14, 2012 and analyzed by Test America Laboratories, Inc. Volatile organic compound analyses were conducted in accordance to SW-846 Method 8260B. The analyses for 1,4-dioxane followed SW-846 Method 8270C in Selective Ion Monitoring SIM mode. GRO and DRO analyses followed SW-846 Method 8015B. The analyses for RDX followed SW-846 Method 8330 and perchlorate 6850 reporting protocol. The analysis for HAA followed EPA Method 552.2.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- In the volatile initial calibration of instrument A3UX16 on May 9, 2012 and the continuing calibration on May 25, 2012 @ 11:36, tert-butyl alcohol and vinyl acetate had a relative response factor (RRF) less than the 0.05 quality control limit. The nondetected vinyl acetate and tert-butyl alcohol results were qualified as rejected (UR) in the affected samples.

- Sample MSA-DMW3D-051412 contained Tentatively Identified Compounds (TICs) containing silanol or siloxanes. These compounds were qualified as rejected (R) because they are indictative of column bleed.

Minor Problems

- The continuing calibration percent differences (%Ds) for bromomethane and chloroethane were greater than 50% on May 25, 2012 @ 11:36 on instrument A3UX16. The nondetected bromomethane and chloroethane results were qualified as estimated (UJ) in the affected samples.

- GRO was detected in the laboratory method blank 240-44711/22.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
GRO	27.4	137.0

An action level of 5X the maximum concentration level has been used in order to evaluate sample data for blank contamination. Positive results less than the action level were qualified (B) as a result of blank contamination. Sample aliquot and dilution factors were taken into account in validation of the data.

- DRO was detected in the laboratory method blank 240-44281/17-A.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
DRO	417	2085

An action level of 5X the maximum concentration level has been used in order to evaluate sample data for blank contamination. Positive results less than the action level were qualified (B) as a result of blank contamination. Sample aliquot and dilution factors were taken into account in validation of the data.

- TICs were qualified as presumptively present (NJ) in several samples.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Sample MSA-DMW3S-051412 was marked on the chain of custody to be analyzed for GRO. According to the case narrative, there was insufficient volume for analysis. The sample was re-sampled. The GRO results were not reported in this SDG.

The continuing calibration %Ds for 1,1,2-trichlorotrifluoroethane, tetrachloroethane and ethyl- tert-butyl ether were greater than the 20% quality control limit and less than 50% on May 25, 2012 @ 11:36 and 11:59 on instrument A3UX16. No action was taken on the nondetected 1,1,2-trichlorotrifluoroethane, tetrachloroethane and ethyl- tert-butyl ether results in the affected samples.

The laboratory control sample (LCS) percent recovery (%R) of tetrachloroethane was greater than the upper quality control limit in batch 240-45325/4. No action was taken on the nondetected tetrachloroethane results in the affected samples.

The relative percent difference (RPD) for 1,4-dioxane was greater than the quality control limit in the matrix spike/matrix spike duplicate of sample 240-11354-AR-2-A. No action was taken because the %Rs of 1,4-dioxane were within quality control limits.

The following sample were diluted resulting in elevated reporting limits.

Sample	Dilution Factor
MSA-DMW3I-051412	333.3X VOC, 10X SVOC
MSA-DMW3S-051412	166.67X VOC, 5X SVOC
MSA-MW5-051412-25	100X VOC
MSA-MW5-051412-31	100X VOC
MSA-MW5-051412-37	90.9X VOC
MSA-MW5-051412	5X GRO

Nondetected results were reported to the MDL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Tert-butyl alcohol and vinyl acetate had RRFs less than quality control limits in the initial and continuing calibrations. GRO and DRO were detected in the laboratory method blanks. The continuing calibration %Ds for bromomethane and chloroethane were greater than 50%.

Other Factors Affecting Data Quality: TICs were detected in several samples.

The data for these analyses were reviewed with reference to the Region III EPA Functional Guidelines for Organic Data Validation (9/94). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

Support Documentation

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater

Report Number: 240-11319-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate and Explosives - RDX analyses were performed at the TestAmerica West Sacramento Laboratory. The Total Alpha Radium and Radium 228 analyses were performed at the TestAmerica Richland Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/15/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.0, 3.4, and 4.6 C.

Insufficient volume was received to perform the GRO analysis requested on the COC for the following sample: 240-11319-6. The GRO analysis was not logged. The client was contacted and the sample was recollected for this analysis. Results for the GRO on this sample are included on a different report.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples MSA-MW5-051412-37 (240-11319-2), MSA-MW5-051412-31 (240-11319-3), MSA-MW5-051412-25 (240-11319-4), TB-051412 (240-11319-5), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/25/2012.

The laboratory control sample (LCS) for batch 45325 exceeded control limits for the following analytes: Tetrachloroethene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

Samples MSA-MW5-051412-37 (240-11319-2)[90.9X], MSA-MW5-051412-31 (240-11319-3)[100X], MSA-MW5-051412-25 (240-11319-4)[100X], MSA-DMW3S-051412 (240-11319-6)[166.67X] and MSA-DMW3I-051412 (240-11319-7)[333.33X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for 1,1,2-Trichloro-1,2,2-trifluoroethane and Tetrachloroethene associated with batch 45325 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 45325 recovered below the lower control limitfor Bromomethane and Cloroethane. The samples associated with this CCV were non-detects for the affected analytes. A low level CCV, at the reporting limit, was analyzed and the affected compounds were detected; therefore the data is acceptable and reportable per the laboratory Standard Operating Procedure.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/19/2012 and analyzed on 05/23/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Nitrobenzene-d5 (Surr) and Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for 240-11354-AS-2-A MS.

