Support Documentation

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H190588

Sample Receiving:
TestAmerica's Pittsburgh laboratory received one sample on August 19, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution. Several samples had the surorgates diluted out.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

PCBs:
There were no problems associated with the analysis.

Metals:
Several samples were over the instruments linear range for SEM zinc and required a dilution.

The serial dilution of sample SD-102-SS (total) was outside of the percent difference control limits for silver, beryllium, and antimony. The results were flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample SD-92-SS recovered outside of the control limits for antimony and lead.

The matrix spike and matrix spike duplicate of sample SD-102-SS recovered outside of the control limits for antimony.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H190588

Metals (cont):
The matrix spike of sample SS-102-SS recovered outside of the control limits for chromium and zinc.

For the matrix spike and matrix spike duplicate of sample SD-102-SS, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
There were no problems associated with the analysis.

METHODS SUMMARY

C0H190588

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
Acid Volatile Sulfide in Sediment	EPA AVS	
ICP-MS (6020)	SW846 6020	SW846 3050B
Mercury in Solid Waste (Manual Cold-Vapor)	SW846 7471A	SW846 7471A
PCBs by SW-846 8082	SW846 8082	SW846 3541
Semivolatile Organics GCMS BNA 8270C	SW846 8270C	
Simultaneouly Extractable Metals	EPA SEM	
Total Residue as Percent Solids	SM20 2540G	
TOC Lloyd Kahn Lloyd Kahn	EPA Lloyd Kahn	EPA Lloyd Kahn

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

FORM 5
SEMIVOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.:

Lab File ID: V0825DF1 DFTPP Injection Date: 08/25/10

Instrument ID: 731 DFTPP Injection Time: 1237

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	53.6
68	Less than 2.0% of mass 69	0.0 (0.0)1
69	Mass 69 relative abundance	59.7
70	Less than 2.0% of mass 69	0.2 (0.3)1
127	40.0 - 60.0% of mass 198	48.9
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.5
275	10.0 - 30.0% of mass 198	23.0
365	Greater than 1.0% of mass 198	2.64
441	Present, but less than mass 443	6.5
442	40.0 - 99.0% of mass 198	52.3
443	17.0 - 23.0% of mass 442	10.6 (20.3)2

1-Value is % mass 69 2-Value is % mass 442

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

SW846 8270C METHOD BLANK SUMMARY

BLANK WORKORDER NO.: L513R1AA

Lab Name: TestAmerica Laboratories, Inc.

Lab Code: TALPIT

SDG Number:

Lab File ID: V0825011.

Lot Number: C0H190588

Date Analyzed: 08/25/10

Time Analyzed: 13:15

Matrix: SOLID

Date Extracted:08/23/10

GC Column: DB5 ID: .25

Extraction Method:

Instrument ID: 731

Level:(low/med) LOW

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, LCS, LCSD, MS , MSD:

	CLIENT ID.	SAMPLE WORK ORDER #	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

Overview

The sample set for Middle River Complex, SDG C0H190588, consists of forty (40) sediment environmental samples. This SDG contained three field duplicate pairs: SD-DUP1-01/SD-95-01, SD-DUP2-04/SD-102-04, and SD-DUP3-SS/SD-104-SS.

All samples were analyzed for select metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium, and zinc. Samples SD-101-01, SD-101-02, SD-101-04, SD-101-SS, SD-87-01, SD-87-02, SD-87-04, and SD-87-SS were analyzed for acid volatile sulfides (AVS), total organic carbons (TOC), simultaneously extracted metals (SEM) cadmium, chromium, copper, lead, nickel, silver, and zinc. The samples were collected by Tetra Tech NUS on August 17th and 18th, 2010 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7471A. AVS/SEM analyses were conducted using method EPA AVS/SEM. TOC analyses were conducted using method EPA Llyod Kahn.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

- Sample SD-86-02 had a percent recovery < 60% for the internal standard scandium. Positive results for beryllium, chromium, nickel, copper, arsenic, selenium, and zinc were qualified as estimated (J).

Notes

The following samples were analyzed at dilutions:

Sample	Dilution Factor	Analytes
SD-101-01	2X	TOC
SD-101-02	2X	TOC
SD-101-SS	2X	TOC
SD-87-01	2X	TOC
	5X	Zinc
SD-87-02	2X	TOC
	5X	Zinc
SD-87-SS	2X	TOC and Zinc

The CRDL standard analyzed on 8/30/10 had a percent recovery > 110% for cadmium and zinc and <90% for copper. All samples in the SDG were affected. No validation actions were warranted as positive results were all >2X CRDL.

The CRDL standard analyzed on 8/31/10 had a percent recovery >110% for chromium. All samples analyzed for SEM metals were affected. No validation action was warranted as all positive result were >2X CRDL.

Executive Summary

Laboratory Performance: Preparation and calibration blanks resulted in the qualification on several samples. ICP internal standard recoveries for SD-103-02 and SD-85-02 resulted in the qualification of sample results. Percent soild results for samples SD-101-SS, SD-102-SS, SD-105-01, SD-105-SS, and SD-95-SS were <30% and resulted in qualification of all sample results. Serial dilution non-compliances for sample SD-102-SS resulted in the qualification of sample results.

Other Factors Affecting Data Quality: Matrix spike noncompliances for lead, chromium, and antimony resulted in the qualification of sample results.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Megan Carson

Tetra Tech NUS

Chemist/Data Validator

Minor Problems-

- The following contaminants were detected in blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Chromium [1]	0.01 mg/kg	0.05 mg/kg
Antimony [2]	0.00029 mg/L	0.0725 mg/kg
Thallium [2]	0.00003 mg/L	0.0075 mg/kg
Chromium [3]	0.001 umole/g	0.005 umole/g
Copper [3]	0.0025 umole/g	0.012 umole/g
Nickel [3]	0.00066 umole/g	0.003 umole/g
Zinc [3]	0.019 umole/g	0.095 umole/g
Cadmium [4]	0.2 ug/L	0.0002 umole/g
Nickel [4]	3.9 ug/L	0.0083 umole/g

[1] Maximum concentration present in a preparation blank affecting samples in preparation batch 0242192.
[2] Maximum concentration present in a continuing calibration blank affecting all samples analyzed for select metals.
[3] Maximum concentration present in a preparation blank affecting samples in preparation batch 0243148.
[4] Maximum concentration present in a continuing calibration blank affecting all samples analyzed for SEM metals.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for were qualified "B" as a result of laboratory blank contamination.

- The serial dilution for sample SD-102-SS had a percent difference > 10% for antimony, beryllium, and silver. Samples in preparation batch 0242192 were affected. Positive results were qualified as estimated (J).

- The matrix spike and matrix spike duplicate for sample SD-92-SS had a percent recovery <75% for antimony and a percent recovery >125% for lead. Samples in preparation batch 0242185 were affected. Positive results for antimony were qualified as biased low (L) and estimated (J) due to conflicting directional bias. Positive results for lead were qualified as biased high (K) and estimated (J) due to conflicting directional bias.

- The matrix spike and matrix spike duplicate for sample SD-102-SS had a percent recovery <75% for antimony and a percent recovery >125% for chromium. Samples in preparation batch 0242192 were affected. Positive results for antimony were qualified estimated (J) due to conflicting directional bias. Positive results for chromium were qualified as biased high (K) and estimated (J) due to conflicting directional bias.

- The following samples had percent solid recoveries <30%: SD-101-SS, SD-102-SS, SD-105-SS, and SD-95-SS. Positive results were qualified as estimated (J).

- Sample SD-103-02 had percent recovery >120% for internal standards terbium (MW 159) and holmium (MW 165). Positive results for thallium and lead were qualified as estimated (J). Positive results for antimony were not qualified as sample results were previously qualified due to blank contamination.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	GFAA PDS - GFAA MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (e.g. base-line drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	% Difference between columns/detectors >25% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H190588

Sample Receiving:
TestAmerica's Pittsburgh laboratory received one sample on August 19, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution. Several samples had the surorgates diluted out.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

PCBs:
There were no problems associated with the analysis.

Metals:
Several samples were over the instruments linear range for SEM zinc and required a dilution.

The serial dilution of sample SD-102-SS (total) was outside of the percent difference control limits for silver, beryllium, and antimony. The results were flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample SD-92-SS recovered outside of the control limits for antimony and lead.

The matrix spike and matrix spike duplicate of sample SD-102-SS recovered outside of the control limits for antimony.

Metals (cont):
The matrix spike of sample SS-102-SS recovered outside of the control limits for chromium and zinc.

For the matrix spike and matrix spike duplicate of sample SD-102-SS, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
There were no problems associated with the analysis.

METHODS SUMMARY

SAMPLE SUMMARY

C0H190588

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
L5VT0	037	SD-86-SS	08/18/10	15:20
L5VT1	038	SD-86-01	08/18/10	15:22
L5VT2	039	SD-86-02	08/18/10	15:24
L5VT3	040	SD-86-04	08/18/10	15:26

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Special Instructions/ Conditions of Receipt

Possible Hazard Identification
☒ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☐ Other STANDARD

QC Requirements (Specify)

	Date	Time
1. Relinquished By	8/18/10	1600
2. Relinquished By	8/19/10	1700
3. Relinquished By

Cooler Receipt Form

Client: Tetra Tech NUS Project: _____ Quote: 86823

Cooler Rec'd & Opened for Temp. Check on: 8/19/10

Coolers Opened and Unpacked on: 8/19/10 By: MF

(Signature)

TestAmerica Pittsburgh Lot Number: _____

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity 1 Location front			
	Were signatures and date correct?	✓		
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

CCV Std. ID#: WC 4325-10 Exp: 09/07/2010 True Value: 960

LCS 1 mL of 960 ppm (ID#: WC 4324-10)= 2.9944 umoles Range:_+/-15%
CCV 1 mL of 960 ppm (ID#: WC 4325-10)= 19.2 ppm Range:_+/-10%

Calculations:

$$\text{Sulfide mg/L} = \frac{[(\text{mL of Iodine} * \text{N Iodine}) - (\text{mL of } Na_2S_2O_3 \text{ X N } Na_2S_2O_3)] * 16000}{\text{mL of Sample}}$$

Iodine Standardization ID#: WC 3765-10

$$0.025 \quad \text{N Iodine} = \frac{(20 \text{ mL } Na_2S_2O_3)(0.025 \text{ N of } Na_2S_2O_3)}{20.0 \text{ mL of Iodine Solution}}$$

Relative Percent Difference:

X1 = Original Result
X2 = Duplicate

$$\left(\frac{X1 - X2}{\frac{X1 + X2}{2}} \right) \times 100$$

Sodium Thiosulfate Standardization

OVERVIEW

The sample set for Middle River Center, SDG C0H200635, consists of thirty (30) sediment environmental samples. There are two (2) field duplicate pairs associated with this SDG: SD-100-02 (original) / SD-DUP4-02 (duplicate) and SD-96-01 (original) / SD-DUP5-01 (duplicate).

Samples were analyzed for polycyclic aromatic hydrocarbons (PAH) and polychlorinated biphenyls (PCB). The samples were collected by Tetra Tech NUS on August 18 and 19, 2010 and analyzed by TestAmerica Laboratories, Inc. All analyses were conducted in accordance with SW-846 Methods 8270C and 8082 analysis and reporting protocols.

The data in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method/field blank results, surrogate spike recovery, internal standard recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, field duplicate results, compound identification, compound quantitation, and detection limits. Problems affecting data quality are discussed below; documentation supporting these findings is presented in Appendix C. Qualified Analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Major

- None.

Minor

- Samples SD-89-SS and SD-96-SS contained less than 70% solids. Positive and non-detected PAH and PCB results were qualified as estimated (J) in samples SD-89-SS and SD-96-SS in on this basis.

- Positive PAH results less than the reporting limit but greater than the method detection limit were qualified as estimated (J) due to uncertainty near the detection limit.

- Sample SD-98-SS had a relative percent difference (RPD) between columns that exceeded the quality control limit of 25% (but was less than 100%) for Aroclor-1260. The positive result for Aroclor-1260 in sample SD-98-SS was qualified as estimated on this basis.

- Positive PCB results less than the reporting limit but greater than the method detection limit were qualified as estimated (J) due to uncertainty near the detection limit.

Notes

All non-detected results were reported to method detection limits.

All PAH results in the following samples were reported from dilutions:

Sample	Dilution Factor
SD-100-SS	2.47
SD-98-04	2.47
SD-100-01	2.5
SD-89-04	2.5
SD-99-04	2.5

SD-DUP4-02	5
SD-DUP5-01	5

The PAH surrogate recovery for nitrobenzene-d5 for sample SD-100-04 was greater than the laboratory quality control range. No action was necessary because only one surrogate was outside of the quality control range.

All PCB results in the following samples were reported from dilutions:

Sample	Dilution Factor
SD-100-01	0.49
SD-100-02	0.5
SD-100-04	0.49
SD-100-SS	0.5
SD-106-01	0.5

SD-99-04	0.5
SD-99-SS	0.49
SD-DUP4-02	0.5
SD-DUP5-01	0.5

The percent difference between columns exceeded 25% for Aroclor-1260 in sample SD-96-SS. No action was taken because the RPD was less than 25%.

EXECUTIVE SUMMARY

Laboratory Performance Issues: One positive PCB result was qualified due to RPD between columns.

Other Factors Affecting Data Quality: Two samples contained less than 30% solids. Some positive PAH and PCB results were qualified due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to the "Region III Modifications to the National Functional Guidelines for Organic Data Review" (09/94). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
DoD ELAP	ADE-1442	WW HW	X
US Dept of Agriculture	(#P330-10-00139)	Foreign Soil Import Permit	X
Arkansas	(#88-0690)	WW HW	X X
California – NELAC	04224CA	WW HW	X X
Connecticut	(#PH-0688)	WW HW	X X
Florida – NELAC	(#E871008)	WW HW	X X
Illinois – NELAC	(#002319)	WW HW	X X
Kansas – NELAC	(#E-10350)	WW HW	X X
Louisiana – NELAC	(#04041)	WW HW	X X
New Hampshire – NELAC	(#203010)	WW --	X --
New Jersey – NELAC	(PA-005)	WW HW	X X
New York – NELAC	(#11182)	WW HW	X X
North Carolina	(#434)	WW HW	X X
Pennsylvania - NELAC	(#02-00416)	WW HW	X X
South Carolina	(#89014002)	WW HW	X X
Utah – NELAC	(STLP)	WW HW	X X
West Virginia	(#142)	WW HW	X X
Wisconsin	998027800	WW HW	X X

The codes utilized for program types are described below:

HW Hazardous Waste certification
WW Non-potable Water and/or Wastewater certification
X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H200635

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 20, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

Several samples were analyzed at a dilution due to matrix interference and/or concentration of compounds detected.

Sample SD-100-01 had nitrobenzene-d5 surrogate recover above the control limit.

PCBs:
There were no problems associated with the analysis.

Metals:
The serial dilution percent difference was outside the control limit for cadmium, and antimony for sample SD-106-SS.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spikes of sample SD-106-SS recovered below the control limit for antimony, arsenic, beryllium, copper, and selenium. The matrix spike duplicate recovered below the control limit for cadmium, chromium, nickel, silver and zinc.

For the matrix spikes of sample SD-106-SS, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H200635

Metals (cont):
For the matrix spikes of sample SD-88-04, arsenic, lead, thallium, and zinc recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

The matrix spikes of sample SD-88-04 recovered below the control limit for antimony, cadmium, copper, nickel and selenium.

General Chemistry:
There were no problems associated with the analysis.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Cooler Receipt Form

Client: Tetra Tech Project: _____ Quote: 86823

Cooler Rec'd & Opened for Temp. Check on: 8/20/10

Coolers Opened and Unpacked on: 8/20/10 By: RLF (Signature)

TestAmerica Pittsburgh Lot Number: COH200635

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity 1 Location front			
	Were signatures and date correct?	✓		
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?		✓	
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: FEDEX UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic valueof the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

SURROGATE	PERCENT RECOVERY	RECOVERY LIMITS
Tetrachloro-m-xylene	104	(35 - 140)
Decachlorobiphenyl	105	(35 - 140)

NOTE(S):

Results and reporting limits have been adjusted for dry weight.

Response / RRF = on-col (ng) × $\frac{\text{Final Volume (uL)}}{\text{sample weight (g)}}$

Peak 1 = $\frac{6408844}{1750342}$ = 3.66148 ✓ × $\frac{10,000}{15.3}$ = ~~3782.63~~ = ~~1580~~ 2393

Peak 2 = $\frac{2744505}{1417188}$ = 1.93658 ✓ × $\frac{10,000}{15.3}$ = ~~2000.68~~ = 1266

Peak 3 = $\frac{4060236}{1121377}$ = 3.62076 ✓ × $\frac{10,000}{15.3}$ = ~~3740.6~~ = 2367

Peak 4 = $\frac{3001607}{1049784}$ = 2.85942 ✓ × $\frac{10,000}{15.3}$ = ~~2954.07~~ = 1869

Peak 5 = $\frac{9067919}{2550769}$ = 3.55497 ✓ × $\frac{10,000}{15.3}$ = ~~3672.64~~ = 2324

Sum = ~~16150.67~~ 10219

Average = ~~4037.67~~ 2043.8 ✓

2043.8 / (0.31 (% solids)) = 6593 ✓

Overview

The sample set for Middle River Complex, SDG C0H200635, consists of thirty (30) sediment environmental samples. This SDG contained two field duplicate pairs: SD-DUP4-02/SD-100-02 and SD-DUP5-01/SD-96-01.

All samples were analyzed for select metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium, and zinc. Samples SD-88-01, SD-88-02, SD-88-04, SD-88-SS, SD-89-01, SD-89-02, SD-89-04, SD-89-SS, SD-99-01, SD-99-02, SD-99-04, and SD-99-SS were analyzed for acid volatile sulfides (AVS) and simultaneously extracted metals (SEM) cadmium, chromium, copper, lead, nickel, silver, and zinc. Samples SD-88-01, SD-88-02, SD-88-SS, SD-89-01 SD-89-02, SD-89-SS, SD-99-01, SD-99-02, and SD-99-SS were analyzed for total organic carbons (TOC). The samples were collected by Tetra Tech NUS on August 18th and 19th, 2010 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7471A. AVS/SEM analyses were conducted using method EPA AVS/SEM. TOC analyses were conducted using method EPA Llyod Kahn.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, ICPMS tune recoveries, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP internal standard recoveries, ICP interference results, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems-

- The following contaminants were detected in blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Zinc [1]	0.0068 umole/g	0.034 umole/L
Chromium [2]	0.016 mg/kg	0.08 mg/kg
Chromium [3]	0.026 mg/kg	0.13 mg/kg
Antimony [4]	0.00027 mg/L	0.067 mg/kg
Thallium [4]	0.00008 mg/L	0.02 mg/kg
Cadmium [5]	0.2 ug/L	0.000044 umole/L
Zinc [5]	16.1 ug/L	0.0012 umole/L

[1] Maximum concentration present in a preparation blank affecting samples in preparation batch 0244083.
[2] Maximum concentration present in a preparation blank affecting samples in preparation batch 0244130.
[3] Maximum concentration present in a preparation blank affecting samples in preparation batch 0244174.
[4] Maximum concentration present in a continuing calibration blank affecting all samples analyzed for select metals.
[5] Maximum concentration present in a continuing calibration blank affecting all samples analyzed for SEM metals.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for were qualified "B" as a result of laboratory blank contamination.

- The CRDL standard analyzed on 9/2/10 had a percent recovery >110% for arsenic, thallium, and zinc. All samples analyzed on 9/2/10 were affected. Positive results <2X CRDL for thallium were qualified as estimated (K) and estimated (J) due to conflicting directional bias.

- The serial dilution for sample SD-106-SS had a percent difference > 10% for antimony and cadmium. Samples in preparation batch 0244130 were affected. Positive results were qualified as estimated (J).

- The matrix spike and matrix spike duplicate for sample SD-106-SS had a percent recovery <75% for antimony, arsenic, beryllium, cadmium, chromium, copper, nickel, selenium, silver, and zinc. Samples in preparation batch 0244130 were affected. Positive results for antimony arsenic, beryllium, cadmium, chromium, copper, nickel, selenium, silver, and zinc were qualified as biased low (L) and estimated (J) due to conflicting directional bias.

- The matrix spike and matrix spike duplicate for sample SD-88-04 had a percent recovery <75% for antimony and copper and a percent recovery <30% for cadmium, nickel, and selenium. Samples in preparation batch 0244174 were affected. Positive results for antimony, copper, cadmium, nickel, and selenium were qualified as biased low (L) and estimated (J) due to conflicting directional bias.

- The following samples had percent solid recoveries <30%: SD-96-SS and SD-89-SS. Positive results were qualified as estimated (J).

- The field duplicate pair SD-DUP4-02/SD-100-02 had a relative percent difference >50% for copper. Only the field duplicate pair were qualified as the other field duplicate pair was within quality control limits. Positive results were qualified as estimated (J).

Notes

Positive results greater than the method detection limit but less than the reporting limit were qualified as estimated (J).

Sample SD-88-04 was analyzed at a 5X dilution for zinc.

The SEM CRDL standard analyzed on 9/2/10 had a percent recovery <90% for lead and >110% for zinc. All samples analyzed on 9/2/10 were affected. All sample results were greater than 2X CRDL therefore no sample results were qualified.

Executive Summary

Laboratory Performance: Preparation and calibration blanks resulted in the qualification on several samples. CRDL standard non-compliances resulted in the qualification of data.

Other Factors Affecting Data Quality: Serial dilution non-compliances for antimony and cadmium resulted in the qualification of sample results. Several matrix spike non-compliances resulted in the qualification of sample results. Samples SD-96-SS and SD-89-SS had a percent solid recovery < 30% and all sample results were qualified. Field duplicate noncompliance for copper resulted in the qualification of sample results.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993. The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	GFAA PDS - GFAA MSA's $r < 0.995$
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (e.g. base-line drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	% Difference between columns/detectors >25% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient $r < 0.995$
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H200635

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 20, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

Several samples were analyzed at a dilution due to matrix interference and/or concentration of compounds detected.

Sample SD-100-01 had nitrobenzene-d5 surrogate recover above the control limit.

PCBs:
There were no problems associated with the analysis.

Metals:
The serial dilution percent difference was outside the control limit for cadmium, and antimony for sample SD-106-SS.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spikes of sample SD-106-SS recovered below the control limit for antimony, arsenic, beryllium, copper, and selenium. The matrix spike duplicate recovered below the control limit for cadmium, chromium, nickel, silver and zinc.

For the matrix spikes of sample SD-106-SS, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H200635

Metals (cont):
For the matrix spikes of sample SD-88-04, arsenic, lead, thallium, and zinc recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

The matrix spikes of sample SD-88-04 recovered below the control limit for antimony, cadmium, copper, nickel and selenium.

General Chemistry:
There were no problems associated with the analysis.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Possible Hazard Identification
☒ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☐ Other Standard

QC Requirements (Specify)

1. Relinquished By	Date: 8/19/10	Time: 1530	1. Received By: Paul Hufford	Date: 8/19/10	Time: 1530
2. Relinquished By: Paul Hufford	Date: 8/19/10	Time: 1620	2. Received By	Date:	Time:
3. Relinquished By	Date:	Time:	3. Received By	Date: 8/20/10	Time: 1033

Comments

DISTRIBUTION: WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

TestAmerica Pittsburgh

Cooler Receipt Form

Client: Tetra Tech Project: _____ Quote: 86823

Cooler Rec'd & Opened for Temp. Check on: 8/20/10

Coolers Opened and Unpacked on: 8/20/10 By: RLF (Signature)

TestAmerica Pittsburgh Lot Number: C0H200635

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	/		
	If YES, how many and where? Quantity 1 Location front			
	Were signatures and date correct?	/		
2.	Were custody papers included inside the cooler?	/		
3.	Were custody papers properly filled out (ink, signed, match labels)?	/		
4.	Did you sign the custody papers in the appropriate place?	/		
5.	Was shippers packing slip attached to this form?	/		
6.	Were packing materials used?	/		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	/		
8.	Were the samples appropriately preserved?			/
9.	Were all bottles sealed in separate plastic bags?		/	
10.	Did all bottles arrive in good condition (unbroken)?	/		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	/		
12.	Did all bottle labels and/or tags agree with custody papers?	/		
13.	Were correct bottles used for tests indicated?	/		/
14.	Were all VOA vials checked for the presence of air bubbles?		/	/
15.	Was a sufficient amount of sample sent in each bottle?	/		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

Possible Hazard Identification
☒ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☐ Other Standard

QC Requirements (Specify)

1. Relinquished By	Date: 8/19/10	Time: 1530	1. Received By	Date: 8/19/10	Time: 1530
2. Relinquished By: Paul Hayford	Date: 8/19/10	Time: 1620	2. Received By	Date:	Time:
3. Relinquished By	Date:	Time:	3. Received By	Date: 8/20/10	Time: 1000

Comments

DISTRIBUTION: WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

Overview

The sample set for Middle River Center, SDG C0H210447, consists of fifteen (15) environmental sediment samples. The samples were analyzed for polycyclic aromatic hydrocarbons (PAH) and polychlorinated biphenyls (PCBs). There are no field duplicate pairs contained within this SDG.

The samples were collected on August 19 and 20, 2010 and analyzed by Test America. PAH analyses were conducted in accordance with SW-846 Method 8270C and PCBs Method 8082 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial and continuing calibration results, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, matrix spike/ matrix spike duplicate recoveries, laboratory control standard recoveries, detection limits, compound quantitation and compound identification. Areas of concern with respect to data quality are listed below.

Major- None.

Minor

- The percent solids was less than 30% in sample Middle River Downstream SS. Positive and nondetected results were qualified as estimated (J) and (UJ), respectively.

Notes

The percent recovery of surrogate tetra-chloro-m-xylene was greater than the upper quality control limit in sample SD-83-02. No action was taken on the nondetected PCB results in sample SD-83-02.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: The percent solids was less than 30% in sample Middle River Downstream SS.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Appendix C

Support Documentation

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H210447

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 21, 2010. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

Several samples were analyzed at a dilution due to matrix interference and/or concentration of compounds detected.

Several samples had the surrogates diluted out.

PCBs:
Sample SD-83-02 had the surrogate recovery of tetrachloro-m-xylene recover above the control limit. The recovery of decachlorobiphenyl was within the control limits.

Metals:
The serial dilution percent difference was outside the control limit for SEM chromium, cadmium, nickel, lead, and zinc for sample SD-85-SS.

Sample SD-84-SS was over the instrument's linear range for lead and antimony, and required dilution.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spikes of sample SD-85-SS recovered below the control limit for arsenic, cadmium, copper, zinc and selenium. The matrix spike duplicate recovered below the control limit for antimony, and nickel. The RPD for antimony and nickel was above the control limit.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H210447

Metals (cont.):
For the matrix spikes of sample SD-85-SS, chromium and lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
The RPD for the duplicate analysis was above the control limit for TOC.

Samples SD-84-SS and MIDDLE RIVER DOWNSTREAM SS were originally analyzed within the holding time for TOC but the analytical run was not valid. The samples were re-analyzed outside of holding time.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

FORM 5
SEMIVOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.:

Lab File ID: V0604DF1 DFTPP Injection Date: 06/04/10

Instrument ID: 731 DFTPP Injection Time: 0711

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	37.5
68	Less than 2.0% of mass 69	0.6 (1.3)1
69	Mass 69 relative abundance	42.9
70	Less than 2.0% of mass 69	0.0 (0.0)1
127	40.0 - 60.0% of mass 198	40.6
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.1
275	10.0 - 30.0% of mass 198	24.3
365	Greater than 1.0% of mass 198	2.64
441	Present, but less than mass 443	7.9
442	40.0 - 99.0% of mass 198	54.0
443	17.0 - 23.0% of mass 442	9.8 (18.1)2

1-Value is % mass 69 2-Value is % mass 442

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

FORM 5
SEMIVOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.:

Lab File ID: V0830DF1 DFTPP Injection Date: 08/30/10

Instrument ID: 731 DFTPP Injection Time: 1003

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	33.8
68	Less than 2.0% of mass 69	0.3 (0.6)1
69	Mass 69 relative abundance	45.9
70	Less than 2.0% of mass 69	0.5 (1.0)1
127	40.0 - 60.0% of mass 198	43.2
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.0
275	10.0 - 30.0% of mass 198	23.9
365	Greater than 1.0% of mass 198	2.43
441	Present, but less than mass 443	7.0
442	40.0 - 99.0% of mass 198	47.8
443	17.0 - 23.0% of mass 442	9.2 (19.2)2

1-Value is % mass 69 2-Value is % mass 442

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	59.5
68	Less than 2.0% of mass 69	0.5 (0.8)1
69	Mass 69 relative abundance	66.1
70	Less than 2.0% of mass 69	0.0 (0.0)1
127	40.0 - 60.0% of mass 198	52.2
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.4
275	10.0 - 30.0% of mass 198	24.6
365	Greater than 1.0% of mass 198	4.26
441	Present, but less than mass 443	7.5
442	40.0 - 99.0% of mass 198	56.5
443	17.0 - 23.0% of mass 442	11.8 (20.9)2

1-Value is % mass 69 2-Value is % mass 442

METHOD BLANK REPORT

GC/MS Semivolatiles

Client Lot #...: C0H210447 **Work Order #...:** L53AP1AA **Matrix.....:** SOLID
MB Lot-Sample #: C0H240000-295

Prep Date.....: 08/24/10 **Analysis Time..:** 11:04
Analysis Date..: 08/27/10 **Prep Batch #...:** 0236295 **Final Wgt/Vol..:** 0.5 mL
Dilution Factor: 0.5 **Initial Wgt/Vol:** 30 g **Instrument ID..:** 731
Analyst ID.....: 003200

PARAMETER	RESULT	REPORTING LIMIT	UNITS	METHOD
Naphthalene	ND	3.4	ug/kg	SW846 8270C
Acenaphthylene	ND	3.4	ug/kg	SW846 8270C
Acenaphthene	ND	3.4	ug/kg	SW846 8270C
Fluorene	ND	3.4	ug/kg	SW846 8270C
Phenanthrene	ND	3.4	ug/kg	SW846 8270C
Anthracene	ND	3.4	ug/kg	SW846 8270C
Fluoranthene	ND	3.4	ug/kg	SW846 8270C
Pyrene	ND	3.4	ug/kg	SW846 8270C
Benzo(a)anthracene	ND	3.4	ug/kg	SW846 8270C
Chrysene	ND	3.4	ug/kg	SW846 8270C
Benzo(b)fluoranthene	ND	3.4	ug/kg	SW846 8270C
Benzo(k)fluoranthene	ND	3.4	ug/kg	SW846 8270C
Benzo(a)pyrene	ND	3.4	ug/kg	SW846 8270C
Indeno(1,2,3-cd)pyrene	ND	3.4	ug/kg	SW846 8270C
Dibenzo(a,h)anthracene	ND	3.4	ug/kg	SW846 8270C
Benzo(ghi)perylene	ND	3.4	ug/kg	SW846 8270C

SURROGATE	PERCENT RECOVERY	RECOVERY LIMITS
Nitrobenzene-d5	87	(27 - 110)
Terphenyl-d14	102	(21 - 130)
2-Fluorobiphenyl	79	(28 - 108)
2-Fluorophenol	81	(28 - 107)
Phenol-d5	88	(30 - 112)
2,4,6-Tribromophenol	78	(21 - 116)

NOTE(S):

Calculations are performed before rounding to avoid round-off errors in calculated results.

FORM 5
SEMIVOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.:

Lab File ID: V0831DF1 DFTPP Injection Date: 08/31/10

Instrument ID: 731 DFTPP Injection Time: 1055

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	34.7
68	Less than 2.0% of mass 69	0.0 (0.0)1
69	Mass 69 relative abundance	45.3
70	Less than 2.0% of mass 69	0.3 (0.6)1
127	40.0 - 60.0% of mass 198	42.3
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	6.9
275	10.0 - 30.0% of mass 198	23.1
365	Greater than 1.0% of mass 198	2.50
441	Present, but less than mass 443	6.6
442	40.0 - 99.0% of mass 198	44.7
443	17.0 - 23.0% of mass 442	8.9 (19.9)2

1-Value is % mass 69 2-Value is % mass 442

SD-85-SS	

Overview

The sample set for Middle River Center, SDG C0H210447, consists of fifteen (15) sediment environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for select total metals including antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium and zinc. Samples SD-85-01, SD-85-02, SD-85-04 and SD-85-SS were also analyzed for acid volatile sulfide and simultaneously extracted metals. All samples with the exception of SD-85-04 were also analyzed for total organic carbon. The samples were collected by Tetra Tech NUS on August 19 and 20, 2010 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7471A. Simultaneously extracted metals analyses were conducted using EPA method SEM. Acid volatile sulfide analyses were conducted using EPA method AVS. Total organic carbon analyses were conducted using the Lloyd Kahn method.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample / laboratory control sample duplicate recoveries, matrix spike / matrix spike duplicate recoveries, internal standards, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems

- The 14 day hold time for the total organic carbon analyses was exceeded by 5 days for samples SD-84-SS and MIDDLE RIVER DOWNSTREAM SS. The positive result reported for sample SD-84-SS was qualified as biased low, "L". The positive result reported for MIDDLE RIVER DOWNSTREAM SS was qualified as estimated, "J", as a result of conflicting noncompliances.

- The contract required detection limit (CRDL) percent recovery for zinc was > 110% quality control limit affecting the SEM analyses. Positive results < 2X CRDL were qualified as estimated "J", as a result of conflicting noncompliances.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Affecting total metals analysis

Analyte	Maximum Concentration	Action Level
Antimony[2]	0.00086 mg/L	0.215 mg/kg
Antimony[3]	0.00026 mg/L	0.065 mg/kg
Chromium[4]	0.0082 mg/kg	0.041 mg/kg
Lead[1]	0.00093 mg/L	0.2325 mg/kg
Thallium	0.00003 mg/L	0.0075 mg/kg

Affecting SEM analysis

Analyte	Maximum Concentration	Action Level
Zinc[4]	0.0068 umoles/gm	0.034 umoles/gm

(1) Maximum concentration present in a method blank affecting all samples except SD-84-SS.
(2) Maximum concentration present in a method blank affecting all samples except SD-84-SS, SD-84-01 and SD-84-02.
(3) Maximum concentration present in a method blank affecting samples SD-84-SS, SD-84-01 and SD-84-02.
(4) Maximum concentration present in a preparation blank.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for antimony were qualified "B" as a result of laboratory blank contamination.

- The matrix spike and/or matrix spike duplicate percent recoveries for antimony, arsenic, copper, nickel and selenium were < 75% quality control limit affecting the total metals analysis. The matrix spike / matrix spike duplicate percent recoveries for cadmium and zinc were < 10% quality control limit affecting the total metals analysis. The positive results reported for the aforementioned analytes were qualified as either biased low, "L" or estimated, "J", as a result of conflicting noncompliances.

- The ICP serial dilution percent differences were > 10% quality control limit (sample result > 50X IDL) for cadmium, chromium, lead, nickel and zinc affecting the SEM analysis. The positive results reported for the aforementioned analytes were qualified as estimated, "J", as a result of conflicting noncompliances.

- The internal standard recoveries for Scandium-45 and Rhodium-103 were below the 60% quality control limit for sample SD-84-SS. The positive results reported for beryllium, nickel, copper, zinc, arsenic, selenium, silver and cadmium in the affected sample were qualified as biased low, "L".

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated, "J".

- The percent solids for sample MIDDLE RIVER DOWNSTREAM SS was < 30%. The positive results reported for the aforementioned sample were qualified as estimated, "J".

Notes

The CRDL percent recovery for zinc was > 110% quality control limit affecting the total metals analysis. No validation actions were required as all results were > 2X CRDL.

The CRDL percent recovery for lead was < 90% quality control limit affecting the SEM analysis. No validation actions were required as all results were > 2X CRDL.

Executive Summary

Laboratory Performance: The 14 day hold time for the total organic carbon analyses was exceeded by 5 days for samples SD-84-SS and MIDDLE RIVER DOWNSTREAM SS. The CRDL percent recovery for zinc was > 110% quality control limit affecting the SEM analyses. Several analytes were present in the laboratory method / preparation blanks.

Other Factors Affecting Data Quality: The matrix spike and/or matrix spike duplicate percent recoveries for antimony, arsenic, copper, nickel and selenium were < 75% quality control limit and the matrix spike / matrix spike duplicate percent recoveries for cadmium and zinc were < 10% quality control limit affecting the total metals analysis. The ICP serial dilution percent differences were > 10% quality control limit for cadmium, chromium, lead, nickel and zinc affecting the SEM analysis. Positive results reported below the RL but above the MDL were qualified as estimated. The percent solids for sample MIDDLE RIVER DOWNSTREAM SS was < 30%.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O - Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DOT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H210447

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 21, 2010. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

Several samples were analyzed at a dilution due to matrix interference and/or concentration of compounds detected.

Several samples had the surrogates diluted out.

PCBs:
Sample SD-83-02 had the surrogate recovery of tetrachloro-m-xylene recover above the control limit. The recovery of decachlorobiphenyl was within the control limits.

Metals:
The serial dilution percent difference was outside the control limit for SEM chromium, cadmium, nickel, lead, and zinc for sample SD-85-SS.

Sample SD-84-SS was over the instrument's linear range for lead and antimony, and required dilution.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spikes of sample SD-85-SS recovered below the control limit for arsenic, cadmium, copper, zinc and selenium. The matrix spike duplicate recovered below the control limit for antimony, and nickel. The RPD for antimony and nickel was above the control limit.

Metals (cont.):
For the matrix spikes of sample SD-85-SS, chromium and lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
The RPD for the duplicate analysis was above the control limit for TOC.

Samples SD-84-SS and MIDDLE RIVER DOWNSTREAM SS were originally analyzed within the holding time for TOC but the analytical run was not valid. The samples were re-analyzed outside of holding time.

METHODS SUMMARY

C0H210447

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SUBJECT: **ORGANIC DATA VALIDATION- PAH/PCBs**
MIDDLE RIVER CENTER
FULL REVIEW
SAMPLE DELIVERY GROUP (SDG) - C0H250417

SAMPLES: 8/Sediment/PAH/PCB

Bowleys Quarters-01	Bowleys Quarters-02	Bowleys Quarter-04
Bowleys Quarter-SS	Marshy Point-01	Marshy Point-02
Marshy Point-04	Marshy Point-SS	

Overview

The sample set for Middle River Center, SDG C0H250417, consists of eight (8) environmental sediment samples. The samples were analyzed for polycyclic aromatic hydrocarbons (PAH) and polychlorinated biphenyls (PCBs).

The samples were collected on August 21, 2010 and analyzed by Test America. PAH analyses were conducted in accordance with SW-846 Method 8270C and PCBs Method 8082 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial and continuing calibration results, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, matrix spike/ matrix spike duplicate recoveries, laboratory control standard recoveries, detection limits, compound quantitation and compound identification. Areas of concern with respect to data quality are listed below.

Major- None.

Minor

- The percent solids were less than 30% in samples Bowleys Quarter-SS and Marshy Point-SS. Positive and nondetected results were qualified as estimated (J) and (UJ), respectively.

Notes

The continuing calibration percent difference for indeno(1,2,3-cd)pyrene and dibenzo(a,h)anthracene were greater than the 20% quality control limit but less than 50% on August 27, 2010 @ 5:56. No action was taken on the nondetected indeno(1,2,3-cd)pyrene and dibenzo(a,h)anthracene results.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: The percent solids were less than 30% in samples Bowleys Quarter-SS and Marshy Point-SS.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Appendix C

Support Documentation

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H250417

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 24, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

PCBs:
There were no problems associated with the analysis.

Metals:
Several samples were over the instruments linear range for SEM zinc and required a dilution.

The serial dilution of sample SD-102-SS (total) was outside of the percent difference control limits for silver, beryllium, and antimony. The results were flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample SD-92-SS recovered outside of the control limits for antimony and lead.

The matrix spike and matrix spike duplicate of sample SD-102-SS recovered outside of the control limits for antimony.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H250417

Metals (cont):
The matrix spike of sample SS-102-SS recovered outside of the control limits for chromium and zinc.

