## Fall 2015/Winter 2016 Voluntary Cleanup Progress

The remediation of Lockheed Martin's Bloody Brook voluntary cleanup site is now more than halfway complete.

Throughout the months of October through December 2015, Lockheed Martin's remedial construction contractor AECOM continued to restore both the 2014 (wooded area) and 2015 (residential) construction areas as well as to excavate the brook sediment and side banks down to Floradale Road. Approximately 870 truckloads (21,000 tons or 14,000 cubic yards) of soil and sediment were removed in 2015, and approximately 1,600 truckloads (34,000 tons or 18,000 cubic yards) have been removed to date for the entire project. During this timeframe, the Brookview Lane culvert replacement was completed with new pavement over the crossing, and the culvert replacements at Sunflower Drive and Floradale Road were initiated and completed including new pavement and guardrails.

We removed the site access roads and most of the construction equipment and site fencing from the wooded and residential construction areas. In addition, the

bypass pump piping and the pump and generators which powered the pump have been removed. The replacement of vegetation within the easement and on residential properties continued. Seed or sod, shrubs and trees were planted. We replaced fences and any sheds that had been removed to allow for remedial construction activities.

## Upcoming Activities

Weather permitting, AECOM will continue activities throughout the winter months. We are currently contacting property owners directly affected by the 2016 proposed construction activities about having some trees removed and survey data collected on their properties. Similar to the past two construction seasons, the New York State Departments of Environmental Conservation and Fish and Wildlife have asked that trees over three inches in diameter at breast height be removed between November 15, 2015 and March 31, 2016 to confidently ensure that we avoid any disturbance to endangered species. Therefore, during the months of January through March, you should expect to see workers around the site continuing site restoration and maintenance activities, removing trees and installing site fencing and access areas for the 2016 construction season.

Look for another issue of the Bloody Brook Voluntary Cleanup Newsletter this spring to update you on the project.

## For more information

Information including documents, sample results and informational materials and updates about the Bloody Brook cleanup are available on the Lockheed Martin website at [www.lockheedmartin.com/liverpool](http://www.lockheedmartin.com/liverpool).

The New York State Department of Environmental Conservation maintains repositories for documents and sample results at the locations listed below. The proposed cleanup plan for Bloody Brook is currently available here:
