Section 1
Introduction

Tetra Tech, Inc. (Tetra Tech) has prepared this construction completion report on behalf of Lockheed Martin Corporation (Lockheed Martin) to document completion of the soil remedial action at Tax Block (Block) D in March 2016, at the Lockheed Martin Middle River Complex (MRC) in Middle River, Maryland (Figure 1-1). The location of Block D within the Middle River Complex is shown on Figure 1-2.

This report documents the successful execution of the soil remedial action in Block D and the achievement of the associated soil remedial action objective (RAO) (see Section 4.4). In accordance with Section VI of Administrative Consent Order and Settlement Agreement ACO-SAR-MDE0746-2015-1-01 entered into by Lockheed Martin Corporation and the Maryland Department of the Environment, this remedial action meets the requirements for a "No Further Action" letter or equivalent determination for Block D soil.

1.1 BACKGROUND

Block D consists of 12.78 acres in the southeastern portion of the Middle River Complex (MRC). This tax block has been divided conceptually into two areas for future remediation and redevelopment: the main parcel of Block D, and the Block D Panhandle (a narrow strip of land southeast of Block D). Block D consists primarily of an asphalt parking lot (designated parking lot No. 6) and a portion of the grassed waterfront lot between parking lot No. 6 and Dark Head Cove. Block D is bounded to the north by Dark Head Cove Road and Johnson & Towers, Inc., to the south by Dark Head Cove and the panhandle area, to the east by Wilson Point Road and Martin State Airport (MSA), and to the west by Chesapeake Park Plaza (county road), Block E (including the former site of Building D), and Block F. Parking lot No. 6 is surrounded on all sides by a chain-link fence. Locked gates along Dark Head Cove Road, Chesapeake Park Plaza, and the Block D portion of the waterfront lot restrict access to authorized personnel.

Numerous environmental studies, including soil sampling, have chemically characterized Block D soil. A soil remedial action plan (RAP) was prepared to outline the alternatives and objectives for

remediating Block D soil (Tetra Tech, 2013). The remedial action plan was subsequently amended three times. The first addendum presented the results of additional sampling to support the soil-remediation design (Tetra Tech, 2014). The second addendum documented protocols to investigate an oil sheen found behind the bulkhead at the corner of Block D, near the panhandle (Tetra Tech, 2015a). The third addendum included a revision to the remedial action objective (RAO) and presented an updated implementation schedule (Tetra Tech, 2015b). The remedial action objective developed in the Block D soil remedial action plan (and amended in the third addendum) is to mitigate risks associated with potential exposure pathways identified in the conceptual site model for industrial users, as follows:

Soil remedial action objective— *Reduce site-related chemicals of concern in Block D soils to not exceed a cumulative human health cancer-risk limit of 1×10^{-5} for industrial workers via ingestion, dermal contact, and inhalation.*

The remedial action objective and previous soil sampling results were incorporated into the *100% Soil Remedial Action Design for Blocks D, D Panhandle, F, G, and H* (Tetra Tech, Inc., 2015c) in January 2015, and approved by the Maryland Department of the Environment (MDE) on January 18, 2015. These documents form the basis for the Block D soil remedial action, which removed and disposed of 5,028 tons of soil impacted by benzo(a)pyrene-equivalents (BaPEq), and removed and disposed of 286 tons of soil to facilitate the repair of the degraded storm-drain pipe leading to Outfall 9OF001. Daily reports completed during field activities are in Appendix A.

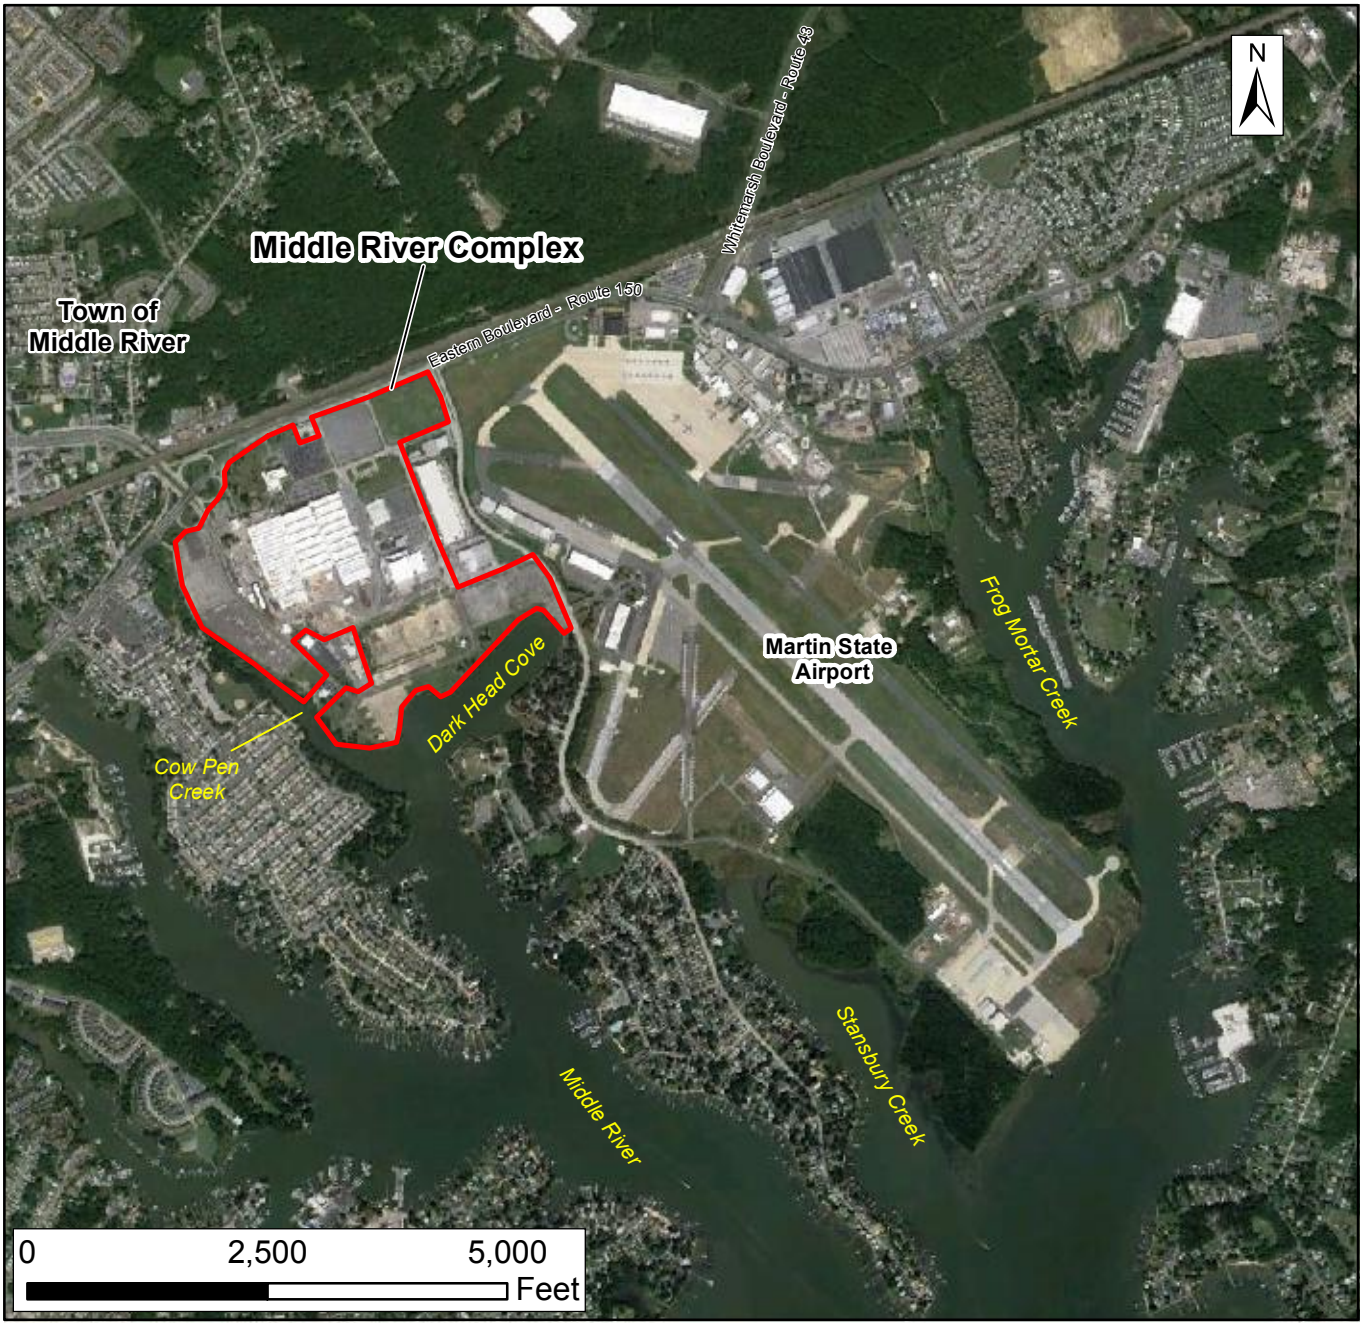
1.2 ORGANIZATION

This report is organized as follows:

Section 1—Introduction: Presents the background and organization of the construction completion report.

Section 2—Design, Permitting, and Site Setup: Describes the remedial action design, permits obtained before construction, erosion- and sediment-control installation, and site setup.

Section 3—Health, Safety, and the Environment: Describes the procedures used to ensure the health and safety of personnel.



Section 4—Remedial Action Implementation: Describes the soil removal and achievement of the remedial action objective.

Section 5—Sheen Investigation and Storm-Drain Pipe Repair: Describes the sheen investigation and repairs made to storm-drain pipes at the site.

Section 6—Transportation and Disposal: Presents waste transportation and disposal details.

Section 7—Decontamination, Site Restoration, and Demobilization: Presents details of decontamination, site restoration, and demobilization.

Section 8—References: Lists references and citations used in compiling this report.

Section 2
Design, Permitting, and Site Setup

Permitting and site setup to implement the remedial action for Tax Block (Block) D soil included:

- completing the remedy design
- obtaining necessary permits and approvals
- clearing utilities
- installing temporary facilities
- installing erosion and sediment control measures

2.1 DESIGN AND REGULATORY PERMITS

Tetra Tech Inc. (Tetra Tech) submitted the *100% Soil Remedial Action Design for Blocks D, D Panhandle, F, G, and H* (Tetra Tech, 2015b) to state regulators in January 2015. The design was approved by the Maryland Department of the Environment (MDE) on January 18, 2015. Tetra Tech secured all necessary permits, approvals, and authorizations from state, federal, and local agencies for activities in Block D. Copies of the permits and authorization letters are in Appendix B. Note that work authorization for Block D is part of work authorizations issued for Blocks D, D Panhandle, F, G, and H. Permits/approvals secured specifically for the work in Block D include:

- Baltimore County grading permit
- Baltimore County Soil Conservation District (SCD) erosion and sediment-control plan approval
- MDE "General Permit for Stormwater Associated with Construction Activity"
- Maryland Historical Trust (MHT) determination
- Maryland Department of Natural Resources (MDNR) review
- Baltimore County stormwater-management variance

- Baltimore County critical-area and natural-resource variance
- MDE Water Management "General Tidal Wetlands License"
- United States Army Corps of Engineers (USACE) Section 404 approval under the "Maryland State Programmatic General Permit"
- LMC Properties, Inc. (LMCPI) confined-space entry

Baltimore County approved a standard grading permit for ground disturbance (in the upland areas of Block D) on April 23, 2015 as part of the grading application submittal for Blocks D, F, G, and H. The erosion and sediment-control (E&SC) plans for controlling stormwater runoff during construction were likewise approved by the Baltimore County SCD on April 23, 2015. MDE required approval of E&SC plans by SCD for final authorization of the Maryland State "General Permit for Stormwater Associated with Construction Activity" that MDE approved on May 6, 2015.

The MHT and the MDNR were consulted to determine if historical or special-status species/habitats would be affected by the proposed action. On December 9, 2015, MHT indicated in a letter that the project would have no adverse effect on historical resources. The MDNR stated in a letter dated December 18, 2013 that no listed species or habitats are known to occur in the project area, but cautioned that this letter should not be interpreted as meaning that rare, threatened, or endangered species are not present. MDNR also noted that if appropriate habitats are available, certain species could be present without documentation, since adequate surveys have not been conducted.

This project qualified for a stormwater-management variance because final site grades remained unchanged and the project involved no post-construction stormwater-management features. This variance was approved on July 23, 2014 by the stormwater management office of the Baltimore County Department of Environmental Protection and Sustainability (DEPS). The project also qualified for a critical-area and natural-resource variance (approved on February 22, 2014) from the DEPS Environmental Impact Review office, because the project remedied previously developed/industrial areas that lack any wetlands, forest, or other natural habitats.

Impacts to tidal wetlands in Block D were associated with repair of the storm drain. The MDE Tidal Wetlands Division authorized these activities under a "General Tidal Wetlands License" on

August 27, 2015. The work on the storm-drain repair was approved under the "Maryland State Programmatic General Permit" by the USACE on the same date.

Entry into the stormwater inlet was required during the storm-drain repair to access the drain lines and connect piping. LMCPI issued the confined-space entry permits, valid for eight-hour periods and nontransferable. New permits were obtained each day that access was required.

2.2 UTILITY CLEARANCE

A pre-construction utility-locating survey was conducted before any activities requiring ground disturbance began. Enviroscan, Inc. of Lancaster, Pennsylvania was contracted to perform a geophysical survey of the work area and identify possible underground utilities. This survey was completed on May 20–21, 2015. Identified utilities were marked on the ground using spray paint. These marks were refreshed as required throughout the project. The project team also inspected the area for overhead utilities, noting where utilities might interfere with operations.

Maryland's "Miss Utility" clearinghouse was notified of project activities and approved the ticket request on April 15, 2015. The Miss Utility ticket was updated as required throughout the project. Tetra Tech followed Lockheed Martin Corporation (Lockheed Martin) *Enterprise Operations-28* and Lockheed Martin *Minimum Requirements for Intrusive Fieldwork Work Plans*, in addition to completing the LMCPI digging authorization form and obtaining required signatures before conducting any intrusive activities. The completed digging authorization form and utility clearance report are in Appendix B.

2.3 INSTALLATION OF TEMPORARY FACILITIES

One project trailer was placed in Block G for site personnel in April 2015; this trailer was used for the duration of the soil remedial actions in all tax blocks. Power was connected to the trailer through the existing power-supply lines in Block G. Portable toilets and a storage container for tools were also provided.

2.4 INSTALLATION OF EROSION AND SEDIMENT CONTROLS

Temporary E&SCs were installed in June 2015 in accordance with the approved E&SC plan included in the *100% Soil Remedial Action Design for Blocks D, D Panhandle, F, G, and H* (Tetra Tech, 2015c). These controls included a temporary asphalt berm, inlet protection, a super-silt

fence, super-silt fencing on paved areas, and a turbidity curtain placed in Dark Head Cove. These controls were inspected and approved by a representative of the Baltimore County Department of Permits, Approvals, and Inspections on August 5, 2015. Tetra Tech inspected the E&SCs weekly, and after rain, throughout the duration of the project. The county representative also made periodic inspections during site activities. Maintenance and repairs were performed as necessary; minor deficiencies were noted during some inspections by Baltimore County and site personnel, and were corrected immediately.

Section 3
Health, Safety, and the Environment

A dust control plan (Appendix C) and a health and safety plan (HASP) (Tetra Tech, Inc. 2015d) were prepared before starting soil remedial-action activities to specify the measures taken to control airborne dust and ensure personnel safety. The following sections describe how these plans were implemented during construction in Tax Block (Block) D.

3.1 AIR MONITORING

Real-time dust (RTD) monitoring and visual observations were conducted to determine (quantitatively and qualitatively) if measures were needed to control airborne-dust levels and avoid dispersion or inhalation of contaminated dusts or particulate during excavation, stockpiling, load-out, backfilling, and compaction. RTD equipment (Dust Trak II air-monitoring stations) was deployed during excavation and load-out, and recorded dust concentrations from one upwind and two downwind positions on the perimeter of the Block D work areas. RTD equipment was calibrated each morning before use.

Data were continuously downloaded to data analysis software onboard the device so that field personnel could obtain real-time air monitoring data (via email and text message), expressed as 15-minute-average dust concentrations. All dust readings recorded during construction were well below the Block D-specific dust action-level (five milligrams per cubic meter) specified in the dust control plan; dust suppression measures were therefore not needed. Air monitoring data are in Appendix C.

3.2 PERSONAL AIR SAMPLING

Personal air sampling assessed personal dust and contaminant exposure for site personnel during excavation in Block D. Personal air samples were collected and analyzed for polycyclic aromatic hydrocarbons (PAHs) and crystalline silica as described in Section 4 of the dust-control and

air-monitoring plan (Appendix C). PAH and crystalline silica data underwent a quality assurance/quality control review by the site safety and health officer and a certified industrial hygienist from Tetra Tech. The review concluded that all PAH and crystalline silica detections were well below the threshold limit values. A review of personal air sampling data and associated calculations are in Appendix C.

3.3 HEALTH AND SAFETY MONITORING

All employees complied with the requirements of the federal Occupational Safety and Health Administration (29 *Code of Federal Regulations* [CFR] 1910 and 29 CFR 1926). All employees involved in intrusive fieldwork were 40-hour hazardous waste operations and emergency response (HAZWOPER)-certified, which includes eight-hour annual-refreshers and current medical clearance. Safety meetings were held before the start of each workday. All field personnel reviewed and signed a site-safety briefing form before beginning any work on site. Hazard-analysis worksheets were prepared per the site-specific HASP, and were reviewed by all personnel before each new task.

Section 4
Remedial Action Implementation

This section details the remedial activities for soil that were completed in Tax Block (Block) D of the Middle River Complex in September and October 2015.

4.1 EXCAVATION OF IMPACTED SOIL

Impacted soil was excavated from excavation areas A, B, C, D, E, F, and F1 using a hydraulic excavator. Soil was excavated to a depth of two feet below ground surface (bgs) in areas A, B, C, D, and E, and to a depth of three feet bgs in area F1. Soil was excavated to depths between 2-3 feet bgs in area F to inspect the condition of tieback rods and wooden pile-anchors for the bulkhead tieback system. In August 2015, the impacted soil was directly loaded into tri-axle dump trucks for 201 shipments to and recycling at the Soil Safe, Inc. facility in Brandywine, Maryland. Excavated soil was visually inspected to ensure that it was similar to previously identified conditions. Shipping documentation accompanied each truckload (see Appendix D). Approximately 5,028 tons of soil were excavated from Block D and transported to the recycling facility.

4.2 VERIFICATION SAMPLING

Once excavation had been completed in an area, verification sidewall-samples were collected at a minimum frequency of one sample per 100-linear-feet of sidewall. The data from these samples were used in the post-excavation residual-risk analysis (RRA) calculation to determine if the remedial action objective (RAO) had been met (Section 4.4). Four composite verification sidewall-samples were collected around each excavation area (Figure 4-1).

Verification samples at the base of the excavations were also collected, at a minimum frequency of one sample per 625-square-feet of excavation floor. The following numbers of verification base-samples were collected from excavation areas A through F1 (Figure 4-2):

- area A—three verification base-samples
- area B—three verification base-samples plus one duplicate
- area C—four verification base-samples
- area D—two verification base-samples plus one duplicate
- area E—six verification base-samples plus one duplicate
- area F—25 verification base-samples plus two duplicates
- area F1—10 verification base-samples

Note that verification base-samples were collected for informational purposes only, and were not used to determine whether additional vertical excavation would be required. Verification sidewall and base samples were analyzed for polycyclic aromatic hydrocarbons (PAHs) by United States Environmental Protection Agency (USEPA) Method 8270D.

To ensure that the post-excavation RRA would meet the RAO, each verification sidewall-sample result was compared to the benzo(a)pyrene-equivalent (BaPEq) [1] remedial goal (RG) of 2,900 micrograms per kilogram (µg/kg). If BaPEq concentrations for all sidewall samples were below the RG, then the excavation area was backfilled. If a BaPEq concentration exceeded the RG, then the following criteria would determine if additional excavation had been required:

- if the maximum detected concentration of a verification sidewall-sample in an excavation area exceeded twice the block-specific RG
- if two or more sampling results per excavation area exceeded the block-specific RG
- if the arithmetic-mean concentration for the verification samples exceeded the block-specific RG

Per these criteria, additional excavation was not required in Block D. Figures 4-3 and 4-4 depict sampling results of verification sidewall-samples. Verification sampling results are also listed in Tables 4-1 through 4-7 for excavation areas A through F1, respectively. Copies of the verification

[1]Per current United States Environmental Protection Agency (USEPA) guidance (USEPA, 1993), concentrations of benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene can be combined in an adjusted risk-weighted concentration that is expressed in terms of benzo(a)pyrene toxicity. This calculated value, called a *benzo(a)pyrene-equivalent (BaPEq) concentration*, uses USEPA-recommended toxicity equivalency factors to estimate the potency of each of these polycyclic aromatic hydrocarbon (PAH) compounds relative to that of benzo(a)pyrene. The toxicity equivalency factors are then used to convert each individual PAH concentration into an equivalent concentration of benzo(a)pyrene; these values are summed to arrive at the calculated BaPEq concentration. Details outlining the BaPEq calculation are in Appendix E of the *Block D Remedial Action Plan* (Tetra Tech, 2013).

sampling logs and chain of custody forms are in Appendix E, and laboratory and validation reports are in Appendix F.

4.3 RESIDUAL-RISK ANALYSIS

A post-excavation residual-risk analysis (RRA) calculated the final Block D cancer and noncancer risk to industrial users following soil removal to determine if the Block D remedial action objective had been achieved. The post-excavation RRA data set consists of data from the verification sidewall-samples, along with historical surface-soil data (at 0–2 foot depth) and subsurface-soil (two feet to the groundwater table) for all locations that were not excavated. Backfill material was analyzed before being delivered to the site, in accordance with the *100% Soil Remedial Action Design for Blocks D, D Panhandle, F, G, and H* (Tetra Tech, 2015b), and was approved for use. Chemical concentrations in excavated samples were replaced in the RRA calculation with the concentrations of chemicals in the backfill material. Verification base-samples were not used in the RRA because they were collected at the bottom of the excavation area. These samples represent deeper soil that industrial workers would not contact under typical conditions. Appendix G includes a technical memorandum with details regarding the RRA and associated calculations. BaPEq were the chemicals of concern driving the remediation effort. Tables B-1 and B-2 of Appendix G provide the BaPEq concentrations and the final 95% upper confidence-limit (UCL) on the arithmetic mean for detected concentrations. The following paragraphs summarize the post-excavation RRA.

The RRA first identified chemicals of potential concern (COPC) to be evaluated in the RRA by comparing the maximum detected chemical concentrations in the post-excavation database to current USEPA regional screening-levels (RSLs). Chemicals detected at concentrations exceeding screening levels were retained in the RRA for quantitative evaluation. Chemicals retained as COPC in the 2012 human health risk assessment (HHRA) were also retained in the RRA as COPC[2], so that the pre-excavation soil-risk estimates could be compared to the post-excavation soil-risk estimates.

The exposure assessment assumptions used in the RRA are those presented in the USEPA Office of Solid Waste and Emergency Response Directive 9200.1–120, *Human Health Evaluation*

[2] Chemicals from the global list of COPCs in the 2012 HHRA evaluated in the RRA for Block D included benzo(a)pyrene equivalents, hexavalent chromium, naphthalene, lead, mercury, and nickel.

Manual, Supplemental Guidance: Update of Standard Default Exposure Factors (USEPA, 2014). Exposure-point concentrations were calculated using the current valid version of USEPA's *Pro-UCL* software (Version 5.0.00). The receptor of concern is an industrial worker, which is consistent with the current site land use. In general, industrial workers are potentially exposed to contaminants in the top two feet of soil (0-2 feet bgs) as they are not typically involved with excavation activities like construction or utility workers that would result in contact with deeper subsurface soils. Therefore, soil remediation was primarily focused on reducing contaminant concentrations within the top two feet of soil to acceptable risk-based levels. However, as detailed in the RRA, soil excavation and removal went deeper than two feet at a few locations in Block D in sub-area F1 to address potential BaPEq "hot spots", as defined by MDE guidance.

The toxicity criteria (e.g., cancer slope-factors, reference doses) used to estimate cancer and noncancer risks are from the May 2016 RSL table published by USEPA. The equations used to calculate receptor intake (dose) and risk are the same as those used in the original baseline human health risk assessment prepared for Block D (Tetra Tech, 2012). As detailed in the RRA and summarized in Table 4-8, risk estimates for COPC concentrations (including BaPEq concentrations) in remaining Block D soil do not exceed a lifetime cancer risk of 1×10^{-5} (i.e., a one in 100,000 probability) for industrial users exposed to BaPEq via ingestion, dermal contact, and inhalation. The cumulative hazard index (an indicator of the potential for adverse noncancer effects) also does not exceed 1 (the noncancer risk-management benchmark for the project). Thus, the soil RAO at Block D has been achieved. The MDE Controlled Hazardous Substances Enforcement Division will document land use controls applicable to Block D in a "No Further Action" letter.

4.4 TIEBACK REPAIR, SOIL BACKFILL, AND COMPACTION TESTING

A tieback rod for the existing bulkhead wall was bent and disconnected from its associated anchor pile during soil excavation in area F. The tieback rod was straightened and reseated with a cubic yard of concrete. All excavation areas were backfilled and final surfaces were graded to match existing grades. Material similar in grain size to the removed soil and obtained from an off-site borrow source (Aggregate Transport Corporation in Hanover, Maryland) was used as fill. Fill material was analyzed and approved for use before being delivered to the site, in accordance with

the *100% Soil Remedial Action Design for Blocks D, D Panhandle, F, G, and H* (Tetra Tech, 2015b). Analytical data for the borrow-source sample is in Appendix H.

Various combinations of backfill were used during site restoration because wet subsurface conditions existed when the remedial action was completed. Backfill in the Block D excavation area A consisted of approximately 13 inches of No. 2 stone in saturated areas, covered with geotextile, followed by approximately 12–24 inches of CR-6. Backfill in excavation areas B, C, and D consisted of 24 inches of select fill, capped with 6–8 inches of compacted CR-6. Backfill in excavation areas E, F, and F1 consisted of No. 2 stone in saturated areas along the excavation bottom, covered with geotextile, followed by 1–3 feet of select fill depending on excavation depth. Backfill materials were placed via excavator and dozer and compacted with a single-drum soil compactor or mechanical tamper, depending on the size and depth of the excavation. In-place compaction testing was performed via nuclear moisture-density methods during backfill placement; all compaction results exceeded 90% modified proctor. Compaction-test data are in Appendix H. Final restoration is discussed in Section 6.

Section 5
Sheen Investigation and Storm-Drain Pipe Repair

On June 22, 2015, a team of ecologists surveyed Cow Pen Creek and Dark Head Cove to gather the data necessary to evaluate impacts that might occur during future sediment remediation. The team noticed a small sheen on the water behind the bulkhead near the corner of Tax Blocks (Blocks) D and D Panhandle. The sheen was tracked to a small oily breakout in an eroded area behind the bulkhead. The eroded area was associated with a damaged storm-drain pipe, and was identified for repair in the *100% Soil Remedial Action Design for Blocks D, D Panhandle, F, G, and H* (Tetra Tech, Inc. [Tetra Tech], 2015b).

Lockheed Martin Corporation notified the Maryland Department of the Environment (MDE) about the situation via electronic mail on June 22, 2015, and subsequently submitted the *Block D Remedial Action Plan (RAP) Addendum 2*. This addendum was approved by MDE in August 2015, and included protocols to investigate the source of the sheen when the eroded area and storm-drain pipe were repaired in conjunction with the soil remedy at Block D (Tetra Tech, 2015c). The storm-drain repair does not affect the achievement of the remedial action objective (RAO) described in Section 4.3. Middle River Complex (MRC) utility drawings identify a 36-inch storm-drain pipe that connects to a junction box in Block D, and subsequently leads to Outfall 9OF001 (as designated in the sediment-remediation design). The pipe was not visible in the eroded area during previous inspections, but was believed to have been corroded, collapsed, or washed out of the eroded area. Repairs conducted during the Block D remedial action included locating competent storm-drain pipe, replacing the missing piece leading to the outfall, and backfilling the eroded area. Utility clearance, permitting, and site setup was conducted as described in Section 2 before the repair began. A description of the sheen investigation and storm-drain pipe repair is in the following sections.

5.1 SHEEN INVESTIGATION

On October 7, 2015, per the approved Block D RAP Addendum 2, soil was excavated at the sheen location and stockpiled on polyethylene sheeting. A photoionization detector (PID) was used while excavating to evaluate the presence of volatile organic compounds; no elevated PID readings above background conditions were detected. Tie rods and wood anchors from the bulkhead tieback system were in the excavation area immediately beneath the soil, and were clearly the source of the sheen.

Sampling results from the initial sheen sample presented in the Block D RAP addendum are consistent with preservative used to protect wood anchor pilings and tie rods. The tieback system, which is buried beneath the soil all along the bulkhead, maintains the integrity of the bulkhead. The soil above the tieback system would prevent direct exposure of the wood anchor piling preservative to industrial workers. Migration of oil to surface water would not be expected since oil transport was observed to be blocked by the soil and has not been previously observed along the bulkhead alignment. These findings indicate no additional excavation or remedial action is required at this time.

5.2 EXCAVATION TO LOCATE STORM-DRAIN PIPE

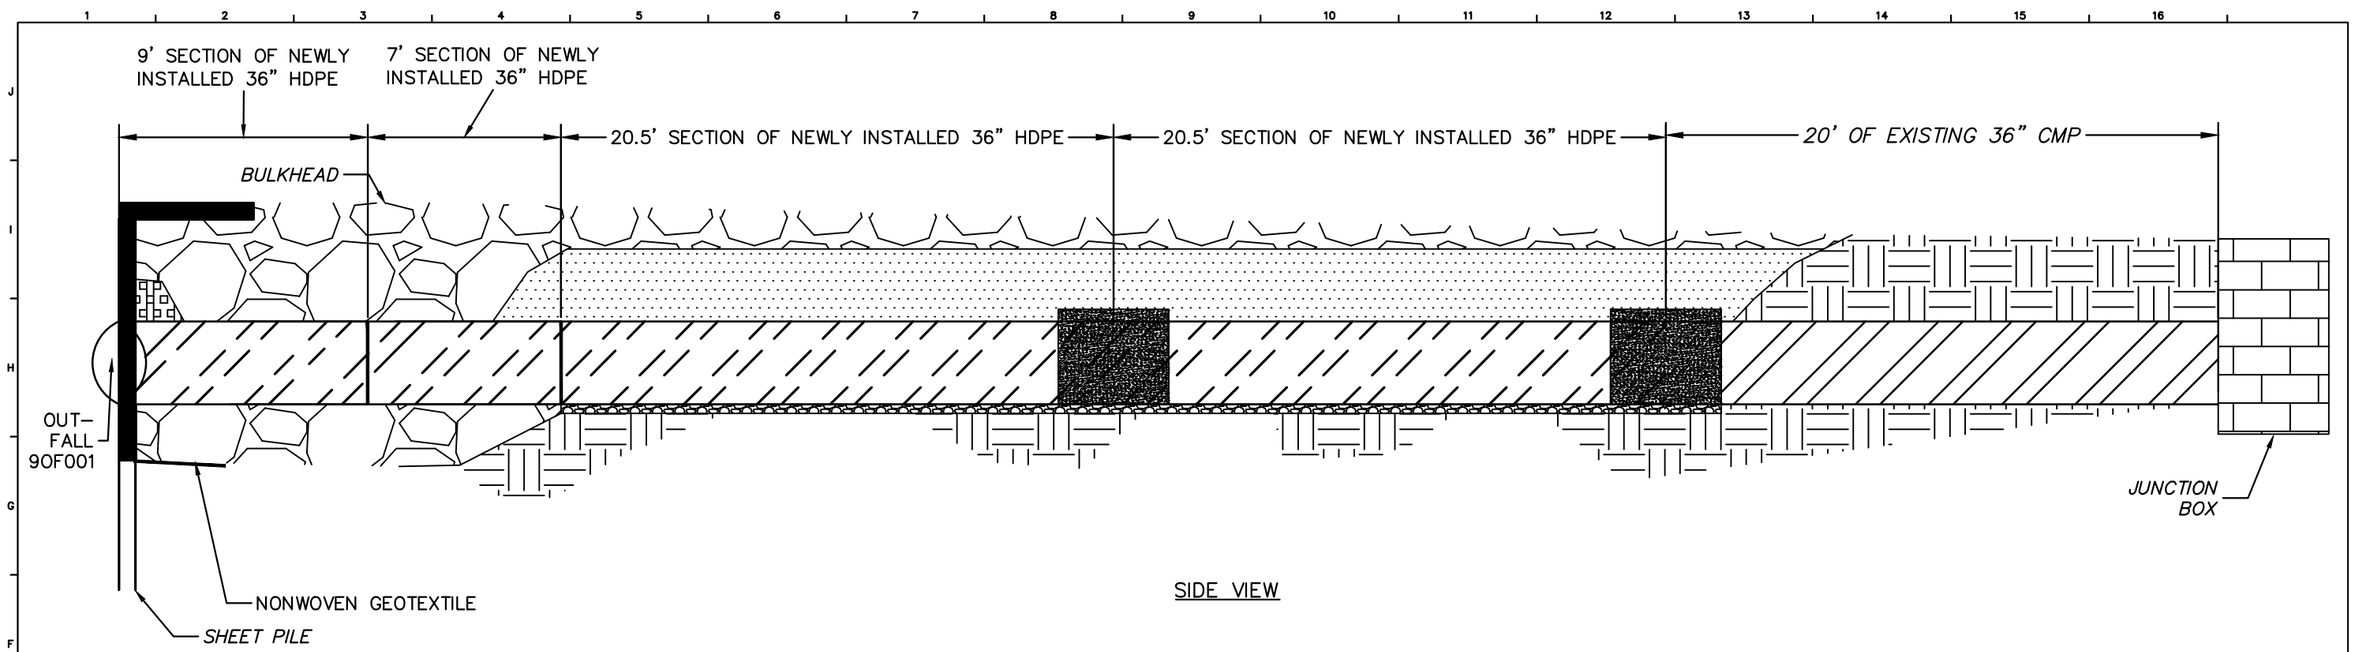
Before test-pit excavation and repairs began, black-stained soil and sediment were observed behind the bulkhead wall. This stained soil (totaling approximately 18 tons) was excavated and stored in a roll-off box pending characterization and transport for off-site disposal. Details regarding waste characterization and off-site disposal are in Section 6.2.

Test pits were excavated in October 2015 to determine if any viable sections of the 36-inch pipe were present between the bulkhead and the junction box. Competent 36-inch inside-diameter corrugated-steel pipe was located approximately 20 feet downstream of the junction box, at a depth of four feet below ground surface. An inflatable temporary plug was inserted into the 36-inch pipe downstream of the junction box to minimize flow in the pipe during repairs. A stormwater bypass was approved by a representative of the Baltimore County Department of Permits, Approvals, and Inspections, and was installed in the junction box to pump water from the box into Dark Head Cove.

Visually contaminated soil was observed in test-pit excavations parallel to the storm-drain alignment where the 36-inch pipe had been uncovered. This contamination appeared to be associated with the bulkhead wall tieback system, and was similar in nature to what was found in the sheen investigation area. The spacing of the wood pile-anchors along the alignment precluded placement of a trench box, and prevented sloping needed in the excavation to safely install the storm drain. Given these conditions, sheet piling was installed around the storm-drain pipe location to provide trench stability, limit potential migration of contaminants into the work area, and protect the tieback system during excavation and repair. Approximately 18 tons of visually contaminated soil and debris were excavated and stockpiled following installation of the sheet piling, to await characterization and transport off-site for disposal. Details regarding waste characterization and off-site disposal can be found in Section 6.2.

Approximately 286 tons of soil were excavated from within the sheet piling so the pipe could be replaced. Concrete and other debris from the eroded area were also removed to facilitate repairs. Care was taken to avoid damaging the tie rods and wooden pile-anchors encountered during excavation and repair.

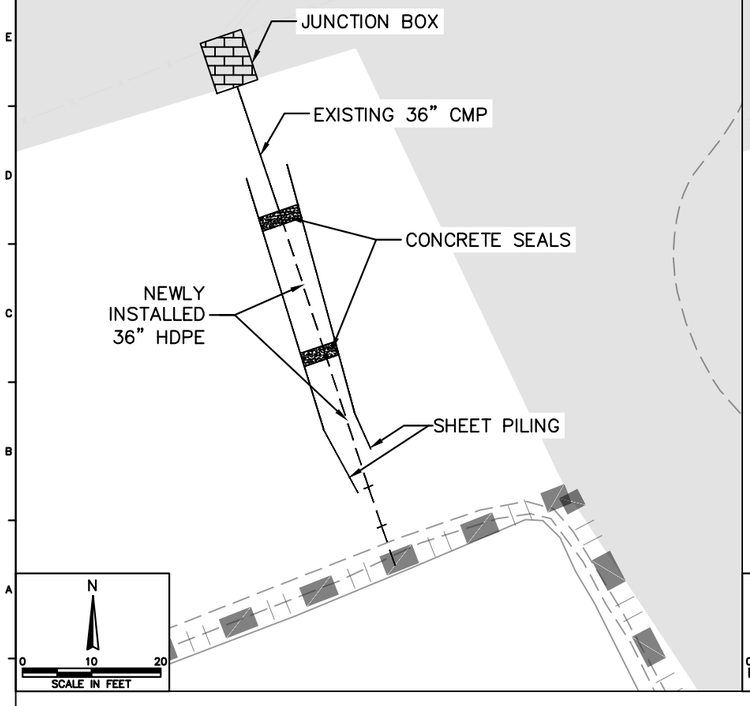
5.3 PIPE PLACEMENT AND COUPLING



Approximately four inches of coarse aggregate (No. 2 stone) was placed as pipe bedding at the base of the pipe excavation, between the sheet piling. Two sections of 20.5-foot 36-inch high-density polyethylene (HDPE) corrugated pipe were placed into the excavation and connected to the existing 36-inch corrugated steel pipe. New HDPE piping was connected to the existing metal pipe by overlapping the joint section (eight-inch overlap), packing the connection with oakum, and using self-tapping screws to connect the two sections.

The two HDPE piping sections were connected using manufactured slip joints that snap together with rubber O-rings. Self-tapping screws were installed after the sections were snapped together. Geotextile was then wrapped around the connections and the joints were covered with three cubic yards of concrete slurry to provide anti-flotation anchoring and to seal the joints. An additional 15-foot section of HDPE was then connected using the manufactured slip joints and rubber O-rings. This joint was wrapped in geotextile, but a concrete anti-flotation anchor was not installed.

A gap between the bulkhead wall and the HDPE pipe remained after installation of the three pipe sections. The initial attempt to run an additional six-feet of HDPE through the existing penetration in the bulkhead failed due to constraints from bulkhead tiebacks, sheet piling used to contain the excavation area, and the constant infiltration of tidal waters from Dark Head Cove. During a later effort, the 15-foot section of HDPE was cut back to an approximately seven-foot length. A temporary nine-foot section of HDPE was then connected to the seven-foot section of pipe and successfully penetrated the bulkhead wall. The corrugation of this final nine-foot section had to be trimmed to fit into the existing outfall hole. The pipe sections were connected using a manufactured slip joint and O-ring; however, the final alignment was slightly off, due to the angle of the outfall hole. Geotextile was wrapped around the pipe connection and riprap was used to seal the annular space between the pipe and the opening of the bulkhead wall. The last nine-foot section of pipe will require replacement at a future date when the bulkhead is upgraded as part of the pending sediment remediation. Figure 5-1 depicts the as-built configuration of the storm-drain repair.



5.4 BACKFILLING THE ERODED AREA

The storm-drain-pipe repair area between the sheet piles was backfilled with approximately 50 inches of No. 57 stone. The eroded soil outside of the sheet piles was leveled (using an excavator) to create an even elevation, then backfilled with approximately five feet of No. 2 stone to allow for water infiltration. A geotextile fabric was placed adjacent to the existing bulkhead before backfilling to limit migration of backfill into Dark Head Cove. The sheet piling that had been installed to facilitate the pipe installation was left in place (see Figure 5-1).

Section 6
Transportation and Disposal

Transportation and disposal/recycling for the Tax Block (Block) D soil remedial action included the following waste streams:

- benzo(a)pyrene-equivalent (BaPEq)-impacted soil
- lead-impacted soil and debris
- concrete
- general refuse

A predefined truck-traffic route was established before construction began, and was executed during transportation and disposal (recycling) activities. This route minimized inconvenience to the public, while ensuring safe conditions for roadway users (including pedestrians and bicyclists) and personnel in work zones.

6.1 IMPACTED SOIL EXCAVATED FROM THE REMEDIAL ACTION AREA

Before soil removal, waste characterization samples were collected from each excavation area at a frequency of one sample per 1,000 tons, as directed by the disposal facility. Therefore, one sample was collected from each removal area. All samples were collected and analyzed for total petroleum (TPH)-hydrocarbon gasoline-range (GRO) and diesel-range organics (DRO) by United States Environmental Protection Agency (USEPA) SW-846 Method 8015/9017B, for volatile organic compounds (VOCS) by USEPA SW-846 Method 8260, for polychlorinated biphenyls (PCBs) by USEPA SW-846 Method 8082, and for toxicity characteristic leaching procedure (TCLP) metals by USEPA SW-846 Method 1311/6010, in accordance with recycling facility requirements. Sampling results indicated that all excavation areas were suitable for recycling at Soil Safe, Inc. (Soil Safe). Copies of the laboratory and validation reports are in Appendix F.

Upon receipt of the sampling results, Profile W5-4105 was prepared to support disposal-facility acceptance of the impacted soil. Profile W5-4105 included transportation provided by the disposal

facility, and was submitted and approved by the disposal facility in July 2015. Copies of the waste profile and approval sheet(s) are in Appendix D.

Impacted soil was loaded into tri-axle dump trucks for transport to Soil Safe, in Brandywine, Maryland. Each truck had appropriate licensing, registration, and placarding, and was tarped and inspected before and after loading to ensure that it was in suitable condition for road transport. A uniform shipping-manifest was completed for each load. Two hundred and one dump-truck loads of impacted soil were sent to the recycling facility for the Block D remediation. Approximately 5,028 tons of soil were transported to Soil Safe, with each truck carrying an average of 25 tons.

6.2 SOIL AND DEBRIS FROM STORM-DRAIN PIPE REPAIR

As described in Section 5.2, visual signs of black-stained soil and sediment were observed behind the bulkhead wall before repairs began. This stained soil and debris were excavated and stored in a roll-off box pending characterization and transport for off-site disposal. Visibly contaminated soil was also observed during test-pit excavation, along the storm-drain alignment where the 36-inch pipe had been uncovered. The soil along the alignment was stockpiled on polyethylene sheeting and then covered. The following sections describe the waste characterization samples collected from both waste streams, and the transportation and disposal of the soil removed during the storm-drain pipe repair.

6.2.1 Lead-Impacted Hazardous Soil

A waste characterization sample (BDP-WC-36) was collected from the roll-off box storing the visually stained material. The sample was analyzed for TPH-GRO and TPH-DRO by USEPA SW-846 Method 8015/9017B, for VOCs by USEPA SW-846 Method 8260, for semi-volatile organic compounds (SVOCs) by USEPA SW-846 Method 8270, for PCBs by USEPA SW-846 Method 8082, for metals by USEPA SW-846 Method 6010, and for TCLP metals by USEPA SW-846 Method 1311/6010. Lead was detected in the TCLP analysis at a concentration of 140 milligrams per liter (mg/L), which exceeds the federal Resource Conservation and Recovery Act (RCRA) hazardous level (5 mg/L). TCLP metals results were validated and the hazardous lead result was verified. The laboratory and validation reports are in Appendix F.

Upon receipt of the sampling results, Profile CH1119687 was prepared to support Clean Harbors' acceptance of the hazardous lead-impacted soil. Profile CH1119687 included transportation

provided by the disposal facility, and was submitted and approved by Clean Harbors in December 2015. Copies of the waste profile and approval sheet are in Appendix D.

The roll-off bin containing the lead-impacted waste and debris was transported by Clean Harbors for disposal as hazardous waste. The truck hauling the bin had appropriate licensing, registration, and placarding, and was tarped and inspected before and after loading to ensure that it was in suitable condition for road transport. A uniform shipping-manifest was completed for the approximately 18 tons of soil removed off-site (see Appendix D).

6.2.2 Non-Hazardous Soil

The segregated soil from the storm-drain repair area was stockpiled on-site, and waste characterization samples were collected to determine the proper management of these soils. All samples were collected and analyzed for total petroleum (TPH)-hydrocarbon gasoline-range (GRO) and diesel-range organics (DRO) by United States Environmental Protection Agency (USEPA) SW-846 Method 8015/9017B, for volatile organic compounds (VOCS) by USEPA SW-846 Method 8260, for polychlorinated biphenyls (PCBs) by USEPA SW-846 Method 8082, and for toxicity characteristic leaching procedure (TCLP) metals by USEPA SW-846 Method 1311/6010. Sampling results indicated that all of this soil was suitable for recycling at Soil Safe. Copies of the laboratory and validation reports are in Appendix F.

Upon receipt of the sampling results, Profile W5-4303 was prepared to support disposal-facility acceptance of the impacted soil. Profile W5-4303 included transportation provided by the disposal facility, and was submitted and approved by the disposal facility in January 2016. Copies of the waste profile and approval sheet are in Appendix D.

Impacted soil was loaded into tri-axle dump trucks for transport to Soil Safe, in Brandywine, Maryland. Each truck had appropriate licensing, registration, and placarding, and was tarped and inspected before and after loading to ensure that it was in suitable condition for road transport. A uniform shipping-manifest was completed for each load. Ten dump-truck loads of impacted soil were sent to the recycling facility from the storm-drain repair area. Approximately 286 tons were transported to Soil Safe, with each truck carrying an average of 29 tons.

6.2.3 Concrete

Large pieces of concrete were observed in the storm-drain repair area before construction began. The load concrete was removed and transported off-site to Benjer, Inc. for recycling.

6.3 GENERAL REFUSE

General refuse generated during the project was collected in a dumpster that was emptied as necessary and disposed of at the local municipal-waste landfill. Dumpster service was provided by Waste Management of Maryland, Inc.

Section 7
Decontamination, Site Restoration, and Demobilization

The following sections detail final construction activities, including decontamination, site restoration, and demobilization.

7.1 DECONTAMINATION

Equipment that had contacted impacted soil was decontaminated before being removed from Tax Block (Block) D. Equipment that required decontamination included one excavator bucket, the bucket from the rubber-tired loader, and a holding tank for water. Decontamination consisted of removing residual soil from equipment-contact surfaces via scraping, rinsing, and scrubbing. Residual soil was containerized and disposed of off-site. Decontamination pads were built to capture decontamination water. That water was stored in frac tanks before being transported off-site for disposal. The wash and rinse water was disposed of at Clean Harbors, Inc. in Baltimore, Maryland.

7.2 SITE RESTORATION

Repair of the storm-drain pipe in Block D included backfilling the area with No. 2 stone to match the pre-existing grade and to allow for water infiltration. Block D excavation areas A through D were backfilled with select fill and capped with 6–8 inches of compacted CR-6 to match pre-existing grade, and restored using asphalt millings. Excavation areas E, F, and F1 were backfilled (as specified in Section 4) and capped with 6–8 inches of topsoil to match the pre-exiting grade, then hydro-seeded. A permanent seed mixture was used, per the 2008 Baltimore County Soil Conservation District/Maryland Aviation Administration vegetative-establishment specifications for projects within three miles of the Martin State Airport (Tetra Tech, 2015b). Seeding and seed-bed preparation were performed in accordance with the 2012 Maryland *Specifications for*

Soil Erosion and Sediment Control, Section G: "Vegetative Practices" (Tetra Tech, 2015b). Details about backfill in each excavation area are in Section 4.4.

7.3 DEMOBILIZATION

Equipment and personnel were demobilized from Block D as tasks were completed and services were no longer required. Erosion and sediment controls in Block D remain in place, and will continue until 90% of the vegetation has been established and removal is approved by the Baltimore County erosion and sediment control inspector. The project trailer and general refuse dumpster also remain in Block G, and will be used during soil remedial-actions in other tax blocks.

APPENDIX A—DAILY REPORTS

TETRA TECH, INC.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 8, 2015	Start Work at:	6:30 AM	Depart Site at:	5:30 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Partly Cloudy	Wind:	Moderate	Precipitation:	None

Weather Comments:

Summary of Work/Major Activities

1. Tailgate safety meeting, discussed safety hazards resulting from loading trucks (overhead hazard with swinging bucket, use spotters). Vehicle load out procedures and operator safety during excavation activities. Possible thunderstorms in the afternoon, warmer temps, stay hydrated and wear sun block.
2. Block G Area H soil excavation completed, 5 trucks loaded.
3. Block G Area J soil excavation completed, 20 trucks loaded.
4. Exploratory excavations completed in suspected UST areas in Block G, no USTs found. Samples will be taken 6/9 for verification of no contamination following receipt of direction from project team. Two trucks loaded from UST areas.
5. Continue installing construction entrance in Block F.
6. MET weather station and DUSTTRAK air monitors set up around excavations in Block G.
7. Verification sampling completed Block G Areas H and J.
8. Begin silt fence installation activities in Block D.

Personnel On-Site

Name:	Company:
Josh Mullis	Tetra Tech

Health & Safety Topics or Issues

1. Operator safety in heavy machinery and on the ground safety when in heavy machinery (use spotters, blind spots).
2. Weather: Possible thunderstorms in the afternoon, warmer temps so wear sun block and stay hydrated.
3. Truck load out procedures, correct routes and proper PPE required for all who are on site.

QC Procedures/Inspections/Testing to be Performed Today

1. MET weather station and DUSTRAKK Air Monitors set up in Block G surrounding excavation Areas H and J.
2. Verification sampling completed in Block G Areas H and J.

Planned Week Schedule

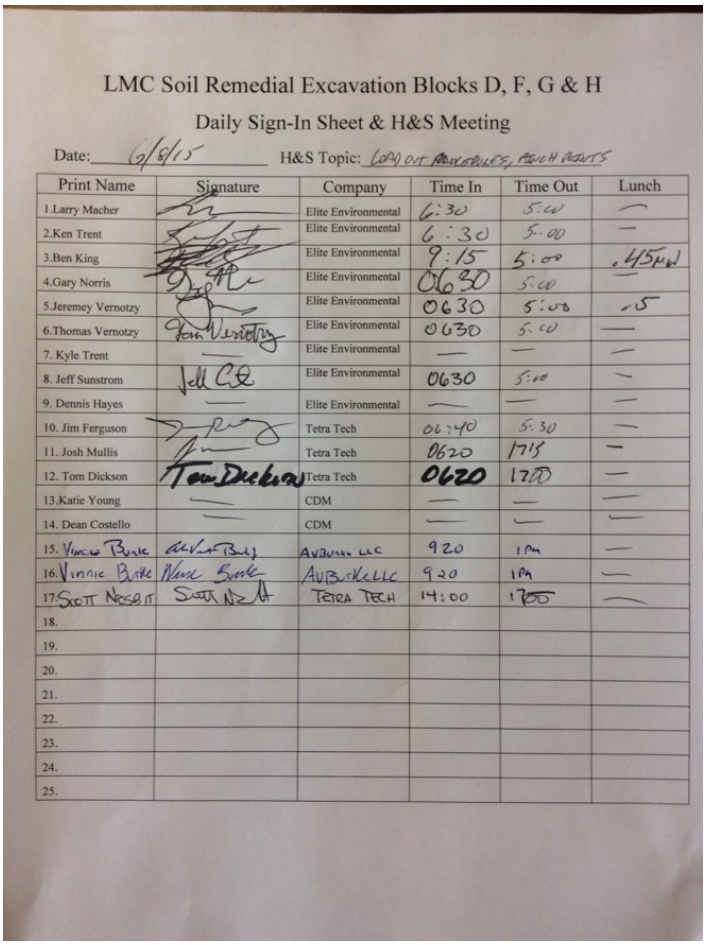
1. Complete excavations in Block G (completed 6/8 except for Area I), followed by surveying (completed 6/8 for Areas A-E) and backfilling.
2. Verification sampling of completed excavations (Block G Areas H and J completed 6/8).
3. Saw cut concrete areas in Block F.
4. Asphalt restoration in Block H Areas A and B.
5. Complete construction entrance in Block F.
6. Exploratory excavations for USTs in Block G (no USTs found, samples to be taken 6/9).
7. Baltimore County E&S inspection scheduled for 6/9 for Block F controls.
8. Begin silt fence installation activities in Block D.

Photos of Select Daily Activities

Comments: Truck loaded from Block G Area J.

Comments: Construction entrance installation in Block F.

Photos of Select Daily Activities (continued)



Comments: Exploratory excavation for a suspected UST in Block G, no UST found.

Comments: Exploratory excavations for a suspected UST in Block G, no UST found.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 9, 2015	Start Work at:	6:30 AM	Depart Site at:	7:30 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Few Clouds	Wind:	Moderate	Precipitation:	None
Weather Comments:							

Summary of Work/Major Activities

1. Tailgate safety meeting, discussed safety hazards resulting from loading trucks (overhead hazard with swinging bucket, use spotters). Vehicle load out procedures and operator safety during excavation activities. Possible thunderstorms in the morning and afternoon, warmer temps, stay hydrated and wear sun block.
2. Block G suspected UST areas excavated, 17 trucks loaded.
3. Finish installing construction entrance in Block F.
4. Baltimore County inspector Jim Brendel approved E&S controls in Block F.
5. Verification sampling completed in Block G suspected UST areas.
6. Continue silt fence installation activities in Block D.
7. Begin preparation for asphalt paving in Block H Areas A and B, asphalt paving scheduled to be completed on 6/10.
8. Prepare excavation Areas A-E in Block G for backfilling.
9. Pump storm water out of excavation Area J in Block G into the frac tank staged in Block G.
10. Decontaminate heavy equipment (mini excavator, front end loader) before staging equipment in Block F after work in Block G.

Personnel On-Site

Name:	Company:
Josh Mullis	Tetra Tech
Jim Ferguson	Tetra Tech
Tom Dickson	Tetra Tech
Larry Macher	Elite Environmental
Ken Trent	Elite Environmental
Thomas Vernotzy	Elite Environmental
Jeremy Vernotzy	Elite Environmental
Jeff Sunstrom	Elite Environmental
Gary Norris	Elite Environmental
Scott Nesbit	Tetra Tech
Ben King	Elite Environmental
Joe Green	Elite Environmental

Health & Safety Topics or Issues

1. Operator safety in heavy machinery and on the ground safety when in heavy machinery (use spotters, blind spots).
2. Weather: Possible thunderstorms in the morning and afternoon, warmer temps so wear sun block and stay hydrated.
3. Truck load out procedures, correct routes and proper PPE required for all who are on site.

QC Procedures/Inspections/Testing to be Performed Today

1. Soil sampling completed in Block G suspected UST areas.
2. Baltimore County Inspection for E&S controls in Block F completed and approved.

Planned Week Schedule

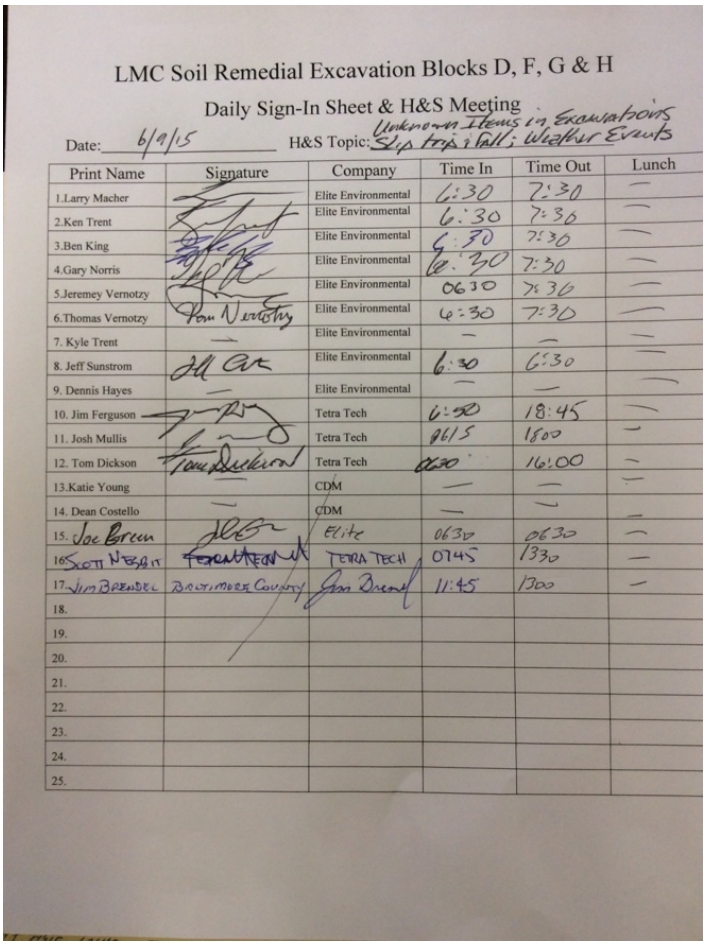
1. Complete excavations in Block G (completed 6/8 except for Area I), followed by surveying (completed 6/8 for Areas A-E) and backfilling.
2. Verification sampling of completed excavations (Block G Areas H and J completed 6/8).
3. Saw cut concrete areas in Block F.
4. Asphalt restoration in Block H Areas A and B (preparation completed 6/9, paving to be completed 6/10).
5. Complete construction entrance in Block F.
6. Exploratory excavations for USTs in Block G (no USTs found, sampling completed 6/9).
7. Baltimore County E&S inspection scheduled for 6/9 for Block F controls (completed and approved on 6/9).
8. Continue silt fence installation activities in Block D.

Photos of Select Daily Activities

Comments: Soil profile of suspected UST areas in Block G. Terra cotta piping with pebble fill material and a clay layer underneath, clay layer occurs approx 4 ft bgs. Soil samples were taken from this clay layer.

Comments: Silt fence installation in Block D.

Photos of Select Daily Activities (continued)



Comments:	Decontamination of the mini-excavator bucket.

Comments:	Decontamination of the front end loader.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 10, 2015	Start Work at:	6:30 AM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments: Partly cloudy, winds out of the southeast.

Summary of Work/Major Activities

1. Tailgate safety meeting, discussed safety hazards resulting from loading trucks (overhead hazard with swinging bucket, use spotters). Vehicle load out procedures and operator safety. Asphalt paving activity and burn potential due to asphalt materials. Weather: warmer temps, stay hydrated and wear sun block.
2. Asphalt pavement installation in Block H, Areas A and B.
3. Soil load out from Block G, UST Area (one truck).
4. Super Silt diversion fence installation in Block D.
5. Clear and grub brush in Block D Panhandle area.
6. Obtain access to Block D gates from Lockheed Martin security. Placed Tetra Tech padlock in series with Lockheed Martin lock for future access.

Personnel On-Site

Name:	Company:
Jim Ferguson	Tetra Tech

Health & Safety Topics or Issues

1. Equipment safety and awareness.
2. Heat stress, stroke, evaluation and monitoring.
3. Asphalt paving activity and burn potential due to asphalt materials.

QC Procedures/Inspections/Testing to be Performed Today

1. Monitor asphalt installation and compaction in Block H.
2. Monitor Super silt diversion fence installation in Block D.
3. Monitor clearing and grubbing operations in Block D Panhandle Area.

Planned Week Schedule

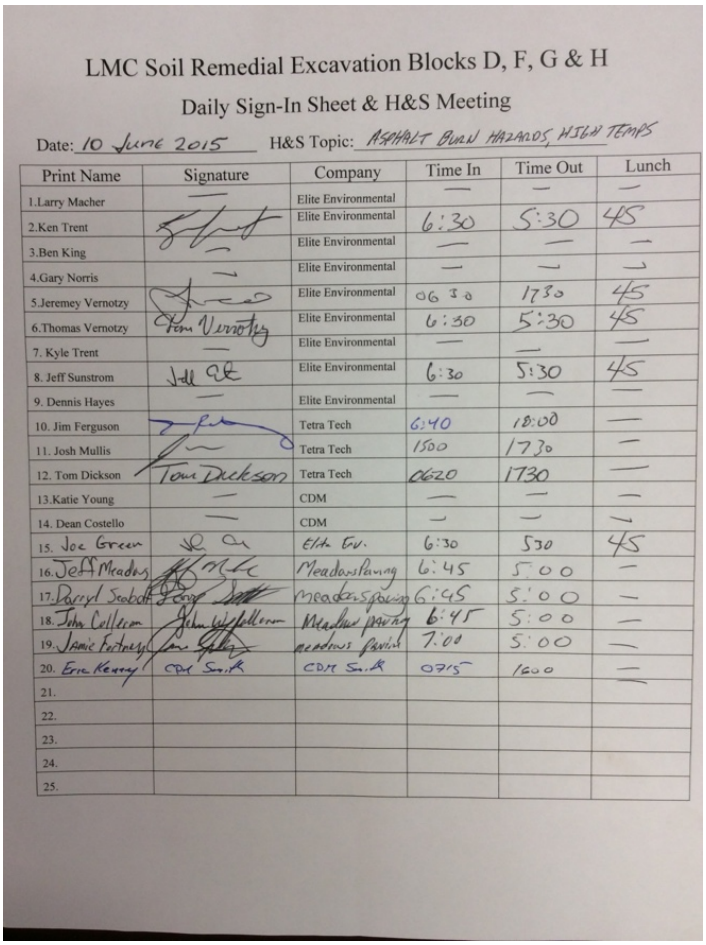
1. Complete excavations in Block G (completed 6/8 except for Area I), followed by surveying (completed 6/8 for Areas A-E) and backfilling. (UST area excavations completed 6/10)
2. Verification sampling of completed excavations (Block G Areas H and J completed 6/8).
3. Saw cut concrete areas in Block F.
4. Asphalt restoration in Block H Areas A and B (preparation completed 6/9, paving completed 6/10).
5. Complete construction entrance in Block F (completed 6/9).
6. Exploratory excavations for USTs in Block G (no USTs found, sampling completed 6/9).
7. Baltimore County E&S inspection scheduled for 6/9 for Block F controls (completed and approved on 6/9).
8. Continue silt fence installation activities in Block D.
9. Clear and grub brush from Block D Panhandle area.

Photos of Select Daily Activities

Comments: Block H Area A completed asphalt paving.

Comments: Block H Area B, compaction of final asphalt layer.

Photos of Select Daily Activities (continued)



Comments: Clearing and grubbing Block D Panhandle Area.

Comments: Block D super silt diversion fence installation.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 11, 2015	Start Work at:	6:30 AM	Depart Site at:	4:00 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	None	Precipitation:	None

Weather Comments: Humid, little to no wind.

Summary of Work/Major Activities

1. Hertz Equipment mechanic on site to fix power broom and to adjust ditch witch chain tightness.
2. Elite Environmental crews continue with E&S controls installation in Block D.
3. Trenching with Bobcat ditch witch in block D for silt fence installation.
4. Working with Rain-for-rent to try to arrange for delivery of an additional frac-tank for storm water storage.

Personnel On-Site

Name:	Company:
Tom Dickson	Tetra Tech
Jim Ferguson	Tetra Tech
Ivanna Goldsberry	Tetra Tech
Ken Trent	Elite Environmental
Jeff Sunstrom	Elite Environmental
Tom Vernotzy	Elite Environmental
Jeremy Vernotzy	Elite Environmental
Joe Greene	Elite Environmental

Health & Safety Topics or Issues

1. Discussed generating a task hazard analysis for trenching with the Bob-cat and ditch witch implement with the Elite Environmental staff.
2. Discussed keeping metrics for individual workers (weight/body temperature) in an effort to better monitor for signs of heat stress, fatigue or stoke.
3. Discussed better documentation of daily / weekly / monthly equipment inspections.
4. Discussed safety data sheet compilation and location with site documents.

QC Procedures/Inspections/Testing to be Performed Today

1. CQA for silt fence installation.
2. CQA for super silt fence installation.

Planned Week Schedule

1. Complete Block G excavation (completed 6/8 except for Area I), followed by surveying (completed 6/8 for areas A-E) and backfilling, (UST area excavations completed 6/10).
2. Verification sampling of completed excavations (Block G Areas H and J completed 6/8).
3. Saw cut concrete areas in Block F.
4. Asphalt restoration in Block H Areas A and B (preparation completed 6/9, paving completed 6/10).
5. Complete construction entrance in Block F (completed (6/9).
6. Exploratory excavations for USTs in Block G (no USTs found, sampling completed 6/9).
7. Baltimore County E&S inspection for Block F controls (completed and approved on 6/9).
8. Continue silt fence and super silt fence installation activities in Block D. (Ongoing as of 6/11).
9. Clear and grub brush in Block D panhandle area (Ongoing as of 6/11).
10. Deliver additional frac-tank for storm water (Delivered 6/11).

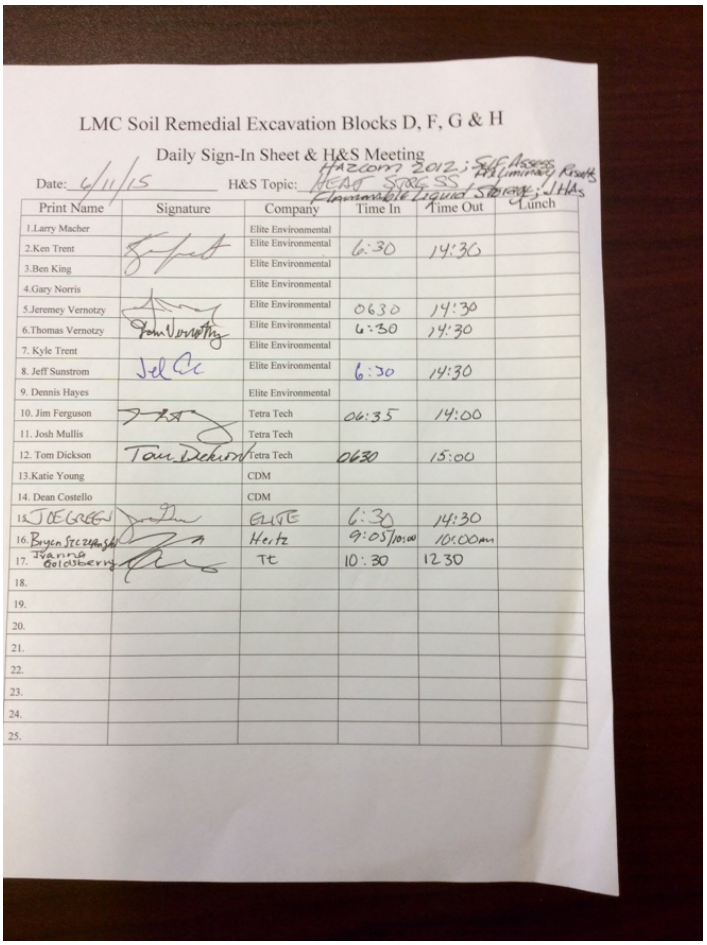
Photos of Select Daily Activities

Comments:

Block D super silt fence installation.

Comments:

Installation of super silt diversion fence in vicinity of construction entrance for Block D.



Photos of Select Daily Activities (continued)

Comments: Delivery of second frac for stormwater.

Comments:

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 15, 2016	Start Work at:	6:20 AM	Depart Site at:	7:00 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Mostly Cloudy	Wind:	Light	Precipitation:	Light Rain

Weather Comments: Overcast, intermittent rain and thunder showers.

Summary of Work/Major Activities

1. Diversion of storm water around Block G Area J.
2. Well abandonment Block F, UST Area (46A), Area E (47A) by Ground Zero Drilling.
3. Trenching with mini-excavator in Block D.
4. Installation of 18" HDPE RCP for storm water diversion in proximity to Block G Area J.

Personnel On-Site

Name:	Company:
Jim Ferguson	Tetra Tech
Tony Apanavage	Tetra Tech
Clyde Snyder	Tetra Tech
Jeff Sunstrom	Elite Environmental
Tom Vernotzy	Elite Environmental

Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 16, 2015	Start Work at:	6:30 AM	Depart Site at:	6:30 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	—

Weather Comments: Partly cloudy, wind out of the southwest.

Summary of Work/Major Activities

1. Silt fence trenching And silt fence installation.
2. Super silt fence installation Block D.
3. Storm water diversion piping enhancements.
4. Met with I. Goldsberry (Tt) and K. Trent (Elite Env.) regarding approach to excavation of south wall in Block G area H excavation.
5. During installation of storm water diversion pipe and the subsequent regrading of the area, located a transformer with wiring.
6. Two 20 cubic yard roll-offs were delivered to the site to contain soils in and around the transformer location. Roll-offs were lined and tapped following removal of the overlying soils and removal of the soils around the transformer.
7. Following regrading of soils in the location the transformer housing was located, covered the area with plastic to prevent any contact with precipitation to eliminate runoff.

J. Thoas	Lockheed Martin

Health & Safety Topics or Issues

1. Weather, lightening and safety issues.
2. Fall protection awareness related to operations involving the frac-tanks.

QC Procedures/Inspections/Testing to be Performed Today

1. Super silt diversion fence installation CQA in Block D.
2. Silt fence installation CQA in Block D.
3. Soil samples collected from area where transformer was found. Two grab samples from soil immediately in contact with the transformer and two composite samples from soils directly overlying the transformer.

Planned Week Schedule

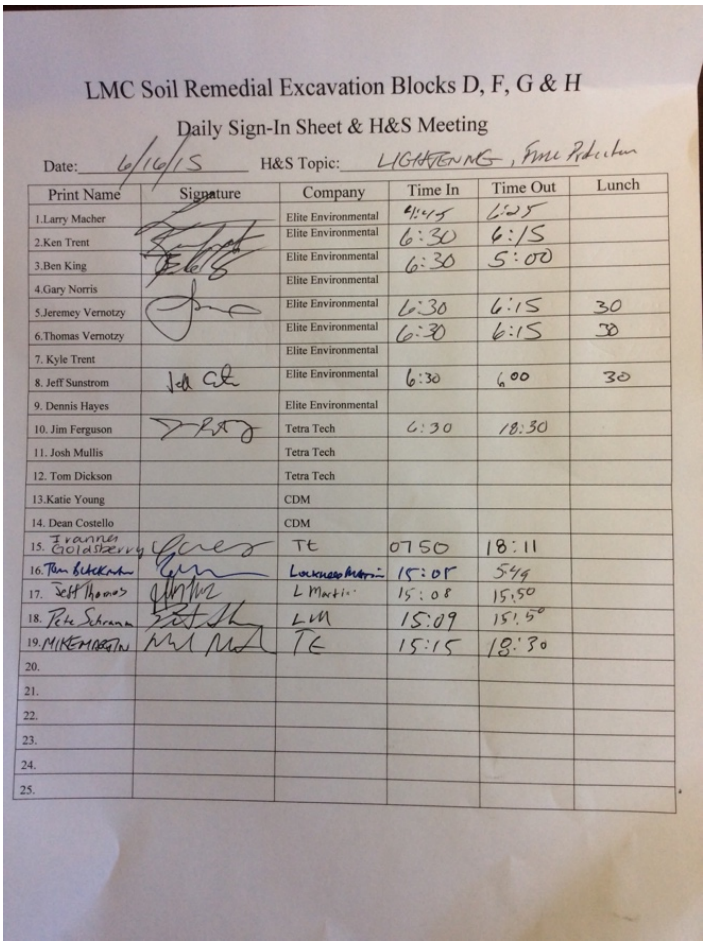
1. Diversion of storm water around Block G Area J (completed 6/16).
2. Construction entrance construction in Block D.
3. Demo concrete in Block F.
4. Begin backfill and compaction of excavations in Block G.
5. Remove temporary 6' chain-link fencing in Block H.
6. Continue E & S controls installation in Block D (Work is ongoing).
7. Excavate and contain soils from location around transformer located adjacent to Block G Area J excavation (completed 6/16).

Photos of Select Daily Activities

Comments: Location of transformer north and west of the storm water discharge drainage ditch.

Comments: Transformer removed by trac-hoe in fill material.

Photos of Select Daily Activities (continued)



Comments: Diversion pipe, transformer found near down gradient end of pipe. Block G Excavation Area J in left side of photo.

Comments: Transformer location, residual metal from transformer housing.

Health & Safety Topics or Issues

1. Slips trips and falls related to the rainy weather.
2. Poison ivy and remedies available in the site trailer if you feel you have been exposed.
3. Perform a quick review of tasks to be completed and assess hazards. Take any precautions prior to start of work.
4. Portable electric equipment use related to rainy and wet conditions, potential shock hazards.

QC Procedures/Inspections/Testing to be Performed Today

1. Review silt fence on pavement installation details.
2. Review silt fence installation details.

Planned Week Schedule

1. Diversion of storm water around block G area J (completed 6/16).
2. Construction entrance construction in Block D (week of 6/22).
3. Demo concrete in Block F (week of 6/22).
4. Begin backfill of excavations in block G (to be completed week of 6/22, approvals received 6/17).
5. Remove temporary 6' chain link fence in Block H (to be completed week of 6/22).
6. Continue E & S installation in Block D (work is ongoing).
7. Excavate and contain soils from location around transformer location adjacent to Block G area J excavation (completed 6/16).
8. Backfill Block G excavation areas. Additional excavation in south wall of Block G Area H, excavate Block G area I (week of 6/22).

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	June 22, 2015	Start Work at:	6:30 AM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments: Partly cloudy, wind out of the southwest.

Summary of Work/Major Activities

1. Pumped storm water from excavation are J in Block G due to extensive precipitation influx due to pop-up thunder storm on 6/21/15.
2. Complete super silt fence installation in Block D Panhandle.
3. Complete silt fence installation along west side of Block D panhandle.
4. Completed construction entrance opening in fence in Block D.

Personnel On-Site

EROSION AND SEDIMENT CONTROL
INSPECTION REPORT

PROJECT: LOCKHEED MARTIN Dist: 15
DATE: 6/30/15 TIME: _____ PERMIT #: B840975
☐ Correction Notice ☐ Stop Work order
Phone: (410)887-3226

An erosion and sediment control inspection was performed at the above referenced project, and the following deficiencies were found in violation of Baltimore County code, Article_____,Title_____, Section_____.

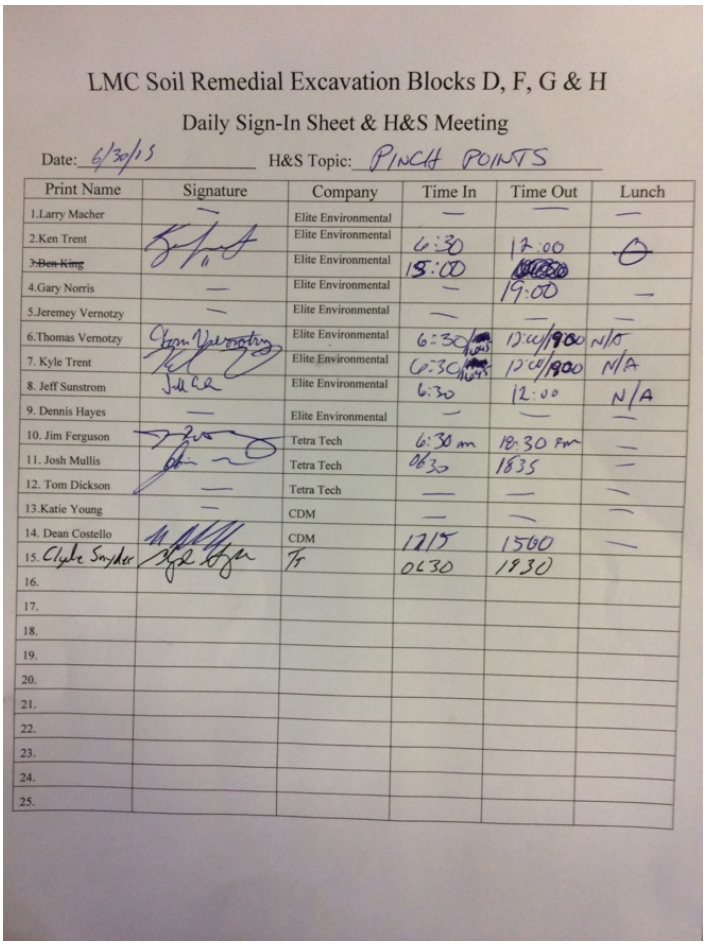
☐ Construction Entrance	☐ Dewatering	☐ Ult. Stream Crossing
☐ Silt Fence	☐ Outlet Protection	☐ Temporary Seeding
☐ Storm Drain Inlet Protection	☐ Riprap	☐ Permanent Seeding
☐ SSF/SFD	☐ Stone Check Dams	☐ Dust Control
☐ Diversion Dike	☐ Level Spreader	☐ Mud Tracking
☐ Sediment Trap	☐ Stream Bank Stabilization	☐ Sequence of Construction
☐ Sediment Basin	☐ Temporary Stabilization	☐ Swale(Temp)
☐ Temporary Vehicular Stream Crossing	☐ Soil Stablization Blankets and Matting	☐ Land Disturbance Outside of Approved Limits

☐ Other: _____

Comments:

The violations checked above must be corrected no later than:_____ Failure to comply and complete the required work, may result in penalization by way of monetary fine, imprisionment, or both, pursuant to Article 1, Section 217, and Article 33, Section 5 of the Baltimore County Code.

☑ **An erosion and sediment control inspection was conducted at the above referenced project and no deficiencies found.**



A Copy of this inspection report shall be maintained on site and available for review by County Inspectors.

Inspected by: (Print) JIM BRENDEL **(Signature)** _____

Received by: (Print) KEN TRENT **(Signature)** _____

Comments: E&S Inspection report for inspection conducted 6/30/15.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	August 6, 2015	Start Work at:	6:30 AM	Depart Site at:	4:00 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Partly Cloudy	Wind:	Moderate	Precipitation:	None

Weather Comments:

Summary of Work/Major Activities

1. Excavate completely Block D Area B, load out 14 trucks, and complete verification sampling.
2. Begin excavating Block D Area A, load out 4 trucks, and partially complete verification sampling.
3. Complete exploratory digging with mini excavator in Block D Area C for underground storm drain that runs through excavation, storm drain pipe located at 3'4" bgs, excavation is to 2' bgs, therefore, no issues will arise during excavation.
4. Conduct air monitoring while excavating in Block D with the MultiRae PID and DUSTRAKK monitors.
5. Secure Block D Areas A and B open excavations with orange fencing.

Personnel On-Site

Name:	Company:
Josh Mullis	Tetra Tech
Jim Ferguson	Tetra Tech
Clyde Snyder	Tetra Tech
Larry Macher	Elite Environmental
Ken Trent	Elite Environmental
Kyle Trent	Elite Environmental
Thomas Vernotzy	Elite Environmental
Dean Costello	CDM Smith
Scott Nesbit	Tetra Tech
Ivanna Goldsberry	Tetra Tech
Tom Blackman	Lockheed Martin
J. Herman	MDE-OCP
G. Schold	MDE-LRP
Mike Martin	Tetra Tech

Health & Safety Topics or Issues

1. Operator safety on excavators; stay out of Line of Fire, watch swing patterns of excavator.
2. Slips, trips, and falls - uneven/unstable ground.
3. Heat stress: drink plenty of fluids and take breaks.

QC Procedures/Inspections/Testing to be Performed Today

1. Air monitoring during excavations in Block D with a MultiRae PID and DUSTRAKK Air monitors.
2. Conduct verification sampling in Block D Areas A and B.

Planned Week Schedule

1. Air monitoring via DUSTRAKK monitors and/or Multirae Photoionization (PID) detector (performed during excavation activities).
2. Continue to backfill Block F excavations with select fill (top soil placement and reseeding to be completed by 8/14).
3. Conduct exploratory UST investigation in Block F UST area (completed 8/3).
4. Move jersey barriers from Block F to Block G Area I for silt boom deployment (completed 8/3).
5. Investigate Block F Area A pipe area for possible USTs (initial investigation completed 8/4).
6. Baltimore County Inspector Jim Brendel approves E&S controls in Block D and D Panhandle (completed 8/5).
7. Await approvals to begin work for Block G UST Area, Block G Transformer Area, Block G Area I and approval for recycling facility for asphalt and concrete generated during the soil remedy project.
8. Begin Block D excavation and soil load out activities (Area B complete 8/6, Area A partially complete 8/6).
9. Conduct verification sampling of base and sidewalls of excavations in Block D (Area B complete 8/6, Area A partially complete 8/6).

Tentative schedule for week of 8/10
1. Continue to excavate, load out trucks, and conduct verification sampling in Block D.
2. Continue to backfill Block F excavations with select fill, topsoil, and reseeding.
3. Await approvals to begin work for Block G UST Area, Block G Transformer Area, Block G Area I and approval for recycling facility for asphalt and concrete generated during the soil remedy project.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	August 12, 2015	Start Work at:	6:30 PM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments: Wind out of the northeast.

Summary of Work/Major Activities

1. Set up DUSTRAKK air monitors in Block D for excavation activities. In addition to the DUSTRAKK monitors, personal air sampling equipment (aluminum cyclone device) was placed in the cab of the excavator and on a DUSTRAKK device for analytical sampling for crystalline silica and PAH concentrations.
2. Continue excavating in Block D; Area A complete (10 trucks loaded), Area C complete (16 trucks loaded), Area E partially complete (5 trucks loaded).
3. Collect verification sidewall and base samples from Block D excavation Areas A, C, and E (E partially complete).
4. Block D Area C specifics: Two telephone poles were located in the southwest corner of the excavation. Both poles (approximately 6' long) were removed from the ground and left in the excavation.
5. Block D Area E: While loading out trucks in Block D Area E, soft grass conditions and heavy trucks created large ruts in the grass. Contacted John Morgan of LMCPI regarding the soft soil conditions in the Block D Areas E/F excavations, requested permission to place stone down to facilitate access, placement was authorized. Areas are to be restored upon completion of project. No. 2 stone was then delivered and placed into and around disturbed areas.
6. Use mini excavator to attempt to locate various storm drains running through Block D for future work in the Block D Seep Area.
7. Hertz Equipment delivers a street sweeper and a small dump truck to move stone for Block D disturbed grass area.

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech

Health & Safety Topics or Issues

1. Equipment safety, spotters and appropriate PPE for traffic areas.
2. Heat stress, higher temps during mid-day, stay hydrated and take breaks.

QC Procedures/Inspections/Testing to be Performed Today

1. Air monitoring during excavations in Block D with a MultiRae PID and DUSTRAKK Air monitors.
2. Air sampling for particulates (crystalline silica and PAH) during excavation activities (samples sent to lab).
3. Verification sidewall and base soil sampling in Block D Areas A, C, and E (E partially complete).

Planned Week Schedule

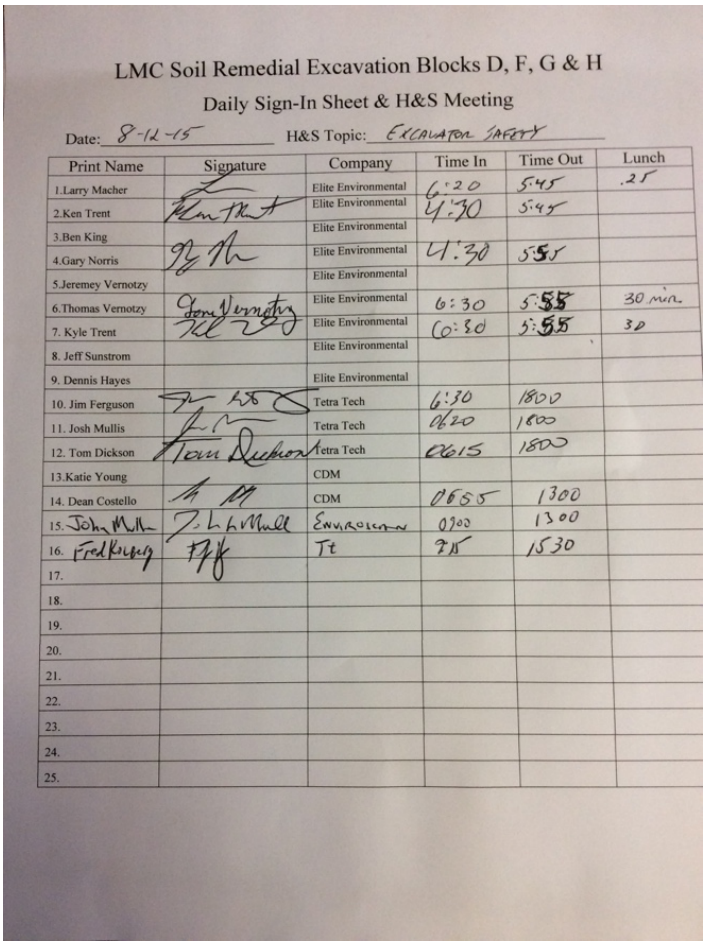
1. Exploratory test digging in Block F UST Area (complete 8/10).
2. Excavate soil and load out trucks in Block D (Area A complete 8/12, Area B complete 8/6, Area C complete 8/12, Area E begun 8/12).
3. Conduct verification soil sampling in Block D (Area A complete 8/12, Area B complete 8/6, Area C complete 8/12, Area E partially complete 8/12).
4. Air monitoring during excavations in Block D with DUSTRAKK air monitors and a MultiRae PID (ongoing).
5. Collect air particulate samples for crystalline silica and PAH (completed 8/12 during excavation activities).
6. Place No. 2 stone on disturbed grassy areas in Block D for future truck load out in Areas E, F, and F1 (stone placed 8/12).

Photos of Select Daily Activities

Comments: 1. Block D Area E, wooden poles in excavation.

Comments: 2. DUSTRAKK air monitoring system and air particulate sampler (aluminum cyclone) downwind of Block D Area E during excavation activities.

Photos of Select Daily Activities (continued)



Comments: 3. Block D Area C, poles removed from ground in southwest corner.

Comments: 4. Placement of #2 stone to allow access into Block F Areas E and F.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	August 13, 2015	Start Work at:	6:30 AM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments:

Summary of Work/Major Activities

1. Soil load out in Block D Areas E and F1.
2. Pumped storm water from Block D Areas A and C into rain for rent frac tank staged in Block D.
3. Camz Corp. delivers select fill material (540 tons) to Block D for backfill of excavations completed to date.
4. A.V. Burke LLC surveys bases of completed excavations in Block D Areas A, B, C and E. Surveyors will also locate tie back pilings within the limits of the respective excavation areas.
5. Personal ambient air samples were collected for PAH's and crystalline silica (respirable dust fraction) via aluminum cyclone pumps as well as the DUSTRAKK air monitors.

Personnel On-Site

Vinnie Burke	A.V. Burke LLC

Health & Safety Topics or Issues

1. Vehicle and equipment safety concerns (visibility, pinch points, backup alarms).
2. Personal ambient air monitoring.

QC Procedures/Inspections/Testing to be Performed Today

1. Air monitoring during excavations in Block D with a MultiRae PID and DUSTRAKK air monitors.
2. Air sampling for particulates (crystalline silica and PAH) during excavation activities (samples sent to lab).
3. Verification sidewall and base soil sampling in Block D Area E.

Planned Week Schedule

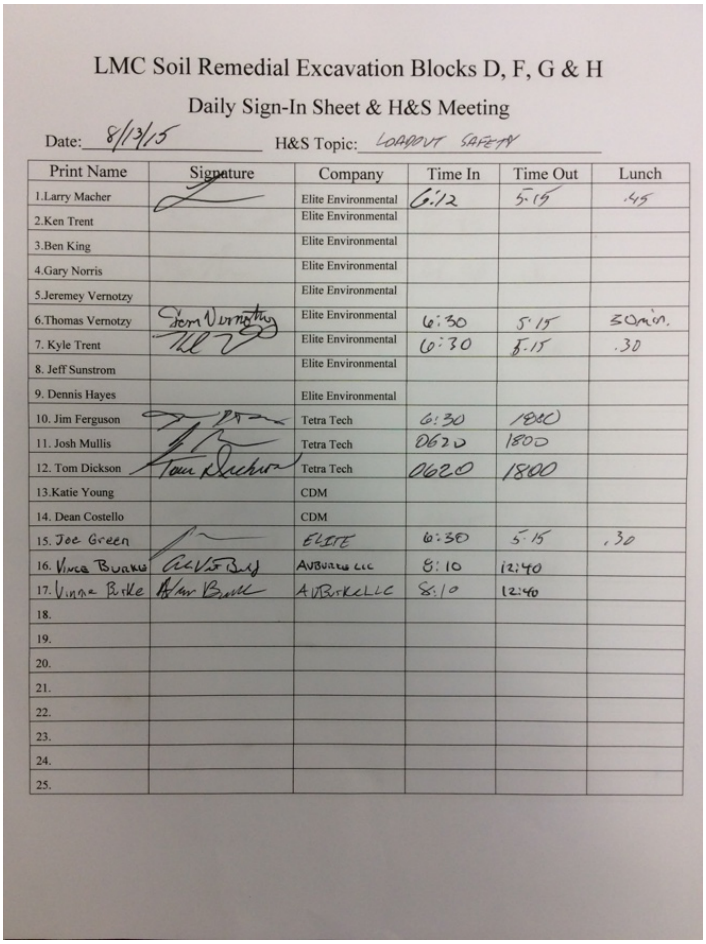
1. Exploratory test digging in Block F UST Area (complete 8/10).
2. Excavate soil and load out trucks in Block D (Area A complete 8/12, Area B complete 8/6, Area C complete 8/12, Area E complete 8/13, Area F1 begun 8/13).
3. Conduct verification soil sampling in Block D (Area A complete 8/12, Area B complete 8/6, Area C complete 8/12, Area E complete 8/13).
4. Air monitoring during excavations in Block D with DUSTRAKK air monitors and a MultiRae PID (ongoing).
5. Collect air particulate samples for crystalline silica and PAH (completed 8/12 and 8/13 during excavation activities).
6. Place No. 2 stone on disturbed grassy areas in Block D for future truck load out in Areas E, F, and F1 (stone placed 8/12).
7. Begin to backfill completed Block D excavation areas (540 tons delivered 8/13).
8. Pump out storm water from Block D excavations into frac tank staged in Block D (begin pumping 8/13).
9. Survey post excavation limits of Block D Areas A, B, C, and E (completed 8/13).

Photos of Select Daily Activities

Comments: 1. Realtime ambient air monitoring during excavation activities.

Comments: 2. Excavation of soil in Block D Area E.

Photos of Select Daily Activities (continued)



Comments: 3. Bulkhead tie back pilings in Block D excavation Area F1. Also excavated from 3' to 5' in the southeast corner of Area F1 containing tarry, asphaltic material.

Comments: 4. Tarry asphaltic material removed from southeast corner of Block D Area F1.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	August 19, 2015	Start Work at:	6:45 AM	Depart Site at:	5:45 AM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Overcast	Wind:	Other (explain)	Precipitation:	—

Weather Comments: High 90 deg, humidity 53%

Summary of Work/Major Activities

Block D
1) Excavated Area F1 to 3-feet, 29 trucks offsite
2) Survey completed portion of Area F to confirm excavated to desired depth (2-feet).
3) Begin backfilling Area F with stockpiled/staged select fill.
4) Hydroseed restored, Area E - See description Block F.
5) Restored Block D, Areas A, B, C, and E with asphalt millings.
5a) Topsoil - One load of topsoil spread and scarifier on Area E prior to hydro seeding.

Block F
6) Restored Areas A, B, C, D, & E - This included spreading seed; covered then with straw; then a sprayed hydro mulch mixture
7) Two loads of topsoil were delivered and spread over Area E.

Health & Safety Topics or Issues

Heat stress/strain
Stay well hydrated, take breaks often; limit physically taxing activities
Watch out for each other
Use your cards as reference report to SSHO if you are experiencing signs and symptoms of Heat stress.

Truck and loading safety - This includes placement of the truck during offloading and your placement during dumping - Back away from the truck (at least the height of the bed) during offloading in case the load sticks and the truck tips over;
Place the truck on firm flat ground before dumping.
Exercise caution during dumping not to approach the sea wall to close due to instability.

Hearing conservation and the use of hearing protection. All open cab equipment requires the use of hearing protection plugs or muffs

QC Procedures/Inspections/Testing to be Performed Today

Verification sampling conducted Block D, Area F1. Sidewalls VS-1 & 2; VB- 2, 3, 6, 7, 8, & 9

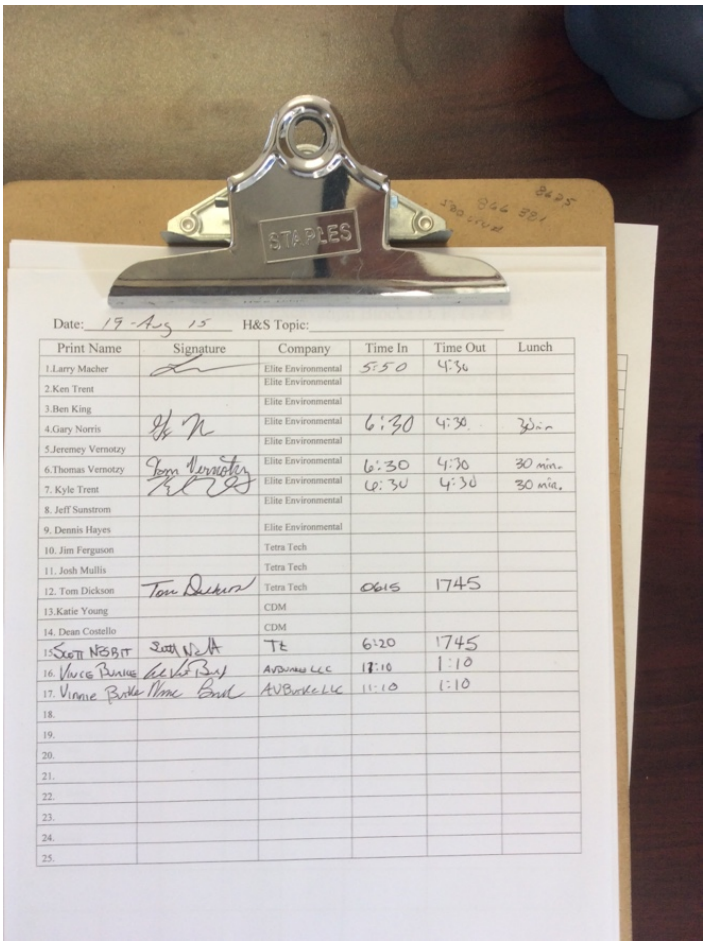
Planned Week Schedule

1) Empty and decon water storage tank (8/20), Block G
2) Backfill Block D, Area F, F1 (portion thereof); begin 8/19
3) Continue to excavate Block D, Area F, F1 (began 8/19)

Photos of Select Daily Activities

Comments: Block D, Area E - Restored hydro seeded area.

Comments: Surveying Block D, Area F.



Photos of Select Daily Activities (continued)

Comments: Tieback structure, Area F1.

Name:		Company:	

Health & Safety Topics or Issues

1. Operator safety, stay out of the line of fire w/ swing of bucket, always use a spotter.
2. Hot and humid conditions; stay hydrated, wear sun block, take breaks.
3. Heavy rain last night causing wet slippery conditions today, beware of slips trips and falls.

QC Procedures/Inspections/Testing to be Performed Today

1. Air monitoring via DUSTRAKK monitors and MultiRae PID.
2. Verification sidewall and base sampling in excavation Areas F and D in Block D.
3. Waste characterization sample collected from Block D frac tank holding storm water.

Planned Week Schedule

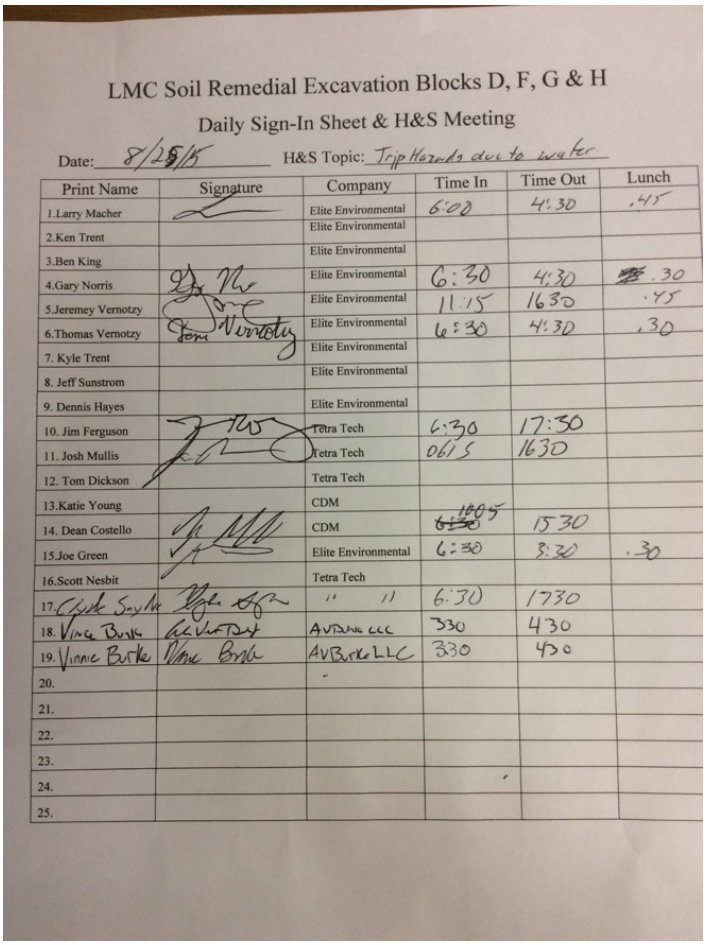
1. Air monitoring via DUSTRAKK monitors and/or Multirae Photoionization (PID) detector (performed during excavation/backfilling activities).
2. Excavate in Block D (all areas complete excavation 8/25).
3. Continue to backfill Block D excavations with select fill (ongoing).
4. Conduct verification sampling of base and sidewalls of excavations in Block D (completed 8/25).
5. Survey post excavation limits in Block D (Area F1 completed 8/24, Areas F and D completed 8/25).
6. Pump storm water from Block D Areas F and F1 excavations into frac tank in Block D (ongoing).
7. Collect a waste characterization sample from the frac tank in Block D containing storm water pumped from excavations for future disposal (collected 8/25).

Photos of Select Daily Activities

Comments: Excavation and truck loading activities in Block D Area F excavation.

Comments: Storm water pumped out from Block D excavation Areas F and F1 into frac tank.

Photos of Select Daily Activities (continued)



Comments: Excavation and truck loading activities in Block D Area D.

Comments: Block D Area D secured with orange fencing.

Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	August 31, 2015	Start Work at:	6:30 AM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	Light Rain

Weather Comments: Overcast, light rain in morning, clearing in the afternoon.

Summary of Work/Major Activities

1. Setup DustTRAK air monitoring stations and meteorological station in Block D.
2. Agtrans supplied 32 trucks of select fill that was placed in Block D Areas D and F. Both areas were compacted following fill placement.
3. 675 tons of select fill was delivered to Block D for backfill purposes.
4. Break up concrete pads in the UST area to permit access to several areas for continued UST test pitting activity in Block G.
5. Removed tarp from 20 yard roll off container to recover housing of transformer located north of Block G Area J. Placed remnant into a drum until hexane wipes could be delivered to the site so wipe samples could be collected (13:00-14:00).
6. J. Brendell of Baltimore Conservation District was on site to perform an inspection of E&S controls in place on the Site.

Health & Safety Topics or Issues

1. Potential weather hazards today, keep alert for approaching thunder storms.
2. During backfilling operations, please monitor all heavy equipment traffic. Utilize spotters while backing in dump trucks bringing select fill into the site. Be alert when approaching an excavator, be aware of the swing radius of the equipment.
3. Utilize hearing protection while operating heavy equipment.

QC Procedures/Inspections/Testing to be Performed Today

Monitor placement and compaction of fill material in the excavations at Block D.
Setup and operate DustTRAK monitors.

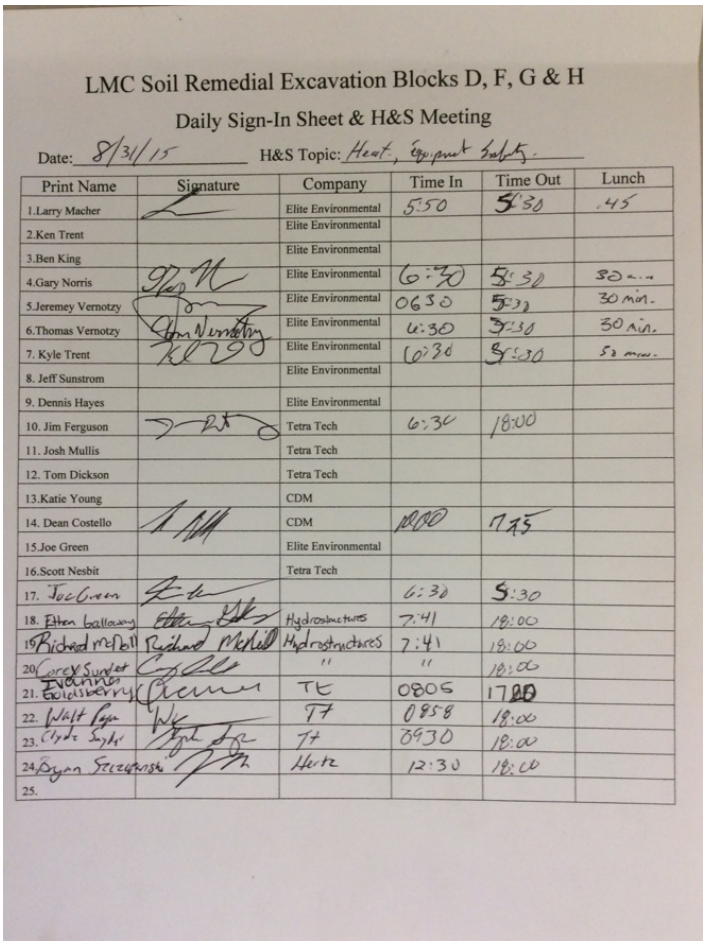
Planned Week Schedule

1. Finish fill placement in Block D (ongoing)
2. Perform Block G UST Test Pitting, must remove concrete prior to moving forward (ongoing).
3. Perform real time ambient dust monitoring using DustTRAK system.
4. Place transformer remnants in over pack drum to await analytical results (ongoing).

Photos of Select Daily Activities

Comments: 1. Operator uses hoe ram to break concrete pad between Block G Area J and UST Area.

Comments: 2. Soil exposed in Block G exploratory UST dig area following removal of concrete pad.



Photos of Select Daily Activities (continued)

Comments: Placement and compaction of fill material in Block D area F.

TETRA TECH, INC.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	September 1, 2016	Start Work at:	6:30 AM	Depart Site at:	6:30 PM

Weather Conditions

Temperature (°F):	80 to 90	Skies:	Few Clouds	Wind:	Light	Precipitation:	—

Weather Comments: Hot, humid.

Summary of Work/Major Activities

1. Complete backfill in Block D Areas F and D.
2. Set up DustTRAK air monitoring system.
3. Excavated two trenches (4' x 15' x 7.5') (9:35) between Block G excavation Area J and the north edge of the UST excavation Area (points G55 and G52). Excavated to a depth of 7.5' below ground surface into red brown, and tan-brown, silty, sandy (fine), clay. USTs were not located. Soils were I disturbed in both excavations. PID scanning of soil removed did not detect any volatile organic compounds in soil removed from the excavations.
4. Completed second UST Area Test pit. Excavated pit 7' X 85' X 7' south and west of wells 12a, 12b and 12c. Encountered a layer of heterogeneous fill material from the ground surface to 3', overlying a 1'-2' layer of fine, silty, sand (sm - 2')' overlying a layer of pea gravel (1'-2', gm).
5. Following removal of concrete pads and concrete foundation supports, began to dig test pit starting on south side (North American Lighting) of former structure (15:30). While starting to dig encountered a mixture of sandy silt (wet, mud) and brown, sludge like petroleum material directly beneath the location of a concrete slab. Collected a sample for analysis (G-WC-FTL-1). Removed a 3" Inside diameter steel pipe with petroleum sludge inside the pipe. Collected another sample (G-WC-FTL-2). Samples to be submitted to Test America for Analysis.

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech
C. Snyder	Tetra Tech
I. Goldsberry	Tetra Tech
L. Macher	Elite Env.
G. Norris	Elite Env.
J. Vernotzy	Elite Env.
T. Vernotzy	Elite Env.
K. Trent	Elite Env.
B. White	Hollis-Karnes
J. Green	Elite Env.
D. Costello	CDM Smith
B. Scezmanski	Hertz Equipment

Health & Safety Topics or Issues

1. Heat stress monitoring, hydration breaks should be frequent throughout the day.

QC Procedures/Inspections/Testing to be Performed Today

1. PID monitoring during excavation at Block G UST Area test pit locations. PID calibration by C. Snyder.
2. Monitor fill placement and compaction in Block F.
3. Collected two sludge like samples for analysis at the former Fuel Test Lab Location (G-WC-FTL-1 and G-WC-FTL-2).
4. Collected ambient air samples from personal air sampling devices workers were equipped with. Samples to be analyzed for PAHs and silica dust.

Planned Week Schedule

1. Complete backfill and compaction of Block D Areas D and F (8/31 - ongoing)).
2. Perform Ambient air monitoring during Block F backfilling activities (8/31 - ongoing).
3. Perform soil compaction testing in Block D Area F (Hillis-Karnes, completed 9/1).
4. Excavate test pits in Block G UST areas of concern (9/1 - ongoing).

Photos of Select Daily Activities

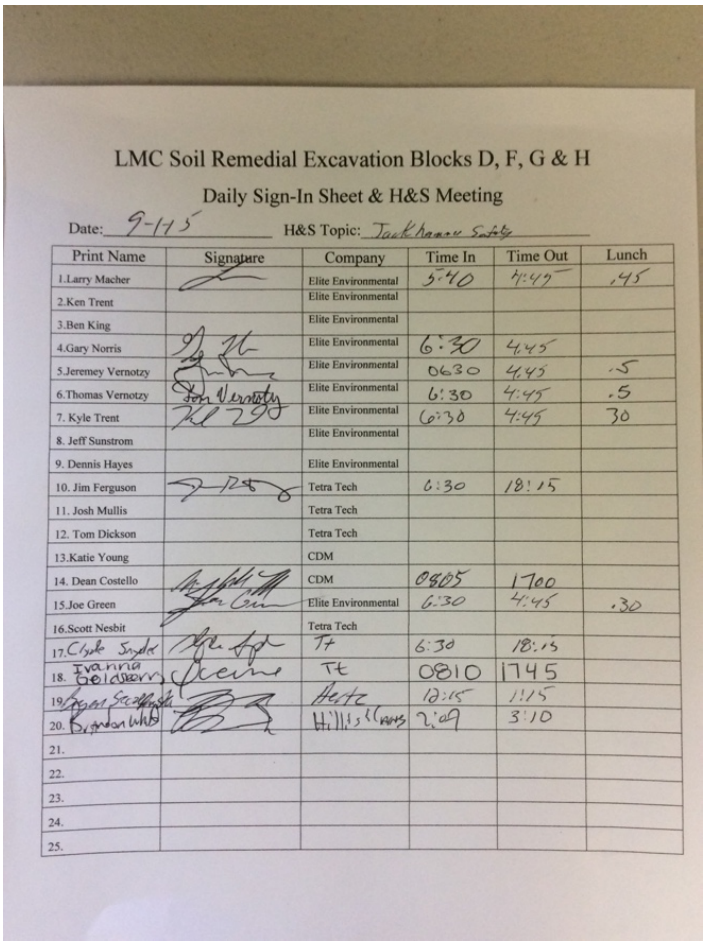
Comments:

1. Side by side excavations completed in between Excavation Area J and the initial UST Area identified in scoping documents. Both excavations completed to a depth of 7.5' below ground surface. Water western (right side of photo) test pit was due to water discharging from CR-6 backfill placed in Area J. Groundwater was not encountered in either excavation area.

Comments:

2. Fuel Test Lab building excavation, photo showing soil/mud/sludge located immediately beneath the location of a concrete slab. PID monitoring of material indicated organic vapors ranging from 31ppm to 67 ppm. Waste sample G-WC-TL-1 was collected for analysis.

Photos of Select Daily Activities (continued)



Comments: 3. G-WC-FTL-2 sample collected at Fuel Test Lab Area. Note sludge from steel pipe (PID ranged from 30-67 ppm).

Comments: 4. Compaction of soil at test pit located the vicinity of wells 12A, 12B and 12C in Block G UST area.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	September 15, 2015	Start Work at:	6:30 AM	Depart Site at:	5:00 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Few Clouds	Wind:	Light	Precipitation:	None
Weather Comments:							

Summary of Work/Major Activities

1. Begin excavation in Block G Transformer area in between Area H and the super silt fence to the northwest/west. First trench dug parallel to Area H (3' wide by approx 7.5' deep by 35' long). Metal scraps and misc fill items (brick, concrete, metal bucket) found from 2' to 5' bgs with the fill material grading downwards towards cow pen creek (see picture 1).
Two additional trenches dug parallel to the first (same dimensions), no items of interest uncovered. All three trenches were immediately backfilled and will be reseeded. The area of interest between excavation Areas J and I will be investigated 9/16.

2. Place hay and seeding mixture in Block G Area I, Block G Transformer Areas, Block D Areas F and F1, and Block F Area E to support revegetation of excavation areas. These areas will also be watered twice a day.

Name:		Company:	

Health & Safety Topics or Issues

1. Operator safety, stay out of the line of fire w/ swing of bucket, always use a spotter.
2. Use caution when working near slick surfaces due to rain, slips trips and falls.

QC Procedures/Inspections/Testing to be Performed Today

1. DUSTRAKK air monitors in place during excavation activities.
2. Subsurface metallic material located via magnetometer for Block G Transformer investigation.

Planned Week Schedule

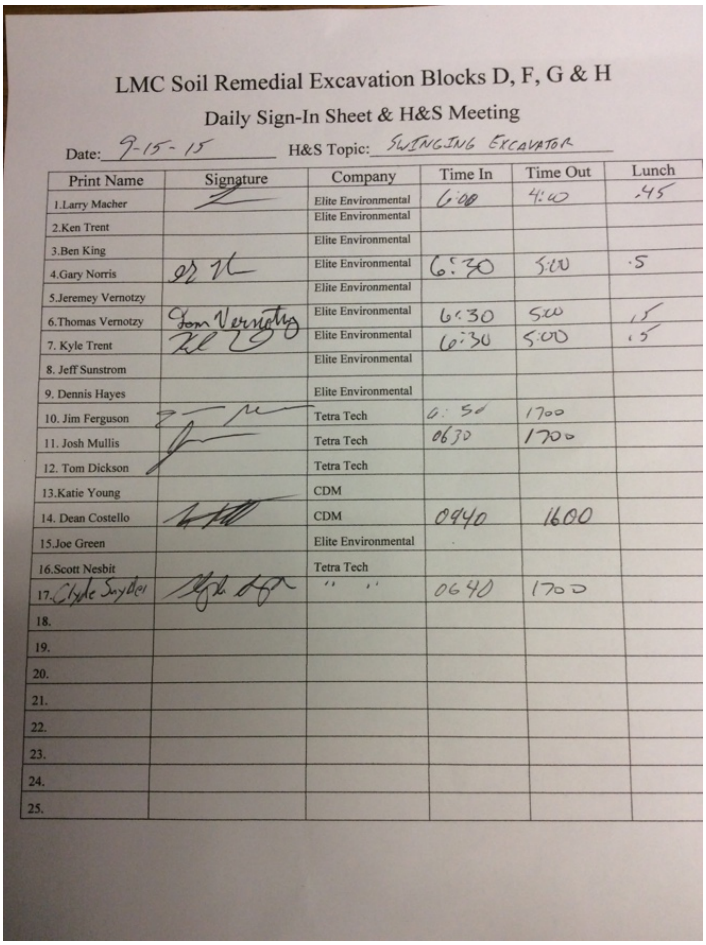
1. Backfill Block G Area I (ongoing, topsoil backfilled 9/14).
2. Block G Transformer Area excavation, followed by re-seeding and curl-x placement (area northwest of Area H complete 9/14, area in-between Area H and the silt fence completed 9/15, Area between I and J to be completed 9/16).
3. Monitor growth conditions for re-seeded excavation areas in Block F, D, and G (ongoing).
4. Place hay and seeding mixture in Block G Area I, Block G Transformer Areas, Block D Areas F and F1, and Block F Area E to support revegetation of excavation areas (completed 9/15).

Photos of Select Daily Activities

Comments: 1. Block G Transformer area in between Area H and the silt fence. Fill material grades downwards towards cow pen creek (with the creek side slope) suggesting various layers of fill pushed downwards to cow pen creek.

Comments: 2. Block G Transformer Area excavation. Pictured above is the area of the first trench. Area H is shown to left of excavator and the silt fence runs behind the picture taker.

Photos of Select Daily Activities (continued)



Comments: 3. Block G Transformer Inv. between Area H (to the right) and the silt fence (to the left). Trench 3' wide by 7.5' deep by 35' long. No items of concern found, only scrap metal, bricks, and wood found.

Comments: 4. Block G Transformer Area, contractor onsite spreading hay and seeding liquid mixture for regrowth.

Health & Safety Topics or Issues

Activity: Truck loading – D-Panhandle Areas A and A1 (4-feet deep)
Safety concerns:
· Truck driver safety – Keep them out of the active zones; PPE requirements will be relaxed in those locations; Active zones, they look like us or do not get out of the truck.
· Do NOT place yourself between trucks; trucks and equipment; trucks and immovable objects
· Climbing trucks – Slip, trip, and fall - Maintain 3-points of contact; Do not remain on top of the truck
· Excavation depth – 4-feet in depth - need ladders or structured entrances/egress. Check with SSHO before entry

QC Procedures/Inspections/Testing to be Performed Today

1. Air monitors and MultiRae PID utilized during excavation activities in Block D Panhandle.
2. Verification sidewall and base sampling in Block D Panhandle Areas A, A1, and B conducted; will be analyzed for PAH, arsenic, and hex chrom.

Planned Week Schedule

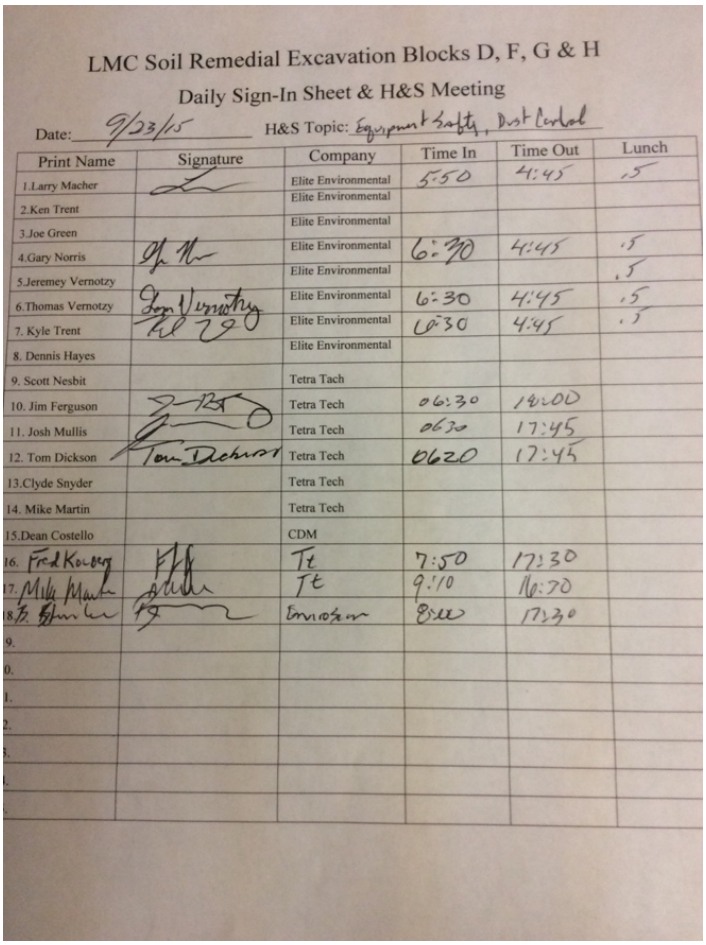
1. Backfill Block G Transformer Areas w/ topsoil (ongoing).
2. Monitor growth conditions for re-seeded excavation areas in Block F, D, and G (ongoing).
3. Load out stockpiled soil from the Block G Area I excavation to the landfill in Little Plymouth, VA (1 truck loaded and load out complete 9/21).
4. Decontaminate excavator bucket and mob to Block D Panhandle for work starting 9/22 (complete 9/21).
5. Excavate in Block D Panhandle (complete Area A1 9/22, complete Areas A and B 9/23).
6. Conduct verification sidewall and base sampling in Block D Panhandle excavations (Areas A, A1, and B complete 9/23).
7. Load out Block D Panhandle soil (14 trucks from Area A and 4 trucks from Area B on 9/23).
8. Place jersey barriers in Block D and D Panhandle for future use as anchors for the turbidity curtain (anchors in place 9/22, turbidity curtain delivered 9/23).

Photos of Select Daily Activities

Comments: 1. Block D Panhandle Area A excavation and truck loading activities. Photo facing west to northwest.

Comments: 2. Block D Panhandle Areas A and A1 excavation completed, orange fencing surrounds open excavation. Photo facing north to northwest.

Photos of Select Daily Activities (continued)



Comments: 3. Block D Panhandle Area B excavation and truck loading activities, photo facing west.

Comments: 4. Block D Panhandle Area B excavation completed, orange fencing put in place around open excavation. Photo facing south to southwest.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	September 29, 2015	Start Work at:	6:30 AM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Mostly Cloudy	Wind:	Light	Precipitation:	—

Weather Comments: Overcast and humid.

Summary of Work/Major Activities

1. Complete backfill and compaction of Block D Panhandle Area A.
2. Begin asphalt removal in Block D Panhandle.
3. Troxler density testing in Block D Areas A and B.
4. Tie back repair in Block D Area F.

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech
T. Dickson	Tetra Tech
W. Pryor	Tetra Tech

Aileen Craig	CDM Smith
D. Costello	CDM Smith

Health & Safety Topics or Issues

1. Discussed equipment operation and safety related to the stripping of asphalt in Block D Panhandle. Requested that staff be alert and be aware of backup alarms on the equipment.

QC Procedures/Inspections/Testing to be Performed Today

1. Trioxler density testing in Block D Panhandle Areas A and B.
2. Monitoring removal of asphalt in Block D

Planned Week Schedule

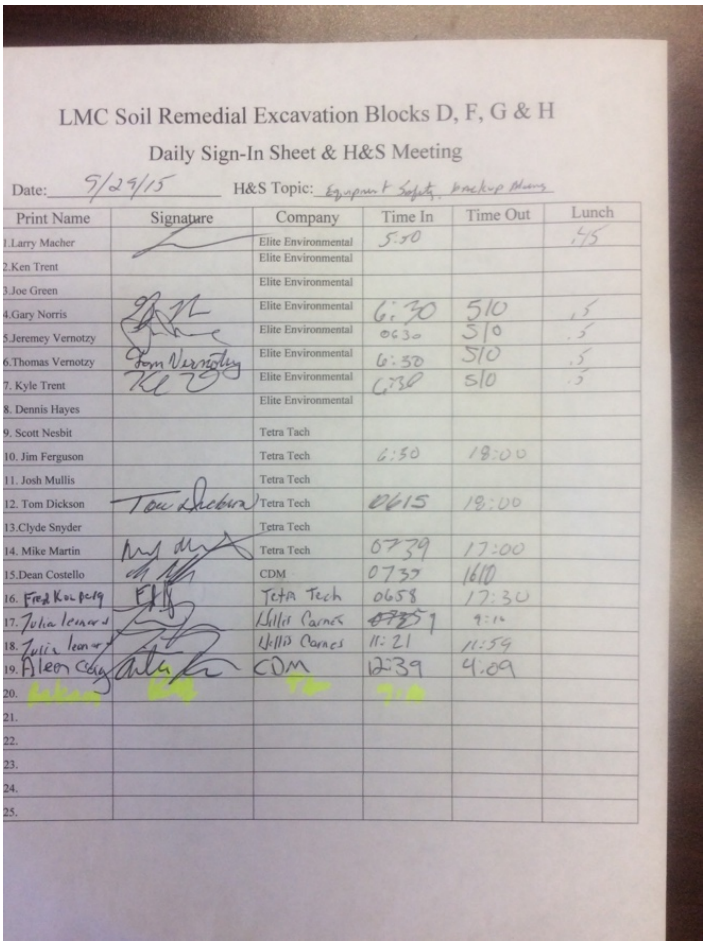
1. Backfill and compact Block D Panhandle Areas A and B (9/28-29).
2. Strip asphalt from Block D Panhandle (9/29).
3. Test pits for Block D Panhandle storm water conveyance repairs.
4. Complete Block D Area F-1 tie back repair (9/29, ongoing).
5. Remove rubble and storm water conveyance structure behind bulkhead in Block D Panhandle.
6. Install turbidity curtain in Block D Panhandle (9/28).
7. Complete density testing in Block D Panhandle Areas A and B (9/29).
8. Baltimore County erosion control and sedimentation control inspection.

Photos of Select Daily Activities

Comments: 1. Irrigation of reseeded areas at Block D.

Comments: 2. Piling and tie back repair in Block D Area F-1. Poured 1.5 cubic yards of 3500 psi concrete.

Photos of Select Daily Activities (continued)



Comments: 3. Compaction/ density testing at Block D Panhandle Area A.

Comments: 4. Stripping asphalt from Block D Panhandle Area.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	October 5, 2015	Start Work at:	6:45 PM	Depart Site at:	6:00 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Few Clouds	Wind:	Light	Precipitation:	None

Weather Comments: Sunny, cool, light wind out of northeast.

Summary of Work/Major Activities

1. Stage asphalt remnants in Block D Panhandle at north end of the area to facilitate placement of topsoil.
2. Site walk and inspection of Blocks D, D Panhandle, F and G to determine impacts of weather from 10/2 through today.
3. Readjust turbidity curtain in Block D Panhandle.

Personnel On-Site

Health & Safety Topics or Issues

1. Discussed equipment operational hazards associated with movement of the asphalt in Block D Panhandle.
2. Reviewed procedures for securing equipment and work areas prior to departure from site.

QC Procedures/Inspections/Testing to be Performed Today

1. Monitored skid-steer equipment operation in proximity to additional earth moving equipment in the Block D Panhandle area.

Planned Week Schedule

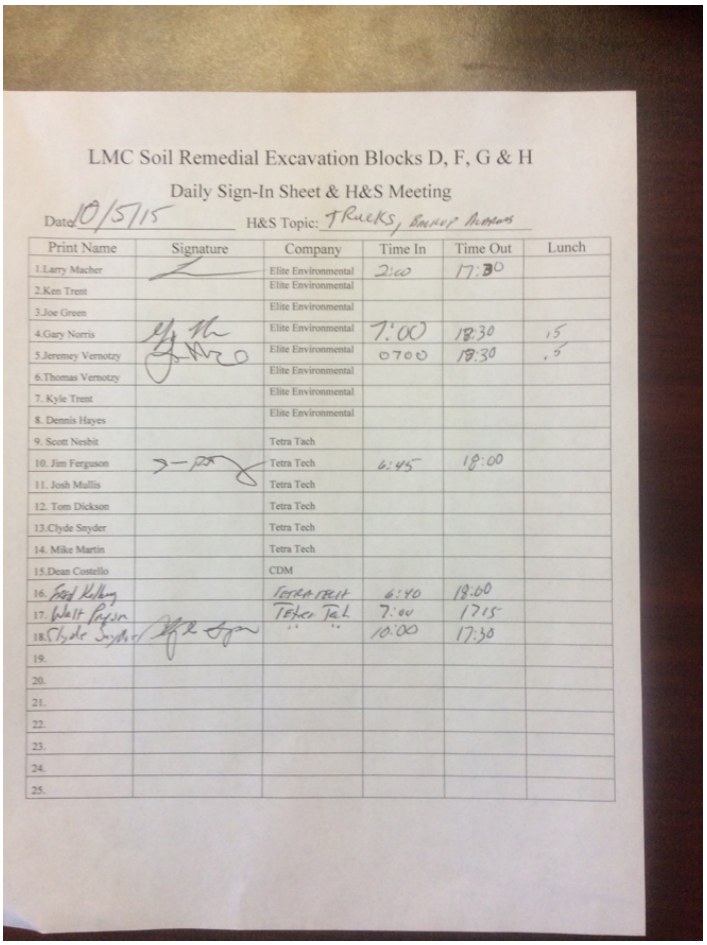
1. Stage asphalt / asphaltic sub-base material for removal in Block D Panhandle (10/5, ongoing).
2. Complete Block D Area F-1 tie back repair by filling remaining excavation with select fill (ongoing).
3. Place top soil in Block D Panhandle area (to be completed 10/7-10/8).
4. Complete an additional test pit in Block G between the transformer area, Area H and I (cross roads area, to be completed 10/6).
5. Test pit and removal of debris near the storm water conveyance structure in Block D/D Panhandle (to be completed 10/7-10/8).
6. Survey proposed drainage channel below stormwater outfall in Block G, between UST Area and Area J (to be completed 10/7).

Photos of Select Daily Activities

Comments: 1. Block G Area I slope following 10/2 weekend storm, minor erosion of hay used for initial stabilization of slope.

Comments: 2. Some minor slippage of Curlex stabilization matting at top of Block G Area I slope.

Photos of Select Daily Activities (continued)



Comments: 3. Overland flow of storm water in Block G UST Area.

Comments: 4. Select fill which was displaced past the super silt fence in Block D Panhandle Area B.

Health & Safety Topics or Issues

1. Excavation safety and worker / operator hand signals.
2. Environmental monitoring related to excavation of soil and storm water handling.

QC Procedures/Inspections/Testing to be Performed Today

1. Monitor test pit excavation around Block D / D Panhandle storm water conveyance structure.
2. Meet with Scott Lapp (EMCOR) to declassify storm water vault and to get a Confined Space Permit to facilitate measurement of discharge pipe diameter.
3. Survey work areas in Blocks G, D and D Panhandle (see daily activities for detail).

Planned Week Schedule

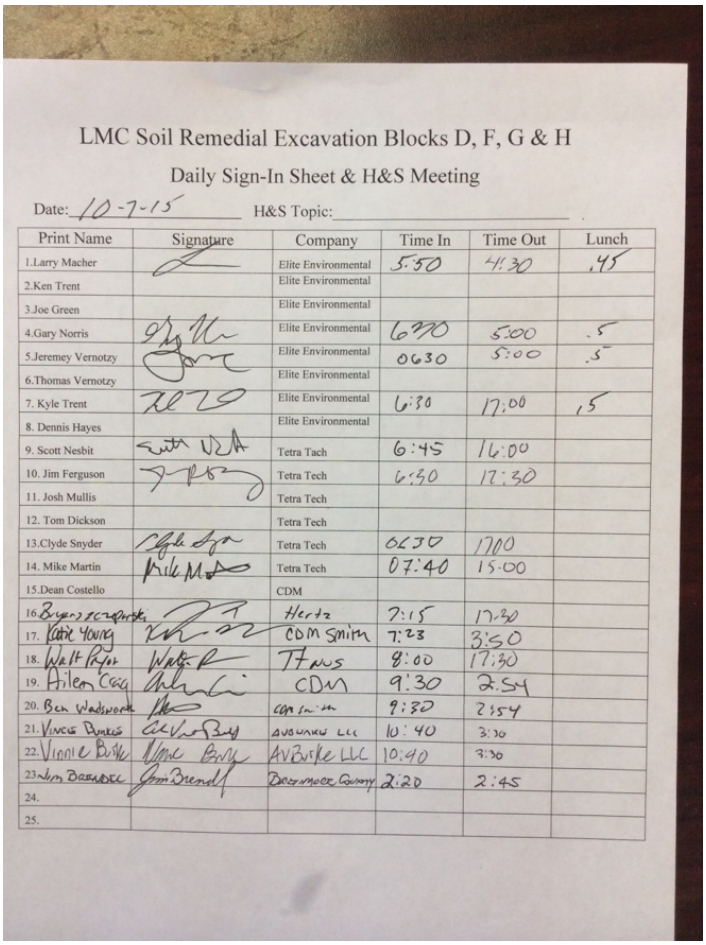
1. Stage asphalt / asphaltic sub-base material for removal in Block D Panhandle (10/5-6).
2. Complete Block D Area F-1 tie back repair by filling remaining excavation with select fill (10/6 ongoing).
3. Place top soil in Block D Panhandle Area (10/7 ongoing).
4. Completed two test pits in Block G (BG-TP-CR-1, BG-TP-CR-2) between the transformer area and Areas H and I (cross roads area) (10/6).
5. Test pit and removal of debris near the storm water conveyance structure in Block D / D Panhandle (10/7).
6. Survey Block G storm water discharge (profile) between UST and Transformer Areas, Block G test Pits and transformer area grid. Locate limits of fuel test lab excavation areas (10/7)

Photos of Select Daily Activities

Comments: 1. Test pit excavation to locate 36" CMP in Block D / D Panhandle, CMP located approx. 4.8' bgs.

Comments: 2. Block D / D Panhandle, excavator utilized to remove rubble from behind bulkhead in storm water catch basin repair area.

Photos of Select Daily Activities (continued)



Comments: 3. During excavation, encountered a creosoted piling, Block D / D Panhandle storm water conveyance structure area.

Comments: 4. Remove old catch basin in Block D.

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Partly Cloudy	Wind:	—	Precipitation:	—

Weather Comments:

Summary of Work/Major Activities

1. Install 36" ID (inside diameter) plug on down-gradient side of storm water junction vault in Block D. Prior to installation obtained confined space permit from Scott Lapp (EMCOR/LMC).
2. Continue to receive top soil for placement at Block D Panhandle Area.
3. Removed large boulders from behind bulkhead which were placed on top of 2 short pieces of creosoted piles. Pilings were removed, hydrophobic booms were installed and the pilings were staged for removal from the Site.
4. Installed marine plywood over 36" discharge point at bulkhead at Dark Head Cove.
5. Collected oil impacted soil/sediment sample from down gradient discharge point of 36" storm water discharge pipe.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	October 12, 2015	Start Work at:	6:30 AM	Depart Site at:	5:30 PM

Weather Conditions

Temperature (°F):	60 to 70	Skies:	Few Clouds	Wind:	Light	Precipitation:	None

Weather Comments:

Summary of Work/Major Activities

1. Use excavator to place stockpiled soil generated from Block D conveyance structure digging into roll-off in Block D.
2. Clean Harbors delivered second roll-off for excavated soils related to the Block D conveyance structure activities.
3. Trench box delivered for use during the Block D conveyance structure repairs.
4. Place additional hydrophobic booms in between excavation and the bulkhead to hinder any possible oily contamination from reaching Dark Head Cove.
5. T. Blackman and L. Drake of Lockheed Martin on site to assess plan for continuing Block D conveyance structure repair work.
6. Install temporary chain link fencing around the Block F UST Area in preparation for tank pull activities.

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech
T. Dickson	Tetra Tech
J. Mullis	Tetra Tech
L. Macher	Elite Environmental
G. Norris	Elite Environmental
Ky. Trent	Elite Environmental
J. Vernotzy	Elite Environmental
T. Blackman	LMC
L. Drake	LMC

Health & Safety Topics or Issues

1. Use the right tool for the job; save some energy and increase safety while working.
2. Excavation activities planned; always use a spotter, maintain eye contact with operator if you need to move into excavation zones.
3. Watch where you step; uneven terrain and rubble can cause slips, trips, and falls, always keep your head up and be attentive to your surroundings.

QC Procedures/Inspections/Testing to be Performed Today

1. Monitor excavation activities during the Block D conveyance structure work.
2. Place additional hydrophobic booms in Block D conveyance structure area.

Planned Week Schedule

1. Clean Harbors deliver second rolloff for Block D conveyance structure work (completed 10/12).
2. Place stockpiled soil from Block D conveyance structure work into roll offs (completed 10/12, work is ongoing)
3. Continue Block D conveyance structure investigation (ongoing).
4. Install temporary chain link fencing around the Block F UST Area in preparation for tank pull activities (fence installed 10/12).

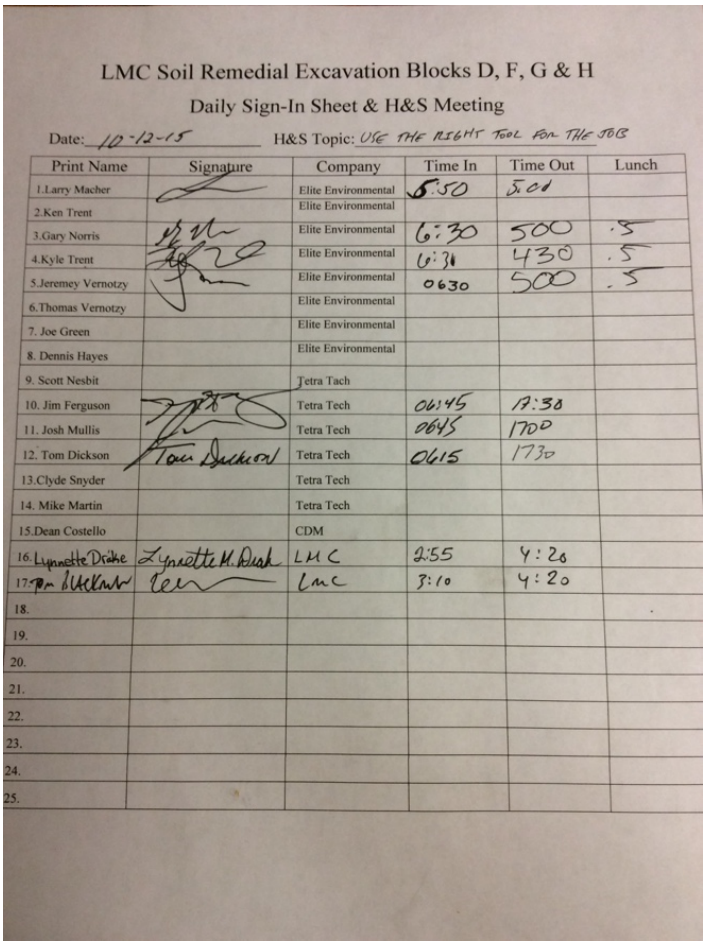
Tentative schedule week of 10/12
1. Continue to work on the Block D Panhandle conveyance structure (ongoing).
2. Break up concrete and possible soil load out in Block G Fuel Test Lab Area (to be completed by 10/15).
3. Continue to monitor re-vegetation status of all excavation areas restored (ongoing).

Photos of Select Daily Activities

Comments: 1. Excavator used to place stockpiled soil from the Block D conveyance structure excavation into a roll-off in Block D.

Comments: 2. Clean Harbors delivery of the second roll-off for the Block D conveyance structure excavation.

Photos of Select Daily Activities (continued)



Comments: 3. Block D conveyance structure area, additional hydrophobic booms placed in-between bulkhead and excavation.

Comments: 4. Block D conveyance structure area, orange safety fencing in place around open excavation.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	October 13, 2015	Start Work at:	6:30 AM	Depart Site at:	6:10 PM

Weather Conditions

Temperature (°F):	60 to 70	Skies:	Few Clouds	Wind:	Light	Precipitation:	Other (explain)

Weather Comments: Light rain from 0930-1030, clear and sunny rest of day.

Summary of Work/Major Activities

1. Hertz equipment delivered one excavator with a hammer attachment for use in Block G to break up concrete slab in the Fuel Test Lab Area (FTL). Hertz also moved the excavator in Block D to Block G for use during the FTL excavation.
2. Complete a confined space entry (and acquire a confined space permit from LMC) into the junction box in Block D to assess air pressure loss of the installed plug. Plug pulled, 1" puncture on back end of plug releasing air pressure found. Discontinue plug use until repaired and/or a different plan is established. The downstream end (towards Dark Head Cove) of the 36" CMP is currently plugged with soil.
3. Break up the concrete slab in Block G FTL area with excavator in preparation for excavation activities on 10/14.
4. Inspect hydrophobic booms in Block D conveyance area twice daily to insure the booms are working properly and effectively.
5. No. 2 stone delivered to Block D for future use in the Block D conveyance structure area.

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech
T. Dickson	Tetra Tech
J. Mullis	Tetra Tech
L. Macher	Elite Environmental
G. Norris	Elite Environmental
J. Vernotzy	Elite Environmental
Ky. Trent	Elite Environmental
A. Craig	CDM Smith
R. Opem	CDM Smith

Health & Safety Topics or Issues

1. Confined space entry:
-Review roles and responsibilities (Entry Supervisor; Authorized Entrant; Authorized Attendant
-All equipment used was inspected and approved for use (tripod; harness; hoist)
-Tetra Tech personnel will support atmospheric monitoring using the Multi-Rae Plus
-Once acceptable entry conditions were established LMC issued Confined Space Entry Permit

2. Use of excavator hammer to break up concrete; wear ear protection, stay in enclosed cab, stay away from area to eliminate the hazard of flying debris.

3. Possible rain in mid-morning, be prepared to button up activities in a safe and efficient manner.

QC Procedures/Inspections/Testing to be Performed Today

1. Acquire confined space permit from LMC, followed by confined space entry into Block D junction box to assess plug air pressure loss, monitor with MultiRae PID.
2. Inspect hydrophobic booms in Block D conveyance structure area twice daily.

Planned Week Schedule

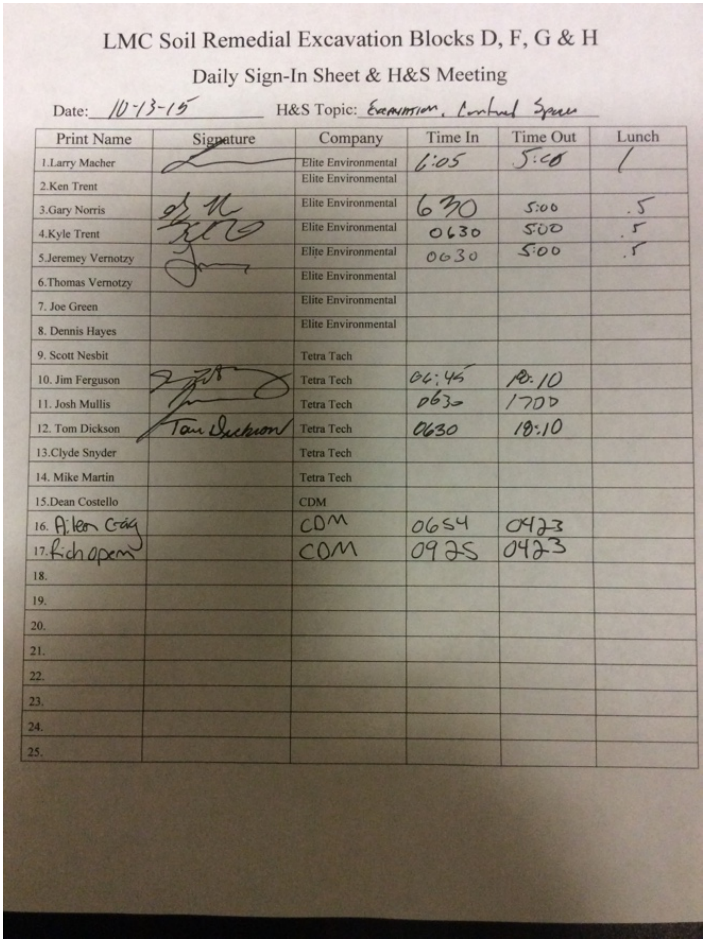
1. Clean Harbors deliver second rolloff for Block D conveyance structure work (completed 10/12).
2. Place stockpiled soil from Block D conveyance structure work into roll offs (completed 10/12, work is ongoing)
3. Block D conveyance structure investigation on hold to re-assess approach due to incoming water from Dark Head Cove
4. Install temporary chain link fencing around the Block F UST Area in preparation for tank pull activities (fence installed 10/12).
5. Inspect hydrophobic booms in Block D conveyance structure area (completed twice daily beginning 10/13).
6. Break up concrete slab in Block G FTL area with excavator (completed 10/13).

Photos of Select Daily Activities

Comments: 1. Block D junction box confined space entry. Elite personnel assessing possible damage to the inflatable plug located in the downgradient 36" storm drain.

Comments: 2. Excavator with hammer attachment utilized to break up concrete slab in the Block G Fuel Test Lab Area.

Photos of Select Daily Activities (continued)



Comments: 3. Temporary 6' chain link fencing installed around the Block F UST Area in preparation for future tank pull activities. (Installed 10/12)

Comments: 4. No. 2 stone delivered to Block D for future use in the Block D conveyance structure repair.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	October 9, 2015	Start Work at:	6:30 AM	Depart Site at:	3:00 PM

Weather Conditions

Temperature (°F):	70 to 80	Skies:	Overcast	Wind:	Moderate	Precipitation:	Light Rain

Weather Comments: Light rain in AM

Summary of Work/Major Activities

1. Delivery of one roll-off by Clean Harbors to Block D Panhandle for potentially contaminated soil excavated in the 36" CMP repair area. A second roll-off will be delivered on Monday Oct. 12.
2. Contractors on site to spread hay and seeding mixture in Block D Panhandle top soil area and Block D Area F1 tieback area.

Personnel On-Site

Name:	Company:
J. Mullis	Tetra Tech
L. Macher	Elite Environmental
Ky. Trent	Elite Environmental

Health & Safety Topics or Issues

1. Excavation safety and worker / operator hand signals.
2. Environmental monitoring related to excavation of soil and storm water handling.

QC Procedures/Inspections/Testing to be Performed Today

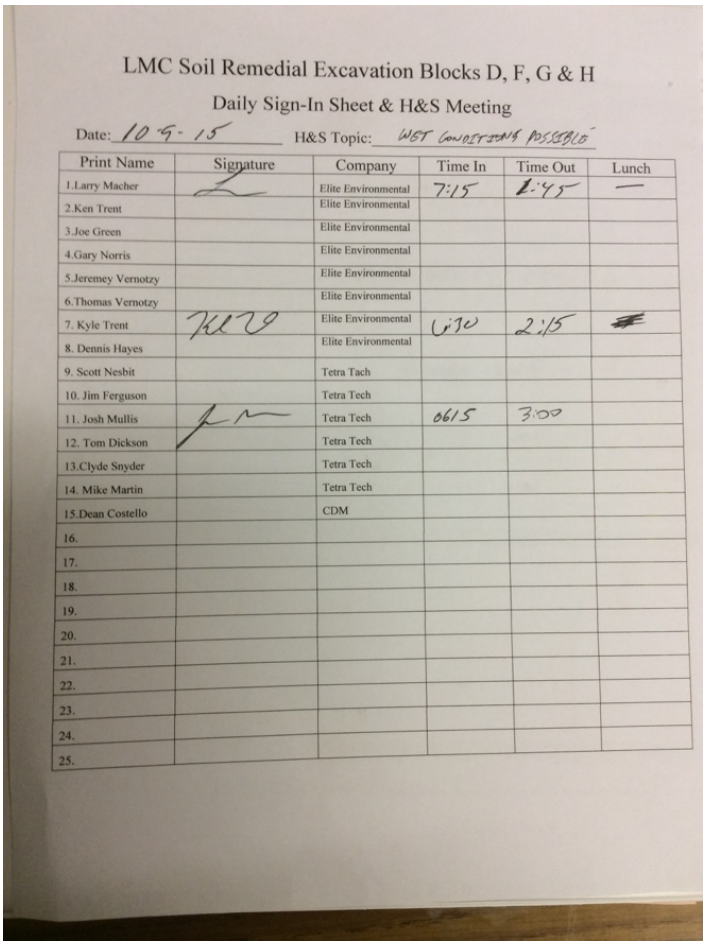
1. Monitor seeding activities in Block D Panhandle and Block D Area F-1 tieback area.

Planned Week Schedule

1. Stage asphalt / asphaltic sub-base material for removal in Block D Panhandle (completed 10/5-6).
2. Complete Block D Area F-1 tie back repair by filling remaining excavation with select fill (completed 10/6).
3. Place top soil in Block D Panhandle Area (completed 10/7).
4. Completed two test pits in Block G (BG-TP-CR-1, BG-TP-CR-2) between the transformer area and Areas H and I (cross roads area) (completed 10/6).
5. Test pit and removal of debris near the storm water conveyance structure in Block D / D Panhandle (begin 10/7, ongoing).
6. Survey Block G storm water discharge (profile) between UST and Transformer Areas, Block G test Pits and transformer area grid. Locate limits of fuel test lab excavation areas (completed 10/7).
7. Delivery of 1 roll-off to Block D Panhandle (completed 10/9, second to be delivered 10/12).
8. Seeding and hay placed in Block D Panhandle and Block D Area F-1 tie back area (completed 10/9).

Tentative schedule week of 10/12
1. Continue to work on the Block D Panhandle conveyance structure (to be completed tentatively by 10/15).
2. Break up concrete and possible soil load out in Block G Fuel Test Lab Area (to be completed by 10/15).
3. Continue to monitor re-vegetation status of all excavation areas restored (ongoing).

Photos of Select Daily Activities



Comments: 1. Roll-off delivered by Clean Harbors for excavated soil from 36" CMP digging in Block D Panhandle.

Comments: 2. Contractor spreading hay in the Block D Panhandle top soil area.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	November 30, 2015	Start Work at:	6:30 AM	Depart Site at:	6:30 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Overcast	Wind:	Light	Precipitation:	None

Weather Comments: Cold, partly cloudy, winds out of northwest.

Summary of Work/Major Activities

1. Move frac-tank from Block D location east towards Block D Panhandle (11/30).
2. Excavate small areas of soil behind Block D Panhandle to facilitate installing geotextile over exposed soil surface. Soil excavated was temporarily staged for and contained in a lined area (11/30).
3. Following installation of geotextile, backfill area immediately behind bulkhead with No. 2 stone.
4. Modify length of float switch line on centrifugal bypass pump so the location of the pump can be moved to an area that does not obstruct equipment in the vicinity of the Block D Panhandle storm water line repair. (11/30).
5. Obtain confined confined space entry permit from S. Lappe (EMCOR) and install confined space equipment so a plug can be installed in the 36" diameter discharge pipe (11/30).
6. Install 36" diameter plug for storm water diversion (11/30).
7. Begin construction of soil containment cell for soil stabilization mixing process (11/30, ongoing).

Personnel On-Site

Name:		Company:	
Name:	J. Ferguson	Company:	Tetra Tech
Name:	T. Dickson	Company:	Tetra Tech
Name:	L. Macher	Company:	Elite Env.
Name:	W. Pryor	Company:	Tetra Tech

Name:		Company:	
Name:		Company:	
Name:		Company:	
Name:		Company:	
Name:		Company:	
Name:		Company:	

Health & Safety Topics or Issues

1. Reviewed inspection of vehicles (dump trucks) when arriving and when leaving the site. Discussed routes of trucks coming into site areas and house keeping issues that could be problematic if trucks enter areas with debris.
2. Discussed site security measures to be utilized.
3. Excavation safety.

QC Procedures/Inspections/Testing to be Performed Today

1. Monitor construction of soil containment / treatment area in Block D Panhandle.
2. Monitor installation of geotextile and No. 2 stone behind Block G Panhandle bulkhead.
3. Inspection of Block G, F, D and D Panhandle Areas.

Planned Week Schedule

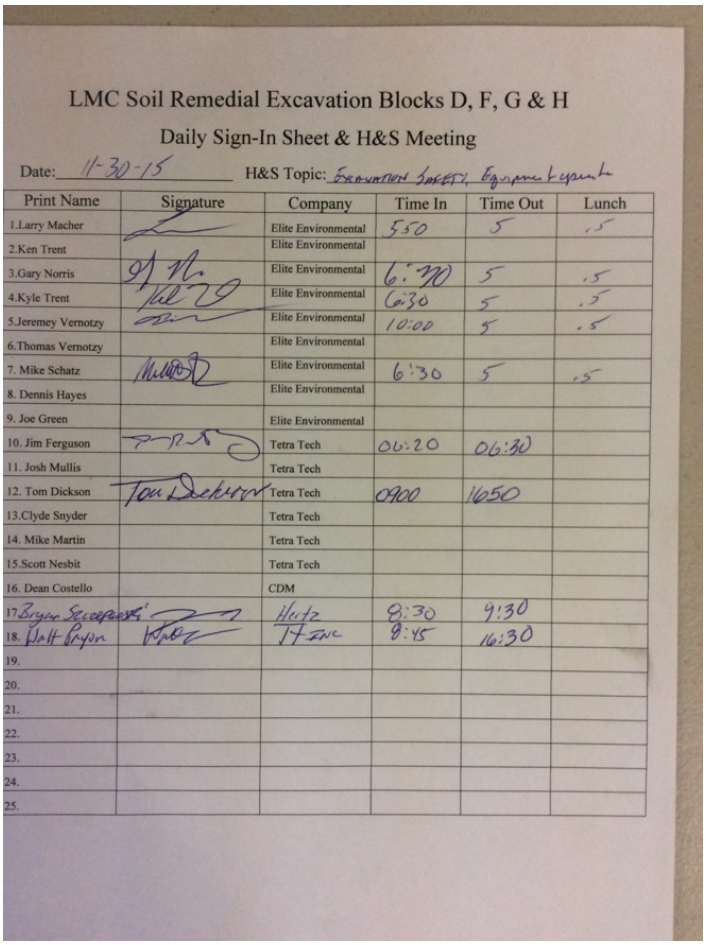
1. Install 36" storm drain plug on discharge pipe from Block D Panhandle storm water junction box (11/30).
2. Excavate soil in eroded area behind bulkhead in Block D Panhandle to facilitate installation of geotextile and No. 2 stone backfill (11/30).
3. Extend float switch line on storm water junction box bypass pump (11/30).
4. Move frac-tank to Block D Panhandle storm water repair area (11/30).
5. Conduct daily inspections of Block G, F and D water front areas (11/30, ongoing).
6. Obtain hot work permit to cut Block F UST piping, to size piping for load out in roll-off for recycling (12/1).
7. Pump remaining water out of Block G UST for treatment and disposal at Clean Harbors Baltimore Facility (12/1).
8. Set whalers in place in Block D Panhandle storm water repair area and begin small excavation along whalers to prepare for driving sheet piles (12/3).

Photos of Select Daily Activities

Comments: 1. Initial placement of No. 2 stone over geotextile behind bulkhead in Block D / D Panhandle Areas.

Comments: 2. Looking south and east, front end loader placing No. 2 stone. In foreground, 4" ID centrifugal pump installed to bypass water from storm water junction box.

Photos of Select Daily Activities (continued)



Comments: 3. Concrete blocks delivered to site for construction of soil staging / stabilization area.

Comments: 4. Storm water bypass pump installed in storm water junction box. Wood 2"X4" inside junction box opening was placed to install a float switch. Float switch line was lengthened to allow pump to be repositioned during storm water pipe repair.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 2, 2015	Start Work at:	6:30 AM	Depart Site at:	6:30 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Overcast	Wind:	Light	Precipitation:	Heavy Rain

Weather Comments: Cloudy, overcast, light to heavy rainfall.

Summary of Work/Major Activities

1. Continue construction of soil containment cell for soil stabilization mixing process (11/30, ongoing).
2. Place stone in Block G in areas that had ruts related to Clean Harbors tanker leaving Block G 12/1 (12/2).
3. Obtained hot work permit for activities related to cutting Block F UST piping (12/1, ongoing).
4. Cut Block F UST piping (12/1, ongoing).
5. Performed inspections of water front Areas in Blocks G, F, D and D Panhandle (11/30, ongoing).
6. Procure additional 6" filter logs to enhance storm water management in Blocks G and D Panhandle (12/1-2).
7. Install fencing around open excavation in Block D Panhandle (12/2).

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech

D. Marchase	CDM-Smith

Health & Safety Topics or Issues

1. Discussed and reviewed portable equipment inspection and safety.
2. Discussed and reviewed use and inspection of ground fault interrupters.

QC Procedures/Inspections/Testing to be Performed Today

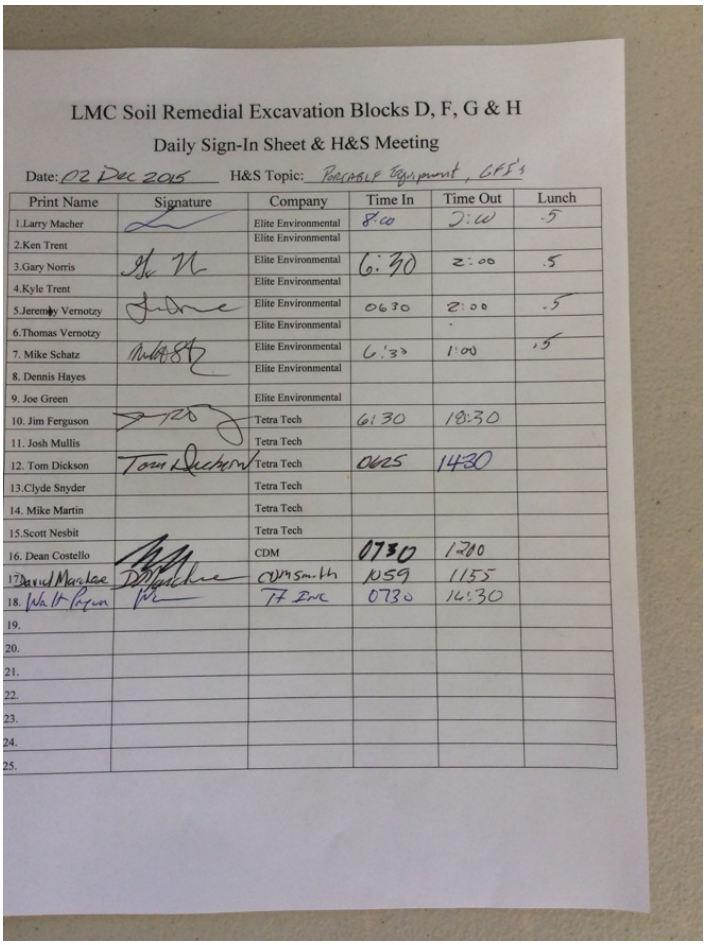
1. Monitor installation of additional E&S controls.
2. Monitor installation of fencing.

Planned Week Schedule

1. Install 36" storm drain plug on discharge pipe from Block D Panhandle storm water junction box (11/30).
2. Excavate soil in eroded area behind bulkhead in Block D Panhandle to facilitate installation of geotextile and No. 2 stone backfill (11/30).
3. Extend float switch line on storm water junction box bypass pump (11/30).
4. Move frac-tank to Block D Panhandle storm water repair area (11/30).
5. Conduct daily inspections of Block G, F and D water front areas (11/30, ongoing).
6. Obtain hot work permit to cut Block F UST piping, to size piping for load out in roll-off for recycling (11/30, ongoing).
7. Pump remaining water out of Block G UST for treatment and disposal at Clean Harbors Baltimore Facility (12/1).
8. Set whalers in place in Block D Panhandle storm water repair area and begin small excavation along whalers to prepare for driving sheet piles (12/3).
9. Collect additional sample of concrete from Block F, UST 5 for additional analytical parameters (12/1).
10. Procure and deploy additional 6" filter logs to enhance storm water runoff measures in Blocks G and F (12/1, ongoing).
11. Inspect pumps installed to bypass storm water in Block D Panhandle (12/1, ongoing).
12. Load out Block F UST piping into roll off container for recycling (12/3).
13. Install gravel in Areas that had ruts due to the Clean Harbors truck maneuvering to leave Block G (12/2).
14. Install fencing around excavation area in Block D Panhandle (12/2).

Photos of Select Daily Activities

Comments:



1. Reduced turbidity behind silt curtain due to installation of filter logs up-gradient of Block D Panhandle excavation.

Comments:

2. Installed fencing around opening in the vicinity of the Block D Panhandle repair.

Health & Safety Topics or Issues

1. Discussed and reviewed issues regarding installing liners and plywood sheeting during gusting winds.
2. Discussed and reviewed use and inspection of ground fault interrupters.

QC Procedures/Inspections/Testing to be Performed Today

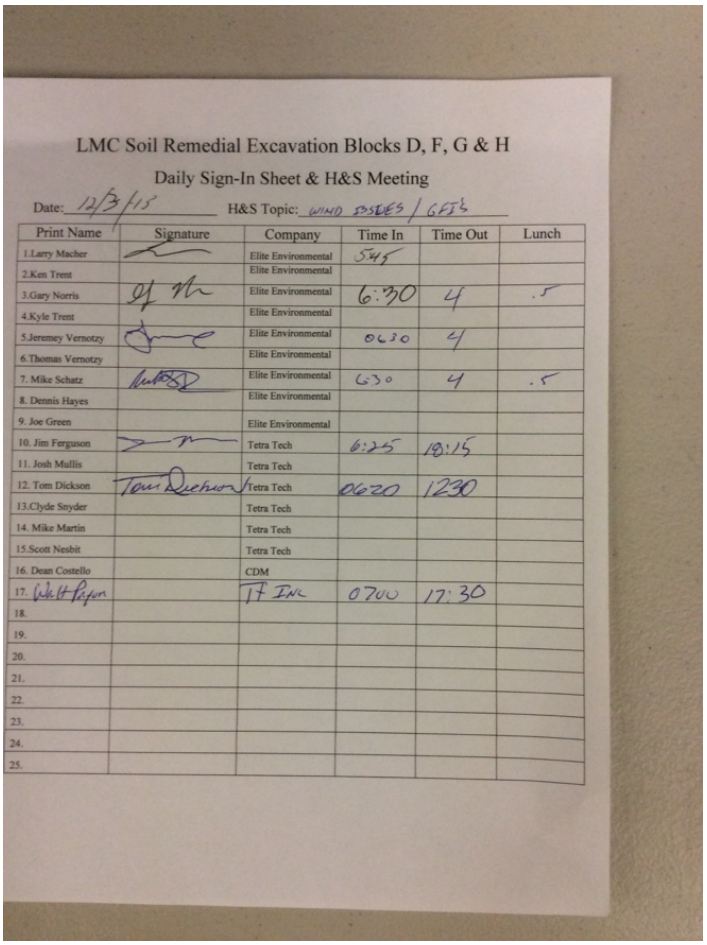
1. Monitor installation of soil mixing cell liner, work started but not completed due to high winds.
2. Blocks G, F, D and D Panhandle water front inspections.

Planned Week Schedule

1. Install 36" storm drain plug on discharge pipe from Block D Panhandle storm water junction box (11/30).
2. Excavate soil in eroded area behind bulkhead in Block D Panhandle to facilitate installation of geotextile and No. 2 stone backfill (11/30).
3. Extend float switch line on storm water junction box bypass pump (11/30).
4. Move frac-tank to Block D Panhandle storm water repair area (11/30).
5. Conduct daily inspections of Block G, F and D water front areas (11/30, ongoing).
6. Obtain hot work permit to cut Block F UST piping, to size piping for load out in roll-off for recycling (11/30, ongoing).
7. Pump remaining water out of Block G UST for treatment and disposal at Clean Harbors Baltimore Facility (12/1).
8. Set whalers in place in Block D Panhandle storm water repair area and begin small excavation along whalers to prepare for driving sheet piles (12/3).
9. Collect additional sample of concrete from Block F, UST 5 for additional analytical parameters (12/1).
10. Procure and deploy additional 6" filter logs to enhance storm water runoff measures in Blocks G and F (12/1, ongoing).
11. Inspect pumps installed to bypass storm water in Block D Panhandle (12/1, ongoing).
12. Load out Block F UST piping into roll off container for recycling (12/3).
13. Install gravel in Areas that had ruts due to the Clean Harbors truck maneuvering to leave Block G (12/2).
14. Install fencing around excavation area in Block D Panhandle (12/2).
15. Construct soil mixing cell (12/3, ongoing).
16. General site cleanup and house keeping work (dispose of debris in blocks G, F and D, organize equipment, secure remaining fencing) (12/3).
17. Load vibratory compactor on low boy trailer for return to vendor (12/3).

Photos of Select Daily Activities

Comments:



1. Site crews begin installation of soil mixing cell base. Work halted due to 20-30 mph winds which precluded crews from installing liner layers.

Comments:

2. Vibratory compactor was loaded on truck and returned to supplier.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 8, 2015	Start Work at:	6:30 AM	Depart Site at:	5:30 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None
Weather Comments:	Partly cloudy, cool						

Summary of Work/Major Activities

1. Staged soil excavated from stormwater repair area in Block D Panhandle in cell (12/8, ongoing).
2. Installed portion of sheet pile walls down gradient of area where 36" corrugated pipe is damaged (12/8, ongoing).
3. Following installation of sheet piles on down gradient side of damaged 36" pipe, excavated trench to physically confirm centerline of intact up gradient 36" pipe, locating couplings (12/8).
4. Completed water front inspections in Blocks D, D Panhandle, F and G (12/8, ongoing).

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech
T. Dickson	Tetra Tech
L. Macher	Elite Env.
T. Vernotzy	Elite Env
G. Norris	Elite Env.
J. Vernotzy	Elite Env.
T. Apanavage	Tetra Tech
Jacob Jones	Mabey

Health & Safety Topics or Issues

1. Discussed scope of work for today and potential hazards.
2. Discussed slips, trips and falls in excavation area.
3. Discussed loading and moving sheet piles with pile driving equipment. Be aware of the possibility the sheet could swing if a tag line is not in place.

QC Procedures/Inspections/Testing to be Performed Today

1. Monitor installation of soil staging cell liner.
2. Blocks G, F, D and D Panhandle water front inspections.
3. Monitor layout of whalers and sheet pile lines in stormwater repair area.

Planned Week Schedule

1. Conduct daily inspections of Block G, F and D water front areas (12/7, ongoing).
2. Pump remaining water out of Block G UST for treatment and disposal at Clean Harbors Baltimore Facility (12/9).
3. Off load whalers, cross members and sheet pile driving tool from flat bed truck in Block D Panhandle (12/7).
4. Begin a shallow excavation in the Block D Panhandle stormwater repair area to facilitate layout of whalers (12/7).
5. Set whalers in place in Block D Panhandle stormwater repair area (12/7).
6. Scheduled removal of water from the Block G UST (12/9) and removal of the water in the Block F frac-tank (week of 12/14).
7. Drive sheet piles in the Block D Panhandle stormwater repair area (12/8-10).
8. Block D Panhandle stormwater pipe replacement (12/14-17).
9. Begin soil staging activities in Block D Panhandle (12/8).
10. Dig test pit along centerline of 36" pipe in Block D Panhandle to confirm location and couplings.

Photos of Select Daily Activities

Comments: 1. Construction crew positions sheet pile in Block D Panhandle Storm Water Repair Area.

Comments: 2. Following adjusting sheet position, sheet is vibrated into place. Sheets are checked by level during installation.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 9, 2015	Start Work at:	6:30 AM	Depart Site at:	6:30 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments: Partly cloudy, cool

Summary of Work/Major Activities

1. Continued installation of sheet piles in Block D Panhandle area (12/8, ongoing).
2. During sheet pile installation, fitting broke on sheet pile drive head requiring a work stoppage at 10:30. Elite and Mabey representatives begin to disassemble the unit in preparation to install a replacement (12/9)
3. Residual soil around excavation was placed in the containment area (12/9).
4. Bobcat mini-excavator is used to excavate around 5' x 5' square concrete stormwater pipe (15:00). The excavation was intended to identify the cause of two sink holes located on the east and west sides of the storm water pipe. The excavation identified 2 locations where there were leaks on the east and west sides of the structure. Water escaping was likely causing erosion of soils with subsequent subsidence (12/9).
5. Mabey delivers a sheet pile drive head replacement for the damaged unit (12/9).
6. Removed an empty roll-off that had been delivered to Block F several weeks ago (12/9).

Health & Safety Topics or Issues

1. Discussed scope of work for today and potential hazards.
2. Discussed slips, trips and falls in excavation area.
3. Discussed loading and moving sheet piles with pile driving equipment. Be aware of the possibility the sheet could swing if a tag line is not in place.

QC Procedures/Inspections/Testing to be Performed Today

1. Blocks G, F, D and D Panhandle waterfront inspections.
2. Monitor layout of whalers and sheet pile lines in stormwater repair area.
3. Monitor excavation along Block D 5'x 5' storm water pipe.

Planned Week Schedule

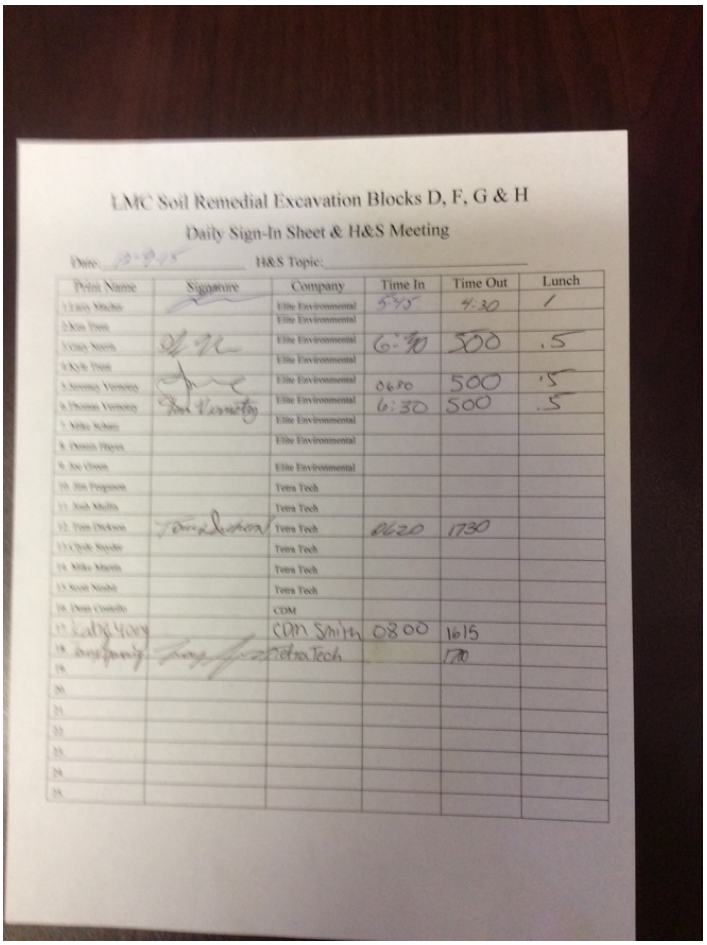
1. Conduct daily inspections of Block G, F and D water front areas (12/7, ongoing).
2. Pump remaining water out of Block G UST for treatment and disposal at Clean Harbors Baltimore Facility (12/9).
3. Off load whalers, cross members and sheet pile driving tool from flat bed truck in Block D Panhandle (12/7).
4. Begin a shallow excavation in the Block D Panhandle stormwater repair area to facilitate layout of whalers (12/7).
5. Set whalers in Place in Block D Panhandle stormwater repair area (12/7).
6. Scheduled removal of water from the Block G UST (12/9) and removal of the water in the Block F frac-tank the week of (12/14).
7. Drive sheet piles in the Block D Panhandle stormwater repair area (12/8-10).
8. Block D Panhandle stormwater pipe replacement (12/14-17).
9. Block D test pits to discern depressions observed in field (week of 12/14).
10. Begin soil staging activities in Block D Panhandle (12/8).
11. Dig test pit along centerline of 36" pipe in Block D Panhandle to confirm location and couplings (12/8).
12. Dig test pit along 5'x 5' concrete storm water pipe (12/8).

Photos of Select Daily Activities

Comments: 1. Empty roll off removed from Block F.

Comments: 2. Looking down at a depression in the ground surface east of Block D Area F and west of Block D Panhandle stormwater repair area. Depression was next to the west side of a 5' x 5' concrete storm drain.

Photos of Select Daily Activities (continued)



Comments: 3. Test pit dug to determine cause of depression in ground surface.

Comments: 4. Test pit located a +/- 3" diameter hole on the east and west side of the 5' x 5' concrete storm water pipe. Water was visible entering excavation at depth of opening.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 10, 2015	Start Work at:	6:30 AM	Depart Site at:	6:15 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments: Partly cloudy, warm.

Summary of Work/Major Activities

1. Continued installation of sheet piles in Block D Panhandle area (12/8, ongoing). Mechanical issue with drive head occured and needed to shut down work. Mabey Inc. was contacted to have a replacement drive head delivered. Replacement drive head arrived at 15:45 and was installed onto the excavator. Damaged drive head was loaded on truck for return to Mabey Inc. for repair (12/10).
2. Moved Bobcat mini-excavator to Block G. Began to excavate around concrete vault installed over the top of the UST. Exposed piping in preparation to cut and cap to facilitate removal of vault. Completed excavation around vault and erection of temporary fencing around vault. To complete pipe terminations, a confined space permit will be required since excavations range from 4'-5' (12/10, ongoing).
3. Clean Harbors on site to vacuum water out of Block G UST (12/10).
4. S. Polasi of MDE arrives on site to deliver preliminary analytical report on Tilley Chemical stormwater discharge pipe sampling (11:30, 12/10).
5. Installed fencing around Block G UST vault excavation and posted open excavation signage (12/10).

Personnel On-Site

Name:	Company:
J. Ferguson	Tetra Tech
T. Dickson	Tetra Tech
L. Macher	Elite Env.
T. Vernotzy	Elite Env
G. Norris	Elite Env.
J. Vernotzy	Elite Env.
W. Pryor	Tetra Tech
D. Costello	CDM-Smith
M. Martin	Tetra Tech
S. Polasi	MDE

Health & Safety Topics or Issues

1. Discussed scope of work for today and potential hazards.
2. Discussed excavation safety and limiting access to areas by erecting fencing.
3. Discussed loading and moving sheet piles with pile driving equipment. Be aware of the possibility the sheet could swing if a tag line is not in place.

QC Procedures/Inspections/Testing to be Performed Today

1. Blocks G, F, D and D Panhandle waterfront inspections.
2. Monitor layout of whalers and sheet pile lines in storm water repair area.
3. Monitor excavation around block G UST.

Planned Week Schedule

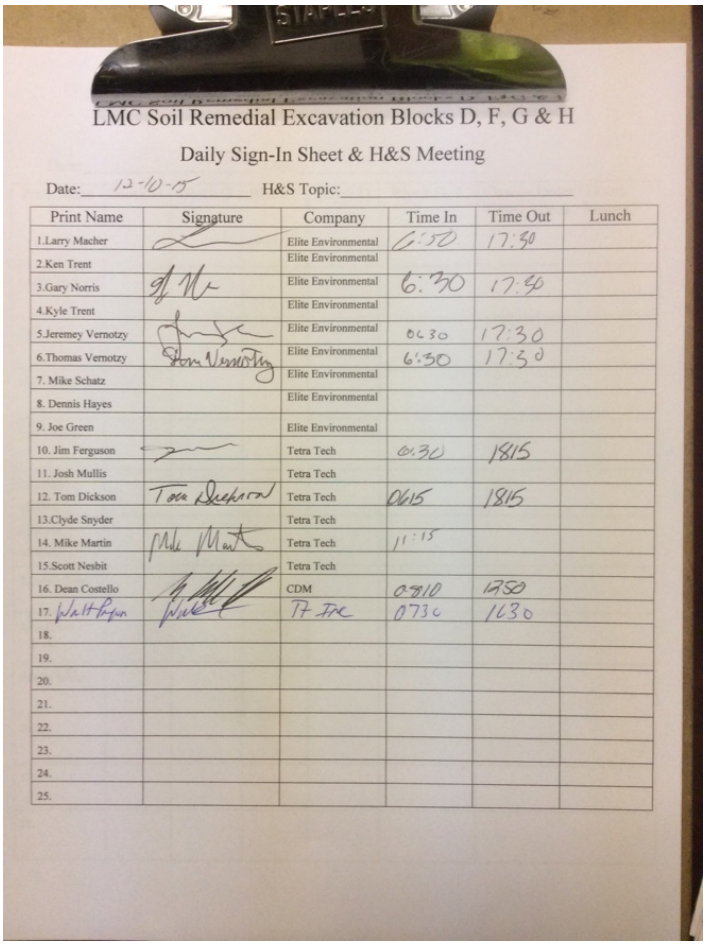
1. Conduct daily inspections of Block G, F and D waterfront areas (12/7, ongoing).
2. Pump remaining water out of Block G UST for treatment and disposal at Clean Harbors Baltimore Facility (12/9).
3. Off load whalers, cross members and sheet pile driving tool from flat bed truck in Block D Panhandle (12/7).
4. Begin a shallow excavation in the Block D Panhandle stormwater repair area to facilitate layout of whalers (12/7).
5. Set whalers in Place in Block D Panhandle storm water repair area (12/7).
6. Schedule removal of water from the Block G UST (12/9) and removal of the water in the Block F frac-tank the week of (12/14).
7. Drive sheet piles in the Block D Panhandle storm water repair area (12/8-10).
8. Block D Panhandle stormwater pipe replacement (12/14-17).
9. Block D test pits to discern depressions observed in field (week of 12/14).
10. Begin soil staging activities in Block D Panhandle (12/8).
11. Dig test pit along centerline of 36" pipe in Block D Panhandle to confirm location and couplings (12/8).
12. Dig test pit along 5'x 5' concrete storm water pipe (12/8).
13. Vacuum water from Block G UST (2,800 gallons, 12/10).
14. Begin Block G UST vault excavation to expose piping (12/10). Installed fencing around excavation at completion.

Photos of Select Daily Activities

Comments: 1. Block D storm water repair area with cross members installed. Photo shows sheet piles installed in down gradient portion of the 36" storm water line.

Comments: 2. Excavated around concrete vault installed over top of Block G UST. Exposed vault and top of tank to create access into tank to facilitate removal of sludge and to clean tank interior tank walls prior to removal. Upon completion of excavation temporary fencing was installed around excavation.

Photos of Select Daily Activities (continued)



Comments: 3. Clean Harbors vac truck on site to remove water in Block G UST. Removed ~ 2800 gallons.

Comments: 4. Mabey Inc. delivers replacement sheet pile drive head. Drive head is off loaded from vehicle. Damaged drive head was loaded for return to shop for repair.

Weather Conditions

Temperature (°F):	50 to 60	Skies:	Partly Cloudy	Wind:	Moderate	Precipitation:	None

Weather Comments: Partly cloudy, warm, winds out of the northwest.

Summary of Work/Major Activities

1. Installed down gradient portion of 36" ID HDPE pipe.
2. Following pipe installation, sealed pipe joint with sealant compound, wrapped pipe joint with geotextile (12/16).
3. Covered distal portion of pipe with No. 57 stone (12/16).
4. Soil removed during installation of pipe was placed in containment area and covered with plastic (12/16).

Health & Safety Topics or Issues

1. Discussed slips trips and falls due to light rain last night.
2. Reviewed confined space procedures that may be applicable to today's activities.

QC Procedures/Inspections/Testing to be Performed Today

1. Blocks G, F, D and D Panhandle water front inspections.
2. Monitor installation of 36" HDPE storm water pipe and backfill.

Planned Week Schedule

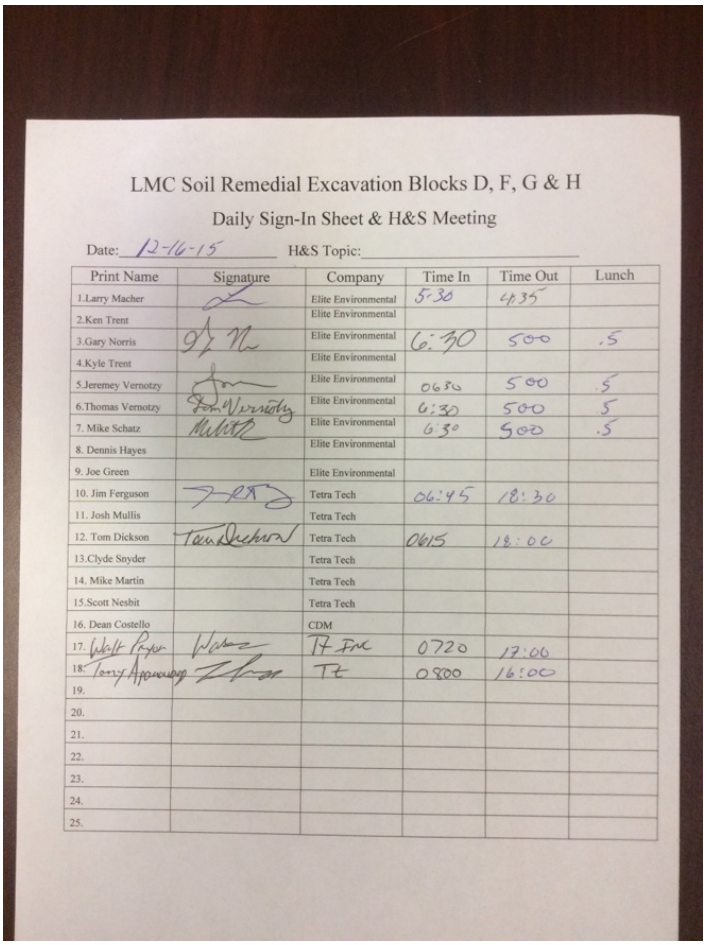
1. Conduct daily inspections of Block G, F and D waterfront areas (12/14, ongoing).
2. Pump water out of Block stormwater excavation for storage, characterization, treatment/ disposal (12/14, ongoing).
3. Excavate soil in the Block D Panhandle stormwater repair area and place in soil containment area (12/14, ongoing).
4. Block D Panhandle stormwater pipe installation/replacement (12/15-17).
5. Collect soil sample and water sample from storm water repair area for waste stream characterization (12/14).
6. Pump water from between sheet pile repair area into frac-tank staged in Block D storm water repair area (12/14, ongoing).
7. Remove water from Block F frac-tank for treatment and disposal (12/15-16).
8. Install 36" ID storm water pipe in Block D stormwater pipe repair area (12/15-17).
9. Install concrete cover over 36" pipe joint (12/17).
10. Following installation of concrete, cover area with No. 57 stone and grade (12/17).
11. Remove remaining water from frac-tank in Block F for treatment and disposal by Clean Harbors (12/17).

Photos of Select Daily Activities

Comments: 1. Distal portion of 36" HDPE pipe positioned for installation.

Comments: 2. 36" pipe placed between sheet pile walls being advanced through opening in bulkhead.

Photos of Select Daily Activities (continued)



Comments: 3. Geotextile was wrapped around pipe connection following coupling pipes together and sealing.

Comments: 4. Stone (no. 57) is placed on top of 36" pipe following completing connection.

Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 17, 2015	Start Work at:	6:30 AM	Depart Site at:	4:00 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Overcast	Wind:	Moderate	Precipitation:	Light Rain

Weather Comments: Overcast, intermittent to steady rainfall.

Summary of Work/Major Activities

1. Received No. 2 and No. 57 stone for backfill from Agtrans for stormwater repair area (12/17).
2. Following pipe installation, sealed pipe joint with 3 cubic yards of concrete (12/17).
3. Covered distal portion of concrete pipe seal with No. 57 stone followed by No. 2 stone (12/17).
4. Decontaminated both trac-hoes following stone placement (12/17).
5. Removed booms between bulkhead and silt curtain (12/17).
6. Removed 1595 gallons of water from Block F frac-tank for treatment / disposal of water from UST removal excavation at Clean Harbors Baltimore Facility (Manifest No. 982975, 12/17).
7. Rain for Rent driver repositions frac-tank in Block G for containment of water from Block G Fuel Test Lab (FTL) (12/17).

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 21, 2015	Start Work at:	6:30 AM	Depart Site at:	6:45 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Overcast	Wind:	Moderate	Precipitation:	None

Weather Comments: Overcast, slight winds out of north west

Summary of Work/Major Activities

1. Dismantled centrifugal pump, suction and discharge hose used to bypass storm water around Block D storm water repair area (complete).
2. Set up confined space equipment, procured confined space entry permit from S. Lapp (EMCOR) and tested atmosphere in Block D storm water piping junction box. Following clearing atmosphere and evacuation of water in junction box, deflated pneumatic plug in 36" storm water pipe and removed plug (complete).
3. Performed site cleanup activities in Block D storm water repair area (complete).
4. Moved trac-hoe through Block D to Block F (complete).
5. Set up centrifugal pump and hose to frac-tank for water transfer in Block G Fuel Test Lab (FTL) Area (complete).
6. Excavated soil around piping runs at Block G UST Area (12/21, ongoing).
7. Began to gain access to Block G UST using a drill and reciprocating saw (12/21, ongoing).
8. Installed temporary fencing around LMC Outfall 008 (complete).
9. Place excavated steel piping from the Block F UST area into a roll off in Block F (complete).

Personnel On-Site

Name:		Company:	
Name:	J. Ferguson	Company:	Tetra Tech
Name:	J. Mullis	Company:	Tetra Tech
Name:	T. Dickson	Company:	Tetra Tech

Name:		Company:	
Name:		Company:	
Name:		Company:	

Health & Safety Topics or Issues

1. Discussed excavation safety related to removing soil around pipes.
2. Discussed confined space procedures.

QC Procedures/Inspections/Testing to be Performed Today

1. Blocks G, F, D and D Panhandle water front inspections.
2. Monitor excavation of soil around piping runs at the Block G UST.
3. Monitor atmosphere in Block D storm water pipe junction box following calibration of four-gas monitor and issuance of confined space permit while Elite staff remove plug from 36" ID storm water pipe.

Planned Week Schedule

1. Conduct daily inspections of Block G, F and D water front areas (12/14, ongoing).
2. Obtain confined space permit, test atmosphere in Block D storm water junction box vault and remove 36" nominal plug (complete 12/21).
3. Disassemble centrifugal pump, hard suction and discharge hose used to bypass storm water from vault to Dark Head Cove (complete 12/21).
4. Moved trac-hoe to Block F (complete 12/21).
5. Began excavating soil from around piping runs in Block G UST Area (12/21, ongoing).
6. Began attempts to gain access to the interior of the Block G UST using a drill and reciprocating saw (12/21, ongoing).
7. Installed temporary fencing around LMC Outfall 008 (complete 12/21).
8. Place excavated steel piping from the Block F UST area into a roll off in Block F (completed 12/21).

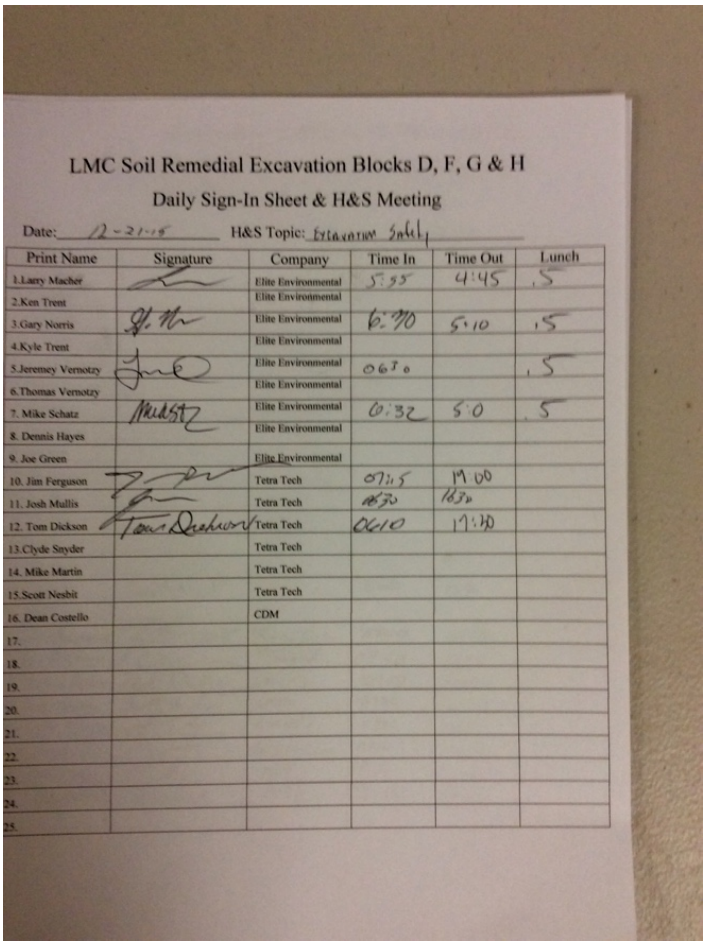
Tentative schedule week of 12/21
1. Tidy up the Block D storm water repair work area upon completion of grading activities (to be completed by 12/22).
2. Block G UST area activities including excavating soil around piping to cut and plug pipes before tank pulling activities and opening the tank to see contents (to be completed by 12/23).
3. Pump storm water from the Block G FTL area into the frac tank located in Block G (to begin 12/22).

Photos of Select Daily Activities

Comments: 1. Block D storm water repair area following installation of 36" Inside Diameter (ID) HDPE pipe. Straw placed over areas where grass was stressed to mitigate erosion.

Comments: 2. Block D storm drain repair area: Confined space entry, elite personnel in the process of removing the 6' rubber plug installed during the storm drain construction process. Plug removed 12/21.

Photos of Select Daily Activities (continued)



Comments: 3. Excavation around piping to expose Block G UST.

Comments: 4. Installed fencing around depression caused by headward erosion around LMC Outfall 008.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	December 23, 2015	Start Work at:	6:30 AM	Depart Site at:	2:30 PM

Weather Conditions

Temperature (°F):	40 to 50	Skies:	Overcast	Wind:	Moderate	Precipitation:	Heavy Rain

Weather Comments:

Summary of Work/Major Activities

1. Decontaminate tools / equipment from UST related activities with a pressure washer and liquinox (photo 1). Decon fluids were collected into a 5-gallon bucket and will be disposed of during UST removal activities.
2. General site cleanup in Block G, check E&S controls around the site in Blocks G, D, and F in preparation for the holiday break and due to the heavy rain conditions (photo 2).
3. Use skid steer to move drums consisting of absorbent pads generated from the Block G UST area to the Block E drum storage area.