For the matrix spike and matrix spike duplicate of sample SD-102-SS, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
There were no problems associated with the analysis.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SEMIVOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.:

Lab File ID: F0813DF1 DFTPP Injection Date: 08/13/10

Instrument ID: 722 DFTPP Injection Time: 0531

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	38.2
68	Less than 2.0% of mass 69	0.0 (0.0)1
69	Mass 69 relative abundance	54.6
70	Less than 2.0% of mass 69	0.0 (0.0)1
127	40.0 - 60.0% of mass 198	56.5
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.6
275	10.0 - 30.0% of mass 198	23.6
365	Greater than 1.0% of mass 198	2.76
441	Present, but less than mass 443	8.3
442	40.0 - 100.0% of mass 198	48.5
443	17.0 - 23.0% of mass 442	10.0 (20.7)2

1-Value is % mass 69 2-Value is % mass 442

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	42.7
68	Less than 2.0% of mass 69	0.0 (0.0)1
69	Mass 69 relative abundance	58.9
70	Less than 2.0% of mass 69	0.0 (0.0)1
127	40.0 - 60.0% of mass 198	56.2
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.4
275	10.0 - 30.0% of mass 198	23.1
365	Greater than 1.0% of mass 198	2.71
441	Present, but less than mass 443	7.6
442	40.0 - 100.0% of mass 198	44.3
443	17.0 - 23.0% of mass 442	9.0 (20.4)2

1-Value is % mass 69 2-Value is % mass 442

MARSHY POINT-04	MARSHY POINT-SS

Overview

The sample set for Middle River Complex, SDG C0H250417, consists of eight (8) sediment environmental samples. This SDG contained one field duplicate pair: DHC-SW-VOC-DUP.

All sample were analyzed for select metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium, and zinc. Samples BOWLEYS QUARTERS-SS MARSHY POINT-SS were analyzed for total organic carbon (TOC). The samples were collected by Tetra Tech NUS on August 21st, 2010 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7471ATOC analyses were conducted using method EPA Llyod Kahn.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems-

- The following samples had percent solid <30%: BOWLEYS QUARTERS-SS and MARSHY POINT-SS. Positive results were qualified as estimated (J).

Notes

Positive results greater than the method detection limit but less than the reporting limit were qualified as estimated (J).

The following contaminants were detected in blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony [1]	0.0038 mg/kg	0.019 mg/kg
Chromium [1]	0.036 mg/kg	0.18 mg/kg
Lead [1]	0.0078 mg/kg	0.039 mg/kg
Arsenic [2]	0.00022 mg/L	0.055 mg/kg
Selenium [2]	0.00078 mg/L	0.195 mg/kg
Thallium [2]	0.00004 mg/L	0.01 mg/kg

[1] Maximum concentration present in a preparation blank affecting samples in preparation batch 0245104.
[2] Maximum concentration present in a continuing calibration blank affecting all samples analyzed for select metals.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was warranted as sample results were all greater than the blank action levels.

The CRDL standard analyzed on 9/5/10 had a percent recovery >110% for arsenic. All samples were affected. All sample results were greater than 2X CRDL therefore no sample results were qualified.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: Percent soild results for samples BOWLEYS QUARTERS-SS and MARSHY POINT-SS were <30% and resulted in qualification of all sample results.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993. The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	GFAA PDS - GFAA MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (e.g. base-line drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	% Difference between columns/detectors >25% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0H250417

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 24, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

PCBs:
There were no problems associated with the analysis.

Metals:
Several samples were over the instruments linear range for SEM zinc and required a dilution.

The serial dilution of sample SD-102-SS (total) was outside of the percent difference control limits for silver, beryllium, and antimony. The results were flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample SD-92-SS recovered outside of the control limits for antimony and lead.

The matrix spike and matrix spike duplicate of sample SD-102-SS recovered outside of the control limits for antimony.

Metals (cont):
The matrix spike of sample SS-102-SS recovered outside of the control limits for chromium and zinc.

For the matrix spike and matrix spike duplicate of sample SD-102-SS, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
There were no problems associated with the analysis.

METHODS SUMMARY

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Possible Hazard Identification
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☐ Other _____

QC Requirements (Specify)

1. Relinquished By	Date: 8/23/10	Time: 1530	1. Received By	Date: 8/23/10	Time: 1530
2. Relinquished By	Date: 8/23/10	Time: 1630	2. Received By	Date:	Time:
3. Relinquished By	Date:	Time:	3. Received By	Date: 8/24/10	Time: 1015

Comments

DISTRIBUTION: WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

L6FJV C			
			9.2.10 CH

SAMPLE CODING: B-Blank C-Check L-Check Duplicate S-Matrix Spike D-Matrix Spike Duplicate X-Sample Duplicate

NOTE: Samples marked with an asterisk (*) required filtration after digestion and prior to analysis
Samples marked with a plus sign (+) required additional Conc.HNO3 in digestion process, brown fumes were observed

Hot Plate/Block Temp	Correction Factor
#10 194°C	±0.0°C

Reagents:
5 ml Optima Conc HNO3, 6901 J08N59, JT Baker
10 ml 1:1 Optima HNO3, MET 4487-10, Stds. Log
10ml Opt. Conc. HCl, V078 J02N57, Mallinckrodt
10 ml 30% H2O2, 3408 H47A18, Mallinckrodt

Minimum digestion times have been met (analyst initials): CH

MIDDLE RIVER CENTER
FULL REVIEW
SAMPLE DELIVERY GROUP (SDG) - C0I020508

SAMPLES: 1/Pore Water/VOC

PW-01 Composite

10/Pore Water/PAH/PCB

PW-03 0-6"	PW-03 18-30"	PW-03 6-18"	PW-04 0-6"	PW-04 18-30"
PW-04 6-18"	PW-05 0-6"	PW-05 18-30"	PW-05 6-18"	Rinsate Blank

Overview

The sample set for Middle River Center, SDG C0I020508, consists of one (1) pore water environmental sample analyzed for volatile organic compounds (VOC). Ten (10) environmental pore water samples were analyzed for polycyclic aromatic hydrocarbons (PAH), plus 1,4-dioxane, and polychlorinated biphenyls (PCBs). There are no field duplicate pairs contained within this SDG.

The samples were collected on August 22, 2010 and analyzed by Test America. VOC analysis followed SW-846 Method 8260B, PAH Method 8270C, and PCBs Method 8082 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial and continuing calibration results, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, matrix spike/ matrix spike duplicate recoveries, laboratory control standard recoveries, detection limits, compound quantitation and compound identification. Areas of concern with respect to data quality are listed below.

Major

- The initial calibration relative response factor (RRF) for tert-butyl alcohol on August 3, 2010 and continuing calibration on September 13, 2010 @ 11:23 on instrument A3UX16 was less than the 0.05 quality control limit. The nondetected tert-butyl alcohol result in sample PW-01 Composite was qualified as rejected (UR).

Minor

- The continuing calibration percent difference (%D) for bromomethane was greater than the 50% quality control limit on September 13, 2010 @ 11:23. The nondetected bromomethane result in sample PW-01 Composite was qualified as estimated (UJ).

- The continuing calibration %D for acetone was greater than the 25% quality control limit on September 13, 2010 @ 11:23. The positive acetone result in sample PW-01 Composite was qualified as estimated (J).

- The sampling date on the chain of custody (COC) does not match the sampling date on the form 1s. The samples were collected as sediments. The laboratory centrifuged the samples and analyzed the supernatant. The sampling date on the form 1s reflects the date samples were centrifuged. The samples were extracted outside of hold time for PAHs and PCBs. The VOC analysis took place outside of hold time. All sample positive and nondetected PAH and PCB results were qualified as estimated (J) and (UJ), respectively. VOC results were qualified as biased low (L) and (UL) because they were analyzed 22 days after collection.