1,4-Dioxane exceeded the rpd limit for the MSD of sample 240-11354-2 in batch 240-44986.

Refer to the QC report for details.

Samples MSA-DMW3S-051412 (240-11319-6)[5X] and MSA-DMW3I-051412 (240-11319-7)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Sample MSA-MW5-051412 (240-11319-1) was analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/22/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-44711/22 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Sample MSA-MW5-051412 (240-11319-1)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the GRO analysis. All other quality control parameters were within the acceptance limits.

HALOACETIC ACIDS (HAAS)
Sample MSA-DMW3S-051412 (240-11319-6) was analyzed for Haloacetic Acids (HAAs) in accordance with EPA Method 552.2. The samples were prepared and analyzed on 05/17/2012.

No difficulties were encountered during the haloacetic acids analysis. All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Samples MSA-MW5-051412 (240-11319-1) and MSA-DMW3S-051412 (240-11319-6) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/16/2012 and analyzed on 05/18/2012 and 05/19/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Total Petroleum Hydrocarbons (C10-C32) was detected in method blank MB 240-44281/17-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 44281.

No other difficulties were encountered during the DRO analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)
Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/18/2012 and analyzed on 05/21/2012.

No difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)
Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method

6020. The samples were prepared on 05/18/2012 and analyzed on 05/21/2012.

Several analytes were detected in method blank MB 240-44621/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY

Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/16/2012 and 05/21/2012 and analyzed on 05/17/2012 and 05/22/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/16/2012 and analyzed on 05/17/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Case Narrative

TestAmerica West Sacramento Project Number G2E160436

WATER, 6850, Perchlorate
Sample(s): 1, 2, 3, 4
In accordance with the requirements of Method 6850, both a Laboratory Control Sample (LCS) and a Synthetic Matrix Check Sample (SMCS) were analyzed with the associated samples. Both are reported on the LCS data evaluation and recovery reports, and are differentiated from one another by their workorder number:

LCS: MTP6G1AC
SMCS: MTP6G1AD

WATER, 8330/8330A, RDX
Sample(s): 1, 2
There was insufficient sample volume to prepare a matrix spike/matrix spike duplicate (MS/MSD) pair with this batch.

There were no other anomalies associated with this project.

Notes(s):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity, pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

ANALYTICAL METHODS SUMMARY

G2E160436

PARAMETER	ANALYTICAL METHOD
Nitroaromatics and Nitramines by HPLC	SW846 8330/8330A
Perchlorate by 6850	SW846 6850

GC/HPLC ICAL Checklist

Instrument ID: LC10 ICAL ID: 04192012C Method: 8330A/B

Analytes Included in curve (with dates): 8330 All + NG, PETN, 3,5DNA + EGDN

A. Included Sections of ICAL	Analyst	Reviewer	N/A
1. ICAL Summary included (for both columns if applicable).	✓	✓	
2. ICAL Runlog included.	✓	✓	
3. ICAL's are in chronological order.	✓	✓	
4. PEM meets requirements and is included for 8081.			✓
5. Alkane Marker included for 8015 TPH.			✓
6. ICAL Raw Data included for all analytes.	✓	✓	
B. ICAL Summary			
1. All analytes meet %RSD or linear regression requirements.	✓	✓	
2. ICAL meets requirements stated in SOP.	✓	✓	
2. Any levels dropped are reviewed and appropriate.			✓
3. All analytes in ICAL are in the ICAL summary.	✓	✓	
4. RFs are calculated correctly. Perform Manual calculation.	✓	✓	
C. ICAL Analysis			
1. Manual Integrations reviewed and appropriate.			✓
2. All peaks correctly identified.	✓	✓	
3. No analytes have saturated peaks.	✓	✓	
4. RT windows set correctly (8015 TPH).			✓
5. ICV meets requirements and is run after the ICAL.	✓	✓	
6. Standards used in ICAL are current.	✓	✓	
7. ICAL is copied to source method.	✓	✓	

Curve Valid for:	Yes	No	Criteria
Standard SOP	✓		RSD ≤20%, r≥ 0.995 (intercept <1/2RL for 8081,8082, NQ, 8310) and (<RL for 8330) and r>0.990 (intercept <RL for 8015), ICV≤15%, PEM ≤15%
DOD QSM V3	✓		RSD ≤20%, r≥ 0.995, ICV≤20%, PEM ≤15%
AFCEE 3.1	✓		RSD ≤20%, r≥ 0.995, ICV≤15%, PEM ≤15%
AFCEE 4.0	✓		RSD ≤20%, r≥ 0.995, ICV≤20% (8081, 8082, 8015) and ICV≤25% (8330,8310), PEM ≤15%

Analyst: [signature] Date: 4/20/12

Reviewer: [signature] Date: 4/23/12

Comments:
MRL for EGDN was analyzed after samples had already been analyzed. As RPDs were passing + S/N was greater than 5:1 on ICAL and on RL Verif analyzed after samples there is no further action.

SUBJECT: **INORGANIC DATA VALIDATION – SELECT TOTAL AND DISSOLVED METALS, TOTAL RADIUM, RADIUM-228**
MARTIN STATE AIRPORT – GROUNDWATER
SAMPLE DELIVERY GROUP (SDG) – 240-11319-1

SAMPLES: 4/Aqueous/

MSA-DMW3D-051412	MSA-DMW3I-051412
MSA-DMW3S-051412	MSA-MW5-051412

Overview

The sample set for Martin State Airport – Groundwater, SDG 240-11319-1, consists of four (4) aqueous environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for select total and dissolved metals including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, tungsten, vanadium and zinc. Samples MSA-DMW3D-051412 and MSA-DMW3I-051412 were also analyzed for Total Radium and Radium-228. The samples were collected by Tetra Tech on May 14, 2012 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7470A. Radium analyses were conducted using EPA methods 903.0 and 904.0.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike / matrix spike duplicate recoveries, laboratory duplicate results, ICP serial dilution results, internal standard recoveries, yield recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The contract required detection limit (CRDL) percent recovery for lead was > 110% quality control limit affecting all samples. The positive results < 2X CRDL for lead were qualified biased high, "K", or "J", as a result of conflicting noncompliances.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Molybdenum[(1)]	0.467 ug/L	2.335 ug/L
Thallium[(1)]	0.223 ug/L	1.115 ug/L
Tungsten[(1)]	0.479 ug/L	2.395 ug/L
Mercury[(2)]	0.148 ug/L	0.74 ug/L
Barium[(3)]	1.17 ug/L	5.85 ug/L
Copper[(3)]	0.560 ug/L	2.8 ug/L
Zinc[(3)]	14.7 ug/L	73.5 ug/L

(1) Maximum concentration present in a method blank.
(2) Maximum concentration present in a method blank affecting all samples except MSA-DMW3D-051412 (dissolved).
(3) Maximum concentration present in a preparation blank.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for copper, mercury, molybdenum, thallium and zinc were qualified "B" as a result of laboratory blank contamination.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated, "J".

Notes

Nondetected results were reported to the MDL.

The uncertainty for the radium results are reported at 2–sigma (95% confidence). The EDD does not contain the uncertainty result.

Total Radium is a combination of Radium-226 and Radium-224.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method / preparation blanks.

Other Factors Affecting Data Quality: Positive results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

APPENDIX C
SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater

Report Number: 240-11319-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate and Explosives - RDX analyses were performed at the TestAmerica West Sacramento Laboratory. The Total Alpha Radium and Radium 228 analyses were performed at the TestAmerica Richland Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/15/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.0, 3.4, and 4.6 C.

Insufficient volume was received to perform the GRO analysis requested on the COC for the following sample: 240-11319-6. The GRO analysis was not logged. The client was contacted and the sample was recollected for this analysis. Results for the GRO on this sample are included on a different report.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples MSA-MW5-051412-37 (240-11319-2), MSA-MW5-051412-31 (240-11319-3), MSA-MW5-051412-25 (240-11319-4), TB-051412 (240-11319-5), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/25/2012.

The laboratory control sample (LCS) for batch 45325 exceeded control limits for the following analytes: Tetrachloroethene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

Samples MSA-MW5-051412-37 (240-11319-2)[90.9X], MSA-MW5-051412-31 (240-11319-3)[100X], MSA-MW5-051412-25 (240-11319-4)[100X], MSA-DMW3S-051412 (240-11319-6)[166.67X] and MSA-DMW3I-051412 (240-11319-7)[333.33X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for 1,1,2-Trichloro-1,2,2-trifluoroethane and Tetrachloroethene associated with batch 45325 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 45325 recovered below the lower control limitfor Bromomethane and Cloroethane. The samples associated with this CCV were non-detects for the affected analytes. A low level CCV, at the reporting limit, was analyzed and the affected compounds were detected; therefore the data is acceptable and reportable per the laboratory Standard Operating Procedure.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/19/2012 and analyzed on 05/23/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Nitrobenzene-d5 (Surr) and Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for 240-11354-AS-2-A MS.

1,4-Dioxane exceeded the rpd limit for the MSD of sample 240-11354-2 in batch 240-44986.

Refer to the QC report for details.

Samples MSA-DMW3S-051412 (240-11319-6)[5X] and MSA-DMW3I-051412 (240-11319-7)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Sample MSA-MW5-051412 (240-11319-1) was analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/22/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-44711/22 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Sample MSA-MW5-051412 (240-11319-1)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the GRO analysis. All other quality control parameters were within the acceptance limits.

HALOACETIC ACIDS (HAAS)
Sample MSA-DMW3S-051412 (240-11319-6) was analyzed for Haloacetic Acids (HAAs) in accordance with EPA Method 552.2. The samples were prepared and analyzed on 05/17/2012.

No difficulties were encountered during the haloacetic acids analysis. All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Samples MSA-MW5-051412 (240-11319-1) and MSA-DMW3S-051412 (240-11319-6) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/16/2012 and analyzed on 05/18/2012 and 05/19/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Total Petroleum Hydrocarbons (C10-C32) was detected in method blank MB 240-44281/17-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 44281.

No other difficulties were encountered during the DRO analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)
Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/18/2012 and analyzed on 05/21/2012.

No difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)
Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method

6020. The samples were prepared on 05/18/2012 and analyzed on 05/21/2012.

Several analytes were detected in method blank MB 240-44621/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY

Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/16/2012 and 05/21/2012 and analyzed on 05/17/2012 and 05/22/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MSA-MW5-051412 (240-11319-1), MSA-DMW3S-051412 (240-11319-6), MSA-DMW3I-051412 (240-11319-7) and MSA-DMW3D-051412 (240-11319-8) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/16/2012 and analyzed on 05/17/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Certificate of Analysis

June 12, 2012

TestAmerica Laboratory North Canton
4101 Shuffel Drive NW
North Canton, OH 44720

Attention: Pat O'Meara

Date Received	:	May 16, 2012
Sample Number/Matrix	:	Two (2) Waters
SDG Number	:	45009
Project Name	:	MSA Groundwater Sampling
Job Number	:	240-11319-1

CASE NARRATIVE

I. Introduction

On May 16, 2012, two water samples were received at the TestAmerica Richland laboratory for radiochemical analysis. Upon receipt, the samples were assigned the TestAmerica identification numbers as described on the cover page of the Analytical Data Package. The samples were assigned to Lot Number J2E160478.

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information; analytical results and the appropriate associated statistical uncertainties.

The requested analyses were:

Gas Proportional Counting
Radium-226 by method RL-RA-002
Radium-228 by method RL-RA-001

IV. Quality Control

The analytical result for each analysis performed includes a minimum of one laboratory control sample (LCS), and one reagent blank sample analysis. Any exceptions have been noted in the "Comments" section.

V. Comments

Gas Proportional Counting

Radium-226 by method RL-RA-002:
The final precipitate weight for sample MSA-DMW3D-051412 (240-11319-8) exceeded acceptance criteria in batch 2142059. The sample was successfully reanalyzed in batch 2157047. In addition, the LCS recovery for batch 2142059 was below acceptance criteria at 72%. The batch was recounted for an acceptable final LCS recovery of 80%. Except as previously noted, the LCS, batch blank, sample, and sample duplicate results are within acceptance limits.

Radium-228 by method RL-RA-001:
The LCS, batch blank, sample, and sample duplicate results are within acceptance limits.

I certify that this Certificate of Analysis is in compliance with the SOW and/or NELAC, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Date Closed:

Classification: **Deficiency**
Status: **PMREVIEW**
Production Area: Environmental - Sep
Tests: RaTot by GPC
Lot #'s (Sample #'s): J2E160462 (1,2,3), J2E160478 (1,2), J2E210000 (59),
QC Batches: 2142059,

Nonconformance: Batch Result Out of Limits
Subcategory: LCS result outside acceptance limits

Problem Description / Root Cause

Name	Date	Description
Tom Mcginnis	06/11/2012	The final precipitate weight for sample J2E160478-2 exceeded acceptance criteria. The sample was successfully reanalyzed in batch 2147047. The LCS recovery (72%) for batch 2142059 was below acceptance criteria. The entire batch was recounted. The final LCS recovery (80%) as well as all other batch results meet acceptance criteria.

Corrective Action

Name	Date	Corrective Action
Tom Mcginnis	06/11/2012	The PM was notified of the batch deficiencies.

Uncertainty Estimation

TestAmerica Richland has adopted the internationally accepted approach to estimating uncertainties described in "NIST Technical Note 1297, 1994 Edition". The approach, "Law of Propagation of Errors", involves the identification of all variables in an analytical method which are used to derive a result. These variables are related to the analytical result (R) by some functional relationship, R = constants * f(x,y,z,...). The components (x,y,z) are evaluated to determine their contribution to the overall method uncertainty. The individual component uncertainties (u_i) are then combined using a statistical model that provides the most probable overall uncertainty value. All component uncertainties are categorized as type A, evaluated by statistical methods, or type B, evaluated by other means. Uncertainties not included in the components, such as sample homogeneity, are combined with the component uncertainty as the square root of the sum-of-the-squares of the individual uncertainties. The uncertainty associated with the derived result is the combined uncertainty (u_c) multiplied by the coverage factor (1,2, or 3).

When three or more sample replicates are used to derive the analytical result, the type A uncertainty is the standard deviation of the mean value (S/?n), where S is the standard deviation of the derived results. The type B uncertainties are all other random or non-random components that are not included in the standard deviation.

The derivation of the general "Law of Propagation of Errors" equations and specific example are available on request.

SUBJECT: **ORGANIC AND INORGANIC DATA VALIDATION- VOC / SVOC / METALS MIDDLE RIVER COMPLEX GROUNDWATER SAMPLING – FULL REVIEW SAMPLE DELIVERY GROUP (SDG) 240-11568-1**

SAMPLES: 2/Aqueous/VOC

MRC-MW08B-052212 TB-052212

1/Aqueous/SVOC /Metals

MRC-MW08B-052212

Overview

The sample set for Middle River Complex Groundwater Sampling, SDG 240-11568-1 consists of one (1) aqueous environmental samples and a trip blank. All samples were analyzed for volatile organic compounds (VOCs). One (1) aqueous environmental sample was analyzed for semivolatile organic compounds (SVOCs) and total and dissolved metals. There are no field duplicate pairs included in this SDG.

The samples were collected on May 22, 2012 and analyzed by Test America Laboratories, Inc. Volatile organic compound analyses were conducted in accordance to SW-846 Method 8260B. The analyses for SVOCs followed SW-846 Method 8270D. Metal analyses followed SW-846 Method 6020A and mercury 7470A.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, serial dilution, compound identification, chromatographic resolution, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- In the volatile initial calibration of instrument A3UX15 on April 29, 2012 and the continuing calibration on May 31, 2012 @ 10:09, tert-butyl alcohol had a relative response factor (RRF) less than the 0.05 quality control limit. In the initial calibration on April 29, 2012, vinyl acetate also had a RRF less than the 0.05 quality control limit. The nondetected vinyl acetate and tert-butyl alcohol results were qualified as rejected (UR) in the affected samples.

- MRC-MW08B-052212 contained Tentatively Identified Compounds (TICs) containing silanol or siloxanes. These compounds were qualified as rejected (R) because they are indictative of column bleed.

Minor Problems

- The initial calibration relative standard deviations (%RSDs) for 4-bromophenyl phenyl ether, 3,3'-dichlorobenzidine, benzo(b)fluoranthene, and dibenzo(a,h)anthracene were greater than the 15% quality control limit and 50%. The nondetected 4-bromophenyl phenyl ether, 3,3'-dichlorobenzidine, benzo(b)fluoranthene, and dibenzo(a,h)anthracene results were qualified as estimated (UJ).

- The laboratory control sample (LCS) percent recovery (%R) of 4,6-dinitro-2-methylphenol was less than the lower quality control limit in batch 240-45149/15. The nondetected 4,6-dinitro-2-methylphenol result was qualified as biased low (UL) in sample MRC-MW08B-052212.

- The CRQL %Rs of chromium were less than 90% in CRI-240-45845/9 and CRI-240-45945/25, The total chromium result was qualified as estimated (J) due to conflicting directional bias in sample MRC-MW08B-052212. The nondetected dissolved chromium result was qualified as biased low (UL) in sample MRC-MW08B-052212. In addition, the CRQL %R of zinc was greater than 110% in sample CRI 240-45845/25. No action was taken because the positive zinc results were qualified due to blank contamination.

- The CRQL %R of mercury was less than 80% in CRA 240-46141/9. The total and dissolved nondetected mercury results were qualified as biased low (UL) in sample MRC-MW08B-052212.

- Contamination was detected in the continuing calibration and method blanks for metals.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Barium [(1)]	0.728	3.64
Copper [(1)]	0.421	2.11
Molybdenum [(2)]	0.748	3.74
Zinc [(1)]	11.3	56.5
Thallium [(2)]	0.414	2.07

(1) Maximum concentration detected in laboratory method blank 240-45614/1.
(2) Maximum concentration detected in the continuing calibration blank (CCB) 240-45845/15 analyzed on May 31, 2012 @ 7:40.
(3) Maximum concentration detected in the CCB analyzed on May 31, 2012 @ 8:37.

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were taken into account when applying the action level. Positive results less than the action level were qualified as (B) due to blank contamination.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

The continuing calibration percent differences (%Ds) for chloroethane, 1,1,2,-trichlorotrifluoroethane, acetone, 2-chloroethyl vinyl ether, 2-hexanone, 1,2,4-trichlorobenzene, hexachlorobutadiene, and 1,2,3-trichlorobenzene were greater than the 20% quality control limit and less than 50% on May 31, 2012 @ 10:09 on instrument A3UX15. No action was taken on the nondetected chloroethane, 1,1,2,-trichlorotrifluoroethane, acetone, 2-chloroethyl vinyl ether, 2-hexanone, 1,2,4-trichlorobenzene,

hexachlorobutadiene, and 1,2,3-trichlorobenzene results.

The matrix spike/ matrix spike duplicate (MS/MSD) %Rs of 2-hexanone were greater than the upper quality control limit in sample 240-11548-B-2. In addition, the MSD %Rs of tert-butyl alcohol, m&p xylenes and total xylenes were greater than the upper quality control limit. No action taken because this is not a sample in this SDG.

Nondetected results were reported to the MDL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Tert-butyl alcohol and vinyl acetate had RRFs less than quality control limits in the initial and continuing calibrations. The initial calibration %RSDs for several SVOCs exceeded quality control limits. The LCS %R of 4,6-dinitro-2-methylphenol was less than the lower quality control limit. The CRQL %Rs of chromium were less than 90%. The CRQL %R of mercury was less than 80%. Contamination was detected in the metals fraction.

Other Factors Affecting Data Quality: TICs were detected.

The data for these analyses were reviewed with reference to the Region III EPA Functional Guidelines for Organic Data Validation (9/94)and Region III EPA Functional Guidelines for Inorganic Data Validation (April 1993). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

Support Documentation

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MRC 2012 GW

Report Number: 240-11568-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/23/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 1.3 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples TB-052212 (240-11568-1) and MRC-MW08B-052212 (240-11568-2) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 05/31/2012.

2-Hexanone failed the recovery criteria high for the MS of sample 240-11548-2 in batch 240-45839. 2-Hexanone, m-Xylene & p-Xylene, tert-Butyl alcohol and Xylenes, Total failed the recovery criteria high for the MSD of sample 240-11548-2 in batch 240-45839.

Refer to the QC report for details.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample MRC-MW08B-052212 (240-11568-2) was analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/24/2012 and analyzed on 05/30/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

4,6-Dinitro-2-methylphenol failed the recovery criteria low for LCS 240-45149/15-A. Refer to the QC report for details.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Sample MRC-MW08B-052212 (240-11568-2) was analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Methods 6020A. The samples were prepared on 05/30/2012 and analyzed on 05/31/2012.

No difficulties were encountered during the metals analysis. All quality control parameters were within the acceptance limits.

METALS (ICPMS)
Sample MRC-MW08B-052212 (240-11568-2) was analyzed for metals (ICPMS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 05/30/2012 and analyzed on 05/31/2012.

Several analytes were detected in method blank MB 240-45614/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY
Sample MRC-MW08B-052212 (240-11568-2) was analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/29/2012 and analyzed on 06/05/2012.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

TOTAL MERCURY
Sample MRC-MW08B-052212 (240-11568-2) was analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/29/2012 and analyzed on 06/05/2012.

Mercury was detected in method blank MB 240-45395/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the mercury analysis. All other quality control parameters were within the acceptance limits.

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity _____ Yes (No)
   -Were custody seals on the outside of the cooler(s) signed & dated? Yes No (NA)
   -Were custody seals on the bottle(s)? Yes (No)
3. Shippers' packing slip attached to the cooler(s)? (Yes) No
4. Did custody papers accompany the sample(s)? (Yes) No
5. Were the custody papers relinquished & signed in the appropriate place? (Yes) No
6. Did all bottles arrive in good condition (Unbroken)? (Yes) No
7. Could all bottle labels be reconciled with the COC? (Yes) No
8. Were correct bottle(s) used for the test(s) indicated? (Yes) No
9. Sufficient quantity received to perform indicated analyses? (Yes) No
10. Were sample(s) at the correct pH upon receipt? (Yes) No NA
11. Were VOAs on the COC? (Yes) No
12. Were air bubbles >6 mm in any VOA vials? Yes (No) NA
13. Was a trip blank present in the cooler(s)? (Yes) No

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other

Concerning _____

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.

Sample(s) _____ were received in a broken container.

Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in Sample Receiving to meet recommended pH level(s). Nitric Acid Lot# 110410-HNO3; Sulfuric Acid Lot# 041911-H2SO4; Sodium Hydroxide Lot# 121809 - NaOH; Hydrochloric Acid Lot# 041911-HCl; Sodium Hydroxide and Zinc Acetate Lot# 100108-(CH3COO)2ZN/NaOH. What time was preservative added to sample(s)? _____

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

TestAmerica ICP/MS Data Review Checklist

Run Date: 5-31-12 Analyst: Kam Instrument: I8

Review Items

A. Tune/Daily performance	Yes	No	N/A	2nd Level
1. Resolution </= 0.9 AMU full width at 10% peak height, and within +/- 0.1 AMU of true mass?	✓			✓
2. Performance check within recommended specifications? (Be>8000cps) (In >300,000 cps) (Pb >100,000 cps) (Co>100000) (Mg>10000) (CeO/Ce<0.03) (Ba++/Ba<0.03) (Background < 30cps @ Mass 220) CCT Performance Check (In > 75000) (Se< 20 cps)	✓			✓
B. Calibration/Instrument Run QC				
1. Instrument calibrated per manufacturer's instructions and at SOP specified levels? Correlation coefficient > 0.995?	✓			✓
1. ICV/CCV analyzed at appropriate frequency and within control limits? (*ICV:* = 90 – 110%) (*CCV:* 90 – 110%, 200.8 = 85 -115%)	✓			✓
2. ICB/CCB analyzed at appropriate frequency and within +/- RL?	✓			✓
3. CRI run and recovered within QC limits (+/-50%) or project limits?	✓			✓
4. ICSA/ICSAB run at required frequency and within SOP control limits?	✓			✓
C. Sample Results				
1. Were samples with concentrations > the linear range for any parameter diluted and reanalyzed?	✓			✓
2. All reported results bracketed by in control QC?	✓			✓
3. Were the internal standards within acceptance criteria for all results reported?	✓			✓
4. Sample analyses done within holding time?	✓			✓
D. Preparation/Matrix QC				
1. LCS done per prep batch and within QC limits?	✓			✓
2. Method blank done per prep batch and < RL?	✓			✓
3. MS run at required frequency and within limits?	✓			✓
4. MSD or DU run at required frequency and RPD within SOP limits?	✓			✓
5. Serial dilution done per prep batch?	✓			✓
6. Post digest spike analyzed if required?	✓			✓
E. Other				
1. Are all nonconformance's documented appropriately?	✓			✓
2. Current IDL/LR data on file?	✓			✓
3. Calculations checked for error?	✓			✓
4. Transcriptions checked for error?	✓			✓
5. All client/project specific requirements met?	✓			✓
6. Date/time of analysis verified as correct?	✓			✓

SUBJECT: **INORGANIC DATA VALIDATION – HEXAVALENT CHROMIUM**
MARTIN STATE AIRPORT – SURFACE WATER
SAMPLE DELIVERY GROUP (SDG) – R1202455

SAMPLES: 4/Aqueous/

MSA-MW15D-041812	MSA-MW15I-041812
MSA-MW15S-041812	MSA-MW38S-041812

Overview

The sample set for Martin State Airport – Surface Water, SDG R1202455, consists of four (4) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 18, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated, "J".

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: Positive results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

APPENDIX C
SUPPORT DOCUMENTATION

April 23, 2012

Service Request No: R1202455

Ms. Samantha Brenner
Tetra Tech NUS,Inc.
20251 Century Blvd. Ste. 200
Germantown, MD 20874-7114

Laboratory Results for: MSA Groundwater/112IC04021 - 02

Dear Ms. Brenner:

Enclosed are the results of the sample(s) submitted to our laboratory on April 19, 2012. For your reference, these analyses have been assigned our service request number **R1202455**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at MPerry@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Michael Perry

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/18/12 and received at CAS in good condition at a cooler temperature of 2.7 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Four water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Surface Water, SDG R1202486, consists of five (5) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 19, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems – None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

APPENDIX C
SUPPORT DOCUMENTATION

April 24, 2012

Service Request No: R1202486

Ms. Samantha Brenner
Tetra Tech NUS,Inc.
20251 Century Blvd. Ste. 200
Germantown, MD 20874-7114

Laboratory Results for: MSA Groundwater/112IC04021- 03

Dear Ms. Brenner:

Enclosed are the results of the sample(s) submitted to our laboratory on April 20, 2012. For your reference, these analyses have been assigned our service request number **R1202486.**

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at MPerry@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/19/12 and received at CAS in good condition at a cooler temperature of 3.0 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Five water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

A matrix Spike and Duplicate analysis was done on sample MSA-MW19D-041912. The RPD and Recovery were within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Possible Hazard Identification: ☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month): ☐ Return to Client ☐ Disposal By Lab ☐ Archive For _____ Months

Special Instructions/QC Requirements & Comments:

Samples Must be analyzed within 24 hours of sample time.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202557, consists of six (6) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 23, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

- It was noted in the case narrative that samples MSA-MW20D-042312 and MSA-MW17I-042312 were reanalyzed outside the 24 hour hold time due to false positives above the baseline of the instrument. The reanalysis were chosen for data validation and qualified as rejected, "UR", as a result of sample reanalyses performed 3 days after sampling date.

Minor Problems- None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Positive results for hexavalent chromium were present in the continuing calibrations blanks (0.026 ug/L, 0.020 ug/L) affecting the reanalyses. However, no validation actions were warranted as the sample results were nondetects.

Executive Summary

Laboratory Performance: The twenty-four hour hold time was exceeded for the reanalyses of samples MSA-MW20D-042312 and MSA-MW17I-042312.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1202557
Project:	MSA Groundwater	**Project Number:**	112IC04021 - 02
Sample Matrix:	Water	**Date Received:**	4/24/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/23/12 and received at CAS in good condition at a cooler temperature of 1.9 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Note: samples MSA-MW20D-042312 and MSA-MW17I-04231 were both re-analyzed outside the 24 hour holding time due to false positives from a high baseline bias due to instrument issues during the original analyses. Both sample results were reported.

All samples were analyzed within 24 hours of sampling except as mentioned above.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Tetra Tech **INTERNAL CORRESPONDENCE**

TO:	**A. APANAVAGE**	**DATE:**	**MAY 21, 2012**
FROM:	**TERRI L. SOLOMON**	**COPIES:**	**DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION – HEXAVALENT CHROMIUM**
MARTIN STATE AIRPORT – GROUNDWATER
SAMPLE DELIVERY GROUP (SDG) – R1202581

SAMPLES: 2/Aqueous/

MT-MW04S-042412 MT-MW06S-042412

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202581, consists of two (2) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 24, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems

- The 24 hour hold time for hexavalent chromium was exceeded by 1 day for samples MT-MW04S-042412 and MT-MW06S-042412 due to high baseline bias. The nondetected results reported for the affected samples were qualified as estimated, "UJ".

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Positive results for hexavalent chromium were present in the continuing calibrations blanks (0.026 ug/L, 0.020 ug/L) affecting the samples. However, no validation actions were warranted as the sample results were nondetects.

Executive Summary

Laboratory Performance: The 24 hour hold time was exceeded by 1 day for samples MT-MW04S-042412 and MT-MW06S-042412.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/24/12 and received at CAS in good condition at a cooler temperature of 1.4 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Two samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Note: samples MT-MW04S-042412 and MT-MW-06S-042412 were done outside the 24 hour holding time due to a high baseline bias caused by instrument issues. The samples were analyzed as soon as possible after the problem was corrected.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

SUBJECT: **INORGANIC DATA VALIDATION – HEXAVALENT CHROMIUM**
MARTIN STATE AIRPORT – GROUNDWATER
SAMPLE DELIVERY GROUP (SDG) – R1202604

SAMPLES: 3/Aqueous/

MT-MW01S-042512 MT-MW03S-042512
MT-MW05S-042512

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202604, consists of three (3) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 25, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems- None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Positive results for hexavalent chromium were present in the continuing calibrations blanks (0.026 ug/L, 0.020 ug/L) affecting the samples. However, no validation actions were warranted as the sample results were nondetects.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

Sample Matrix:	Water	**Date Received:**	4/26/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/25/12 and received at CAS in good condition at a cooler temperature of 1.6 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Three water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

GSP-MW3-042612

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202652, consists of three (3) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 26, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems - None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

Sample Matrix:	Water	**Date Received:**	4/27/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/26/12 and received at CAS in good condition at a cooler temperature of 0.9 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Three water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202694, consists of six (6) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on April 30, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory duplicate results, matrix spike recoveries, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems- None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

APPENDIX C
SUPPORT DOCUMENTATION

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1202694
Project:	MSA Groundwater	**Project Number:**	112IC04021 - 02
Sample Matrix:	Water	**Date Received:**	5/01/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 4/30/12 and received at CAS in good condition at a cooler temperature of 2.9 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

A matrix spike and duplicate analyses was not requested but was analyzed on sample MT-02S-043012. The recovery and RPD were with QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202733, consists of six (6) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 1, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory duplicate results, matrix spike recoveries, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems- None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

SUPPORT DOCUMENTATION

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1202733
Project:	MSA Groundwater	**Project Number:**	112IC04021 - 02
Sample Matrix:	Water	**Date Received:**	5/02/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/01/12 and received at CAS in good condition at a cooler temperature of 3.5 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

A matrix spike and duplicate analyses was requested and was analyzed on sample MSA-MW14I-050112. The recovery and RPD were with QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202767, consists of six (6) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 2, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems- None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Positive results for hexavalent chromium were present in a continuing calibrations blank on 05/03/2012 at 12:38 (0.061 ug/L) affecting sample MSA-DMW8I-050212. No validation actions were warranted as the sample result was nondetected.

The continuing calibration percent recovery on 05/03/2012 at 12:23 for hexavalent chromium was greater than the laboratory limit affecting sample MSA-DMW8I-050212. No validation actions were warranted as the sample result was nondetected.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1202767
Project:	MSA Groundwater	**Project Number:**	112IC04021 - 02
Sample Matrix:	Water	**Date Received:**	5/03/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/02/12 and received at CAS in good condition at a cooler temperature of 2.1 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met except CCV2 (110%) was outside QC limits high. No data was affected since all the samples under this CCV was non-detects..

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202808, consists of eight (8) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 3, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems- None.

Notes

The original sample IDs reported by the laboratory did not match the chain of custody (COC). The sample IDs were amended to match the COC.

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Positive results for hexavalent chromium were present in a continuing calibrations blank (0.03 ug/L) affecting the samples. However, no validation actions were warranted as the sample results were nondetects.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

APPENDIX C
SUPPORT DOCUMENTATION

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1202808
Project:	MSA Groundwater	**Project Number:**	112IC04021 - 02
Sample Matrix:	Water	**Date Received:**	5/04/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/03/12 and received at CAS in good condition at a cooler temperature of 2.3 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Eight water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blanks associated with these samples were free of contamination except CCB2 was greater than the MRL. No data was affected since all the samples under this CCB was non-detects.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202849, consists of seven (7) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 7, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory duplicate results, matrix spike recoveries, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems – None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/07/12 and received at CAS in good condition at a cooler temperature of 4.6 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Seven water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

A matrix spike and duplicate analyses was analyzed on sample MSA-MW24I-050712. The recovery and RPD were with QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

SUBJECT: **INORGANIC DATA VALIDATION – HEXAVALENT CHROMIUM**
MARTIN STATE AIRPORT – GROUNDWATER
SAMPLE DELIVERY GROUP (SDG) – R1202917

SAMPLES: 3/Aqueous/

MSA-MW25I-050812 MSA-MW25S-050812
MSA-MW37S-050812

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202917, consists of three (3) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 8, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems – None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/08/12 and received at CAS in good condition at a cooler temperature of 1.6 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Three water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling except samples MSA-MW25I-050812 and MSA-MW25S-050812 were analyzed 5 minutes outside the 24 hours from time of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

MSA-MW16I-050912	MSA-MW16S-050912

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202949, consists of six (6) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 9, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory duplicate results, matrix spike recoveries, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems

- The continuing calibration percent recovery on 05/10/2012 at 13:05 was below the laboratory quality control limit affecting all samples. The samples were reanalyzed outside of the 24 hour hold time. The original nondetected results were used for validation purposes and were qualified as biased low, "UL".

- The matrix spike percent recovery for hexavalent chromium was below the laboratory quality control limit affecting all samples. The samples were reanalyzed outside of the 24 hour hold time. The original nondetected results were used for validation purposes and were qualified as biased low, "UL".

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: The continuing calibration percent recovery on 05/10/2012 at 13:05 was below the laboratory quality control limit.

Other Factors Affecting Data Quality: The matrix spike percent recovery for hexavalent chromium was below the laboratory quality control limit.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

Sample Matrix:	Water	**Date Received:**	5/10/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/09/12 and received at CAS in good condition at a cooler temperature of 0.3 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met except CCV2 (94 %) was slightly less than the 95 – 105 % limit. All data was accepted based on the other CCV recoveries as well as the LCS recovery. Also due to an instrument error, the ICB did not completely run and could not be calculated. All samples were re-analyzed and the original data was confirmed.

The Blank Spike (LCS) recovery was within QC limits.

A matrix spike and duplicate analyses was not requested but analyzed on sample MSA-MW16d-050912. The matrix spike recovery was initially low (81 %) and was flagged with an "*". The QC was re-analyzed and the recovery was within QC limits. The RPD were with QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1202995, consists of six (6) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 10, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory duplicate results, matrix spike recoveries, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems – None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/10/12 and received at CAS in good condition at a cooler temperature of 3.1 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

A matrix spike and duplicate analyses was analyzed on sample MSA-MW16d-050912. The matrix spike recovery and the RPD were with QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1203057, consists of eight (8) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 14, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems – None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/14/12 and received at CAS in good condition at a cooler temperature of 1.9 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Eight water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Overview

The sample set for Martin State Airport – Groundwater, SDG R1203098, consists of five (5) aqueous environmental samples. No field duplicate pairs were included in this SDG.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on May 15, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems – None.

Notes

All samples were filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%

APPENDIX C
SUPPORT DOCUMENTATION

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1203098
Project:	MSA Groundwater	**Project Number:**	112IC04021 - 02
Sample Matrix:	Water	**Date Received:**	5/16/12

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/15/12 and received at CAS in good condition at a cooler temperature of 2.6 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

Five water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

SUBJECT: **INORGANIC DATA VALIDATION – HEXAVALENT CHROMIUM**
MARTIN STATE AIRPORT – GROUNDWATER
SAMPLE DELIVERY GROUP (SDG) – R1203134

SAMPLES: 1/Aqueous/

MSA-MW29D-051612

Overview

The sample set for Martin State Airport – Groundwater, SDG R1203134, consists of one (1) aqueous environmental sample. No field duplicate pairs were included in this SDG.

The sample was analyzed for hexavalent chromium. The sample was collected by Tetra Tech on May 16, 2012 and analyzed by Columbia Analytical Services, Inc. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration recoveries, laboratory method / preparation blank results, laboratory control sample recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems –None.

Minor Problems – None.

Notes

The sample was filtered in the laboratory and preserved by the laboratory to a pH of 9.3-9.7.

Nondetected results are reported to the method reporting limit.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Tetra Tech
Terri L. Solomon
Environmental Scientist

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 5/16/12 and received at CAS in good condition at a cooler temperature of 2.1 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS CLP Batching sheets for a cross-reference between Client ID and CAS Job # and analyses requested.

Hexavalent Chromium Analysis – 218.6

One water samples were analyzed for CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All samples were analyzed within 24 hours of sampling.

All the initial and continuing calibration criteria were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.