Health & Safety Topics or Issues

1. Wet conditions; be aware of slippery muddy surfaces and always maintain three points of contact.

QC Procedures/Inspections/Testing to be Performed Today

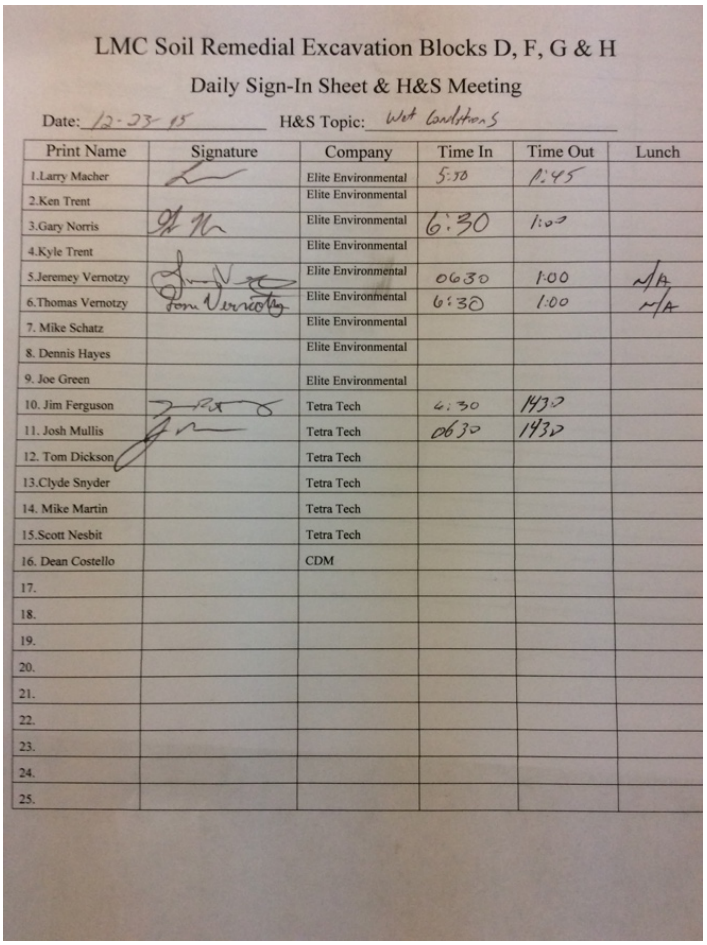
1. Decontaminate tools/equipment using a power washer.

Planned Week Schedule

1. Conduct daily inspections of Block G, F and D water front areas (12/14, ongoing).
2. Obtain confined space permit, test atmosphere in Block D storm water junction box vault and remove 36" nominal plug (complete 12/21).
3. Disassemble centrifugal pump, hard suction and discharge hose used to bypass storm water from vault to Dark Head Cove (complete 12/21).
4. Moved trac-hoe to Block F (complete 12/21).
5. Began excavating soil from around piping runs in Block G UST Area (12/21, ongoing).
6. Began attempts to gain access to the interior of the Block G UST using a drill and reciprocating saw (12/21, ongoing).
7. Installed temporary fencing around LMC Outfall 008 (complete 12/21).
8. Place excavated steel piping from the Block F UST area into a roll off in Block F (completed 12/21).
9. Pump storm water from the Block G FTL excavation into the frac tank located in Block G (begin 12/22).
10. Cut, bend upward, and plug all pipes running from the Block G UST, as well as cut 2' by 3' openings on each end of the UST in preparation for future tank pulling activities (completed 12/22).
11. Clean Harbors vacuum contents of the Block G UST, approx 1,400 gallons (completed 12/22).
12. Decontaminate tools/equipment used during Block G UST activities (completed 12/23).
13. Mob drums generated from the Block G UST activities (absorbent pads) from Block G to the storage area in Block E (completed 12/23).

Tentative schedule week of 12/28
1. Continue to pump storm water from the Block G FTL excavation into the frac tank in Block G (to be completed by 12/30).
2. Clean Harbors to begin hauling storm water in the Block G frac tank to the disposal facility (to be completed by 12/30).
3. Begin backfilling the Block G FTL excavation with No. 2 stone (begin 12/28-29).
4. Load out steel / scrap metal from Block D and Block F (to be completed by 12/29).
5. Weather permitting, pull remaining piping and sample soil associated with the Block F UST area near Bulkhead (to be completed 12/28).
6. Load out rolloff located in Block D (to be completed by 12/30).

Photos of Select Daily Activities



Comments:

1. Elite personnel utilizing a power washer to decontaminate equipment caked with mud from previous work. Decon water was collected into a 5 gallon bucket and will be disposed of during UST removal.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	January 5, 2016	Start Work at:	6:30 AM	Depart Site at:	6:30 PM

Weather Conditions

Temperature (°F):	10 to 20	Skies:	Partly Cloudy	Wind:	Moderate	Precipitation:	None

Weather Comments: Partly cloudy, cold, winds out of northeast.

Summary of Work/Major Activities

1. Clean Harbors (Clean Ventures Inc) tankers loaded with water (approx 6,600 gallons) from the Block G frac tank and sent to the disposal facility. The frac tank is now empty.
2. Roller delivered to site and then utilized to compact the Block F UST pipe area backfill (photo 1) and the Block G FTL excavation.
3. Mini-excavator moved from Block G to Block D and then utilized to remove the No. 2 stone from around the previously installed storm drain line (photo 2) to visualize the extent of the void between the bulkhead and the 42" OD / 36" ID HDPE pipe. The void between the bulkhead and the 42" OD pipe appears to be 3" (photo 3). The method to fill the void and remedy the issue is still under discussion.
4. Excavator utilized in the Block G UST excavation to backfill No. 2 stone followed by backfilling with the previously excavated soil (after given approval by CDM and LMC). Backfill was only placed up to the pipes remaining in the excavation for easy access when the pipe runs are excavated on 1/6.
5. AV Burke LLC onsite to survey the excavation limits of the Block G UST area as well as the Block D stormwater drain area (Block D see photo 4).

Name:		Company:	

Health & Safety Topics or Issues

1. Cold weather, wear proper PPE for the job; wear layers, thick socks, insulated work gloves etc.
2. Discussed machinery safety, use spotters, keep eye contact when moving near the moving machine.

QC Procedures/Inspections/Testing to be Performed Today

1. Spotters utilized while excavator, roller, and mini-excavator were in use.
2. AV Burke LLC survey excavation limits in Block G and Block D.

Completed Week Schedule

1. Conduct daily inspections of Block G, F and D water front areas (1/4, ongoing).
2. Test atmosphere of Block G UST and subsequently remove UST from the ground (completed 1/4).
3. Remove water from Block G frac-tank for treatment and disposal (frac tank empty 1/5).
4. Place No.2 stone backfill in Block G FTL excavation (1/4, ongoing),
5. Collect verification samples from Block G UST excavation and ship to Test American North Canton (completed 1/4).
6. After UST removal, decontaminated interior of UST, fluids vacuumed out by Clean Harbors straight truck and transported to Clean Harbors facility (completed 1/4).
7. Installed temporary fencing around excavation (completed 1/4).
8. Backfill the Block G UST area with No. 2 stone followed by previously excavated soil (begin 1/5, ongoing).
9. Utilize mini-excavator to pull back No. 2 stone in the Block D storm drain repair area (completed 1/5).
10. Utilize roller to compact backfilled excavations in Block F and Block G (begin 1/5, ongoing).
11. AV Burke LLC survey excavation limits for the Block G UST area and the Block D storm drain repair area (completed 1/5).

Tentative schedule week of 1/4

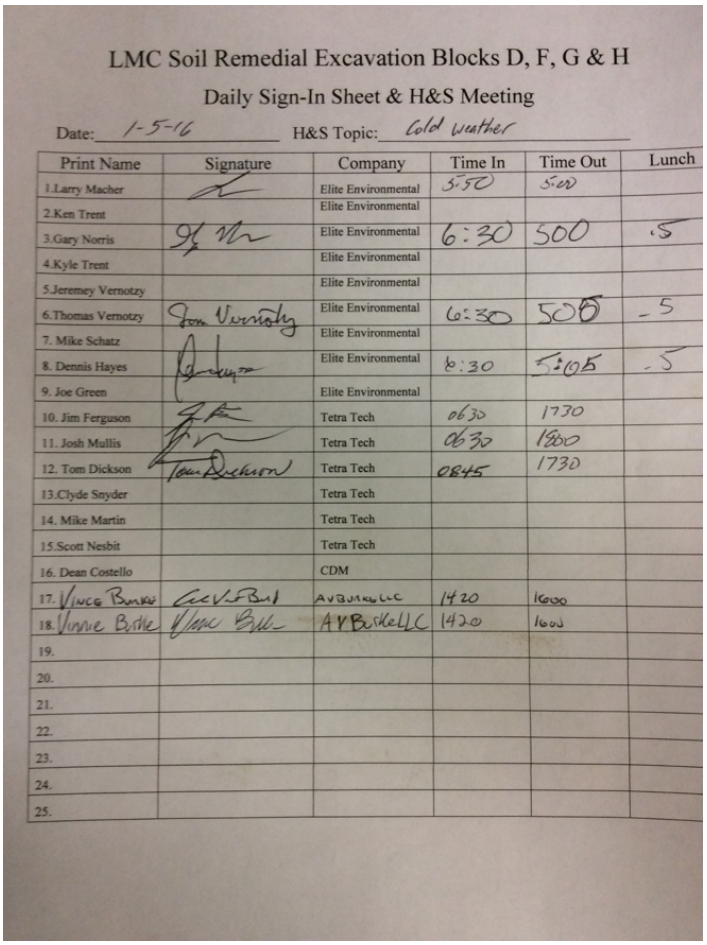
1. Excavate remaining piping runs from the former Block G UST with MDE assistance and collect confirmatory samples along piping runs (to be completed 1/6).
2. Begin backfill placement in Block G UST excavation and piping runs (approval given for backfill using excavated soil 1/5, begin backfill 1/5).
3. Excavate additional sidewall along the Block G FTL excavation followed by confirmatory sampling (to be completed by 1/7).
4. Remove former Block G UST from site (awaiting approval).

Photos of Select Daily Activities

Comments: 1. Block D storm drain repair area; mini-excavator utilized to pull back stone for better visualization of the size of the void between the existing bulkhead and the newly installed 42" OD/ 36" ID pipe.

Comments: 2. Block D storm drain repair area; size of void between the existing bulkhead and the 42" OD / 36 ID" pipe is approximately 2.5".

Photos of Select Daily Activities (continued)



Comments: 3. Roller utilized to compact the backfilled Block F UST pipe excavation area.

Comments: 4. Block D storm drain repair area; AV Burke LLC surveying excavation limits.

DAILY CONSTRUCTION REPORT
Middle River Complex
Soil Remediation Blocks D, D Panhandle, F, G, and H

Duration of Site Activities

Date:	January 11, 2016	Start Work at:	6:30 AM	Depart Site at:	4:30 PM

Weather Conditions

Temperature (°F):	30 to 40	Skies:	Partly Cloudy	Wind:	Light	Precipitation:	None

Weather Comments: Partly cloudy, cool, winds out of west-northwest.

Summary of Work/Major Activities

1. Pumped water in FTB excavation Area VS-1 to Block G frac-tank.
2. Collected verification sample G-VS-1-3-11116, logged and prepped sample for shipment (COC#016113) to Test America Labs in North Canton, Ohio.
3. Following collection of verification sample, V. Burke of A.V. Burke LLC surveyed limits of VS-1 excavation area at completion of survey, excavation was backfilled with select fill and compacted.
4. Began a low tide cycle which permitted Elite staff to perform additional work on the outfall related to extension of the 36" discharge pipe through the outfall. Removed stone which had sloughed through the gap between the bulkhead and the discharge pipe.

Health & Safety Topics or Issues

1. Discussed weather related issues (exposure, hydration).
2. Discussed procedures for placing backfill.

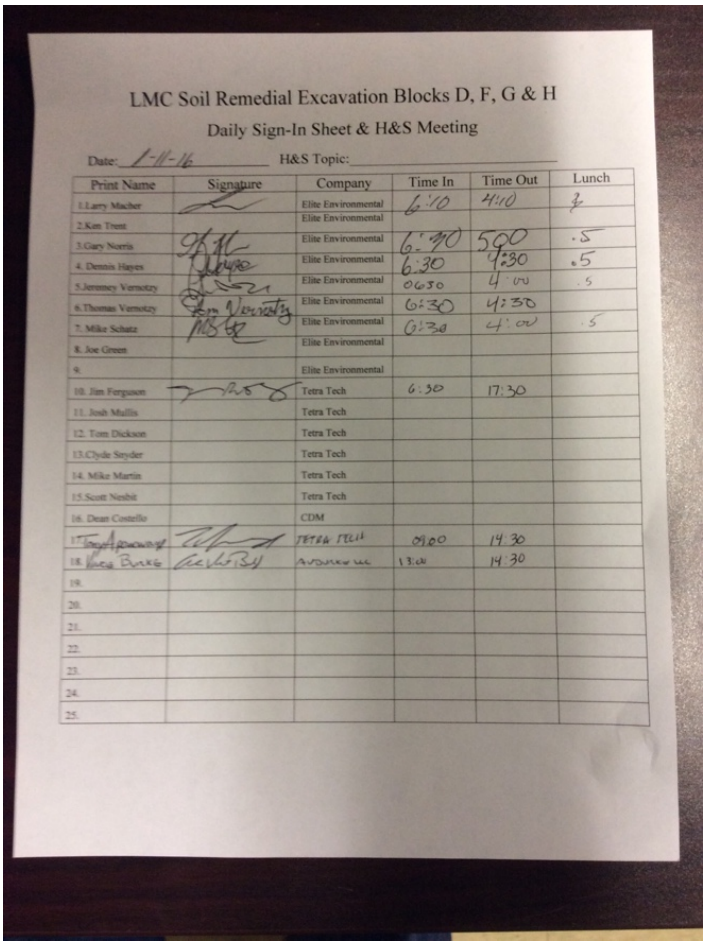
QC Procedures/Inspections/Testing to be Performed Today

1. Monitor excavation of soil around VS-1 with PID.
2. Monitor atmosphere around excavation areas.
3. Collect confirmatory sample from VS-1.

Completed Week Schedule

1. Conduct daily inspections of Block G, F and D water front areas (1/4, ongoing).
2. Pump water from FTB excavation VS-1 to frac-tank (1/11).
3. Collect verification sample from 3' interval at FTB VS-1 location and ship sample to Test America Laboratory in North Canton, Ohio (1/11).
4. Backfilled FTB VS-1 excavation Area with select fill (1/11).
5. AV Burke LLC surveyor surveys the limits of FTB are VS-1(1/11).
6. Decontamination of frac tanks in Blocks D/G.
7. Remove decon water, and waste water originating in Blocks D and G for treatment and disposal at Clean Harbors, Baltimore Facility.
8. Continue to work on 36" discharge pipe pass through during low tide cycles.
9. Demobilization of rain for rent frac-tanks.

Photos of Select Daily Activities



Comments: 1. Groundwater which accumulated in Excavation Area VS-1.

Comments: 2. Low tide and winds out of the northwest expose 36" ID storm water pipe.

Health & Safety Topics or Issues

1. Body positioning - the collection of the riprap, removal of incidental soils and hand placement in the drainage swale in Block G can result in soft muscle injury. Control measures include:
   A. Stretch and limber before conducting task.
   B. Dump near the person placing the stones, they can gather from the pile to place.
   C. If it is necessary to hand toss remove personnel from the landing area, toss the stone then the person placing may re-enter the swale to place the stones as desired.
   D. Rotate work activities to provide rest breaks and prevention of cumulative trauma disorders.

Pinch points - to minimize these types of injuries personnel shall
   A. Wear work gloves when handling the stone.
   B. Do not attempt to toss and catch to place.
   C. Workers shall spreadout to minimize striking someone else during placement.

QC Procedures/Inspections/Testing to be Performed Today

1. Visual examination of the finished effort; onsite supervision of field staff.

Completed Week Schedule

1. Restoration efforts Block D - Panhandle
   A. Grade and compact gravel cover.
   B. Modify and direct overland drainage pattern to designated swale and filtration bed.
   C. Remove as much gravel as is possible from Darkhead Cove to minimize flow disruption.

2. Remove and transport riprap from Block F to Block G. The riprap was removed from the drainage containment from the west southwest side of Block F and the hole backfilled; compacted; seeded; and covered in curlex (nailed down). The hole would have to be abandoned and backfilled as part of the removal of erosion and sediment controls measures in this area. It was determined as a cost saving measure, the removal and relocation of the riprap to be used in Block G Drainage swale was a more palatable solution rather than burying it with select fill.

3. Block G - the top of the drainage swale was cut to allow the fabric to be tucked in and buried to avoid overland flow possibly getting under the fabric once installed. No additional work was conducted in this area.

Date of Permit Issuance: 5/6/2015

Lockheed Martin Corporation
6801 Rockledge Drive
MP:CCT-246
Bethesda, Maryland 20817

RE: **MDRCC01CX**

Dear Mr. Thomas Blackman:

Please find enclosed documentation of coverage under the 2014 General Permit for Stormwater Associated with Construction Activity (MDRC) for:

MRC Blocks D,F,G, and H Soil Remediation

issued to

Lockheed Martin Corporation

Please note that the effective date of coverage under the General Permit is the date on the attached cover sheet. If the current erosion and sediment control plan approval covers only part of the entire site covered by this permit, be advised that this permit does not authorize discharges from the other portions of the site until the appropriate erosion and sediment control approval authority approves the erosion and sediment control plan for those portions. The permit also requires that the site have an approved stormwater management plan (unless exempt or waived by the stormwater approval authority) prior to earth disturbance. Part IV.C.3 of the permit requires the permittee to use the standard written report form as provided by MDE. The form is available on MDE's website at the following location both as a fillable Microsoft Word form and as an Adobe Acrobat file.

http://go.usa.gov/gFMW

Print this letter and the cover sheet and keep them with your permit file. In addition, download the 2014 General Permit from the above website, print it for your permit file, and refer to it to ensure compliance with its terms. Submit any modifications to this coverage, Transfers of Authorization, or Notices of Termination via the ePermits portal. If your contact information changes, update it through the ePermits portal.

Your cooperation in this matter is appreciated. If you have any questions, please call the administrative team for the General Permit at (410) 537-3019.

Sincerely,

Heather L. Nelson

Heather L. Nelson, Acting Director
Compliance Program
Water Management Administration

GENERAL PERMIT FOR STORMWATER ASSOCIATED WITH CONSTRUCTION ACTIVITY

State Discharge Permit Number:	**Effective Date:** 5/6/2015
MDRCC01CX	**Expiration Date:** 12/31/2019
	NOTE: If site work is complete per Part II. I. prior to the expiration date, the permittee must submit a Notice of Termination and terminate the permit.

Pursuant to the provisions of Title 9 of the Environment Article, Annotated Code of Maryland, and regulations promulgated thereunder, and the provisions of the Clean Water Act, 33 U.S.C., Section 1251 et. seq., and implementing regulations 40 CFR Parts 122, 123, 124 and 125, the Department of the Environment hereby establishes conditions and requirements pertinent to stormwater associated with construction activity at the site described below and authorizes:

Lockheed Martin Corporation
6801 Rockledge Drive
MP:CCT-246
Bethesda, Maryland 20817

TO DISCHARGE STORMWATER FROM:

MRC Blocks D,F,G, and H Soil Remediation
construction project on
2.15 acres
at property located at
Tax Blocks D, F, G, and H within Lockheed Martin Corporation's Middle River Complex (MRC)
2323 Eastern Boulevard, Middle River, Maryland 21220

If the current erosion and sediment control plan approval covers only part of the entire site covered by this permit, this permit does not authorize discharges from the other portions of the site until the appropriate erosion and sediment control approval authority approves the erosion and sediment control plan for those portions.

TO:
Surface waters -- Cow Pen Creek and Dark Head Cove

which is
Waters protected for Support of Estuarine and Marine Aquatic Life and Shellfish Harvesting

in accordance with the 2014 General Permit. The vicinity map submitted with the Notice of Intent is considered incorporated herein and made a part hereof.

20130256

Ms. Beth Cole
Maryland Historical Trust
Maryland Department of Planning
100 Community Place
Crownsville, MD 21032

Dear Ms. Cole:

This letter is to request Maryland Historical Trust (MHT) project review for the Lockheed Martin soil remediation project in Blocks D, E, F, G and H at the Middle River property located in Baltimore County, Maryland (see attached Figures 1 and 2). The purpose of the soil remediation in Blocks D, E, F, G and H is to reduce the levels of contaminants of concern (COCs) in existing soils to meet standards under Maryland Department of the Environment's (MDE's) Controlled Hazardous Substances Program.

Activities proposed for the soil remediation work include excavation and removal of approximately 3,884 cubic yards (cy) of overlying soil in Block D (including 579 cy in the panhandle portion of Block D), 9,837 cy in Block E, 912 cy in Block F, 1,645 cy in Block G, and 332 cy in Block H (see Figure 3). The soil remediation work will also include removal of existing impervious pavement/concrete in Block E and the panhandle portion of Block D. Volume estimates of soil to be excavated in each block are currently preliminary and may be revised. Excavated soil and pavement/concrete will be loaded in trucks on-site and taken to an appropriate disposal facility or will be recycled.

Middle River

Additional activities proposed for the soil remediation work will include the removal of the floor drains in the Block E basement foundation, and the removal and relocation of the storm drain system in Block E. The new storm drain system will be designed based on the final grading plan selected for the site.

All excavated areas, including areas of pavement/concrete, will be replaced with in-kind clean fill material and topsoil and revegetated, Excavated areas in Blocks D, F, G, and H will be graded back to original contours; however, Block E is expected to be graded to drain with a minimum 2% grade.

Other areas of ground disturbance will include truck traffic and staging areas, as well as E&S control locations. These areas will be graded back to original contours.

Archeo JLH 12/9/13 2ma

prior review 2009 0445 7 2012 0495 5 2ma

w/in BA-2081

The Maryland Historical Trust has determined that this undertaking will have no adverse effect on historic properties.

Tel 301.528.555[illegible] Fax 301.528.3000 www.tetratech.com

TETRA TECH

Standard best management practices will be employed during all work at the site, including seeding all exposed areas with a standard seed mix, restoring wetland areas as appropriate, following an approved erosion and sediment control plan, and obtaining a Construction General Permit for construction stormwater runoff.

Expected federal and state permits include a United States Army Corps of Engineers (USACE) Section 404 Maryland State Programmatic General Permit for minor work in wetlands, an Erosion/Sediment Control Approval from the Baltimore County Soil Conservation District, a site Grading Permit from Baltimore County Department of Environmental Protection and Sustainability, and a General Permit for Construction Activity (Stormwater) from MDE.

Included with this request is the MHT Project Review Form. I appreciate your input on this matter and if you have any questions or need additional information please contact me at (301) 528-3022.

Sincerely,

Michael Martin, PG

RE: Environmental Review for Lockhead Martin property, jct. of Eastern Blvd and Wilson Point Rd., Middle River, soil remediation project, Blocks D, E, F, G, and H, Baltimore County, MD.

Dear Mr. Martin:

The Wildlife and Heritage Service has determined that there are no State or Federal records for rare, threatened or endangered species within the boundaries of the project site as delineated. As a result, we have no specific comments or requirements pertaining to protection measures at this time. This statement should not be interpreted however as meaning that rare, threatened or endangered species are not in fact present. If appropriate habitat is available, certain species could be present without documentation because adequate surveys have not been conducted.

Thank you for allowing us the opportunity to review this project. If you should have any further questions regarding this information, please contact me at (410) 260-8573.

Sincerely,

Lori A. Byrne

Germantown, MD 20874-7114

RE: LOCKHEED MARTIN MIDDLE RIVER COMPLEX
Soil Remediation In Blocks D, F, G & H
Stormwater Management Variance
Middle River Watershed
EPS Project I.D. M140086
EPS Tracking Number: 07-14-1848

Dear Mr. Myers:

This office has reviewed the information submitted and finds that a stormwater management variance can be granted for this project under Section 33-4-113 (a) (2) of Title 4 of the Baltimore County Code. This section of the regulations allows a stormwater management variance to be granted if there are exceptional circumstances such that strict adherence to the provisions of this article would result in unreasonable hardship or practical difficulty and not fulfill the intent of the regulations. The proposed project is for the removal of contaminated soil and replacing it with clean soil. The existing grades will be reestablished once the contaminated soil is removed. There will be a reduction in impervious area as a result of this project. Since there will be a slight reduction in impervious area and water quality will be improved by the removal of contaminated soil, a stormwater management variance can be granted for this project.

Please contact Ed Schmaus of my staff at 410-887-3768 should you have any questions.

Very truly yours,

Thomas L. Vidmar, P.E., Deputy Director
Department of Environmental Protection
& Sustainability

Subject: Lockheed Martin Middle River Remediation

Paul,

I have received your variance application for the soil remediation proposed at Lockheed Martin's Middle River Complex. In reviewing the proposal, this Department has determined that a variance is not necessary for the remediation work, including the work within the wetlands and buffer. As with the prior remediation work, we will not apply the Critical Area regulations to the site until such time as it is proposed for redevelopment. We will see the sediment control plans you submit to the County as part of this Department's review process.

Thank you for providing this information and keeping us apprised on the ongoing work.

Sincerely,

Re: Agency Interest Number: 138775
Tracking Number: 201560745
Tidal Authorization Number: 15-GL-0408

Dear Lockheed Martin Corporation:

Your application to alter tidal wetlands has been evaluated by the Tidal Wetlands Division. Your State wetlands license or permit authorizing work in tidal wetlands is attached. Please take a moment to read and review your authorization to ensure that you understand the limits of the authorized work and all of the general and special conditions.

Your project qualifies for federal approval under the Maryland State Programmatic General Permit (MDSPGP), that permit is also attached. You should not begin any work until you have obtained all necessary State, local, and federal authorizations.

This State authorization is a final agency decision; there is no further opportunity for administrative review. Any person with standing, who is either the applicant or who participated in the public participation process through the submission of written or oral comments, may petition for judicial review in the circuit court in the county where the authorized activity will occur. The petition for judicial review must be filed with the court within 30 days of receipt of this decision. Please contact Robert Rushlow at Robert.Rushlow@maryland.gov or 410-537-4023 with any questions.

Sincerely,

Robert Tabisz, Acting Chief
Tidal Wetlands Division

LICENSEE: **Lockheed Martin Corporation**
ADDRESS: **Attn: Tom Blackman 2323 Eastern Blvd**
Middle River, Maryland 21220
PROJECT LOCATION: **2323 Eastern Boulevard**
Middle River, MD 21220
Dark Head Creek in Baltimore

PURSUANT TO THE AUTHORITY OF THE BOARD OF PUBLIC WORKS, TITLE 16 OF THE ENVIRONMENT ARTICLE, ANNOTATED CODE OF MARYLAND, AND CODE OF MARYLAND REGULATIONS 26.24 AND 23.02.04, **Lockheed Martin Corporation** ("LICENSEE") IS AUTHORIZED BY THE WATER MANAGEMENT ADMINISTRATION ("ADMINISTRATION") TO CONDUCT THE FOLLOWING REGULATED ACTIVITY IN STATE TIDAL WETLANDS, IN ACCORDANCE WITH THE CONDITIONS OF THIS LICENSE AND THE ATTACHED REVISED PLANS DATED **July 17, 2015**, PREPARED BY **Tetra Tech**, AND APPROVED BY THE ADMINISTRATION'S TIDAL WETLANDS DIVISION ON **August 27, 2015**, AND INCORPORATED HEREIN:

1. Emplace a 36 inch diameter outfall pipe that encroaches one foot channelward from an existing bulkhead .
2. Repair an existing bulkhead from the upland side of the structure.

All work is to be completed within a maximum of one foot channelward of the mean high water line.

SPECIAL CONDITIONS

A. A turbidity curtain shall be installed and maintained channelward of the area where bulkhead repair is being conducted during excavation and backfilling operations.

GENERAL CONDITIONS

A. The Maryland Department of the Environment has determined that the proposed activities comply with, and will be conducted in a manner consistent with the State's Coastal Zone Management Program, as required by Section 307 of the Federal Coastal Zone Management Act of 1972, as amended.

B. The Licensee shall comply with all Critical Area requirements and obtain all necessary authorizations from local jurisdiction. This License does not constitute authorization for disturbance in the 100-foot Critical Area Buffer. "Disturbance" in the Buffer means clearing, grading, construction activities, or

removal of any size of tree or vegetation. Any anticipated Buffer disturbance requires prior written approval, before commencement of land disturbing activity, from local jurisdiction in the form of a Buffer Management Plan.

C. If the authorized work is not performed by the property owner, all work performed under this Tidal Wetlands License shall be conducted by a marine contractor registered with the Maryland Department of the Environment in accordance with Chapter 286 of the 2010 Laws of Maryland. A list of registered marine contractors can be obtained by contacting the Department at 410-537-3249 or by e-mail at MDE.MCLB@maryland.gov.

D. The Licensee certifies real property interest in the contiguous upland.

E. This License does not relieve the Licensee from the responsibility of obtaining all necessary federal, State and local government authorizations.

F. The Licensee shall obtain an approved sediment and erosion control plan from the local soil conservation district when the area disturbed is greater than 5000 square feet or 100 cubic yards of fill.

G. The Licensee shall ensure that a copy of this License, including the approved plans, is available at the site until the authorized work is complete.

H. The Licensee shall make every reasonable effort to design and construct the structure or perform the activity authorized in this License in a manner which minimizes adverse impacts on natural resource values, including water quality, plants, wildlife, plant and wildlife habitat, and on historic property values.

I. The Secretary of the Environment may suspend or revoke a License if the Secretary finds that the Licensee has not complied with any condition or limitation in the License or has exceeded the scope of the authorized activities.

J. The Licensee shall indemnify, defend and hold harmless the State of Maryland, its officials, officers, and employees from and against any and all liability, suits, claims and actions of whatever kind, caused by or arising from the work authorized by the License.

K. The Licensee acknowledges that this License does not transfer any property interest in State tidal wetlands. This License allows the Licensee to use State tidal wetlands only for the structure or activity authorized herein and in no way limits the use of waters of the State by the public.

L. This License is valid only for use by the Licensee. Permission for transfer of the License shall be obtained from the Water Management Administration, Tidal Wetland Division. The terms and conditions of this License shall be binding on any assignee or successor in interest of the License.

M. The Licensee shall allow representatives of the Maryland Department of the Environment to inspect the authorized activities.

N. The Licensee shall notify the Maryland Department of the Environment, Water Management Administration, Compliance Program at least 10 day before starting the authorized activities at (410) 537-3510.

O. The Licensee shall complete construction of the activity authorized under this License by the expiration date, otherwise a new General License shall be obtained.

P. Upon completion of the authorized activities, the Licensee shall notify the Maryland Department of the Environment, Water Management Administration, Compliance Program at (410) 537-3510.

REVISED 7/17/15

DEPARTMENT OF THE ARMY
BALTIMORE DISTRICT, U.S. ARMY CORPS OF ENGINEERS
P.O. BOX 1715
BALTIMORE, MD 21203-1715

REPLY TO
ATTENTION OF

IMPORTANT INFORMATION ABOUT YOUR PROJECT

Corps Permit Tracking No.: 201560745 Date: August 27, 2015

Permittee/Project Name: Lockheed Martin Corp. MDSPGP-4 Category and Activity No.: A-e8

Dear Applicant:

The U. S. Army Corps of Engineers, Baltimore District, has determined that the proposed work meets the enclosed terms and conditions of the Maryland State Programmatic General Permit-4 (MDSPGP-4). A requisite of permit issuance requires that the applicant comply with any specific terms and conditions associated with the authorized project (conditions enclosed). This MDSPGP-4 verification is provided pursuant to Section 10 of the Rivers and Harbors Act of 1899 and/or Section 404 of the Clean Water Act. If any of the information contained in your application and/or plans is later found to be in error, the MDSPGP-4 authorization for your project may be modified, suspended, or revoked.

As a condition of the MDSPGP-4 authorization, you, the permittee, are required to complete and sign the **enclosed** Compliance Self-Certification Form regarding the completed work and any required mitigation. The signed form should be returned to the Regulatory Branch at the above address **within 60 days** following completion of the authorized work and any required mitigation.

Please be aware that the terms and conditions of this permit will continue to be binding on the new property owner(s) if structures or work authorized by this permit exist at the time of ownership transfer of the associated property. Although the construction period for work authorized by this MDSPGP-4 is finite, the permit itself, with its limitations, does not expire. To validate the transfer of this permit and the legal responsibility to comply with its terms and conditions, the transferee (new owner) must provide the Corps a mailing address and telephone number along with their signature and date in the space provided below and mail a copy to the above address.

Your MDSPGP-4 authorization is valid until September 30, 2016 unless the permit is modified, reissued, or revoked. You must remain informed of the changes to the MDSPGP-4. When changes to the MDSPGP-4 occur, a public notice announcing the changes will be issued. Be advised that you have 12 months from the effective date of the MDSPGP-4's expiration, modification or revocation to complete the work under the present terms and conditions provided you have commenced construction or are under contract to commence construction of the authorized work.

In order for this authorization to be valid, you must obtain all required Federal, State, and local permits.

William P. Seib

REPLY TO
ATTENTION OF

Effective October 1, 2011

Corps Permit Number

CENAB-OP-R-MDSPGP-4 (MARYLAND STATE PROGRAMMATIC GENERAL PERMIT-4)

TO WHOM IT MAY CONCERN:

Upon the recommendation of the Chief of Engineers, and under the provisions of Section 404 of the Clean Water Act, as amended, and Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403), the Secretary of the Army hereby authorizes the discharge of dredged or fill material or the placement of structures into Waters of the United States, including wetlands and navigable waters. These discharges and structures must comply with all the terms and conditions identified in this MDSPGP-4. It has been determined that the project qualifies for the MDSPGP-4. Accordingly, you are authorized to undertake the activity pursuant to:

1. Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403); and/or
2. Section 404 of the Clean Water Act (33 U.S.C. 1344).

You are authorized to perform work in accordance with the terms and conditions specified in Section VII of the MDSPGP-4 effective on October 1, 2011.

VII. General Conditions: To qualify for MDSPGP-4 authorization, the prospective permittee must comply with the following general conditions, as appropriate, in addition to any activity-specific conditions in the MDSPGP-4 category list and any case-specific special conditions imposed by the Corps.

A. General Requirements:

1. **Other Permits:** Authorization under the MDSPGP-4 does not obviate the need to obtain other Federal, State, or local authorizations required by law.

2. **Geographic Jurisdiction:** This MDSPGP-4 will authorize work undertaken within the geographic limits of the State of Maryland under the regulatory jurisdiction of the Baltimore District.

3. **Applicability:** Applicability of the MDSPGP-4 shall be reviewed with reference to the Corps definition of waters of the United States, including wetlands, and navigable waters of the United States. Applicants are responsible for delineating boundaries of all waters of the United States, including wetland boundaries. The delineation of wetland boundaries shall be accomplished in accordance with the current Federal manual for identifying jurisdictional wetlands and appropriate guidance issued by the Corps of Engineers.

4. **Minimal Effects:** Projects authorized by the MDSPGP-4 shall have no more than minimal individual and cumulative adverse environmental effects.

5. **Discretionary Authority:** Notwithstanding compliance with the terms and conditions of the MDSPGP-4, the Corps retains discretionary authority to require an alternate Corps permit review for any project under all categories of the MDSPGP-4 based on concerns for the aquatic environment or for any other factor of the public interest. This authority may be invoked on a case-by-case basis during the review process for Category B activities whenever the Corps determines that, based on the concerns stated above, the potential consequences of the proposed project warrant individual review. In some rare instances, the Corps may have concerns for the aquatic environment or for any other public interest factor pertaining to a specific proposed project, which has already received a case-specific verification as a Category A activity. In order to evaluate this project under an alternate Corps permit review, the verification must be suspended in accordance with Section VIII.E of the MDSPGP-4.

Whenever the Corps notifies an applicant that an alternate Corps permit may be required, authorization under the MDSPGP-4 is voided. No work may be conducted until the individual Corps permit is obtained, or until the Corps notifies the applicant that further review has demonstrated that the work may proceed under the MDSPGP-4.

6. **Single and Complete Projects:** The MDSPGP-4 shall not be used for piecemeal work and shall be applied to single and complete projects, including maintenance activities. For purposes of this MDSPGP-4, a single and complete project means the total project proposed or accomplished by one owner/developer or partnership or other association of owners/developers and which has independent utility. All components of a project, including all attendant features both temporary and permanent, shall be reviewed together as constituting one single and complete project. All planned phases of multi-phased projects (e.g., subdivisions should include all work such as roads, utilities, and lot development) shall be applied for and reviewed together as constituting one single and complete project. The MDSPGP-4 shall not be used for any activity or portion of a project (e.g., a pier or boat ramp), that is part of, or dependent on, an overall project (e.g., the dredging of a main navigation channel or a spur channel), for which an individual permit or some other alternate Corps permit is required.

7. ***Use of Multiple MDSPGP-4 Activities:*** More than one MDSPGP-4 activity may be used to authorize a single and complete project. However, the specific requirements, including all activity-specific requirements and impact thresholds, must be met for each MDSPGP-4 activity and the total extent of project impacts must not exceed the acreage and/or linear foot limit of the MDSPGP-4 activity with the highest specified acreage and/or linear foot limit. For example, if a road crossing is authorized under Category A of Section IV.B.1.(d)(1) with an associated nontidal bank stabilization authorized under Section IV.B.1.f.(4)(a), the maximum total impact limits to nontidal waters of the United States for the single and complete project may not exceed 10,000 square feet in total area and/or 500 linear feet in total length. The road crossing and nontidal bank stabilization activities must still meet all Category A activity-specific requirements and impact thresholds.

A single and complete project with multiple impacts, that may be eligible for authorization under a Category A and a Category B activity, requires an application submittal to the Corps and review under the MDSPGP-4 Category B verification procedures. All specific requirements, including the activity-specific requirements and impact thresholds of the Category A activity and the Category B activity must be met and the total extent of project impacts must not exceed to total acreage and/or linear foot limit of the MDSPGP-4 activity with the highest specified acreage and/or linear foot limit. For example, if a road crossing is authorized under Category A of Section IV.B.1.(d)(1) with an associated nontidal bank stabilization authorized under Section IV.B.f.(4)(b), the maximum total impact limits to waters of the United States for the single and complete project may not exceed 1/2 acre (21,780 square feet) in total area and/or 2,000 linear feet in total length. The road crossing activity must meet the Category A activity-specific requirements and impact thresholds, and the nontidal bank stabilization activity must meet the Category B activity-specific requirements and impact thresholds.

8. **Permit On-Site:** The permittee shall ensure that a copy of the MDSPGP-4 and the accompanying authorization letter are at the work site at all times. These copies must be made available to any regulatory representative upon request. Although the permittee may assign various aspects of the work to different contractors or sub-contractors, all contractors and sub-contractors shall be expected to comply with all conditions of any general permit authorization.

9. **Authorized Activities in Navigable Waters Subject to Section 10 of the Rivers and Harbors Act of 1899:**

a. If future operations by the United States require removal, relocation, or other alteration of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable water, the permittee will be required, upon due notice from the Corps, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the United States. No claim shall be made against the United States on account of any such removal or alteration.

b. The permittee acknowledges the possibility that the structure permitted herein may be subject to damage by wave wash from passing vessels and/or ice flows within the waterway. The issuance of this permit does not relieve the permittee from taking all proper steps to ensure the integrity of the structure permitted herein and the safety of vessels moored thereto from damage by wave wash and/or ice flows, and the permittee shall not hold the United States liable for such damage.

c. The permittee must install and maintain, at his/her expense any safety lights, markers, and/or signals prescribed by the USCG, through regulations or otherwise, on the authorized facilities and/or structures. The permittee must contact the Commander (AOWW), Fifth Coast Guard District, Federal Building, 431 Crawford

Street, Portsmouth, Virginia, 23704, to ascertain the need for obstruction lights. Prior to commencing the construction or installation of an authorized structure in navigable waters of the United States, the permittee must submit a "Private Aids to Navigation Application" to the Commander of the USCG.

d. The permittee must provide location coordinates of the authorized structures, including minimum depth and other pertinent information to the USCG and request that a Local Notice to Mariners is issued regarding the authorized work.

10. For Aerial Transmission Lines Across Navigable Waters: The following minimum clearances are required for aerial electric power transmission lines crossing navigable waters of the United States. These clearances are related to the clearances over the navigable channel provided by existing fixed bridges, or the clearances which would be required by the USCG for new fixed bridges, in the vicinity of the proposed aerial transmission line. These clearances are based on the low point of the line under conditions producing the greatest sag, taking into consideration temperature, load, wind, length of span, and type of supports as outlined in the National Electrical Safety Code:

NOMINAL SYSTEM VOLTAGE (kV)	Minimum additional clearance (ft.) above clearance required for bridges.
115 and below	20
138	22
161	24
230	26
350	30
500	35
700	42
750-765	45

a. Clearances for communication lines, stream gauging cables, ferry cables, and other aerial crossings must be a minimum of ten feet above clearances required for bridges, unless specifically authorized otherwise by the District Engineer.

b. Corps Regulation ER 1110-2-4401 prescribes minimum vertical clearances for power communication lines over Corps lake projects. In instances where both the National Electrical Safety Code requirements and ER 1110-2-4401 apply, the greater minimum clearance is required.

A. **National Concern:**

1. **Historic Properties:** Any activity authorized by the MDSPGP-4 shall comply with Section 106 of the National Historic Preservation Act. Maryland Department of the Environment, in cooperation with the Maryland Historic Preservation Office, shall conduct an initial review and notify the Corps if any archaeological or other cultural resources are in the vicinity of the project. The Corps may require applicants to perform a survey of archaeological and historical resources in the project area. The Corps shall determine whether National Historic Preservation Act Section 106 consultation is required. The applicant must notify the Corps if they have knowledge that the activity may affect any historic properties listed or eligible for listing, or that the applicant has reason to believe may be eligible for listing on the National Register of Historic Places. If the permittee discovers any previously unknown archaeological or other cultural resource while accomplishing the work authorized by the MDSPGP-4, the permittee shall immediately notify the Corps of what has been found and stop work in the permit area until the required coordination has been completed. The permittee shall not begin or continue work until notified by the District Engineer that the requirements of the National Historic Preservation Act have been satisfied

and that the activity may proceed. Information on the location and existence of historical resources can be obtained from the MHT, Office of Preservation Services, and the National Register of Historic Places.

2. **Tribal Rights:** No activity or its operation may impair reserved tribal rights, including but not limited to, reserved water rights and treaty fishing and hunting rights.

3. **National Lands:** Activities authorized by the MDSPGP-4 shall not impinge upon the value of any Federal land, including but not limited to, National Wildlife Refuges, National Forests, National Parks, National Marine Sanctuaries, or any area administered by the FWS, U.S. Forest Service, or National Park Service (e.g., Assateague Island National Seashore).

4. **Endangered Species:** The MDSPGP-4 does not authorize any activity that may directly or indirectly affect a threatened or endangered species or a species proposed for such designation, as identified under the Federal ESA; or which may directly or indirectly destroy or adversely modify the critical habitat of such species unless and until appropriate coordination with the applicable resource agency(s) is complete and all such issues are resolved in accordance with the applicable regulations and procedures. MDE, in cooperation with MD DNR, shall conduct an initial review and notify the Corps and FWS or NMFS if any Federally listed species or critical habitat is likely to be in the vicinity of the project. The Corps shall determine if consultation with FWS or NMFS is required under Section 7 of the ESA. If consultation is required, the applicant, after notification, shall not begin or continue work until notified by the Corps that the requirements of the ESA have been satisfied and that the activity is eligible for authorization. Information on the location of threatened and endangered species and their critical habitat can be obtained from FWS and NMFS. The Corps will be initiating consultation under the Endangered Species Act on this MDSPGP-4 and any conditions from that consultation will be inserted into the MDSPGP-4.

National Marine Fisheries Service – Endangered Species Act Requirements:

a. **Interactions with National Marine Fisheries Service Federally Threatened or Endangered Species:** Any interaction between a sea turtle or any species listed now or in the future under Federal law as a threatened or endangered species ("listed species") (e.g., North Atlantic right whale, humpback whale, shortnose sturgeon) and the vessels associated with the project must be reported to the NMFS as follows: If the animal appears alive and uninjured (i.e., breathing normally, no visible wounds, movement uninhibited), the permittee or its representative must report the incident to the NMFS Northeast Region Marine Mammal and Sea Turtle Stranding and Entanglement Hotline at (866) 755-6622 within 24 hours of returning from the trip on which they made the discovery. If the animal requires assistance, the call to the hotline must be made immediately. If the animal appears to be injured (i.e. bleeding, gasping for air, etc.) or dead, the permittee or its representative must also immediately call the hotline so the appropriate rehabilitation or stranding network representative can be contacted. The applicant shall also notify the Corps of all correspondence and interaction with the NMFS within two calendar days. Additional information about any Federally threatened or endangered species may be obtained from the attached fact sheet or online at: http://www.nero.noaa.gov/prot_res/stranding/SpeciesOverview.html and at: http://www.nero.noaa.gov/prot_res/esp/. An interaction is defined as an entanglement or capture of a listed species or a strike/direct contact between vessels or equipment used for the project and a listed species.

b. **Vessel Buffer:** When listed species are sighted, vessels must attempt to maintain a distance of 50 yards (150 feet) or greater between the animal and the vessel whenever possible. State and Federal regulations prohibit approaching a right whale within a 500 yard (1,500 foot) buffer zone. Any vessel finding itself within the 500 yard (1,500 foot) buffer zone created by a surfacing right whale must depart immediately at a safe, slow speed. If other listed species are detected, vessels will reduce their speeds to 10 knots or to the maximum extent practicable to ensure human safety. If listed species are sighted off of a moving dredge, intentional approaches within 100 yards (300 feet) of the animal must be avoided. Vessels must reduce speeds to 4 knots or the lowest speed practicable to ensure human safety. Any interactions must be reported to the NMFS.

c. **Best Management Practices Applicable to Category A Activities Within Tidal Waters Having Salinity Levels Less Than 6 Parts Per Thousand (ppt) (See Appendix B):**

(i) Pile Driving: For the protection of listed species within all tidal waters of the Chesapeake Bay in Maryland and its tidal tributaries with salinity levels <6 ppt, pile driving methods must maintain noise level thresholds not to exceed 187dB SEL re 1μPa or 206dB peak re 1μPa at a distance of >10m from the pile being installed; and for levels >155dB peak re 1μPa must not exceed 12 consecutive hours on any given day and a 12 hour

recovery period (i.e., in-water noise levels below 155dB peak re 1μPa) must be provided between work days. Pile driving construction must adhere to one of the following methods: (a) piles must be installed in-the-dry during low water; or (b) piles must be drilled and pinned to ledge; or (c) vibratory hammers must be used to install any size and quantity of wood, concrete, or steel pilings; or (d) impact hammers must be limited to one hammer and <50 piles installed per day with the following: wood piles of any size; concrete piles <18-inches diameter; steel piles <12-inch diameter if the hammer is <3,000 pounds and a wood cushion is used between the hammer and steel pile; or (e) approved pile driving methods that will allow noise level thresholds to be met.

(ii) Sediment Disturbing Activities Time-of-Year Restriction: Sediment disturbing activities, which includes pile driving activities, are prohibited during the period April 1 through June 30 within all tidal waters of the Chesapeake Bay in Maryland and its tidal tributaries with salinity levels <6 ppt for the protection of shortnose sturgeon and early life stages in these waters.

5. **Essential Fish Habitat (EFH) and Fish and Wildlife Coordination Act:** Section 305(b)(2) of the Magnuson-Stevens Fishery Conservation and Management Act requires an EFH consultation with the NMFS for any action or proposed action authorized, funded, or undertaken by a Federal agency that may adversely affect EFH. Essential Fish Habitat has been defined by Congress as "those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity." The designation and conservation of EFH seeks to minimize adverse effects on habitat caused by fishing and non-fishing activities. NMFS has determined that many of the MDSPGP-4 Category A activities are eligible for EFH general or programmatic concurrence and require no further EFH consultation. National Marine Fisheries Service, in consultation with the District, has determined that individual EFH consultation is needed for some projects potentially eligible for authorization under Category A of the MDSPGP-4 that may adversely affect EFH. The Corps will coordinate with NMFS as part of the Category B review procedures. EFH conservation recommendations made by NMFS will normally be included as a permit requirement by the Corps. If the EFH coordination and consultation requirements cannot be resolved under the MDSPGP-4 process, an alternate Corps permit review process is required for the project. The Corps will be initiating consultation under these authorities on this MDSPGP-4, and any conditions from that consultation to protect NOAA trust resources will be inserted into this MDSPGP-4.

6. **Wild and Scenic Rivers:** No activity is authorized under the MDSPGP-4 that occurs in a component of the National Wild and Scenic River System, including rivers officially designated by Congress as study rivers for possible inclusion in the system, while such rivers are in an official study status, unless the appropriate Federal agency, with direct management responsibility for the river, has determined in writing that the proposed activity will not adversely affect any National Wild and Scenic River, including study rivers. Information on Wild and Scenic Rivers may be obtained from the appropriate Federal land management agency in the area (e.g., National Park Service, U. S. Forest Service, Bureau of Land Management, or FWS).

7. **Federally Authorized Civil Works Projects:**

a. **Federal Navigation Projects:** The MDSPGP-4 does not authorize interference with any existing or proposed Federal navigation projects. The permittee understands and agrees that, if future operations by the United States require the removal, relocation, or other alteration of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, the permittee will be required, upon due notice from the Corps, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the United States. No claim shall be made against the United States on account of any such removal or alteration. (See VII.A.9.a.)

b. **Federal Navigation Channel Setbacks:** All activities must comply with the Baltimore District Minimum Setback Guidance for Structures Along Federally Authorized Channels. Please see the Baltimore District's Regulatory webpage to view this guidance: http://www.nab.usace.army.mil/Wetlands%20Permits/publications.htm.

c. **Other Federally Authorized Civil Work Projects (e.g., flood control, dams, and reservoirs):** The MDSPGP-4 does not authorize interference with any proposed or existing Federally authorized civil works project.

8. **Federal Liability:** In issuing this permit, the Federal Government does not assume any liability for the following:

a. Damages to the permitted project, or uses thereof, as a result of other permitted or unpermitted activities or from natural causes;

b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest;

c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit;

d. Design or construction deficiencies associated with the permitted work; and

e. Damage claims associated with any future modification, suspension or revocation of the MDSPGP-4 or any specific MDSPGP-4 verification.

9. **Navigation:** Projects authorized under the MDSPGP-4 shall not cause interference with navigation, and no attempt shall be made by the permittee to prevent the full and free use by the public of all navigable waters at or adjacent to projects authorized under the MDSPGP-4. Nothing in the MDSPGP-4 shall in any way restrict the District Engineer, U.S. Army Engineer District, Baltimore, from exercising his legal authority to protect the public interest in navigation or from exercising his authority under the Navigation Servitude of the United States. (See VII.B.8.)

10. **Fills Within 100-Year Floodplain:** The activity must comply with applicable Federal Emergency Management Agency approved State or local floodplain management requirements.

11. **Safety of Impoundment Structures:** To ensure that all impoundment structures are safely designed, the Corps may require non-Federal applicants to demonstrate that the structures comply with established State dam safety criteria or have been designed by qualified persons. The Corps may also require documentation that the design has been independently reviewed by similarly qualified persons, and appropriate modifications made to ensure safety.

B. **Minimization of Environmental Impacts:**

1. **Avoidance and Minimization:** Discharges of dredged or fill material into waters of the United States and adverse impacts of such discharges on the aquatic ecosystem shall be avoided and minimized to the maximum extent practicable at the project site (i.e., on-site).

2. **Mitigation Standards:** A proposed compensatory mitigation proposal may be submitted with the application to expedite the process. The Corps will determine if the project is eligible for authorization under the MDSPGP-4 subject to the applicant's submittal of a compensatory mitigation proposal for stream and wetland impacts. Compensatory mitigation plans will generally include a requirement for the establishment, performance, maintenance, legal protection (e.g., conservation easements), and long-term management of the mitigation area. Applicants may propose the use of mitigation banks, in-lieu-fee programs, or separate permittee-responsible mitigation. In general, maintenance of previously authorized activities typically does not require mitigation. All mitigation must be in compliance with the 2008 Mitigation Rule (73 FR 70).

a. Wetland mitigation will generally be required for all permanent tidal or nontidal wetland losses either through the use of the State's tidal or nontidal programmatic wetland compensation, mitigation banks, in-lieu-fee programs, and/or by the permittee as required by special condition of the MDSPGP-4 or the State authorization. Generally, the minimum required wetland mitigation ratios will be as follows: 2:1 for forested and scrub-shrub wetlands; 1:1 for herbaceous emergent wetlands, and 1:1 for permanent conversion of forested wetlands to herbaceous emergent wetlands. Wetland mitigation can include wetland restoration, establishment, enhancement (including restoration or enhancement of upland forested buffers), and/or wetland preservation, unless the Corps determines in writing that some other form of mitigation would be more appropriate and provides a project-specific waiver of this requirement. Since the likelihood of success is greater and the impacts are reduced, wetland restoration should be the first compensatory mitigation option considered.

b. Stream mitigation, focusing on functional replacement, will generally be required for any project that involves losses of more than 200 linear feet to stream channels and rivers through the use of mitigation banks, in-lieu-fee programs, or by the permittee as required by special condition of the MDSPGP-4 and/or the State authorization. Stream mitigation can include stream restoration, establishment, enhancement (including enhancement of riparian buffers), and stream preservation. Riparian buffer areas should consist of native species. The width of the required riparian area will address documented water quality or aquatic habitat impact concerns. The need to require mitigation for impacts to open waters will be determined on a case-by-case basis.

c. For activities resulting in the loss of marine or estuarine resources, permittee-responsible compensatory mitigation may be environmentally preferable if there are no mitigation banks or in-lieu-fee programs in the area that have marine or estuarine credits available for sale or transfer to the permittee.

d. For permittee-responsible mitigation, the special conditions of the MDSPGP-4 verification must clearly indicate the party or parties responsible for the implementation, performance, and long-term management of the compensatory mitigation project.

3. **Work in Wetlands:** Heavy equipment working in wetlands shall be avoided if possible and, if required, soil and vegetation disturbance shall be minimized by using techniques such as timber mats, geotextile fabric, and vehicles with low-pressure tires. Disturbed areas in wetlands shall be restored to preconstruction contours and elevations upon completion of the work.

4. **Temporary Fill and Mats**: Temporary fill and the use of mats are both considered a discharge of fill material and must be included in the quantification of impact area authorized by the MDSPGP-4. Temporary fill (e.g., access roads, cofferdams) in waters and wetlands authorized by the MDSPGP-4 shall be properly stabilized during use to prevent erosion. Temporary fill in wetlands shall be placed on geotextile fabric laid on the existing wetland grade. Upon completion of the work, all temporary fills shall be disposed of at an upland site, suitably contained to prevent erosion and transport to a waterway or wetland. Temporary fill areas shall be restored to their original, pre-construction contours and revegetated with native wetland species.

5. **Erosion and Sediment Control:** Adequate erosion and sediment control measures, practices, and devices, such as turbidity curtains in tidal waters, vegetated filter strips, geotextile silt fences, phased construction, or other devices or methods, shall be used to reduce erosion and retain sediment on-site during and after construction. These devices and methods shall be capable of (a) preventing erosion, (b) collecting sediment and suspended and floating materials, and (c) filtering fine sediment. Erosion and sediment control devices shall be removed when the work is complete and the site has been successfully stabilized. The sediment collected by these devices shall be removed and placed at an upland location, in a manner that will prevent its later erosion into a waterway or wetland. All exposed soil and other fills shall be permanently stabilized at the earliest practicable date. In-stream work shall be conducted "in the dry" whenever practicable. This should be accomplished using stream diversion devices, other than earthen or stone cofferdams. In addition, work in waters of the United States should be performed during periods of low-flow or no-flow, whenever practicable.

6. **Aquatic Life Movements:** No activity may substantially disrupt the necessary life-cycle movements of those species of aquatic life indigenous to the waterbody, including those species that normally migrate through, or spawn/nursery within the area (e.g., anadromous/catadromous fish); unless the activity's primary purpose is to impound water. Culverts placed in streams must be installed to maintain low flow conditions. A low flow channel must be maintained through any discharges placed for armoring across the channel so as to not impede flow in the waterway and/or not to block or impede the movements of anadromous, estuarine, and resident fish. Permanent culvert or pipes placed in streams must be depressed in accordance with the State of Maryland regulations. If depression of the culvert is not practicable, the applicant must submit a narrative, along with their application, documenting measures evaluated to minimize disruption of the movement of aquatic life, as well as specific documentation concerning site conditions and limitations on depressing the culvert, cost, and engineering factors that prohibit depressing the pipe/culvert. Options that need to be considered include the use of a bridge, bottomless pipe, partial depression, or other measures to provide for the movement of aquatic organisms. The documentation must also include photographs documenting site conditions. The applicant may find it helpful to contact their regional fishery agency for recommendations about the measures to be taken to allow for fish passage

7. Water Crossings:

a. All temporary and permanent crossings of waterbodies shall be suitably bridged, culverted, or otherwise constructed to withstand and to prevent the restriction of high flows and tidal flows; to maintain existing low flows; and to prevent the obstruction of movement by aquatic life indigenous to the water body, including anadromous, estuarine, and resident fish species.

b. All water crossings (e.g., utility lines and road crossings) must be constructed roughly perpendicular to waters of the United States, including streams and wetlands. Where a utility line or access road is constructed parallel to a stream corridor, an undisturbed buffer shall be maintained between the utility line/access road and the waterway to avoid or minimize potential future impacts to waters of the United States. These potential impacts would include such issues as sewer line leaks or failures, future stream channel meandering, stream bank instability and failure, and right-of-way maintenance.

c. Water crossings must be constructed "in the dry" whenever practicable. This should be accomplished by using stream diversion devices other than earthen or stone cofferdams.

d. Equipment shall cross streams only at suitably constructed permanent or temporary crossings.

e. Temporary structures and fills shall be removed and the area restored to its original contours and elevations, or to the conditions specified in the approved plans. The temporary structures and the areas of fill associated with these structures must be included in the total waterway/wetlands impacts.

8. **Discharge of Pollutants:** All activities that are authorized under the MDSPGP-4 and that involve any discharge or relocation of pollutants into waters of the United States shall be consistent with applicable water quality standards, effluent limitations, standards of performance, prohibitions, and pretreatment standards and management practices established pursuant to the CWA (33 U.S.C. 1251 et. Seq.), and applicable State and local laws and regulations. No discharge of dredged or fill material in association with this authorization may consist of unsuitable material such as trash, debris, car bodies, asphalt, etc.

9. **Spawning Areas:** Activities, including structures and work in navigable waters of the United States or discharges of dredged or fill materials in fish and shellfish spawning or nursery areas during spawning seasons, shall be avoided. Impacts to these areas shall be avoided or minimized to the maximum extent practicable during all other times of year. Activities that result in the physical destruction (e.g., through excavation, dredging, mining, fill, or significant downstream sedimentation by substantial turbidity) of an important spawning/nursery area are not authorized by this MDSPGP-4.

10. **Waterfowl Breeding and Wintering Areas:** Discharges into breeding and wintering areas for migratory waterfowl shall be avoided to the maximum extent practicable.

11. **Environmental Values:** The permittee shall make every reasonable effort to construct or operate the work authorized under the MDSPGP-4 in a manner that maintains as many environmental values as practicable, and that avoids or minimizes any adverse impacts on existing fish, wildlife, and natural environmental values.

12. **Management of Water Flows:** To the maximum extent practicable, the pre-construction course, condition, capacity, and location of open waters must be maintained for each activity, including stream channelization and storm water management activities. The activity must be constructed to withstand expected high flows. The activity must not restrict or impede the passage of normal or high flows. The activity may alter the pre-construction course, condition, capacity, and location of open waters if it benefits the aquatic environment (e.g., stream restoration or relocation activities).

13. **Water Supply Intakes:** No discharge of dredged or fill material may occur in the proximity of a public water supply intake.

D. **Procedural Conditions:**

1. **Inspections:** The permittee shall permit the District Engineer or his authorized representative(s) to make periodic inspections at any time deemed necessary to ensure that the work is being performed in accordance with the terms and conditions of the MDSPGP-4. The District Engineer may also require post-construction engineering drawings (as-built plans) for completed work, and post-dredging survey drawings for any dredging work.

2. **Compliance Certification:** Every permittee who receives a written MDSPGP-4 verification shall submit a signed Compliance Certification Form within 60 days following completion of the authorized work and any required mitigation (but not mitigation monitoring, which requires separate submittals). Failure to submit the Compliance Certification Form by the permittee could result in the Corps taking appropriate non-compliance enforcement action against the permit holder. The Corps will provide a blank copy of the Compliance Certification Form to the permittee with the MDSPGP-4 verification. The completed form will include the following:

a. A statement that the authorized work either was or was not done in accordance with the MDSPGP-4 verification, including any general and/or specific conditions. If the activity was not done in accordance with the MDSPGP-4 verification, including any general and/or specific conditions and requirements, the permittee shall describe the specifics of the deviation from the authorized activity.

b. A statement that any required mitigation was or was not completed in accordance with the permit conditions. If the mitigation was not completed in accordance with the permit conditions, the permittee shall describe the specifics of the deviation from the permit conditions.

c. The signature of the permittee, certifying the completion of the work and compensatory mitigation.

After the project is completed, the certification shall be sent to the Baltimore District at the following address:

U. S. Army Corps of Engineers
Baltimore District
Attn: CENAB-OP-R
P. O. Box 1715
Baltimore, Maryland 21203-1715

3. **Transfer of MDSPGP-4 Verifications:** If the permittee sells the property associated with a MDSPGP-4 verification, the permittee may transfer the MDSPGP-4 verification to the new owner by submitting a letter to the Baltimore District Corps of Engineers office to validate the transfer. A copy of the MDSPGP-4 verification must be attached to the letter, and the letter must contain the following statement and signature:

"When the structures or work authorized by this MDSPGP-4 are still in existence at the time the property is transferred, the terms and conditions of this MDSPGP-4, including special conditions, will continue to be binding on the new owner(s) of the property. To validate the transfer of this MDSPGP-4 permit and the associated liabilities associated with compliance with its terms and conditions, have the transferee sign and date below."

_____ _____
(Transferee) (Date)

4. **Maintenance:** The permittee shall properly maintain the work or structure authorized by the MDSPGP-4 in good condition and in compliance with the terms and conditions of the MDSPGP-4, including maintenance to ensure public safety.

5. **Property Rights:** The MDSPGP-4 does not convey any property rights, either in real estate or material, or any exclusive privileges, nor does it authorize any injury to property or invasion of rights or any infringement of Federal, State, or local laws or regulations.

6. **Modification, Suspension and Revocation:** The MDSPGP-4, or any verification under it, may be either modified, suspended, or revoked, in whole or in part, pursuant to DA policies and procedures and any such action shall not be the basis for any claim for damages against the United States.

7. **Restoration:** The permittee, upon receipt of a notice of revocation of authorization under the MDSPGP-4, shall restore the wetland or waterway to its former condition, without expense to the United States and as directed by the Secretary of the Army or his authorized representative. If the permittee fails to comply with such a directive, the Secretary or his designee may restore the wetland or waterway to its former condition, by contract or otherwise, and recover the cost from the permittee.

8. **Special Conditions:** The Corps may impose special conditions on any project authorized under the MDSPGP-4, in cases where the Corps determines that special conditions are necessary to avoid or minimize adverse effects on the environment or on any other factor of the public interest. Failure to comply with all conditions of the authorization/ verification, including special conditions, will constitute a permit violation/unauthorized work and may subject the permittee to criminal, civil, or administrative penalties, and/or restoration.

9. **False or Incomplete Information:** In granting authorization pursuant to this permit, the Baltimore District will rely upon information and data provided by the permittee. If the project is verified by the Corps or MDE under the MDSPGP-4 and subsequently discovers that it has relied on false, incomplete, or inaccurate information provided by the permittee, the MDSPGP-4 verification may be revoked, in whole or in part, and/or the United States may institute appropriate legal proceedings.

10. **Compliance:** Any activity performed in waters of the United States, including wetlands and navigable waters, that is not in compliance with all the terms and conditions of the MDSPGP-4, which includes the MDSPGP-4 authorized activity activity-specific requirements, constitutes unauthorized work and is subject to an enforcement action by the Corps or the EPA. Furthermore, the MDSPGP-4 does not delegate any Section 404 enforcement or regulatory authority. Unauthorized work in waters of the United States, including wetlands and navigable waters, is subject to one or more of the following responses by EPA and/or the Corps:

a. A Cease and Desist order and/or an administrative compliance order requiring remedial action.

b. Initiation and assessment of a Class I administrative penalty order pursuant to Section 309(g) of the CWA.

c. Initiation and assessment of a Class II administrative penalty for continuing violation pursuant to Section 309(g) of the CWA.

d. Referral of the case to the U. S. Attorney with a recommendation for a civil or criminal action.

e. If the Corps determines that an after-the-fact application is appropriate, it will be reviewed following the appropriate procedures.

f. Any other appropriate response.

MDSPGP-4 PERMIT COMPLIANCE CERTIFICATION FORM (10/1/11)

Corps Permit Tracking No. _____ Category & Activity Number _____

Project Name _____ Applicant Name _____

Waterway _____ County _____

Dear Permittee:

In accordance with the compliance certification condition of your MDSPGP-4 authorization, you are required upon completion of all permitted work, or if mitigation/compensation is required, within 60 days following completion of the authorized work and any required mitigation (but not the mitigation monitoring, which requires separate submittals), to complete and sign this certification form and return it to the Corps of Engineers, Baltimore District, ATTN: CENAB-OP-R, P.O. Box 1715, Baltimore, Maryland 21203-1715.

Please note that the permitted activity is subject to compliance inspections by U.S. Army Corps of Engineers representatives. As a condition of this permit, failure to return this notification form, provide the required information below, or to perform the authorized work in compliance with the permit, can result in suspension, modification or revocation of your authorization in accordance with 33 CFR Part 325.7 and/or administrative, civil, and/or criminal penalties, in accordance with 33 CFR part 326.

Please provide the following information:

1. Date authorized work commenced: _____ 2. Date authorized work completed: _____

3. Was all work and any required mitigation, completed in accordance with your MDSPGP-4 authorization, includin all general and/or specific conditions? YES___ NO ___

4. For Category A projects involving pile driving activities that are within all tidal waters of the Chesapeake Bay in Maryland and its tidal tributaries with salinity levels less than 6 parts per thousand (See Appendix B of the MDSPGP-4), please indicate the pile driving method that was used for the authorized work:

_____(a) Piles must be installed in-the-dry during low water;
_____(b) Piles must be drilled and pinned to ledge;
_____(c) Vibratory hammers must be used to install any size and quantity of wood, concrete, or steel pilings;
_____(d) Impact hammers must be limited to one hammer and <50 piles installed per day with the following: wood piles of any size; concrete piles <18-inches diameter; steel piles <12-inch diameter if the hammer is <3,000 pounds and a wood cushion is used between the hammer and steel pile;
_____(e) Approved pile driving methods that will allow noise level thresholds to be met.
Describe: _____

5. Explain in detail any deviations to the authorized work and/or mitigation (use additional sheets if necessary)

_____

_____

6. Was mitigation accomplished through a contribution to the Maryland Nontidal Wetlands Compensation Fund? YES_____NO_____ (if NO, please complete Nos. 6 and 7 below).

7. Wetland Mitigation: Required? YES____ NO_____ Required Completion Date _____
Wetland Mitigation Completed? YES_____ NO____ Mitigation Monitoring Reports Required? YES____ NO___

8. Please attach labeled photographs showing completed work including mitigation area(s).

I hereby certify that, except as noted above, that all work, including mitigation, has been completed in accordance with the terms and conditions, including special conditions of the above referenced permit.

MDSPGP-3
CATEGORY I ACTIVITY (I-e(8))
Outfall Structures and Associated Intake Structures

The projects, structures and activities, listed below, must comply with all activity-specific conditions, in addition to all of the general conditions of this general permit.

This activity authorizes discharges of dredged or fill material associated with the construction of new outfall structures and associated intake structures where the effluent from the outfall is authorized, conditionally authorized, or specifically exempted, or is otherwise in compliance with regulations issued under the National Pollutant Discharge Elimination System (NPDES) program. All work authorized by this activity, including discharges, must comply with all activity-specific impact limits and conditions listed below, in addition to the general conditions of this permit (Sections 10 and 404; all waters of the United States).

Impact Limits: The total temporary and permanent impact to waters of the United States, which includes tidal and nontidal wetlands, streams, rivers, navigable waters, and other open waters may not exceed ½ acre (21,780 square feet).

Conditions:

(i) Application must be submitted to MDE for Corps authorization.

(ii) In order to minimize the effects of intakes on anadromous fish eggs and larvae, and oyster larvae, intake structures should be equipped with screening (with mesh size no larger than 2 mm) of wedge wire or another material of equal or better performance. Where feasible, intakes should be located away from spawning or nursery grounds, or to minimize the impingement on, or entrainment of, eggs or larvae. In addition, intake velocities should not exceed 0.5 ft./sec.

RE: Geophysical Survey
Utility/Structure Clearance for Soil Remediation Excavations
Middle River Complex
Blocks F, D, and D Panhandle
Middle River, MD
Enviroscan Reference Number 051533

Dear Mr. Apanavage:

Pursuant to your request for a proposal on April 2, 2015, Enviroscan, Inc. has conducted a multi-technique geophysical survey at the above-referenced site. The fieldwork was performed on May 20 and 21, 2015. The purpose of the survey was to perform utility clearance at client-designated proposed soil remediation excavations.

Methods

The utility survey was completed using standard and/or routinely accepted practices of the geophysical industry and equipment representing the best available technology, including:

- a Radiodetection RD8000 Multi-Frequency pipe and cable tracer;
- a Radiodetection C.A.T. and Genny pipe and cable locator/tracer;
- a Fisher TW-6 electromagnetic (EM) pipe and cable locator/tracer;
- a GSSI SIR-4000 ground penetrating radar (GPR) system.

The principles of these techniques are detailed below.

RD8000

Utility tracing was conducted using a Radiodetection RD8000 digital cable and pipe tracer. The transmitter can be directly (conductively) coupled to exposed portions of a metallic pipe, cable, or wire or indirectly (inductively) to a subsurface metallic utility of known location/orientation. The transmitter remains stationary and energizes the metallic utility at a frequency selected by the operator (512 Hz, 8 kHz, 33 kHz, or 65 kHz), which is received at the ground surface by the digital locator. When the transmitter is directly coupled to the metallic utility, the digital receiver can also calculate the depth of the utility to an accuracy of ±10% of the actual depth of the utility. Please note the close proximity to bends in the traced line or poor signal strength can result in erroneous depth estimations.

C.A.T. and Genny

The survey areas were also scanned with a Radiodetection C.A.T. and Genny pipe and cable locator and tracer. In Power mode, the C.A.T. detects the 50 to 60 Hertz (Hz) electromagnetic field generated by live power cables and other metallic utilities to which a live line is grounded. In Radio mode, the C.A.T. detects buried conductors (cables or metallic pipes) as they conduct and re-transmit commercial broadcast radio energy. In Genny mode, the C.A.T. detects signal generated by the Genny transmitter. The Genny transmitter can be coupled directly (conductively) to exposed portions of a metallic pipe, cable, or wire or indirectly (inductively) to a subsurface metallic utility with known location and orientation.

TW-6

In order to detect unknown utilities, Enviroscan employed a Fisher TW-6 pipe and cable locator and tracer. In pipe and cable search mode, the TW-6 is essentially a deep-sensing metal detector that detects any highly electrically conductive materials (e.g. metals) by creating an electromagnetic field with a transmitting coil. A receiving coil at a fixed separation from the transmitter measures the field strength. As the instrument is swept along the ground surface, subsurface metallic bodies distort the transmitted field. The change in field strength/orientation is sensed by the receiver, setting off an audible alarm and/or causing deflection of an analog meter. The TW-6 can nominally detect a 2-inch metal pipe to a depth of 8 feet and a 10-inch metal pipe to a depth of 14 feet.

In pipe and cable tracing mode, the TW-6 transmitter can be coupled directly (conductively) to exposed portions of a metallic pipe, cable, or wire or indirectly (inductively) to a subsurface metallic utility with known location and orientation. The transmitter remains stationary and energizes or excites the metallic utility to be traced with an 81.92-kilohertz signal that can be traced at the ground surface using the mobile TW-6 receiver wand or probe.

GPR

GPR systems produce cross-sectional images of subsurface features and layers by continuously emitting pulses of radar-frequency energy from a scanning antenna as it is towed along a survey profile. The radar pulses are reflected by interfaces between materials with differing dielectric properties. The reflections return to the antenna and are displayed on a video monitor as a continuous cross section in real time. Since the electrical properties of metal are distinctly different from soil and backfill materials, metallic pipes and other structures commonly produce dramatic and characteristic reflections. Fiberglass, plastic, concrete, and terra-cotta pipes and structures also produce recognizable, but less dramatic reflections. Scanning was performed using a GSSI SIR-4000 GPR controller with an internal hard drive and a color display, and both a high-frequency, high-resolution 400 megaHertz (MHz) antenna or transducer, and a lower frequency deep-penetrating 200 MHz transducer.

Results Summary

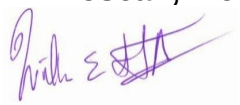
The utility clearance survey results are depicted in Figures 1 through 3. The mapped utilities located during the survey are overlain on a base map of the site. Outlines of the proposed excavations appear as blue polygons. Several utilities were found (and marked in the field) to pass through or near the proposed excavations. When possible, the approximate depth of a utility was noted in the field markings.

The results for Block F are depicted in Figures 1 and 2. Figure 1 shows the current and past utility mark-out results. Figure 2 also includes the terrain conductivity contours from an EM-31 survey performed for Tetra Tech in 2005. The contours support the utility mark-out results. Several of the proposed excavations have known utilities within or near their boundaries.

The results for Block D are depicted in Figure 3, which shows the current and past utility mark-outs. Additionally, the results of a past EM-61 survey performed in 2014 are depicted in a portion of the Block D area. The report associated with this survey is included as Appendix A.

The Results for the Block D and Panhandle are shown in Figure 4. This figure shows the current and past utility mark-outs. No archived EM data are included in this figure. One known storm pipe is near the corner of Proposed Excavation D.

Limitations



The above-referenced geophysical survey was completed using standard and/or routinely accepted practices of the geophysical industry and equipment representing the best available technology. Enviroscan does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen site-specific conditions. However, we make every effort to identify and notify the client of such limitations or conditions. In particular, please note the following specific limitations and recommendations:

- Enviroscan's field markings should be considered accurate to within approximately +/-18 inches for single lines. In contrast, since electromagnetic tracing of duct banks provides only a centerline, the bank itself may extend for 2 to 3 feet beyond the marked trace.

- The completion of this survey does not relieve any party of applicable legal obligations to notify the appropriate One-Call center prior to digging or drilling.

As always, we appreciate this opportunity to have worked with you. If you have any questions, please do not hesitate to contact me.

Sincerely,
Enviroscan, Inc.

RE: Geophysical Survey – Metallic Target Detection/Delineation
Block D Waterfront Area
Middle River Complex
Middle River, MD
Enviroscan Reference Number 051406

Dear Mr. Apanavage:

Pursuant to your request, Enviroscan, Inc. (Enviroscan) has completed a geophysical survey of the above-referenced site. The survey consisted of a reconnaissance-level electromagnetic (EM) survey. The methods and results of the survey are described below.

Survey Purpose and Site Description

The primary purpose of the survey was to determine whether there is evidence of buried metallic debris (e.g. tanks, drums, building foundations, etc.) near a recently examined DPT location (SB-1305) that showed visual signs of contamination and unexpectedly high PID levels, while nearby PID locations were clean (see black and light blue triangles, Figure 1).

Survey Methods

In order to provide detection of large subsurface metallic targets, while minimizing interference from surficial debris and structures, Enviroscan performed an electromagnetic (EM) survey using a Geonics, Ltd. EM-61 MK2 instrument. Ground penetrating radar (GPR) was then utilized to further characterize targets identified with the EM-61 MK2. The principles of each technique are described below.

EM-61 MK2

The EM-61 MK2 uses a one-meter by ½-meter coil to transmit 150 electromagnetic pulses per second into the ground at each measurement station. During the off-time between transmitted pulses, a receiver coil measures the decay of transient electrical currents induced by the transmitted pulses. The decay is characterized by recording the strength of the transient electrical currents (in milliVolts) at four different delays or time gates following shut-off of the applied field. Electrical currents in moderately conductive earth materials (e.g. electrolytic soils) dissipate rapidly, leaving the more prolonged currents due to buried metallic objects. The EM-61 MK2 measures the surficial electrical potential due to the prolonged subsurface currents, providing a digital read-out of the relative metallic content of the subsurface.

To complete the EM-61 MK2 survey, a system of profiles (at approximately 5-foot intervals) was surveyed by towing the EM-61 MK2 with a low metallic profile Yamaha Rhino UTV. Data were collected at a rate of eight readings per second (for an average station spacing of approximately one foot). Location control was maintained using a Topcon GMS-110 global positioning system (GPS) receiver. The GPS positions were collected with real-time differential correction, using the corrections from a coastguard beacon in Annapolis, MD. The resulting differential GPS (DGPS) positions have an accuracy of better than two feet. GPS and EM data were fed simultaneously to a Juniper System Allegro data logger running Trackmaker 61 software by Geomar, Inc. This software allows display of the data coverage in real time to ensure complete site coverage.

The EM-61 MK2 records four measurements spaced by time (time gates) after the initial transmit pulse. Gate 1 reads responses from metal targets of all depth and size within the range and sensitivity of the instrument. Gate 2 filters out the smallest targets. Gates 3 and 4 read responses from large targets, with Gate 4 showing the least interference from smaller targets. The purpose of this survey was to detect and delineate possible individual buried metallic targets of a size comparable to drums and USTs; therefore, Gate 3 was selected for the best display of possible targets of interest. Results of the EM-61 MK2 survey are depicted as contours of the individual EM-61 MK2 station measurements in millivolts on Figure 1. The color contours depicted in Figure 1 show increasing metallic response from green to yellow to orange to red to pink colors.

TW-6

In order to re-acquire the location of identified metallic anomalies detected in the EM-61 MK2 survey, Enviroscan employed a GPS and a Fisher TW-6 pipe and cable locator and tracer. In pipe and cable search mode, the TW-6 is essentially a deep-sensing metal detector that detects any highly electrically conductive materials (e.g. metals) by creating an electromagnetic field with a transmitting coil. A receiving coil at a fixed separation from the transmitter measures the field strength. As the instrument is swept along the ground surface, subsurface metallic bodies distort the transmitted field. The change in field strength/orientation is sensed by the receiver, setting off an audible alarm and/or causing deflection of an analog meter. The TW-6 can nominally detect a 2-inch metal pipe to a depth of 8 feet and a 10-inch metal pipe to a depth of 14 feet.

Ground Penetrating Radar Survey

Anomalies in the EM-61 MK2 data that indicated the presence of subsurface metallic objects indicative of building debris, USTs, or drums (see Figure 1) were re-located using DGPS and the TW-6, and then scanned with GPR to identify any high-amplitude parabolic reflections of the type indicative of intact tanks, utilities, or buried debris. GPR systems produce cross-sectional images of subsurface features and layers by continuously emitting pulses of radar-frequency energy from a scanning antenna as it is towed along a survey profile. The radar pulses are reflected by interfaces between materials with differing dielectric properties. The reflections return to the antenna and are displayed on a color monitor as a continuous cross section in real time. Since the electrical properties of metal are distinctly different from soil and backfill materials, metallic pipes and other structures produce dramatic and characteristic reflections. Fiberglass, plastic, concrete, and terra-cotta pipes and structures also produce recognizable, but less dramatic, reflections.

Enviroscan performed GPR scanning of the survey area using a GSSI UtilityScan DF GPR controller, along with a dual frequency 800/300 MHz scanning antenna. During data collection, the GPR images were inspected in real-time for any GPR reflections that are characteristic of metallic USTs or drums (i.e. high-amplitude parabolic reflections). Anomalies identified in the field were marked with semi-permanent marking paint and flags. The EM anomalies further investigated with GPR are depicted in Figure 1, overlain on the EM-61 MK2 data as blue-outlined polygons/ovals.

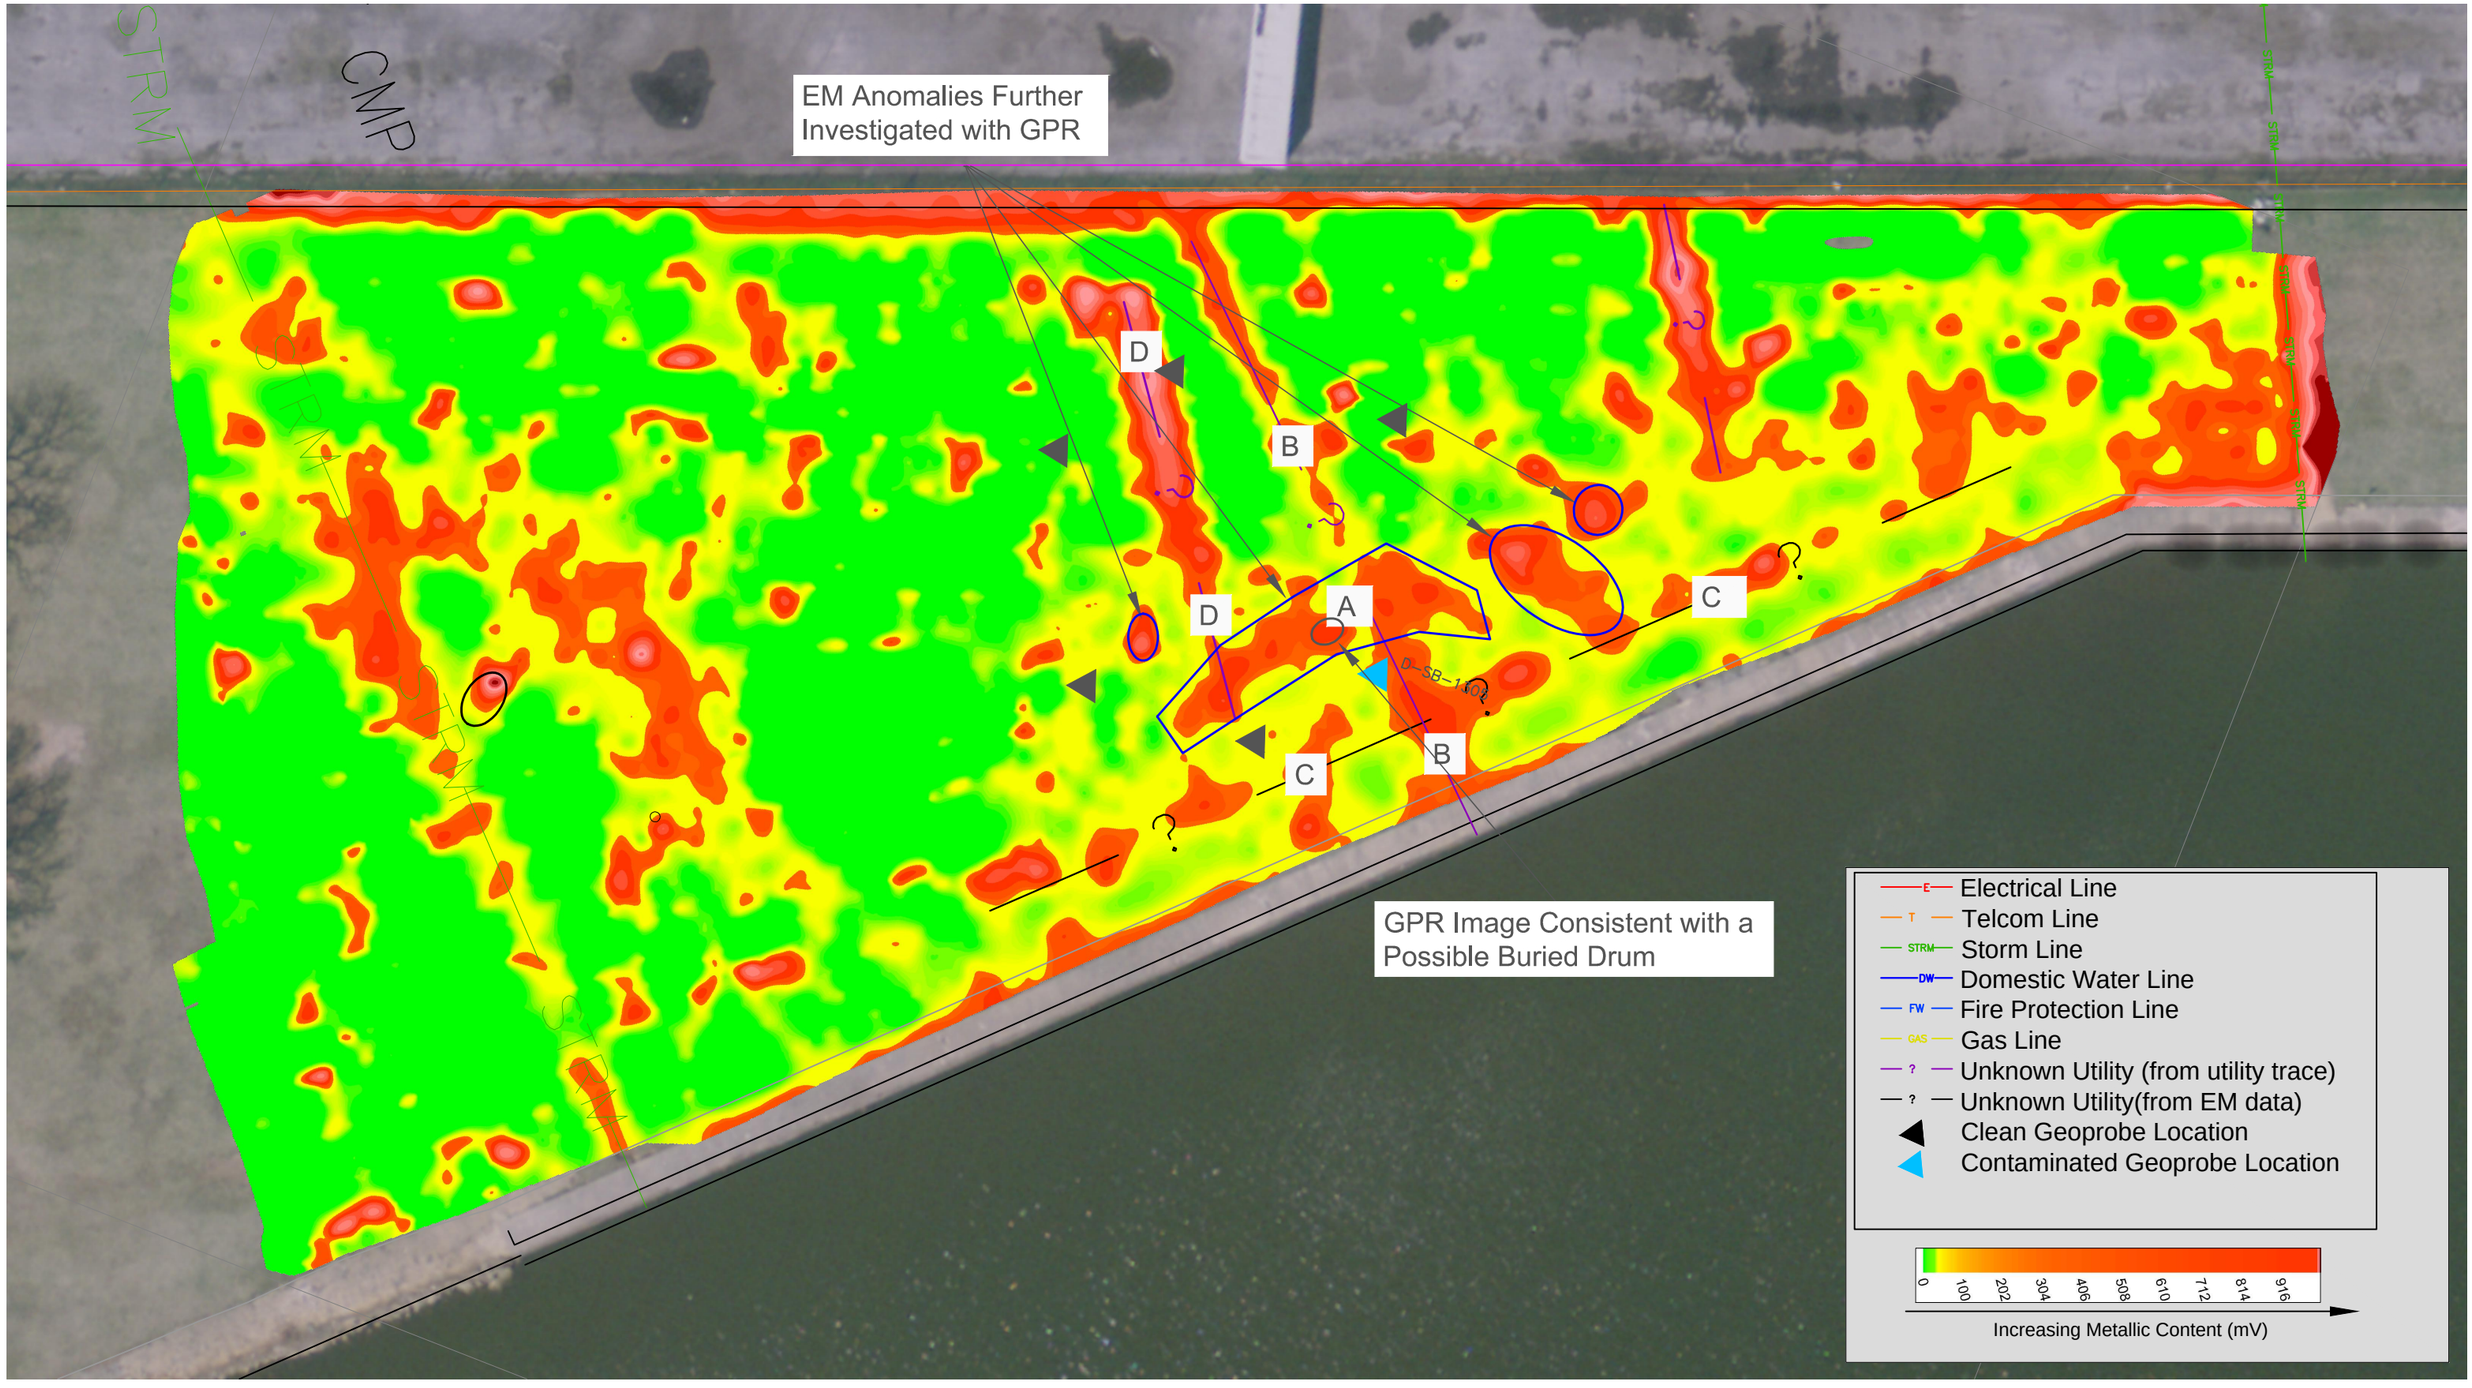
Results

The EM survey results are depicted in Figure 1, showing the Channel 3 EM-61 MK2 results in millivolts from this survey. The EM survey shows numerous small low- to moderate-amplitude and several large varying-amplitude EM anomalies. The survey area was much larger than needed to identify metallic anomalies near Boring SB-1305 (see blue triangle, Figure 1). The large area aids in identifying linear metallic anomalies characteristic of utility pipes that may also have an impact on the suspect boring. Enviroscan identified four EM anomalous areas between the clean borings and SB-1305 and three linear EM anomalies (see blue polygons/ovals, Figure 1). No other anomalies were in close enough proximity to affect SB-1305 alone. These anomalies were further scanned with GPR. Within the largest anomaly, a metallic object with the GPR characteristics of a potential drum was identified (see black oval labeled A, Figure 1). No other anomalies scanned with GPR showed any characteristic shapes. One linear anomaly, labeled B, just to the east of SB-1305, was delineated. The suspected pipe tracks to the northwest, and its origin is not known. A second potential linear anomaly, labeled C, tracks to the northeast. This anomaly is not as clearly defined, and runs parallel to the seawall about 25 feet inland. A third linear anomaly was delineated to the west of SB-1305, labeled D. This anomaly is not long, (approximately 60 to 80 feet), and clearly has ends within the survey area. GPR scanning of Anomaly D showed GPR image characteristics consistent with shallow buried metallic debris. This anomaly might be the result of a disposal trench. This determination is based on the linear metallic nature of the anomaly and GPR images consistent with buried debris.

Limitations

The geophysical survey described above was completed using standard and/or routinely accepted practices of the geophysical industry and equipment representing the best available technology. Enviroscan does not accept responsibility for survey limitations due to inherent technological limitations or site-specific conditions. However, we make every effort to identify and notify the client of such limitations or conditions.

As always, we have appreciated this opportunity to have worked with you. If you have any questions, please do not hesitate to contact the undersigned.



Sincerely,
Enviroscan, Inc.

Section 1
Introduction

This dust control and air monitoring and sampling plan describes the monitoring procedures that will be used during soil excavation and remediation activities to control airborne and air-driven dusts. Airborne dusts can be generated during the following excavation and remediation activities:

- Excavation of contaminated soil within identified tax blocks –Potential dust generation is anticipated to be low to moderate, and easily controlled via water misting.

- Loading and unloading of transportation vehicles – Potential dust generation is anticipated to be low to moderate, and can occur during transfer of excavated material from the excavator or loader into the transportation vehicle, or during restoration when trucks dump backfill material on-site. Loading at a higher vantage point increases mechanical agitation, thereby increasing potential dust generation. Dust generation is expected to decrease as more material is loaded into the vehicle and drop distance decreases. Dust generated during loading activities can be easily controlled by misting soil with water, and by soil transit.

- Degradation of haul roads or construction entrance resulting from heavy traffic use – Potential dust generation is anticipated to be moderate to high. As the road surface pulverizes it becomes more easily airborne. However, travel distances are minimal, and generated dust can be easily controlled via water misting.

- Tracking soils from tax blocks onto improved and unimproved roadways – Potential for dust generation is anticipated to be low. To minimize this potential, trucks will be examined prior to leaving the Tax block for residual soils (mud on the tires). In these cases, the trucks will be routed through the adjacent decontamination unit for pressure washing wheels, tires, and undercarriage before exiting onto in-plant and public thoroughfares.

Airborne dusts may also result from high winds. In addition, any eroded soil or sediment resulting from rainfall can also dry out and become airborne if agitated. The implementation of the Erosion and Sediment Control Plan (Tetra Tech, March 2015) is designed to prevent this from occurring.

In general, dust generation can be controlled by misting dry soil and road surfaces, by keeping soil stockpiles covered and/or vegetated (based on anticipated storage time) and by managing soil excavation, dumping and grading operations.

Section 2
Dust Suppression Methods

Dust generation is mitigated by applying water to knock down or pre-saturate media, thereby preventing particulates from becoming airborne during mechanical action. Substances that draw or retain water (e.g., calcium chloride) can be added to the water to extend the suppression period. Calcium chloride can also be applied to road or other exposed soil surfaces directly, either as a solid or as a 30% solution. Dust generation can be minimized as follows:

- Water trucks with spray nozzles and hose attachments will be used to mist surfaces used by vehicles; a hose can be used for spot treatment and where necessary during loading and unloading operations.

- Separate portable tanks and systems can be placed at the decontamination pad, at the wheel wash and stabilized construction entrance.

- Power brooms can be used to collect and remove soil and sediment from improved surfaces and from paved travel routes. These devices are equipped with water tanks to minimize dust generation during sweeping/collection.

- Correct placement of the stabilized construction entrance and decontamination pad in relationship to public roadways can help limit construction dust to the work area. Vehicles will be decontaminated by washing to remove stuck on soil and sediment. The stabilized construction entrance will shake off material on wheels and tires, and provide a final soil collection point within the tax block (in the contamination reduction zone).

- Housekeeping – Prompt cleanup of soil spilled during loading/transport helps prevent spread and cross contamination both within, and the spread of contamination outside of the tax block.

- Soil staging areas/soil stockpiles – Excavated soil will be staged in piles and covered to prevent erosion including dust spread by overland transport of soil by runoff. Backfill soil can be stockpiled and vegetated to minimize erosion until it is needed.

2.1 DUST SUPPRESSION ON IMPROVED ROAD SURFACES

As stated in previous text, efforts to reduce dust on improved road surfaces will be made through:

- Vigilant inspections of vehicles leaving the construction sites
- Diligent employment of the decontamination process to remove visual soils from trucks/trailers and
- Through proper construction and maintenance of engineered temporary control measures including stabilized construction entrances and erosion and sediment control traps to control migration of soils from trucks to these areas.

Normal travel areas such as paved on-facility roads and improved surfaces (e.g., parking lots) will be visually monitored to ensure soil and sediment are not tracked onto these surfaces. If it is, the following actions will take place:

1. Load outs and deliveries will be temporarily suspended until source is identified and cleaned.
2. The frequency of housekeeping measures will be increased to minimize and, if possible, eliminate reoccurrence. The frequency of wheel washing before leaving the tax block will also be increased if necessary, as will the frequency of wet sweeping paved on-facility roads and parking lots.
3. Power broom affected areas will be wet to remove residual accumulation. If necessary, a combination of the water truck and power broom can be used.

2.2 DUST SUPPRESSION ON AGGREGATE BASED HAUL ROADS

The degradation of on-site haul roads can be one of the largest contributors to airborne dusts during remediation activities. Quarried limestone will be used to stabilize the construction entrance, and as a construction aggregate for driving surfaces. Dust generation if it occurs would be expected to be higher at turnaround points, sharp turns, and changes in elevation, where the surface is worn due to repeated traffic patterns that pulverize surface materials. As traffic moves over the surface, particulates are reduced in size and can become airborne more easily. To combat these effects, the following dust control measures will be used on haul roads:

- As the surface becomes more worn and pulverized, dust will become more of an issue. The water truck will be used more frequently to control dust emissions as the road degrades. Note that over-watering can cause slurry conditions that will result in tracking the material onto roadways, and therefore must be prevented. It should be noted that with the length of the planned haul roads within the tax blocks and the sizes of the stone to be used in the stabilized construction entrances, the slurrying aspect is considered negligible but recognized.

- To further control fugitive dust production on unpaved haul roads, solid calcium chloride or a calcium chloride solution (in water) can be applied. Calcium chloride attracts and retains moisture and helps keep the road surface slightly damp, thus reducing dust production. A 30% calcium chloride solution can also be applied. Calcium chloride binds with lime due to its chemical composition; the magnesium within the limestone/dolomite forms a crust that helps to retain fines and minimize dust generation and erosion.

- Areas of more vulnerable to severe pulverization may be resurfaced with additional aggregate and watered and re-compacted more frequently to maintain the surface.

Haul roads and impervious areas are used to provide a travel surface, but also provide separation from the underlying contaminated soil in the exclusion zone. Therefore, the following controls must be diligently applied

- Good housekeeping - Personnel must diligently clean up contaminated soil spills on pervious and impervious surfaces to avoid potential cross-contamination through construction vehicles tracking the materials into unaffected areas.

- Decontamination - Trucks/Trailers will be routed through the decontamination pad so that wheels and tires can be pressure-washed before exiting over the stabilized construction entrance as an additional control measure to prevent contaminated and uncontaminated construction materials from leaving the exclusion and/or contamination reduction zone.

- Visual inspection – Only trucks/trailers visually inspected and approved as clean will be released from the site.

Public or private roadways within the facility will be visually monitored for the presence of tracked construction materials (limestone residue; surface soil, etc.), and will be addressed according to procedures outlined in Section 2.1, which would be to wet broom any indication of limestone residue from the affected roadways. The plan view drawing for each tax block indicates wheel wash locations, vehicle exit points, and excavation limits. These are provided in Appendix A.

2.3 CRYSTALLINE SILICA

To assess the potential for exposure to crystalline silica (quartz), bulk samples will be collected to evaluate percentage composition to determine if silica is present in greater than 1% composition. In addition, respirable air samples will be collected to determine if airborne concentrations of crystalline silica within airborne dusts also are present in concentrations greater than 0.05mg/m^3. Dolomitic limestone will be used as a construction aggregate in construction entrances and as a wear surface for haul roads and is a potential source for crystalline silica. Table 2-1, LaFarge Material Safety Data Sheet excerpt contains a list of dolomitic limestone geochemical constituents and associated percent concentrations.

Additionally, the soils to be excavated may also contain crystalline silica and will serve as a potential source contributor.

2.4 DUST DETECTION USING REAL-TIME DETECTION (RTD) MONITORING EQUIPMENT

Dust control efforts for larger particles (greater than 7.0 microns [µm] in concentrations greater than 3.0 milligrams per cubic meter [mg/m^3] air) will be assessed visually, but dust outside the visible spectrum (less than 7.0 µm in size and less than 3.0 mg/m^3 in concentration) will be assessed via real time detection (RTD) monitoring instrumentation that measures airborne concentrations of respirable particulates.

Respirable fractions can pass deeper into the lungs and can pose a potential local (acute) and systemic (chronic) hazard and affect human health.

Respirable particulates may be expelled during exhalation; trapped within the mucus and expelled through the mucociliary tract, or become lodged in the lungs. Because respirable dusts due to their size cannot be seen by the naked eye, visual observations cannot be used for its control. Frequent water application during any dust generating activities, and/or in response to traffic density, will be used as a precautionary control measure. However, RTD readings must be used to assess the effectiveness of (respirable) dust control. The RTD monitor will be linked via telemetry to transmit alerts or texts when action levels are being approached, so that controls can be instituted before action levels are exceeded.

Permissible Exposure Limits (PELs)/Time Weighted Averages (TWAs)

Through an evaluation of previous soil media sampling results of the materials to be excavated, mathematical evaluations were conducted to determine potential airborne concentrations (worst case scenario) based on source concentrations of various identified contaminants. These values were compared to PELs/TWAs to determine if an exceedance of these limits were theoretically possible. The following information are the PELs/TWAs for the contaminants of concern:

- Crystalline silica [American Conference of Industrial Hygienists (ACGIH) — 0.025 mg/m^3 (used to screen the limestone used for haul roads [up to 20% may be comprised of crystalline silica – quartz] and soil components) from a selected representative excavation.

- Polycyclic aromatic hydrocarbons (PAHs) — 0.2 mg/m^3 as coal tar pitch volatiles — used to screen the excavated soil components from selected representative tax blocks.

- Metals (arsenic and hexavalent chromium) (0.01 mg/m^3 and 0.005mg/m^3, respectively) were reported in very low concentrations within bulk samples collected on the surface. Mathematical calculations indicate there are insufficient source concentrations to present an inhalation exposure concern. However, as these materials are a solid, they will be captured in the RTD result.

RTD Action Levels

The following action levels will be used for all PAHs laden soils (including BaPEq) (as determined by the evaluation of soil concentrations) and percent silica:

Tax Block D:—5 mg/m^3 - Based on the highest reported concentration (22,517µg/kg) of Benzo(a)pyrene Equivalent (BaPEq); dust concentrations would have to exceed over 2,000 mg/m^3 to represent an exposure concern to this specific BaPEq compound. Of this Total dust value, the respirable dust faction will represent only a small fraction. Therefore this action level is considered very conservative.

Tax Block D-Panhandle:—5 mg/m^3 - Based on the highest reported concentration (6,008 µg/kg) of Benzo(a)pyrene Equivalent (BaPEq); hexavalent chromium 1.2 µg/kg. Airborne dust concentrations would have to be well in excess of 600,000 mg/m^3 to exceed the mixture PEL/TWA for these compounds. Of this Total dust value, the respirable dust faction will represent only a small fraction. Therefore this action level is considered very conservative.

Tax Block F:—5 mg/m^3 - Based on the highest reported concentration (38,098µg/kg) of Benzo(a)Pyrene Equivalent (BaPEq), dust concentrations would have to exceed 1,315 mg/m^3 in order to represent an exposure concern to exceed the PEL/TWA for this compound. Of this Total dust value, the respirable dust faction will represent only a small fraction. Therefore this action level is considered very conservative.

Tax Block G:—5 mg/m^3 - Based on the highest reported concentration (24,698µg/kg) of Benzo(a)pyrene Equivalent (BaPEq), dust concentrations would have to exceed 1315 mg/m^3 in order to represent an exposure concern to exceed the PEL/TWA for this compound. Note: One sample G-TP-D-N with a reported concentration of 230,000µg/kg, would require airborne dust levels to exceed 217 mg/m^3 in order to present an exposure concern to this compound. Of this Total dust value, the respirable dust faction will represent only a small fraction. Therefore this action level is considered very conservative.

Tax Block H:—5 mg/m^3 Based on the highest reported concentration (460,008µg/kg) of Benzo(a)Pyrene Equivalent (BaPEq), dust concentrations would have to exceed 1,087 mg/m^3 in order to represent an exposure concern to exceed the PEL/TWA for this compound. Of this Total dust value, the respirable dust faction will represent only a small fraction. Therefore this action level is considered very conservative.

Given the reported soil concentrations and excavation dimensions, it is unlikely that exceedances greater than a chemical-specific time-weighted average - threshold limit values (TWA-TLVs) or permissible exposure limits (PELs) will be observed In addition, these action levels represent 50% of the concentration associated with overexposure, making the action levels even more conservative and protective of human health. These action levels also provide protection from total and respirable dust particulates not otherwise classified.

Table 2-1

LaFarge Materials Safety Data Sheet Excerpt,
Chemical Composition – Limestone and Dolomite
Lockheed Martin, Middle River Complex

Component	Percent (By Weight)	CAS Number	OSHA PEL -TWA (mg/m^3)	ACGIH TLV-TWA (mg/m^3)	LD_{50}	LC_{50}
Calcium Carbonate*	50-100	1317-65-3	15 (T), 5 (R)	10 (T)	NA	NA
Magnesium Carbonate*	0-50	546-93-0	15 (T), 5 (R)	3 (R); 10 (T)	NA	NA
Crystalline Silica (as Quartz)	0-15	14808-60-7	[(10) / (%SiO_2+2)] (R); [(30) / (%SiO_2+2)] (T)	0.025 (R)	NA	NA
Particulate Not Otherwise Regulated	-	NA	5 (R) 15 (T)	3 (R); 10 (T)	NA	NA

Note: Exposure limits for components noted with an * contain no asbestos and <1% crystalline silica

The following table describes the mineral composition of Limestone and Dolomite.

Rock Type	Rock	Mineral	Mineral Formula	Mineral Composition
Sedimentary Rocks	Limestone	Calcite and Aragonite	$CaCO_3$	Calcium Carbonate
		Clay Minerals	(Mg, Al) Si_3O_{12}	Magnesium Aluminum Silicate
		Chert or Diatomite	SiO_2	Silicon Dioxide
	Dolomite (Dolostone)	Dolomite	$CaMg(CO_3)_2$	Calcium Magnesium Carbonate
		Clay Minerals	(Mg, Al) Si_3O_{12}	Magnesium Aluminum Silicate
		Chert or Diatomite	SiO_2	Silicon Dioxide
Crystalline silica content: Sedimentary types 1-20%; Quartz 100%.

Section 3
Real Time Detection (RTD) Monitoring Instrumentation

Area and personal real-time detection (RTD) monitoring instrumentation will be used during remediation activities for at-risk populations, including ground personnel and equipment operators, to assess whether working in the excavation areas are potentially being overexposed to dust generated from contaminated soil. Perimeter air monitoring will be conducted to determine if dust control measures are performing as desired, or if dust concentrations greater than acceptable limits are putting others at risk. Perimeter monitoring will use RTD monitoring instrumentation at multiple locations (one location upwind, and two to three downwind) at identified cardinal points. Area monitors will be placed at or near the fence lines and/or associated tax block demarcations. Final placement will be determined in the field based on existing (real time) environmental conditions.

3.1 SELECTED INSTRUMENTATION

The Dust Trak II, Aerosol Monitor PM 2.5 8530 Desk Top Model will be used to monitor airborne dusts/particulates. This instrument comes with an environmental enclosure and tripod unit that permits the air intake to be set at varying vertical elevations. The environmental enclosure is equipped with a wireless modem to permit real time notification and alerts.

The SidePak AM510 Personal Aerosol Monitor is a personal monitor that can be worn on a belt with the air intake positioned within the breathing zone of high risk personnel. High-risk personnel are those based on their assigned tasks would place them in areas where dust exposure would have the potential to be the greatest. These persons would include ground support personnel employed to direct and oversee truck loading, survey personnel and equipment operators. Specification sheets for RTD air monitoring instrumentation are in Appendix B.

3.2 RTD POSITIONING

Monitoring instrumentation for RTD will be spatially positioned to detect, measure, and display dust concentrations from the one upwind and 2-3 selected downwind positions on the perimeter of each tax block, based on wind direction and variability in wind direction. Variations in placement are possible based on actual field conditions.

Each tax block will be marked for 15 cardinal positions (north, north-northeast, east-northeast, east, east-southeast, etc.). The final distance or placement of the instrument from the source will be determined in the field, based on wind direction (along with site orientation), wind speed, and visual observations. If visible dust appears to be carrying over established stations, monitors may be moved.

3.3 FREQUENCY OF MONITORING

Air monitoring will be performed within each tax block to measure airborne dust concentrations at the perimeter of the work area, and for personnel occupying potential high exposure risk locations (selected ground personnel and equipment operators) in addition to assessing the efficacy of the dust control measures.

- **Base Monitoring Frequency** - Air monitoring using RTDs will be conducted daily to monitor generation of dust and potential off site migration. RTDs will be positioned and monitored continuously during activities that could potentially generate airborne dusts.

- If predetermined action levels as specified in section 2.4 are approached, the frequency of dust-control measures will be increased, as will monitoring intensity, to reduce airborne dust levels and to quantify success.

- The highest concentrations of polycyclic aromatic hydrocarbons (PAHs/BaPEq) in soil were in Block F. Therefore, additional air sampling will be conducted in this tax block during remediation activities.

- The frequency of the dust monitoring may be reduced if sufficient data establish contaminant concentrations below action levels.

- Monitoring for airborne dusts/particulates will not be conducted during rain events, because rain washes dust and particulates from the air. Monitoring during heavy rains may also damage instrumentation.

3.4 METEOROLOGICAL DATA

Meteorological data will be gathered from a portable meteorological station positioned at each tax block during remediation activity. Additional meteorological data will also be obtained from a station at the Martin State Airport. Wind socks will be placed at two locations at each tax block during remediation activities as these provide visual indication of wind direction and speed. Meteorological data for each work day will be downloaded and maintained as part of the project record.

3.5 RECORDKEEPING

All particulate monitors will be set to record data (data logging) as it is collected during potential dust generating activities as defined in Section 1. Data will be downloaded periodically to avoid overwriting any data collected during instrument operation. The placement of the instruments (based on meteorological data), distances from potential dust and particulate sources, and any information that may affect the outcome of the data or derived results will also be recorded either electronically or written within a logbook.

This page intentionally left blank.

Section 4
Air Sampling

Air sampling (the collection of analytical air samples for PAHs and crystalline silica) will be conducted to:

- Assess personal exposure of those persons working within high exposure risk job classifications including ground support personnel and equipment operators.
- Gather information to support the validity of air monitoring results obtained through the use of RTDs.
- Obtain data to support the efficacy of dust control measures employed.

Air sampling will not be conducted at each tax block. It will however be conducted at:

- The start of the project in an effort to correlate real-time detection (RTD) instrumentation data with collected sample data.
- Air samples will also be collected at Tax Block F, as it has the highest reported polycyclic aromatic hydrocarbon (PAH) concentrations in soil.
- Air samples shall be collected to quantify dust generation during those activities as defined in Section 1.

The SSHO will determine when and where additional air samples shall be collected based on derived field data and field observations.

4.1 POLYCYCLIC AROMATIC HYDROCARBONS (PAHS)

PAHs, including BaPEq, represent the most abundant contaminant within the soils for all of the tax blocks. Air sampling for PAHs (including BaPEq) will be conducted using:

- **NIOSH Manual of Analytical Methods (NMAM) Number 5506** – uses a 37 millimeter (mm), 2-micron (µm) polytetrafluoroethylene (PTFE, i.e., Teflon®) filter + washed XAD sorbent tube (100 milligram [mg] front section; 50 mg back section); during collection, the XAD tube is placed in a tube holder to protect against ultraviolet (UV) light and temperature degradation.

- **Sample flow rate:** two liters per minute for a preferred eight-hour time frame. Shorter sample runs may be collected provided minimum volume is obtained.
- **Pump calibration** - with a representative media in line.
    - volume (minimum): 200 liters
    - volume (maximum): 1000 liters
- **Shipment:** transfer filters to culture tubes; wrap sorbent and culture tubes in aluminum foil; ship at 0 degrees Centigrade (C).
- **Sample stability**: protect from heat and UV light.

The NIOSH methodology used for PAH sampling is in Appendix C.

4.2 CRYSTALLINE SILICA

We have determined that silica is contaminant that best represents the potential exposure scenario for total dust or respirable dust particulates, not otherwise classified. The NIOSH methodology used for silica sampling is in Appendix C. Air sampling for crystalline silica will be conducted using:

- **NIOSH Method 7500:** silica is present in excavated or backfilled soil band can be liberated from degrading dolomitic limestone placed on haul roads.
- **Sampler:** cyclone + filter (10-mm nylon cyclone, Higgins-Dewell cyclone, or aluminum cyclone + 5-µm polyvinyl chloride membrane)
- **Flow rate:** nylon cyclone: 1.7 L/min; HD cyclone: 2.2 L/min; aluminum cyclone: 2.5 L/min
    - Volume (minimum): 400 liters
    - Volume (maximum): 1000 liters
- **Shipment:** routine
- **Sample stability:** stable

4.3 QUALITY ASSURANCE/QUALITY CONTROL

The site safety and health officer (SSHO) or the industrial hygiene (IH) technician will conduct quality assurance/quality control (QA/QC) by ensuring that proper sampling, collection, and chemical analysis procedures were followed. QA/QC procedures assess the precision, accuracy, representativeness, and comparability of monitoring results.

4.4 SAMPLE NUMBERING AND MANAGEMENT

The SSHO or the IH technician will record all air samples on chain-of-custody (COC) forms. Each COC form will include:

- the identification numbers of the samples collected on a given day
- time(s) (on- and off-duration) of collection
- estimated flow rate
- total volume of air collected
- names of the samplers
- any pertinent information regarding the sampling event that may affect sampling results

The COC form will identify the requested chemical analyses, and the record of the release and custody to document sample possession. The SSHO, IH technician, or appropriate designee is responsible for the care and custody of the samples collected until they are delivered to the analytical laboratory or entrusted to a carrier. Transfer of custody to another party is formally documented on the COC form. Sample logs or other records will be signed and dated according to protocol. Containers used to ship samples will be sealed according to United States Environmental Protection Agency (USEPA) requirements to maintain sample integrity, and the shipments will be accompanied by the COC record identifying the contents. The COC may be carbon copy or electronic, providing the necessary information is provided. One copy of the COC record will accompany the shipment, and the SSHO or the IH Technician will retain another copy of each COC. A sample of the COC custody form is in Appendix D.

4.4.1 Nomenclature for Ambient Air Samples

Perimeter air samples will be collected at up to four of 15 cardinal positions (north, north-northeast, northeast, east-northeast, east, east-southeast, etc.). Sample nomenclature used to identify air samples will be identified by the facility (Middle River Complex [MRC]), followed by the tax block, followed by the media type (AS for air sample) and its sequential number, followed by the sample category (perimeter, operator, or ground support), the analytical code (PAH-low volume [PAHL] or crystalline silica [CSLO]), followed by the sampling date. For

example, sample MRC-BLDA-S01-PER-PAHL-022615 represents the first air sample collected at Block D along the perimeter, for PAHs-low volume on February 26, 2015.

4.4.2 Quality Control (QC) Sample Numbering

The QC code will consist of a three- to four-segment alpha-numeric code that identifies the sample QC type, the date the sample was collected, and the number of this type of QC sample collected on that date. QC types are identified as field duplicate (FD) or method blanks (MB), and the valid matrix code is air sample (AS). The sampling time recorded for duplicate samples on the COC form and labels will be "0000" so that the samples are "blind" to the laboratory. Notes detailing the duplicate sample number, time, date, and type will be recorded on the sample log sheet and in the field log book to document its location. The time on blind samples will always be recorded as "0000" on the COC. Sample log sheets are not provided to the laboratory.

4.4.2.1 Field Duplicates

Field duplicates are collected to check the laboratory accuracy under identical conditions. Duplicate samples will be collected side by side with the original. Duplicate nomenclature will consist of QC type (FB or MB), followed by sample type (AS), followed by analytical code (PAH-L or CSLO), followed by the date, followed by a sequential number. For example, sample FD-AS-PAHL-021615-001 indicates a field duplicate for an air sample analyzed for PAHs and collected on February 16, 2015, with a sequential number (001) assigned by the SSHO and/or the IH technician. Field duplicates will be collected for each analysis at Blocks D, D-Panhandle, F, G, and H at a frequency of one QC sample per ten analytical air samples.

4.5 RECORDKEEPING

4.5.1 Air Sample Log Sheets

Each sample will be recorded on a sample log sheet or multi-sample log sheet. These forms are used to document daily air sampling activities and other pertinent on-site information that may impact the collection of samples. Examples of log sheets are in Appendix D.

4.5.2 Calibration Record

Calibration of the air sampling pumps will be recorded on the "Air Sample/Multi-Air Sample Log Sheet" provided in Appendix D.

4.6 DATA MANAGEMENT

Data management procedures used in this dust control and air monitoring/sampling plan are designed to ensure that all sampling and analytical data are collected, stored, and maintained in an efficient and secure environment, so the data quality meets the plan objectives. The efficiency of the data management process will be maximized by using standardized data collection and review procedures.

4.7 DATA QUALITY REVIEW

Data quality review will be conducted on all ambient samples to determine whether analytical laboratory data collected are of acceptable quality for use in decision-making. This review begins with data validation, which is a comparison of data quality indicators (DQIs) to prescribed acceptance criteria. The DQIs are measures used to assess the completeness, sensitivity, accuracy, precision, comparability, and representativeness of the sample collection and sample analysis process. The output of this review is a set of alphabetic flags such as "U" – not detected, "J" - estimated, "R" - rejected, or combinations thereof that may apply to individual results based on its validation. These flags infer the general quality of the data.

4.7.1 Certified Industrial Hygienist (CIH) Review

All data collected during air sampling efforts will be submitted to a CIH, who will approve or identify discrepancies within sample collection, analytical screening, and/or laboratory reporting. Data analyzed will include air sample log sheets, COC forms, calibration records, calculations of air volumes, and laboratory-provided information.

Table 4-1

Sample Summary Table
Lockheed Martin Middle River Complex
Page 1 of 3

Sample Number	Media	Comments
Geotechnical Particulate Sieve Analysis		
MRC-SS-BL___MMDDYR-0001	Soils	Geotechnical Soil Particulate analysis

GENERAL NOTES:

1. GRID COORDINATES REFERENCE MARYLAND STATE PLANE COORDINATE SYSTEM, NORTH AMERICAN DATUM OF 1983 (MDSPCS NAD83). ELEVATIONS REFERENCE NORTH AMERICAN VERTICAL DATUM, 1988 (NAVD88).
2. UNLESS OTHERWISE NOTED, GROUND SURFACE TOPOGRAPHY OBTAINED FROM DRAWING NO. 22042C01 TITLED "SITE PLAN, CHESAPEAKE PARK, LMC PROPERTIES, INC." (REV C DATED 10/02/02) PREPARED BY TAI CONSULTING ENGINEERS, OWINGS MILLS, MARYLAND AND NOTED THEREON AS BEING OBTAINED FROM FIELD RUN SURVEY CONDUCTED BY DMW, INC. DURING JUNE 1999 FLOATED TO STATE GRID. GROUND SURFACE TOPOGRAPHY BETWEEN COW PEN CREEK AND CHESAPEAKE PARK PLAZA AND DELINEATED WETLAND LIMITS SURVEYED BY TETRA TECH, NEWARK, DELAWARE DURING NOVEMBER AND DECEMBER 2009.
3. ADDITIONAL HORIZONTAL INFORMATION OBTAINED FROM TAI DRAWING NOTED ABOVE AND NOTED THEREON AS BEING OBTAINED FROM BALTIMORE COUNTY OFFICE OF INFORMATION TECHNOLOGY GIS SERVICES UNIT WITH MARCH 1995 DATE OF CAPTURE.
4. EXISTING UTILITIES OBTAINED FROM TAI DRAWING NOTED ABOVE AND NOTED THEREON AS BEING OBTAINED FROM DMW FIELD RUN SURVEY AND LOCKHEED MARTIN PROPERTIES, INC. DRAWING TITLED "EXHIBIT #6 EXISTING UTILITIES PLAN."
5. BOUNDARY LINES OBTAINED FROM TAI DRAWING NOTED ABOVE AND NOTED THEREON AS BEING OBTAINED FROM RECORDED PLAT E.H.K., JR. 51 FOLIO 43 "1ST AMENDED CHESAPEAKE PARK RE-SUBDIVISION" PREPARED BY MARYLAND SURVEYING AND ENGINEERING CO., INC. 4/24/84 WITH BOUNDARY ORIENTED TO BALTIMORE COUNTY METROPOLITAN DISTRICT GRID, BUT SHOULD NOT BE CONSIDERED A BOUNDARY SURVEY.
6. 1% ANNUAL CHANCE FLOOD (100-YEAR FLOOD) ELEVATION IS 8.5-FT NAVD88 BASED ON "FLOOD INSURANCE STUDY, BALTIMORE COUNTY, MARYLAND (UNINCORPORATED AREAS)" FLOOD INSURANCE STUDY NUMBER 240010V000C [FEMA, SEPTEMBER 2009 (PRELIMINARY)].
7. CHESAPEAKE BAY CRITICAL AREA BOUNDARY OBTAINED FROM MARYLAND DEPARTMENT OF NATURAL RESOURCES WEBSITE. AREAS WITHIN THE CHESAPEAKE BAY CRITICAL AREA ARE INTENSELY DEVELOPED AREA (IDA) CATEGORY.
8. TWO FOOT CONTOUR INTERVAL FOR GROUND SURFACE TOPOGRAPHY UNLESS OTHERWISE NOTED.
9. FIGURED DIMENSIONS TAKE PRECEDENCE OVER SCALED DIMENSIONS. CHECK GRAPHIC SCALE BEFORE SCALING DRAWING.
10. UNDERGROUND UTILITY LOCATIONS SHOWN ARE APPROXIMATE. VERIFICATION OF UTILITY LOCATIONS MUST BE MADE PRIOR TO WORK ON-SITE. NOTIFY MISS UTILITY OF MARYLAND (1-800-257-7777; www.missutility.net) AT LEAST 48 HOURS, BUT NOT MORE THAN 10 WORKING DAYS, PRIOR TO THE DAY EXCAVATION WILL COMMENCE. MISS UTILITY OF MARYLAND IS NOT EXPECTED TO HAVE COMPLETE RECORD OF UTILITIES FOR THE MIDDLE RIVER COMPLEX. IN ADDITION TO NOTIFYING MISS UTILITY OF MARYLAND, VERIFY UTILITY LOCATIONS PRIOR TO BEGINNING ANY WORK USING A MINIMUM OF TWO PASSIVE METHODS (E.G., ELECTROMAGNETIC INDUCTION, GROUND PENETRATING RADAR, MAGNETIC LOCATORS, ACOUSTIC SURVEY, ETC.).
11. INSPECT INDIVIDUAL AREAS PRIOR TO CONSTRUCTION TO VERIFY EXISTING SITE CONDITIONS.
12. PROVIDE HORIZONTAL AND VERTICAL CONTROL FOR CONSTRUCTION.
13. STAKE THE LOCATION OF REMOVAL AND DISTURBED AREAS PRIOR TO ACTUAL WORK.
14. THE SOLE LOCATION FOR INGRESS AND EGRESS TO INDIVIDUAL AREAS SHALL BE VIA CONSTRUCTION ENTRANCE(S) WHICH SHALL BE CONSTRUCTED ACCORDING TO THE APPROVED EROSION AND SEDIMENT CONTROL PLAN. PROVIDE INGRESS/EGRESS CONTROL INTO INDIVIDUAL AREAS AS PART OF AREA-SPECIFIC MOBILIZATION ACTIVITIES.
15. PROVIDE PROTECTION FOR EXISTING UTILITIES TO REMAIN IN SERVICE.
16. LIMIT WORK TO INDIVIDUAL AREAS WITHIN THE APPROVED LIMITS OF DISTURBANCE.
17. MAINTAIN WORK AREAS FREE FROM DUST AND ODORS.
18. PROPERTY LINE INFORMATION TAKEN FROM RECORDED PLAT E.H.K., JR 51 FOLIO 43 "1ST AMENDED CHESAPEAKE PARK RE-SUBDIVISION" PREPARED BY MARYLAND SURVEYING AND ENGINEERING CO. INC. 4/24/84. PROPERTY LINES HAVE BEEN ORIENTED TO THE BALTIMORE COUNTY METROPOLITAN DISTRICT GRID. SHOULD NOT BE CONSIDERED A BOUNDARY SURVEY.
19. IN ACCORDANCE WITH THE CODE OF MARYLAND REGULATIONS 26.17.04.11 (5) ALL IN-STREAM CONSTRUCTION IN DARK HEAD COVE WHICH MAY ADVERSELY AFFECT ANADROMOUS FISH SPAWNING AREAS, SHALL BE PROHIBITED FROM MARCH 15 THROUGH JUNE 15.

TIDAL DATUMS AT BALTIMORE, FORT McHENRY, PATAPSCO RIVER, MARYLAND

TIDAL EPOCH: 1983-2001

ELEVATIONS OF TIDAL DATUMS REFERRED TO IN FEET.
ELEVATIONS OF TIDAL DATUMS COMPUTED USING BENCHMARK 857 4680 TIDAL 32.

TRAFFIC AND STOCKPILE NOTES:

ALL CONSTRUCTION TRAFFIC SHALL ENTER AND EXIT VIA A STABILIZED CONSTRUCTION ENTRANCE. CONTRACTOR SHALL REMOVE OR IMPORT DIRT AS REQUIRED. ANY STOCKPILE AREA CREATED FOR THIS MATERIAL SHALL BE MANAGED BY A SEDIMENT CONTROL DEVICE AT ALL TIMES.
TEMPORARY STOCKPILES SHALL BE:

1. LOCATED WITHIN THE LIMIT OF DISTURBANCE (LOD).
2. DRAIN TO A FUNCTIONING SEDIMENT CONTROL DEVICE.
3. POSITIONED TO NOT IMPEDE UPON, OR IMPAIR THE FUNCTION OF SAID DEVICE.
4. POSITIONED TO NOT ALTER DRAINAGE DIVIDES.

GENERAL GRADING NOTES AND CERTIFICATIONS:

1. THE PROPOSED GRADING SHOWN ON THIS PLAN MEETS THE REQUIREMENTS SET FORTH BY BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY AND COMPLIES WITH ARTICLE 33, TITLE 5 OF THE BALTIMORE COUNTY CODE. HOWEVER, DUE TO BUILDING TYPES AND LAYOUT, SOME FIELD ADJUSTMENTS MAY BE REQUIRED. ALL CHANGES MUST COMPLY WITH THE ABOVE MENTIONED REQUIREMENTS.
2. ALL SWALES HAVE BEEN DESIGNED BY THE ENGINEER TO CONVEY RUNOFF ACCORDING TO BALTIMORE COUNTY DEPARTMENT OF PUBLIC WORKS DESIGN STANDARDS.
3. THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EASEMENT OR OTHER FOREST RETENTION AREAS, EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.
4. STORMWATER MANAGEMENT HAS BEEN ADDRESSED BY A STORMWATER MANAGEMENT VARIANCE.

SITE DATA:

BALTIMORE COUNTY SPECIFIC EROSION AND SEDIMENT CONTROL PLAN GENERAL NOTES:

1. REFER TO "2011 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL" FOR STANDARD DETAILS AND DETAILED SPECIFICATIONS OF EACH PRACTICE SPECIFIED HEREIN.
2. WITH THE APPROVAL OF THE SEDIMENT CONTROL INSPECTOR, MINOR FIELD ADJUSTMENTS CAN AND WILL BE MADE TO INSURE THE CONTROL OF ANY SEDIMENT. CHANGES IN SEDIMENT CONTROL PRACTICES, REQUIRE PRIOR APPROVAL OF THE SEDIMENT CONTROL INSPECTOR AND THE BALTIMORE COUNTY SOIL CONSERVATION DISTRICT.
3. AT THE END OF EACH WORKING DAY, ALL SEDIMENT CONTROL PRACTICES WILL BE INSPECTED AND LEFT IN OPERATIONAL CONDITION.
4. FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED WITHIN: A.) THREE (3) CALENDAR DAYS AS TO THE SURFACE OF ALL PERIMETER CONTROLS, DIKES, SWALES, DITCHES, PERIMETER SLOPES, AND ALL SLOPES GREATER THAN THREE HORIZONTAL TO ONE VERTICAL (3:1), AND B.) SEVEN (7) DAYS AS TO ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE NOT UNDER ACTIVE GRADING.
5. ANY CHANGE TO THE GRADING PROPOSED ON THIS PLAN REQUIRES RE-SUBMISSION TO BALTIMORE COUNTY SOIL CONSERVATION DISTRICT FOR APPROVAL.
6. DUST CONTROL WILL BE PROVIDED FOR ALL DISTURBED AREAS. REFER TO "2011 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL", PG. H-30-1, FOR ACCEPTABLE METHODS AND SPECIFICATIONS FOR DUST CONTROL.
7. ANY VARIATIONS FROM THE SEQUENCE OF OPERATIONS STATED ON THIS PLAN REQUIRES THE APPROVAL OF THE SEDIMENT CONTROL INSPECTOR AND THE BALTIMORE COUNTY SOIL CONSERVATION DISTRICT PRIOR TO THE INITIATION OF THE CHANGE.
8. EXCESS CUT OR BORROW MATERIAL SHALL GO TO, OR COME FROM, RESPECTIVELY, A SITE WITH AN OPEN GRADING PERMIT.
9. THE FOLLOWING ITEM MAY BE USED AS APPLICABLE: REFER TO MARYLAND'S GUIDELINES TO WATERWAY CONSTRUCTION" BY THE WATER MANAGEMENT ADMINISTRATION OF THE MARYLAND DEPARTMENT OF THE ENVIRONMENT,REVISED NOVEMBER,2000, FOR THE STANDARD DETAILS AND DETAILED SPECIFICATIONS OF EACH PRACTICE SPECIFIED WEREIN FOR WATERWAY CONSTRUCTION.
10. PUMPING SEDIMENT-LADEN WATER INTO WATERS OF THE STATE IS STRICTLY PROHIBITED. ANY PORTABLE DEWATERING DEVICE MUST BE LOCATED WITHIN THE LIMIT OF DISTURBANCE.

ADDITIONAL STATE OF MARYLAND EROSION AND SEDIMENT CONTROL PLAN GENERAL NOTES:

1. THE CONTRACTOR SHALL NOTIFY BALTIMORE COUNTY DEPARTMENT OF PERMITS, APPROVALS, AND INSPECTIONS – SEDIMENT CONTROL (PAI-SC) AT (410) 887-3226 AT LEAST 48 HOURS BEFORE COMMENCING ANY LAND DISTURBANCE ACTIVITY TO HOLD A PRE-CONSTRUCTION MEETING BETWEEN PROJECT REPRESENTATIVES AND THE PAI-SC INSPECTOR.
2. THE CONTRACTOR MUST NOTIFY PAI-SC IN WRITING AND BY TELEPHONE AT THE FOLLOWING POINTS:
   a. THE REQUIRED PRE-CONSTRUCTION MEETING
   b. FOLLOWING INSTALLATION OF SEDIMENT CONTROL MEASURES.
   c. PRIOR TO REMOVAL OR MODIFICATION OF ANY SEDIMENT CONTROL STRUCTURE(S).
   d. PRIOR TO REMOVAL OF ALL SEDIMENT CONTROL DEVICES.
   e. PRIOR TO FINAL ACCEPTANCE.
3. THE CONTRACTOR SHALL CONSTRUCT ALL EROSION AND SEDIMENT CONTROL MEASURES PER THE APPROVED PLAN AND CONSTRUCTION SEQUENCE AND SHALL HAVE THEM INSPECTED AND APPROVED BY THE PAI-SC INSPECTOR PRIOR TO BEGINNING ANY OTHER LAND DISTURBANCES.
4. THE CONTRACTOR SHALL PROTECT ALL POINTS OF CONSTRUCTION INGRESS AND EGRESS TO PREVENT THE DEPOSITION OF MATERIALS ONTO PUBLIC ROADS. ALL MATERIALS DEPOSITED ONTO PUBLIC ROADS SHALL BE REMOVED IMMEDIATELY.
5. THE CONTRACTOR SHALL APPLY SOD OR SEED AND ANCHORED STRAW MULCH, OR OTHER APPROVED STABILIZATION MEASURES TO ALL DISTURBED AREAS AND STOCKPILES WITHIN SEVEN (7) CALENDAR DAYS AFTER STRIPPING AND GRADING ACTIVITIES HAVE CEASED IN THE AREA. MAINTENANCE SHALL BE PERFORMED AS NECESSARY TO ENSURE CONTINUED STABILIZATION. (REQUIREMENT MAY BE REDUCED TO THREE (3) DAYS FOR SENSITIVE AREAS.)
6. PRIOR TO REMOVAL OF SEDIMENT CONTROL MEASURES, THE CONTRACTOR SHALL STABILIZE AND HAVE ESTABLISHED PERMANENT STABILIZATION FOR ALL CONTRIBUTORY DISTURBED AREAS USING SOD OR AN APPROVED PERMANENT SEED MIXTURE WITH REQUIRED SOIL AMENDMENTS AND AN APPROVED ANCHORED MULCH. WOOD FIBER MULCH MAY ONLY BE USED IN SEEDING SEASON WHERE THE SLOPE DOES NOT EXCEED 10% AND GRADING HAS BEEN DONE TO PROMOTE SHEET FLOW DRAINAGE. AREAS BROUGHT TO FINISHED GRADE DURING THE SEEDING SEASON SHALL BE PERMANENTLY STABILIZED AS SOON AS POSSIBLE, BUT NO LATER THAN SEVEN (7) CALENDAR DAYS AFTER ESTABLISHMENT. WHEN PROPERTY IS BROUGHT TO FINISHED GRADE DURING THE MONTHS OF NOVEMBER THROUGH FEBRUARY, AND PERMANENT STABILIZATION IS FOUND TO BE IMPRACTICAL, TEMPORARY SEED AND ANCHORED STRAW MULCH SHALL BE APPLIED TO DISTURBED AREAS. THE FINAL PERMANENT STABILIZATION OF SUCH PROPERTY SHALL BE APPLIED BY MARCH 15 OR EARLIER IF GROUND AND WEATHER CONDITIONS ALLOW.
7. THE SITES APPROVAL LETTER, APPROVED EROSION AND SEDIMENT CONTROL PLANS, DAILY LOG BOOKS, AND TEST REPORTS SHALL BE AVAILABLE AT THE SITE FOR INSPECTION BY DULY AUTHORIZED OFFICIALS OF WMA AND THE AGENCY RESPONSIBLE FOR PROJECT.
8. SURFACE DRAINAGE FLOWS OVER UNSTABILIZED CUT AND FILL SLOPES SHALL BE CONTROLLED BY EITHER PREVENTING DRAINAGE FLOW FROM TRAVERSING THE SLOPES OR BY INSTALLING PROTECTIVE DEVICES TO LOWER THE WATER DOWN SLOPE WITHOUT CAUSING EROSION. DIKES SHALL BE INSTALLED AND MAINTAINED AT THE TOP OF A CUT OR FILL SLOPE UNTIL THE SLOPE AND DRAINAGE AREA TO IT ARE FULLY STABILIZED, AT WHICH TIME THEY MUST BE REMOVED AND FINAL GRADES DONE TO PROMOTE SHEET FLOW DRAINAGE. PROTECTIVE METHODS MUST BE PROVIDED AT POINTS OF CONCENTRATED FLOW WHERE EROSION IS LIKELY TO OCCUR.
9. PERMANENT SWALES OR OTHER POINTS OF CONCENTRATED WATER FLOW SHALL BE STABILIZED WITH SOD OR SEED WITH AN APPROVED EROSION CONTROL MATTING, RIP-RAP, OR BY OTHER APPROVED STABILIZATION MEASURES.
10. TEMPORARY SEDIMENT CONTROL DEVICES MAY BE REMOVED, WITH PERMISSION OF THE PAI-SC INSPECTOR, WITHIN THIRTY (30) CALENDAR DAYS FOLLOWING ESTABLISHMENT OF PERMANENT STABILIZATION IN ALL CONTRIBUTORY DRAINAGE AREAS. STORMWATER MANAGEMENT STRUCTURES USED TEMPORARILY FOR SEDIMENT CONTROL SHALL BE CONVERTED TO THE PERMANENT CONFIGURATIONS WITHIN THIS TIME PERIOD AS WELL.
11. NO PERMANENT CUT OR FILL SLOPE WITH A GRADIENT STEEPER THAN 3:1 WILL BE PERMITTED IN LAWN MAINTENANCE AREAS. A SLOPE GRADIENT OF UP TO 2:1 WILL BE PERMITTED IN NON-MAINTENANCE AREAS PROVIDED THAT THOSE AREAS ARE INDICATED ON THE EROSION AND SEDIMENT CONTROL PLAN WITH A LOW-MAINTENANCE GROUND COVER SPECIFIED FOR PERMANENT STABILIZATION. SLOPE GRADIENT STEEPER THAN 2:1 WILL NOT BE PERMITTED WITH VEGETATIVE STABILIZATION.
12. FOR FINISHED GRADING, THE CONTRACTOR SHALL PROVIDE ADEQUATE GRADIENTS TO PREVENT WATER FROM PONDING FOR MORE THAN TWENTY FOUR (24) HOURS AFTER THE END OF THE RAINFALL EVENT. DRAINAGE COURSES AND SWALE FLOW AREAS MAY TAKE AS LONG AS FORTY-EIGHT (48) HOURS AFTER THE END OF A RAINFALL EVENT TO DRAIN. AREAS DESIGNATED TO HAVE STANDING WATER SHALL NOT BE REQUIRED TO MEET THIS REQUIREMENT.
13. SEDIMENT TRAPS AND BASINS ARE NOT PERMITTED WITHIN 20 FEET OF A FOUNDATION THAT EXISTS OR IS UNDER CONSTRUCTION. NO STRUCTURE MAY BE CONSTRUCTED WITHIN 20 FEET OF AN ACTIVE SEDIMENT TRAP OR BASIN.
14. THE PAI-SC INSPECTOR HAS THE OPTION OF REQUIRING ADDITIONAL SAFETY OR SEDIMENT CONTROL MEASURES, IF DEEMED NECESSARY.
15. ALL TRAP DEPTH DIMENSIONS ARE RELATIVE TO OUTLET ELEVATION. ALL TRAPS MUST HAVE A STABLE OUTFALL. ALL TRAPS AND BASINS SHALL HAVE STABLE INFLOW POINTS.
16. VEGETATIVE STABILIZATION SHALL BE PREFORMED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL. REFER TO APPROPRIATE SPECIFICATIONS FOR TEMPORARY SEEDING, PERMANENT SEEDING, MULCHING, SODDING, AND GROUND COVERS.
17. SEDIMENT SHALL BE REMOVED AND THE TRAP OR BASIN RESTORED TO ITS ORIGINAL DIMENSIONS WHEN THE SEDIMENT HAS ACCUMULATED TO ONE QUARTER OF THE TOTAL DEPTH OF THE TRAP OR BASIN. TOTAL DEPTH SHALL BE MEASURED FROM THE TRAP OR BASIN BOTTOM TO THE CREST OF THE OUTFALL.

ADDITIONAL STATE OF MARYLAND EROSION AND SEDIMENT CONTROL PLAN GENERAL NOTES (CONTINUED):

18. SEDIMENT REMOVED FROM TRAPS (AND BASINS) SHALL BE PLACED AND STABILIZED IN APPROVED AREAS, BUT NOT WITHIN A FLOODPLAIN, WETLAND, OR TREE-SAVE AREA. WHEN PUMPING SEDIMENT LADEN WATER, THE DISCHARGE MUST BE DIRECTED TO A SEDIMENT TRAPPING DEVICE PRIOR TO RELEASE FROM THE SITE. A SUMP PIT MAY BE USED IF SEDIMENT TRAPS THEMSELVES ARE BEING PUMPED OUT.
19. ALL WATER REMOVED FROM EXCAVATED AREAS SHALL BE PASSED THROUGH AN APPROVED DEWATERING PRACTICE OR PUMPED TO A SEDIMENT TRAP OR BASIN PRIOR TO DISCHARGE FROM THE SITE
20. WHERE DEEMED APPROPRIATE BY THE ENGINEER OR INSPECTOR, SEDIMENT BASINS AND TRAPS MAY NEED TO BE SURROUNDED WITH AN APPROVED SAFETY FENCE. THE FENCE MUST CONFORM TO LOCAL ORDINANCES AND REGULATIONS. THE DEVELOPER OR OWNER SHALL CHECK WITH LOCAL BUILDING OFFICIALS ON APPLICABLE SAFETY REQUIREMENTS. WHERE SAFETY FENCE IS DEEMED APPROPRIATE AND LOCAL ORDINANCES DO NOT SPECIFY FENCING SIZES AND TYPES, THE FOLLOWING SHALL BE USED AS A MINIMUM STANDARD: THE SAFETY FENCE MUST BE MADE OF WELDED WIRE AND AT LEAST 42 INCHES HIGH, HAVE POSTS SPACED NO FARTHER APART THAN 8 FEET, HAVE MESH OPENINGS NO GREATER THAN 2 INCHES IN WIDTH AND 4 INCHES IN HEIGHT WITH A MINIMUM OF 14 GAUGE WIRE. SAFETY FENCE MUST BE MAINTAINED AND IN GOOD CONDITION AT ALL TIMES.
21. OFF-SITE SPOIL OR BORROW AREAS ON STATE OR FEDERAL PROPERTY MUST HAVE PRIOR APPROVAL BY WMA AND OTHER APPLICABLE STATE, FEDERAL, AND LOCAL AGENCIES; OTHERWISE APPROVAL MUST BE GRANTED BY THE LOCAL AUTHORITIES. ALL WASTE AND BORROW AREAS OFF-SITE MUST BE PROTECTED BY SEDIMENT CONTROL MEASURES AND STABILIZED.
22. SITES WHERE INFILTRATION DEVICES ARE USED FOR THE CONTROL OF STORMWATER, EXTREME CARE MUST BE TAKEN TO PREVENT RUNOFF FROM UNSTABILIZED AREAS FROM ENTERING THE STRUCTURE DURING CONSTRUCTION. SEDIMENT CONTROL DEVICES PLACED IN INFILTRATION AREAS MUST HAVE BOTTOM ELEVATIONS AT LEAST TWO (2) FEET HIGHER THAN THE FINISH GRADE BOTTOM ELEVATION OF THE INFILTRATION PRACTICE. WHEN CONVERTING A SEDIMENT TRAP TO AN INFILTRATION DEVICE, ALL ACCUMULATED SEDIMENT MUST BE REMOVED AND DISPOSED OF PRIOR TO FINAL GRADING OF INFILTRATION DEVICE.
23. WHEN A STORM DRAIN SYSTEM OUTFALL IS DIRECTED TO A SEDIMENT TRAP OR SEDIMENT BASIN AND THE SYSTEM IS TO BE USED FOR TEMPORARILY CONVEYING SEDIMENT LADEN WATER, ALL STORM DRAIN INLETS IN NON-SUMP AREAS SHALL HAVE A TEMPORARY ASPHALT BERMS CONSTRUCTED AT THE TIME OF BASE PAVING TO DIRECT GUTTER FLOW INTO THE INLETS TO AVOID SURCHARGING AND OVERFLOW OF INLETS IN SUMP AREAS.
24. SITE INFORMATION:
   a. TOTAL AREA OF FACILITY = 205.94 ACRES
   b. TOTAL AREA OF PROJECT SITE = 80.29 ACRES
   c. AREA WITHIN LIMITS OF DISTURBANCE = 24.41 ACRES
   d. AREA TO BE ROOFED OR PAVED = 0 ACRES OF NEWLY PAVED AREAS
   e. EXCAVATION AREA = 2.37 ACRES
   f. TOTAL CUT = 6,979 CUBIC YARDS
   g. TOTAL FILL = 6,979 CUBIC YARDS
   h. OFF-SITE WASTE / BORROW AREA LOCATION – KING AND QUEEN LANDFILL, PLYMOUTH VIRGINIA

REFER TO DRAWINGS C-9 THROUGH C-14 FOR LIMITS OF DISTURBANCE, EXCAVATION AREAS, AND CUT/FILL VOLUMES RELATED TO INDIVIDUAL AREAS.

INLET PROTECTION NOTE:

THE CONTRACTOR IS REQUIRED TO INSTALL INLET PROTECTION ON ALL STORM DRAIN INLETS WITH THE EXCEPTION OF THE FOLLOWING:

1. ANY INLET OUTFALLING DIRECTLY INTO A SEDIMENT TRAPPING DEVICE.*
2. INLETS ON PRIVATE OR PUBLIC PAVED ROADWAYS OPEN TO THE PUBLIC.

ALL INLET PROTECTION WILL BE INSTALLED AS DIRECTED BY THE INSPECTOR IN ACCORDANCE WITH THE 2011 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL, PAGE E-23 (OR AS MAY BE AMENDED). THE REMOVAL OF ANY INLET PROTECTION DEVICES WILL REQUIRE APPROVAL FROM THE INSPECTOR.

*STORM DRAINS SHALL BE FLUSHED PRIOR TO TRAPPING DEVICE REMOVAL.

MAINTENANCE NOTE:

SILT FENCE ON PAVED AREAS, SUPER SILT FENCE, AND INLET PROTECTION SHALL BE INSPECTED AND MAINTAINED EACH DAY AND AFTER EACH STORM EVENT. MAINTENANCE INCLUDES, BUT IS NOT LIMITED TO, REMOVAL OF ALL ACCUMULATED SEDIMENT. GEOTEXTILE FABRIC SHALL BE REPLACED AS NEEDED TO ENSURE PROPER FUNCTION. ANY DAMAGED OR REMOVED SUPER SILT FENCE SHALL BE REPAIRED OR REPLACED BY THE END OF EACH DAY.

SEQUENCE OF OPERATIONS FOR EACH AREA:

1. NOTIFY BALTIMORE COUNTY DEPARTMENT OF PERMITS, APPROVALS, AND INSPECTIONS – SEDIMENT CONTROL (PAI-SC) AT (410) 887-3226 AT LEAST 48 HOURS PRIOR TO BEGINNING WORK.
2. NOTIFY MARYLAND DEPARTMENT OF THE ENVIRONMENT (MDE), INSPECTION AND COMPLIANCE PROGRAM (410) 537-3510 AT LEAST 7 DAYS PRIOR TO BEGINNING WORK.
3. CONTACT MISS UTILITY TO LOCATE ALL SITE UTILITIES WITHIN LIMITS OF DISTURBANCE. FOLLOWING UTILITY LOCATION, VISIT SITE TO VERIFY SITE CONDITIONS
4. IF APPLICABLE, ORANGE HIGH VISIBILITY FENCE SHALL BE MANUALLY INSTALLED ALONG THE LIMIT OF DISTURBANCE, WHERE THE LIMIT IS WITHIN 50 FEET OF THE FOREST BUFFER/CONSERVATION EASEMENT. THIS SHALL BE COMPLETED BY AND INSPECTED AT, THE PRECONSTRUCTION MEETING.
5. CLEAR AND GRUB FOR SEDIMENT & EROSION CONTROL MEASURES OR DEVICES ONLY.
6. INSTALL SEDIMENT & EROSION CONTROL MEASURES AND DEVICES IN BLOCK G. SEDIMENT AND EROSION CONTROL MEASURES WILL BE INSTALLED ONE BLOCK AT A TIME IN THE ORDER OF SEQUENCE NOTED IN ITEM NUMBER 8 BELOW.
7. NOTIFY PAI-SC, INSPECTION AND COMPLIANCE DIVISION UPON COMPLETION OF SEDIMENT AND EROSION CONTROL MEASURES AND DEVICES INSTALLATION.
8. WITH THE APPROVAL OF THE SEDIMENT CONTROL INSPECTOR, CLEAR REMAINDER OF PROPOSED EXCAVATION AREAS. EXCAVATION ACTIVITIES WILL BEGIN IN BLOCK H AND PROCEED TO BLOCKS G, F, D PANHANDLE, AND D. PRIOR TO BEGINNING NEXT BLOCK, CURRENT BLOCK MUST BE STABILIZED. SILT FENCE ON PAVED AREAS, SUPER SILT FENCE, AND INLET PROTECTION SHALL BE INSPECTED AND MAINTAINED EACH DAY AND AFTER EACH STORM EVENT. MAINTENANCE INCLUDES, BUT IS NOT LIMITED TO, REMOVAL OF ALL ACCUMULATED SEDIMENT. GEOTEXTILE FABRIC SHALL BE REPLACED AS NEEDED TO ENSURE PROPER FUNCTION. ANY DAMAGED OR REMOVED FILTER FENCE SHALL BE REPAIRED OR REPLACED BY THE END OF EACH DAY.
9. EXCAVATE SOIL IDENTIFIED IN THE RESIDUAL RISK ANALYSIS AS NEEDING TO BE REMOVED TO MEET A SITE-WIDE 95% UPPER CONFIDENCE LIMIT OF 1 X 10 -5 CANCER RISK, AND TRANSPORT SOIL OFF-SITE FOR DISPOSAL WITHIN A PERMITTED LANDFILL (LANDFILL TO BE IDENTIFIED PRIOR TO EXCAVATION). PERFORM VERIFICATION SAMPLING TO VERIFY REMOVAL OF SOIL TO MEET A SITE-WIDE 95% UCL BELOW THE PRELIMINARY REMEDIAL GOALS. IF SOIL WITH COC CONCENTRATIONS GREATER THAN THE PRG REMAINS, ADJUST EROSION AND SEDIMENT CONTROLS AS REQUIRED, OBTAIN ADJUSTMENT APPROVAL FROM THE SEDIMENT CONTROL INSPECTOR, THEN CONTINUE EXCAVATION. REPEAT THIS PROCESS UNTIL VERIFICATION SAMPLES INDICATE REMOVAL OF SOIL TO MEET THE SITE-WIDE 95% UCL AND BACKFILL EXCAVATION. UPON COMPLETION PERMANENTLY STABILIZE ALL DISTURBED AREAS.
10. DUE TO CONTAMINANT DISTRIBUTION IN BLOCK H AND THE REQUIREMENT TO MAINTAIN PUBLIC PARKING DURING IMPLEMENTATION OF REMEDIAL ACTIVITIES, THE REMEDIAL ACTIVITIES IN BLOCK H WILL BE PERFORMED IN 2 PHASES. PHASE 1 WILL INCLUDE INSTALLING AND MAINTAINING EROSION CONTROL MEASURES WHILE EXCAVATION IS CONDUCTED WITHIN THE SOUTHERN HALF OF BLOCK H. ONCE THESE EXCAVATIONS ARE BACKFILLED AND STABILIZED, EROSION CONTROL MEASURE WILL BE MOVED TO ESTABLISH EROSION CONTROL FOR PHASE 2. DURING IMPLEMENTATION OF PHASE 2 THE EROSION CONTROL MEASURES WILL BE MAINTAINED. EROSION CONTROL MEASURES WILL BE REMOVED FROM BLOCK H FOLLOWING STABILIZATION.
11. UPON STABILIZATION OF SITE WITH ESTABLISHED VEGETATION AND WITH PERMISSION OF THE SEDIMENT CONTROL INSPECTOR, REMOVE SEDIMENT CONTROL MEASURES AND STABILIZE THOSE AREAS DISTURBED BY THIS PROCESS.

STANDARD STABILIZATION NOTE:

FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED WITHIN THREE (3) CALENDAR DAYS AS TO THE SURFACE OF ALL PERIMETER CONTROLS, DIKES, SWALES, DITCHES, PERIMETER SLOPES, AND ALL SLOPES GREATER THAN 3 HORIZONTAL TO 1 VERTICAL (3:1) AND SEVEN (7) DAYS AS TO ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE.

CONSULTANT'S CERTIFICATION:

I CERTIFY THAT THIS PLAN OF EROSION AND SEDIMENT CONTROL REPRESENTS A PRACTICAL AND WORKABLE PLAN BASED ON MY PERSONAL KNOWLEDGE OF THE SITE, AND THAT THIS PLAN WAS PREPARED IN ACCORDANCE WITH THE REQUIREMENTS OF THE BALTIMORE COUNTY SOIL CONSERVATION DISTRICT AND THE CURRENT STATE OF MARYLAND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL. I HAVE REVIEWED THIS EROSION AND SEDIMENT CONTROL PLAN WITH THE OWNER/DEVELOPER.

OWNER'S / DEVELOPER'S CERTIFICATION:

I/WE HEREBY CERTIFY THAT ANY CLEARING, GRADING, CONSTRUCTION AND/OR DEVELOPMENT WILL BE DONE PURSUANT TO THIS PLAN AND THAT ANY RESPONSIBLE PERSONNEL INVOLVED IN THIS CONSTRUCTION WILL HAVE A CERTIFICATE OF ATTENDANCE AT A MARYLAND DEPARTMENT OF THE ENVIRONMENT APPROVED TRAINING PROGRAM FOR THE CONTROL OF SEDIMENT AND EROSION BEFORE BEGINNING THE PROJECT. I/WE ALSO CERTIFY THAT THE SITE WILL BE INSPECTED AT THE END OF EACH WORKING DAY, AND THAT ANY NEEDED MAINTENANCE WILL BE COMPLETED SO AS TO INSURE THAT ALL SEDIMENT CONTROL PRACTICES ARE LEFT IN OPERATIONAL CONDITION. I/WE AUTHORIZE THE RIGHT OF ENTRY FOR PERIODIC ON-SITE EVALUATIONS BY THE BALTIMORE COUNTY SOIL CONSERVATION DISTRICT BOARD OF SUPERVISORS OR THEIR AUTHORIZED AGENTS.

NOTES:
1. REFER TO DRAWING C-8 FOR EROSION AND SEDIMENT CONTROL NOTES AND DRAWING C-18 FOR SEED MIXTURES
2. STORM DRAINS LOCATED WITHIN THE LIMITS OF EXCAVATION WILL BE PROTECTED AND SUPPORTED DURING EXCAVATION AND BACKFILL ACTIVITIES
3. STORM DRAIN REPAIR WILL BE COMPLETED BEFORE ANY OTHER INTRUSIVE WORK BEGINS IN THE BLOCK D PANHANDLE.
4. ALL IMPERVIOUS SURFACES WITHIN THE LIMITS OF DISTURBANCE IN THE BLOCK D PANHANDLE WILL BE REMOVED AND MADE PERVIOUS.
5. PERVIOUS AREAS TO BE STABILIZED WITH PERMANENT SEED MIXTURE PROVIDED ON DRAWING C-18.
6. FOR ACCESS PURPOSES THE SOUTHERNMOST EXCAVATION AREA WILL BE EXCAVATED FIRST. AFTER RESTORATION OF THE SOUTHERNMOST EXCAVATION AREAS EXCAVATION WILL PROCEED NORTH.
7. ACCESS TO THE BLOCK D PANHANDLE WILL BE THROUGH THE BLOCK D CONSTRUCTION ENTRANCE.
8. NO NEW UTILITIES PROPOSED.
9. ALL WORK PERFORMED WITHIN LOCKHEED MARTIN PROPERTY LINES.
10. EXISTING CONTOURS WILL BE RE-ESTABLISED ONCE THE CONTAMINATED SOIL HAS BEEN REMOVED.
11. SINKHOLE BACKFILL WILL BE USED AS NEEDED AS SINKHOLES ARE ENCOUNTERED. SINKHOLE BACKFILL WILL ALSO BE USED TO BACKFILL STORM DRAIN REPAIR AREA.
12. THE TURBIDITY CURTAIN WILL BE REMOVED UPON COMPLETION OF THE STORM DRAIN REPAIR AND RELOCATED TO ADDRESS ANY SINKHOLE REPAIRS NEEDED ALONG THE BULKHEAD WALL.
13. CONSTRUCTION VEHICLES SHALL ENTER AND EXIT THE DISTURBED AREA ONLY VIA THE STABILIZED CONSTRUCTION ENTRANCE.

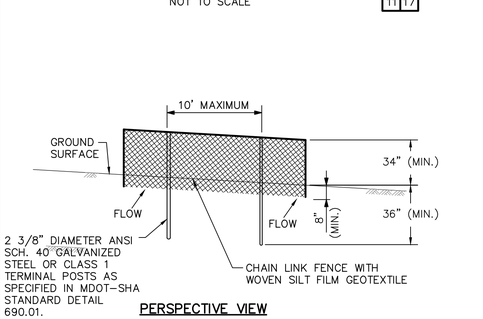
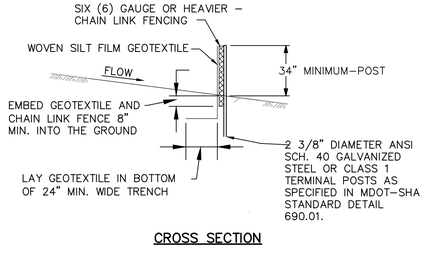
PLAN/CUT AWAY VIEW



CROSS SECTION

CONSTRUCTION SPECIFICATIONS

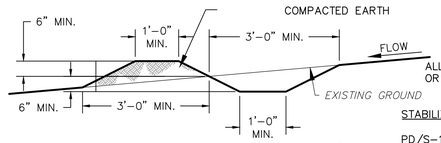


1. USE NONWOVEN GEOTEXTILE AS SPECIFIED IN SECTION H–1 MATERIALS.
2. LIFT GRATE AND WRAP WITH NONWOVEN GEOTEXTILE TO COMPLETELY COVER ALL OPENINGS. SECURE WITH WIRE TIES AND SET GRATE BACK IN PLACE.
3. PLACE CLEAN ¾ TO 1½ INCH STONE OR EQUIVALENT RECYCLED CONCRETE 6 INCHES THICK ON THE GRATE.
4. STORM DRAIN INLET PROTECTION REQUIRES FREQUENT MAINTENANCE. REMOVE ACCUMULATED SEDIMENT AFTER EACH RAIN EVENT TO MAINTAIN FUNCTION AND AVOID PREMATURE CLOGGING. IF INLET PROTECTION DOES NOT COMPLETELY DRAIN WITHIN 24 HOURS AFTER A STORM EVENT, IT IS CLOGGED. WHEN THIS OCCURS, REMOVE ACCUMULATED SEDIMENT AND CLEAN, OR REPLACE GEOTEXTILE AND STONE.

AT GRADE INLET PROTECTION DETAIL

NOT TO SCALE — 1 | 11 | 17

PERSPECTIVE VIEW



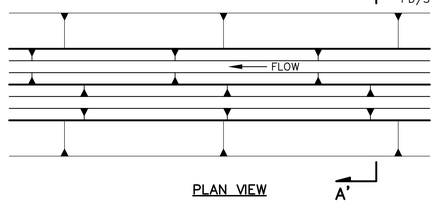
CROSS SECTION

CONSTRUCTION SPECIFICATIONS

1. INSTALL 2⅜ INCH DIAMETER GALVANIZED STEEL POSTS OF 0.095 INCH WALL THICKNESS AND SIX FOOT LENGTH SPACED NO FURTHER THAN 10 FEET APART. DRIVE THE POSTS A MINIMUM OF 36 INCHES INTO THE GROUND.
2. FASTEN 6 GAUGE OR HEAVIER GALVANIZED CHAIN LINK FENCE (2⅜ INCH MAXIMUM OPENING) 42 INCHES IN HEIGHT SECURELY TO THE FENCE POSTS WITH WIRE TIES OR HUG RINGS.
3. FASTEN WOVEN SLIT FILM GEOTEXTILE AS SPECIFIED IN SECTION H–1 MATERIALS, SECURELY TO THE UPSLOPE SIDE OF CHAIN LINK FENCE WITH TIES SPACED EVERY 24 INCHES AT THE TOP AND MID SECTION. EMBED GEOTEXTILE AND CHAIN LINK FENCE A MINIMUM OF 8 INCHES INTO THE GROUND. LAY THE GEOTEXTILE IN THE BOTTOM OF THE 24 INCH WIDE TRENCH.
4. WHERE ENDS OF THE GEOTEXTILE COME TOGETHER, THE ENDS SHALL BE OVERLAPPED BY 6 INCHES, FOLDED, AND STAPLED TO PREVENT SEDIMENT BY PASS.
5. EXTEND BOTH ENDS OF THE SUPER SILT FENCE A MINIMUM OF THREE VERTICAL FEET TO PREVENT RUNOFF FROM GOING AROUND THE ENDS OF THE SUPER SILT FENCE.
6. PROVIDE MANUFACTURER CERTIFICATION TO THE INSPECTION/ENFORCEMENT AUTHORITY SHOWING THAT GEOTEXTILE USED MEETS THE REQUIREMENTS IN SECTION H–1 MATERIALS.
7. REMOVE ACCUMULATED SEDIMENT AND DEBRIS WHEN BULGES DEVELOP IN FENCE OR WHEN SEDIMENT REACHES 25% OF FENCE HEIGHT. REPLACE GEOTEXTILE IF TORN. IF UNDERMINING OCCURS, REINSTALL CHAIN LINK FENCING AND GEOTEXTILE.

SUPER SILT FENCE DETAIL

NOT TO SCALE — 7 | 11 | 17



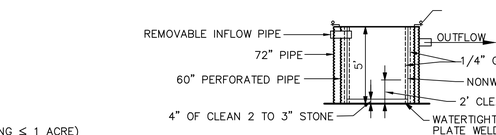
CROSS SECTION A–A'

STABILIZATION

PD/S–1: SEED AND MULCH (DRAINING ≤ 1 ACRE) (NOT ALLOWED FOR CLEAR WATER DIVERSION)

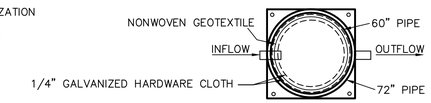
PD/S–2: SEED AND COVER WITH SOIL, STABILIZATION MATTING OR LINE WITH SOD (DRAINING BETWEEN 1 AND 2 ACRES)

PLAN VIEW



CONSTRUCTION SPECIFICATIONS

1. REMOVE AND DISPOSE OF ALL TREES, BRUSH, STUMPS, OBSTRUCTIONS, AND OTHER OBJECTIONABLE MATERIAL SO AS NOT TO INTERFERE WITH PROPER FUNCTION OF DIKE/SWALE.
2. EXCAVATE OR SHAPE DIKE/SWALE TO LINE, GRADE, AND CROSS SECTION AS SPECIFIED. BANK PROJECTIONS OR OTHER IRREGULARITIES ARE NOT ALLOWED.
3. COMPACT FILL.
4. CONSTRUCT DIKE/SWALE ON AN UNINTERRUPTED, CONTINUOUS GRADE, ADJUSTING THE LOCATION DUE TO FIELD CONDITIONS AS NECESSARY TO MAINTAIN POSITIVE DRAINAGE.
5. PROVIDE OUTLET PROTECTION AS REQUIRED ON APPROVED PLAN.
6. STABILIZE DIKE/SWALE WITHIN 3 DAYS OF INSTALLATION. STABILIZE DIKE/SWALES USED FOR CLEAR WATER DIVERSION WITHIN 24 HOURS OF INSTALLATION.
7. MAINTAIN LINE, GRADE, AND CROSS SECTION. REMOVE ACCUMULATED SEDIMENT AND DEBRIS, AND MAINTAIN POSITIVE DRAINAGE. KEEP PERIMETER DIKE/SWALE AND POINT OF DISCHARGE FREE OF EROSION AND CONTINUOUSLY MEET REQUIREMENTS FOR ADEQUATE VEGETATIVE ESTABLISHMENT IN ACCORDANCE WITH SECTION B–4 VEGETATIVE STABILIZATION.
8. UPON REMOVAL OF DIKE/SWALE, GRADE AREA FLUSH WITH EXISTING GROUND. WITHIN 24 HOURS OF REMOVAL STABILIZE DISTURBED AREA WITH TOPSOIL, SEED, MULCH, OR AS SPECIFIED ON APPROVED PLAN.



NOTE: MAXIMUM DRAINAGE AREA FOR THIS PRACTICE IS 2 ACRES.

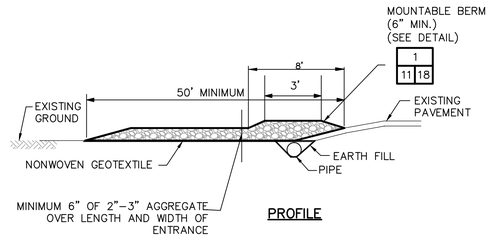
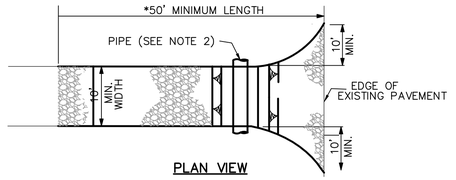
ELEVATION



PLAN VIEW

CONSTRUCTION SPECIFICATIONS



1. PROVIDE 1 CUBIC FOOT OF STORAGE FOR EACH GALLON PER MINUTE OF PUMP CAPACITY. REQUIRED STORAGE VOLUME MAY BE ATTAINED BY PLACEMENT OF TANKS IN PARALLEL WITH INFLOW EVENLY DISTRIBUTED AMONG TANKS. OVERTOPPING OF TANKS IS NOT PERMITTED.
2. USE 60 INCH CORRUGATED METAL OR PLASTIC PIPE WITH 1 INCH DIAMETER PERFORATIONS, 6 INCHES ON CENTER FOR THE INNER PIPE. LINE PIPE WITH NONWOVEN GEOTEXTILE, AS SPECIFIED IN SECTION H–1 MATERIALS, SANDWICHED BETWEEN, AND ATTACHED TO, ¼ INCH HARDWARE CLOTH.
3. OVERLAP GEOTEXTILE 8 INCHES MINIMUM AT VERTICAL SEAM AND AT THE BOTTOM PLATE.
4. ANCHOR GEOTEXTILE AT BOTTOM OF TANK WITH 4 INCHES OF 2 TO 3 INCH CLEAN STONE OR EQUIVALENT RECYCLED CONCRETE.
5. USE 72 INCH CORRUGATED METAL OR PLASTIC OUTER PIPE WITH PERMANENT OUTFLOW PIPE WITH INVERT LOWER THAN INFLOW PIPE
6. INFLOW PIPE MUST DISCHARGE INTO INNER PIPE AND BE REMOVABLE.
7. PLACE TANK ON LEVEL SURFACE AND DISCHARGE TO A STABLE AREA AT A NONEROSIVE RATE.
8. A PORTABLE SEDIMENT TANK REQUIRES FREQUENT MAINTENANCE. REMOVE ACCUMULATED SEDIMENT FROM INNER PIPE WHEN IT REACHES TWO FEET IN DEPTH. IF SYSTEM CLOGS, PULL OUT INNER PIPE, REMOVE ACCUMULATED SEDIMENT, AND REPLACE GEOTEXTILE. KEEP POINT OF DISCHARGE FREE OF EROSION.

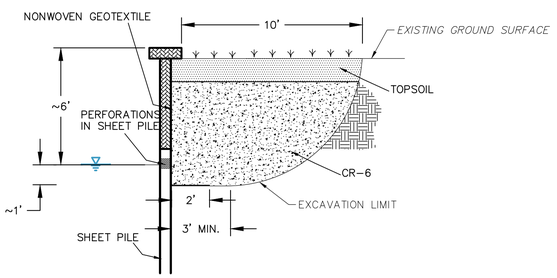
PROFILE



PLAN VIEW

CONSTRUCTION SPECIFICATIONS

1. PLACE STABILIZED CONSTRUCTION ENTRANCE IN ACCORDANCE WITH THE APPROVED PLAN. VEHICLES MUST TRAVEL OVER THE ENTIRE LENGTH OF THE SCE. USE MINIMUM LENGTH OF 50 FEET (*30 FEET FOR SINGLE RESIDENCE LOT). USE MINIMUM WIDTH OF 10 FEET. FLARE SCE 10 FEET MINIMUM AT THE EXISTING ROAD TO PROVIDE A TURNING RADIUS.
2. PIPE ALL SURFACE WATER FLOWING TO OR DIVERTED TOWARD THE SCE UNDER THE ENTRANCE, MAINTAINING POSITIVE DRAINAGE. PROTECT PIPE INSTALLED THROUGH THE SCE WITH A MOUNTABLE BERM WITH 5:1 SLOPES AND A MINIMUM OF 12 INCHES OF STONE OVER THE PIPE. PROVIDE PIPE AS SPECIFIED ON APPROVED PLAN. WHEN THE SCE IS LOCATED AT A HIGH SPOT AND HAS NO DRAINAGE TO CONVEY, A PIPE IS NOT NECESSARY. A MOUNTABLE BERM IS REQUIRED WHEN SCE IS NOT LOCATED AT A HIGH SPOT.
3. PREPARE SUBGRADE AND PLACE NONWOVEN GEOTEXTILE, AS SPECIFIED IN SECTION H–1 MATERIALS.
4. PLACE CRUSHED AGGREGATE (2 TO 3 INCHES IN SIZE) OR EQUIVALENT RECYCLED CONCRETE (WITHOUT REBAR) AT LEAST 6 INCHES DEEP OVER THE LENGTH AND WIDTH OF THE SCE.
5. MAINTAIN ENTRANCE IN A CONDITION THAT MINIMIZES TRACKING OF SEDIMENT. ADD STONE OR MAKE OTHER REPAIRS AS CONDITIONS DEMAND TO MAINTAIN CLEAN SURFACE, MOUNTABLE BERM, AND SPECIFIED DIMENSIONS. IMMEDIATELY REMOVE STONE AND/OR SEDIMENT SPILLED, DROPPED, OR TRACKED ONTO ADJACENT ROADWAY BY VACUUMING, SCRAPING, AND/OR SWEEPING. WASHING ROADWAY TO REMOVE MUD TRACKED ONTO PAVEMENT IS NOT ACCEPTABLE UNLESS WASH WATER IS DIRECTED TO AN APPROVED SEDIMENT CONTROL PRACTICE.

JOINING ADJACENT SECTIONS OF GEOTEXTILE

SECTION A–A

1. USE NOMINAL 2 INCH X 4 INCH LUMBER.
2. USE WOVEN SLIT FILM GEOTEXTILE, AS SPECIFIED IN SECTION H–1 MATERIALS.
3. PROVIDE MANUFACTURER CERTIFICATION TO THE AUTHORIZED REPRESENTATIVE OF THE INSPECTION/ENFORCEMENT AUTHORITY SHOWING THAT THE GEOTEXTILE USED MEETS THE REQUIREMENTS IN SECTION H–1 MATERIALS.
4. SPACE UPRIGHT SUPPORTS NO MORE THAN 10 FEET APART.
5. PROVIDE A TWO FOOT OPENING BETWEEN EVERY SET OF SUPPORTS AND PLACE STONE IN THE OPENING OVER GEOTEXTILE.
6. KEEP SILT FENCE TAUT AND SECURELY STAPLE TO THE UPSLOPE SIDE OF UPRIGHT SUPPORTS. EXTEND GEOTEXTILE UNDER 2x4.
7. WHERE TWO SECTIONS OF GEOTEXTILE ADJOIN: OVERLAP, FOLD, AND STAPLE TO POST IN ACCORDANCE WITH THIS DETAIL. ATTACH LATHE.
8. PROVIDE A MASTIC SEAL BETWEEN PAVEMENT, GEOTEXTILE, AND 2x4 TO PREVENT SEDIMENT–LADEN WATER FROM ESCAPING BENEATH SILT FENCE INSTALLATION.
9. SECURE BOARDS TO PAVEMENT WITH 40D 5 INCH MINIMUM LENGTH NAILS.
10. REMOVE ACCUMULATED SEDIMENT AND DEBRIS WHEN BULGES DEVELOP IN SILT FENCE OR WHEN SEDIMENT REACHES 25% OF FENCE HEIGHT. REPLACE GEOTEXTILE IF TORN. MAINTAIN WATER TIGHT SEAL ALONG BOTTOM. REPLACE STONE IF DISPLACED.

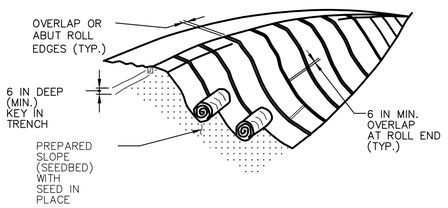
FILTER FABRIC SHALL BE EMBEDDED A MIN. OF 4" AND SHALL EXTEND AT LEAST 6" BEYOND THE EDGE OF THE RIP-RAP

SECTION B-B



CONSTRUCTION SPECIFICATIONS

1. RIPRAP AND STONE MUST CONFORM TO THE SPECIFIED CLASS.
2. USE NONWOVEN GEOTEXTILE, AS SPECIFIED IN SECTION H-1 MATERIALS, AND PROTECT FROM PUNCTURING, CUTTING, OR TEARING. REPAIR ANY DAMAGE OTHER THAN AN OCCASIONAL SMALL HOLE BY PLACING ANOTHER PIECE OF GEOTEXTILE OVER THE DAMAGED PART OR BY COMPLETELY REPLACING THE GEOTEXTILE. PROVIDE A MINIMUM OF ONE FOOT OVERLAP FOR ALL REPAIRS AND FOR JOINING TWO PIECES OF GEOTEXTILE TOGETHER.
3. PREPARE THE SUBGRADE FOR GEOTEXTILE OR STONE FILTER (⅜ TO 1½ INCH MINIMUM STONE FOR 6 INCH MINIMUM DEPTH) AND RIPRAP TO THE REQUIRED LINES AND GRADES. COMPACT ANY FILL REQUIRED IN THE SUBGRADE TO A DENSITY OF APPROXIMATELY THAT OF THE SURROUNDING UNDISTURBED MATERIAL.
4. EXTEND GEOTEXTILE AT LEAST 6 INCHES BEYOND EDGES OF RIPRAP AND EMBED AT LEAST 4 INCHES AT SIDES OF RIPRAP.
5. CONSTRUCT RIPRAP OUTLET TO FULL COURSE THICKNESS IN ONE OPERATION AND IN SUCH A MANNER AS TO AVOID DISPLACEMENT OF UNDERLYING MATERIALS. PLACE STONE FOR RIPRAP OUTLET IN A MANNER THAT WILL ENSURE THAT IT IS REASONABLY HOMOGENOUS WITH THE SMALLER STONES AND SPALLS FILLING THE VOIDS BETWEEN THE LARGER STONES. PLACE RIPRAP IN A MANNER TO PREVENT DAMAGE TO THE FILTER BLANKET OR GEOTEXTILE. HAND PLACE TO THE EXTENT NECESSARY.
6. WHERE NO ENDWALL IS USED, CONSTRUCT THE UPSTREAM END OF THE APRON SO THAT THE WIDTH IS TWO TIMES THE DIAMETER OF THE OUTLET PIPE, AND EXTEND THE STONE UNDER THE OUTLET BY A MINIMUM OF 18 INCHES.
7. CONSTRUCT APRON WITH 0% SLOPE ALONG ITS LENGTH AND WITHOUT OBSTRUCTIONS. PLACE STONE SO THAT IT BLENDS IN WITH EXISTING GROUND.
8. MAINTAIN LINE, GRADE, AND CROSS SECTION. KEEP OUTLET FREE OF EROSION. REMOVE ACCUMULATED SEDIMENT AND DEBRIS. AFTER HIGH FLOWS INSPECT FOR SCOUR AND RIPRAP DISLODGED RIPRAP. MAKE NECESSARY REPAIRS IMMEDIATELY.

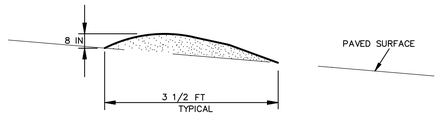
TEMPORARY SOIL STABILIZATION MATTING SLOPE APPLICATION

NOT TO SCALE



3 | 11 | 18

CONSTRUCTION SPECIFICATIONS

1. USE MATTING THAT HAS A DESIGN VALUE FOR SHEAR STRESS EQUAL TO OR HIGHER THAN 1.5 LB/FT^2.
2. USE TEMPORARY SOIL STABILIZATION MATTING MADE OF DEGRADABLE (LASTS 6 MONTHS MINIMUM) NATURAL OR MAN-MADE FIBERS (MOSTLY ORGANIC). MAT MUST HAVE UNIFORM THICKNESS AND DISTRIBUTION OF FIBERS THROUGHOUT AND BE SMOLDER RESISTANT. CHEMICALS USED IN THE MAT MUST BE NON-LEACHING AND NON-TOXIC TO VEGETATION AND SEED GERMINATION AND NON-INJURIOUS TO THE SKIN. IF PRESENT, NETTING MUST BE EXTRUDED PLASTIC WITH A MAXIMUM MESH OPENING OF 2x2 INCHES AND SUFFICIENTLY BONDED OR SEWN ON 2 INCH CENTERS ALONG LONGITUDINAL AXIS OF THE MATERIAL TO PREVENT SEPARATION OF THE NET FROM THE PARENT MATERIAL.
3. SECURE MATTING USING STEEL STAPLES, WOOD STAKES, OR BIODEGRADABLE EQUIVALENT. STAPLES MUST BE "U" OR "T" SHAPED STEEL WIRE HAVING A MINIMUM GAUGE OF NO. 11 AND NO. 8 RESPECTIVELY. "U" SHAPED STAPLES MUST AVERAGE 1 TO 11/2 INCHES WIDE AND BE A MINIMUM OF 6 INCHES LONG. "T" SHAPED STAPLES MUST HAVE A MINIMUM 8 INCH MAIN LEG, A MINIMUM 1 INCH SECONDARY LEG, AND A MINIMUM 4 INCH HEAD. WOOD STAKES MUST BE ROUGH-SAWN HARDWOOD, 12 TO 24 INCHES IN LENGTH, 1x3 INCH IN CROSS SECTION, AND WEDGE SHAPED AT THE BOTTOM.
4. PERFORM FINAL GRADING, TOPSOIL APPLICATION, SEEDBED PREPARATION, AND PERMANENT SEEDING IN ACCORDANCE WITH SPECIFICATIONS. PLACE MATTING WITHIN 48 HOURS OF COMPLETING SEEDING OPERATIONS UNLESS END OF WORKDAY STABILIZATION IS SPECIFIED ON THE APPROVED EROSION & SEDIMENT CONTROL PLAN.
5. UNROLL MATTING DOWNSLOPE. LAY MAT SMOOTHLY AND FIRMLY UPON THE SEEDED SURFACE. AVOID STRETCHING THE MATTING.
6. OVERLAP OR ABUT ROLL EDGES PER MANUFACTURER RECOMMENDATIONS. OVERLAP ROLL ENDS BY 6 INCHES (MINIMUM), WITH THE UPSLOPE MAT OVERLAPPING ON TOP OF THE DOWNSLOPE MAT.
7. KEY IN THE UPSLOPE END OF MAT 6 INCHES (MINIMUM) BY DIGGING A TRENCH, PLACING THE MATTING ROLL END IN THE TRENCH, STAPLING THE MAT IN PLACE, REPLACING THE EXCAVATED MATERIAL, AND TAMPING TO SECURE THE MAT END IN THE KEY.
8. STAPLE/STAKE MAT IN A STAGGERED PATTERN ON 4 FOOT (MAXIMUM) CENTERS THROUGHOUT AND 2 FOOT (MAXIMUM) CENTERS ALONG SEAMS, JOINTS, AND ROLL ENDS.
9. ESTABLISH AND MAINTAIN VEGETATION SO THAT REQUIREMENTS FOR ADEQUATE VEGETATIVE ESTABLISHMENT ARE CONTINUOUSLY MET IN ACCORDANCE WITH SECTION B-4 VEGETATIVE STABILIZATION.

PLAN VIEW

CROSS SECTION

CONSTRUCTION SPECIFICATIONS

1. CONSTRUCT BERM ON AN UNINTERRUPTED, CONTINUOUS GRADE.
2. INSTALL BERM TO CONFORM TO CROSS SECTION DIMENSIONS OF A UNIFORM HEIGHT OF 8 INCHES MINIMUM AND APPROXIMATE WIDTH OF 3½ FEET.
3. PROVIDE OUTLET PROTECTION AS REQUIRED ON PLAN.
4. COMPACT ASPHALT BERM.
5. REPAIR DAMAGED ASPHALT. REMOVE ACCUMULATED SEDIMENT AND DEBRIS. MAINTAIN POSITIVE DRAINAGE.
6. UPON REMOVAL OF ASPHALT BERM, RETURN TO ORIGINAL CONDITIONS OR AS SPECIFIED ON APPROVED PLAN.

TEMPORARY ASPHALT BERM

MARYLAND AVIATION ADMINISTRATION SEEDING SPECIFICATIONS

REFERENCES TO ITEM #S NOTED BELOW ARE FOUND IN MARYLAND AVIATION ADMINISTRATION'S MANUAL ENTITLED SPECIFICATIONS FOR PERFORMING LANDSCAPING ACTIVITIES FOR THE MARYLAND AVIATION ADMINISTRATION DATED JANUARY 2008.

ITEM 903 SEEDING

DESCRIPTION

903–1.1 GENERAL. This item provides specifications for seeding of areas as designated on plans or as directed by the MAA Engineer. The species, mixtures, and methods of application provided in this item have been designed to reduce the attractiveness of airport grounds to wildlife. Only MAA–approved species, mixtures, and rates of application provided in this item may be used to establish vegetation. All activities associated with seeding including soil preparation, seed application, fertilization, and maintenance shall also conform to these approved standards.

MATERIALS

903–2.1 SEED. All seed shall comply with the Maryland Seed Law (Agricultural Article of the Annotated Code of Maryland). Only MAA–approved species, mixtures, and rates of application provided in this item may be used to establish vegetation. Seed will be sampled and tested by an inspector from the Turf and Seed Section, Maryland Department of Agriculture (MDA), Annapolis, Maryland. All lawn and turf seed and mixtures shall be free from the following state–listed restricted noxious weeds:

corn cockle (agrostemma githago),
bentgrass (Agrostis spp.),*
redtop (Agrostis gigantea) *
wild onion (Allium canadense),
wild garlic (Allium vineale),
bindweed (Calstegia spp.),
dodder (Cuscuta spp.),
Bermuda grass (Cynodon dactylon),
orchardgrass (Dactylis glomerata),
tall fescue (Festuca arundinacea) *
meadow fescue (Festuca pratensis) *,
velvetgrass (Holcus lanatus),
annual bluegrass (Poa annua),
rough bluegrass (Poa trivialis),*
timothy (Phleum pratense), and
Johnson grass (Sorgum halepense).

* These species may be included as a labeled component of a mixture when each is present in excess of five percent of the mixture by weight.

Restricted noxious–weed seed may not exceed 0.5 percent by weight of any seed mixture. In addition, all seeds sold in Maryland shall be free from the following listed prohibited noxious weeds: balloonvine (Cardiospermum halicacabum), quackgrass (Elytrigia repens), sicklepod (Senna obtusifolia), sorghum (Sorghum spp.), Canada thistle (Cirsium arvense), plumeless thistle (Carduus spp.–includes musk thistle and curled thistle), and serrated tussock (Nassella trichotoma).

903.2.1.1 APPROVED SPECIES. The following table contains species that are approved by MAA for use in seed mixtures. Purity requirements and germination requirements are also provided.

APPROVED PLANT SPECIES
MMA SEED MIXTURES

	PURITY* NOT LESS THAN %	MINIMUM % GERMINATION**	PURE LIVE SEED FACTOR
CERTIFIED TURF–TYPE TALL FESCUE (Festua arundinacea)	98	90	1.1300
CERTIFIED KENTUCKY BLUE GRASS (poa pratensis)	90	80	1.3900
FOWL BLUEGRASS (Poa Palustris)	90	80	1.3900
HARD FESCUE (Festuca longifolia)	98	90	1.1300
CHEWING RED FESCUE (Festuca rubra commutata)	98	90	1.1300
ANNUAL RYEGRASS (Lolium multiflorum)	95	85	1.2400
PERENNIAL RYEGRASS (Lolium perenne)	90	80	1.3900
CREEPING BENTGRASS (Agrostis Stolonifera)	90	80	1.3900
SWITCHGRASS (Panicum Virgatum)	90	80	1.3900
LITTLE BLUESTEM (Andropogon scoparius)	62	94	1.7100

*THE PERCENTAGE WEIGHT OF PURE SEED PRESENT SHALL BE FREE OF ANY AGRICULTURE SEEDS, INERT MATTER, AND OTHER SEEDS DISTINGUISHABLE BY THEIR PERCENTAGE.

**THE PERCENTAGE OF GERMINATION SHALL BE ACTUAL SPROUTS AND SHALL NOT INCLUDE HARD SEEDS UNLESS SPECIFICALLY PERMITTED BY THE MAA ENGINEER.

903–2.1.2 PURITY. All seed shall be free of all state–designated noxious weeks listed in Paragraph 2.1.1 and conform to MAA specifications. To ensure compliance, MAA requires sampling and testing of seed by the Turf and Seed Section, Maryland Department of Agriculture (MDA). The Contractor shall furnish the MAA Engineer with duplicate signed copies of a statement by the Turf and Seed Section certifying that each lot of seed has been laboratory tested within six months of date of delivery. This statement shall include the following information:

- name and address of laboratory,
- date of test,
- lot number,
- the results of tests as to name, percentages of purity and of germination,
- percentage of weed content for the seed furnished,
- and, in the case of a mixture, the proportions of each kind of seed.

Seed shall be furnished in standard containers with the seed name, lot number, net weight, percentages of purity, germination rate and hard seed, and percentage of maximum weed seed content clearly marked. All seed containers shall be tagged with a MDA supervised mix program seed tag.

903–2.1.3 MIXTURES AND APPLICATION RATES. Only seed mixtures and application rates described in this item may be used unless otherwise approved by the MAA Engineer. seed mixtures shall meet criteria detailed in Paragraph 903–2.1.2. Seed mixtures have been formulated to minimize the attractiveness of areas to wildlife of common landscape scenarios. The appropriate seed mixture for application will be designated based on environmental conditions and may vary from site to site. All planting rates listed are in pounds of Pure Live Seed (PLS) per acre.

Seed mixtures, application scenarios, and rates for permanent cool–season grasses are as follows:

a. Seed Mixture No. 1 – relatively flat areas (grade less than 4:1) subject to normal conditions and regular mowing (Application rate = 234 lbs PLS/acre)
b. Seed Mixture No. 2 – sloped areas (grade greater than 4:1) not subject to regular mowing (Application Rate = 115 lbs PLS/acre); and
c. Seed Mixture No. 3 – wetlands and their associated buffer zones (Application rate = 131 lbs PLS/acre).

Seed Mixture No. 1: Relatively flat areas regularly mowed and exposed to normal conditions (Application rate = 234 lbs PLS/acre)

Seed		Rate of Application (lbs of PLS/acre)
85%	Certified Turf–Type Tall Fescue	192
10%	Certified Kentucky Bluegrass	28
5%	Perennial Ryegrass	14
Supplemental Seed		
	Annual Ryegrass	25

Seed Mixture No. 2: Sloped areas not subject to regular mowing (Application rate = 115 lbs PLS/acre)

Seed		Rate of Application (lbs of PLS/acre)
75%	Hard Fescue	85
20%	Chewing Fescue	23
5%	Kentucky Bluegrass	7
Supplemental Seed		
	Redtop	3

Seed Mixture No. 3: Wetland areas and their associated buffer zones (Application rate = 131 lbs PLS/acre)

Seed		Rate of Application (lbs of PLS/acre)
60%	Creeping Bentgrass	83
30%	Fowl Bluegrass	34
10%	Switchgrass	14
Supplemental Seed		
	Redtop	3

903.2.1.4 SEEDING SEASON. Application of seed and seed mixtures shall occur within a specified seeding season unless otherwise approved by the MAA Engineer. No seed or seed mixtures are to be applied on frozen ground or when the temperature is at or below 35 degrees Farenheit (7.2 degrees Centigrade). Under these conditions, a layer of mulch should be applied in accordance with Item 905, Mulching, to stabilize the site, and permanent seeding should occur in the subsequent seeding season. Seed application may occur during the seeding season dates listed below. Seeding performed after October 20 should be a temporary cover of annual ryegrass and followed by overseeding of the appropriate seed mixture during the spring seeding season.

SEEDING SEASONS

PERMANENT COOL–SEASON GRASSES	MARCH 1 TO APRIL 20 AND AUGUST 1 TO OCTOBER 20, INCLUSIVE
TEMPORARY COVER OF ANNUAL RYE/REDTOP	MARCH 1 TO APRIL 30 AND AUGUST 1 TO NOVEMBER 30, INCLUSIVE
TEMPORARY COVER OF WARM–SEASON GRASSES (LITTLE BLUESTEM ONLY)	MAY 1 TO JULY 31, INCLUSIVE. RATE OF APPLICATION SHOULD BE 13.6 LBS. PLS PER ACRE

903–2.2 LIME. Lime shall consist of ground limestone and contain at least 85 percent total carbonates. Lime shall be ground to a fineness so that at least 90 percent will pass through a No. 20 mesh sieve and 50 percent will pass through a No. 100 mesh sieve. Dolomitic lime or a high magnesium lime shall contain at least 10 percent magnesium oxide. Lime shall be applied by approved methods detailed in Section 903–3.3 of this item. The rate of application will be based on results of soil tests.

903–2.3 FERTILIZER. Fertilizer shall be standard commercial fertilizer (supplied separately or in mixtures) and meet the requirements of applicable state and federal laws (O–F–241) as well as standards of the Association of Official Agricultural Chemists. Nitrogen–Phosphorus–Potassium (N–P–K) concentrations shall be determined from analysis of soil samples. Methods of fertilizer application shall conform to standards described in Section 903–3.3 of this item. Fertilizer shall be furnished in standard containers that are clearly labeled with name, weight, and guaranteed analysis of the contents (percentage of total nitrogen, available phosphoric acid, and water–soluble potash). Mixed fertilizers shall not contain any hydrated lime or cyanamide compounds. Fertilizers failing to meet the specified analysis may be approved by the MAA Engineer, providing sufficient materials are applied to conform with the specified nutrients per unit of measure without additional cost to MAA.

The fertilizers may be supplied in the following forms:
a. A dry, free–flowing fertilizer suitable for application by a common fertilizer spreader;
b. A finely ground fertilizer soluble in water, suitable for application by power sprayers; or
c. A granular or pellet form suitable for application by blower equipment.

The rate of application will be based on results of soil tests performed by the University of Maryland Soil Testing Laboratory. By law, persons applying fertilizer to State–owned land shall follow the recommendations of the University of Maryland as set forth in the "Plant Nutrient Recommendations Based on Soil Tests for Turf Maintenance" and the "Plant Nutrient Recommendations Based on Soil Tests for Sod Production". Application of the fertilizer shall be in a manner that is consistent with the recommendations of the University of Maryland Cooperative Extension.

CONSTRUCTION METHODS AND EQUIPMENT

903–3.1 GENERAL. This section provides approved methods for the application of and includes standards for seedbed preparation, methods of application, and equipment to be used during the process. Lime and fertilizer shall be applied to seeded areas before the seed is spread. The mixture of seed will be determined for sites based on environmental conditions as described in Paragraph 903–2.1.3.

903–3.2 ADVANCE PREPARATION. Areas designated for seeding shall be properly prepared in advance of seed application. The area shall be tilled and graded prior to application of lime and fertilizer, and the surface area shall be cleared of any stones larger than 1 inch in diameter, sticks, stumps, and other debris that might interfere with sowing of seed, growth of grasses, or subsequent maintenance of grass–covered areas. Damage caused by erosion or other forces that occur after the completion of grading shall be repaired prior to the application of fertilizer and lime. The Contractor will repair such damage, which may include filling gullies, smoothing irregularities, and repairing other incidental damage before beginning the application of fertilizer and ground limestone.

If an area to be seeded is sparsely sodded, weedy, barren and unworked, or packed and hard, all grass and weeds shall first be cut or otherwise satisfactorily disposed of, and the soil then scarified or otherwise loosened to a depth not less than 5 inches (125 mm). Clods shall be broken and the top 3 inches (75 mm) of soil shall be worked into a satisfactory condition by discing or by use of cultipackers, rollers, drags, harrows, or other appropriate means.

An area to be seeded shall be considered a satisfactory seedbed (without requiring additional treatment) if it has recently been thoroughly loosened and worked to a depth of not less than 5 inches; the top 3 inches of soil is loose, friable, and is reasonably free from large clods, rocks, large roots, or other undesirable matter; appropriate amounts of fertilizer and lime have been added; and, if it has been shaped to the required grade immediately prior to seeding. For slope areas steeper than 3:1 (three horizontal to one vertical), the subsoil shall be loose to a depth of 1 inch.

After completion of tilling and grading, lime and fertilizer shall be applied within 48 hours according to the specified rate (Paragraphs 903–2.2 and 2.3) and methods (Paragraphs 903–3.3.1 and 903–3.3.2) approved by MAA. The seeding mixture shall be applied within 48 hours after application of lime and fertilizer. To firm the seeded areas, cultipacking shall occur immediately after seeding.

903–3.3 METHODS OF APPLICATION. Lime, fertilizer, and seed mixes shall be applied by either the dry or wet application methods that have been approved by MAA and are detailed below.

903–3.3.1 DRY APPLICATION METHOD

a. Liming. If soil test results indicate that lime is needed, the following procedures will be used: following advance preparation of the seedbed, lime shall be applied prior to the application of any fertilizer or seed and only on seedbeds that have been prepared as described in paragraph 903–3.2. The lime shall be uniformly spread and worked into the top 2 inches of soil, after which the seedbed shall be properly graded again.
b. Fertilizing. Following advance preparations (and liming if necessary), fertilizershall be spread uniformly at the specified rate to provide no less than the minimum quantity stated in Paragraph 903–2.3.
c. Seeding. Seed mixtures shall be sown immediately after fertilization of the seedbed. The fertilizer and seed shall be lightly raked to a depth of 1 inch for newly graded and disturbed areas.
d. Rolling. After the seed has been properly covered, the seedbed shall be immediately compacted using a cultipacker or an approved lawnroller.

903–3.3.2 WET APPLICATION METHOD/HYDROSEEDING

A. GENERAL.The contractor may elect to apply seed and fertilizer as per paragraphs c and d of this section in the form of an aqueous mixture by spraying over the previously prepared seedbed using methods and equipment approved by MAA. The rates of application shall be as specified in paragraphs 903–2.1 through 903–2.3.

B. SPRAYING EQUIPMENT. The spraying equipment shall have a container or water tank equipped with a liquid level gauge capable of reading increments of 50 gallons or less over the entire range of the tank capacity. The liquid level gauge shall be mounted so as to be visible to the nozzle operator at all times. The container or tank shall also be equipped with a mechanical power–driven agitator capable of keeping all the solids in the mixture in complete suspension at all times until used.

The spraying equipment shall also include a pressure pump capable of delivering 100 gallons per minute at a pressure of 100 pounds per square inch. The pressure pump assemblage shall be configured to allow the mixture to flow through the tank when not being sprayed from the nozzle. All pump passages and pipelines shall be capable of providing clearance for 5/8–inch solids. The power unit for the pump and agitator shall have controls mounted so as to be accessible to the nozzle operator. A pressure gauge shall be connected to and mounted immediately behind the nozzle.

The nozzle pipe shall be mounted on an elevated supporting stand in such a manner that it can be rotated through 360 degrees horizontally and inclined vertically from at least 20 degrees below to at least 60 degrees above the horizontal. There shall be a quick–acting, three–way control valve connecting the recirculating line to the nozzle pipe and mounted so that the nozzle operator can control and regulate the amount of flow of mixture to be supplied so that mixtures may be properly sprayed over a distance varying from 20 feet to 100 feet. One shall be a close–range ribbon nozzle, one a medium–range ribbon nozzle, and one a long–range jet nozzle. for ease of removal and cleaning, All nozzles shall be connected to the nozzle pipe by means of quick–release couplings. In order to reach areas inaccessible to the regular equipment, an extension hose at least 50 feet in length shall be provided to which the nozzles may be connected.

C. MIXTURES. Lime shall be applied separately in the quantity specified, prior to the fertilizing and seeding operations. Lime should be added to and mixed with water at a concentration not to exceed 220 pounds of lime for every 100 gallons of water. After lime has been applied, the tank should be emptied and rinsed with fresh water. Seed and fertilizer shall be mixed together in the relative proportions specified, but the resulting concentration should not exceed 220 pounds of mixture per 100 gallons of water and should be applied within 30 minutes to prevent fertilizer burn of the seeds.

All water used shall be obtained from fresh water sources and shall be free from injurious chemicals and other toxic substances harmful to plant life. Brackish water shall not be used at any time. The contractor shall identify all sources of water to the MAA engineer at least two weeks prior to use. The engineer may take samples of the water at the source or from the tank at any time and have a laboratory test the samples for chemical and saline content. The contractor shall not use any water from any source that is disapproved by the engineer following such tests.

All mixtures shall be constantly agitated from the time they are mixed until they are finally applied to the seedbed. All such mixtures shall be used within 30 minutes from the time they were mixed or they shall be wasted and disposed of at a location acceptable to the engineer.

D. SPRAYING. Lime shall be sprayed upon previously prepared seedbeds on which the lime, if required, shall have been worked in already. The mixtures shall be applied using a high–pressure spray which shall always be directed upward into the air so that the mixtures will fall to the ground in a uniform spray. Nozzles or sprays shall never be directed toward the ground in such a manner that might produce erosion or runoff. Particular care shall be exercised to ensure that the application is made uniformly, at the prescribed rate, and to guard against misses and overlapped areas. Predetermined quantities of the mixture shall be used in accordance with specifications to cover specified sections of known areas. To checks the rate and uniformity of application, the applicator will observe the degree of wetting of the ground or distribute test sheets of paper or pans over the area at intervals and observe the quantity of material deposited thereon.

On surfaces that are to be mulched as indicated by the plans or designated by the MAA engineer, seed and fertilizer applied by the spray method need not be raked into the soil or rolled. however, on surfaces on which mulch is not to be used, the raking and rolling operations will be required after the soil has dried.

903–3.4 MAINTENANCE OF SEEDED AREAS. The contractor shall protect seeded areas against traffic or other use by warning signs or barricades, as approved by the engineer. Surfaces gullied or otherwise damaged following seeding shall be repaired by regrading and reseeding as directed. The contractor shall mow, water as directed, and otherwise maintain seeded areas in a satisfactory condition until final inspection and acceptance of the work.

When either the dry or wet application method outlined above is used for work performed out of season, the contractor will be required to establish a good stand of grass of uniform color and density to the satisfaction of the engineer. If at the time when the contract has been otherwise completed it is not possible to make an adequate determination of the color, density, and uniformity of such stand of grass, payment for the unaccepted portions of the areas seeded out of season will be withheld until such time as these requirements have been met.

ITEM 904 SODDING

DESCRIPTION

904–1 This item provides standards for furnishing, hauling, and placing approved live sod on prepared areas as indicated on site plans. Sod will only be applied to landscape areas and shall be mowed frequently. All sodding activities shall conform to these specifications at the locations shown on site plans or as directed by the MAA Engineer.

MATERIALS

904–2.1 SOD. Sod furnished by the Contractor shall have a good cover of living or growing grass. This includes grass that is seasonally dormant during the cold or dry seasons and capable of renewing growth after the dormant period. All sod shall be obtained from areas in which the soil is reasonably fertile and contains a high percentage of loamy topsoil. Sod shall be cut or stripped from living, thickly matted turf relatively free of weeds or other undesirable foreign plants, large stones, roots, or other materials that might be detrimental to the development of the sod or to future maintenance. Grass sod shall be Maryland–certified or approved and shall comply with the Maryland Sod Law of the Annotated Code of Maryland (Agricultural Article Sections

9–101 through 9–110). Each load of sod shall bear a Maryland State Approved or Certified label at the time of delivery on the job. Sod shall be either: (1) Bluegrass sod containing not less than 80 percent Kentucky bluegrass (Poa pratensis) and not more than 20 percent Red Fescue (Festuca rubra); or (2) certified turf type–tall fescue (Festuca arundinacea) sod containing not less than 80 percent certified turf type–tall fescue (Festuca arundinacea) grass and not more than 20 percent Kentucky Bluegrass (Poa pratensis) and Red Fescue (Festuca rubra). Any vegetation more than 6 inches in height shall be mowed to a height of 3 inches or less before sod is lifted. Sod, including the soil containing the roots and the emergent plant growth, shall be cut uniformly to a thickness not less than that specified in Section 904–3.4.

904–2.2 LIME. Lime shall conform to standards described in Section 903, 'Seeding.'

904–2.3 FERTILIZER. Fertilizers and application methods shall conform to the standards previously described in Section 903, 'Seeding.'

904–2.4 WATER. All water shall conform to the standards previously described in Paragraph 902–2.4, 'Water.'

904–2.5 SOILS FOR REPAIR. All soils for repairs shall conform to the standards previously described in Paragraph 901–2.3, 'Soils for Repair.'

CONSTRUCTION REQUIREMENTS

904–3.1 GENERAL. Areas to be sodded shall be clearly indicated by site plans. Areas requiring special ground surface preparation, such as tilling, and those areas in a satisfactory condition that are to remain undisturbed shall also be shown on the plans.

Suitable equipment necessary for proper preparation of the ground surface and for the handling and placing of all required materials shall be on hand, in good condition, and shall be approved by the MAA Engineer before sodding operations begin. The Contractor shall demonstrate to the MAA Engineer, before starting the various operations, that the application of required materials, such as fertilizer and limestone, will be made at the specified rates.

904–3.2 ADVANCE PREPARATION. If the area to be sodded is sparsely vegetated, weedy, barren and unworked, or packed and hard, all existing herbaceous vegetation shall be removed. The soil shall then be scarified or otherwise loosened to a depth of at least 5 inches (125 mm). Clods shall be pulverized, and the top 3 inches (75 mm) of soil shall be worked into a satisfactory bed by discing or use of cultipackers, rollers, drags, harrows, or other equipment approved by the MAA Engineer. The area shall then be properly graded as indicated by site plans.

After grading of areas is complete and prior to the application of fertilizer and limestone, areas to be sodded shall be raked or otherwise cleared of stones larger than 1 inch in diameter, sticks, stumps, and other debris which might interfere with sodding, growth of grasses, or subsequent maintenance of grass–covered areas. If any damage by erosion or other causes has occurred after grading of areas and before beginning the application of fertilizer and ground limestone, the Contractor shall repair such damage. This may include filling gullies, smoothing irregularities, and repairing other incidental damage.

An area to be sodded will be considered a satisfactory seedbed without requiring additional treatment if it recently has been thoroughly loosened and worked to a depth of not less than 5 inches as a result of grading operations and, if immediately prior to sodding, the top 3 inches of soil is loose, friable, reasonably free from large clods, rocks, large roots, or other undesirable matter, and is shaped to the required grade. For slope areas steeper than 3:1 (three horizontal to one vertical) the subsoil shall be loosened to a depth of 1 inch. Lime and fertilizer shall be applied within 48 hours after tilling as described in 903–3.3 and 3.4. The sod shall be applied immediately after the lime and fertilizer have been worked into the soil.

904–3.3 APPLICATION OF FERTILIZER AND LIME. Following ground surface preparation, fertilizer shall be uniformly spread as described in Section 903–3.3 at a rate that will provide at least the minimum quantity of fertilizer required. If the use of ground limestone is specified, it shall be spread as described in Section 903–3.3, 'Methods of Application'; at a rate that will provide at least the minimum quantity of lime required. These materials shall be incorporated into the soil to a depth of at least 2 inches by discing, raking, or other methods approved by the MAA Engineer. Any stones larger than 1 inch in diameter, large clods, roots, and other litter brought to the surface by this operation shall be removed.

904–3.4 OBTAINING AND DELIVERING SOD. The sod shall be well rooted, grown in the State of Maryland, and field grown for a minimum of 12 months. After inspection and approval of the sod by the MAA Engineer, the sod shall be cut with approved sod cutters to such a thickness that after placement on the prepared bed, but before compaction, it shall have a uniform attached soil thickness of at least 0.75 inch. Sod sections or strips shall be cut in uniform widths of at least 14 inches and in lengths of at least 18 inches, but not to lengths that might inhibit placement without breaking, tearing, or loss of soil. Where strips are required, the sod shall be rolled or folded undamaged, with the grass facing inward. The Contractor may be required to mow high grass before cutting sod.

Sod shall be transplanted within 24 hours from the time of harvest unless circumstances beyond the Contractor's control make storage necessary. In such cases, sod shall be stacked, kept moist, protected from exposure to the air and sun, and shall be kept from freezing. Sod shall only be harvested and mowed when soil moisture conditions are such that favorable results can be expected. Where soil is too dry, permission to cut sod may be granted only after it has been sufficiently watered to moisten the soil to the depth at which the sod will be cut.

904–3.5 PLACING SOD. Sodding shall only be performed during seasons when satisfactory results can be expected. Frozen sod shall not be used and sod shall not be placed upon frozen soil. Sod may be transplanted during periods of drought with the approval of the MAA Engineer, provided the sod bed is watered to moisten the soil to a depth of at least 4 inches immediately prior to laying the sod.

The sod shall be moist and shall be placed on a bed, prepared according to Paragraphs 904–3.2 'Advance Preparation', and 904–3.3, 'Application of Fertilizer and Lime'by hand. Pitchforks shall not be used to handle sod, and dumping from vehicles shall not be permitted. The sod shall be placed carefully by hand, edge to edge and with staggered joints, in rows at right angles to the slopes, starting at the base of the area to be sodded and working upward. The sod shall immediately be pressed firmly into contact with the sod bed by tamping or rolling with approved equipment to provide a true and even surface, and ensure knitting without displacement of the sod or deformation of the surfaces of sodded areas. Where the sod has been displaced during sodding operations, the workmen replacing it shall work from ladders or treaded planks to prevent further displacement. Where the grades are such that the flow of water will be from paved surfaces across sodded areas, the surface of the soil in the sod after compaction shall be set approximately 1.5 inches below the pavement edge. Where the flow will be over the sodded areas and onto the paved surfaces around manholes and inlets, the surface of the soil in the sod after compaction shall be placed flush with pavement edges.

On slopes steeper than 1:2.5 and in V–shaped or flat–bottom ditches or gutters, the sod shall be secured with wooden pegs at least 18 inches long and a cross–sectional area of at least 0.75–square inch, or by other methods of securing sod approved by the MAA Engineer. The pegs shall be driven flush with the surface of the sod. The pegs shall be of sufficient number and at adequate spacing to secure sod from displacement. The use of sod staples or other means of securing the sod from displacement may be approved by the MAA Engineer provided satisfactory results are expected.

904–3.6 WATERING. Adequate water and watering equipment shall be on hand before sodding begins, and sod shall be kept moist until it has become established and its continued growth assured. In all cases, watering shall be done in a manner that will avoid erosion from the application of excessive quantities and will avoid damage to the finished surface.

904–3.7 ESTABLISHING TURF.

904–3.7.1 GENERAL. The Contractor shall provide general care for the sodded areas as soon as the sod has been laid and shall continue to provide such care until final inspection and acceptance of the work.

904–3.7.2 PROTECTION. All sodded areas shall be protected against traffic or other use by warning signs and barricades approved by the MAA Engineer.

904–3.7.3 MOWING. The Contractor shall mow the sodded areas with approved mowing equipment, depending upon climatic and growth conditions and the needs for mowing of specific areas. in the event that weeds or other undesirable vegetation establishes to such an extent that, either cut or uncut, they threaten to smother the sodded species, the weeds shall be mowed and the clippings raked and removed from the area. Spot applications of an appropriate herbicide by a licensed applicator shall be approved by the MAA Engineer to remove invasive species. The appropriate herbicide shall be determined on a case–by–case basis, depending on the location and type of weed.

904–3.7.4 REPAIR. When the surface has become gullied or otherwise damaged during the period covered by this contract, the affected areas shall be repaired to re–establish the grade and the condition of the soil and shall then be re–sodded as specified in Paragraph 904–3.5, 'Placing Sod', at the Contractor's expense

ITEM 905 MULCHING

DESCRIPTION

905–1.1 GENERAL. This item provides the Contractor with MAA–approved specifications for mulch and the application of mulch including distribution of mulch and securing of mulched areas. Areas to be mulched will be clearly shown on site plans or otherwise designated by the MAA Engineer.

MATERIALS

905–2.1 TYPES OF MULCH. Acceptable mulch shall be composed of the materials listed below or composed of any locally available materials that are similar to those specified and approved by the MAA Engineer. Low–grade, shalely, soiled, partially rotted hay, straw, or other materials unfit for animal consumption will not be acceptable for use as mulch. Straw or other material that is fresh, excessively brittle, or is in such an advanced stage of decomposition as to smother or retard the planted grass, is not acceptable. Clean, weed–free straw may be used. Mulch materials containing matured seed with the potential to establish and be detrimental to the project or the surrounding area is not acceptable.

a. Shredded Hardwood Bark. Shredded hardwood bark shall consist of hardwood tree bark that has been milled and screened to ensure a maximum 4–inch (100–mm) particle size, provide a uniform texture, and be free from sawdust, toxic substances, and other foreign materials.

b. Wood Chips. Wood chips shall be produced by a chipping machine to a size specified by the MAA Engineer. Chips may not have been subjected to any conditions that would shorten their useful life or cause them to lose any of their value as mulch. Wood chips shall be free from bark, leaves, twigs, wood shavings, sawdust, toxic substances, and other foreign material.

c. Wood Cellulose Fiber. Wood cellulose fiber shall consist of a processed wood product with uniform fiber characteristics. The fiber shall be capable of remaining in a uniform suspension under agitation in water and blending with seed, fertilizer, and other additives to form a homogeneous slurry. The fiber shall perform satisfactorily in hydraulic seeding equipment without clogging or damaging the system. The slurry shall contain a green dye to provide easy visual inspection for uniformity of application.

Certification showing that the fiber material conforms to the following specifications shall be provided by the manufacturer:

Wood Cellulose Fiber Requirements

Particle Length, in. (mm)	Approximately 1/2 (13)
Particle Thickness, in. (mm)	Approximately 1/16 (1.5)
Net dry Weight Content	Minimum as stated on bag
TAPPI* T 509, pH	4.0 to 8.5
Ash Content, TAPPI* Standard T 413, % max	7.0
Water Holding Capacity, % min	90

*Technical Association of Pulp and Paper Industry

The material shall be delivered in packages of uniform net weight of 75 lbs (34 kg) or less and shall be clearly labeled with the name of the manufacturer, net weight, and a supplemental statement of the net weight content.

905–2.2 INSPECTION. Within five days after acceptance of the bid, the Contractor shall provide representative samples of mulch material to be used to the MAA Engineer and identify the source of the material and quantities of mulch materials available. The samples provided may be used as standards with the approval of the MAA Engineer and any materials brought on the site that do not meet these standards may be rejected.

CONSTRUCTION REQUIREMENTS

905–3.1 ADVANCE PREPARATION. Before spreading mulch, all large clods, stumps, stones, brush, roots, and other foreign material shall be removed from the area to be mulched. Mulch shall be applied immediately after seeding unless otherwise specified. The application and spreading of mulch may be by hand methods, blower, or other mechanical methods, provided a uniform covering is obtained.

905–3.2 APPLICATION OF MULCH. The Contractor shall evenly apply mulch materials to areas indicated by site plans or otherwise designated by the MAA Engineer. Cellulose–fiber or wood–pulp mulch shall be applied at the rate of 1,500 pounds (dry weight) per acre. Mulch may be blown on the slopes and use of cutters in the equipment for this purpose will be permitted to the extent that at least 95 percent of the mulch in place on the slope is 6 inches or more in length. When mulch applied by the blowing methods is cut, the loose depth in place shall be 1 to 2 inches. Cellulose fiber or wood–pulp mulch shall be applied as an aqueous mixture by spraying at the rate of 1,500 pounds (dry weight) per acre using spraying equipment approved by the MAA Engineer.

905–3.3 SECURING MULCH. Mulch shall be held in place by light discing, a thin coating of topsoil, pins, stakes, wire mesh, or other methods approved by the MAA Engineer. If the 'peg and string'method is used, the mulch shall be secured with stakes or wire pins driven into the ground on 5–foot centers or less. Binder twine shall be strung between adjacent stakes in straight lines and crossed diagonally over the mulch. The stakes shall be firmly driven nearly flush to the ground to draw the twine tightly onto the mulch.

905–3.4 MAINTENANCE OF MULCHED AREAS. The Contractor shall care for mulched areas until final acceptance of the project. Care required may consist of providing protection against traffic or other disturbances by placement of warning signs and/or barricades before or immediately after mulching has been completed.

The Contractor may be required to repair or replace any mulching that is defective or becomes damaged before the project is finished and deemed satisfactory by the MAA Engineer. When, in the judgment of the MAA Engineer, defects or damage result from poor workmanship or failure to meet the requirements of the specifications, the cost of the necessary repairs or replacement will be borne by the Contractor. However, once the Contractor has completed the mulching of an area in accordance with the provisions of the specifications and to the satisfaction of the Engineer, no additional work at his expense will be required. Any subsequent repairs and/or replacements deemed necessary by the Engineer may be made by the Contractor and will be paid for as additional or extra work.

APPENDIX B—RTDS SPECIFICATION SHEETS

HEALTH AND SAFETY

Exposure Monitoring

Features and Benefits

- Easy to program, easy to operate
- New graphical user interface with color touch-screen
- Perform in-line gravimetric analysis for custom reference calibrations
- Automatic zeroing (with optional zero module) minimizes the effect of zero drift
- Measure aerosol concentrations corresponding to PM_1, $PM_{2.5}$, PM_{10}, or Respirable size fractions

DustTrak™ II Aerosol Monitor

Models 8530, 8531, and 8532

Desktop or Handheld Units for Any Environment, Any Application

The new DustTrak II Aerosol Monitors are battery-operated, data-logging, light-scattering laser photometers that give you real-time aerosol mass readings. They use a sheath air system that isolates the aerosol in the optics chamber to keep the optics clean for improved reliability and low maintenance. Suitable for clean office settings as well as harsh industrial workplaces, construction and environmental sites and other outdoor applications. DustTrak II monitors measure aerosol contaminants such as dust, smoke, fumes and mists.

Applications

- Industrial/occupational hygiene surveys
- Indoor air quality investigations
- Outdoor environmental monitoring
- Baseline trending and screening
- Point source monitoring
- Engineering control evaluations
- Engineering studies
- Remote monitoring
- Process monitoring
- Emissions monitoring
- Aerosol research studies

TRUST. SCIENCE. INNOVATION.

Easy to Program and Operate

The new graphical user interface with color touch-screen puts everything at your fingertips. The easy-to-read display shows real-time mass concentration and graphical data as well as other statistical information along with instrument pump, laser and flow status, and much more. Perform quick walk-through surveys or program the instrument's advanced logging modes for long-term sampling investigations. Program start times, total sampling times, logging intervals, alarm setpoints and many other parameters. You can even set up the instrument for continuous unattended operation.

Desktop Models: Ideal for Long-Term Surveys and Remote Monitoring Applications

Manual and programmable data logging functions also make DustTrak II desktop monitors ideal for unattended applications. They come with USB (device and host), Ethernet, and analog and alarm outputs allowing remote access to data. User adjustable alarm setpoints for instantaneous or 15-minute short-term excursion limit (STEL) are available on desktop models. The alarm output with user-defined setpoint alerts you when upset or changing conditions occur.

All DustTrak II desktop monitors have three unique features:

- Gravimetric sampling capability using a 37-mm filter cassette which can be inserted in-line with the aerosol stream allowing you to perform an integral gravimetric analysis for custom reference calibrations.
- They can be zeroed automatically using the external zeroing module. This optional accessory is used when sampling over extended periods of time. By zeroing the monitor during sampling, the effect of zero drift is minimized.
- STEL alarm feature for tracking 15-minute average mass concentrations when alarm setpoint has been reached for applications like monitoring fugitive emissions at hazardous waste sites.

Handheld Models: Perfect for Walk-Through Surveys and Single-Point Data Collection Applications

DustTrak II handheld models are lightweight and portable. They're perfect for industrial hygiene surveys, point source location monitoring, indoor air quality investigations, engineering control evaluations/validation, and for baseline trending and screening. Like desktop models, they have manual and programmable data logging functions. In addition, they have single-point data logging capability. Single-point data collection is used for walk-through industrial hygiene surveys and indoor air quality investigations.

New Software Makes Monitoring Easier than Ever

TrakPro™ Data Analysis Software allows you to set up and program directly from a PC. A new feature is the ability for remote programming and data acquisition from your PC via wireless (922 MHz or 2.4 GHz) communications or over an Ethernet network. As always, you can print graphs, raw data tables, and statistical and comprehensive reports for recordkeeping purposes.

DustTrak II Aerosol Monitor Features

All Models

- Li-Ion rechargeable batteries
- Internal and external battery charging capabilities
- Outlet port for isokinetic sampling applications
- User serviceable sheath flow and pump filters
- Logged test pause and restart feature
- Logged test programming
  - Color touch screen—either manual mode or program mode
  - TrakPro™ Data Analysis Software via a PC
- User adjustable custom calibration settings
- Instantaneous alarm settings with visual and audible warnings
- Real-time graph display
- View statistical information during and after sampling
- On-screen instrument status indicators: FLOW, LASER and FILTER
- Filter service indicator for user preventative maintenance

All Desktop Models

- Hot swappable batteries
- Gravimetric reference sample capability
- Long life 10,000-hour internal pump
- TrakPro Data Analysis Software
- Auto zeroing module (optional accessory)
- STEL alarm setpoint

All Handheld Models

- Long life 2,500-hour internal pump
- Single-point data collection for walk through surveys
- TrakPro Data Analysis Software

Specifications

Models 8530, 8531, and 8532
DustTrak™ II Aerosol Monitor

Sensor Type
90° light scattering

Particle Size Range
0.1 to 10 µm

Aerosol Concentration Range

8530 Desktop	0.001 to 150 mg/m^3
8531 Desktop High Conc.	0.001 to 400 mg/m^3
8532 Handheld	0.001 to 150 mg/m^3

Resolution
±0.1% of reading or 0.001 mg/m^3, whichever is greater

Zero Stability
±0.002 mg/m^3 per 24 hours at 10 sec time constant

Flow Rate
3.0 L/min set at factory, 1.40 to 3.0 L/min, user adjustable

Flow Accuracy
±5% of factory set point, internal flow controlled

Temperature Coefficient
+0.001 mg/m^3 per °C

Operational Temp
32 to 120°F (0 to 50°C)

Storage Temp
-4 to 140°F (-20 to 60°C)

Operational Humidity
0 to 95% RH, non-condensing

Time Constant
User adjustable, 1 to 60 seconds

Data Logging
5 MB of on-board memory (>60,000 data points)
45 days at 1 minute logging interval

Log Interval
User adjustable, 1 second to 1 hour

Physical Size (HWD)

Handheld	4.9 x 4.8 x 12.5 in. (12.5 x 12.1 x 31.6 cm)
Desktop	5.3 x 8.5 x 8.8 in. (13.5 x 21.6 x 22.4 cm)

Weight

Handheld	2.9 lb (1.3 kg), 3.3 lb (1.5 kg) with battery
Desktop	3.5 lb (1.6 kg), 4.5 lb (2.0 kg)–1 battery, 5.5 lb (2.5 kg)–2 batteries

Communications

8530/31	USB (host and device) and Ethernet. Stored data accessible using flash memory drive
8532	USB (Hose and device). Stored data accessible using flash memory drive

Power–AC
Switching AC power adapter with universal line cord included, 115–240 VAC

Analog Out

8530/31	User selectable output, 0 to 5 V or 2 to 20 mA User selectable scaling range

Alarm Out

8530/31	Relay or audible buzzer Relay Non-latching MOSFET switch User selectable set point –5% deadband Connector 4-pin, Mini-DIN connectors
8532	Audible buzzer

Screen

8530/31	5.7 in. VGA color touchscreen
8532	3.5 in. VGA color touchscreen

Gravimetric Sampling

8530/31	Removable 37 mm cartridge (user supplied)

CE Rating

Immunity	EN61236-1:2006
Emissions	EN61236-1:2006

SidePak™ AM510 Personal Aerosol Monitor

The SidePak AM510 Personal Aerosol Monitor for industrial hygiene and safety professionals displays and data logs aerosol concentration in real time. The rugged, belt-mountable laser photometer is compact and quiet, minimizing interference and worker discomfort. The built-in sampling pump lets you attach a wide variety of size-selective aerosol inlet conditioners for breathing zone or area measurements with a respirable cyclone or one of the three integrated impactors.

The SidePak monitor incorporates TSI's Smart Battery Management System. This system utilizes a built-in "gas gauge" in the battery packs to monitor battery condition and provide precise run time information.

The SidePak monitor's easy-to-read display shows your data as both real-time aerosol mass-concentration and 8-hour time-weighted average (TWA). The monitor's intrinsic safety rating makes it ideal for hazardous/explosive environments. With its convenient data logging and long battery life, the SidePak is also ideal for extended sampling. The easy-to-use TrakPro™ Data Analysis Software lets you create effective graphs and reports.

User Friendly

- Small, lightweight and quiet to maximize worker acceptance
- Rugged design with secure belt clip
- Easy-to-understand user interface with only four keys
- Lockable keypad prevents tampering while sampling
- User-adjustable sample flow rate
- Define, label and store multiple calibration constants
- Easy-to-read LCD display
- Convenient, threaded tripod socket accommodates area sampling

Advanced Features

- Smart Battery Management System provides precise run time information, maximizes battery capacity and speeds charging
- Integrated pump allows use of size-selective aerosol inlet conditioners
- Built-in impactors let you choose "none," 1.0, 2.5 or 10-micron cut off
- Display shows real-time concentrations (mg/m^3) and "on-the-fly" TWA as you data log
- Display statistics: max, min and average readings, elapsed time and 8-hour TWA

Quick and Easy Reports

- Convenient preprogramming for occupational exposure sampling
- Data log for long periods and store multiple tests
- Analyze data, print graphs and create reports with TrakPro software
- USB port lets you conveniently connect to your computer

Power to Spare

- Long-lasting NiMH rechargeable battery packs eliminate "memory" issues
- Choice of rechargeable NiMH smart battery packs or AA-cell pack

TSI.

Specifications

SidePak AM510 Personal Aerosol Monitor

Sensitivity

Sensor type	90° light scattering, 670 nm laser diode
Aerosol concentration range	0.001 to 20 mg/m³ (calibrated to respirable fraction of ISO 12103-1, A1 test dust)
Particle size range	0.1 to 10 micrometer (µm)
Minimum resolution	0.001 mg/m³
Zero stability	±0.001 mg/m³ over 24 hours using 10-second time-constant
Temperature coefficient	Approximately +0.0005 mg/m³ per °C (for variations from temperature at which instrument was last zeroed)

Flow Rate

Range	User-adjustable, 0.7 to 1.8 liters/min (lpm)

Temperature Range

Operating range	0 to 50°C (32 to 120°F)
Storage range	-20 to 60°C (-4 to 140°F)

Time Constant (LCD display)

Range	User-adjustable, 1 to 60 seconds

Data Logging

Data points	Approx. 31,000 (21 days logging once per minute)
Logging interval	User-adjustable, 1 second to 1 hour

User-Select Calibration Factors

Factory setting	1.0 (non-adjustable)
User-defined settings	3, with user-defined labels
Range	0.1 to 10.0, user-adjustable

Physical

External Dimensions	106 mm × 92 mm × 70 mm (4.2 in. × 3.7 in. × 2.8 in.) with 801724 battery 130 mm × 92 mm × 70 mm (5.1 in. × 3.7 in. × 2.8 in.) with 801722 or 801708 battery
Weight	0.46 kg (16 oz) with 801724 battery 0.54 kg (19 oz) with 801722 battery 0.54 kg (19 oz) with 801708 battery
Display	2 line × 12 character LCD
Tripod socket	1/4–20 female thread

Power Supply/Charger (P/N 2613210)

Input voltage range	100 to 240 VAC, 50 to 60 Hz
Output voltage	9 VDC @ 1.0 A
Battery charge time	6.5 hours

Specifications are subject to change without notice.
Windows is a registered trademark of Microsoft Corporation.

Maintenance

Factory clean/calibrate	Recommended annually
User zero calibration	Before each use
User flow calibration	As needed

Battery Information

Battery Option	Charge Time*	Intrinsically Safe
1650 mAH NiMH Pack (P/N 801724)	3.5 Hours	Yes**
2700 mAH NiMH Pack (P/N 801722)	5.5 Hours	Yes**
6-Cell AA-size Pack (P/N 801708)	NA	No

* Of a fully depleted battery
** All dust plugs and gaskets must be installed.

Typical Battery Life

Battery Pack	Cell Type	Hours @ 0.7 lpm	Hours @ 1.7 lpm
1650 mAH NiMH Pack (P/N 801724)	NiMH (4.8 V, 1650 mAH)	11.5	9.2
2700 mAH NiMH Pack (P/N 801722)	NiMH (4.8 V, 2700 mAH)	19.8	15.6
6-Cell AA-size Pack	AA Alkaline Cells	29.6	22.5
(P/N 801708, with six user-supplied AA cells)	AA NiMH Cells (1600 mAH per cell. Cells cannot be charged while inside AA Pack)	8.8	6.7

Communications Interface

Type	USB 1.1
Connector, instrument	USB Mini-B (socket)

Minimum Computer Requirements for TrakPro Software

Communications port	Universal Serial Bus (USB) v1.1 or higher
Operating system	Microsoft Windows® 98, Me, 2000, XP (USB not supported in Windows 95 or NT)

Approvals

Intrinsic Safety Rating Information	TSI Battery Pack P/Ns: 801722 or 801724 INTRINSICALLY SAFE CSA Exia Class I Groups A, B, C, D T2A with 801724 T2C with 801722 File: 200507 TSI Battery Pack P/N: 801708 NOT INTRINSICALLY SAFE

APPENDIX C—NIOSH ANALYTICAL AIR SAMPLING METHODOLOGY

POLYNUCLEAR AROMATIC HYDROCARBONS by HPLC 5506

Formulae: Table 1 MW: Table 1 CAS: Table 2 RTECS: Table 2

METHOD: 5506, Issue 3 **EVALUATION:** PARTIAL **Issue 1:** 15 May 1985
Issue 3: 15 January 1998

OSHA: Table 3
NIOSH: Table 3
ACGIH: Table 3

PROPERTIES: Table 1

Compounds

acenaphthene	benzo[ghi]perylene	fluorene
acenaphthylene	benzo[a]pyrene	indeno[1,2,3-cd]pyrene
anthracene	benzo[e]pyrene	naphthalene
benz[a]anthracene	chrysene	phenanthrene
benzo[b]fluoranthene	dibenz[a,h]anthracene	pyrene
benzo[k]fluoranthene	fluoranthene	

NAMES & SYNONYMS: Polycyclic aromatic hydrocarbons, PAHs; also see Table 2.

SAMPLING

SAMPLER: FILTER + SORBENT TUBE (37-mm, 2-µm, PTFE + washed XAD-2, 100 mg/50 mg)

FLOW RATE: 2 L/min

VOL-MIN: 200 L
-MAX: 1000 L

SHIPMENT: transfer filters to culture tubes; wrap sorbent and culture tubes in Al foil; ship @ 0 °C

SAMPLE STABILITY: unknown; protect from heat and UV light

FIELD BLANKS: 3 to 10 field blanks per set
MEDIA BLANKS: 6 to 10 media blanks per set

ACCURACY

RANGE STUDIED: not determined

BIAS: not determined

OVERALL PRECISION ($\hat{S}_{rt}$): not determined

ACCURACY: not determined

MEASUREMENT

TECHNIQUE: HPLC, FLUORESCENCE/UV DETECTION

ANALYTE: compounds listed above

EXTRACTION: 5 mL acetonitrile; ultrasonic bath, 30 to 60 minutes

INJECTION VOLUME: 10 to 50 µL

MOBILE PHASE: acetonitrile/water gradient @ ambient temperature, 1 mL/min

COLUMN: 250 x 4.6-mm, reversed-phase, 5-µm C_{18}

DETECTOR: UV @ 254 nm; fluorescence @ 340 nm (excitation), 425 nm (emission)

CALIBRATION: standards in acetonitrile

RANGE: see EVALUATION OF METHOD

ESTIMATED LOD: see EVALUATION OF METHOD

PRECISION ($\hat{S}_r$): see EVALUATION OF METHOD

APPLICABILITY: This method is applicable to samples that can be extracted with acetonitrile. This method is not applicable to samples that require a different extraction solvent or contain large amounts of highly adsorptive particulate matter, e.g., fly ash or diesel soot; also, this method is not applicable to asphalt fume samples.

INTERFERENCES: Any compound that elutes at the same HPLC retention time may interfere. Heat, ozone, NO_2, or UV light may cause sample degradation.

OTHER METHODS: This revises P&CAM 206 and 251 [1]. Method 5515 uses the same sampling technique, with gas chromatographic measurement [2]. Method 5800 uses the same sampling technique, and a flow-injection method to determine total polycyclic aromatic compounds at two different sets of fluorescent wavelengths [3].

REAGENTS:

1. Water, distilled, deionized, degassed.
2. Acetonitrile, HPLC grade, degassed.
3. PAH test mixture,* a liquid standard containing the PAHs except benzo[e]pyrene (EPA 610 Polynuclear Aromatic Hydrocarbons,Supelco, Cat. No. 4-8743; or equivalent).
4. Benzo[e]pyrene,* solid (Supelco, Cat. No. 44-2475; or equivalent).

* See SPECIAL PRECAUTIONS

EQUIPMENT:

1. Sampler:
   a. Filter. 37-mm, 2-µm pore size, PTFE membrane filter laminated to PTFE, (Zefluor, Pall Gelman Sciences, Cat. No. P5PJ037;SKC Inc., Cat. No. 225-17-07; or equivalent filter), cellulose spacer ring, 37-mm OD, 32-mm ID, (SKC Inc., Cat. No. 225-23; or equivalent) in a 37-mm cassette filter holder.
      NOTE: If sampling is to be done in bright sunlight, use opaque or foil-wrapped cassettes to prevent sample degradation.
   b. Sorbent tube, washed XAD-2 resin (front = 100 mg; back = 50 mg) (ORBO 43, Supelco, Cat. No. 2-0258; or equivalent), connected to filter with minimum length of PVC tubing. Plastic caps are required after sampling.
      NOTE: If pressure drop is excessive or pump fails, use a larger diameter sorbent tube with XAD-2 resin (ORBO 42 Large, Supelco, Cat. No. 2-0264U; or equivalent).
2. Personal sampling pump capable of operating for 8 h at 2 L/min, with flexible connecting tubing.
3. Aluminum foil.
4. Refrigerant, bagged.
5. Culture tubes, PTFE-lined screw cap, 13-mm x 100-mm.
6. Forceps.
7. Syringe filters, 0.45-µm, 25-mm, PTFE (Acrodisc-CR, Pall Gelman Sciences, Cat. No. 4219; or equivalent).
8. Pipet, 5-mL.
9. Syringe or micropipets, 1- to 100-µL.
10. Ultrasonic bath.
11. HPLC, with gradient capability, fluorescence (excitation @ 340 nm, emission @ 425 nm) and UV (254 nm) detectors in series, electronic integrator, and a 250 x 4.6-mm C_{18} column (Vydac 201TP, The Separations Group, Hesperia, CA, Cat. No. 201TP54; or equivalent).
12. Volumetric flasks, 10- and 100-mL.
13. Recommendation: lighting in laboratory should be incandescent or UV-shielded fluorescent.

SPECIAL PRECAUTIONS: Treat all polynuclear aromatic hydrocarbons as carcinogens. Samples and unused standards are considered toxic waste. Dispose of in an appropriate manner. Counter tops and equipment should be checked regularly with a "black light" for fluorescence as an indicator of contamination by PAHs.

SAMPLING:

1. Calibrate each personal sampling pump with a representative sampler in line.
2. Take personal samples at 2 L/min for a total sample size of 200 to 1000 L.
3. Immediately after sampling, transfer the filter carefully with forceps to a culture tube. Hold filter at edge to avoid disturbing the collected sample. Cap the tube and wrap in aluminum foil.
   NOTE: This step is necessary to avoid loss of analytes by sublimation.
4. Cap the sorbent tube and wrap in aluminum foil.
5. Ship to laboratory in insulated container with bagged refrigerant.

SAMPLE PREPARATION:

NOTE: UV light may degrade PAHs; therefore, recommend using yellow, UV-absorbing shields for fluorescent lights or use incandescent lighting.

6. Refrigerate samples upon receipt at laboratory.
7. Extract PAH from filters.
   a. Add 5.0 mL of acetonitrile to each culture tube containing a filter. Similarly, add 5.0 mL of acetonitrile to each culture tube containing the media and reagent blanks. Cap the tubes.
   b. Place capped tubes in an ultrasonic bath for 30 to 60 min.
8. Desorb PAH from sorbent.
   a. Score each sorbent tube with a file in front of the front (larger) sorbent section. Break tube at score line.
   b. Transfer front glass wool plug and front sorbent section to a culture tube. Transfer back sorbent section, and the middle glass wool plug to a second culture tube.
   c. Add 5.0 mL acetonitrile to each culture tube. Cap the tubes.
   d. Place capped tubes in an ultrasonic bath for 30 to 60 min.
9. Filter all sample extracts through an 0.45-µm syringe filter.

CALIBRATION AND QUALITY CONTROL:

10. Calibrate daily with at least six working standards.
    NOTE: If a benzo[e]pyrene standard is needed, weigh desired amount and add to a known volume of the PAH test mixture.
    a. Dilute aliquots of the PAH test mixture (containing benzo[e]pyrene if needed) with acetonitrile in 10-mL volumetric flasks. The concentration range should cover most of the PAH concentrations in the samples.
    b. During analysis, intersperse working standards with samples and blanks.
    c. Prepare calibration graphs (peak area vs. µg of each PAH per sample).
11. Recovery and desorption efficiency.
    a. Determine recovery (R) from filters and desorption efficiency (DE) from sorbent tubes at least once for each lot of filters and sorbent tubes used in the range of interest.
       (1) Filters. Using a microliter syringe or a micropipette, spike four filters at each of five concentration levels with a mixture of the analytes. Allow the filters to dry in the dark overnight. Analyze the filters (steps 7, 9, and 13 through 15). Prepare graphs of R vs. amounts found.
       (2) Sorbent tubes. Transfer an unused front sorbent section to a culture tube. Prepare a total of 24 culture tubes in order to measure DE at five concentration levels plus blank in quadruplicate. Using a microliter syringe or micropipette, add calibration stock solution directly to sorbent. Cap culture tubes and allow to stand overnight. Desorb and analyze (steps 8, 9, and 13 through 15). Prepare graphs of DE vs. amounts found.
    b. Check R and DE at two levels for each sample set, in duplicate. Repeat determination of R or DE graphs if checks do not agree to within ±5% of R or DE graph.
12. Analyze at least three field blanks for each sample medium.

MEASUREMENT:

13. Set HPLC according to manufacturer's instructions, conditions on page 5506-1, and steps 14 and 15.
14. Inject sample aliquot (10 to 50 µL). Start mobile phase gradient:
    a. Linear gradient from 60% acetonitrile/40% deionized water to 100% acetonitrile at 1 mL/min over 20 min.
    b. Hold at 100% acetonitrile for 20 min.
    c. Linear gradient to initial condition, 5 min.
15. Measure peak areas for each analyte using the appropriate detector as specified in Table 1.
    NOTE 1: The order of elution for the PAHs appears in Table 4.
    NOTE 2: If peak area is above the calibration range, dilute with acetonitrile, reanalyze, and apply dilution factor in calculations.
    NOTE 3: If sample has many interferences, additional sample cleanup may be necessary.

CALCULATIONS:

16. Read the mass, µg (corrected for R or DE) of each analyte found on the filter (W) and front sorbent (W_f) and back sorbent (W_b) sections, and on the average media blank filter (B) and front sorbent (B_f) and back sorbent (B_b) sections from the calibration graphs.
17. Calculate concentration, C (mg/m^3), as the sum of the particulate concentration and the vapor concentration in the actual air volume sampled, V (L).

$$C = \frac{\left\{ W + W_f + W_b - B - B_f - B_b \right\}}{V}, \ mg/m^3$$

NOTE 1: µg/mL = mg/m^3

NOTE 2: W_f and W_b include analyte originally collected on the filter as particulate, then volatilized during sampling. This can be a significant fraction for many PAHs (e.g., anthracene, fluoranthene, fluorene, naphthalene, phenanthrene).

EVALUATION OF METHOD:

The UV detector is used to analyze for some PAHs (see Table 1), and the remaining PAHs are analyzed by a fluorescent detector, which gave better sensitivity for some PAHs. The ranges of the limit of detection (LOD) and the limit of quantitation (LOQ) values for the 17 PAHs are reported in Table 4 [4]. The LOD and LOQ values varied because of differences in the detectors used and the concentrations of the standards. Therefore, it is important that the LOD and LOQ values be determined for each set of samples. The LOQs are the lower end of the analytical ranges. The upper end of the analytical ranges were not determined.

This method was evaluated by means of a user check [5]. An independent laboratory prepared spiked filters and sorbent tubes for a recovery and desorption efficiency study (see Table 4). For the filters, except naphthalene, the recovery results were greater than or equal to 75%. Since naphthalene is fairly volatile under ambient conditions, this may account for the poor recovery results. For the sorbent tubes, only four of the 17 analytes had desorption efficiencies that were greater than or equal to 75%. During the user check, the sorbent tubes were extracted by adding 5 mL acetonitrile and were allowed to stand for 30 minutes with occasional swirling. In more recent quality control experiments, the desorption efficiencies were often better for some analytes (see Table 4) [4]. These results were achieved using an ultrasonic bath for 30 to 60 minutes. The results indicated the importance of preparing media spikes for recovery and desorption efficiency studies for each set of samples; moreover, the results reenforce this need when using new lots of media.

Figure 1. Structure of the PAHs.

SILICA, CRYSTALLINE, by XRD (filter redeposition) 7500

SiO_2 MW: 60.08 CAS: 14808-60-7 (quartz) RTECS: VV7330000 (quartz)
14464-46-1 (cristobalite) VV7325000 (cristobalite)
15468-32-3 (tridymite) VV7335000 (tridymite)

METHOD: 7500, Issue 4 **EVALUATION: FULL** **Issue 1: 15 August 1990**
Issue 4: 15 March 2003

OSHA : quartz (respirable) 10 mg/m³/(%SiO_2+2); cristobalite and tridymite (respirable) ½ the above
NIOSH: 0.05 mg/m³; carcinogen
ACGIH: quartz (respirable) 0.1 mg/m³
cristobalite (respirable) 0.05 mg/m³
tridymite (respirable) 0.05 mg/m³

PROPERTIES: solid; d 2.65 g/cm³ @ 0 °C; crystalline transformations: quartz to tridymite @ 867 °C; tridymite to cristobalite @ 1470 °C; α-quartz to ß-quartz @ 573 °C

SYNONYMS: free crystalline silica; silicon dioxide

SAMPLING

SAMPLER:	CYCLONE + FILTER (10-mm nylon cyclone, Higgins-Dewell (HD) cyclone, or aluminum cyclone + 5-µm PVC membrane) *see sampling section
FLOW RATE:	Nylon cyclone: 1.7 L/min; HD cyclone: 2.2 L/min; aluminum cyclone: 2.5 L/min
VOL-MIN:	400 L
-MAX:	1000 L
SHIPMENT:	Routine
SAMPLE STABILITY:	Stable
BLANKS:	2 to 10 per set (see step 13.g.)
BULK SAMPLE:	High-volume or settled dust; to identify interferences

ACCURACY

RANGE STUDIED:	25 to 2500 µg/m³ [1] (800-L sample)
BIAS:	None known
OVERALL PRECISION ($\hat{S}_{rT}$):	0.09 (50 to 200 µg) [1]
ACCURACY:	± 18%

MEASUREMENT

TECHNIQUE:	X-RAY POWDER DIFFRACTION
ANALYTE:	Crystalline SiO_2
ASH:	Muffle furnace or RF plasma asher or dissolve in tetrahydrofuran
REDEPOSIT:	On 0.45-µm Ag membrane filter
XRD:	Cu target X-ray tube, graphite monochromator Optimize for intensity; 1° slit Slow step scan, 0.02°/10 sec Integrated intensity with background subtraction
CALIBRATION:	NIST SRM 1878a quartz, NIST SRM 1879a cristobalite, USGS 210-75-0043 tridymite suspensions in 2-propanol.
RANGE:	0.02 to 2 mg SiO_2 per sample [2]
ESTIMATED LOD:	0.005 mg SiO_2 per sample [2]
PRECISION ($\hat{S}_r$):	0.08 @ 0.05 to 0.2 mg per sample [1]

APPLICABILITY: The working range is 0.025 to 2.5 mg/m³ for an 800-L air sample.

INTERFERENCES: Micas, potash, feldspars, zircon, graphite, and aluminosilicates. See APPENDIX.

OTHER METHODS: This is similar to the method in the Criteria Document [3] and P&CAM 259 [4] which has been collaboratively tested [1]. This method is similar, except for sample collection, to S315 [5,6]. Method P&CAM 109 [7,8,9], which incorporates an internal standard, has been dropped. XRD can distinguish the three silica polymorphs and silica interferences can be eliminated by phosphoric acid treatment. IR (methods 7602 and 7603) can also quantify quartz, cristobalite and tridymite if amorphorous silica and silicates are not present in large amounts. However sensitivity is reduced if multiple polymorphs are present and secondary peaks must be used. Crystalline silica can also be determined by visible absorption spectrophotometry (e.g., Method 7601), but polymorphs can not be distinguished. Visible absorption methods also have larger laboratory-to-laboratory variability than XRD and IR methods and therefore are recommended for research use only [10].

REAGENTS:

1. Silica Standards.
   a. Quartz* (SRMs 1878a, 2950, 2951, 2958) and Cristobalite* (SRMs 1879a, 2960, 2957), available from Standard Reference Materials Program, Rm. 204, Bldg. 202, National Institute of Standards and Technology (NIST), Gaithersburg, MD 20899; www.nist.gov.
   b. Tridymite* (210-75-0043) available from U.S. Geological Survey, Box 25046, MS 973, Denver, CO 80225.
2. 2-Propanol*, reagent grade.
3. Desiccant.
4. Glue or tape for securing Ag filters to XRD holders.
5. Optional: tetrahydrofuran (THF)* (if LTA or muffle furnace are unavailable).
6. 1.5 % parlodion solution. (Dissolve 1.5 g of parlodion* in isopentyl acetate* and dilute to 100 mL with isopentyl acetate.)
7. Optional (if calcite present): 25% v/v concentrated hydrochloric acid* (ACS reagent grade) in distilled water and 25-mm filters of PVC or cellulose ester with pore size of 1 µm or less.

* See SPECIAL PRECAUTIONS.

EQUIPMENT:

1. Sampler:
   a. Filter: Polyvinyl chloride (PVC) filter, 37-mm, 5.0-µm pore size supported with backup pad in a two-piece, 37-mm cassette filter holder (preferably, conductive) held together by tape or cellulose shrink band.
      NOTE: Check each new lot of PVC filters by analyzing one or more by this method. For example, Gelman VM-1 filters (all lots) were found to be unacceptable because of high ash and background. If THF is used, check for complete dissolution by dissolving a blank PVC filter and following steps 5c through 8.
   b. Cyclone: 10-mm nylon, Higgins-Dewell (HD), Aluminum (Al), or equivalent [11].
2. Area air sampler: PVC membrane filter, 37-mm diameter, 5-µm pore size; three-piece filter cassette.
3. Sampling pumps with flexible connecting tubing, capable of the following flow rates: nylon cyclone, 1.7 L/min; HD cyclone, 2.2 L/min; Al cyclone, 2.5 L/min; and bulk sampler, 3 L/min.
4. Silver membrane filters, 25-mm diameter, 0.45-µm pore size, available from Sterlitech Corp., 22027 70th Ave S, Kent, WA 98032-1911; www.sterlitech.com.
5. X-ray powder diffractometer (XRD) equipped with copper target X-ray tube, graphite monochromator, and scintillation detector.
6. Reference specimen (mica, Arkansas stone, or other stable standard) for data normalization.
7. Low-temperature radio-frequency plasma asher (LTA) or muffle furnace, or ultrasonic bath (≥150 W), for filter preparation.
8. Vacuum filtration assembly and side-arm vacuum flask with a 25-mm filter holder.
9. Sieve, 10-µm, for wet sieving.
10. Analytical balance (0.001 mg); magnetic stirrer with thermally insulated top; ultrasonic bath or probe; volumetric pipettes and flasks; Pyrex crucibles with covers (muffle furnace); 40-mL wide-mouth or 50-mL centrifuge tubes (THF method); desiccator; reagent bottles with ground glass stoppers; drying oven; polyethylene wash bottle.
11. Explosion-resistant hot plate.
12. Teflon sheet, 0.3 to 1 mm thick.

SPECIAL PRECAUTIONS: Avoid inhaling silica dust [3]. THF is extremely flammable and should be used in a fume hood. 2-Propanol, parlodion and isopentyl acetate are flammable. Hydrochloric acid is corrosive and should be used in a fume hood.

SAMPLING:

1. Calibrate each personal sampling pump with a representative sampler in line.
2. Sample at 1.7 ± 5% L/min with nylon cyclone or 2.2 ± 5% L/min with HD cyclone for a total sample size of 400 to 1000 L. Do not exceed 2 mg dust loading on the filter.
   NOTE 1: Do not allow the sampler assembly to be inverted at any time when using a cyclone. Turning the cyclone to anything other than a horizontal orientation may deposit oversized material from the cyclone body onto the filter.
   NOTE 2: A single sampler/flow rate should be used for a given application. Sampling for both crystalline silica and coal mine dust should be done in accordance with the ISO/CEN/ACGIH/ASTM respirable aerosol sampling convention. Flow rates of 1.7 L/min for the Dorr-Oliver nylon cyclone and 2.2 L/min for the Higgins-Dewell cyclone have been found to be optimal for this purpose. Outside of coal mine dust sampling, the regulatory agencies currently use these flow rates with the Dorr-Oliver cyclone in the United States and the Higgins-Dewell sampler in the United Kingdom. Though the sampling recommendations presented in a NIOSH Criteria Document have been formally accepted by MSHA for coal mine dust sampling, the Dorr-Oliver cyclone at 2.0 L/min with 1.38 conversion factor is currently used in the United States for the purpose of matching an earlier sampling convention [12]. In any case, a single sampler/flow rate should be used in any given application so as to eliminate bias introduced by differences between sampler types and sampler conventions [11].
3. Take an area air sample or collect a settled dust sample, if dust in the work environment has not been previously characterized.

SAMPLE PREPARATION:

4. Samples may be characterized by one of the following methods, as appropriate.
   a. **Interference check.** Prepare area dust sample or settled dust bulk sample for XRD analysis by mounting the collection sample directly on an XRD sample holder, or by depositing or redepositing the dust on another filter for mounting, or by packing an XRD powder holder. Proceed to step 11.
   b. **Qualitative Analysis.** Prepare the area air sample or settled dust sample for qualitative analysis by grinding and/or wet sieving to best match the airborne dust particle size. Wet sieve with a 10-µm sieve, 2-propanol, and an ultrasonic bath [13], followed by evaporation of excess alcohol, drying in an oven for 2 hours, and overnight storage in a desiccator. Deposit the end product on a filter (steps 7-8) or pack in a conventional XRD powder holder.
      NOTE 1: For quantitative determination of % SiO_2, weigh out, in triplicate, 2 mg sieved dust, transfer to a 50-mL beaker, add 10 mL 2-propanol, and continue with step 6.
      NOTE 2: In a bulk sample, if there is an interfering compound(s) that renders the identification and quantitation of quartz very difficult, the sample will need to be carefully treated in hot phosphoric acid [14] to dissolve the interfering compound(s) and avoid the loss of quartz. This treatment can be used to dissolve several 50-mg sample aliquots in order to concentrate the quartz content for the purpose of lowering the LOD.
5. Use one of the following methods to prepare filter samples and blanks:
   a. **Low Temperature Ashing:** Place the filters in 50-mL beakers within the low temperature asher so that the sample exposure to the plasma is optimized. Ash according to manufacturer's instructions. After ashing, carefully add 15 mL 2-propanol to each beaker; or
   b. **Muffle Furnace Ashing:**
      i. If the samples contain a significant amount of calcite (>20% of total dust loading), silica may be lost due to formation of $CaSiO_3$. Remove the calcite by the following procedure: Place a 0.5-µm, 25-mm PVC filter in the filtration apparatus and clamp the filter funnel over it. Remove the sample filter from the cassette, fold, and drop it on the 25-mm filter. Add 10 mL 25% v/v HCl and

5 mL 2-propanol to the filter funnel and allow to stand for 5 min. Apply vacuum and slowly aspirate the acid and alcohol in the funnel, washing with three successive 10-mL portions of distilled water. Release the vacuum. Carry both filters through the ashing step together.

ii. Place the filter samples in porcelain crucibles, loosely cover and ash in muffle furnace for 2 h at 600 °C (800 °C if graphite is present). Add several mL 2-propanol to the ash, scrape the crucible with a glass rod to loosen all particles and transfer the residue to a 50-mL beaker. Wash the crucible several more times and add wash to beaker. Add 2-propanol to the beaker to bring the volume to about 15 mL; or

c. **Filter Dissolution:** Using forceps and a spatula, remove the filter from the cassette, fold the filter three times, and place in the bottom of a 40- or 50-mL centrifuge tube. Add 10 mL THF and allow to stand for at least 5 min. Cap the centrifuge tube with aluminum foil to prevent contamination. Gently agitate the centrifuge tube by hand or with a vortex mixer making sure the THF does not go near the top of the tube. Place the tube in an ultrasonic bath (water level 2.5 cm from top) for at least 10 min. (The filter should be totally dissolved.) Just prior to filtering, agitate the sample for 10 to 20 sec on a vortex mixer. Continue with step 6, substituting THF for 2-propanol and centrifuge tube for beaker.

6. Cover the beaker with a watchglass and agitate in an ultrasonic bath for at least 3 min. Observe the suspension to make sure that the agglomerated particles are broken up. Wash the underside of the watchglass with 2-propanol, collecting the washings in the beaker.

7. Place a silver filter in the filtration apparatus. Attach the funnel securely over the entire filter circumference. With no vacuum, pour 2 to 3 mL 2-propanol onto the filter. Pour the sample suspension from the beaker into the funnel. After the transfer, rinse the beaker several times and add rinsings to the funnel for a total volume of 20 mL. In order to minimize feathering of the sample outside the deposition area, allow the suspension to settle for a few minutes prior to applying vacuum. Do not rinse the chimney after the material has been deposited on the silver filter. Rinsing the chimney can disturb the thin layer deposition.

8. Leave the vacuum on after filtration to produce a dry filter. Place 2 drops of 1.5% parlodion solution on a glass slide. Remove the silver filter with forceps and fix the material to the filter by placing the bottom side of the filter in the parlodion solution. Place the saturated filter on top of the Teflon sheet which has been heated on the hot plate at a low temperature setting. When thoroughly dry, mount the silver filter in the XRD sample holder.

CALIBRATION AND QUALITY CONTROL:

9. Prepare and analyze at least 6 levels of standard filters.

NOTE 1: Calibration standards are limited to NIST and USGS certified standards of known purity, particle size, and sample-to-sample homogeneity. At least 12 materials, including 5-µm Min-U-Sil, previously used by laboratories throughout the United States and Canada, have been evaluated, and none have been found to be acceptable alternatives to the certified standards cited within this method [10]. Standard reference materials should be corrected for phase purity.

NOTE 2: Crystalline silica methods require calibration standards of known purity, specific particle size and distribution, and sample-to-sample homogeneity. Establishing traceability of secondary calibration standards to the specified NIST and USGS primary standards requires the use of measurement methods with better precision and accuracy than the XRD, IR and visible absorption spectrophotometry methods commonly used in the industrial hygiene field can provide. In addition, particle size distribution measurements have considerable error. Therefore, the use of secondary calibration standards that are traceable to NIST and USGS certified standards is not appropriate.

NOTE 3: NIST SRM 2950 calibration set (α-quartz) and NIST SRM 2960 calibration set (cristobalite) may be useful for preparing working standards at known concentrations.

a. Prepare two suspensions of each analyte in 2-propanol by weighing 10 and 50 mg of the standard material to the nearest 0.01 mg. Quantitatively transfer each to a 1-L glass-stoppered bottle using 1.00 L of 2-propanol.

b. Suspend the powder in 2-propanol with an ultrasonic probe or bath for 20 min. Immediately move the bottle to a magnetic stirrer with thermally insulated top and add a stirring bar. Allow the solution to return to room temperature before withdrawing aliquots.

c. Mount a silver filter on the filtration apparatus. Place several mL of 2-propanol on the filter. Turn off the stirrer and shake vigorously by hand. Immediately remove the stopper and withdraw an aliquot from the center at half-height of the 10 mg/L or 50 mg/L suspension. Do not adjust the volume in the pipet by expelling part of the suspension. If more than the desired aliquot is withdrawn, discard the aliquot in a beaker, rinse and dry the pipet, and take a new aliquot. Transfer the aliquot from the pipet to the silver filter, keeping the tip of the pipet near the surface but not submerged in the delivered suspension.

d. Rinse the pipet with several mL 2-propanol, draining the rinse into the funnel. Repeat the rinse several times.

e. Allow the suspension to settle for a few minutes prior to applying vacuum. Apply vacuum and rapidly filter the suspension. Do not wash down the sides of the funnel after the deposit is in place since this will rearrange the material on the silver filter. Leave vacuum on until filter is dry. Place 2 drops of 1.5% parlodion solution on a glass slide. Remove the silver filter with forceps and fix the material to the filter by placing the bottom side of the filter in the parlodion solution. Place the saturated filter on top of the heated Teflon sheet. When thoroughly dry, mount the silver filter in the XRD sample holder. Prepare working standard filters, in triplicate, at e.g., 10, 20, 50, 100, 250, and 500 µg.

f. Analyze the working standards together with samples and blanks (step 12). The XRD intensities for the working standards (step 12.d) are designated I_x^o and are then normalized (step 12.e) to obtain $\bar{I}_x^o$. Correct the intensities of working standards >200 µg for matrix absorption (steps 12.f and 13).

g. Prepare a calibration graph ($\bar{I}_x^o$, vs µg of each standard).

NOTE: Poor repeatability (>10% above 0.04 mg silica) at any given level indicates that new standards should be made. The data should lie along a straight line. A weighted least squares ($1/\sigma^2$ weighting) is preferable.

h. Determine the slope, m, of the calibration graph in counts/µg. The intercept, b, on the abscissa should be within ± 5 µg of zero.

NOTE: A large intercept indicates an error in determining the background, i.e., an incorrect baseline or interference by another phase.

10. NOTE: The following procedure for absorption correction is not necessary in situations that have been previously documented as requiring no corrections.

Select six silver membrane filters as media blanks randomly from the same box of filters to be used for depositing the samples. These will be used to test for sample self-absorption. Mount each of the media blanks on the filtration apparatus and apply vacuum to draw 5 to 10 mL 2-propanol through the filter. Remove, let dry, and mount on XRD holders. Determine the net normalized count for the silver peak, I_{Ag}, for each media blank (step 12.g). Obtain an average value for the six media blanks, $\bar{I}_{Ag}^o$.

NOTE: The analyst is a critical part of this analytical procedure [12]. A high level of analyst expertise is required to optimize instrument parameters and correct for matrix interferences either during the sample preparation phase or the data analysis and interpretation phase [15]. The analyst should have some training (university or short course) in mineralogy or crystallography in order to have a background in crystal structure, diffraction patterns and mineral transformation. In addition, an intensive short course in the fundamentals of X-ray diffraction can be useful.

MEASUREMENT:

11. Obtain a qualitative X-ray diffraction scan (e.g., 10 to 80 °2θ) of the area air sample (or bulk settled dust) to determine the presence of free silica polymorphs and interferences (see APPENDIX). The diffraction peaks are:

Mineral	Peak (2-Theta Degrees)		
	Primary	Secondary	Tertiary
Quartz	26.66	20.85	50.16
Cristobalite	21.93	36.11	31.46
Tridymite	21.62	20.50	23.28
Silver	38.12	44.28	77.47

NOTE: There is an alternative to scanning an area air sample, settled dust sample, or ground bulk sample to prove lack of contamination. A slow scan of the three main peaks of quartz (also cristobalite and tridymite if their absence has not been previously confirmed) on a personal air sample, with verification that their intensity ratios are within 15% of pure quartz, is sufficient evidence that other materials are not interfering in the silica determination.

12. Perform the following for each sample, working standard, and blank filter:
    a. Mount the reference specimen. Determine the net intensity, I_r, of the reference specimen before and after each filter is scanned. Use a diffraction peak of high intensity that can be rapidly but reproducibly (S_r <0.01) measured.
    b. Mount the sample, working standard, or blank filter. Measure the diffraction peak area for each silica polymorph. Scan times must be long, e.g., 15 min (longer scan times will lower the limit of detection).
    c. Measure the background on each side of the peak for one-half the time used for peak scanning. The sum of these two counts is the average background. Determine the position of the background for each sample.
    d. Calculate the net intensity, I_x, (the difference between the peak integrated count and the total background count).
    e. Calculate and record the normalized intensity, I_x, for each peak:

$$I_x = \frac{I_x}{I_r} \cdot N$$

NOTE: Select a convenient normalization scale factor, N, which is approximately equivalent to the net count for the reference specimen peak, and use this value of N for all analyses. Normalizing to the reference specimen intensity compensates for long-term drift in X-ray tube intensity. If intensity measurements are stable, the reference specimen may be run less frequently and the net intensities should be normalized to the most recently-measured reference intensity.

    f. Determine the normalized count, I_{Ag}, of an interference-free silver peak on the sample filter following the same procedure. Use a short scan time for the silver peak (e.g., 5% of scan time for analyte peaks) throughout the method.
    g. Field blanks may be analyzed by scanning the 2-theta range used for the analyte and silver peaks to verify that contamination of the filters has not occurred. The analyte peak should be absent. The normalized intensity of the silver peak should match that of the media blank. Each laboratory should determine the specifics of field blank use for its application. When contamination does occur, the reason should be investigated and appropriate action taken. In practice, contamination of field blanks is extremely rare and usually is not consistent across filters. The analysis of blanks may be abbreviated if experience indicates that contamination is not likely with current field and laboratory operations; however, occasional confirmation of non-contamination is prudent.

CALCULATIONS:

13. Calculate the concentration of crystalline silica, C (mg/m^3), in the air volume sampled, V (L):

$$C = \frac{I_x \cdot f(t) - b}{m \cdot V}, mg/m^3$$

I_x = normalized intensity for sample peak
b = intercept of calibration graph (I_x^o vs. µg)
m = slope of calibration graph, counts/µg
f(t) = $-R \ln T/(1 - T^R)$ = absorption correction factor (Table 1)

R = $\sin(\Theta_{Ag})/\sin(\Theta_x)$
T = $I_{Ag}/(\text{average } I^o_{Ag})$ = transmittance of sample
I_{Ag} = normalized silver peak intensity from sample
I^o_{Ag} = normalized silver peak intensity from media blanks (average of six values)

EVALUATION OF METHOD:

This method is based on P&CAM 259 which was collaboratively tested [1]. The testing included a ruggedization step to test the effects of the use of muffle furnace or plasma asher (but not the use of THF), shipment of samples, ashing time, and ultrasonication time. None of these factors was found to have an effect. The method was shown to have no bias when referenced to the Talvitie spectrophotometric method [14] and when all standards and samples were Min-U-Sil 5. The relative standard deviations (S_r) for intralaboratory, total measurement and overall (including sampling) variability are:

	Analyte Level (µg)	Measurement Precision (S_r)	Overall Precision (S_{rT})
Intralaboratory	50-200	0.08 [1]	
	20	0.20 [5]	
	10	0.28 [9]	
Total (intra- and interlaboratory)	50-200	0.17 [1]	0.29 [1]

METHOD REVISED BY:

Rosa Key-Schwartz, Ph.D., Dawn Ramsey, M.S., and Paul Schlecht, NIOSH/DART.

APPENDIX: INTERFERENCES

Interferences include barite, micas (muscovite, biotite), potash, feldspars (microcline, plagioclase), montmorillonite, sillimanite, zircon, graphite, iron carbide, clinoferrosilite, wollastonite, sanidine, leucite, orthoclase, and lead sulfide.

The patterns for three forms of aluminum phosphate [JCPDS 10-423, 11-500, 20-44] are practically identical to those of quartz, cristobalite and tridymite, respectively. The quartz secondary and cristobalite primary peaks are close; cristobalite secondary peak is overlapped by a quartz peak; tridymite, if present in sufficient quantity, will interfere with all of the main (primary, secondary and tertiary) quartz and cristobalite peaks. Silver chloride, if present on the silver filter, interferes slightly with the primary quartz peak. Many of these interferences occur in the presence of quartz; however, in a study of samples collected in 11 different industries, Altree-Williams [20] found no significant interferences.

The presence of elements such as iron can result in appreciable X-ray fluorescence which leads to high background intensity. A diffracted-beam monochromator will minimize this problem.

If calcite is present, loss of quartz will occur when samples are ashed in a muffle furnace. See SAMPLE PREPARATION (step 5.b) for procedure to remove calcite.

If interferences with the primary silica peak are present, use a less sensitive peak. When overlaps are not severe, a smaller receiving slit or chromium radiation may be used; however, a new calibration curve will be necessary.

Table 1. Absorption correction factor as a function of transmittance for some silica-silver peak combinations [16-21].

Soil Safe

Material Characterization Report
Brandywine, Maryland

Please complete all sections of the form, sign where indicated and return completed form to:

Soil Safe, Inc.
6700 Alexander Bell Dr., Suite 300, Columbia MD 21046
Phone: 410 872-3990 Fax: 410 872-9082

Project Information

Site Name: Lockheed Martin Middle River

Address: 195 Chesapeake Park Plaza Road

City, State Zip: Middle River, MD 21220 | County: Baltimore

Contact: Mike Musheno

Phone: 610-656-4012 | Fax: 410-682-0854

Approximate Quantity: 1600 - Tax Block F

Unit of Measure: (Check One) ☐ Drums ☑ Tons ☐ Yards

Type of Contamination: ☑ Gasoline ☑ Diesel ☐ Fuel Oil ☐ Hydraulic Oil ☐ Heating Oil ☐ Kerosene ☐ Jet Fuel ☑ Motor Oil ☑ Used Oil

☑ Other (explain):

Contamination Source: ☐ UST ☐ AST ☐ Spill ☑ Historic

Other (explain): PAHs

Past Use of Site: ☑ Industrial ☐ Commercial ☐ Residential

Describe Past Use of Site: Currently vehicle parking and equipment storage, former WWTP and wind tunnel.

Client Information

I, the undersigned, understand that any soil delivered to Soil Safe's facility that is found to be non-conforming will not be accepted for processing. I further understand that the Client shall be solely responsible for its removal. In the event that the Client does not remove the soils in a timely manner, Soil Safe, acting as agent for the Client, may arrange to have the soil removed and disposed of at a properly permitted facility at the Client's sole expense.

I, the undersigned, Certify that, to the best of my knowledge, the soil submitted for acceptance to Soil Safe does not contain Polychlorinated Biphenyl's (PCB's), as defined by 40 CFR761, at levels greater than 5 ppm. I further certify that, to the best of my knowledge, the soil does not contain herbicides, pesticides, or any other constituents at levels which would cause the soil to be characterized as toxic or hazardous as defined by 40 CFR 261. I further certify that all documentation, including all soil analysis, that has been performed on the subject site has been provided to Soil Safe and that the soils have not been or are not presently the focus of a remediation for contaminants other than those that are being disclosed to Soil Safe, Inc.

I, the undersigned, am the generator or a properly authorized agent for the generator. By signing below I certify that I have been granted the authority to execute this document.

Soil Safe

Material Characterization Report
Brandywine, Maryland

The Brandywine Facility requires the following analysis for approval of material into the facility.

Analysis	Method	Acceptance Criteria
TPH – As appropriate for the type of contamination	8015 / 9071B	Less than 25,000 ppm
BTEX	By an EPA Approved Method	Less than 500 ppm
PCB's	8082	Less than 5 ppm
TCLP Metals *Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, Silver*	1311/6010	Less than RCRA

Note: Additional testing may be required depending on type of contamination. Soil not specifically exempted under COMAR 26.13.10.10 will require a full TCLP test instead of a TCLP Metals.

- Analytical requirements can be reduced if both of the following conditions are met:
  - A. Soils are impacted with only virgin oil(s).
  - B. One of the following Reduced Analytical Documents is provided: (check the applicable document provided)
    - ☐ MDE UST document completed by MDE Representative
    - ☐ Another Maryland document or form completed by a Department Representative
    - ☐ An MDE equivalent document from another State
    - ☐ Spill response document completed by or for a Government Agency
    - ☐ A UST document completed by a Soil Safe Employee
    - ☐ Single family home affidavit
    - ☐ Commercial transportation spill affidavit

- Reduced analytical are:
  - A. BTEX
  - B. TPH – As appropriate for the type of oil that was discharged.

Site Plan (Please attach drawing showing source of spill or product)

Signature and Verification

★ I certify that soils were sampled as noted above and the results are representative of the stated volume to be shipped to Soil Safe, Inc.

Chain of Payment

The information below must be provided for billing purposes and is required for project approval.

Instructions
In order, starting with the generator and ending with Billing Company please provide the chain of payment for the project that you wish to have approved for acceptance by Soil Safe. Please contact Soil Safe with any questions you may have.

Generator Information

Generator: Lockheed Martin Corp
Contact: Mike Musheno
Address: 195 Chesapeake Park Plaza Road
City, State Zip: Middle River, MD 21220
Phone: 610-656-4012
Fax: 410-682-0854

Company: _____
Contact: _____
Address: _____
City, State Zip: _____
Phone: _____
Fax: _____

Company: _____
Contact: _____
Address: _____
City, State Zip: _____

SOIL SAFE INCORPORATED CERTIFICATE OF RECYCLE

Soil Safe Incorporated has accepted 446.59 tons of non-hazardous, petroleum contaminated soil, transported or 18 truck(s) from:

195 Chesapeake Park Plaza Road
Middle River MD 21220

Under approval number W5-4105 and billed under invoice # 67456

This material was contracted by and between Soil Safe, Inc. and
Elite Environmental Broker, Generator, or Agent, representing
Lockheed Martin Middle River , generator.

This material was analyzed prior to acceptance by a certified soils technician to determine soil components and specific product usage. Soil Safe Incorporated has taken full responsibility for this material: including safe handling, processing, storage, and reuse. We hereby certify that all of the above was executed in accordance with all existing laws and regulations.

Soil Safe certified on 14 January 2016 that this material has been recycled into an environmentally benign product.

State of Maryland
My commission expires December 7, 2018
As sworn to me this 14 January 2016

Notary

CERTIFICATE ISSUED TO:
Elite Environmental
P.O. Box 615
Cape Canavarel FL 32920

GENERATOR:

Lockheed Martin Middle River

Soil Safe Incorporated is a corporation committed to the safe handling, processing and recycling of non-hazardous petroleum contaminated soil.

Soil Safe Incorporated is a corporation committed to the safe handling, processing and recycling of non-hazardous petroleum contaminated soil.

© 2015 Great Papers

SOIL SAFE INCORPORATED
CERTIFICATE OF RECYCLE

Soil Safe Incorporated has accepted 735.04 tons of non-hazardous, petroleum contaminated soil, transported or 29 truck(s) from:

195 Chesapeake Park Plaza Road
Middle River MD 21220

Under approval number W5-4105 and billed under invoice # 67539

This material was contracted by and between Soil Safe, Inc. and
Elite Environmental Broker, Generator, or Agent, representing
Lockheed Martin Middle River , generator.

This material was analyzed prior to acceptance by a certified soils technician to determine soil components and specific product usage. Soil Safe Incorporated has taken full responsibility for this material: including safe handling, processing, storage, and reuse. We hereby certify that all of the above was executed in accordance with all existing laws and regulations.

Soil Safe certified on 14 January 2016 that this material has been recycled into an environmentally benign product.

State of Maryland
My commission expires December 7, 2018
As sworn to me this 14 January 2016

Approximate Quantity: 200 - Block D Storm Drain

Unit of Measure: (Check One) ☐ Drums ☑ Tons ☐ Yards

Type of Contamination: ☑ Gasoline ☑ Diesel ☐ Fuel Oil ☐ Hydraulic Oil ☐ Heating Oil ☐ Kerosene ☐ Jet Fuel ☑ Motor Oil ☑ Used Oil

☐ Other (explain):

Contamination Source: ☐ UST ☐ AST ☐ Spill ☑ Historic

Other (explain): PAHs

Past Use of Site: ☑ Industrial ☐ Commercial ☐ Residential

Describe Past Use of Site: Currently vehicle parking and equipment storage.

Certifications

I, the undersigned, understand that any soil delivered to Soil Safe's facility that is found to be non-conforming will not be accepted for processing. I further understand that the Client shall be solely responsible for its removal. In the event that the Client does not remove the soils in a timely manner, Soil Safe, acting as agent for the Client, may arrange to have the soil removed and disposed of at a properly permitted facility at the Client's sole expense.

I, the undersigned, Certify that, to the best of my knowledge, the soil submitted for acceptance to Soil Safe does not contain Polychlorinated Biphenyl's (PCB's), as defined by 40 CFR761, at levels greater than 5 ppm. I further certify that, to the best of my knowledge, the soil does not contain herbicides, pesticides, or any other constituents at levels which would cause the soil to be characterized as toxic or hazardous as defined by 40 CFR 261. I further certify that all documentation, including all soil analysis, that has been performed on the subject site has been provided to Soil Safe and that the soils have not been or are not presently the focus of a remediation for contaminants other than those that are being disclosed to Soil Safe, Inc.

I, the undersigned, am the generator or a properly authorized agent for the generator. By signing below I certify that I have been granted the authority to execute this document.

★ Print Name: Tom Blackman

Title: Project Lead

Company: Lockheed Martin Corp

Signature: Tom D. Blackman

Jan. 18, 2016

The Brandywine Facility requires the following analysis for approval of material into the facility.

Analysis	Method	Acceptance Criteria
TPH – As appropriate for the type of contamination	8015 / 9071B	Less than 25,000 ppm
BTEX	By an EPA Approved Method	Less than 500 ppm
PCB's	8082	Less than 5 ppm
TCLP Metals *Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, Silver*	1311/6010	Less than RCRA

Note: Other tests may be required depending on type of contamination. Soil not specifically exempted under 40CFR261.4 (b) (10) will require a Full TCLP List instead of TCLP Metals.

- Analytical requirements can be reduced if both of the following conditions are met:
  - A. Soils are impacted with only virgin oil(s).
  - B. One of the following Reduced Analytical Documents is provided: (check the applicable document provided)
    - ☐ MDE UST document completed by MDE Representative
    - ☐ Another Maryland document or form completed by a Department Representative
    - ☐ An MDE equivalent document from another State
    - ☐ Spill response document completed by or for a Government Agency
    - ☐ A UST document completed by a Soil Safe Employee
    - ☐ Single family home affidavit
    - ☐ Commercial transportation spill affidavit

- Reduced analytical are:
  - A. BTEX
  - B. TPH – As appropriate for the type of oil that was discharged.

Site Diagram (please sketch or attach drawing showing source of soil on project site)

Sample and Analysis Certification

I certify that soils were sampled as noted above and the results are representative of the stated volume to be shipped to Soil Safe, Inc.

WASTE MATERIAL PROFILE SHEET

Clean Harbors Profile No. CH1119687

A. GENERAL INFORMATION

GENERATOR EPA ID #/REGISTRATION #: *MDR000524413* GENERATOR NAME: *Lockheed Martin Middle River*

GENERATOR CODE (Assigned by Clean Harbors): *LO25247* CITY: *Middle River* STATE/PROVINCE: *MD* ZIP/POSTAL CODE: *21220*

ADDRESS: *195 Chesapeake Park Plaza* PHONE: *(301) 548-2209*

CUSTOMER CODE (Assigned by Clean Harbors): *AM1660* CUSTOMER NAME: *American Waste Management Svcs*

ADDRESS: *One American Way* CITY: *Warren* STATE/PROVINCE: *OH* ZIP/POSTAL CODE: *44484*

B. WASTE DESCRIPTION

WASTE DESCRIPTION: *Hazardous Lead Soil*

PROCESS GENERATING WASTE: **Storm Drain Clean out**

IS THIS WASTE CONTAINED IN SMALL PACKAGING CONTAINED WITHIN A LARGER SHIPPING CONTAINER ? No

C. PHYSICAL PROPERTIES (at 25C or 77F)

PHYSICAL STATE
- [x] SOLID WITHOUT FREE LIQUID POWDER
- [ ] MONOLITHIC SOLID
- [ ] LIQUID WITH NO SOLIDS
- [ ] LIQUID/SOLID MIXTURE
- % FREE LIQUID
- % SETTLED SOLID
- % TOTAL SUSPENDED SOLID
- [ ] SLUDGE
- [ ] GAS/AEROSOL

NUMBER OF PHASES/LAYERS: 1 2 3

% BY VOLUME (Approx.): TOP *0.00*, MIDDLE *0.00*, BOTTOM *0.00*

VISCOSITY (If liquid present)
- [ ] 1 - 100 (e.g. Water)
- [ ] 101 - 500 (e.g. Motor Oil)
- [ ] 501 - 10,000 (e.g. Molasses)
- [ ] > 10,000

COLOR: *brown/black*

ODOR
- [x] NONE
- [ ] MILD
- [ ] STRONG

Describe:

BOILING POINT °F (°C)
- [ ] <= 95 (<=35)
- [ ] 95 - 100 (35-38)
- [ ] 101 - 129 (38-54)
- [ ] >= 130 (>54)

MELTING POINT °F (°C)
- [ ] < 140 (<60)
- [ ] 140-200 (60-93)
- [x] > 200 (>93)

TOTAL ORGANIC CARBON
- [x] <= 1%
- [ ] 1-9%
- [ ] >= 10%

FLASH POINT °F (°C)
- [ ] < 73 (<23)
- [ ] 73 - 100 (23-38)
- [ ] 101 -140 (38-60)
- [ ] 141 -200 (60-93)
- [ ] > 200 (>93)

pH
- [ ] <= 2
- [ ] 2.1 - 6.9
- [x] 7 (Neutral)
- [ ] 7.1 - 12.4
- [ ] >= 12.5

SPECIFIC GRAVITY
- [x] < 0.8 (e.g. Gasoline)
- [ ] 0.8-1.0 (e.g. Ethanol)
- [ ] 1.0 (e.g. Water)
- [ ] 1.0-1.2 (e.g. Antifreeze)
- [ ] > 1.2 (e.g. Methylene Chloride)

ASH
- [x] < 0.1
- [ ] 0.1 - 1.0
- [ ] 1.1 - 5.0
- [ ] 5.1 - 20.0
- [ ] > 20
- [ ] Unknown

BTU/LB (MJ/kg)
- [x] < 2,000 (<4.6)
- [ ] 2,000-5,000 (4.6-11.6)
- [ ] 5,000-10,000 (11.6-23.2)
- [ ] > 10,000 (>23.2)

Actual:

D. COMPOSITION (List the complete composition of the waste, include any inert components and/or debris. Ranges for individual components are acceptable. If a trade name is used, please supply an MSDS. Please do not use abbreviations.)

CHEMICAL	MIN	--	MAX	UOM
ACENAPHTHENE	34000.000000	--	34000.000000	PPB
ANTHRACENE	4600.0000000	--	4600.000000	PPB
BENZO(A)ANTHRACENE	6200.0000000	--	6200.000000	PPB
BENZO(A)PYRENE	3600.0000000	--	3600.000000	PPB
CHRYSENE	4600.0000000	--	4600.000000	PPB
FLUORANTHENE	32000.000000	--	32000.000000	PPB
FLUORENE	16000.000000	--	16000.000000	PPB
LEAD	140.0000000	--	140.0000000	PPM
NAPTHALENE	6800.0000000	--	6800.000000	PPB
PHENANTHRENE	42000.000000	--	42000.000000	PPB

DOES THIS WASTE CONTAIN ANY HEAVY GAUGE METAL DEBRIS OR OTHER LARGE OBJECTS (EX., METAL PLATE OR PIPING >1/4" THICK OR >12" LONG, METAL REINFORCED HOSE >12" LONG, METAL WIRE >12" LONG, METAL VALVES, PIPE FITTINGS, CONCRETE REINFORCING BAR OR PIECES OF CONCRETE >3")? YES [x] NO

If yes, describe, including dimensions:

DOES THIS WASTE CONTAIN ANY METALS IN POWDERED OR OTHER FINELY DIVIDED FORM? YES [x] NO

DOES THIS WASTE CONTAIN OR HAS IT CONTACTED ANY OF THE FOLLOWING; ANIMAL WASTES, HUMAN BLOOD, BLOOD PRODUCTS, BODY FLUIDS, MICROBIOLOGICAL WASTE, PATHOLOGICAL WASTE, HUMAN OR ANIMAL DERIVED SERUMS OR PROTEINS OR ANY OTHER POTENTIALLY INFECTIOUS MATERIAL? YES [x] NO

I acknowledge that this waste material is neither infectious nor does it contain any organism known to be a threat to human health. This certification is based on my knowledge of the material. Select the answer below that applies:

The waste was never exposed to potentially infectious material. YES NO

Chemical disinfection or some other form of sterilization has been applied to the waste YES NO

I ACKNOWLEDGE THAT THIS PROFILE MEETS THE CLEAN HARBORS BATTERY PACKAGING REQUIREMENTS.	YES	☑ NO
I ACKNOWLEDGE THAT MY FRIABLE ASBESTOS WASTE IS DOUBLE BAGGED AND WETTED	YES	☑ NO

SPECIFY THE SOURCE CODE ASSOCIATED WITH THE WASTE *G44*

SPECIFY THE FORM CODE ASSOCIATED WITH THE WASTE. *W301*

E. CONSTITUENTS

Are these values based on testing or knowledge? Knowledge ☑ Testing

If constituent concentrations are based on analytical testing, analysis must be provided. Please attach document(s) using the link on the Submit tab.

Please indicate which constituents below apply. Concentrations must be entered when applicable to assist in accurate review and expedited approval of your waste profile. Please note that the total regulated metals and other constituents sections require answers.

RCRA	REGULATED METALS	REGULATORY LEVEL (mg/l)	TCLP mg/l	TOTAL	UOM	NOT APPLICABLE
D004	ARSENIC	5.0				☑

>=50 PPM

IF PCBS ARE PRESENT, IS THE WASTE REGULATED BY TSCA 40 CFR 761?

YES ☑ NO

ADDITIONAL HAZARDS

DOES THIS WASTE HAVE ANY UNDISCLOSED HAZARDS OR PRIOR INCIDENTS ASSOCIATED WITH IT, WHICH COULD AFFECT THE WAY IT SHOULD BE HANDLED?

YES ☑ NO (If yes, explain)

CHOOSE ALL THAT APPLY

DEA REGULATED SUBSTANCES | EXPLOSIVE | FUMING | OSHA REGULATED CARCINOGENS

POLYMERIZABLE | RADIOACTIVE | REACTIVE MATERIAL | ☑ NONE OF THE ABOVE

F. REGULATORY STATUS

☑ YES NO USEPA HAZARDOUS WASTE?

D008

YES ☑ NO DO ANY STATE WASTE CODES APPLY?

Texas Waste Code

YES ☑ NO DO ANY CANADIAN PROVINCIAL WASTE CODES APPLY?

☑ YES NO IS THIS WASTE PROHIBITED FROM LAND DISPOSAL WITHOUT FURTHER TREATMENT PER 40 CFR PART 268?

LDR CATEGORY: This is subject to LDR.
VARIANCE INFO:

YES ☑ NO IS THIS A UNIVERSAL WASTE?

YES NO IS THE GENERATOR OF THE WASTE CLASSIFIED AS CONDITIONALLY EXEMPT SMALL QUANTITY GENERATOR (CESQG)?

YES NO IS THIS MATERIAL GOING TO BE MANAGED AS A RCRA EXEMPT COMMERCIAL PRODUCT, WHICH IS FUEL (40 CFR 261.2 (C)(2)(II))?

YES ☑ NO DOES TREATMENT OF THIS WASTE GENERATE A F006 OR F019 SLUDGE?

YES ☑ NO IS THIS WASTE STREAM SUBJECT TO THE INORGANIC METAL BEARING WASTE PROHIBITION FOUND AT 40 CFR 268.3(C)?

YES ☑ NO DOES THIS WASTE CONTAIN VOC'S IN CONCENTRATIONS >=500 PPM?

YES NO DOES THE WASTE CONTAIN GREATER THAN 20% OF ORGANIC CONSTITUENTS WITH A VAPOR PRESSURE >= .3KPA (044 PSIA)?

YES ☑ NO DOES THIS WASTE CONTAIN AN ORGANIC CONSTITUENT WHICH IN ITS PURE FORM HAS A VAPOR PRESSURE > 77 KPA (11.2 PSIA)?

YES ☑ NO IS THIS CERCLA REGULATED (SUPERFUND) WASTE ?

YES ☑ NO IS THE WASTE SUBJECT TO ONE OF THE FOLLOWING NESHAP RULES?

Hazardous Organic NESHAP (HON) rule (subpart G) Pharmaceuticals production (subpart GGG)

YES ☑ NO IF THIS IS A US EPA HAZARDOUS WASTE, DOES THIS WASTE STREAM CONTAIN BENZENE?

YES NO Does the waste stream come from a facility with one of the SIC codes listed under benzene NESHAP or is this waste regulated under the benzene NESHAP rules because the original source of the waste is from a chemical manufacturing, coke by-product recovery, or petroleum refinery process?

YES NO Is the generating source of this waste stream a facility with Total Annual Benzene (TAB) >10 Mg/year?

What is the TAB quantity for your facility? Megagram/year (1 Mg = 2,200 lbs)

The basis for this determination is: Knowledge of the Waste Or Test Data Knowledge Testing

COMMENTS OR REQUESTS:

**Pre-qual'd as CCS to Baltimore facility by B. Fornoff.*

GENERATOR'S CERTIFICATION

I certify that I am authorized to execute this document as an authorized agent. I hereby certify that all information submitted in this and attached documents is correct to the best of my knowledge.I also certify that any samples submitted are representative of the actual waste.If Clean Harbors discovers a discrepancy during the approval process, Generator grants Clean Harbors the authority to amend the profile, as Clean Harbors deems necessary, to reflect the discrepancy.

AUTHORIZED SIGNATURE	NAME (PRINT)	TITLE	DATE
[signature]	THOMAS D. RUCKMAN	PROJECT LEAD	12/28/2015

This waste profile has been submitted using Clean Harbors' electronic signature system.

Section 2 - Shipping & Packaging Information

2.1) Shipping Volume & Frequency:

a) Volume of Waste to be Shipped: 50 TONS

b) Frequency: ● One Time ○ Month ○ Quarter ○ Year ○ Other

2.2) DOT Information

a) Is this a U.S. Department of Transportation (USDOT) Hazardous Material? ● Yes ○ No

b) If "Yes", indicate the proper shipping name per 49 CFR 172.101 Hazardous Materials Table:

NA3077, Hazardous waste, solid, n.o.s. (Lead), 9, PGIII, ERG#171

Section 3 - Special Properties

3.1) Color BLACK/BROWN

3.2) Odor ☑ None ☐ Ammonia ☐ Amines ☐ Mercaptans ☐ Sulfur ☐ Organic Acid ☐ Amines/Ammonia ☐ Other:

3.3) Consistency at 70 °F: ☑ Solid ☐ Dust/Powder ☐ Debris ☐ Sludge ☐ Liquid ☐ Gas/Aerosol ☐ Varies

3.4) What is the pH? ☐ ≤2 ☐ 2.1-4.9 ☐ 5-10 ☐ 10.1-12.4 ☐ ≥12.5 ☑ N/A

3.5) What is the flash point? ☐ <90 °F ☐ 90-139 °F ☐ 140-199 °F ☐ ≥200 °F ☑ N/A

3.6) Does this waste exhibit any of the following properties? **(check all that apply)**

☑ **None**	☐ Free Liquids	☐ Metal Fines	☐ Water Reactive	☐ Biohazard
☐ Shock Sensitive	☐ Oily Residue	☐ Dioxins	☐ Furans	☐ Aluminum
☐ Asbestos -non- friable	☐ Asbestos - friable	☐ Other Radioactive	☐ Air Reactive	☐ Isocyanates
☐ Biodegradable Sorbents	☐ Pyrophoric	☐ Reactive Sulfide	☐ Reactive Cyanide	☐ Explosives
☐ Temperature Controlled Organic Peroxide		☐ NORM	☐ TENORM	

Section 4 - Composition and Generating Process

4.1) Provide a physical and chemical composition of the waste (e.g. soil, water, PPE, debris, etc.). List the percent ranges or the concentration of each component, either estimated or known.

Soil w/Lead 100. to 100. %

4.2) Provide a description of the generating process. *Remediation & IDW Sites: please provide a site history.*

Storm Drain Cleanout

4.3) Are there any known previous handling or treatment issues involving this waste? ○ Yes* ● No

*If yes, describe:

Section 5 - Hazardous Wastes

As determined by 40 CFR, Part 261 and State Rules: **Please list applicable waste code(s):**

5.1) Is this waste exempted from RCRA? ○ Yes ● No

If Yes, please provide exemption:

5.2) Is this an EPA RCRA listed hazardous waste (F, K, P or U)? ○ Yes ● No

a) For F006-F009, F012, does this come from a generator that conducts a cyanide plating process? ○ Yes ● No

5.3) Is this an EPA RCRA characteristic hazardous waste (D001-D043)? ● Yes ○ No D008

5.4) Do any State Specific Hazardous Waste Codes apply? ○ Yes ● No

If you answered 'no' to 5.2, 5.3 and 5.4, please proceed to Section 6.

5.5) EPA Source Code: G44 EPA Form Code: W301

5.6) Waste Code Determination Is Based On: ☐ Generator Knowledge ☑ Analysis ☐ MSDS

Analysis and/or MSDS may be required for review and approval for hazardous and non-hazardous waste streams.

5.7) Does this waste exceed Land Disposal Restriction levels? ● Yes ○ No

a) Is this stream a wastewater (WW) or non-wastewater (NWW)? ○ WW ● NWW

b) If this waste stream is greater than 50% soil, does it meet the alternative soil treatment standards of 40 CFR 268.49? ○ Yes ○ No

c) Does this waste contain greater than 50% debris, by volume? (Debris is greater than 2.5 inches in size.) ○ Yes ● No

d) If the debris is larger than 3 ft x 3 ft x 3 ft, please provide the approximate dimensions and weight:

5.8) If this is a characteristic hazardous waste, does it contain Underlying Hazardous Constituents? ● Yes* ○ No

*If Yes, please list: 2 Acenaphthene, 12 Anthracene, 19 Benz(a)anthracene, 22 Benzo(a)pyrene, 52 Chrysene, 112 Fluoranthene, 113 Fluorene, 141 Naphthalene, 166 Phenanthrene, 173 Pyrene

For a complete list of UHC constituents, please refer to 40 CFR 268.48

Section 6 - Non-Hazardous Wastes

Please list applicable waste code(s):

6.1) Do any State Specific Non-Hazardous Waste Codes apply? ○ Yes ● No

6.2) Is this a Universal (UNIV) waste or a Recyclable Good (RG) ? ○ UNIV ○ RG ● N/A

6.3) Is this waste used oil as defined by 40 CFR Part 279? ○ Yes ● No

a) If yes, is the total halogen content of the used oil waste stream greater than 1,000 ppm? ○ Yes ○ No

b) If yes, what is the source of the halogen content?

○ This is a metalworking oil/fluid containing chlorinated paraffins.
○ This is a used oil contaminated with chlorofluorocarbons from refrigeration units.
○ This oil contains halogenated solvents. List specific solvents:
○ Other, describe:

Section 7 - TSCA Information

7.1) What is the concentration of PCBs in the waste? ☑ None ☐ 0-49 ppm ☐ 50-499 ppm ☐ 500+ ppm

7.2) Does the waste contain PCB contamination from a source with a concentration ≥ 50 ppm? ○ Yes ● No ○ Unknown

If you answered "none" or '0-49 ppm' to 7.1 and "no" to 7.2, please proceed to Section 8.

7.3) Has this waste been processed into a non-liquid form? ○ Yes* ○ No

*If yes, what was the concentration of PCBs prior to processing? ○ 0-499 ppm ○ 500+ ppm

7.4) Is this non-liquid PCB waste in the form of soil, rags, debris, or other contaminated media? ○ Yes ○ No

7.5) Are you a PCB capacitor manufacturer or a PCB equipment manufacturer? ○ Yes ○ No

7.6) Has the PCB Article (e.g., transformer, hydraulic machine, PCB-contaminated electrical equipment) been drained/flushed of all PCBs and decontaminated in accordance with 40 CFR 761.60(b)? ○ Yes ○ No ○ N/A

Section 8 - Clean Air Act Information

8.1) Is this waste subject to regulation under 40 CFR, Part 264, Subpart CC (VOC > 500 ppmw)? ○ Yes ● No

8.2) Is this waste subject to regulation under 40 CFR, Part 63, Subpart DD (VOHAP > 500 ppmw)? ○ Yes ● No

8.3) Is the site, or waste, subject to any other NESHAP/MACT standard(s)? ○ Yes* ● No

*If Yes this document serves as notification that this waste contains chemicals _____, required to be managed in accordance with Part ○ 61 ○ 62 ○ 63 Subpart _____ of NESHAP/MACT standards.

8.4) Does this waste stream contain Benzene? ○ Yes ● No

If you answered "no" to 8.4, please proceed to Section 9.

8.5) Does the waste stream come from a facility subject to 40 CFR 61, Subpart FF (Benzene NESHAP)? ○ Yes ○ No

If Yes, please provide the SIC/NAICS code: _____

If you answered "no" to 8.5, please proceed to Section 9.

8.6) Does your facility manage the waste subject to Benzene NESHAP in a manner other than shipping off-site? ○ Yes ○ No

If Yes, please specify: _____

8.7) Is the generating source of this waste a facility with Total Annual Benzene (TAB) ≥ 10 Mg/year? ○ Yes ○ No

8.8) Does the waste contain >10% water? ○ Yes ○ No

8.9) What is the TAB quantity for your facility? _____ Mg/year

8.10) What is the total Benzene concentration in your waste? _____ Percent or _____ ppmw.

Supporting analysis must be attached. Do not use TCLP analytical results. Acceptable laboratory methods include 8020, 8240, 8260, 602 and 624.

Section 9 - Certification

I certify that all information (including attachments) is complete and factual and is an accurate representation of the known and suspected hazards, pertaining to the waste described herein. I authorize EQ's personnel to add supplemental information to the waste approval file, provided I am contacted and give verbal permission. I authorize EQ's personnel to obtain a sample from any waste shipment for purposes of verification and confirmation. I agree that, if EQ approves the waste described herein, all such wastes that are transported, delivered, or tendered to EQ by Generator or on Generator's behalf shall be subject to, and Generator shall be bound by, the attached Standard Terms and Conditions.

If I am an agent acting on behalf of the generator, I also certify that I have permission to sign any and all waste characterization paperwork on the generator's behalf and that I can produce such certification in writing upon request.

Generator Signature Thomas D. Blackman Printed Name THOMAS D. BLACKMAN

Company Cocknells Hastings Corp. Title PROJECT LEAD Date 12-23-2015

STANDARD TERMS AND CONDITIONS

The Agreement between the Customer and EQ - The Environmental Quality Company and/or its member companies (hereinafter "EQ") related to or associated with Delivered Waste, as herein defined, shall be governed by the following Standard Terms and Conditions in addition to the terms and conditions contained in any Waste Profile Form, Customer Approval Quote Confirmation, Generator Approval Notification, Notice of Waste Approval Expiration, and/or Credit Agreement associated with such Delivered Waste.

The Customer may use its standard forms (such as purchase orders, acknowledgments of orders, and invoices) to administer its dealings under this Agreement for convenience purposes, but all provisions thereof in conflict with these terms and conditions shall be deemed stricken.

Definitions

"Acceptable Waste" shall mean any hazardous waste, as defined under applicable State or federal law, determined by EQ as acceptable for treatment and/or disposal in accordance with this Agreement.

"Delivered Wastes" shall mean all wastes (i) which are transported, delivered, or tendered to EQ by the Customer; (ii) which the Customer has arranged for the transport, delivery or tender to EQ; or (iii)) which are transported, delivered, or tendered to EQ under a Credit Agreement between the Customer and EQ.

"Non-Conforming Wastes" shall mean wastes that (a) are not in accordance in all material respects with the warranties, descriptions, specifications or limitations stated in the Waste Profile Form and this Agreement; (b) have constituents or components of a type or concentration not specifically identified in the Waste Profile Form (i) which increase the nature or extent of the hazard and risk undertaken by EQ in treating and/or disposing of the waste, or (ii) for whose treatment and/or disposal a Waste Management Facility is not designed or permitted, or (iii) which increase the cost of treatment and/or disposal of waste beyond that specified in EQ's price quote; or (c) are not properly packaged, labeled, described, or placarded, or otherwise not in compliance with United States Department of Transportation and United States Environmental Protection Agency regulations.

Control of Operations.

EQ shall have sole control over all aspects of the operation of any treatment and/or disposal facility of EQ receiving Delivered Wastes under this Agreement (hereinafter, "Waste Management Facility"), including, without limitation, maintaining EQ's desired volume of Acceptable Wastes being delivered to any Waste Management Facility by the Customer or any other person or entity.

Identification of Waste.

For each waste material to be transported, delivered, or tendered to EQ under this Agreement, the Customer shall provide, or cause to be provided, to EQ a representative sample of the waste material and a completed Waste Profile Form containing a physical and chemical description or analysis of such waste material, which description shall conform with any and all guidelines for waste acceptance provided by EQ. On the basis of EQ's analysis of such representative sample of the waste material and such Waste Profile Form, EQ will determine whether such wastes are Acceptable Wastes. EQ does not make any guarantee that it will handle any waste material or any particular quantity or type of waste material, and EQ reserves the right to the decline to transport, treat and/or dispose of waste material. The Customer shall promptly furnish to EQ any information regarding known, suspected or planned changes in the composition of the waste material. Further, the Customer shall promptly inform EQ of any change in the characteristic or condition of the waste material which becomes known to the Customer subsequent to the date of the Waste Profile Form.

Non-Conforming Wastes.

In the event that EQ at any time discovers that any Delivered Waste is Non-Conforming Waste, EQ may reject or revoke its acceptance of the Non-Conforming Waste. The Customer shall have seven (7) days to direct an alternative lawful manner of disposition of the waste, unless it is necessary by reason of law or otherwise to move the Non-Conforming Waste prior to expiration of the seven (7) day period. If the Customer does not direct an alternative disposal, at its option, EQ may return any such Non-Conforming Wastes to the Customer, and the Customer shall pay or reimburse EQ for all costs and expenses incurred by EQ in connection with the receipt, handling, sampling, analyses, transportation and return to the Customer of such Non-Conforming Wastes. If it is impossible or impractical for EQ to return the Non-Conforming Waste to the Customer, the Customer shall reimburse EQ for all costs, of any type or nature whatsoever, incurred by EQ, solely because such Delivered Waste was Non-Conforming Waste (including, but not limited to, all costs associated with any remedial steps necessary, due to the nature of the Non-Conforming Waste, in connection with material with which the Non-Conforming Waste may have been commingled and all expenses and charges for analyzing, handling, locating, preparing for transporting, storing and disposing of any Non-Conforming Waste).

Customer Warranty - Acceptable Wastes.

All Delivered Wastes shall be Acceptable Wastes and shall conform in all material respects to the description and specifications contained in the Waste Profile Form. The information set forth in the Waste Profile Form or any manifest, placard or label associated with any Delivered Wastes, or otherwise represented by the Customer or the generator (if other than the Customer) to EQ, is and shall be true, accurate and complete as of the date of receipt of the involved waste by EQ.

Customer Warranty - Title to Wastes.

Either the Customer or the generator (if other than the Customer) shall hold clear title, free of any all liens, claims, encumbrances, and charges to Delivered Waste until such waste is accepted by EQ.

Customer Warranty - Compliance with Laws.

The Customer shall comply with all applicable federal, state and local environmental statutes, regulations, and other governmental requirements, as well as directives issued by EQ from time to time, governing the transportation, treatment and/or disposal of Acceptable Wastes, including, but not limited to, all packaging, manifesting, containerization, placarding and labeling requirements.

Customer Warranty - Updating Information.

If the Customer receives information that Delivered Waste or other hazardous waste described in the Waste Profile Form, or some component of such waste, presents or may present a hazard or risk to persons, property or the environment which was not disclosed to EQ, or if the Customer or generator (if other than the Customer) has changed the process by which such waste results, the Customer shall promptly report such information to EQ in writing.

Customer Indemnity.

The Customer shall indemnify, defend and hold harmless EQ, and its affiliated or related companies, and all of their respective present or future officers, directors, shareholders, employees and agents from and against any and all losses, damages, liabilities, penalties, fines, forfeitures, demands, claims, causes of action, suits, costs and expenses (including, but not limited to, reasonable costs of defense, settlement, and reasonable attorneysÆ fees), which may be asserted against any or all of them by any person or any governmental agency, or which any or all of them may hereafter suffer, incur, be responsible for or pay out, as a result of or in connection with bodily injuries (including, but not limited to, death, sickness, disease and emotional or mental distress) to any person (including EQ's employees), damage (including, but not limited to, loss of use) to any property (public or private), or any requirements to conduct or incur expense for investigative, removal or remedial expenses in connection with contamination of or adverse effect on the environment, or any violation or alleged violation of any statutes, ordinances, orders, rules or regulations of any governmental entity or agency, caused or arising out of (i) a breach of this Agreement by the Customer, (ii) the failure of any warranty of the Customer to be true, accurate and complete, or (iii) any willful or negligent act or omission of the Customer, or its employees or agents in connection with the performance of this Agreement.

Force Majeure.

EQ shall not be liable for any failure to accept, receive, handle, treat, and/or dispose of Delivered Waste due to an act of God, fire, casualty, flood, war, strike, lockout, labor trouble, failure of public utilities, equipment failure, facility shutdown, injunction, accident, epidemic, riot, insurrection, destruction of operation or transportation facilities, the inability to procure materials, equipment, or sufficient personnel or energy in order to meet operational needs without the necessity of allocation, the failure or inability to obtain any governmental approvals or to meet Environmental Requirements (including, but not limited to voluntary or involuntary compliance with any act, exercise, assertion, or requirement of any governmental authority) which may temporarily or permanently prohibit operations of EQ, the Customer, or the Generator, or any other circumstances beyond the control of EQ which prevents or delays performance of any of its obligations under this Agreement.

Governing Laws

This Agreement shall in all respects be governed by and shall be construed in accordance with the laws of the State of Michigan applied to contracts executed and performed wholly within such state.

Bulk Disposal Charges

Quoted bulk disposal charges for solid materials will be billed by the cubic yard, if the waste density is less than 2,000lbs./cubic yard. If waste density is greater than 2,000 lbs./cubic yard, then bulk disposal charges will be billed by the ton, regardless of the approved container.

SOIL & SEDIMENT SAMPLE LOG SHEET

Project Site Name: MRC Soil Remediation Blocks D, D Pan, F, G, H
Project No.: 112IC07483

[] Surface Soil
[X] Subsurface Soil
[] Sediment
[] Other:
[] QA Sample Type:

Soil Block: Block D
Excavation Area: AREA A
Sampled By: Josh Mullis
C.O.C. No.: #26 AND #28

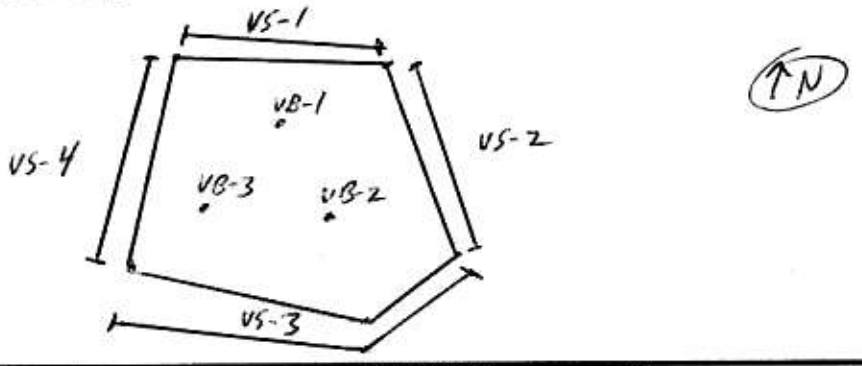
Type of Sample:
[X] Low Concentration
[] High Concentration

COMPOSITE SAMPLE DATA:

Date	Time	Sample ID	Description (Sand, Silt, Clay, Moisture, etc.)
8/12/15	1015	D-VB-A-1-2	Stiff clay, red w/white/tan
8/6/15	1405	D-VB-A-2-2	mottles, v. sl. moist, high plast
8/12/15	1020	D-VB-A-3-2	

GRAB SAMPLE DATA:

Date	Time	Sample ID	Description (Sand, Silt, Clay, Moisture, etc.)
8/12/15	1000	D-VS-A-1-1	Stiff clay, red w/white/tan/
8/6/15	1400	D-VS-A-2-1	dark mottles, v. sl. moist,
8/12/15	1005	D-VS-A-3-1	high plast
8/12/15	1010	D-VS-A-4-1	



SAMPLE COLLECTION INFORMATION:

Analysis	Container Requirements	Collected	Other
PAH Method 8270D	1-40z glass jar	✓	3 DAY TAT

OBSERVATIONS / NOTES:

- 1' of ASPHALT from ground surface, then clay/sandy clay from 1'-2' bgs.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Soil Remedy Block D

Report Number: 240-54086-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 8/7/2015 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.2º C.

Sample D-VS-B-3-1 (240-54086-3) was received in a cracked / broken jar. The sample was transferred to a new container.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples D-VS-B-1-1 (240-54086-1), D-VS-B-2-1 (240-54086-2), D-VS-B-3-1 (240-54086-3), D-VS-B-4-1 (240-54086-4), D-VB-B-1-2 (240-54086-5), D-VB-B-2-2 (240-54086-6), D-VB-B-3-2 (240-54086-7), D-DUP01-080615 (240-54086-8), D-VS-A-2-1 (240-54086-9) and D-VB-A-2-2 (240-54086-10) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 08/10/2015 and analyzed on 08/12/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples D-VS-B-1-1 (240-54086-1), D-VS-B-2-1 (240-54086-2), D-VS-B-3-1 (240-54086-3), D-VS-B-4-1 (240-54086-4), D-VB-B-1-2 (240-54086-5), D-VB-B-2-2 (240-54086-6), D-VB-B-3-2 (240-54086-7), D-DUP01-080615 (240-54086-8), D-VS-A-2-1 (240-54086-9) and D-VB-A-2-2 (240-54086-10) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 08/07/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-54086-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	U	Indicates the analyte was analyzed for but not detected.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Client: Tetra Tech, Inc. Job Number: 240-54086-1

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Soil Remedy Block D

Report Number: 240-54270-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 8/13/2015 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.6º C.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples D-VS-A-1-1 (240-54270-1), D-VS-A-3-1 (240-54270-2), D-VS-A-4-1 (240-54270-3), D-VB-A-1-2 (240-54270-4), D-VB-A-3-2 (240-54270-5), D-VS-C-1-1 (240-54270-6), D-VS-C-2-1 (240-54270-7), D-VS-C-3-1 (240-54270-8), D-VS-C-4-1 (240-54270-9), D-VB-C-1-2 (240-54270-10), D-VB-C-2-2 (240-54270-11), D-VB-C-3-2 (240-54270-12), D-VB-C-4-2 (240-54270-13), D-DUP02-081215 (240-54270-14), D-VS-E-2-1 (240-54270-15), D-VB-E-3-2 (240-54270-16), D-VB-E-6-2 (240-54270-17) and D-DUP03-081215 (240-54270-18) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 08/14/2015 and 08/15/2015 and analyzed on 08/18/2015.

2,4,6-Tribromophenol (Surr) failed the surrogate recovery criteria low for D-VS-E-2-1 (240-54270-15). 2,4,6-Tribromophenol (Surr) failed the surrogate recovery criteria low for D-VB-E-6-2 (240-54270-17).

Sample D-VS-A-3-1 (240-54270-2)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Sample 240-54270-B-15-A has one acid surrogate recovery below acceptance criteria. The target analyte list for this sample is BN only, therefore, no corrective action was required.

2,4,6-Tribromophenol ACID surrogate was out of control in continuing calibration batch 193693. However, since only BN compounds were requested no corrective action was required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples D-VS-A-1-1 (240-54270-1), D-VS-A-3-1 (240-54270-2), D-VS-A-4-1 (240-54270-3), D-VB-A-1-2 (240-54270-4), D-VB-A-3-2 (240-54270-5), D-VS-C-1-1 (240-54270-6), D-VS-C-2-1 (240-54270-7), D-VS-C-3-1 (240-54270-8), D-VS-C-4-1 (240-54270-9), D-VB-C-1-2 (240-54270-10), D-VB-C-2-2 (240-54270-11), D-VB-C-3-2 (240-54270-12), D-VB-C-4-2 (240-54270-13), D-DUP02-081215 (240-54270-14), D-VS-E-2-1 (240-54270-15), D-VB-E-3-2 (240-54270-16), D-VB-E-6-2 (240-54270-17) and D-DUP03-081215 (240-54270-18) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 08/14/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-54270-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	U	Indicates the analyte was analyzed for but not detected.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits

Client: Tetra Tech, Inc. Job Number: 240-54270-1

☐ See Multiple Cooler Form

IR GUN# 8 (CF -1.5 °C) Observed Cooler Temp. °C Corrected Cooler Temp. °C

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity 1	Yes	No
-Were custody seals on the outside of the cooler(s) signed & dated?	Yes	No NA
-Were custody seals on the bottle(s) or bottle kits (LLHg/MeHg)?	Yes	No
3. Shippers' packing slip attached to the cooler(s)?	Yes	No
4. Did custody papers accompany the sample(s)?	Yes	No
5. Were the custody papers relinquished & signed in the appropriate place?	Yes	No
6. Was/were the person(s) who collected the samples clearly identified on the COC?	Yes	No
7. Did all bottles arrive in good condition (Unbroken)?	Yes	No
8. Could all bottle labels be reconciled with the COC?	Yes	No
9. Were correct bottle(s) used for the test(s) indicated?	Yes	No
10. Sufficient quantity received to perform indicated analyses?	Yes	No
11. Were sample(s) at the correct pH upon receipt?	Yes	No NA pH Strip Lot# **HC432654**
12. Were VOAs on the COC?	Yes	No
13. Were air bubbles >6 mm in any VOA vials?	Yes	No NA
14. Was a trip blank present in the cooler(s)? Trip Blank Lot #	Yes	No

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Soil Remedy Block D

Report Number: 240-54331-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 8/14/2015 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.8º C.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples D-VS-E-1-1 (240-54331-1), D-VS-E-3-1 (240-54331-2), D-VS-E-4-1 (240-54331-3), D-VB-E-1-2 (240-54331-4), D-VB-E-2-2 (240-54331-5), D-VB-E-4-2 (240-54331-6) and D-VB-E-5-2 (240-54331-7) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 08/15/2015 and analyzed on 08/18/2015.

2,4,6-Tribromophenol (Surr) failed the surrogate recovery criteria low for D-VB-E-4-2 (240-54331-6).

Samples D-VS-E-1-1 (240-54331-1)[2.5X], D-VS-E-3-1 (240-54331-2)[4X] and D-VB-E-4-2 (240-54331-6)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

2,4,6-Tribromophenol ACID surrogate was out of control in continuing calibration batch 193693 associated with samples D-VS-E-1-1 (240-54331-1), D-VS-E-3-1 (240-54331-2), D-VS-E-4-1 (240-54331-3), D-VB-E-1-2 (240-54331-4), D-VB-E-2-2 (240-54331-5), D-VB-E-4-2 (240-54331-6), D-VB-E-5-2 (240-54331-7), (240-54331-B-7-B MS) and (240-54331-B-7-C MSD). However, since only BN compounds were requested no corrective action was required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples D-VS-E-1-1 (240-54331-1), D-VS-E-3-1 (240-54331-2), D-VS-E-4-1 (240-54331-3), D-VB-E-1-2 (240-54331-4), D-VB-E-2-2 (240-54331-5), D-VB-E-4-2 (240-54331-6) and D-VB-E-5-2 (240-54331-7) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 08/14/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-54331-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	U	Indicates the analyte was analyzed for but not detected.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits

Client: Tetra Tech, Inc. Job Number: 240-54331-1