Notes

The samples included in this SDG represent core samples collected on August 22, 2010. The core samples were separated into three incremental sections and centrifuged. Pore water from each section was analyzed by the laboratory for the fraction marked on the COC record.

The rinsate blank contained phenanthrene in the PAH fraction. No action was taken on the detection of this compound in the rinsate blank.

The percent recovery (%R) of surrogate nitrobenzene-d5 in sample PW-05 18-30" was less than the lower quality control limit but greater than 10%. No action was taken on this single surrogate %R noncompliance.

The laboratory did not calculate a relative percent difference (RPD) between columns for positive PCB sample results. The data reviewer calculated the RPDs and all of the RPDs were within acceptable criterion. A table listing the RPD for positive PCB detections is located in Appendix C.

VOC fraction analysis was not listed on the COC. The rinse blank was also not written on the COC. This item is noted for completeness.

The VOC method blank contained hexachlorobutadiene and 1,2,3-trichlorobenzene. No action was required because both analytes were non-detected in the environmental sample.

Executive Summary

Laboratory Performance: RRF for tert-butyl alcohol was less than the quality control limit resulting in the rejection of data. The continuing calibration %Ds for bromomethane and acetone exceeded quality control limits resulting in the qualification of data. All samples were qualified in every fraction due to hold time exceedances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can be any number of issues; e.g. poor chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Support Documentation

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0I020508

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on August 24, 2010. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
TestAmerica's North Canton laboratory performed the VOA analysis. All data is included in the package.

Due to the concentration of target compounds detected, PW-01 Composite was analyzed at a dilution.

The method blank had compounds detected below the reporting limit but above the MDL. The result was flagged with a "J" qualifier. Any sample associated with this blank that had the same compounds detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected and/or matrix, all samples were analyzed at a dilution.

Sample PW-05 18-30" had nitrobenzene-d5 surrogate recover below the control limit. The sample was analyzed at a dilution.

The RPD between the LCS and LCSD recovered above the control limit for 4-nitrophenol.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The continuing calibrations had the %D > 25% but were within expected performance range for these compounds.

PCBs:
There were no problems associated with the analysis.

CASE NARRATIVE
TETRA TECH NUS, INC.
Middle River, MD

Lot #: C0I020508

Metals:
The serial dilution percent difference was outside the control limits for antimony in sample PW-07 18-30".

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
pH is a field parameter. Laboratory pH analysis was completed at the request of the client.

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity 1 Location front			
	Were signatures and date correct?	✓		
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		
16.	Samples received by: FEDEX UPS CLIENT DROP-OFF OTHER DHL US CARGO

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

METHODS SUMMARY

C0I020508

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
pH Aqueous	SW846 9040	SW846 9040
Dissolved Organic Carbon 5310C	SM20 5310C	
ICP-MS (6020)	SW846 6020	SW846 3005A
Mercury in Liquid Waste (Manual Cold-Vapor)	SW846 7470A	SW846 7470A
PCBs by SW-846 8082	SW846 8082	SW846 3510C
Semivolatile Organics GCMS BNA 8270C	SW846 8270C	
Total Hardness	SM18 2340B	
Volatile Organics by GC/MS	SW846 8260B	SW846 5030B

VOLATILE ORGANIC GC/MS TUNING AND MASS CALIBRATION - BROMOFLUOROBENZENE (BFB)

Lab Name: NORTH CANTON Contract:

Lab Code: TALCAN Case No.: SAS No.: SDG No.: C0I020508

Lab File ID: BFB524 BFB Injection Date: 08/03/10

Instrument ID: A3UX16 BFB Injection Time: 1600

Matrix: (soil/water) WATER Level: (low/med) LOW Column: (pack/cap) CAP

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	16.0
75	30.0 - 60.0% of mass 95	45.8
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	6.9
173	Less than 2.0% of mass 174	0.0 (0.0)1
174	50.0 - 100.0% of mass 95	88.3
175	5.0 - 9.0% of mass 174	6.4 (7.3)1
176	Greater than 95.0%, but less than 101.0% of mass 174	85.7 (97.0)1
177	5.0 - 9.0% of mass 176	5.3 (6.2)2

1-Value is % of mass 174 2-Value is % of mass 176

THIS TUNE APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED
01	VSTD040	200NG-IC	UXM7963	08/03/10	1644

Data review checklist: 8260 A/8260B/624 Initial Calibration

Method (check the applicable box): ☒ 8260A ☒ 8260B ☐ 624

Analysis Date: 8.3.10 **Run batch ID:** N/A

Curve ID: M00803-IC.b **(curve ID must include instrument designation and date reference)**

Acceptance criteria is found in the applicable laboratory SOP. If item is N/A, mark as such in Notes column

Item for review	Level I Yes	Level I No	Level II Yes	Level II No
Tune:				
BFB passes, all points within 12 hr clock (24 hr for 624)	Yes		Yes	
All calibration points ID'd on Calibration Summary Form	Yes		Yes	
Documentation: Raw data and run logs present for all points	Yes		Yes	
Run log and Raw data clearly indicate method by version	Yes		Yes	
RLs: Minimum of 5 points, lowest standards at or below RL	Yes		Yes	
Linearity: 8260 CCCs ≤ 30% RSD	Yes		Yes	
Linear Regression curve fit for all >15% RSD (35% 624) r2>0.980 (r>0.990)	Yes		Yes	
Plots for all Linear Regressions printed	Yes		Yes	
Response: SPCCs all pass minimum response factors	Yes		Yes	
ICV- Second source standard Analytes 60-140% recovery, problem compounds may be allowed outside these limits, but must be evaluated (acrolein, acrylonitrile, 2-ceve, propionitrile, trans 1,4-dichloro-2-butene) Internal Standards 50-200% of recent curve	Yes		Yes	
Manual integrations: necessary, correct & documented	NA		NA	
Other: Verify Avg RF on Cal Summary matches Avg RF on Con Cal form	NA		NA	

Reviewed by Analyst/ Level I: Lary A. Wil Date: 8.4.10

Reviewed by Peer/Sup/ Level II: _____ Date: 8-5-10

By signing in "Reviewed by" above I agree that I have reviewed the data as indicated on this checklist.

*Peer/Sup only: In addition to the items above, all manual integrations in this package have been reviewed and found acceptable.

SW846 8260B METHOD BLANK SUMMARY

BLANK WORKORDER NO.: L6W2R1AA

Lab Name: TestAmerica Laboratories, Inc.

Lab Code: TALPIT — SDG Number:

Lab File ID: UXM8991.D — Lot Number: C0I020508

Date Analyzed: 09/13/10 — Time Analyzed: 12:51

Matrix: WATER — Date Extracted: 09/13/10

GC Column: DB624 ID: .18 — Extraction Method: 5030B

Instrument ID: UX16 — Level: (low/med) LOW

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, LCS, LCSD, MS , MSD:
