VOC	volatile organic compound

Section 1
Introduction

This report summarizes groundwater sampling procedures and chemical results for groundwater sampling conducted in March–May 2014 at the Dump Road Area (DRA) and Main Terminal (MT) area of Martin State Airport (MSA) in Middle River, Maryland. Figure 1-1 shows the locations of Martin State Airport, the Dump Road Area, and the Main Terminal area and the monitoring wells sampled. Tetra Tech, Inc. (Tetra Tech) prepared this report on behalf of Lockheed Martin Corporation (Lockheed Martin) in accordance with the *Martin State Airport 2014 Groundwater Monitoring Work Plan* (Tetra Tech, Inc., 2013a). Sampling objectives are to:

- provide a current round of groundwater data for selected monitoring wells for the Dump Road Area and Main Terminal area
- better understand the nature and extent of contamination in groundwater
- evaluate the natural attenuation of the chemicals of concern in groundwater at Martin State Airport

These data, in conjunction with previously collected site data, will support the numerical modeling of shallow-groundwater flow patterns and the discharge of groundwater to Frog Mortar Creek, and will provide the scientific and engineering basis to select and implement a cost-effective and state-approved remedial alternative for the site.

Groundwater samples were chemically analyzed for volatile organic compounds (VOCs), semivolatile compounds (SVOCs) (including 1,4-dioxane), total metals, and dissolved metals. Select groundwater samples were also analyzed for perchlorate (a propellant constituent), total petroleum hydrocarbon (TPH)-diesel-range organics (DRO), total petroleum hydrocarbon-gasoline-range organics (GRO), hexavalent chromium, total radium, radium-228, haloacetic acids, and natural-attenuation assessment (NAA) parameters. This report is organized as follows:

Section 2—Site Background: Briefly summarizes the sites and references recent reports containing detailed background information related to the project.

Section 3—Investigation Approach and Methodology: Presents the technical approach to the groundwater monitoring and describes the field methodology employed for the study.

Section 4—Results: Presents the investigation results.

Section 5—Summary: Summarizes the investigation findings.

Section 6—References: Cites references used to compile this report.

Section 2
Site Background

Martin State Airport (MSA) is at 701 Wilson Point Road in Middle River, Maryland. It is bounded by Frog Mortar Creek to the east and Stansbury Creek to the west (Figure 2-1). These creeks conjoin at the southern boundary of the site and continue south to feed Middle River and Chesapeake Bay. The Dump Road Area (DRA) in the southeastern portion of MSA is bounded by Frog Mortar Creek to the east and the main airport runway to the west. The Main Terminal (MT) area comprises approximately 280 acres in the northwestern portion of MSA, just east of Wilson Point Road and Dark Head Cove. The MT area consists of the main terminal building, aircraft hangars and fueling stations, several taxiways, and the northern portion of the runway.

Lockheed Martin Corporation (Lockheed Martin) has conducted detailed investigations at the DRA and at the MT since 1999 and 2010, respectively. Lockheed Martin has also conducted additional investigations at Strawberry Point, Greater Strawberry Point, and Frog Mortar Creek (Figure 2-1). Investigations of these latter areas are not discussed in this report because they are being addressed under separate investigation programs.

2.1 DUMP ROAD AREA

Environmental investigations of MSA began in the mid-1980s, when the Maryland Department of the Environment (MDE) conducted site inspections related to stored drums and a reported chemical dump. In 1989, MDE conducted a preliminary assessment of MSA that identified fill areas and ponds, the latter of which were reportedly used from the 1930s through the 1960s to dispose of spent battery acid, acid-type strippers, and other acidic solutions (MDE, 1989). Detailed investigations of the DRA began after July 1991, when the Maryland Aviation Administration (MAA) encountered four buried drums adjacent to Taxiway Tango during trenching to install an electrical cable. Discovery of these drums led to investigation of the surrounding area for possible soil and groundwater contamination, as required by MDE in its letters of January 6, 1992 and January 14, 1997 to MAA (MDE, 1992; 1997).

MAA conducted several investigations of the DRA from 1991–1998. These studies identified four areas where environmental sampling investigations have been focused: the Taxiway Tango Median Area (TT Median Area), the Petroleum Hydrocarbon Area (PHA), Pond 1, and the Drum Area (DA). These early investigation areas are shown in Figure 2-2.

From 1999 to 2010, Lockheed Martin conducted a remedial investigation (Tetra Tech, 2012a) and supplemental fieldwork to further delineate the extent of soil, groundwater, and pond-sediment chemical contamination indicated by earlier DRA studies. Through geophysical surveys, membrane-interface probes, test pits, soil borings, and chemical analyses of soil and pond sediment samples, the remedial investigation identified large areas of buried fill and debris and surface and subsurface soil contamination in and around the buried fill material and in pond sediment. The extent of buried fill and debris was estimated to be present over approximately 25 acres of the DRA (see Figure 2-2).

A 2012 review of historical aerial photographs (Tetra Tech, 2013a) identified and mapped what appear to be open burning areas, open pits or ponds, soil or debris piles, possible ammunition bunkers, ground scars, and fill areas (see shaded areas on Figure 2-2). Several of these historical features coincide with areas of elevated contaminant concentrations in soil and/or groundwater; these areas were later identified as possible contaminant-source areas and were subsequently investigated in 2012–2014 (Tetra Tech, 2013b and 2014b,c).

Trichloroethene (TCE) (a metal degreaser) and TCE-degradation daughter products have been detected in groundwater throughout the investigation area, with the highest concentrations appearing in the upper and intermediate regions of the surficial aquifer. At the DRA, TCE concentrations have been detected in groundwater ranging from 0.5 to 490,000 micrograms per liter (µg/L). 1,4-Dioxane, benzene, toluene, xylenes, and several metals (typically co-located with chlorinated solvents) are also considered chemicals of concern in groundwater. TCE-degradation daughter products (e.g., dichloroethene [DCE], vinyl chloride [VC], etc.) are typically co-located with TCE at MSA.

Additional details regarding DRA background and history, including details of previous environmental investigations and discussions of contaminant source areas at the DRA, are in the *Dump Road Area Characterization of Possible Source Areas Report* (Tetra Tech, Inc. [Tetra Tech], 2013b), and therefore are discussed only briefly below. A detailed chronological

discussion of investigations at the DRA from 1985–2012 is provided as Appendix A of the *Dump Road Source-Areas Investigation Work Plan* (Tetra Tech, 2012c).

2.2 MAIN TERMINAL

Previous investigations directly related to the MT area include the *Environmental Evaluation Report for Martin State Airport Main Terminal* (Tetra Tech, 2010a) and the *Environmental Evaluation Addendum for Martin State Airport Main Terminal* (Tetra Tech, 2010b). These evaluations concentrated on environmental impacts resulting from practices carried out between 1929 and 1975, when the Glenn L. Martin Company and Martin Marietta owned and operated on the property. Possible areas of environmental concern in the MT area were identified through historical aerial photographs, facility records, local and federal library documents, museum records, regulatory data, environmental database reviews, interviews with former employees, and locating/reviewing environmental reports and data.

Nine recognized environmental conditions (RECs)[1] (RECs #1–9) were identified in the MT area during the environmental evaluation (Tetra Tech, 2010a), along with five potential RECs (RECs #10–14). The addendum report (Tetra Tech, 2010b) identified eight additional RECs (RECs #15–22) and provides supplemental details on 10 of 14 initial/possible RECs. Additional information obtained during development of the addendum report led to upgrading potential REC #14 to a full REC because an underground storage tank (UST) had once been at that location. Locations of the MT area RECs (exclusive of potential RECs #10–13) are shown in Figure 2-3.

A Phase II environmental site assessment for the MT area was conducted in 2010–2012 (Tetra Tech, 2012b and 2013c). Soil and groundwater samples were collected and analyzed for possible organic and inorganic constituents, based on historical site uses and operations. Twelve wells were installed around the perimeter of the airport hangars and airport terminal building near the identified MT-area RECs. Results of these groundwater studies indicated benzene (a petroleum volatile organic compound [VOC]) at well MT-MW02S at concentrations of 50.5 micrograms

[1] *Recognized environmental conditions (RECs) at a site are based on the presence or likely presence of hazardous substances and/or petroleum products under conditions that could indicate a historical, existing, or potential release to the property's structures, soil, groundwater, or surface water.*

per liter (µg/L) in 2011 and 87 µg/L in 2012. These concentrations exceed the MDE groundwater standard (5 µg/L) for benzene.

Seven other VOCs (acetone, carbon disulfide, carbon tetrachloride, chloroform, chloromethane, naphthalene, and toluene) were detected in the groundwater samples collected in 2012, but detected concentrations were below MDE groundwater standards. However, concentrations of total petroleum hydrocarbons (TPH)-gasoline-range organics (GRO), TPH-diesel-range organics (DRO), beryllium, nickel, and vanadium in several groundwater samples also exceeded MDE groundwater standards. Detected concentrations of semivolatile organic compounds (SVOCs), including 1,4-dioxane, did not exceed the MDE groundwater standards in the 2010–2012 samples. Additional details for the MT-area background and history, including details of previous environmental investigations and REC discussions, are available in several previous documents (Tetra Tech, 2010a, 2010b, 2012b, and 2013c) and are not repeated herein.

Section 3
Investigation Approach and Methodology

This report summarizes the 2014 groundwater sampling program for the Dump Road Area (DRA) and Main Terminal (MT) area. The investigation measured synoptic groundwater-levels and sampled groundwater for laboratory chemical analyses. The 2014 groundwater sampling round augments groundwater level measurements and sampling data obtained from 2003–2013 for the DRA and 2010–2013 for the MT area.

3.1 SYNOPTIC GROUNDWATER-LEVEL MEASUREMENTS

A synoptic round of water-level measurements was conducted on March 24–25, 2014. Static water levels were measured using an electronic graduated water-level meter. The static water level was determined by lowering the meter's probe into the well until an audible tone indicated that the air/water interface had been reached. The water level relative to the top of the well casing was recorded to the nearest 0.01 foot based on measurements collected from the meter's graduated cable. Groundwater-level measurement sheets are in Appendix A.

3.2 GROUNDWATER SAMPLING

Groundwater samples were collected in March–May 2014 from 107 wells at the DRA and 12 wells at the MT area as part of the annual monitoring program (Figure 3-1). Sampling included four deep confined-aquifer wells (MW-27D, MW-29D, MW-30D, and MW-31D); these four wells are the only wells installed in permeable zones below the surficial aquifer of concern. The groundwater sampling program is summarized in Table 3-1. The following sections outline well purging, sampling, and analytical procedures.

***Well purging*—**Monitoring wells were purged using low-flow-purging techniques before sample collection. Groundwater was purged using a peristaltic pump fitted with dedicated, disposable Teflon®-lined tubing, or by using a submersible pump positioned in the center of the well's

saturated screen. The pumping rate during purging ranged between 100–300 milliliters per minute (mL/min), and was frequently measured using a graduated cylinder. The purge rate was adjusted (but not allowed to fall below 100 mL/min) to minimize groundwater drawdown from the initial static water level.

During groundwater purging, water-level drawdown and groundwater parameters (including pH [a measure of acidity and alkalinity], temperature, specific conductance, dissolved oxygen [DO], oxidation-reduction potential [ORP], and turbidity) were measured and recorded every five to 10 minutes until purging was complete. Data were recorded in the appropriate site-specific logbook and on low-flow-purge data sheets. Water-quality parameters were measured using an inline water-quality meter. Turbidity readings were collected using a separate turbidity meter.

Purging was considered complete when the monitored water-quality parameters stabilized, when three saturated well-casing volumes had been removed, or when the well had been purged dry. Stabilization was considered achieved when three consecutive readings (taken at five-minute intervals) were within ±0.1 standard units for pH, ±3% for specific conductance and temperature, ±10% for DO and ORP, and less than 10 nephelometric turbidity units (NTUs) for turbidity. If the monitoring well was purged dry, the water level in the well was allowed to recover a minimum of 80% of its initial static water level before groundwater was sampled. Well purging and sample record sheets are in Appendix B. All purged water was collected in United States Department of Transportation (USDOT)-approved 55-gallon steel drums, which were properly labeled and staged at a location approved by the Maryland Air National Guard (MDANG) and Lockheed Martin Corporation (Lockheed Martin).

Sample collection—Monitoring wells were sampled after purging using the same dedicated tubing or submersible pump that had been used during purging. Groundwater samples were collected using low-flow-sampling protocols at the same pumping rate used during well purging. Groundwater was pumped directly into the appropriate sample containers (including all VOC samples), or into a certified-clean disposable container (supplied by the laboratory), which was then used to pour the collected water directly into the appropriate sample containers.

3.3 LABORATORY ANALYSES

Groundwater samples were collected and analyzed by an off-site laboratory using the following methods (see Table 3-1 for details):

- analysis for VOCs plus tentatively identified compounds (TICs), Freon 22 (chlorodifluoromethane), and Freon 113 by United States Environmental Protection Agency (USEPA) Method 8260C—(107 DRA monitoring wells and 12 MT-area wells).
- 1,4-dioxane by USEPA Method 8270C SIM—(107 DRA wells and 12 MT-area wells)
- perchlorate by USEPA SW846 Method 6850—(37 DRA wells)
- mercury by USEPA SW846 Method 7470A—(107 DRA wells and 12 MT-area wells)
- hexavalent chromium by USEPA Method 218.6—(30 DRA wells)
- total and dissolved priority pollutant metals by USEPA Method 6020B—(107 DRA wells and 12 MT-area wells)
- Total radium and radium-228 by USEPA 900-series methods—(10 DRA wells in the upper, intermediate, and lower surficial-aquifer, and in the deep confined-aquifer)
- gasoline-range organics (GRO) and diesel-range organics (DRO) by SW846 Method 8015B—(49 DRA wells and 12 MT-area shallow monitoring wells screened in the upper surficial-aquifer)
- natural-attenuation assessment (NAA) parameters—(nine monitoring wells were analyzed using USEPA SW846 protocols for NAA parameters [nitrate, nitrite, ammonia nitrogen, phosphate, sulfate, total alkalinity, dissolved organic carbon, total iron, total manganese, total potassium, total calcium, total magnesium, total chloride, total sodium, total silica, and total dissolved solids (TDS)]). Methane, ethane, and ethene were analyzed using Microseeps® AM 20GAX protocols.

Hexavalent chromium was analyzed by USEPA Method 218.6 (ion chromatography) with a specified detection limit of 0.02 µg/L, a value lower than the method's published detection limit (0.10 µg/L). Perchlorate was analyzed by USEPA Method 6850 with a specified detection limit of 1 µg/L. One trip blank per cooler per day was collected for VOC analysis samples for quality assurance/quality control (QA/QC) purposes. Matrix-spike and matrix-spike duplicate samples were collected on a 1:20 basis. Chemical results for this sampling event are discussed in Section 4. A table listing the chemical results for all samples is in Appendix C.

3.4 DOCUMENTATION

A master site logbook was maintained as an overall record of field activities. Sample documentation consists of completed chain of custody reports and matrix-specific sample log sheets. The chain of custody report is a standardized form summarizing and documenting pertinent sample information, such as sample identification and type, matrix, date and time of collection, preservation, and requested analyses. Sample custody procedures document sample acquisition and integrity. Chain of custody reports are included with the data validation reports in Appendix D.

3.5 EQUIPMENT DECONTAMINATION

Reusable equipment (e.g., water-level meter) was decontaminated before and after each use. Small, reusable equipment was decontaminated as follows:

- Liquinox® and potable-water wash
- potable-water rinse
- distilled-water rinse
- air drying
- collecting decontamination solutions for disposal

Decontamination rinsate was transferred to properly labeled 55-gallon drums staged at a facility-approved location. Dedicated and/or disposable equipment was used for groundwater purging and sampling and did not require decontamination.

3.6 WASTE MANAGEMENT

Investigation-derived waste (IDW) consisting of decontamination rinsate water, monitoring well purge water, and personal protective equipment (PPE) was generated during groundwater characterization. PPE was brushed off, placed in trash bags, and disposed of in a facility trash receptacle. Dedicated and disposable equipment was also rinsed off and disposed of in a facility trash receptacle. Well purge water was collected and stored in USDOT-approved 55-gallon drums. All drums were properly labeled and logged on a drum inventory form. The drums were profiled and removed from the site as nonhazardous waste.

3.7 GENERAL SAMPLING PROCEDURES, NOMENCLATURE, AND HANDLING

A master site logbook was maintained at the site as an overall record of field activities. Each sample received a unique sample identification consisting of the site location, well number, and a six-digit sampling date. For example, the groundwater sample collected on May 23, 2014 from monitoring well MSA-DMW-2S was labeled MSA-DMW-2S-042314. Trip blanks were labeled with a "TB" prefix, followed by the blank's six-digit submittal date (e.g., TB-042314). Field-related sample-handling considerations include selection of sample containers, preservatives, allowable holding times, and requested analyses.

Proper custody procedures were followed throughout all phases of sample collection and handling. Chain of custody protocols were used throughout sample handling to document the integrity of sample containers. Such protocols demonstrate that the samples were handled and transferred in a manner that would prevent or detect tampering.

Empty sample containers were released under signature from the laboratory and accepted under signature by the sampler or other individual responsible for maintaining custody until the sample containers were transferred to the sampling team. Groundwater samples were collected in these containers, released under signature from the sampling team, and then accepted under signature by the laboratory. Transport containers returning to the laboratory were sealed with strapping tape and a tamper-resistant custody seal. The custody seal shows the signature of the individual releasing the transport container, along with the date and time.

3.8 DATA VALIDATION

Data validation involves having a party independent of the laboratory review data provided by the laboratory to ensure that specific criteria have been met. These criteria concern specifications that are not sample dependent; they specify performance requirements that should be fully under a laboratory's control. For data analyses of organic chemicals, specific validation areas include blanks, performance-evaluation-standard materials, and instrument-performance checks. For data analyses involving inorganic chemicals, specific validation areas include blanks, calibration standards, calibration-verification standards, laboratory-control standards, and interference-check standards. The analytical laboratory supplies the chemical data as hard-copy reports and electronic databases.

Once the investigation was complete, chemical data were validated by Tetra Tech, Inc. (Tetra Tech) in accordance with established USEPA protocols to assess the reliability and accuracy of the data. This review was based on the USEPA Region 3 modifications to the *National Functional Guidelines for Data Review* (USEPA, 1993 and 1994) and the specifics of the analytical method used. Data validation reports are in Appendix D (on compact disc).

Validation of these data concluded that they are acceptable for their intended uses (i.e., risk screening and risk assessment), except for data qualified as unreliable (UR flags). The data qualifiers (i.e., flags) applied to the chemical results during data validation are listed below:

J The analyte is considered present in the sample, but the value is estimated and may not meet highest accuracy or precision standards. In this program, samples were qualified with "*J*" because quantitation was above the method detection limit but below the laboratory reporting-limit.

NJ The analyte has been tentatively identified. This qualifier indicates presumptive evidence of a compound. Special methods may be required to confirm its presence or absence in future sampling efforts.

U Not detected; the analyte is considered not detected at the reported value.

UJ The analyte was not detected. However, the quantitation or detection limit may be inaccurate or imprecise.

UR The non-detect result is considered qualitatively or quantitatively unreliable. Results flagged with "UR" data qualifiers include hexachlorocyclopentadiene (two samples), 2-chloroethyl vinyl-ether (five samples), 3-3'-dichlorobenzidine (one sample), nitrate (two samples), orthophosphate (two samples), and hexavalent chromium (eight samples).

Two of these flags (i.e., *J,* and NJ) appear on the chemical results tables in Section 4; all flags can be found in Appendices C and D.

Notes:

1 Perchlorate was analyzed by USEPA Method 6850 with a specified detection limit of 1 µg/L.

2 Hexavalent chromium was analyzed by USEPA Method 218.6 (ion chromotography) with a specified detection limit of 0.02 µg/L, which is lower than the method's published detection limit of 0.10 µg/L.

3 Natural attenuation parameters: nitrate, nitrite, ammonium nitrogen, phosphate, sulfate, total alkalinity, dissolved organic carbon, total iron total calcium, total manganese, total potassium, total magnesium, total chloride, total silica, total dissolved solids, methane, ethane and ethene.

4 Natural attenuation parameters were analyzed by USEPA Method SW846, and methane, ethane, and ethene were analyzed using Microseeps © AM 20GAX

Section 4
Results

This section presents the results of the 2014 groundwater-elevation data and groundwater sampling and chemical analysis programs for the Dump Road Area (DRA) and Main Terminal (MT) area of Martin State Airport (MSA). These results are compared against current Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008) and other state standards/criteria where MDE has not established standards. At present, MDE has not established an advisory level or standard for 1,4-dioxane in drinking water or groundwater. Several states (e.g., California, Colorado, Connecticut, Florida, Maine, Massachusetts, Michigan, and North Carolina) have established drinking water standards or action levels for 1,4-dioxane. These values range from California's action level of 3 micrograms per liter (µg/L) to Michigan's drinking water standard of 85 µg/L (United States Environmental Protection Agency [USEPA], 2006 and 2009, respectively).

USEPA has also published a preliminary remedial goal of 6.1 µg/L for 1,4-dioxane in tap water (USEPA, 2006) and a risk-based regional screening level of 0.67 µg/L for tap water (USEPA, 2013). The current advisory level or the most stringent standard for 1,4-dioxane is used as a comparison criterion to evaluate its groundwater concentrations in this report. Therefore, the California Department of Health Services advisory level (3 µg/L) is used herein as the groundwater screening level for 1,4-dioxane.

4.1 DUMP ROAD AREA

DRA groundwater levels were measured on March 24–25, 2014. Groundwater samples were collected from 107 DRA monitoring wells for chemical analyses in March–May 2014. Sampling at one well (MW-29D) was delayed until late May because an active bird nest was in the annulus between the protective casing and the well casing. Two other deep confined-aquifer wells (MW-30D and MW-31D) and newly installed wells (MW-52S/I/D through MW-54S/I) were also sampled at that time. Other wells were sampled from March through the first day of May.

4.1.1 Groundwater Level Data

Table 4-1 lists March 2014 groundwater level measurements and computed groundwater elevations for the wells sampled at MSA. Figures 4-1 through 4-3 show the DRA groundwater-elevation contour maps for the upper, intermediate, and lower surficial-aquifer zones, respectively. As presented in Table 4-1, static groundwater levels in the sampled wells were measured and recorded as groundwater depths measured from the top of the well casings, and were converted to elevations based on the North American Vertical Datum of 1988 (NAVD88). Groundwater elevations for the surficial aquifer ranged from 0.07 feet below NAVD88 at well MW-49S (near Frog Mortar Creek) to 7.8 feet above NAVD88 at well MW-44S (adjacent to Pond 2). Accounting for well-casing stick-up for aboveground well-casing risers and well stick-down for flush-mounted well designs, groundwater depths in the surficial aquifer ranged from approximately 1.5 to 18.5 feet below grade. Shallow groundwater was encountered adjacent to Pond 2 (well MW-44S) and in the western part of the site near the airport runway (e.g., wells MW-24S and DMW-11S); deeper groundwater was found in the eastern portion of the site along the top of the fill embankment near Frog Mortar Creek.

As shown in Figures 4-1 through 4-3, groundwater in the upper, intermediate, and lower surficial-aquifer generally flows east–northeast from the runway and taxiway to Frog Mortar Creek. Consistent with previous water level measurements, the 2014 results show elevated groundwater levels at DMW-3S, DMW-11S, MW-36S, MW-43S, and MW-44S (Figure 4-1), indicating local groundwater mounding near Ponds 1 and 2. These shallow wells are installed in a clay-rich material above the more permeable sands in which the surrounding wells are installed. Therefore, groundwater levels in these wells may reflect localized perched groundwater in this portion of the DRA.

4.1.2 Groundwater Chemical Data

Groundwater samples were collected from the DRA wells to evaluate and confirm the horizontal and vertical extent of groundwater contamination at the DRA, and to assess the natural attenuation of VOCs in the subsurface. Validated analytical results are in Appendices C and D. Validated groundwater-chemical data were used to generate a statistical summary table (Table 4-2) that lists only detected analytes.

A positive detections (or "hits") table was also generated from these data (Table 4-3). Gray shading in Table 4-3 indicates results that exceed MDE groundwater standards or the California advisory level for 1,4-dioxane. Table C-1 in Appendix C is similar to Table 4-3, except that it summarizes both detected and nondetected results. Data validation reports and chain of custody forms are on compact disc (CD) in Appendix D. The following sections discuss the results of the groundwater-chemical analyses for the DRA.

4.1.2.1 Volatile Organic Compounds

A wide range of volatile organic compounds (VOCs) was detected in groundwater (Table 4-2). *cis*-1,2-Dichloroethene (*cis*-1,2-DCE), trichloroethene (TCE), and vinyl chloride (VC) are the most frequently detected constituents. These chlorinated VOCs (cVOCs) were detected in approximately 76%, 73%, and 66% of the samples collected, respectively (Table 4-3). The maximum detected concentrations of TCE (50,000 micrograms per liter [µg/L]), *cis*-1,2-DCE (37,000 µg/L), and VC (17,000 µg/L) are several orders of magnitude (i.e., powers of 10) greater than their groundwater standards (5 µg/L, 70 µg/L, and 2 µg/L, respectively). Petroleum-related VOCs (such as benzene, toluene, ethylbenzene, and xylenes [BTEX]) were detected less frequently, ranging from 6% of samples for ethylbenzene to 29% of samples for benzene. BTEX were also detected at lower concentrations than the cVOCs (e.g., maximum benzene is 310 µg/L [MSA-DMW-09S] with a groundwater standard of 5 µg/L).

VOCs exceeding groundwater standards in the upper, intermediate, and lower surficial-aquifer zones are shown in Figures 4-4, 4-5, and 4-6, respectively. The results for the current round are similar to those of previous groundwater sampling rounds. The lateral and vertical distributions of cVOCs in groundwater confirm that several source areas at the site contribute to groundwater contamination (Figures 4-4 through 4-6). These areas include the Taxiway Tango Median Area (TT Median Area), the Petroleum Hydrocarbon Area (PHA), Taxiway Tango Area East (TT Area East), former Pond 3, the Drum Area (DA), and the area east of Pond 1; see Figure 2-2 for the locations of these areas.

Taxiway Tango Median Area—The TT Median Area is in the western portion of the DRA near wells MW-54S/I and DMW-11S (Figures 4-4 through 4-6; Table 4-2). Historically, DMW-11S has contained the highest concentrations of cVOCs in this area (up to 52,000 µg/L for TCE, and up to 53,000 µg/L for *cis*-1,2-DCE in 2004). Wells MW-54S/I were installed northeast of wells

DMW-11S/I, in an area where elevated concentrations of cVOCs were detected in the upper and intermediate surficial-aquifer zones during vertical aquifer-sampling (VAS) in 2013. TCE concentrations (28,000 µg/L) detected in groundwater samples collected in 2014 from MW-54S and MW-54I are nearly 10 times the TCE concentration at DMW-11S (3,100 µg/L). MW-54S also has a toluene concentration (15,000 µg/L) that exceeds its Maryland Department of the Environment (MDE) groundwater standard (1,000 µg/L).

From 2004–2010, TCE concentrations at DMW-11S ranged from 29,000–52,000 µg/L but declined sharply to concentrations ranging from 3,100–16,000 since 2011. Historical data are not available for MW-54S/I, so it is unclear if TCE at DMW-11S migrated downgradient to MW-54S/I, or if MW-54S/I is simply an extension of the TT Median Area TCE-source area. However, an elevated TCE concentration detected in shallow soil (260,000 micrograms per kilogram at 6–8 feet) during drilling and soil sampling at MW-54S/I suggests that this area is an extension of the TT Median Area source area.

Petroleum Hydrocarbon Area—This area is in the central portion of the site (Figure 2-2) near well DMW-9 and Pond 1 (Figures 4-4 through 4-6). In the PHA area, the greatest concentrations of cVOCs are reported for the intermediate surficial-aquifer wells (Figures 4-4 through 4-6; Table 4-3), where most wells have concentrations of TCE, *cis*-1,2-DCE, and VC in excess of groundwater standards. The highest concentrations of *cis*-1,2-DCE (9,400 µg/L) and VC (8,800 µg/L) in this area are in the upper surficial-aquifer zone at well DMW-9S. However, TCE was detected at higher concentrations in wells DMW-9I (800 µg/L) and DMW-9D (2,500 µg/L) as compared to surrounding wells in the PHA.

The maximum detected benzene concentration in the DRA for this round is at well DMW-9S (310 µg/L [*J* qualified]) in the PHA (Table 4-2 and Figure 4-7); this concentration is more than 60 times higher than the groundwater standard (5 µg/L). Other wells in this area with benzene exceedances are DMW-9I (25 µg/L [*J* qualified]), MW-20S (20 µg/L [*J* qualified]), MW-14I (12 µg/L [*J* qualified]), MW-16S (7.5 µg/L), and MW-42S (19 µg/L [*J* qualified]). MW-16S and MW-52S/I/D are hydraulically downgradient of DMW-9S (Figures 4-1 through 4-3), which may explain the presence of benzene at these locations.

TT Area East—This area is in the central portion of the DRA near wells MW-45S, MW-41S/I, and DMW-1A/B. Historical aerial photographs indicate that a former open burning area and a

pond/pit were once in this area. Well MW-45S appears to be installed in the TCE source area in this area. During this round, the total cVOC concentration at MW-45S is 104,000 µg/L, comprised of TCE (50,000 µg/L), *cis*-1,2-DCE (37,000 µg/L), and VC (17,000 µg/L). Concentrations of benzene are at DMW-01B (14 µg/L [*J* qualified]), MW-41S (26 µg/L [*J* qualified]), MW-41I (8.2 µg/L), MW-45S (120 µg/L [*J* qualified]) also exceed its MDE groundwater standard (5 µg/L).

Former Pond 3—This area is in the central portion of the DRA south of Pond 1 (Figure 2-2) at wells MW-53S/I and DMW-8S/I/D. Wells MW-54S/I were also installed in the former Pond 3 area, where elevated concentrations of cVOCs were detected in the upper and intermediate surficial-aquifer zones during VAS in 2013. TCE concentrations at MW-53S (60 µg/L) and MW-53I (4,700 µg/L) in 2014 are substantially lower than TCE concentrations (3,600-490,000 µg/L) detected during VAS at similar depths.

Drum Area—This area is in the southern portion of the site between wells MW-2/MW-19, MW-5/DMW-7, and MW-40S/I. It extends downgradient and to the east at wells DMW-4, DMW-5, MW-50, and MW-51. The highest VOC concentrations in this area are in the upper surficial-aquifer near wells MW-2/MW-19, MW-5/DMW-7, MW-40S/I, and DMW-5; one or more of the three primary cVOCs (TCE, *cis*-1,2-DCE, and VC) exceed their respective groundwater standards in these wells (see Figures 4-4 through 4-6 and Table 4-2). The highest total cVOC concentrations (i.e., 33,400 µg/L in 2007) in this area are generally detected at well DMW-7S. Concentrations of TCE (3,600 µg/L), *cis*-1,2-DCE (14,000 µg/L), and VC (2,100 µg/L) at DMW-7S in 2014 total 19,700 µg/L.

Area East of Pond 1—This area is in the northeastern portion of the site between Pond 1 and Frog Mortar Creek. The highest cVOC concentrations are near Frog Mortar Creek (Figures 4-4 through 4-6). TCE at wells MW-52I (26,000 µg/L) and MW-52D (16,000 µg/L), located east of a wetland area and a former pond or pit observed on historical photographs, appears to be at the lowest drainage point behind the berm constructed when the former Limehouse Cove was being filled. cVOC concentrations in well MW-46I are as much as 45 times above their respective MDE groundwater standards. Concentrations at MW-46I suggest that high cVOC concentrations extend north of the area currently being monitored at the DRA, indicating that VOC exceedances likely extend north to the Maryland Air National Guard (MDANG) armory area.

***Taxiway Tango Area North*—**TCE exceeds its screening level (5 µg/L) at several intermediate wells north and west of Pond 2. TCE concentrations at MW-16I (960 µg/L) and MW-17I (750 µg/L) both exceed its groundwater standard (Table 4-3 and Figure 4-5). These exceedances suggest that the groundwater-contaminant plume extends northwest of wells DMW-9S/I/D (Figures 4-4 and 4-5), likely extending north to the MDANG armory area.

***Shoreline wells*—**Wells MW-46S/I/D through MW-52S/I/D form a northwest–southeast trending line on the embankment along the Frog Mortar Creek shoreline. The six highest TCE concentrations in these wells range from 3,400–26,000 µg/L. They are centered around new wells MW-52I (26,000 µg/L)/MW-52D (16,000 µg/L), extending northwest to MW-47I (3,400 µg/L) and southeast to wells MW-48I (4,200 µg/L), MW-49I (4,800 µg/L), and MW-49D (5,800 µg/L). TCE concentrations decreased from 2013–2014 in nine of 18 wells. Note that TCE concentrations have decreased at MW-50S (13,000 µg/L in 2013, compared to 730 µg/L in 2014) and at MW-49D (from 9,300 µg/L in 2013 to 5,800 µg/L in 2014). All other TCE concentrations in shoreline wells were 730 µg/L or less, and all but three wells (MW-46S, MW-48S, and MW-50D) had TCE concentrations exceeding the groundwater standard (5 µg/L).

***Deep confined-aquifer wells*—**Trace concentrations of three VOCs (acetone, 2-butanone, and carbon disulfide) were detected in three of the deep confined-aquifer wells (Table 4-3). The concentrations were low (0.22–7.2 µg/L) and below groundwater standards, which range from 100–700 µg/L for carbon disulfide and 2-butanone, respectively.

***Natural-attenuation assessment parameters*—**Nine groundwater samples in the current (2014) round were analyzed for natural-attenuation assessment (NAA) parameters. Groundwater samples for NAA parameters were collected from four wells in the upper surficial-aquifer zone (DMW-9S, DMW-11S, MW-18S, and MW-48S), from three wells in the intermediate surficial-aquifer zone (DMW-9I, MW-18I, and MW-48I), and from two wells in the lower surficial-aquifer zone (DMW-9D and MW-48D). These wells are in presumed VOC source-areas. Locations of these wells are shown on Figures 4-4 through 4-5.

NAA parameters include alkalinity, chloride, dissolved organic carbon, nitrate, nitrite, orthophosphate, sulfate, total dissolved solids, calcium, iron, magnesium, manganese, potassium, sodium, and analysis for dissolved gasses ethane, ethene, and methane. NAA parameters were measured in the field as well as at the laboratory. Field measurements of NAA parameters used

for this evaluation (i.e., groundwater pH [a measure of acidity or alkalinity], oxidation-reduction potential [ORP], dissolved oxygen [DO], and temperature) are recorded on the field forms in Appendix B.

NAA analyses evaluate whether anaerobic reductive-dechlorination of cVOCs is occurring at the site. This information will be used during the evaluation of remedial alternatives to determine whether site conditions can be enhanced to stimulate anaerobic reductive-dechlorination by adding electron donors and/or adjusting groundwater pH. Anaerobic reductive-dechlorination is evident at the site, as shown by detection of the TCE breakdown product *cis*-1,2-DCE.

cis-1,2-DCE also appears to be degrading readily in the upper and intermediate zones, as indicated by the VC found at wells DMW-9S/I, DMW-11S, MW-18S/I, MW-48S/I/D. Further, ethene concentrations greater than 10 µg/L at five of nine wells, and elevated chloride concentrations at wells DMW-9S/I and MW-18S/I, indicate that complete mineralization of VOC contaminants is likely occurring at these locations. Methane concentrations at these wells also indicate anaerobic conditions. BTEX at DMW-9S and DMW-11S provide a carbon source that is expected to enhance biodegradation of cVOCs at the PHA and Pond 1 Area plume and, to a lesser extent, the Taxiway Tango plume area.

Other NAA parameters indicate favorable conditions for reductive dechlorination in the upper and intermediate surficial-aquifer zones. Elevated methane concentrations (greater than 500 µg/L) detected at DMW-9S, DMW-9I, and DMW-11S were slightly above the favorable assessment criterion. High methane concentrations at these locations indicate fermentation is occurring; thus, the potential for complete anaerobic dechlorination exists at these locations.

4.1.2.2 1,4-Dioxane

1,4-Dioxane was detected in 67% of the 2014 groundwater samples (Table 4-2 and Figure 4-8), at concentrations ranging from 0.43*J* (MW-16I) to 1,000 µg/L (MW-45S). The average of the detected 1,4-dioxane concentrations is 107.2 µg/L. The highest concentrations occur primarily in the upper and intermediate surficial-aquifer zones east of Taxiway Tango, in an area northeast and hydraulically downgradient of well MW-45S (DMW-2A [450 µg/L], and DMW-2S [310 µg/L]). High 1,4-dioxane concentrations were also detected in wells east of Pond 1 (DMW-3S/DMW-3I [440 µg/L and 420 µg/L, respectively] and DMW-18I [190 µg/L]), and in

the northernmost portion of the site (MW-16S at 240 µg/L). Fifty-four samples exceeded the California Department of Health Services advisory level (3 µg/L). Substantially lower concentrations (ranging from 1.6 to 896 µg/L) of 1,4-dioxane are reported for wells at the Drum Area plume. 1,4-Dioxane was not detected in the deep confined-aquifer groundwater samples (i.e., MW-27D, MW-29D, MW-30D, and MW-31D).

Levels of 1,4-dioxane in high cVOC-concentration areas generally decreased from 2009 to 2012, but have since started to increase. The largest decrease occurred at well DMW-1A; the 2009 concentration (490 µg/L) decreased in 2010 (91 µg/L), remained steady in 2011 (93 µg/L), and then decreased again in 2012 (68 µg/L). In 2013, the 1,4-dioxane concentration at DMW-1A increased to 170 µg/L, and also increased slightly (180 µg/L) during this round (2014).

1,4-Dioxane was also detected in groundwater in lower surficial-aquifer samples in an area co-located with the highest VOC concentrations. 1,4-Dioxane was detected south and southwest of Pond 1 along the longitudinal axis of the VOC-plume, extending eastward from well DMW-1B (56 µg/L) to wells DMW-2A (450 µg/L) and DMW-4D (48 µg/L). Wells MW-45S and DMW-1A appear to be near or in the presumed 1,4-dioxane source in this area.

4.1.2.3 Metals

Tables 4-2 and 4-3 summarize detections of total metals (unfiltered groundwater samples) and dissolved metals (filtered groundwater samples). Metals concentrations that exceed MDE groundwater standards are in Table 4-3 and Figures 4-9 through 4-13. Concentrations of 11 total metals and eight dissolved metals exceed groundwater standards in one or more groundwater samples collected in 2014.

As shown in Table 4-3, concentrations of iron, manganese, vanadium, arsenic, nickel, and cadmium exceed standards most frequently. The maximum concentrations of arsenic, cadmium, iron, manganese, vanadium, and nickel exceed standards by more than one order of magnitude. Figure 4-15 shows the maximum of the dissolved (filtered) and total (unfiltered) exceedances for cadmium, nickel, and vanadium (the three metals that most frequently exceed standards). Well MW-45S appears to be installed in the cadmium and chromium source in this area. Cadmium and chromium concentrations at MW-45S during this round are 4,700 µg/L and 9,300 µg/L, which are several times higher than the elevated cadmium and chromium concentrations in wells

DMW-1A and DMW-1B (cadmium only) located near MW-45S. No exceedances of hexavalent chromium were detected in any of the 38 samples in which it was analyzed for. Only the common metals iron, manganese and vanadium (in one sample) exceed groundwater standards in samples collected from the deep confined-aquifer wells (i.e., MW-27D, MW-29D, MW-30D, and MW-31D).

4.1.2.4 Petroleum Hydrocarbons

As shown in Table 4-2, total petroleum hydrocarbon diesel-range organics (TPH-DRO) were detected in 51% of the 2014 groundwater samples, at concentrations ranging from 470 to 3,200 µg/L. TPH-gasoline-range organics (TPH-GRO) were detected in 89% of the 2014 groundwater samples, at concentrations ranging from 26–52,000 µg/L. TPH-DRO and TPH-GRO exceedances of the screening level (47 µg/L for both) are on Figure 4-14. The average detected concentration of TPH-DRO is 1,420 µg/L, whereas the highest concentration reported is for well DMW-52S (3,200 µg/L). The highest concentration of TPH-GRO reported for 2014 is at well DMW-54S (52,000*J* µg/L); the average detected concentration is 4,327 µg/L.

4.1.2.5 Perchlorate

Thirty-seven groundwater samples were analyzed for perchlorate (Table 4-2). Perchlorate was detected in 18 of 37 (49%) groundwater samples at concentrations ranging from 0.083–4.8 µg/L. Concentrations at wells DMW-04D (4.8 µg/L) and MW-49I (4.2 µg/L) are the only perchlorate results to exceed the standard (2.6 µg/L).

4.1.2.6 Radium-228 and Total Radium

As shown in Table 4-2, radium-228 and total radium were detected in 2014 in eight of 10 groundwater samples. Radium-228 concentrations range from 0.712 to 9.91 picocuries per liter (pCi/L). The average detected radium-228 concentration in the surficial aquifer is 4.33 pCi/L, with the highest radium-228 concentration reported at well DMW-6I (9.91 pCi/L), screened in the intermediate surficial-aquifer in the southeastern part of the site. The radium-228 concentration at DMW-6I (9.91 pCi/L), as well as the radium-228 concentrations at DMW-3I (9.15 pCi/L) and DMW-6D (7.56 pCi/L), exceed the groundwater standard (5 pCi/L). However, concentrations of total radium (0.394–3.45 pCi/L) did not exceed its groundwater standard (5 pCi/L).

4.2 MAIN TERMINAL

Static groundwater levels and groundwater samples for laboratory chemical analyses were collected from 12 MT-area monitoring wells. This section presents groundwater elevation data collected on March 24, 2014 and the chemical results from collected groundwater samples (March 26–28, 2014). The MT-area groundwater samples were analyzed for VOCs, 1,4-dioxane, total and dissolved metals, TPH-DRO, and TPH-GRO.

4.2.1 Groundwater Level Data

Groundwater level measurements and computed elevations for upper surficial-aquifer wells MT-MW01S through MT-MW12S are in Table 4-1; these data are graphically depicted on Figure 4-15. Depth to groundwater ranged from just below the ground surface (in the low elevation area south of hangars H-1 to H-3 at well MT-MW03S) to approximately 12 feet below the ground surface (at the upslope ends of the hangar buildings at wells MT-MW08S [hangar H-1] and MT-MW10S [hangar H-6]). As shown in Figure 4-15, groundwater from the airport terminal area generally flows southwest toward Dark Head Cove.

4.2.2 Groundwater Chemical Data

Validated groundwater chemical data in the MT area were used to generate a statistical summary table (Table 4-4). Positive detections (or "hits") generated from these data are also in Table 4-5. Gray shading in Table 4-5 indicates results that exceed MDE groundwater standards or (for 1,4-dioxane) the California advisory level (3 µg/L). Table C-2 in Appendix C is similar to Table 4-3, except that it summarizes both detected and nondetected results. Data validation reports and chain of custody forms are on compact disc (CD) in Appendix D. The following sections discuss groundwater results for the MT area. Figure 4-16 shows detected organic compounds that exceed the groundwater standards. Figure 4-17 illustrates metals exceedances in groundwater.

4.2.2.1 VOCs and SVOCs

A wide range of VOCs was detected in groundwater at the MT area (Tables 4-4 and 4-5). However, most VOCs were detected infrequently (in one to three of 12 samples). VOCs were primarily detected in well MT-MW02S, on the western side of hangar H-1 in an area where former underground storage tanks (USTs) were previously used to store fuel.

The only VOC exceedance in groundwater samples was benzene (13 µg/L) at well MT-MW02S. This concentration less than the concentration detected in 2013 (18 µg/L), but still higher than the groundwater standard (5 µg/L). Other VOCs were detected at low concentrations that do not exceed cleanup target levels.

4.2.2.2 Metals

Groundwater samples were analyzed for both total (i.e., unfiltered) and dissolved (i.e., filtered) metals. Sixteen metals were detected in groundwater samples collected from wells MT-MW01S through MT-MW12S. Four metals (beryllium, iron, manganese, and nickel) were detected at concentrations exceeding screening criteria, primarily in wells around hangars H-4 through H-6. Beryllium exceeded the MDE standard (4 µg/L) in five unfiltered samples (concentrations ranging from 4.3 µg/L to 87 µg/L) and in five filtered samples (concentrations ranging from 4.3 µg/L to 86 µg/L). Nickel exceeded its standard (73 µg/L) in six of 12 wells sampled, in both unfiltered and filtered samples.

4.2.2.3 Petroleum Hydrocarbons

TPH-GRO was detected in all 12 MT wells at concentrations ranging from 32*J* to 510 µg/L. Most GRO results are *J*-qualified (i.e., estimated). Three detections exceed the MDE groundwater standard (47 µg/L). The highest GRO exceedance was detected at MT-MW02S (510 µg/L). The other two standard exceedances are 57 µg/L and 58 µg/L, which are within the same order of magnitude as the standard.

TPH-DRO was detected at six sampling locations (MT-MW01S, MT-MW02S, MT-MW03S, MT-MW06S, MT-MW07S, and MTW-MW08S) at concentrations ranging from 610–5,200 µg/L. All six detections exceed the MDE groundwater standard (47 µg/L). TPH-DRO at similar concentrations was detected at MT-MW02S during previous sampling rounds (4,900 µg/L in 2011, 3,700 µg/L in 2012, 4,700 µg/L in 2013, and 5,200 µg/L in 2014). However, concentrations at MT-MW01S have increased since 2011 (1.8 µg/L in 2011, 540*B* µg/L in 2012, 700 µg/L in 2013, and 1,300 µg/L in 2014).

1 Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008) unless noted.

2 State of California drinking water action level. MDE standard not available.

Shading indicates value exceeds groundwater standard or action level.

µg/L - micrograms per liter

*Although this well is identified as a deep well (suffix 'D'), it is screened in the intermediate zone of the surficial aquifer

NA - not available (second column) or not analyzed

J - chemical detected, concentration is estimated

NJ - analyte tentatively identified; concentration is estimated

mg/L - milligrams per liter

pCi/L - picoCuries per liter

Section 5
Summary

The following summarizes the findings of the 2014 groundwater sampling and analysis program for the Dump Road Area (DRA) and Main Terminal (MT) area of Martin State Airport (MSA):

Dump Road Area—

- Groundwater in the upper, intermediate, and lower surficial-aquifer zones flows east and northeast to Frog Mortar Creek.

- Concentrations of chlorinated volatile organic compounds (cVOCs) exceed Maryland Department of the Environment (MDE) groundwater standards throughout a large portion of the Dump Road Area, and at multiple depths. The two highest trichloroethene (TCE) concentrations observed in the current sampling round are 50,000 micrograms per liter (µg/L) and 28,000 µg/L, reported for upper surficial-aquifer well MW-45S (east of Taxiway Tango) and shallow and intermediate wells MW-54S/I (west of MW-45S in the Taxiway Tango median area). Multiple volatile organic compound (VOC) sources at the site have resulted in volatile organic compound plumes in groundwater extending to areas north of Pond 2, south to wells DMW-6I and DMW-7I, and west to the area between Taxiway Tango and the airport runway. Concentrations of chlorinated volatile organic compounds in groundwater are consistent

- with the 2013 results, with some exceptions.

- Samples at nine groundwater wells were analyzed for natural-attenuation assessment (NAA) parameters; anaerobic reductive-dechlorination is evidenced by the trichloroethene-breakdown product *cis*-1,2-dichloroethene. Vinyl chloride (VC), methane, ethene, and elevated chloride concentrations indicate that complete dechlorination may be occurring in the upper and intermediate surficial-aquifer zones at the Dump Road Area. However, lower relative concentrations of vinyl chloride, methane, and ethene, as well as low groundwater pH and high oxidation-reduction potential, indicate that slow or incomplete reductive-dechlorination of lower-order chlorinated volatile organic compounds may be occurring in the lower surficial-aquifer zone.

- Volatile organic compounds are in groundwater at concentrations greater than the Maryland Department of the Environment groundwater standards in delineated areas to the north, east, and west of the waste material in the central portion of the Dump Road Area.

- The semivolatile organic compound (SVOC) 1,4-dioxane was detected primarily in groundwater samples from the upper and intermediate surficial-aquifer zones.

1,4-Dioxane is co-located in areas containing the highest concentrations of chlorinated volatile organic compounds (east of Taxiway Tango at MW-45S, the area hydraulically downgradient of MW-45S, and near and east of Pond 1).

- Concentrations of 11 metals exceed groundwater standards in one or more surficial-aquifer groundwater samples. Maximum concentrations of cadmium, iron, manganese, vanadium, nickel, and chromium exceed Maryland Department of the Environment groundwater standards by more than one order of magnitude (i.e., a power of 10).

- Well MW-45S appears to be installed in the cadmium and chromium source east of Taxiway Tango. During this round, cadmium and chromium concentrations at MW-45S are 4,700 µg/L and 9,300 µg/L, which is several times higher than the elevated cadmium and chromium concentrations in wells DMW-1A and DMW-1B (cadmium only) located near MW-45S.

- Detected concentrations of hexavalent chromium do not exceed the Maryland Department of the Environment groundwater standard.

- Total petroleum hydrocarbon (TPH) diesel-range organics (DRO) and gasoline-range organics (GRO) were frequently detected in upper surficial-aquifer groundwater samples. Most concentrations exceed the Maryland Department of the Environment groundwater standard (47 µg/L).

- Perchlorate was detected in 18 of 37 groundwater samples. However, only two of these concentrations (4.8 µg/L at DMW-4D and 4.2 µg/L at MW-49I) exceed the Maryland Department of the Environment groundwater standard of 2.6 µg/L.

- Radium-228 and total radium were detected in eight of 10 groundwater samples. Radium-228 concentrations range from 0.712 picocuries per liter (pCi/L) to 9.91 pCi/L, and exceed the groundwater standard at three sampled locations (wells DMW-6I, DMW-6D, and DMW-3I). Total radium concentrations range from 0.394 pCi/L to 3.45 pCi/L, which are less than the standard of 5 pCi/L.

Main Terminal—

- Groundwater elevation data indicate that groundwater at the Main Terminal area flows southwest toward Dark Head Cove from the airport terminal area.

- Benzene and other petroleum-related volatile organic compounds (e.g., 1,2,4-trimethylbenzene, naphthalene, xylenes, etc.) were detected infrequently (in one to three samples), primarily in well MT-MW02S. This well is on the western side of hangar H-1, in an area where former underground storage tanks (USTs) were previously used to store fuel.

- One volatile organic compound (benzene) exceeded its Maryland Department of the Environment groundwater standard in the groundwater sample collected at well MT-MW02S. Benzene at MT-MW02S (13 µg/L) is less than the concentration detected during the 2013 sampling event (18 µg/L). Other volatile organic compounds were

detected, but at low concentrations that do not exceed their respective groundwater standards.

- Four metals (beryllium, iron, manganese, and nickel) were detected at concentrations exceeding Maryland Department of the Environment groundwater standards, primarily in wells around hangars H-4 through H-6.

- Gasoline-range organics were detected in all 12 wells, but only three of these detections exceed the Maryland Department of the Environment groundwater standard (47 µg/L). Diesel-range organics were detected at six sampling locations (MT-MW01S, MT-MW02S, MT-MW03S, MT-MW06S, MT-MW07S, and MTW-MW08S) at concentrations exceeding the Maryland Department of the Environment groundwater standard.

Time:	(Visual)	(S.U.)	(mS/cm)	(°C)	(NTU)	(mg/l)	(%)	
Method: Peristaltic Pump	clear	8.58	0.826	13.88	11.95	0.0	0.2	

PURGE DATA:

Date: 4/17/14	Volume	pH	S.C.	Temp.	Turbidity	DO	Salinity	Other
Method: peristaltic pump								

Monitor Reading (ppm):
Well Casing Diameter & Material Type: 2" PVC
Total Well Depth (TD): 62.91
Static Water Level (WL): 7.62
One Casing Volume(gal/L): 5
Start Purge (hrs): 1005
End Purge (hrs): 1135
Total Purge Time (min): 90
Total Vol. Purged (gal/L): 45

See Low Flow Purge Data Sheet

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
VOCs	HCl	2-40 mL vials	9
Total Metals	HNO3	1-500 mL plastic	3
Dissolved Metals	HNO3	1-500 mL plastic	3
1,4-Dioxane	None	2-250 mL ambers	6
TPH-GRO	HCL	2-40 mL vials	
TPH-DRO	None	2-250 mL ambers	
Perchlorate	None	1-250 mL plastic	3
Hexavalent Chromium	None	1-250 mL plastic	3
Radium 224, 226, 228	HNO3	3-1 L plastics	
Haloacetic Acids	None	2-250 mL ambers	
Natural Attenuation Parameters	See Notes	See Notes

Project Site Name: ARA Design Char. | Sample ID No.: MSA-MW-525
Project No.: 112501.5482 | Sample Location: MSA
Sampled By: JAM
C.O.C. No.:
Type of Sample:
[x] Low Concentration
[ ] High Concentration

[ ] Domestic Well Data
[x] Monitoring Well Data
[ ] Other Well Type:
[ ] QA Sample Type:

SAMPLING DATA:

Date: 5/20/14	Color (Visual)	pH (S.U.)	S.C. (mS/cm)	Temp. (°C)	Turbidity (NTU)	DO (mg/l)	Salinity (%)	Other
Time: 1100								ORP
Method: peri pump	cloudy	6.46	3.56	18.18	62.3	DEAD	1.2	-90

PURGE DATA:

Date: 5/20/14	Volume	pH	S.C.	Temp.	Turbidity	DO	Salinity	Other
Method: peri pump								
Monitor Reading (ppm): —								
Well Casing Diameter & Material		SEE LOW FLOW PURGE DATA SHEET						
Type: 2" PVC								
Total Well Depth (TD): 22.89'								
Static Water Level (WL): 12.61								
One Casing Volume(gal/L): —								
Start Purge (hrs): 1005								
End Purge (hrs): 1210								
Total Purge Time (min): 125	125							
Total Vol. Purged (gal/L): ~3								

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
VOCs	HCl	3-40 mL vials	✓
TPH-GRO	HCl	2-40 mL vials	✓
TPH-DRO	—	2-1L ambers	✓
Total Metals	HNO3	1-500 mL plastic	✓
Dissolved metals	HNO3	1-500 mL plastic (filtered)	✓
Hex Chrom	—	1-250 mL plastic	✓
SVOCs + 1,4 dioxane	—	2-1L ambers	✓

OBSERVATIONS / NOTES:

Ferrous Iron kit: 0.6 and 4.0

Hex Chrom @ 1200

RADIONUCLIDES (PCI/L)						
RADIUM-228	NA	NA	NA	NA	NA	NA
TOTAL RADIUM	NA	NA	NA	NA	NA	NA

Notes:

J - estimated concentration

UG/L - micrograms per liter (i.e., parts per billion)

MG/L - milligrams per liter (i.e., parts per million)

MSA - Martin State Airport

MW - monitoring well

NA - not analyzed.

NJ - tentatively identified compound

U - analyte is not detected at the concentration shown left of the letter.

UR - not detected. Result is not considered reliable.

Overview

The sample set for Lockheed – MSA, SDG 240-35541-1 consists of twelve (12) aqueous environmental samples. The samples were analyzed for total and dissolved metals.

The samples were collected by Tetra Tech on March 26 and 31, 2014 and analyzed by Test America. All analyses were conducted in accordance with SW-846 Method 6020A and 7470A analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, ICP/MS tuning, initial/continuing calibrations, laboratory method blank results, blank spike/blank spike duplicate results, internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- None

Minor

- The contract required detection limit (CRDL) percent recovery for nickel on 04/04/14 @13:29 was greater than 130% quality control limit affecting total and dissolved samples MSA-MW26S-033114, MSA-MW20S-033114, MSA-MW20I-033114, MSA-MW20D-033114, MSA-MW33S-033114, MSA-MW33I-033114, MSA-MW15I-033114, and MSA-MW15D-033114. Positive results less than 2X the CRDL reported for nickel were qualified as estimated (J).

- The following contaminants were detected in the laboratory method or calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony[(1)]	0.508 ug/L	2.54 ug/L
Beryllium[(1)]	0.0500 ug/L	0.25 ug/L
Silver[(1)]	0.0140 ug/L	0.07 ug/L
Silver[(2)]	0.0110 ug/L	0.55 ug/L
Antimony[(3)]	0.495 ug/L	2.475 ug/L
Iron[(4)]	36.8 ug/L	184 ug/L
Nickel[(4)]	0.0920 ug/L	0.46 ug/L
Arsenic[(5)]	0.231 ug/L	1.155 ug/L
Cadmium[(5)]	0.106 ug/L	0.53 ug/L
Cobalt[(5)]	0.0880 ug/L	0.44 ug/lL
Manganese[(5)]	1.81 ug/L	9.05 ug/L
Silver[(5)]	0.0810 ug/L	0.405 ug/L
Antimony[(6)]	0.199 ug/L	0.995 ug/L
Arsenic[(6)]	0.0940 ug/L	0.47 ug/L
Copper[(6)]	0.260 ug/L	1.3 ug/L
Silver[(6)]	0.0110 ug/L	0.55 ug/L
Antimony[(7)]	0.112 ug/L	0.56 ug/L
Barium[(7)]	0.996 ug/L	4.98 ug/L
Copper[(7)]	0.536 ug/L	2.68 ug/L

(1) - Maximum concentration present in calibration blank analyzed on 04/02/14 @ 12:08 affecting total and dissolved samples MT-MW-01S-032614 and MT-MW-08S-032614.

(2) - Maximum concentration present in calibration blank analyzed on 04/03/14 @ 12:16 affecting total and dissolved samples MT-MW-02S-032614 MT-MW-07S-032614.

(3) - Maximum concentration present in calibration blank analyzed on 04/03/14 @ 13:02 affecting total and dissolved samples MT-MW-02S-032614 MT-MW-07S-032614.

(4) - Maximum concentration present in calibration blank analyzed on 04/05/14 @ 01:06 affecting total and dissolved samples MSA-MW26S-033114, MSA-MW20S-033114, MSA-MW20I-033114, MSA-MW20D-033114, MSA-MW33S-033114, MSA-MW33I-033114, MSA-MW15I-033114, and MSA-MW15D-033114.

(5) - Maximum concentration present in calibration blank analyzed on 04/05/14 @ 03:56 affecting total and dissolved samples MSA-MW26S-033114, MSA-MW20S-033114, MSA-MW20I-033114, MSA-MW20D-033114, MSA-MW33S-033114, MSA-MW33I-033114, MSA-MW15I-033114, and MSA-MW15D-033114.

(6) - Maximum concentration present in method blank (MB240-124733/1-A affecting total and dissolved samples MT-MW-01S-032614, MT-MW-02S-032614, MT-MW-07S-032614, and MT-MW-08S-032614.

(7) - Maximum concentration present in method blank (MB240-124733/1-A affecting total and dissolved samples MSA-MW26S-033114, MSA-MW20S-033114, MSA-MW20I-033114, MSA-MW20D-033114, MSA-MW33S-033114, MSA-MW33I-033114, MSA-MW15I-033114, and MSA-MW15D-033114.

An action level of 5X for all analytes has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Results less than the action level have been qualified (U) due to blank contamination.

- The interfering analyte iron was present in the total and dissolved sample MT-MW-02S-032614 at a concentration comparable to the concentration of iron in the interference check sample (ICS) solution. Several analytes namely, antimony, arsenic, cadmium, chromium, manganese, nickel, and silver were present in the ICS solution at a concentration that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for chromium and silver in total and dissolved samples MT-MW-02S-032614. No action was taken on the silver results because the results were nondetected or qualified due to blank contamination. The detected results reported for chromium in total and dissolved samples MT-MW-02S-032614 were qualified as estimated (J).

- The interfering analyte iron was present in the total and dissolved sample MT-MW-20S-033114 at a concentration comparable to the concentration of iron in the interference check sample (ICS) solution. Several analytes namely, beryllium, cadmium, chromium, cobalt, manganese, and nickel were present in the ICS solution at a concentration that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for beryllium, chromium, and nickel in total and dissolved samples MT-MW-20S-033114. The detected results reported for beryllium, chromium, and nickel in total and dissolved samples MT-MW-20S-033114 were qualified as estimated (J).

- The matrix spike / matrix spike duplicate (MS/MSD) performed on total sample MT-MW-01S-032614 had percent recoveries for mercury <69% quality control limit affecting total and dissolved samples MT-MW-01S-032614, MT-MW-02S-032614, MT-MW-07S-032614, and MT-MW-08S-032614. The nondetected mercury results for the aforementioned samples were qualified as (UJ).

- The internal standard recovery for holium was outside the 60-125% quality control limit for total and dissolved sample MSA-MW20S-033114. The total and dissolved sample MSA-MW20S-033114 was reanalyzed at a two-fold dilution. The holium internal standard recovery was still outside for total sample MSA-MW20S-033114 and the detected and nondetected results for antimony, barium, lead, and thallium were qualified as estimated (J) and (UJ), respectively. The internal standard recovery for dissolved sample MSA-MW20S-033114 was acceptable and the results are reported unqualified at the elevated detection limits.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Nondetected results were reported to the MDL.

The matrix spike/matrix spike duplicate (MS/MSD) percent recoveries (%Rs) were outside quality control limits in the spiked total sample MT-MW-01S-032614. The sample iron concentration was greater than 4X the spike amount. No validation action was required.

The matrix spike/matrix spike duplicate (MS/MSD) percent recoveries (%Rs) were outside quality control limits in the spiked total sample MSA-MW26S-033114. The sample calcium concentration was greater than 4X the spike amount. No validation action was required.

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of data. The CRDL percent recoveries were outside the 70-130% quality control limits resulting in qualification of the data.

Other Factors Affecting Data Quality: The interfering analyte iron was present is several samples resulting in qualification of the sample. Matrix spike percent recovery noncompliances resulted in qualification of data. Internal standard recovery noncompliance resulted in the qualification of data for one total sample. Positive results less than the reporting limit (RL) were qualified as estimated, due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to USEPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Final Data Tracking

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA Main Terminal

Report Number: 240-35541-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at TestAmerica Sacramento.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 3/28/2014 9:30 AM and 4/2/2014 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.2° C, 1.8° C and 1.8° C.

The laboratory did not receive the sample TB-033114 that is listed on the Chain of Custody.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4), MSA-MW20I-033114 (240-35667-4), TB-032614 (240-35541-5), MSA-MW20D-033114 (240-35667-5), MSA-MW33S-033114 (240-35667-6), MSA-MW33I-033114 (240-35667-7), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/02/2014, 04/07/2014 and 04/09/2014.

Carbon disulfide and Methylene Chloride were detected in method blank MB 240-124904/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

tert-Butyl alcohol failed the recovery criteria high for LCS 240-125779/4. Xylenes, Total failed the recovery criteria low for MRL 240-124904/5. Methylene Chloride failed the recovery criteria high. Xylenes, Total failed the recovery criteria low for MRL 240-125439/5. Bromomethane failed the recovery criteria high.

Samples MSA-MW20S-033114 (240-35667-3)[25X], MSA-MW20I-033114 (240-35667-4)[16.67X] and MSA-MW15I-033114 (240-35667-8)[5.71X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 125779 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The laboratory control sample (LCS) for batch 125779 recovered outside control limits for 2-Methyl-2-propanol. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4), MSA-MW20I-033114 (240-35667-4), MSA-MW20D-033114 (240-35667-5), MSA-MW33S-033114 (240-35667-6), MSA-MW33I-033114 (240-35667-7), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 04/02/2014 and 04/04/2014 and analyzed on 04/07/2014, 04/09/2014 and 04/11/2014.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

1,4-Dioxane failed the recovery criteria low for LCS 240-124959/10-A.

Sample MSA-MW20S-033114 (240-35667-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 124959.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 125295.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4) and MSA-MW33S-033114 (240-35667-6) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 03/31/2014, 04/08/2014, 04/10/2014 and 04/11/2014.

Batch 124625 is reported without a matrix spike/matrix spike duplicate (MS/MSD). The batch MS/MSD was originally performed on another client's sample, for method 8015c. This MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

The following volatile sample was analyzed with headspace in the sample vial due to multiple injections : MT-MW-02S-032614 (240-35541-3).

No other difficulties were encountered during the GRO analysis. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4) and MSA-MW33S-033114 (240-35667-6) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 04/01/2014 and 04/03/2014 and analyzed on 04/02/2014 and 04/08/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 124801, 8015.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 125991.

No other difficulties were encountered during the DRO analysis. All other quality control parameters were within the acceptance limits.

PERCHLORATE

Samples MSA-MW20I-033114 (240-35667-4), MSA-MW20D-033114 (240-35667-5), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for Perchlorate in accordance with EPA SW-846 Method 6850. The samples were prepared on 04/09/2014 and analyzed on 04/10/2014.

No difficulties were encountered during the perchlorate analysis. All quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4), MSA-MW20I-033114 (240-35667-4), MSA-MW20D-033114 (240-35667-5), MSA-MW33S-033114 (240-35667-6), MSA-MW33I-033114 (240-35667-7), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for dissolved metals (ICPMS) in accordance

with EPA SW-846 Method 6020. The samples were prepared on 04/01/2014 and 04/03/2014 and analyzed on 04/02/2014, 04/03/2014, 04/04/2014, 04/05/2014 and 04/07/2014.

The following sample(s) was diluted due to the nature of the sample matrix: MSA-MW20S-033114 (240-35667-3). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4), MSA-MW20I-033114 (240-35667-4), MSA-MW20D-033114 (240-35667-5), MSA-MW33S-033114 (240-35667-6), MSA-MW33I-033114 (240-35667-7), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/01/2014 and 04/03/2014 and analyzed on 04/02/2014, 04/03/2014, 04/04/2014, 04/05/2014 and 04/07/2014.

Antimony, Arsenic, Copper and Silver were detected in method blank MB 240-124733/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Antimony, Barium, Calcium, Copper and Magnesium were detected in method blank MB 240-125040/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Sample MSA-MW20S-033114 (240-35667-3)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) was diluted due to the nature of the sample matrix: MSA-MW20S-033114 (240-35667-3). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4), MSA-MW20I-033114 (240-35667-4), MSA-MW20D-033114 (240-35667-5), MSA-MW33S-033114 (240-35667-6), MSA-MW33I-033114 (240-35667-7), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/01/2014 and 04/03/2014 and analyzed on 04/03/2014 and 04/08/2014.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MT-MW-01S-032614 (240-35541-1), MT-MW-08S-032614 (240-35541-2), MSA-MW26S-033114 (240-35667-2), MT-MW-02S-032614 (240-35541-3), MSA-MW20S-033114 (240-35667-3), MT-MW-07S-032614 (240-35541-4), MSA-MW20I-033114 (240-35667-4), MSA-MW20D-033114 (240-35667-5), MSA-MW33S-033114 (240-35667-6), MSA-MW33I-033114 (240-35667-7), MSA-MW15I-033114 (240-35667-8) and MSA-MW15D-033114 (240-35667-9) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/01/2014 and 04/03/2014 and analyzed on 04/03/2014 and 04/08/2014.

No difficulties were encountered during the mercury analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-35541-1

Lab Section	Qualifier	Description
LCMS		
	U	Indicates the analyte was analyzed for but not detected.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Overview

The sample set for Lockheed MSA, SDG 240-35725-1, consisted of eighteen (18) aqueous samples including four (4) aqueous trip blank samples. All samples were analyzed for volatile organic compounds (VOCs) as listed above. Fourteen (14) aqueous samples were analyzed for the semi-volatile organic compound (SVOC) 1,4-dioxane as listed above. Seven (7) aqueous samples were analyzed for the total petroleum hydrocarbons (TPH) TPH C06-C10 & TPH C10-C32 as listed above. Six (6) aqueous samples were analyzed for perchlorate as listed above. Two (2) aqueous samples were analyzed for organic volatile compounds (OVG) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on April 1, 2, 3, and 4, 2014 and analyzed by TestAmerica Laboratories, Inc., North Canton and Sacramento for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 8270C for 1,4-dioxane, 8015B for TPH C06-C10 & TPH C10-C32, 6850 for perchlorate, and RSK-175 for OVG, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

No major issues were identified.

Minor Problems

- The following laboratory VOC contaminants were detected in the method blank and trip blank samples at the following maximum concentration.

Analytes	Maximum Conc.	Action Level
Methylene chloride [1]	0.55 µg/l	5.50 µg/l
Acetone [2]	2.75 µg/l	27.5 µg/l
Carbon disulfide [2]	0.355 µg/l	1.775 µg/l
Carbon disulfide [3]	1.07 µg/l	5.35 µg/l
Methylene chloride [3]	0.982 µg/l	9.82 µg/l

[1] Trip blank sample TB-040114 result – Maximum result from all trip blank samples used to qualify all samples.
[2] Method blank sample MB 240-126387/6 affecting samples MSA-MW41I-040414 and MSA-MW41S-040414.
[3] Method blank sample MB 240-126549/7 affecting samples MSA-MW16I-040314, MSA-MW16S-040314 and MSA-MW45S-040414.

An action level of ten times the maximum level for the common laboratory contaminants acetone and methylene chloride, and five times the maximum level for carbon disulfide were used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less than the action level were qualified non-detected, (U), for blank contamination. The trip blank samples were not qualified for blank contamination.

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control limit for chloromethane, bromomethane, carbon disulfide, tert-butyl alcohol, bromoform, and 1,2-dibromo-3-chloropropane for instrument A3UX12 on 04/09/14 @ 08:43.

Affected Samples:

MSA-MW18S-040114	MSA-MW42I-040214	MSA-MW42S-040214
MSA-MW46D-040214	MSA-MW46I-040214	MSA-MW46S-040214
MSA-MW47I-040314	TB-040114	TB-040214

Action: The aforementioned sample detected and non-detected analyte results were qualified estimated, (J) and (UJ), respectively.

- The VOC CCV %Ds were greater than the 20% quality control limit for bromomethane, trichlorofluoromethane, tert-butyl alcohol, dibromomethane, sec-butyl benzene, and n-butylbenzene for instrument A3UX12 on 04/14/14 @ 12:16.
  Affected Samples:
  MSA-MW47S-040314 TB-040314 TB-040414
  Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- The VOC CCV %Ds were greater than the 20% quality control limit for trichlorofluoromethane, tert-butyl alcohol, 1,2-dibromo-3-chloropropane, naphthalene, and ethyl tert-butyl ether for instrument A3UX16 on 04/14/14 @ 12:04 and @ 12:27.
  Affected Samples: MSA-MW41I-040414 and MSA-MW41S-040414
  Action: The sample detected and non-detected aforementioned analyte results were qualified estimated, (J) and (UJ), respectively.

- The VOC CCV %Ds were greater than the 20% quality control limit for tert-butyl alcohol, 1,2-dibromo-3-chloropropane, naphthalene, and ethyl tert-butyl ether for instrument A3UX16 on 04/15/14 @ 12:58 and @ 13:20.
  Affected Samples:
  MSA-MW16I-040314 MSA-MW16S-040314 MSA-MW45S-040414
  Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- Samples MSA-MW41S-040414, MSA-MW42S-040214, and MSA-MW45S-040414 contain high concentrations of chlorinated organic compounds as reported in the volatile organic fraction analysis. The compounds vinyl chloride, cis-1,2-dichloroethene, and trichloroethene were detected and reported at high concentrations in the aforementioned samples. Because of the presence of the chlorinated compounds in the samples, the reported concentrations of TPH (C06-C10) in samples MSA-MW41S-040414, MSA-MW42S-040214, and MSA-MW45S-040414 likely contain contribution from chlorinated organic compounds thus elevating the concentrations of TPH (C06-C10). The results for TPH (C06-C10) in both samples are qualified as estimated, J.

Notes

VOC samples MSA-MW18I-040114 and MSA-MW47I-040314 were noted in the laboratory narrative as having pHs greater than 2. The sample login pH check sheets did not indicate this issue. No action was taken.

The VOC laboratory control sample (LCS) percent recovery (%R) was greater than the quality control limit for tert-butyl alcohol for LCS 240-125779. No action was taken because all results were nondetected.

The VOC LCS %R was greater than the quality control limit for dibromomethane for LCS 240-126390. No action was taken because all results were nondetected.

The VOC matrix spike (MS) %R was greater than the quality control limit for vinyl chloride for spiked sample MSA-MW41I-040414. No action was taken as the MS duplicate (MSD) %R and the MS/MSD vinyl chloride result relative percent difference (RPD) was compliant.

The VOC MS/MSD RPD for 2-chloroethyl vinyl ether results for spiked sample MSA-MW41I-040414 was non-compliant. No action was taken as the MS and MSD %Rs were compliant for the analyte.

Samples were diluted as listed below for the VOC analysis resulting in elevated levels reported for non-detected VOC analytes.

Sample	Dilution
MSA-MW16I-040314	14.29X
MSA-MW16S-040314	2.86X
MSA-MW18I-040114	250X
MSA-MW18S-040114	25X
MSA-MW41S-040414	50X
MSA-MW42S-040214	100X
MSA-MW41I-040414	6.67X
MSA-MW45S-040414	833.33X
MSA-MW46I-040214	3.33X
MSA-MW47I-040314	50X
MSA-MW47S-040314	5.71X

Samples were diluted as listed below for the 1,4-dioxane analysis.

Sample	Dilution
MSA-MW16S-040314	10X
MSA-MW18I-040114	5X
MSA-MW41I-040414	5X
MSA-MW41S-040414	10X
MSA-MW45S-040414	50X
MSA-MW47I-040314	5X

Sample MSA-MW42S-040214 was diluted 20X and sample MSA-MW45S-040414 was diluted 50X for the TPH C06-C10 analysis.

Sample analyte results were reported to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC sample results were qualified for blank contamination and CCV %D non-compliances.
Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260C, 8270C, 8015B, 6850, RSK-175, and the USEPA National Functional Guidelines for Organic Data Validation (June 2008).

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA Groundwater Sampling

Report Number: 240-35725-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica Sacramento Laboratory. The Radiological analysis was performed at the TestAmerica Richland Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 4/3/2014 9:30 AM, 4/4/2014 11:00 AM and 4/5/2014 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 0.8° C, 1.0° C, 1.0° C, 1.2° C, 1.2° C and 1.4° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-040114 (240-35725-1), TB-040214 (240-35791-1), TB-040414 (240-35833-1), TB-040314 (240-35834-1), MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/07/2014, 04/09/2014, 04/14/2014 and 04/15/2014.

Acetone was detected in method blank MB 240-126387/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Carbon disulfide was detected in method blank MB 240-126387/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Carbon disulfide was detected in method blank MB 240-126549/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank MB 240-126549/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

tert-Butyl alcohol failed the recovery criteria high for LCS 240-125779/4. Dibromomethane failed the recovery criteria high for LCS 240-126390/4.

Samples MSA-MW42S-040214 (240-35725-2)[100X], MSA-MW16S-040314 (240-35725-2)[2.86X], MSA-MW18S-040114 (240-35725-2)

[25X], MSA-MW41S-040414 (240-35725-2)[50X], MSA-MW16I-040314 (240-35725-3)[14.29X], MSA-MW18I-040114 (240-35725-3) [250X], MSA-MW41I-040414 (240-35725-3)[6.67X], MSA-MW47S-040314 (240-35725-4)[5.71X], MSA-MW45S-040414 (240-35725-4) [833.33X], MSA-MW46I-040214 (240-35725-5)[3.33X] and MSA-MW47I-040314 (240-35725-5)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The pH of the following samples was greater than 2.MSA-MW18I-040114 (240-35725-3)(pH of 3) and MSA-MW47I-040314 (240-35834-5)(pH of 4)

The continuing calibration verification (CCV) for analytical batch 125779 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The laboratory control sample (LCS) for batch 125779 recovered outside control limits for 2-Methyl-2-propanol. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 126390 recovered outside control limits for the following analytes: Dibromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 126390 recovered above the upper control limit for multiple analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 126390 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The continuing calibration verification (CCV) associated with batch 126387 recovered above the upper control limit for tert-Butyl ethyl ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 126387 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The method blank for preparation batch 126549 contained Carbon Disulfide above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

The continuing calibration verification (CCV) for analytical batch 126549 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The continuing calibration verification (CCV) associated with batch 126549 recovered above the upper control limit for tert-Butyl ethyl ether. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 04/07/2014 and 04/08/2014 and analyzed on 04/10/2014 and 04/11/2014.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Terphenyl-d14 (Surr) failed the surrogate recovery criteria high for MSA-MW45S-040414 (240-35833-4).

Samples MSA-MW41S-040414 (240-35725-2)[10X], MSA-MW16S-040314 (240-35725-2)[10X], MSA-MW18I-040114 (240-35725-3)[5X], MSA-MW41I-040414 (240-35725-3)[5X], MSA-MW45S-040414 (240-35725-4)[50X] and MSA-MW47I-040314 (240-35725-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4) and MSA-MW47S-040314 (240-35834-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 04/09/2014 and 04/16/2014.

Samples MSA-MW42S-040214 (240-35725-2)[20X] and MSA-MW45S-040414 (240-35725-4)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Batch 125897 is reported without a matrix spike/matrix spike duplicate (MS/MSD). The batch MS/MSD was originally performed on another client's sample, for method 8015c. This MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

The following volatile samples was analyzed with headspace in the sample vials due to multiple injections and/or limited volume: MSA-MW16S-040314 (240-35834-2), MSA-MW41S-040414 (240-35833-2), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4).

Batch is reported without a matrix spike/matrix spike duplicate (MS/MSD). The batch MS/MSD was originally performed on another client's sample, for method 8015c. This MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

No other difficulties were encountered during the GRO analysis. All quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 04/09/2014.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate(MS/MSD) associated with batch 125787.

No other difficulties were encountered during the dissolved gases analysis. All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4) and MSA-MW47S-040314 (240-35834-4) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 04/04/2014 and 04/07/2014 and analyzed on 04/09/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 125302.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 125491, 8015.

No other difficulties were encountered during the DRO analysis. All quality control parameters were within the acceptance limits.

PERCHLORATE

Samples MSA-MW18I-040114 (240-35725-3), MSA-MW46S-040214 (240-35791-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for Perchlorate in accordance with EPA SW-846 Method 6850. The samples were prepared on 04/09/2014 and analyzed on 04/10/2014 and 04/11/2014.

No difficulties were encountered during the perchlorate analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 04/14/2014 and analyzed on 04/15/2014.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and

Detection Limit Exceptions Summary

Client: Tetra Tech, Inc.
Project/Site: MSA Groundwater Sampling

TestAmerica Job ID: 240-35725-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Matrix	Analyte	Units	Client RL	Lab PQL
RSK-175	Water	Ethane	ug/L	0.26	0.5
RSK-175	Water	Ethene	ug/L	0.31	0.5
RSK-175	Water	Ethylene	ug/L	0.31	0.5
RSK-175	Water	Methane	ug/L	0.10	0.5

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD Recovery exceeds the control limits
L	A negative instrument reading had an absolute value greater than the reporting limit

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Indicates the analyte was analyzed for but not detected.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Method 8260C

Volatile Organic Compounds (GC/MS) by Method 8260C

MSA-MW47I-040314	MSA-MW47S-040314	

Overview

The sample set for Lockheed – MSA, SDG 240-35725-1 consists of fourteen (14) aqueous environmental samples. All samples were analyzed for total and dissolved metals. In addition, samples MSA-MW18I-040114 and MSA-MW18S-040114 were analyzed for natural attenuation parameters including dissolved organic carbon, hardness, total dissolved solids, anions, alkalinity, and ammonia.

The samples were collected by Tetra Tech on April 1, 2, 3, and 4, 2014 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Methods 6010C, 6020A, 7470A, 9060, E.P.A. Standard method 2340B, E.P.A. methods 300.0, 310.1, 350.3, and 160.1 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, ICP/MS tuning, initial/continuing calibrations, laboratory method blank results, matrix spike/matrix spike duplicate results, blank spike/blank spike duplicate results, internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- Nitrate, and orthophosphate samples were analyzed six days after collection and grossly exceeded the 48 hour hold time. The nondetected nitrate, and orthophosphate results for samples MSA-MW18I-040114 and MSA-MW18S-040114 were qualified as rejected (UR).

Minor

- The following contaminants were detected in the preparation or calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony[(1)]	0.156 ug/L	0.78 ug/L
Arsenic[(1)]	0.199 ug/L	0.995 ug/L
Barium[(1)]	1.46 ug/L	7.3 ug/L
Copper[(1)]	0.816 ug/L	4.08 ug/L
Manganese[(1)]	0.966 ug/L	4.83 ug/L
Nickel[(1)]	0.212 ug/L	1.06 ug/L
Lead[(1)]	0.178 ug/L	0.89 ug/L
Antimony[(2)]	0.423 ug/L	2.115 ug/L
Barium[(2)]	1.25 ug/L	6.25 ug/L
Copper[(2)]	0.716 ug/L	3.58 ug/L
Manganese[(2)]	1.05 ug/L	5.25 ug/L
Antimony[(3)]	0.206 ug/L	1.03 ug/L
Barium[(3)]	1.2 ug/L	6.0 ug/L
Copper[(3)]	0.698 ug/L	3.49 ug/L
Potassium[(4)]	102 ug/L	510 ug/L
Beryllium[(5)]	0.034 ug/L	0.17 ug/L
Cadmium[(5)]	0.161 ug/L	0.805 ug/L
Chromium[(5)]	0.186 ug/L	0.93 ug/L
Cobalt[(5)]	0.182 ug/L	0.91 ug/L
Silver[(5)]	0.058 ug/L	0.29 ug/L
Vanadium[(5)]	0.224 ug/L	1.12 ug/L
Arsenic[(6)]	0.472 ug/L	2.36 ug/L
Cadmium[(6)]	0.228 ug/L	1.14 ug/L
Chromium[(6)]	0.184 ug/L	0.92 ug/L
Cobalt[(6)]	0.205 ug/L	1.025 ug/L
Iron[(6)]	19.8 ug/L	99 ug/L
Lead[(6)]	0.220 ug/L	1.1 ug/L
Nickel[(6)]	0.202 ug/L	1.01 ug/L
Silver[(6)]	0.079 ug/L	0.395 ug/L
Vanadium[(6)]	0.156 ug/L	0.78 ug/L
Beryllium[(7)]	0.155 ug/L	0.775 ug/L

(1) - Maximum concentration found in preparation blank (MB 240-125231/1-A) affecting total and dissolved samples MSA-MW18I-040114 and MSA-MW18S-040114.

(2) - Maximum concentration found in preparation blank (MB 240-125440/1-A) affecting total and dissolved samples MSA-MW16I-040314, MSA-MW16S-040314, MSA-MW47I-040314, and MSA-MW47S-040314.

(3) - Maximum concentration found in preparation blank (MB 240-125469/1-A) affecting total and dissolved samples MSA-MW41I-040414, MSA-MW41S-040414, MSA-MW42I-040214, MSA-MW42S-040214, MSA-MW45S-040414, MSA-MW46D-040214, MSA-MW46I-040214, and MSA-MW46S-040214.

(4) – Maximum concentration found in calibration blank (CCB240-126579/31 04/15/14 @ 10:44) affecting total and dissolved samples MSA-MW18I-040114 and MSA-MW18S-040114 for 6010 only.

(5) - Maximum concentration found in calibration blank (CCB240-125595/53 04/07/14 @ 16:57) affecting total and dissolved samples total and dissolved samples MSA-MW18I-040114 and MSA-MW18S-040114.

(6) - Maximum concentration found in calibration blank (CCB240-125759/18 04/08/14 @ 16:22) affecting total and dissolved samples MSA-MW16I-

040314, MSA-MW16S-040314, MSA-MW47I-040314, MSA-MW47S-040314, MSA-MW41I-040414, MSA-MW41S-040414, MSA-MW42I-040214, MSA-MW42S-040214, MSA-MW45S-040414, MSA-MW46D-040214, MSA-MW46I-040214, and MSA-MW46S-040214.

(7) - Maximum concentration found in calibration blank (CCB240-125759/58 04/08/14 @ 21:06) affecting total and dissolved samples MSA-MW16I-040314, MSA-MW16S-040314, MSA-MW47I-040314, MSA-MW47S-040314, MSA-MW41I-040414, MSA-MW41S-040414, MSA-MW42I-040214, MSA-MW42S-040214, MSA-MW45S-040414, MSA-MW46D-040214, MSA-MW46I-040214, and MSA-MW46S-040214.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No action was taken on this basis because all results were greater than the action level.

- The interfering analyte iron was present in the total and dissolved samples MSA-MW18I-040114 at concentrations comparable to the concentration of iron in the interference check sample (ICS) solution. Several analytes namely, antimony, arsenic, cadmium, chromium, cobalt, manganese, nickel, and silver were present in the ICS solution at a concentration that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for cadmium and chromium in total and dissolved samples MSA-MW18I-040114. The detected results reported for cadmium and chromium in total and dissolved samples MSA-MW18I-040114 were qualified as estimated (J).

- The interfering analyte iron was present in the total and dissolved samples MSA-MW42S-040214 at concentrations comparable to the concentration of iron in the interference check sample (ICS) solution. Several analytes namely, antimony, arsenic, cadmium, chromium, cobalt, copper, manganese, nickel, and silver were present in the ICS solution at a concentration that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for cadmium and chromium in total and dissolved samples MSA-MW42S-040214. The detected results reported for chromium in total and dissolved samples MSA-MW42S-040214 were qualified as estimated (J). The nondetected results reported for cadmium in total and dissolved samples MSA-MW42S-040214 were qualified as estimated (UJ).

- The matrix spike / matrix spike duplicate (MS/MS) performed on sample MSA-MW18S-040114 had percent recoveries less than the 69-134% quality control limits for mercury. The nondetected mercury results for total and dissolved samples MSA-MW18I-040114 and MSA-MW18s-040114 were qualified as estimated (UJ).

- Nitrite samples were analyzed one day outside the 48 hour hold time. The nondetected nitrite results for samples MSA-MW18I-040114 and MSA-MW18S-040114 were qualified as estimated (UJ).

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The total and dissolved samples MSA-MW18S-040114, MSA-MW46I-040214, and MSA-MW47I-040314 were diluted due to sample matrix interference for several metals. This accounts for the elevated detection limit for the nondetected metals.

The samples MSA-MW18I-040114 and MSA-MW18S-040114 were analyzed at dilutions due to ammonia, chloride, and sulfate concentrations that exceeded the linear calibration range of the instrument.

A continuing calibration verification (CCV) exceeded the 90-110% quality control limit for orthophosphate. No action was taken because the results were qualified for a more severe noncompliance.

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of metals data. Hold time noncompliance resulted in the qualification of several anions.

Other Factors Affecting Data Quality: The interfering analyte iron was present is several samples resulting in qualification of the results. Positive results less than the reporting limit (RL) were qualified as estimated, due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to USEPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

TestAmerica

THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 240-35725-1

Job Description: MSA Groundwater Sampling

For:
Tetra Tech, Inc.
20251 Century Blvd
Suite 200
Germantown, MD 20874

Attention: Tony Apanavage

Approved for release.
John McFadden
Project Manager I
4/29/2014 4:32 PM

John McFadden, Project Manager I
4101 Shuffel Street NW, North Canton, OH, 44720

Final Data Tracking

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA Groundwater Sampling

Report Number: 240-35725-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica Sacramento Laboratory. The Radiological analysis was performed at the TestAmerica Richland Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 4/3/2014 9:30 AM, 4/4/2014 11:00 AM and 4/5/2014 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 0.8° C, 1.0° C, 1.0° C, 1.2° C, 1.2° C and 1.4° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-040114 (240-35725-1), TB-040214 (240-35791-1), TB-040414 (240-35833-1), TB-040314 (240-35834-1), MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/07/2014, 04/09/2014, 04/14/2014 and 04/15/2014.

Acetone was detected in method blank MB 240-126387/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Carbon disulfide was detected in method blank MB 240-126387/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Carbon disulfide was detected in method blank MB 240-126549/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank MB 240-126549/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

tert-Butyl alcohol failed the recovery criteria high for LCS 240-125779/4. Dibromomethane failed the recovery criteria high for LCS 240-126390/4.

Samples MSA-MW42S-040214 (240-35725-2)[100X], MSA-MW16S-040314 (240-35725-2)[2.86X], MSA-MW18S-040114 (240-35725-2)

[25X], MSA-MW41S-040414 (240-35725-2)[50X], MSA-MW16I-040314 (240-35725-3)[14.29X], MSA-MW18I-040114 (240-35725-3) [250X], MSA-MW41I-040414 (240-35725-3)[6.67X], MSA-MW47S-040314 (240-35725-4)[5.71X], MSA-MW45S-040414 (240-35725-4) [833.33X], MSA-MW46I-040214 (240-35725-5)[3.33X] and MSA-MW47I-040314 (240-35725-5)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The pH of the following samples was greater than 2.MSA-MW18I-040114 (240-35725-3)(pH of 3) and MSA-MW47I-040314 (240-35834-5)(pH of 4)

The continuing calibration verification (CCV) for analytical batch 125779 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The laboratory control sample (LCS) for batch 125779 recovered outside control limits for 2-Methyl-2-propanol. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 126390 recovered outside control limits for the following analytes: Dibromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 126390 recovered above the upper control limit for multiple analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 126390 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The continuing calibration verification (CCV) associated with batch 126387 recovered above the upper control limit for tert-Butyl ethyl ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 126387 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The method blank for preparation batch 126549 contained Carbon Disulfide above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

The continuing calibration verification (CCV) for analytical batch 126549 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The continuing calibration verification (CCV) associated with batch 126549 recovered above the upper control limit for tert-Butyl ethyl ether. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 04/07/2014 and 04/08/2014 and analyzed on 04/10/2014 and 04/11/2014.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Terphenyl-d14 (Surr) failed the surrogate recovery criteria high for MSA-MW45S-040414 (240-35833-4).

Samples MSA-MW41S-040414 (240-35725-2)[10X], MSA-MW16S-040314 (240-35725-2)[10X], MSA-MW18I-040114 (240-35725-3)[5X], MSA-MW41I-040414 (240-35725-3)[5X], MSA-MW45S-040414 (240-35725-4)[50X] and MSA-MW47I-040314 (240-35725-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4) and MSA-MW47S-040314 (240-35834-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 04/09/2014 and 04/16/2014.

Samples MSA-MW42S-040214 (240-35725-2)[20X] and MSA-MW45S-040414 (240-35725-4)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Batch 125897 is reported without a matrix spike/matrix spike duplicate (MS/MSD). The batch MS/MSD was originally performed on another client's sample, for method 8015c. This MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

The following volatile samples was analyzed with headspace in the sample vials due to multiple injections and/or limited volume: MSA-MW16S-040314 (240-35834-2), MSA-MW41S-040414 (240-35833-2), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4).

Batch is reported without a matrix spike/matrix spike duplicate (MS/MSD). The batch MS/MSD was originally performed on another client's sample, for method 8015c. This MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

No other difficulties were encountered during the GRO analysis. All quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 04/09/2014.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate(MS/MSD) associated with batch 125787.

No other difficulties were encountered during the dissolved gases analysis. All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4) and MSA-MW47S-040314 (240-35834-4) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 04/04/2014 and 04/07/2014 and analyzed on 04/09/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 125302.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 125491, 8015.

No other difficulties were encountered during the DRO analysis. All quality control parameters were within the acceptance limits.

PERCHLORATE

Samples MSA-MW18I-040114 (240-35725-3), MSA-MW46S-040214 (240-35791-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for Perchlorate in accordance with EPA SW-846 Method 6850. The samples were prepared on 04/09/2014 and analyzed on 04/10/2014 and 04/11/2014.

No difficulties were encountered during the perchlorate analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 04/14/2014 and analyzed on 04/15/2014.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and

MSA-MW46D-040214 (240-35791-6) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/04/2014 and 04/07/2014 and analyzed on 04/07/2014, 04/08/2014 and 04/09/2014.

The following sample(s) was diluted due to the nature of the sample matrix: MSA-MW18S-040114 (240-35725-2). Elevated reporting limits (RLs) are provided.

The following sample(s) was diluted due to the nature of the sample matrix: MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/04/2014 and 04/07/2014 and analyzed on 04/07/2014, 04/08/2014 and 04/09/2014.

Several analytes were detected in method blank MB 240-125231/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Several analytes were detected in method blank MB 240-125440/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Several analytes were detected in method blank MB 240-125469/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples MSA-MW18S-040114 (240-35725-2)[5X], MSA-MW46I-040214 (240-35725-5)[25X] and MSA-MW47I-040314 (240-35725-5) [25X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) was diluted due to the nature of the sample matrix: MSA-MW18S-040114 (240-35725-2). Elevated reporting limits (RLs) are provided.

The following sample(s) was diluted due to the nature of the sample matrix: MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/04/2014 and 04/07/2014 and analyzed on 04/07/2014 and 04/08/2014.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MSA-MW18S-040114 (240-35725-2), MSA-MW42S-040214 (240-35791-2), MSA-MW41S-040414 (240-35833-2), MSA-MW16S-040314 (240-35834-2), MSA-MW18I-040114 (240-35725-3), MSA-MW42I-040214 (240-35791-3), MSA-MW41I-040414 (240-35833-3), MSA-MW16I-040314 (240-35834-3), MSA-MW46S-040214 (240-35791-4), MSA-MW45S-040414 (240-35833-4), MSA-MW47S-040314 (240-35834-4), MSA-MW46I-040214 (240-35791-5), MSA-MW47I-040314 (240-35834-5) and MSA-MW46D-040214 (240-35791-6) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/04/2014 and 04/07/2014 and analyzed on 04/07/2014 and 04/08/2014.

No difficulties were encountered during the mercury analysis. All other quality control parameters were within the acceptance limits.

HARDNESS

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for hardness in accordance with SM 2340B. The samples were analyzed on 04/16/2014.

No difficulties were encountered during the hardness analysis. All quality control parameters were within the acceptance limits.

TOTAL DISSOLVED SOLIDS

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for total dissolved solids in accordance with EPA Method 160.1. The samples were analyzed on 04/04/2014.

No difficulties were encountered during the TDS analysis. All quality control parameters were within the acceptance limits.

ANIONS

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for anions in accordance with EPA Method 300.0. The samples were analyzed on 04/04/2014 and 04/07/2014.

Samples MSA-MW18S-040114 (240-35725-2)[5X] and MSA-MW18I-040114 (240-35725-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following samples were received with less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: MSA-MW18I-040114 (240-35725-3), MSA-MW18S-040114 (240-35725-2).The samples were collected on 4/1/14 at 1115 (18S) and 1340 (18I). The samples were received on 4/3/14 at 0930 and due to a lab instrument issue the samples were analyzed outside of hold time once the instrument was fixed on 4/3/14.

The following samples were diluted for nitrate and orthophosphate due to the nature of the sample matrix: MSA-MW18I-040114 (240-35725-3), MSA-MW18S-040114 (240-35725-2). Elevated reporting limits (RLs) are provided.

The final continuing calibration verification (CCV) associated with batch 125546 recovered above the upper control limit for orthophosphate. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: MSA-MW18I-040114 (240-35725-3), MSA-MW18S-040114 (240-35725-2).

No other difficulties were encountered during the anions analysis. All other quality control parameters were within the acceptance limits.

ANIONS

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for anions in accordance with EPA Method 300.0. The samples were analyzed on 04/15/2014 and 04/16/2014.

Samples MSA-MW18S-040114 (240-35725-2)[10X], MSA-MW18S-040114 (240-35725-2)[5X] and MSA-MW18I-040114 (240-35725-3) [5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the anions analysis. All other quality control parameters were within the acceptance limits.

ALKALINITY

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for alkalinity in accordance with EPA Method 310.1. The samples were analyzed on 04/08/2014.

Alkalinity was detected in method blank MB 240-125761/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the alkalinity analysis. All other quality control parameters were within the acceptance limits.

AMMONIA

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for ammonia in accordance with EPA Method 350.3. The samples were analyzed on 04/07/2014.

Sample MSA-MW18S-040114 (240-35725-2)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the ammonia analysis. All quality control parameters were within the acceptance limits.

DISSOLVED ORGANIC CARBON

Samples MSA-MW18S-040114 (240-35725-2) and MSA-MW18I-040114 (240-35725-3) were analyzed for dissolved organic carbon in accordance with EPA SW-846 Method 9060. The samples were analyzed on 04/07/2014.

No difficulties were encountered during the TOC analysis. All quality control parameters were within the acceptance limits.

Method Summary

Client: Tetra Tech, Inc.
Project/Site: MSA Groundwater Sampling

TestAmerica Job ID: 240-35725-1

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification
☒ *Non-Hazard* ☐ *Flammable* ☐ *Skin Irritant* *Poison B* ☐ *Unknown* ☐

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ *Return To Client* ☒ *Disposal By Lab* ☐ *Archive For _____ Months*

☑ See Multiple Cooler Form

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity 2 (Yes) No
   -Were custody seals on the outside of the cooler(s) signed & dated? (Yes) No NA
   -Were custody seals on the bottle(s)? Yes (No)
3. Shippers' packing slip attached to the cooler(s)? (Yes) No
4. Did custody papers accompany the sample(s)? (Yes) No
5. Were the custody papers relinquished & signed in the appropriate place? (Yes) No
6. Did all bottles arrive in good condition (Unbroken)? Yes (No)
7. Could all bottle labels be reconciled with the COC? (Yes) No
8. Were correct bottle(s) used for the test(s) indicated? (Yes) No
9. Sufficient quantity received to perform indicated analyses? (Yes) No
10. Were sample(s) at the correct pH upon receipt? (Yes) No NA pH Strip Lot# HC391902
11. Were VOAs on the COC? (Yes) No
12. Were air bubbles >6 mm in any VOA vials? Yes (No) NA
13. Was a trip blank present in the cooler(s)? (Yes) No

Contacted PM JWM Date 4/5/14 by JWM via Verbal (Voice Mail) Other
Concerning #15

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES

Samples processed by: BM

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.
Sample(s) 1X250 MW-16S 1X250 MW-47S were received in a broken container.
Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in the laboratory.
Time preserved: _____ Preservative(s) added/Lot number(s): _____

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Overview

The sample set for Lockheed MSA, SDG 240-35913-1, consisted of thirteen (13) aqueous samples including three (3) aqueous trip blank samples. All samples were analyzed for volatile organic compounds (VOCs) as listed above. Nine (9) aqueous samples were analyzed for the semi-volatile organic compound (SVOC) 1,4-dioxane as listed above. Three (3) aqueous samples were analyzed for the total petroleum hydrocarbons (TPH) TPH C06-C10 & TPH C10-C32 as listed above. Four (4) aqueous samples were analyzed for perchlorate as listed above. Two (2) aqueous samples were analyzed for organic volatile

compounds (OVG) as listed above. Ten (10) aqueous samples were analyzed for total and dissolved metals as listed above. In addition, two (2) samples were analyzed for the miscellaneous parameters of dissolved organic carbon, hardness, calcium hardness, magnesium hardness, total dissolved solids, anions (chloride, sulfate, nitrite as N, nitrate as N, orthophosphate as phosphorus), alkalinity, and ammonia as well as the additional metal analytes potassium, magnesium, calcium, sodium and silica dioxide as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on April 7, 8 and 9, 2014 and analyzed by TestAmerica Laboratories, Inc., North Canton for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 8270C for 1,4-dioxane, 8015B for TPH C06-C10 & TPH C10-C32, 6850 for perchlorate, RSK-175 for OVG, 6010C & 6020 for metals, 7470A for mercury, 9060 for dissolved organic carbon (DOC), EPA Standard Method (SM) 2340B for total hardness, EPA Methods 600.1 for total dissolved solids (TDS), 300.0 for anions, 310.1 for alkalinity, and 350.3 for ammonia-N, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, ICP interference results, laboratory duplicate results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The matrix spike (MS) and MS duplicate (MSD) percent recoveries (%Rs) were less than the quality control limit at 0% for 2-chloroethyl vinyl ether for sample MSA-MW17D-040814.
  Affected Sample: MSA-MW17D-040814
  Actions: The sample non-detected 2-chloroethyl vinyl ether result was qualified rejected, (UR).

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control limit for trichlorofluoromethane, 1,3-dichloropropane, 1,1,2,2-tetrachloroethane, and 1,2,3-triichloropropane for instrument A3UX10 on 04/21/14 @ 10:59.
  Affected Samples:
  MSA-MW-14D-040914 MSA-MW-14I-040914 MSA-MW-48D-040914
  MSA-MW-48I-040914 TB-040914
  Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- The VOC CCV %Ds were greater than the 20% quality control limit for bromomethane, trichlorofluoromethane, tert-butyl alcohol, dibromomethane, sec-butyl benzene, and n-butylbenzene for instrument A3UX12 on 04/14/14 @ 12:16.
  Affected Samples:
  MSA-DMW7S-040714 MSA-MW17D-040814 MSA-MW17I-040814
  MSA-MW17S-040814 MSA-MW47D-040814 MSA-MW5-040714
  TB-040714 TB-040814
  Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- The laboratory control sample (LCS) percent recoveries (%Rs) for 1,4-dioxane were less than the quality control limit for batch samples 240-126143 and 240-126314 affecting the samples listed below.

  Affected Samples:

MSA-MW17D-040814	MSA-MW17I-040814	MSA-MW17S-040814
MSA-MW47D-040814	MSA-MW-14D-040914	MSA-MW-14I-040914
MSA-MW-48D-040914		

  Actions: The sample detected and non-detected 1,4-dioxane results were qualified estimated, (J) and (UJ), respectively.

- The metal CCV %D for molybdenum for CCV 240-126699/102 was greater than the 110% quality control limit for instrument I10 on 04/15/14 @ 16:46.

  Affected Total and Dissolved Samples:

MSA-MW17S-040814	MSA-MW-14I-040914	MSA-MW-14D-040914
MSA-MW-48D-040914	MSA-MW-48I-040914	

  Action: The sample total and dissolved non-detected molybdenum results were qualified estimated, (UJ), except where qualified non-detected for blank contamination.

- The following contaminants were detected in the preparation or calibration blanks at the following maximum concentrations:

Analyte	Maximum Conc. µg/	Action Level µg/

(1) Maximum concentration found in continuing calibration blank CCB 240-126579/31 affecting total metals for samples MSA-MW-48D-040914 and MSA-MW-48I-040914.
(2) Maximum concentration found in CCBs affecting total and dissolved metals for samples MSA-DMW7S-040714 and MSA-MW5-040714.
(3) Maximum concentration found in CCBs affecting total and dissolved metals for samples MSA-MW17D-040814, MSA-MW17I-040814, and MSA-MW47D-040814.
(4) Maximum concentration found in CCBs affecting total and dissolved metals for samples MSA-MW17S-040814, MSA-MW-14D-040914, MSA-MW-14I-040914, MSA-MW-48D-040914 and MSA-MW-48I-040914.
(5) Maximum concentration found in preparation blank MB 240-125933/1-A affecting total and dissolved samples MSA-DMW7S-040714 and MSA-MW5-040714.
(6) Maximum concentration found in preparation blank MB 240-126116/1-A affecting total and dissolved samples MSA-MW17D-040814, MSA-MW17I-040814, and MSA-MW47D-040814.
(7) Maximum concentration found in preparation blank MB 240-126332/1-A affecting total and dissolved samples MSA-MW17S-040814, MSA-MW-14D-040914, MSA-MW-14I-040914, MSA-MW-48D-040914 and MSA-MW-48I-040914.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors were taken into consideration when evaluating for blank contamination. Sample analyte results less than the action level were qualified non-detected, (U), for blank.

- The serial dilution %D was greater than 10% for cobalt, iron, manganese, and nickel for the total metals sample MSA-MW17D-040814. All total and dissolved sample detected cobalt, iron, manganese, and nickel results were qualified estimated, (J), except where qualified non-detected for blank contamination.

- The interfering analyte iron was present in the total and dissolved samples MSA-MW-14I-040914 at concentrations comparable to the concentration of iron in the interference check sample (ICS) solution. Several analytes namely, antimony, arsenic, cadmium, chromium, manganese, nickel, and silver were present in the ICS solution at a concentration that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for cadmium, chromium, and nickel in total and dissolved samples MSA-MW-14I-040914. The detected and non-detected results reported for cadmium, chromium, and nickel in total and dissolved samples MSA-MW-14I-040914 were qualified as estimated, (J) and (UJ), respectively.

- TPH C6-C10 results were qualified in samples MSA-DMW7S-040714 and MSA-MW5-040714 because contain high concentrations of chlorinated organic compounds as reported in the volatile organic fraction analysis. The compounds vinyl chloride, cis-1,2-dichloroethene, and/or trichloroethene were detected and reported at high concentrations in the aforementioned samples. While reviewing the petroleum hydrocarbon results, the data reviewer noticed that the parameter TPH (C06-C10) was also reported in the aforementioned samples at concentrations between 54 and 0.98 mg/L. Because of the presence of the chlorinated compounds in the samples, the reported concentrations of TPH (C06-C10) in samples MSA-DMW7S-040714 and MSA-MW5-040714 likely contain contribution from chlorinated organic compounds thus elevating the concentrations of TPH (C06-C10). The results for TPH (C06-C10) in both samples are qualified as estimated, J.

Notes

The VOC LCS %R was greater than the quality control limit for dibromomethane for LCS 240-126390. No validation action was taken as all affected samples had non-detected dibromomethane results.

The VOC matrix spike (MS) %R was greater than the quality control limit for dibromomethane for sample MSA-MW17D-040814. No action was taken as the MS duplicate (MSD) %R was compliant and the sample dibromomethane result was non-detected.

The laboratory VOC contaminant methylene chloride was detected in the trip blank samples TB-040714 and TB-040814 affecting all VOC samples. No action was taken as all samples had non-detected results for methylene chloride.

The laboratory contaminant TPH C06-C10 was detected in the method blank sample MB 240-127165 affecting sample MSA-DMW7S-040714 for TPH C06-C10. The sample had a very high concentration for TPC C06-C10 and was not qualified for method blank contamination.

The OVG laboratory contaminant methane was detected in the method blank sample MB 240-127844 at the maximum concentration of 0.104 µg/l affecting OVG samples MSA-MW-48D-040914 and MSA-MW-48I-040914. An action level of five times the maximum level for the OVG contamination was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was necessary.

The alkalinity method blank for batch 126654 had a result of 1.92 mg/l affecting the samples MSA-MW-48D-040914 and MSA-MW-48I-040914. No action was taken on the associated sample for this water quality parameter.

Samples were diluted as listed below for the VOC analysis resulting in elevated levels reported for non-detected VOC analytes.

Sample	Dilution
MSA-DMW7S-040714	200X
MSA-MW-14I-040914	40X
MSA-MW-48D-040914	5.71X
MSA-MW-48I-040914	166.67X
MSA-MW17I-040814	11.11X
MSA-MW47D-040814	5.71X
MSA-MW5-040714	83.3X

Sample MSA-DMW7S-040714 was diluted 5X and sample MSA-MW-14I-040914 was diluted 2X for the 1,4-dioxane analysis.

Sample MSA-DMW7S-040714 was diluted 5X for the TPH C06-C10 analysis.

Samples MSA-MW-48D-040914 and MSA-MW-48I-040914 were diluted 5X for the sulfate analysis.

Sample analyte results were reported to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC sample results were qualified for CCV %D and LCS %R non-compliances. Metal sample results were qualified for a CCV %D and serial dilution non-compliances and blank contamination. A sample alkalinity result was qualified for blank contamination.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). A sample VOC non-detected result for 2-chloroethyl vinyl ether was rejected due to 0% MS/MSD recoveries. Metal samples were qualified for interfering analytes.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260C, 8270C, 8015B, 6850, RSK-175, 6010C & 6020, 7470A, 9060, EPA SM 2340B, EPA Methods 600.1, 300.0, 310.1, 350.3, and the USEPA National Functional Guidelines for Organic Data Validation (June 2008), and the USEPA National Functional Guidelines for Inorganic Data Validation (January 2010)..

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity 1 (Yes) No
   -Were custody seals on the outside of the cooler(s) signed & dated? (Yes) No NA
   -Were custody seals on the bottle(s)? Yes (No)
3. Shippers' packing slip attached to the cooler(s)? (Yes) No
4. Did custody papers accompany the sample(s)? (Yes) No
5. Were the custody papers relinquished & signed in the appropriate place? (Yes) No
6. Did all bottles arrive in good condition (Unbroken)? (Yes) No
7. Could all bottle labels be reconciled with the COC? (Yes) No
8. Were correct bottle(s) used for the test(s) indicated? (Yes) No
9. Sufficient quantity received to perform indicated analyses? (Yes) No
10. Were sample(s) at the correct pH upon receipt? Yes (No) NA pH Strip Lot# HC391902
11. Were VOAs on the COC? (Yes) No
12. Were air bubbles >6 mm in any VOA vials? Yes (No) NA
13. Was a trip blank present in the cooler(s)? (Yes) No

Contacted PM JWM Date 4/11/14 by AM via Verbal (Voice Mail) Other
Concerning #14 + #15

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES

Samples processed by:

MSA-MW-48I-040914 - Did not receive 1,4 Dioxane volume. Will not log.

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.
Sample(s) _____ were received in a broken container.
Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) MSA-MW-14I-040914 were further preserved in the laboratory.
Time preserved: 1240 Preservative(s) added/Lot number(s): 111360 HNO_3

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA Groundwater Sampling

Report Number: 240-35913-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at TestAmerica Sacramento.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 4/9/2014 10:10 AM, 4/10/2014 9:20 AM and 4/11/2014 11:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.8° C, 3.2° C and 4.8° C.

The laboratory did not receive 1,4-Dioxane volume for sample MSA-MW-48I-040914. The laboratory will not run 1,4-Dioxane for this sample.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-040714 (240-35913-1), TB-040814 (240-36010-1), MSA-MW-14I-040914 (240-36043-1), MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2), MSA-MW-14D-040914 (240-36043-2), MSA-MW5-040714 (240-35913-3), MSA-MW17I-040814 (240-36010-3), MSA-MW-48I-040914 (240-36043-3), MSA-MW17D-040814 (240-36010-4), MSA-MW-48D-040914 (240-36043-4), MSA-MW47D-040814 (240-36010-5) and TB-040914 (240-36043-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/14/2014 and 04/21/2014.

Samples MSA-MW-14I-040914 (240-36043-1)[40X], MSA-DMW7S-040714 (240-36043-2)[200X], MSA-MW17I-040814 (240-36043-3) [11.11X], MSA-MW-48I-040914 (240-36043-3)[166.67X], MSA-MW5-040714 (240-36043-3)[83.33X], MSA-MW-48D-040914 (240-36043-4)[5.71X] and MSA-MW47D-040814 (240-36043-5)[5.71X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 126390 recovered outside control limits for the following analytes: Dibromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 126390 recovered above the upper control limit for multiple analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 126390 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The continuing calibration verification (CCV) for analytical batch 127251 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW-14I-040914 (240-36043-1), MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2), MSA-MW-14D-040914 (240-36043-2), MSA-MW5-040714 (240-35913-3), MSA-MW17I-040814 (240-36010-3), MSA-MW17D-040814 (240-36010-4), MSA-MW-48D-040914 (240-36043-4) and MSA-MW47D-040814 (240-36010-5) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 04/10/2014, 04/11/2014 and 04/14/2014 and analyzed on 04/11/2014, 04/12/2014 and 04/15/2014.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Samples MSA-MW-14I-040914 (240-36043-1)[2X] and MSA-DMW7S-040714 (240-36043-2)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The LCS for batch 126143 had a recovery of 38% for 1,4-Dioxane. This is below the default lower limit of 40%. Since 1,4-dioxane is not a controlling compound, and the lower recovery limit was arbitrarily set to 40%, no corrective action was taken.

1,4-Dioxane recovery in LCS 126314 was 36%. The default lower recovery limit was arbitrarily set to 40%. Since this is not a controlling compound, no corrective action was taken.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 126314.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2) and MSA-MW5-040714 (240-35913-3) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 04/11/2014, 04/17/2014 and 04/19/2014.

Gasoline Range Organics [C6 - C10] was detected in method blank MB 240-127165/5 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Sample MSA-DMW7S-040714 (240-36043-2)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the GRO analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 04/14/2014.

Methane was detected in method blank MB 240-126354/4 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 126354.

No other difficulties were encountered during the dissolved gases analysis. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)

Samples MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2) and MSA-MW5-040714 (240-35913-3) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 04/11/2014 and 04/14/2014 and analyzed on 04/15/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Batch 126527 is reported without matrix spike/matrix spikes duplicate (MS/MSD). The batch MS/MSD was originally performed on another client's sample, for method 8015C. This MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 126317.

No other difficulties were encountered during the DRO analysis. All other quality control parameters were within the acceptance limits.

PERCHLORATE
Samples MSA-MW17I-040814 (240-36010-3), MSA-MW-48I-040914 (240-36043-3), MSA-MW-48D-040914 (240-36043-4) and MSA-MW47D-040814 (240-36010-5) were analyzed for Perchlorate in accordance with EPA SW-846 Method 6850. The samples were prepared on 04/15/2014 and analyzed on 04/16/2014.

No difficulties were encountered during the perchlorate analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 04/14/2014 and analyzed on 04/15/2014.

No difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICPMS)
Samples MSA-MW-14I-040914 (240-36043-1), MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2), MSA-MW-14D-040914 (240-36043-2), MSA-MW5-040714 (240-35913-3), MSA-MW17I-040814 (240-36010-3), MSA-MW-48I-040914 (240-36043-3), MSA-MW17D-040814 (240-36010-4), MSA-MW-48D-040914 (240-36043-4) and MSA-MW47D-040814 (240-36010-5) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/10/2014, 04/11/2014 and 04/14/2014 and analyzed on 04/11/2014, 04/14/2014 and 04/15/2014.

No difficulties were encountered during the metals analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)
Samples MSA-MW-14I-040914 (240-36043-1), MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2), MSA-MW-14D-040914 (240-36043-2), MSA-MW5-040714 (240-35913-3), MSA-MW17I-040814 (240-36010-3), MSA-MW-48I-040914 (240-36043-3), MSA-MW17D-040814 (240-36010-4), MSA-MW-48D-040914 (240-36043-4) and MSA-MW47D-040814 (240-36010-5) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/10/2014, 04/11/2014 and 04/14/2014 and analyzed on 04/11/2014, 04/14/2014 and 04/15/2014.

Several analytes were detected in method blank MB 240-125933/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Several analytes were detected in method blank MB 240-126116/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Several analytes were detected in method blank MB 240-126332/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) associated with batch 126699 recovered above the upper control limit for Molybdenum. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: MSA-MW-48D-040914 (240-36043-4), MSA-MW-48I-040914 (240-36043-3).

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)
Samples MSA-MW-14I-040914 (240-36043-1), MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2), MSA-MW-14D-040914 (240-36043-2), MSA-MW5-040714 (240-35913-3), MSA-MW17I-040814 (240-36010-3), MSA-MW-48I-040914 (240-36043-3), MSA-MW17D-040814 (240-36010-4), MSA-MW-48D-040914 (240-36043-4) and MSA-MW47D-040814 (240-36010-5) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/10/2014, 04/11/2014 and 04/15/2014 and analyzed on 04/11/2014, 04/16/2014 and 04/17/2014.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

TOTAL MERCURY
Samples MSA-MW-14I-040914 (240-36043-1), MSA-DMW7S-040714 (240-35913-2), MSA-MW17S-040814 (240-36010-2), MSA-MW-14D-040914 (240-36043-2), MSA-MW5-040714 (240-35913-3), MSA-MW17I-040814 (240-36010-3), MSA-MW-48I-040914 (240-36043-3), MSA-MW17D-040814 (240-36010-4), MSA-MW-48D-040914 (240-36043-4) and MSA-MW47D-040814 (240-36010-5) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 04/10/2014, 04/11/2014 and 04/15/2014 and analyzed on 04/11/2014, 04/16/2014 and 04/17/2014.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

HARDNESS
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for hardness in accordance with SM 2340B. The samples were analyzed on 04/16/2014.

No difficulties were encountered during the hardness analysis. All quality control parameters were within the acceptance limits.

TOTAL DISSOLVED SOLIDS
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for total dissolved solids in accordance with EPA Method 160.1. The samples were analyzed on 04/14/2014.

No difficulties were encountered during the TDS analysis. All quality control parameters were within the acceptance limits.

ANIONS
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for anions in accordance with EPA Method 300.0. The samples were analyzed on 04/11/2014.

No difficulties were encountered during the anions analysis. All quality control parameters were within the acceptance limits.

ANIONS
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for anions in accordance with EPA Method 300.0. The samples were analyzed on 04/17/2014 and 04/21/2014.

Samples MSA-MW-48I-040914 (240-36043-3)[5X] and MSA-MW-48D-040914 (240-36043-4)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the anions analysis. All quality control parameters were within the acceptance limits.

ALKALINITY
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for alkalinity in accordance with EPA Method 310.1. The samples were analyzed on 04/15/2014.

Alkalinity was detected in method blank MB 240-126654/3 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the alkalinity analysis. All other quality control parameters were within the acceptance limits.

AMMONIA
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for ammonia in accordance with EPA Method 350.3. The samples were analyzed on 04/16/2014.

No difficulties were encountered during the ammonia analysis. All quality control parameters were within the acceptance limits.

DISSOLVED ORGANIC CARBON
Samples MSA-MW-48I-040914 (240-36043-3) and MSA-MW-48D-040914 (240-36043-4) were analyzed for dissolved organic carbon in accordance with EPA SW-846 Method 9060. The samples were analyzed on 04/13/2014.

No difficulties were encountered during the TOC analysis. All quality control parameters were within the acceptance limits.

Method Summary

Client: Tetra Tech, Inc.
Project/Site: MSA Groundwater Sampling

TestAmerica Job ID: 240-35913-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL CAN
8270C	Semivolatile Organic Compounds (GC/MS)	SW846	TAL CAN
8015B	Gasoline Range Organics - (GC)	SW846	TAL CAN
RSK-175	Dissolved Gases (GC)	RSK	TAL CAN
8015B	Diesel Range Organics (DRO) (GC)	SW846	TAL CAN
6850	Perchlorate by LC/MS or LC/MS/MS	EPA	TAL SAC
2340B-1997	Total Hardness (as CaCO3) by calculation	SM	TAL CAN
6010C	Metals (ICP)	SW846	TAL CAN
6020	Metals (ICP/MS)	SW846	TAL CAN
7470A	Mercury (CVAA)	SW846	TAL CAN
160.1	Solids, Total Dissolved (TDS)	MCAWW	TAL CAN
300.0	Anions, Ion Chromatography	MCAWW	TAL CAN
310.1	Alkalinity	MCAWW	TAL CAN
350.3	Nitrogen, Ammonia	MCAWW	TAL CAN
9060	Organic Carbon, Dissolved (DOC)	SW846	TAL CAN

Detection Limit Exceptions Summary

Client: Tetra Tech, Inc.
Project/Site: MSA Groundwater Sampling

TestAmerica Job ID: 240-35913-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Matrix	Analyte	Units	Client RL	Lab PQL
RSK-175	Water	Ethane	ug/L	0.26	0.5
RSK-175	Water	Ethene	ug/L	0.31	0.5
RSK-175	Water	Methane	ug/L	0.10	0.5

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: MSA Groundwater Sampling

TestAmerica Job ID: 240-35913-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
