Overview

The sample set for Lockheed – MSA Surface Water, SDG 240-36112-1 consists of eighteen (18) aqueous environmental samples and one (1) trip blank sample. The samples were analyzed for volatile organic compounds (VOC), 1,4-dioxane, gasoline range organics (GRO), diesel range organics (DRO), perchlorate, and dissolved gases, as outlined above.

The samples were collected by Tetra Tech on April 10 and 11, 2014 and analyzed by Test America. All analyses were conducted in accordance with SW-846 Methods 8260C, 8270C, 8015B, 6850, and EPA Method RSK-175 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC and LC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The matrix spike / matrix spike duplicate (MS/MSD) performed on sample MSA-MW-25I-041114 had zero percent recoveries in the MS and MSD for 2-chloroethyl vinyl ether. The nondetected 2-chloroethyl vinyl ether result for sample MSA-MW-25I-041114 was rejected (UR).

Minor

- The following contaminant was detected in the trip blank at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Acetone	1.6 ug/L	16 ug/L

  An action level of 10X the maximum contaminant level for acetone has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Results less than the action level have been qualified (U) due to blank contamination.

- The VOC continuing calibration percent differences (%Ds) were greater than the quality control limit of 20% for trichlorofluoromethane, 1,3-dichloropropane, 1,1,2,2-tetrachloroethane, and 1,2,3-trichloropropane, for instrument A3UX10 on 04/21/14 @ 10:59. The detected and nondetected results for the aforementioned compounds in the affected samples were qualified as estimated (J) and (UJ), respectively.

- The VOC continuing calibration %D was greater than the quality control limit of 20% for 2,2-dichloropropane, for instrument A3UX10 on 04/22/14 @ 11:32. The nondetected results 2,2-dichloropropane in the affected samples were qualified as estimated (UJ).

- The TIC results for samples MSA-DMW-10S-041014 and MSA-MW-23S-041114 were qualified as presumptively present (NJ).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Nondetected results were reported to the MDL.

The MS/MSD performed on sample MSA-MW-25I-041114 had a relative percent difference (RPD) that exceeded the quality control limit. No action was taken on this basis because the MS and MSD had acceptable recoveries.

Samples MSA-DMW-1A-041014, MSA-DMW-1B-041014, MSA-MW-24I-041114, MSA-MW-48S-041014, MSA-MW-49I-041014, and MSA-MW-49S-041014 required dilutions due to VOC concentrations greater than the linear range of the instrument. This accounts for the elevated detection limits for the nondetected

compounds.

Samples MSA-DMW-1A-041014, MSA-DMW-1B-041014, MSA-MW-49I-041014, and MSA-MW-49S-041014 required dilutions due to 1,4-dioxane concentrations greater than the linear range of the instrument.

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of VOC data. Continuing calibration %D noncompliances resulted in the qualification of VOC data.

Other Factors Affecting Data Quality: MS/MSD percent recovery noncompliance resulted in the rejection of one VOC compound. TIC results were qualified for the VOC fraction. Positive results less than the reporting limit (RL) were qualified as estimated, due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to USEPA National Functional Guidelines for Organic Data Validation (June 2008). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2014

Report Number: 240-36112-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at TestAmerica Sacramento.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No action was taken on this basis because all results were greater than the action level.

- The internal standard recoveries for scandium and holmium were outside the 60-125% quality control limit for the total and dissolved sample MSA-MW-24S-041114. The total and dissolved sample MSA-MW-24S-041114 was reanalyzed at a five-fold dilution. The scandium and holmium internal standard recoveries were within acceptance limits. No action was required.

- The internal standard recoveries for scandium was outside the 60-125% quality control limit for the total sample MSA-MW-49I-041014 analyzed on 4/17/14 @ 16:52. Associated results for arsenic, chromium, cobalt, copper, iron, manganese, nickel, and selenium were qualified as estimated, (J). Terbium and holium were also recovered above the 125% quality control limit on 4/18/14 @16:05 for the aforementioned sample but the sample was re-analyzed at a five fold dilution with compliant recoveries. No action was required.

- The interfering analyte iron was present in the total and dissolved samples MSA-MW-6-041014 and MSA-MW-24S-041114 at concentrations comparable to the concentration of iron in the interference check sample (ICS) solution. Several analytes namely, antimony, arsenic, cadmium, chromium, manganese, nickel, and silver were present in the ICS solution at a concentration that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for chromium in total and dissolved samples MSA-MW-6-041014 and MSA-MW-24S-041114. The detected results reported for chromium in total and dissolved samples MSA-MW-6-041014 and MSA-MW-24S-041114 were qualified as estimated (J).

- The nitrite, nitrate, and orthophosphate samples were analyzed 29 minutes outside the 48 hour hold time. The nondetected nitrite, nitrate, and orthophosphate results for sample MSA-MW-48S-041014 were qualified as estimated (UJ).

- A continuing calibration verification (CCV) exceeded the 90-100% quality control limit for orthophosphate. The nondetected orthophosphate result for sample MSA-MW-48S-041014 was qualified as estimated (UJ).

- The matrix spike / matrix spike duplicate (MS/MS) performed on sample MSA-MW-48S-041014 had percent recoveries greater than the 80-120% quality control limits for nitrite, nitrate, orthophosphate, and chloride. No action was taken on the nondetected nitrite, nitrate, and orthophosphate results. The detected chloride result for sample MSA-MW-48S-041014 was qualified as estimated (J).

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The total and dissolved samples MSA-MW-24S-041114 and MSA-MW-49I-041014 were diluted due to sample matrix interference for several metals. This accounts for the elevated detection limit for the nondetected metals.

The dissolved sample MSA-MW-49I-041014 contained the internal standards terbium and holium above 125%. The sample was re-analyzed at a five fold dilution and the recoveries were compliant. Nno action was required.

The total sample MSA-MW-48S-041014 was analyzed at a ten-fold dilution due to a sulfate concentration

that exceeded the linear calibration range of the instrument.

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of metals data. Hold time noncompliance resulted in the qualification of several anions. A CCV percent recovery noncompliance resulted in the qualification of orthophosphate result.

Other Factors Affecting Data Quality: Internal standard recovery noncompliances resulted in the qualification of several metals. The interfering analyte iron was present is several samples resulting in qualification of the results. An MS/MSD percent recovery noncompliance resulted in qualification of chloride result. Positive results less than the reporting limit (RL) were qualified as estimated, due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to USEPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2014

Report Number: 240-36112-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at TestAmerica Sacramento.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

Overview

The sample set for Lockheed, MSA, SDG 240-36135-1 consists of thirteen (13) aqueous environmental samples. All samples were analyzed for total and dissolved metals. In addition, sample MSA-DMW-11S-041414 was analyzed for natural attenuation parameters including dissolved organic carbon, hardness, total dissolved solids, anions, alkalinity, and ammonia.

The samples were collected by Tetra Tech on April 14 and 16, 2014 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Methods 6010C, 6020A, 7470A, 9060, Standard method 2340B, EPA methods 300.0, 310.1, 350.3, and 160.1 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, ICP/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

(3) - Maximum concentration found in preparation blank (MB 240-127394/1-A) affecting total and dissolved samples MSA-DMW-7D-041614, MSA-DMW-7I-041614, MSA-DMW-8I-041614, MSA-MW-4-041614, MSA-MW-50D-041614, MSA-MW-51I-041414, and MSA-MW-51S-041414.

(4) – Maximum concentration found in calibration blank (CCB240-126899/72 04/17/14 @ 15:07) affecting total and dissolved samples MSA-DMW-11S-041414 and MSA-DMW-11I-041414.

(5) - Maximum concentration found in calibration blank (CCB240-127674/37 04/23/14 @ 13:18) affecting total and dissolved samples MSA-DMW-7D-041614, MSA-DMW-7I-041614, MSA-DMW-8I-041614, MSA-MW-4-041614, MSA-MW-50D-041614, MSA-MW-51I-041414, and MSA-MW-51S-041414.

(6) - Maximum concentration found in calibration blank (CCB240-127580/55 04/22/14 @ 17:41) affecting total and dissolved samples MSA-MW-21D-041414, MSA-MW-21I-041414, MSA-MW-50I-041414, and MSA-MW-50S-041414.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into

consideration when evaluating for blank contamination. No action was taken on this basis because all results were greater than the action level.

- The internal standard recovery for scandium was outside the 60-125% quality control limit for total sample MSA-DMW-8I-041614. The total sample MSA-DMW-8I-041614 was reanalyzed at a five-fold dilution. The scandium internal standard recovery was still outside for total sample MSA-DMW-8I-041614 and the detected results for cobalt, chromium, copper, iron, manganese, and nickel were qualified as estimated (J). Vanadium was not qualified because it was previously qualified due to blank contamination.

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The total and dissolved samples MSA-DMW-8I-041614, MSA-MW-50I-041414 and MSA-MW-50S-041414 were diluted due to sample matrix interference for several metals. This accounts for the elevated detection limit for the nondetected metals.

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of metals data.

Other Factors Affecting Data Quality: Internal standard recovery noncompliances resulted in the qualification of several metals. Positive results less than the reporting limit (RL) were qualified as estimated, due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to USEPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2014

Report Number: 240-36135-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Percholate analysis was performed at TestAmerica Sacramento.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

The continuing calibration verification (CCV) for analytical batch 128028 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

Overview

The sample set for Lockheed MSA, SDG 240-36135-1, consisted of fourteen (14) aqueous samples and two (2) aqueous trip blank samples. Fifteen (15) samples were analyzed for volatile organic compounds (VOCs) as listed above. Fourteen (14) aqueous samples were analyzed for the semi-volatile organic compound (SVOC) 1,4-dioxane as listed above. Four (4) aqueous samples were analyzed for the total petroleum hydrocarbons (TPH) TPH C06-C10 & TPH C10-C32 as listed above. One (1) aqueous sample was analyzed for organic volatile compounds (OVG) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on April 14 and 16, 2014 and analyzed by TestAmerica Laboratories, Inc., North Canton for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 8270C for 1,4-dioxane, 8015B for TPH C06-C10 & TPH C10-C32, and RSK-175 for OVG, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The matrix spike (MS) and MS duplicate (MSD) percent recoveries (%Rs) were less than the quality control limit at 0% for 2-chloroethyl vinyl ether for sample MSA-DMW-11I-041414.
  Affected Sample: MSA-DMW-11I-041414
  Actions: The sample non-detected 2-chloroethyl vinyl ether result was qualified rejected, (UR).

- Sample MSA-MW-50D-041614 had a silanol compound VOC tentatively identified compound (TIC) result.
  Actions: The sample silanol related compound result was qualified rejected (R), as it was considered present due to analytical column bleed.

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The following laboratory VOC contaminants were detected in the trip blank samples at the following maximum concentration affecting all VOC samples.

Analytes	Maximum Conc.	Action Level
Acetone [1]	1.1 µg/l	11 µg/l
Methylene chloride [1]	0.34 µg/l	3.40 µg/l
Acetone [2]	1.2 µg/l	12 µg/l
Methylene chloride [2]	0.36 µg/l	3.60 µg/l

[1] Trip blank sample TB-041414.
[2] Trip blank sample TB-041614.

An action level of ten times the maximum level for the common laboratory contaminants acetone and methylene chloride were used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less than the action level were qualified non-detected, (U), for blank contamination. The trip blank samples were not qualified for blank contamination.

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control limit for bromomethane and 2,2'-dichloropropane for instrument A3UX10 on 04/22/14 @ 11:32.
  Affected Samples:

MSA-DMW-11I-041414	MSA-DMW-11S-041414	MSA-DMW-7D-041614
MSA-MW-21D-041414	MSA-MW-21I-041414	MSA-MW-50I-041414
MSA-MW-50S-041414	TB-041414	TB-041614

  Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control limit for bromomethane, tert-butyl alcohol, dibromomethane, bromoform, 1,2,4-trimethylbenzene, sec-butyl benzene, n-butylbenzene, and hexachlorobutadiene for instrument A3UX12 on 04/26/14 @ 09:26.

  Affected Samples:

MSA-DMW-7I-041614	MSA-DMW-8I-041614	MSA-MW-4-041614
MSA-MW-50D-041614	MSA-MW-51I-041614	MSA-MW-51S-041614

  Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- Samples MSA-MW-21D-041414 and MSA-MW-50I-041414 had a detected VOC TIC result. The detected result was qualified presumptively present, (NJ).

- The MS and MSD %Rs were less than the quality control limit for cis-1,2-dichloroethene and trichloroethene for spiked sample MSA-DMW-11I-041414.

  Affected Sample: MSA-DMW-11I-041414

  Actions: The sample detected cis-1,2-dichloroethene and trichloroethene results were qualified estimated, (J).

- The laboratory contaminant TPH C06-C10 was detected in the method blank sample MB 240-127165 at the following maximum concentration affecting all TPH C06-C10 samples.

Analytes	Maximum Conc.	Action Level
TPH C06-C10	38.7 µg/l	193.5 µg/l

  An action level of 5X the maximum level for the TPH C06-C10 contamination was used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less than the action level were qualified non-detected, (U), for blank contamination.

- The TPH C06-C10 surrogate %R for trifluorotoluene was less than quality control limit for sample MSA-MW-50S-041414.

  Affected Sample: MSA-MW-50S-041414

  Actions: The sample detected TPH C06-C10 result was qualified estimated, (J).

- The OVG CCV %Ds were greater than the 15% quality control limit for ethane and ethene for instrument ZPID on 04/25/14 @ 10:02.

  Affected Sample: MSA-DMW-11S-041414

  Action: Detected ethane and ethene results were qualified estimated, (J).

- Samples MSA-MW11S-041414, MSA-MW50S-041414, and MSA-MW51S-041414 contain high concentrations of chlorinated organic compounds as reported in the volatile organic fraction analysis. The compounds vinyl chloride, cis-1,2-dichloroethene, and trichloroethene were detected and reported at high concentrations in the aforementioned samples. Because of the presence of the chlorinated compounds in the samples, the reported concentrations of TPH (C06-C10) in samples MSA-MW11S-041414, MSA-MW50S-041414, and MSA-MW51S-041414 likely contain contribution from chlorinated organic compounds thus elevating the concentrations of TPH (C06-C10). The results for TPH (C06-C10) in both samples are qualified as estimated, J.

Notes

The VOC LCS %R was greater than the quality control limit for dibromomethane for LCS 240-128028. No validation action was taken as the samples had non-detected dibromomethane results.

The VOC MS %R was greater than the quality control limit for 1,1,2,2-tetrachloroethane for sample MSA-DMW-11I-041414. No action was taken as the sample analyte result was non-detected.

The trip blank sample TB-041414 was re-analyzed by the laboratory. No explanation was found in the laboratory narrative the sample re-analysis. Both sample analyses had compliant quality control limit results for surrogates, internal standards, and the associated LCS. The original trip blank sample TB-041414 analysis was validated/reported.

The OVG laboratory contaminant methane was detected in the method blank sample MB 240-127844 at the maximum concentration of 0.0822 µg/l affecting OVG sample MSA-DMW-11S-041414. An action level of five times the maximum level for the OVG contamination was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was necessary.

Samples were diluted as listed below for the VOC analysis resulting in elevated levels reported for non-detected VOC analytes.

Sample	Dilution
MSA-DMW-11I-041414	5.71X
MSA-DMW-11S-041414	416.67X
MSA-DMW-7I-041614	5.71X
MSA-DMW-8I-041614	8.33x
MSA-MW-21I-041414	14.29X
MSA-MW-50I-041414	2X
MSA-MW-50S-041414	5.71X
MSA-MW-51S-041614	25X

Sample MSA-MW-48I-041414 was diluted 5X and sample MSA-DMW-8I-041614 was diluted 2X for the 1,4-dioxane analysis.

Sample analyte results were reported to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: A VOC silanol compound result was rejected for column bleed. VOC sample results were qualified for trip blank contamination. VOC and OVG sample results were qualified for CCV %D non-compliances. One TPH C06-C10 sample result was qualified for method blank contamination and one TPH C06-C10 results was qualified for a surrogate %R non-compliance.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). VOC TIC results were qualified presumptively present. A sample VOC non-detected result for 2-chloroethyl vinyl ether was rejected due to 0% MS/MSD recoveries. A sample VOC results were qualified for MS/MSD %R non-compliances.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260C, 8270C, 8015B, RSK-175, and the USEPA National Functional Guidelines for Organic Data Validation (June 2008).

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2014

Report Number: 240-36135-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Percholate analysis was performed at TestAmerica Sacramento.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 4/15/2014 10:00 AM, 4/16/2014 9:40 AM and 4/18/2014 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.6° C, 1.8° C, 2.0° C and 3.2° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-041414 (240-36135-1), TB-041414 (240-36233-1), TB-041614 (240-36320-1), MSA-DMW-11S-041414 (240-36135-2), MSA-MW-50S-041414 (240-36233-2), MSA-DMW-7I-041614 (240-36320-2), MSA-DMW-11I-041414 (240-36135-3), MSA-MW-21I-041414 (240-36233-3), MSA-DMW-7D-041614 (240-36320-3), MSA-MW-50I-041414 (240-36233-4), MSA-DMW-8I-041614 (240-36320-4), MSA-MW-21D-041414 (240-36233-5), MSA-MW-4-041614 (240-36320-5), MSA-MW-50D-041614 (240-36320-6), MSA-MW-51S-041614 (240-36320-7) and MSA-MW-51I-041614 (240-36320-8) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 04/22/2014 and 04/26/2014.

Samples MSA-DMW-11S-041414 (240-36135-2)[416.67X], MSA-MW-50S-041414 (240-36135-2)[5.71X], MSA-DMW-7I-041614 (240-36135-2)[5.71X], MSA-MW-21I-041414 (240-36135-3)[14.29X], MSA-DMW-11I-041414 (240-36135-3)[5.71X], MSA-MW-50I-041414 (240-36135-4)[2X], MSA-DMW-8I-041614 (240-36135-4)[8.33X] and MSA-MW-51S-041614 (240-36135-7)[25X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) for analytical batch 127413 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The laboratory control sample (LCS) for batch 128028 recovered outside control limits for the following analytes: Dibromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 128028 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

Detection Limit Exceptions Summary

Client: Tetra Tech, Inc.
Project/Site: MSA GW 2014

TestAmerica Job ID: 240-36135-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Overview

The sample set for Lockheed MSA Surface Water, SDG 240-36343-1, consisted of fifteen (15) aqueous samples including three (3) aqueous trip blank samples. All samples were analyzed for volatile organic compounds (VOCs) as listed above. Twelve (12) aqueous samples were analyzed for the semi-volatile organic compound (SVOC) 1,4-dioxane as listed above. Four (4) aqueous samples were analyzed for the total petroleum hydrocarbons (TPH) TPH C06-C10 & TPH C10-C32 as listed above. Three (3) aqueous samples were analyzed for perchlorate as listed above. Two (2) aqueous samples were analyzed for haloacetic acids (HAAs) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on April 17, 18, 21, and 22, 2014 and analyzed by TestAmerica Laboratories, Inc., North Canton, Savannah, and Sacramento for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260C for VOCs, 8270C for 1,4-dioxane, 8015B for TPH C06-C10 & TPH C10-C32, 6850 for perchlorate, 552.2 for HAAs, and RSK-175 for OVG, analytical and

reporting protocols.
The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, blank results, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, surrogate spike recoveries, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The matrix spike (MS) and MS duplicate (MSD) percent recoveries (%Rs) were less than the quality control limit at 0% for 2-chloroethyl vinyl ether for sample MSA-MW-51D-041714.
  Affected Sample: MSA-MW-51D-041714
  Actions: The sample non-detected 2-chloroethyl vinyl ether result was qualified rejected, (UR).

Minor Problems

- Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The following laboratory VOC contaminants were detected in the method blank and trip blank samples at the following maximum concentration.

Analytes	Maximum Conc.	Action Level
Acetone [1]	1.2 µg/l	12.0 µg/l
1,2,4-Trimethylbenzene [2]	0.152 µg/l	0.760 µg/l
Acetone [2]	0.152 µg/l	1.52 µg/l
Carbon disulfide [2]	0.224 µg/l	1.12 µg/l
n-Butylbenzene [2]	0.212 µg/l	1.060 µg/l

  [1] Trip blank sample TB-041714 result – Maximum result from all trip blank samples used to qualify all samples.
  [2] Method blank sample MB 240-128396/6 affecting samples MSA-DMW-3I-042214 and MSA-DMW-5S-041814.

  An action level of ten times the maximum level for the common laboratory contaminant acetone and five times the maximum level for the other contaminants was used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less than the action level were qualified non-detected, (U), for blank contamination. The trip blank samples were not qualified for blank contamination.

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% quality control limit for bromomethane and 2,2'-dichloropropane for instrument A3UX10 on 04/22/14 @ 11:32.
  Affected Sample: TB-041714
  Action: The aforementioned sample non-detected analyte results were qualified estimated, (UJ).

- The VOC CCV %Ds were greater than the 20% quality control limit for bromomethane, tert-butyl alcohol, dibromomethane, bromoform, 1,2,4-trimethylbenzene, sec-butyl benzene, n-butylbenzene, and hexachlorobutadiene for instrument A3UX12 on 04/26/14 @ 09:26.
  Affected Samples:

MSA-MW-51D-041714	TB-042114	TB-042214

Action: The sample non-detected aforementioned analyte results were qualified estimated, (UJ).

- The VOC CCV %D was greater than the 20% quality control limit naphthalene for instrument A3UX16 on 04/29/14 @ 12:51.
  Affected Samples: MSA-DMW-3I-042214 and MSA-DMW-5S-041814
  Action: The sample detected and non-detected aforementioned analyte results were qualified estimated, (J) and (UJ), respectively.

- The SVOC 1,4-dioxane was detected in the method blank MB 240-128083 at the following maximum concentration.

Analytes	Maximum Concentration	Action Level
1,4-Dioxane [1]	1.43 µg/l	7.15 µg/l

[1] MB 240-128083 result affecting samples MSA-DMW-2B-042214, MSA-DMW-3D-042214, MSA-DMW-3I-042214, MSA-DMW-3S-042214 and MSA-MW-38S-042114.

An action level of five times the maximum level for the laboratory contaminant was used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The sample MSA-DMW-2B-042214 was re-analyzed due to the method blank contamination. However, the sample was re-extracted out of the sample collection to extraction hold time. The original sample analysis was validated/reported. The positive sample result for MSA-DMW-2B-042214 was less than the action level and was qualified non-detected, (U), for blank contamination.

- Samples MSA-DMW-3S-042214, and MSA-DMW-5S-041814 contain high concentrations of chlorinated organic compounds as reported in the volatile organic fraction analysis. The compounds vinyl chloride, cis-1,2-dichloroethene, and trichloroethene were detected and reported at high concentrations in the aforementioned samples. Because of the presence of the chlorinated compounds in the samples, the reported concentrations of TPH (C06-C10) in samples MSA-DMW-3S-042214, and MSA-DMW-5S-041814 likely contain contribution from chlorinated organic compounds thus elevating the concentrations of TPH (C06-C10). The results for TPH (C06-C10) in both samples are qualified as estimated, J.

Notes

The VOC laboratory control sample (LCS) %R was greater than the quality control limit for dibromomethane for LCS 240-128028.
Action: No validation action was taken as all the affected samples had non-detected dibromomethane results.

Samples were diluted as listed below for the VOC analysis resulting in elevated levels reported for non-detected VOC analytes.

Sample	Dilution
MSA-DMW-3I-042214	200X
MSA-DMW-3S-042214	40X

MSA-DMW-5I-041814	3.33X
MSA-DMW-5S-041814	100X
MSA-MW-3-042114	1.43X
MSA-MW-49D-041714	83.33X
MSA-MW-51D-041714	2.5X

Samples were diluted as listed below for the 1,4-dioxane analysis.

Sample	Dilution
MSA-DMW-3I-042214	10X
MSA-DMW-3S-042214	10X

Sample MSA-DMW-5S-041814 was diluted 5X for the TPH C06-C10 analysis.

Sample analyte results were reported to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC sample results were qualified for blank contamination and CCV %D non-compliances. A sample was qualified for 1,4-dioxane method blank contamination.

Other Factors Affecting Data Quality: Detected results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). A sample VOC non-detected result for 2-chloroethyl vinyl ether was rejected due to 0% MS/MSD recoveries.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260C, 8270C, 8015B, 6850, 552.2, RSK-175, and the USEPA National Functional Guidelines for Organic Data Validation (June 2008).

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2014

Report Number: 240-36343-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 552.2 Haloacetic Acids analysis was performed at the TestAmerica Savannah Laboratory. The 6850 Perchlorate analysis was performed at the TestAmerica Sacramento Laboratory. The Radiological analysis was performed at the TestAmerica Richland Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.
