CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10494-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate and RDX Explosive analysis were performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/21/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4, 1.6 and 1.8 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-042012 (240-10494-1), MSA-MW35S-042012 (240-10494-2), MSA-MW20S-042012 (240-10494-3), MSA-MW20I-042012 (240-10494-4), MSA-MW17S-042012 (240-10494-5), MSA-MW17I-042012 (240-10494-6) and MSA-MW20D-042012 (240-10494-7) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/27/2012 and 04/30/2012.

1,2,3-Trichlorobenzene was detected in method blank MB 240-42171/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The laboratory control sample (LCS) for batch 41857 exceeded control limits for tert-Butyl alcohol . This has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Several analytes failed the recovery criteria low for the MS/MSD of sample MSA-MW20S-042012 (240-10494-3) in batch 240-41857.

Refer to the QC report for details.

Samples MSA-MW20S-042012 (240-10494-3)[66.67X], MSA-MW20I-042012 (240-10494-4)[20X] and MSA-MW17I-042012 (240-10494-6)[33.33X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 41857 exceeded control criteria for several compounds. The samples associated with this CCV were not detected for the affected analytes. A low level CCV, at the reporting limit, was analyzed and the affected compounds were detected; therefore the data is reportable per the facility Standard Operating Procedure (SOP).

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples MSA-MW35S-042012 (240-10494-2), MSA-MW20S-042012 (240-10494-3), MSA-MW20I-042012 (240-10494-4), MSA-MW17S-042012 (240-10494-5), MSA-MW17I-042012 (240-10494-6) and MSA-MW20D-042012 (240-10494-7) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 04/24/2012 and 04/25/2012 and analyzed on 04/26/2012, 04/27/2012 and 04/30/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 41464.

Sample MSA-MW20S-042012 (240-10494-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the SVOCs analyses. All quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Samples MSA-MW35S-042012 (240-10494-2), MSA-MW20S-042012 (240-10494-3) and MSA-MW17S-042012 (240-10494-5) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 04/26/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-41736/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Sample MSA-MW20S-042012 (240-10494-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Samples MSA-MW35S-042012 (240-10494-2), MSA-MW20S-042012 (240-10494-3) and MSA-MW17S-042012 (240-10494-5) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 04/24/2012 and analyzed on 04/26/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 41325.

SUBJECT: **ORGANIC DATA VALIDATION – VOC / 1,4-DIOXANE / TOTAL PETROLEUM HYDROCARBONS / PERCHLORATE / SELECT METALS MIDDLE RIVER COMPLEX – GROUNDWATER - FULL REVIEW SAMPLE DELIVERY GROUP (SDG) 240-10598-1**

SAMPLES: 3/Aqueous/VOC/1,4-DIOXANE/SELECT METALS

MT-MW04S MT-MW06S TB-042412

Overview

The sample set for Middle River Complex - groundwater, SDG 240-10598-1 consists of two (2) environmental water samples and one (1) trip blank. The trip blank (TB-042412) was analyzed for volatile organic compounds (VOC) only. All other samples were analyzed for 1,4-dioxane, VOCs, total petroleum hydrocarbons, perchlorate, and select metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, tungsten, vanadium and zinc).

The samples were collected on April 24, 2012 and analyzed by Test America, North Canton. Volatile organic compound analyses were conducted in accordance with SW-846 Method 8260B. The semivolatile compound 1,4-dioxane analyses were conducted in accordance with SW-846 Method 8270D. The metals analyses were conducted in accordance with SW-846 Method 6020A and 7470A. The perchlorate analyses were conducted in accordance with SW-846 Method 6850.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, ICP interference results, ICP serial dilution results, laboratory duplicate results, matrix spike/matrix spike duplicate results, analyte identification, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- The volatile initial calibration of instrument A3UX16 on 04/29/12 had a relative response factor (RRF) less than the 0.05 quality control limit for tert butyl alcohol. The nondetected results for tert butyl alcohol in all samples were rejected (UR).

- The volatile continuing calibration analyzed on instrument A3UX16 on 04/30/12 @11:50 had RRFs less than the 0.05 quality control limit for tert butyl alcohol and vinyl acetate. The nondetected results for tert butyl alcohol and vinyl acetate in all samples were rejected (UR).

- The silanol tentatively identified compound (triimethyl silanol) was rejected (R) for sample TB-042412. This compound is indicative of column bleed.

Minor Problems

- The following compounds were detected in the VOC method blank at the concentrations indicated below:

Compound	Concentration	Action Level
1,2,3-Trichlorobenzene[1]	0.288 ug/L	1.44 ug/L
Methylcyclohexane[2]	0.197 ug/L	0.985 ug/L

1 – Compound detected in method blank (MB 240-42171/5) affecting all samples.
2 – Methycyclohexane was reported as a tentatively identified compound (TIC) in the method blank.

An action level of 5X the maximum contaminant concentration was established to evaluate laboratory contamination for 1,2,3-trichloroethene and methylcyclohexane. Dilution factors and sample aliquots were taken into consideration during the application of all action levels. The methylcyclohexane detection for sample MT-MW04S was qualified (B) as a result of blank contamination. No action was taken on the trip blank because field quality control samples are not qualified for blank contamination.

- The gasoline range organic TPH (C6-C10) was detected in the method blank at the concentration indicated below:

Compound	Concentration	Action Level
TPH (C6-C10)[1]	32.9 ug/L	164.5 ug/L

1 – Compound detected in method blank (MB 240-42055/7) affecting all samples.

An action level of 5X the maximum contaminant concentration was established to evaluate laboratory contamination for TPH (C6-C10). Dilution factors and sample aliquots were taken into consideration during the application of the action level. The TPH (C6-C10) detections for all samples were qualified (B) as a result of blank contamination.

- The diesel range organic TPH (C10-C32) was detected in the method blank at the concentration indicated below:

Compound	Concentration	Action Level
TPH (C10-C32)[1]	422 ug/L	2,110 ug/L

1 – Compound detected in method blank (MB 240-41890/15) affecting all samples.

An action level of 5X the maximum contaminant concentration was established to evaluate laboratory contamination for TPH (C10-C32). Dilution factors and sample aliquots were taken into consideration during the application of the action level. The TPH (C10-C32) detections for all samples were qualified (B) as a result of blank contamination.

- The reporting limit (RL) percent recoveries for arsenic, copper, nickel, silver, and thallium were > 110% quality control limit affecting all samples. The positive results < 2X RL for arsenic in all samples were qualified as estimated, (J), as a result of conflicting noncompliances.

- The following contaminants were detected in the metals laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony	0.159 ug/L	0.795 ug/L
Barium[(1)]	2.10 ug/L	10.5 ug/L
Cobalt	0.093 ug/L	0.465 ug/L
Copper[(1)]	1.32 ug/L	6.6 ug/L
Lead[(1)]	0.268 ug/L	1.34 ug/L
Molybdenum	0.558 ug/L	2.79 ug/L
Thallium	0.899 ug/L	4.495 ug/L
Zinc[(1)]	13.7 ug/L	68.5 ug/L

  [(1)] Maximum concentration present in a preparation blank.

  An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level reported for antimony, copper, molybdenum, thallium and zinc were qualified "B" as a result of laboratory blank contamination.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

The matrix spike / matrix spike duplicate (MS/MSD) performed on sample MSA-MW15D-041812 had a zero percent recovery for 2-chloroethyl vinyl ether in the MS and MSD. In addition, the relative percent difference for tert butyl alcohol exceeded the quality control limit. No action was taken on this basis because sample MSA-MW15D-041812 is contained in another SDG.

The nondetected results were reported to the method detection limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Blank contamination resulted in qualification of VOC, TPH, and METALS data. Two volatile compounds had RRFs less than the quality control limits in the initial and continuing calibrations resulting in the rejection of data. The RL percent recovery for arsenic resulted in qualification of the data. The TIC silanol compound was rejected.

Other Factors Affecting Data Quality: Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

The data for these analyses were reviewed with reference to the Region III EPA Functional Guidelines for Organic Data Validation (September 1994) and Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10598-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/25/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 0.2 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-042412 (240-10598-1), MT-MW04S (240-10598-2) and MT-MW06S (240-10598-3) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/30/2012.

1,2,3-Trichlorobenzene was detected in method blank MB 240-42171/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MT-MW04S (240-10598-2) and MT-MW06S (240-10598-3) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 04/26/2012 and analyzed on 05/01/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

No difficulties were encountered during the SVOCs analyses. All quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MT-MW04S (240-10598-2) and MT-MW06S (240-10598-3) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 04/28/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-42055/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MT-MW04S (240-10598-2) and MT-MW06S (240-10598-3) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 04/27/2012 and analyzed on 04/30/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Total Petroleum Hydrocarbons (C10-C32) was detected in method blank MB 240-41890/15-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the DRO analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples MT-MW04S (240-10598-2) and MT-MW06S (240-10598-3) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/26/2012 and analyzed on 04/28/2012.

No difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MT-MW04S (240-10598-2) and MT-MW06S (240-10598-3) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/26/2012 and analyzed on 04/28/2012.

Several analytes were detected in method blank MB 240-41803/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Case Narrative

TestAmerica West Sacramento Project Number G2D270498

WATER, 6850, Perchlorate
Sample(s): 1, 1, 1, 2
In accordance with the requirements of Method 6850, both a Laboratory Control Sample (LCS) and a Synthetic Matrix Check Sample (SMCS) were analyzed with the associated samples. Both are reported on the LCS data evaluation and recovery reports, and are differentiated from one another by their workorder number:

LCS: MTAGP1AC
SMCS: MTAGP1AD

There were no other anomalies associated with this project.

Overview

The sample set for Lockheed - MSA, SDG 240-10670-1, consisted of four (4) aqueous samples including one (1) aqueous trip blank sample. All aqueous samples were analyzed for volatile organic compounds (VOC). Three (3) aqueous samples were analyzed for 1,4-dioxane, gasoline range organics (GRO), and diesel range organics (DRO) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on April 26, 2012 and analyzed by TestAmerica Laboratories, Inc., Canton for all analyses with the exception of the perchlorate analyses which were subcontracted to TestAmerica Laboratories Inc, West Sacramento. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 8270C for 1,4-dioxane, 8015B for GRO, 8015B for DRO, and 6850 for perchlorates, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factor (RRF) was less than the 0.05 criteria for tert-butyl alcohol on instrument A3UX16 on 04/29/12. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were also less than the 0.05 criteria for instrument A3UX16 on 04/30/12 @ 11:50.
  Affected Samples: All samples
  Action: The sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR).

- Fluorotrimethyl-silane and trimethyl-silanol were detected as tentatively identified compounds (TICs) by the laboratory for samples MT-MW03S-042512 and TB-042512, respectively.
  Action: Fluorotrimethyl-silane and trimethyl-silanol are considered present due to column bleed on the laboratory instrument. The sample positive TIC results for fluorotrimethyl-silane and trimethyl-silanol for these samples were qualified rejected, (R).

Minor Problems

- The total petroleum hydrocarbon (TPH) C6-C10 (GRO) was detected in the method blank at the following maximum concentration affecting all samples.

Analytes	Maximum Conc. µg/L	Action Level µg/L
TPH C6-C10 (1)	32.9	164.5

(1) Method blank MB 240-42055/7 affecting all samples.

An action level of five times the maximum level for TPH C6-C10 has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Sample GRO results if less than the action level were qualified (B), for method blank contamination.

- The TPH C10-C32 (DRO) was detected in the method blank at the following maximum concentration affecting all samples.

Analytes	Maximum Conc. µg/L	Action Level µg/L
TPH C10-C32 (1)	422	2110

(1) Method blank MB 240-42055/7 affecting all samples.

An action level of five times the maximum level for TPH C10-C32 has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Sample DRO results if less than the action level were qualified (B), for method blank contamination.

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The following VOC tentatively identified compounds (TIC) were associated with the samples as listed below. The instrument was not calibrated for these TICs and therefore they were qualified estimated, (NJ), and assumed to be presumptively present.

Sample	TICs
MT-MW01S-042512	butane
MT-MW05S-042512	2-methyl butane

Notes

The laboratory VOC contaminant was detected in the method blank at the following maximum concentration affecting all samples.

Analytes	Maximum Conc. µg/l	Action Level µg/l
1,2,3-Trichlorobenzene [1]	0.288	1.440

[1] Method blank MB 240-42171/5 affecting all samples.

An action level of five times the maximum level for 1,2,3-trichlorobenzene has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No samples were qualified for 1,2,3-trichlorobenzene method blank contamination.

The VOC MS and the MSD for a spiked sample from another SDG (240-10350-A) had %Rs for 2-chloroethyl vinyl ether less than the quality control limit (0%). No validation action was necessary as the sample was not from this SDG.

The sample MT-MW05S-042512 1,4-dioxane analysis surrogates 2-fluorophenol, phenol-d5, and 2,4,6-tribromophenol %Rs were less than the quality control limit (and less than 10% for two of the surrogates) affecting the acid fraction SVOC analytes. As 1,4-dioxane is associated with base/neutral surrogates, no validation action was necessary for the sample 1,4-dioxane result.

The laboratory reported non-detected sample results to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC non-detected tert-butyl alcohol and vinyl acetate sample results were rejected due to calibration and CCV RRF criteria non-compliances. Sample DRO and GRO results were qualified for method blank contamination.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). Some VOC TICs were qualified estimated as the instrument was not calibrated for these analytes. Sample positive silane and silanol TICs were rejected as these analytes were due to instrument column bleed.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260C, 8270C, 8015B, and 6850, and the Region III EPA Functional Guidelines for Organic Data Validation (9/94).

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10670-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/26/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.4 and 0.5 C.

Overview

The sample set for Lockheed MSA, SDG 240-10670-1, consists of three (3) aqueous environmental samples and one trip blank. This SDG contained no field duplicate pairs.

All samples were analyzed for total and dissolved metals. The samples were collected by Tetra Tech on April 25th, 2012 and analyzed by TestAmerica. Metals analyses were conducted using method 6020A. Mercury analyses were conducted using method 7470A.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, ICP internal standard recoveries, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems-

- None.

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Mercury (1)	0.18 ug/L	0.9 ug/L
Barium (2)	1.21 ug/L	6.05 ug/L
Copper (2)	0.90 ug/L	4.5 ug/L
Lead (2)	0.35 ug/L	1.75 ug/L
Silver (2)	0.33 ug/L	1.65 ug/L
Zinc (2)	18.0 ug/L	90 ug/L
Molybdenum (3)	0.45 ug/L	2.25 ug/L
Thallium (3)	0.58 ug/L	2.9 ug/L
Tungsten (3)	0.68 ug/L	3.4 ug/L

(1) Maximum concentration found in a preparation blank affecting sample in 41887.
(2) Maximum concentration found in a preparation blank affecting sample in 41956.
(3) Maximum concentration found in a calibration blank affecting samples analyzed on 4/28/12.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level were qualified (B) for blank contamination.

- The CRDL standard analyzed on 4/29/12 had a percent recovery > 110% for arsenic, copper, nickel, silver, and thallium. All samples were affected. Positive arsenic and nickel results < 2X CRDL were qualified as either biased high (K) or estimated (J) due to conflicting directional bias. No other validation action was warranted as sample results were either > 2X CRDL or qualified for blank contamination.

Notes

Positive results greater than method detection limit (MDL) but less than the reporting limit (RL) were qualified as estimated (J).

Executive Summary

Laboratory Performance: Preparation and calibration blank contamination resulted on the qualification of sample results.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10670-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/26/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.4 and 0.5 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-042512 (240-10670-1), MT-MW05S-042512 (240-10670-2), MT-MW01S-042512 (240-10670-3) and MT-MW03S-042512 (240-10670-4) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/30/2012.

Overview

The sample set for LMC-MSA, SDG 240-10727-1 consisted of three (3) aqueous environmental samples and one (1) trip blank. All four (4) aqueous samples were analyzed for volatile organic compounds (VOC). The three (3) aqueous environmental samples were analyzed for the semi-volatile organic compound (SVOC), 1,4-dioxane, diesel range organics (DRO) and gasoline range organics (GRO). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 26, 2012 and analyzed by Test America, Inc. All analyses were conducted in accordance with SW-846 Methods 8260C, 8270C, and 8015B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, trip blank results, surrogate spike recoveries, blank spike results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial and continuing calibrations performed on instrument A3UX16 in the VOC fraction had Relative Response Factors (RRFs) for tert-butyl alcohol below the 0.050 minimum response criterion. In addition, the continuing calibration RRF for vinyl acetate was below 0.05. All samples were affected. The non-detected results reported for these compounds in the affected samples were qualified as rejected, (UR).

Minor

The following contaminants were detected in the laboratory method blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
1,2,3-Trichlorobenzene [1]	0.280	1.4
GRO (C6-C10) [2]	26.3	131.5

[1] Maximum concentration detected in the laboratory method blank, MB 240-42324/5, affecting all samples.
[2] Maximum concentration detected in the laboratory method blank, MB 240-42085/7, affecting all samples.

An action level of 5X the maximum concentration was used to evaluate for blank contamination. Sample aliquot and dilution factor, if applicable, were taken into consideration when evaluating for blank contamination. Positive results for GRO reported below the established action level were qualified as non-detected, (B). No action was necessary for 1,2,3-trichlorobenzene because no positive results were reported for this compound in the affected samples.

- Positive results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The SVOC continuing calibration performed on instrument A4AG2 on 05/04/12 @ 08:17 had a Percent Difference (%D) for 1,4-dioxane which exceeded the 20% quality control limit but was less than 50%. All samples were affected. No action was taken because no positive results were reported for 1,4-dioxane in the affected samples.

The VOC compound, 2-chloroethyl vinyl ether was not recovered in the Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses. No action was taken because the sample for the MS/MSD analyses was not from this SDG and the blank spike sample had an acceptable %R for this compound.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: Initial and/or continuing calibration RRFs for tert-butyl alcohol and vinyl acetate were below the quality control criterion resulting in the rejection of the non-detected results. Laboratory method blank contamination was noted in the VOC and GRO fractions.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and SW-846 Methods 8260C, 8270C, and 8015B analytical and reporting protocols. The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10727-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

Overview

The sample set for Martin State Airport - Groundwater, SDG 240-10727-1, consists of three (3) aqueous environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for perchlorate and select total and dissolved metals including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, tungsten, vanadium and zinc. The samples were collected by Tetra Tech on April 26, 2012 and analyzed by TestAmerica. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7470A. Perchlorate analyses were conducted using SW-846 method 6850.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike/matrix spike duplicate recoveries, ICP serial dilution results, internal standard recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The contract required detection limit (CRDL) percent recovery for barium was > 110% quality control limit affecting all samples. Positive results < 2X CRDL for barium were qualified as biased high, "K".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony[(1)]	0.184 ug/L	0.92 ug/L
Cobalt[(1)]	0.0960 ug/L	0.48 ug/L
Molybdenum[(1)]	3.01 ug/L	15.05 ug/L
Thallium[(1)]	0.664 ug/L	3.32 ug/L
Tungsten[(1)]	1.17 ug/L	5.85 ug/L
Barium[(2)]	1.12 ug/L	5.6 ug/L
Copper[(2)]	0.546 ug/L	2.73 ug/L
Zinc[(2)]	6.30 ug/L	31.5 ug/L
Barium[(3)]	1.02 ug/L	5.1 ug/L
Copper[(3)]	0.607 ug/L	3.03 ug/L
Nickel[(3)]	0.216 ug/L	1.08 ug/L
Zinc[(3)]	9.92 ug/L	49.6 ug/L

(1) Maximum concentration present in a method blank affecting all samples.
(2) Maximum concentration present in a preparation blank (240-42315) affecting total and dissolved samples GSP-MW1-042612 and GSP-MW2-042612.
(3) Maximum concentration present in a preparation blank (240-42347) affecting total and dissolved samples GSP-MW3-042612.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level reported for antimony, copper, molybdenum, thallium, tungsten and zinc were qualified "B" as a result of laboratory blank contamination.

- The internal standard recoveries for Lithium-6 were < 60% quality control limit affecting total and dissolved sample GSP-MW1-042612. The nondetected results reported for beryllium were qualified as biased low, "UL".

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated, "J".

Notes

Nondetected results are reported to the method detection limits.

The contract required detection limit (CRDL) percent recoveries for cadmium, cobalt, copper, lead, nickel, silver and thallium were > 110% quality control limit affecting all samples. However,

no validation actions were required as all sample results were either > 2X CRDL, nondetects or were qualified as a result of blank contamination.

Executive Summary

Laboratory Performance: Several contaminants were present in the laboratory method / preparation blanks. The CRDL percent recovery for barium was > 110% quality control limit affecting all samples.

Other Factors Affecting Data Quality: Positive results reported below the RL but above the MDL were qualified as estimated. The internal standard recoveries for Lithium-6 were < 60% quality control limit affecting total and dissolved sample GSP-MW1-042612.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993 and the Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10727-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/27/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.3 and 2.3 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-042612 (240-10727-1), GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/01/2012.

1,2,3-Trichlorobenzene was detected in method blank MB 240-42324/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-10770-2 in batch 240-42324.

Refer to the QC report for details.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/03/2012 and analyzed on 05/09/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

No difficulties were encountered during the SVOCs analyses. All quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 04/29/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-42085/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 42628.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/03/2012 and analyzed on 05/04/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 42661.

No difficulties were encountered during the DRO analyses. All quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/01/2012 and analyzed on 05/02/2012.

The continuing calibration verification (CCV) for Molybdenum associated with batch 42586 recovered above the upper control limit. The samples and method blank associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No other difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/01/2012 and analyzed on 05/02/2012.

Barium, Copper and Zinc were detected in method blank MB 240-42315/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes were detected in method blank MB 240-42347/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

The continuing calibration verification (CCV) for Molybdenum associated with batch 42586 recovered above the upper control limit. The samples and method blank associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY

Samples GSP-MW1-042612 (240-10727-2), GSP-MW2-042612 (240-10727-3) and GSP-MW3-042612 (240-10727-4) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/02/2012 and analyzed on 05/03/2012.

Overview

The sample set for LMC-MSA, SDG 240-10770-1 consisted of three (3) aqueous environmental samples and one (1) trip blank. All four (4) aqueous samples were analyzed for volatile organic compounds (VOC). The three (3) aqueous environmental samples were analyzed for the semi-volatile organic compound (SVOC), 1,4-dioxane, diesel range organics (DRO) and gasoline range organics (GRO). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 27, 2012 and analyzed by Test America, Inc. All analyses were conducted in accordance with SW-846 Methods 8260C, 8270C, and 8015B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, trip blank results, surrogate spike recoveries, blank spike results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial and continuing calibrations performed on instrument A3UX16 in the VOC fraction had Relative Response Factors (RRFs) for tert-butyl alcohol below the 0.050 minimum response criterion. In addition, the continuing calibration RRF for vinyl acetate was below 0.05. All samples were affected. The non-detected results reported for these compounds in the affected samples were qualified as rejected, (UR).

- The VOC compound, 2-chloroethyl vinyl ether was not recovered in the Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses of sample GSP-MW7-042712. The non-detected result reported for 2-chloroethyl vinyl ether was qualified as rejected, (UR), in the parent sample.

Minor

The following contaminants were detected in the laboratory method blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
1,2,3-Trichlorobenzene [1]	0.280	1.4
GRO (C6-C10) [2]	29.2	146

[1] Maximum concentration detected in the laboratory method blank, MB 240-42324/5, affecting all samples.
[2] Maximum concentration detected in the laboratory method blank, MB 240-42123/7, affecting all samples.

An action level of 5X the maximum concentration was used to evaluate for blank contamination. Sample aliquot and dilution factor, if applicable, were taken into consideration when evaluating for blank contamination. Positive results for GRO reported below the established action level were qualified as non-detected, (B). No action was necessary for 1,2,3-trichlorobenzene because no positive results were reported for this compound in the affected samples.

- Positive results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Sample GSP-MW7-042712 was diluted 4X prior to analysis in the VOC fraction. The RLs of the non-detected results were elevated.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: Initial and/or continuing calibration RRFs for tert-butyl alcohol and vinyl acetate were below the quality control criterion resulting in the rejection of the non-detected results. Laboratory method blank contamination was noted in the VOC and GRO fractions.

Other Factors Affecting Data Quality: One sample required a dilution for the VOC fraction.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and SW-846 Methods 8260C, 8270C, and 8015B analytical and reporting protocols. The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10770-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/28/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.4 and 1.2 C.

Overview

The sample set for Martin State Airport - Groundwater, SDG 240-10770-1, consists of three (3) aqueous environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for perchlorate and select total and dissolved metals including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, tungsten, vanadium and zinc. The samples were collected by Tetra Tech on April 27, 2012 and analyzed by TestAmerica. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7470A. Perchlorate analyses were conducted using SW-846 method 6850.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike/matrix spike duplicate recoveries, ICP serial dilution results, internal standard recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The contract required detection limit (CRDL) percent recoveries for copper and nickel were > 110% quality control limit affecting all samples. Positive results < 2X CRDL for copper and nickel were qualified as either biased high, "K" or estimated, "J", as a result of conflicting noncompliances.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony[(1)]	0.322 ug/L	1.61 ug/L
Cadmium[(1)]	0.172 ug/L	0.86 ug/L
Cobalt[(1)]	0.169 ug/L	0.845 ug/L
Lead[(1)]	0.191 ug/L	0.955 ug/L
Molybdenum[(1)]	0.854 ug/L	4.27 ug/L
Thallium[(1)]	0.686 ug/L	3.43 ug/L
Tungsten[(1)]	0.956 ug/L	4.78 ug/L
Barium[(2)]	0.541 ug/L	2.705 ug/L
Copper[(2)]	0.388 ug/L	1.94 ug/L
Zinc[(2)]	4.57 ug/L	22.85 ug/L

  [(1)] Maximum concentration present in a method blank affecting all samples.
  [(2)] Maximum concentration present in a preparation blank (240-42485) affecting all total and dissolved samples.

  An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level reported for antimony, cadmium, copper, lead, molybdenum and thallium were qualified "B" as a result of laboratory blank contamination.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated, "J".

Notes

Nondetected results are reported to the method detection limits.

The contract required detection limit (CRDL) percent recoveries for barium, cadmium, cobalt, copper, lead, nickel, silver and thallium were > 110% quality control limit affecting all samples. However, no validation actions were required as all sample results were either > 2X CRDL, nondetects or were qualified as a result of blank contamination.

Executive Summary

Laboratory Performance: Several contaminants were present in the laboratory method / preparation blanks. The CRDL percent recoveries for copper and nickel were > 110% quality control limit affecting all samples.

Other Factors Affecting Data Quality: Positive results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993 and the Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10770-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/28/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.4 and 1.2 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-042712 (240-10770-1), GSP-MW7-042712 (240-10770-2), GSP-MW8-042712 (240-10770-3) and GSP-MW4-042712 (240-10770-4) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/01/2012.

1,2,3-Trichlorobenzene was detected in method blank MB 240-42324/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample GSP-MW7-042712MS/MSD (240-10770-2) in batch 240-42324.

Refer to the QC report for details.

Sample GSP-MW7-042712 (240-10770-2)[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GSP-MW7-042712 (240-10770-2), GSP-MW8-042712 (240-10770-3) and GSP-MW4-042712 (240-10770-4) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/03/2012 and analyzed on 05/08/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 43632/8270.

No other difficulties were encountered during the SVOCs analyses. All quality control parameters were within the acceptance limits.

Case Narrative

TestAmerica West Sacramento Project Number G2E010422

WATER, 6850, Perchlorate
Samples: 1, 2, 3
In accordance with the requirements of Method 6850, both a Laboratory Control Sample (LCS) and a Synthetic Matrix Check Sample (SMCS) were analyzed with the associated samples. Both are reported on the LCS data evaluation and recovery reports, and are differentiated from one another by their workorder number:

LCS: MTELA1AC
SMCS: MTELA1AD

There are no other anomalies associated with this project.

Overview

The sample set for LMC-MSA, SDG 240-10808-1 consisted of three (3) aqueous environmental samples and one (1) trip blank. All four (4) aqueous samples were analyzed for volatile organic compounds (VOC). The three (3) aqueous environmental samples were analyzed for the semi-volatile organic compound (SVOC), 1,4-dioxane, diesel range organics (DRO) and gasoline range organics (GRO). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 30, 2012 and analyzed by Test America, Inc. All analyses were conducted in accordance with SW-846 Methods 8260C, 8270C, and 8015B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, trip blank results, surrogate spike recoveries, blank spike results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial and continuing calibrations performed on instrument A3UX16 in the VOC fraction had Relative Response Factors (RRFs) for tert-butyl alcohol and vinyl acetate below the 0.050 minimum response criterion. All samples were affected. The non-detected results reported for these compounds in the affected samples were qualified as rejected, (UR).

- Tentatively identified compounds (TICs) identified as silanol compounds were qualified as rejected (R), because these are indicative of column bleed.

Minor

- The following contaminants were detected in the laboratory method blanks at the following

maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
1,2,3-Trichlorobenzene [1]	0.372	1.86
1,2,4-Trichlorobenzene [1]	0.247	1.24
Hexachlorobutadiene [1]	0.462	2.31
GRO (C6-C10) [2]	28	140

[1] Maximum concentration detected in the laboratory method blank, MB 240-43549/5, affecting all samples.
[2] Maximum concentration detected in the laboratory method blank, MB 240-42995/7, affecting all samples.

An action level of 5X the maximum concentration was used to evaluate for blank contamination. Sample aliquot and dilution factor, if applicable, were taken into consideration when evaluating for blank contamination. Positive results for GRO reported below the established action level were qualified as non-detected, (B). No action was necessary for the remaining compounds because no positive results were reported for these compounds in the affected samples.

- Positive results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).
- Tentatively identified compounds (TICs) were qualified as estimated presumptively present, (NJ).

Notes

The VOC compounds, 2-chloroethyl vinyl ether and 2-butanone, were not recovered in the Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses. No action was taken because the sample for the MS/MSD analyses was not from this SDG and the blank spike sample had acceptable %Rs for these compounds.

Sample MT-MW02S-043012 was diluted 5X prior to analysis in the VOC fraction. The RLs of the non-detected results were elevated.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: Initial and continuing calibration RRFs for tert-butyl alcohol and vinyl acetate were below the quality control criterion resulting in the rejection of the non-detected results. Laboratory method blank contamination was noted in the VOC and GRO fractions.

Other Factors Affecting Data Quality: One sample required a dilution for the VOC fraction.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and SW-846 Methods 8260C, 8270C, and 8015B analytical and reporting protocols. The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10808-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/01/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.9 and 3.2 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-043012 (240-10808-1), GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/10/2012.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-43549/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

2-Butanone and 2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-10837-5 in batch 240-43549. Refer to the QC report for details.

Sample MT-MW02S-043012 (240-10808-4)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/05/2012 and analyzed on 05/08/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

1,4-Dioxane failed the recovery criteria high for the MSD of sample 240-10837-5 in batch 240-43126.

1,4-Dioxane failed the recovery criteria low for the MSD of sample 240-10842-8 in batch 240-43665. 1,4-Dioxane exceeded the rpd limit.

Refer to the QC report for details.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/07/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-42995/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/04/2012 and analyzed on 05/07/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/02/2012 and analyzed on 05/03/2012.

Several analytes were detected in method blank MB 240-42485/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)
Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/03/2012 and 05/07/2012 and analyzed on 05/04/2012 and 05/08/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY
Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/03/2012 and 05/07/2012 and analyzed on 05/04/2012 and 05/08/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Overview

The sample set for Martin State Airport - Groundwater, SDG 240-10808-1, consists of three (3) aqueous environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for perchlorate and select total and dissolved metals including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, tungsten, vanadium and zinc. The samples were collected by Tetra Tech on April 30, 2012 and analyzed by TestAmerica. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7470A. Perchlorate analyses were conducted using SW-846 method 6850.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike/matrix spike duplicate recoveries, ICP serial dilution results, internal standard recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The contract required detection limit (CRDL) percent recoveries for cadmium, cobalt, lead and nickel were > 110% quality control limit affecting all samples. Positive results < 2X CRDL for cadmium, cobalt, lead and nickel were qualified as either biased high, "K" or estimated, "J", as a result of conflicting noncompliances.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony[1]	0.138 ug/L	0.69 ug/L
Cobalt[1]	0.0610 ug/L	0.305 ug/L
Molybdenum[1]	0.678 ug/L	3.39 ug/L
Thallium[1]	0.554 ug/L	2.77 ug/L
Tungsten[1]	0.868 ug/L	4.34 ug/L
Barium[2]	0.541 ug/L	2.705 ug/L
Copper[2]	0.388 ug/L	1.94 ug/L
Zinc[2]	4.57 ug/L	22.85 ug/L

[1] Maximum concentration present in a method blank affecting all samples.
[2] Maximum concentration present in a preparation blank affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level reported for copper, molybdenum and thallium were qualified "B" as a result of laboratory blank contamination.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated, "J".

Notes

Nondetected results are reported to the method detection limits.

The contract required detection limit (CRDL) percent recoveries for barium, copper, silver and thallium were > 110% quality control limit affecting all samples. However, no validation actions were required as all sample results were either > 2X CRDL, nondetects or were qualified as a result of blank contamination.

Executive Summary

Laboratory Performance: Several contaminants were present in the laboratory method / preparation blanks. The CRDL percent recovery for several analytes was > 110% quality control limit affecting all samples.

Other Factors Affecting Data Quality: Positive results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993 and the Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

The text of this report has been formulated to address only those problem areas affecting data quality.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10808-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/01/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.9 and 3.2 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples TB-043012 (240-10808-1), GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/10/2012.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-43549/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

2-Butanone and 2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-10837-5 in batch 240-43549. Refer to the QC report for details.

Sample MT-MW02S-043012 (240-10808-4)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/05/2012 and analyzed on 05/08/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

1,4-Dioxane failed the recovery criteria high for the MSD of sample 240-10837-5 in batch 240-43126.

1,4-Dioxane failed the recovery criteria low for the MSD of sample 240-10842-8 in batch 240-43665. 1,4-Dioxane exceeded the rpd limit.

Refer to the QC report for details.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/07/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-42995/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/04/2012 and analyzed on 05/07/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

No difficulties were encountered during the DRO analyses. All quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/02/2012 and analyzed on 05/03/2012.

No difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/02/2012 and analyzed on 05/03/2012.

Several analytes were detected in method blank MB 240-42485/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/03/2012 and 05/07/2012 and analyzed on 05/04/2012 and 05/08/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples GSP-MW5-043012 (240-10808-2), GSP-MW6-043012 (240-10808-3) and MT-MW02S-043012 (240-10808-4) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/03/2012 and 05/07/2012 and analyzed on 05/04/2012 and 05/08/2012.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Overview

The sample set for Lockheed - MSA, SDG 240-10925-1, consisted of seven (7) aqueous samples including one (1) aqueous trip blank sample. Six (6) aqueous samples were analyzed for volatile organic compounds (VOC) as listed above. Six (6) aqueous samples were analyzed for 1,4-dioxane and perchlorate as listed above. Two (2) aqueous samples were analyzed for gasoline range organics (GRO), and diesel range organics (DRO) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on May 2, 2012 and analyzed by TestAmerica Laboratories, Inc., Canton for all analyses with the exception of the perchlorate analyses which were subcontracted to TestAmerica Laboratories Inc, West Sacramento. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 8270C for 1,4-dioxane, 8015B for GRO, 8015B for DRO, and 6850 for perchlorates, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factor (RRF) was less than the 0.05 criteria for vinyl acetate and tert-butyl alcohol on instrument A3UX16 on 05/09/12. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were also less than the 0.05 criteria for instrument A3UX16 on 05/10/12 @ 10:53 and on 05/11/12 @ 10:56.
  Affected Samples: All samples
  Action: The sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR).

- Trimethyl-silanol was detected as a tentatively identified compound (TIC) by the laboratory for samples MSA-DMW8S-050212 and TB-050212, respectively.

  Action: Trimethyl-silanol is considered present due to column bleed on the laboratory instrument. The positive TIC trimethyl-silanol results for these samples were qualified rejected, (R).

Minor Problems

- The GRO was detected in the method blank at the following maximum concentration affecting all samples.

Analytes	Maximum Conc. µg/L	Action Level µg/L
GRO [1]	28.0	140.0

[1] Method blank MB 240-42995/6 affecting samples MSA-DMW8S-050212 and MSA-MW32S-050212.

An action level of five times the maximum level for GRO has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Sample GRO results if less than the action level were qualified (B), for method blank contamination.

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- Samples MSA-DMW1B-050212 and MSA-DMW8D-050212 had positive methylcylcohexane results reported as TICs. The instrument was calibrated for methylcyclohexane and the CCV %Ds were compliant. The sample positive methylcyclohexane results were qualified as estimated, (J), presumptively present, as a TIC analyte.

Notes

The following laboratory VOC contaminants were detected in the method blanks at the following maximum concentrations affecting samples as listed.

Analytes	Maximum Conc. µg/l	Action Level µg/l
1,2,3-Trichlorobenzene [1]	0.322	1.610
1,2,4-Trichlorobenzene [1]	0.192	0.960
Hexachlorobutadiene [1]	0.479	2.395
1,2,3-Trichlorobenzene [2]	0.372	1.860
1,2,4-Trichlorobenzene [2]	0.247	1.235
Hexachlorobutadiene [2]	0.462	2.310

[1] Method blank MB 240-43737/5 affecting sample MSA-DMW1B-050212.
[2] Method blank MB 240-43549/5 affecting samples MSA-DMW1A-050212, MSA-DMW8D-050212, MSA-DMW8I-050212, MSA-DMW8S-050212, and TB-050212.

An action level of five times the maximum level for the contaminants has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No samples were qualified for method blank contamination.

The samples listed on the Chain of Custody (COC) stated that seven (7) samples were to be analyzed VOCs. Sample MSA-MW32S-050212 was not analyzed for VOCs.

The VOC MS and the MSD for a spiked sample from another SDG (240-10837-D-5) had %Rs for 2-chloroethyl vinyl ether and 2-butanone less than the quality control limit (0%). No validation action was necessary as the sample was not from this SDG.

The VOC MS and the MSD for a spiked sample from another SDG (240-11065-F-2) had %Rs for 2-chloroethyl vinyl ether less than the quality control limit (0%). No validation action was necessary as the sample was not from this SDG.

The 1,4-dioxane MSD for a spiked sample from another SDG (240-10842-O-8-A) had a %R for 1,4-dioxane less than the quality control limit and the MS/MSD %Rs relative percent difference (RPD) was greater than the quality control limit. No validation action was necessary as the sample was not from this SDG.

The sample MSA-DMW1A-050212 1,4-dioxane analysis surrogate 2,4,6-tribromophenol %R was greater than the quality control limit the acid fraction SVOC analytes. As 1,4-dioxane is associated with base/neutral surrogates no validation action was necessary for the sample 1,4-dioxane result.

The sample were diluted for the VOC analyses as listed below resulting in elevated minimum detection limits reported for the non-detected analytes.

Samples	Dilution
MSA-DMW1A-050212	100X
MSA-DMW1B-050212	76.92X
MSA-DMW8D-050212	16.67X
MSA-DMW8I-050212	16.67X

The sample MSA-DMW1A-050212 was diluted 2X for the 1,4-dioxane analysis.

The laboratory reported non-detected sample results to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC non-detected tert-butyl alcohol and vinyl acetate sample results were rejected due to calibration and CCV RRF criteria non-compliances. Sample GRO results were qualified for method blank contamination.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). VOC TIC methylcyclohexane results were qualified estimated presumptively present.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260C, 8270C, 8015B, and 6850, and the Region III EPA Functional Guidelines for Organic Data Validation (9/94).

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10925-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/03/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.4 and 3.0 C.

WATER, 6850, Perchlorate

Case Narrative

TestAmerica West Sacramento Project Number G2E040502

WATER, 6850, Perchlorate
Samples: 1, 2, 3, 4, 5, 6
In accordance with the requirements of Method 6850, both a Laboratory Control Sample (LCS) and a Synthetic Matrix Check Sample (SMCS) were analyzed with the associated samples. Both are reported on the LCS data evaluation and recovery reports, and are differentiated from one another by their workorder number:

LCS: MTGXH1AC
SMCS: MTGXH1AD

Samples: 1, 2, 3, 4, 5, 6
The opening Perchlorate continuing calibration verification (CCV) & minimum reporting limit (MRL) standards had ion abundance ratios outside of acceptance criteria for the native compound. The exceedence was caused by matrix interference from an over-range field sample analyzed immediately preceding the standards. This ratio is used for positive identification in field samples and all samples with positive results demonstrated ion ratios which were within method acceptance limits. The primary ion used for quantitation in samples and QC was within acceptance limits for percent drift in all CCV and MRL standards pertaining to this batch. All other standards and QC pertaining to this batch had acceptable ion ratios for the native compound. Data is reported with no further corrective action.

There are no other anomalies associated with this project.

Overview

The sample set for Lockheed MSA, SDG 240-10925-1, consists of six (6) aqueous environmental samples and one trip blank. This SDG contained no field duplicate pairs.

All samples were analyzed for total and dissolved metals. The samples were collected by Tetra Tech on May 2nd, 2012 and analyzed by TestAmerica. Metals analyses were conducted using methods 6020A. Mercury analyses were conducted using method 7470.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, ICP internal standard recoveries, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems-

- None.

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Barium (1)	0.94 ug/L	4.7 ug/L
Copper (1)	0.64 ug/L	3.2 ug/L
Zinc (1)	3.41 ug/L	17.1 ug/L
Antimony (2)	0.13 ug/L	0.65 ug/L
Molybdenum (2)	0.58 ug/L	2.9 ug/L
Thallium (2)	0.55 ug/L	2.75 ug/L
Tungsten (2)	0.79 ug/L	3.95 ug/L

(1) Maximum concentration found in a preparation blank affecting sample in 43497
(2) Maximum concentration found in a calibration blank affecting samples analyzed on 5/11/12.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level were qualified (B) for blank contamination.

- The CRDL standard analyzed on 5/11/12 had percent recoveries > 110% for lead, nickel, thallium and had a percent recovery < 90% for barium. All samples were affected. Positive lead results < 2X CRDL were qualified as estimated (J). No other validation action was taken as sample results were either > 2X CRDL or qualified for blank contamination.

Notes

Positive results greater than MDL but less than the RL were qualified as estimated (J).

Executive Summary

Laboratory Performance: Preparation and calibration blank contamination resulted on the qualification of sample results. The CRDL standard non-compliances resulted in the qualification of sample results.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

CASE NARRATIVE

Client: Tetra Tech, Inc formerly Tetra Tech NUS

Project: MSA Groundwater Sampling

Report Number: 240-10925-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Perchlorate analysis was performed at the TestAmerica West Sacramento Laboratory.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/03/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.4 and 3.0 C.

VOLATILE ORGANIC COMPOUNDS (GC MS)

Samples MSA-DMW8S-050212 (240-10925-1), MSA-DMW8I-050212 (240-10925-2), MSA-DMW8D-050212 (240-10925-3), TB-050212 (240-10925-4), MSA-DMW1A-050212 (240-10925-5) and MSA-DMW1B-050212 (240-10925-6) were analyzed for volatile organic compounds (GC MS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/10/2012 and 05/11/2012.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-43549/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-43737/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

2-Butanone and 2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-10837-5 in batch 240-43549.

2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample 240-11065-2 in batch 240-43737.

Refer to the QC report for details.

Samples MSA-DMW8I-050212 (240-10925-2)[16.67X], MSA-DMW8D-050212 (240-10925-3)[16.67X], MSA-DMW1A-050212 (240-10925-5)[100X] and MSA-DMW1B-050212 (240-10925-6)[76.92X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples MSA-DMW8S-050212 (240-10925-1), MSA-DMW8I-050212 (240-10925-2), MSA-DMW8D-050212 (240-10925-3), MSA-DMW1A-050212 (240-10925-5), MSA-DMW1B-050212 (240-10925-6) and MSA-MW32S-050212 (240-10925-7) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 05/05/2012 and 05/07/2012 and analyzed on 05/08/2012, 05/09/2012 and 05/10/2012.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2,4,6-Tribromophenol (Surr) failed the surrogate recovery criteria high for MSA-DMW1A-050212 (240-10925-5).

1,4-Dioxane failed the recovery criteria low for the MS/MSD of sample 240-10842-8 in batch 240-43665. 1,4-Dioxane exceeded the rpd limit.

Sample MSA-DMW1A-050212 (240-10925-5)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample contained one acid and/or one base surrogate outside acceptance limits: MSA-DMW1A-050212 (240-10925-5). The laboratory's SOP allows one acid surrogate and/or one base surrogate to be outside acceptance limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Samples MSA-DMW8S-050212 (240-10925-1) and MSA-MW32S-050212 (240-10925-7) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 05/07/2012.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-42995/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

No other difficulties were encountered during the GRO analyses. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Samples MSA-DMW8S-050212 (240-10925-1) and MSA-MW32S-050212 (240-10925-7) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 05/04/2012 and analyzed on 05/07/2012.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

No difficulties were encountered during the DRO analyses. All quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)
Samples MSA-DMW8S-050212 (240-10925-1), MSA-DMW8I-050212 (240-10925-2), MSA-DMW8D-050212 (240-10925-3), MSA-DMW1A-050212 (240-10925-5), MSA-DMW1B-050212 (240-10925-6) and MSA-MW32S-050212 (240-10925-7) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 05/10/2012 and analyzed on 05/11/2012.

The following sample was diluted due to the nature of the sample matrix: MSA-DMW8I-050212 (240-10925-2). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

Overview

The sample set for Martin State Airport – Groundwater, SDG 240-10949-1, consists of three (3) aqueous environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for Total Radium and Radium-228. The samples were collected by Tetra Tech on May 3, 2012 and analyzed by Test America – Richland. Analyses were conducted using EPA methods 903.0 and 904.0.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, continuing calibration verification results, background results, laboratory method blank results, laboratory control sample recoveries, laboratory duplicate results, yield recoveries and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The positive results below the reporting limit were qualified as estimated, "J".

Notes

The uncertainty for the sample results are reported at 2–sigma (95% confidence). The EDD does not contain the uncertainty result.

Total radium is a combination of Radium-226 and Radium-224.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: The positive results below the reporting limit were qualified as estimated.

The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

I. Introduction

On May 6, 2012, three water samples were received at the TestAmerica Richland laboratory for radiochemical analysis. Upon receipt, the samples were assigned the TestAmerica identification numbers as described on the cover page of the Analytical Data Package. The samples were assigned to Lot Number J2E060401.

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information; analytical results and the appropriate associated statistical uncertainties.

The requested analyses were:

Gas Proportional Counting
Radium-228 by method RL-RA-001
Radium-226 by method RL-RA-002

IV. Quality Control

The analytical result for each analysis performed includes a minimum of one laboratory control sample (LCS), and one reagent blank sample analysis. Any exceptions have been noted in the "Comments" section.

V. Comments

Gas Proportional Counting

Radium-228 by method RL-RA-001:

Upon initial count, the sample and sample duplicate were outside of agreement criteria. The sample and sample duplicate were re-analyzed in batch 2142121 using the remaining sample volume, results are within acceptance criteria. The achieved MDA of sample MSA-DMW6I-050312 and sample duplicate exceeds the CRDL due to limited sample volume. The sample and sample duplicate activity exceeds the achieved MDA/CRDL. Data is accepted. Except as noted, The LCS, batch blank, sample, and sample duplicate results are within acceptance limits.

Radium-226 by method RL-RA-002:

The LCS, batch blank, sample, and sample duplicate results are within acceptance limits.

I certify that this Certificate of Analysis is in compliance with the SOW and/or NELAC, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Uncertainty Estimation

TestAmerica Richland has adopted the internationally accepted approach to estimating uncertainties described in "NIST Technical Note 1297, 1994 Edition". The approach, "Law of Propagation of Errors", involves the identification of all variables in an analytical method which are used to derive a result. These variables are related to the analytical result (R) by some functional relationship, R = constants * f(x,y,z,...). The components (x,y,z) are evaluated to determine their contribution to the overall method uncertainty. The individual component uncertainties (u_i) are then combined using a statistical model that provides the most probable overall uncertainty value. All component uncertainties are categorized as type A, evaluated by statistical methods, or type B, evaluated by other means. Uncertainties not included in the components, such as sample homogeneity, are combined with the component uncertainty as the square root of the sum-of-the-squares of the individual uncertainties. The uncertainty associated with the derived result is the combined uncertainty (u_c) multiplied by the coverage factor (1,2, or 3).

When three or more sample replicates are used to derive the analytical result, the type A uncertainty is the standard deviation of the mean value (S/?n), where S is the standard deviation of the derived results. The type B uncertainties are all other random or non-random components that are not included in the standard deviation.

The derivation of the general "Law of Propagation of Errors" equations and specific example are available on request.

Overview

The sample set for Martin State Airport Groundwater Sampling, SDG 240-10949-1 consists of eight (8) aqueous environmental samples and a trip blank. All samples were analyzed for volatile organic compounds (VOCs). Eight (8) aqueous environmental samples were analyzed for 1,4-dioxane in the semivolatile organic compound (SVOC) SIM fraction, perchlorate, total and dissolved metals. Three (3) aqueous environmental samples; MSA-DMW4S-050312, MSA-DMW6S-050312 and MSA-DMW7S-050312 were analyzed for gasoline range organics (GRO) and diesel range organics (DRO). GRO is listed on the form 1s and EDD as total petroleum hydrocarbons (TPH) (C6-C10) and DRO as TPH (C10-C32). There are no field duplicate pairs included in this SDG.

The samples were collected on May 3, 2012 and analyzed by Test America Laboratories, Inc. Volatile organic compound analyses were conducted in accordance to SW-846 Method 8260B. The analyses for 1,4-dioxane followed SW-846 Method 8270C in Selective Ion Monitoring SIM mode. GRO and DRO analyses followed SW-846 Method 8015B. The analyses for RDX followed SW-846 Method 8330 and perchlorate 6850 reporting protocol. Metals analyses were conducted in accordance with SW-846 6020A and mercury Method 7470A.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, serial dilution, compound identification, chromatographic resolution, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- In the volatile initial calibration of instrument A3UX16 on May 9, 2012 and the continuing calibration on May 10, 2012 @ 10:53, May 11, 2012 @ 10:56 and May 16, 2012 @ 9:54, tert-butyl alcohol and vinyl acetate had a relative response factor (RRF) less than the 0.05 quality control limit. The nondetected vinyl acetate and tert-butyl alcohol results were qualified as rejected (UR) in the affected samples.

- Several samples contained Tentatively Identified Compounds (TICs) containing silanol or siloxanes. These compounds were qualified as rejected (R) because they are indictative of column bleed.

Minor Problems

- The surrogate recoveries of nitrobenzene-d5, 2-fluorobiphenyl, 2,4,6-tribromophenol and terphenyl-d14 were less than the lower quality control limit in sample MSA-DMW6S-050312. The sample was re-extracted outside of hold time with surrogate recoveries within quality control limits. The original nondetected 1,4-dioxane result in sample MSA-DMW6S-050312was used for validation and reporting purposes. The nondetected 1,4-dioxane result was qualified as biased low (UL) due to surrogate recoveries outside quality control limits.

- TICs were qualified as presumptively present (NJ) in several samples.

- GRO was detected in the laboratory method blank 240-43312/6.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
GRO	28.9	144.5

An action level of 5X the maximum concentration level has been used in order to evaluate sample data for blank contamination. Sample aliquot and dilution factors were taken into account in validation of the data. Positive GRO results less than the action level were qualified as (B).

- DRO was detected in the laboratory method blank 240-43296/10.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
DRO	337	1685

An action level of 5X the maximum concentration level has been used in order to evaluate sample data for blank contamination. Sample aliquot and dilution factors were taken into account in validation of the data. Positive DRO results less than the action level were qualified as (B).

- The CRQL percent recoveries of lead, nickel and thallium were greater than 110% in CRI sample 240-43857/7 analyzed on May 11, 2012. The positive lead and nickel results less than 2X the reporting limit were qualified as biased high (K) in the total and dissolved metals fraction. If the sample was qualified due to uncertainty near the detection limit the positive results for lead and nickel were qualified as estimated (J) in the total and dissolved metals fraction due to conflicting directional bias. No action was taken on the thallium results.

- The CRQL percent recovery of lead was greater than the 110% upper quality control limit in CRI sample 240-44022/7 analyzed on May 14, 2012. The positive lead results less than 2X the reporting limit were qualified as estimated (J) in the total and dissolved metals fraction due to conflicting

directional bias.

- Contamination was detected in the laboratory method blank, continuing calibration blanks and initial calibration blanks affecting both the total and dissolved metal results.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Molybdenum(1)	0.540	2.7
Thallium (2)	0.372	1.86
Tungsten (1)	0.711	3.56
Barium (3)	0.940	4.7
Copper (3)	0.642	3.21
Zinc (3)	3.41	17.05
Barium (4)	0.556	2.78

(1) Maximum concentration detected in initial calibration blank 240-43857/6 analyzed on May 11, 2012 @ 6:23.
(2) Maximum concentration detected in the continuing calibration blank (CCB) 240-43857/40 analyzed on May 11, 2012 @ 9:48.
(3) Maximum concentration detected in the laboratory method blank 240-43497/1-A.
(4) Maximum concentration detected in the laboratory method blank 240-43699/1-A.

An action level of 5X the maximum concentration of contaminant was used to evaluate samples due to blank contamination. Positive results less than the action level were qualified (B) as a result of blank contamination. Sample aliquot and dilution factors were taken into account in validation of data.

- The internal standard recoveries for holium (molecular weight 165) were greater than the 125% quality control limit in samples MSA-DMW4I-050312, MSA-DMW4D-050312, MSA-DMW4S-050312 and MSA-DMW2A-050312. The target metals affected by these noncompliances are antimony (MW 123), barium (MW 137), lead (MW 207), thallium (MW 204) and tungsten (MW 184). The positive and nondetected antimony, barium, lead, thallium and tungsten total and dissolved metal results in samples MSA-DMW4I-050312, MSA-DMW4D-050312, MSA-DMW4S-050312 and MSA-DMW2A-050312 were qualified as estimated (J) and (UJ), respectively.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Contamination was detected in several VOC laboratory method blanks.

Compound	Maximum Concentration (ug/L)
1,2,3-trichlorobenzene[(1)]	0.372
1,2,3-trichlorobenzene[(2)]	0.322
1,2,4-trichlorobenzene[(1)]	0.247
1,2,4-trichlorobenzene[(2)]	0.192
Hexachlorobutadiene[(1)]	0.462
Hexachlorobutadiene[(2)]	0.479

(1) Maximum concentration detected in laboratory method blank 240-43549/5 analyzed on May 10, 2012 @ 12:02.
(2) Maximum concentration detected in laboratory method blank 240-43737/5 analyzed on May 11, 2012 @ 12:04.

No action was taken on the nondetected 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene and hexachlorobutadiene results in the affected samples.

The continuing calibration percent difference (%D) for tert-amyl methyl ether was greater than 20% and less than 50% on May 16, 2012 @10:28. No action was taken on the nondetected tert-amyl methyl ether results.

The matrix spike duplicate (MSD) percent recoveries (%Rs) of 1,2-dibromoethane and trichloroethene were greater than the upper quality control limit in sample MSA-DMW2A-050312. No action was taken because the MS %Rs and relative percent differences (RPDs) of 1,2-dibromoethane and trichloroethene were within quality control limits.

The MS/MSD %Rs of 2-chloroethyl vinyl ether and 2-butanone were 0% in sample 240-10837-D-5. No action was taken because this sample is not included in this SDG.

The MS/MSD %Rs of 2-chloroethyl vinyl ether were 0% in sample 240-11065-E-2. No action was taken because this sample is not included in this SDG.

The surrogate recovery of terphenyl-d14 was less than the lower quality control limit and greater than 10% in sample MSA-DMW4I-050312. The sample was re-extracted outside of hold time. The original sample result was used for validation and reporting purposes. No action was taken on the positive 1,4-dioxane result in sample MSA-DMW4I-050312.

The RPD for mercury was outside quality control limits in the MS/MSD of sample 240-11088-P-1-C. No action was taken because this sample is not included in this SDG.

1,2,4-Trichlorobenzene in sample MSA-DMW2A-050312 was reported at a concentration of 440 ug/L. However, the sample was diluted 417X. The data validator reviewed the spectra and confirmed the positive 1,2,4-trichlorobenzene result in sample MSA-DMW2A-050312 against standard spectra. No action was taken. A copy of the spectra is included in Appendix C as a reference.

Several VOC samples were diluted:

Sample	Dilution Factor
MSA-DMW2A-050312	417X
MSA-DMW7S-050312	417X
MSA-DMW4D-050312	143X
MSA-DMW4I-050312	125X
MSA-DMW4S-050312	40X

Nondetected results were reported to the MDL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Tert-butyl alcohol and vinyl acetate had RRFs less than quality control limits in the initial and continuing calibrations. Surrogate recoveries were outside quality control limits in the SVOC fraction in sample MSA-DMW6S-050312. GRO, DRO and metals were detected in the laboratory blanks. The CRQL %Rs of several metals exceeded 110% resulting in the qualification of positive results. The internal standard recoveries for holium were greater than the 125% quality control limit in samples MSA-DMW4I-050312, MSA-DMW4D-050312, MSA-DMW4S-050312 and MSA-DMW2A-050312.

Other Factors Affecting Data Quality: TICs were detected in several samples.

The data for these analyses were reviewed with reference to the Region III EPA Functional Guidelines for Organic Data Validation (9/94) and Region III EPA Functional Guidelines for Inorganic Data Validation (April 1993). The text of this report has been formulated to address only those problem areas affecting data quality.
