SECTION 1
INTRODUCTION

This report summarizes field activities and chemical analytical results from the investigation of floor and brick tiles remaining at the foundation of former Building D in Block E to determine if they contain asbestos and results from the investigation of volatile organic compounds (VOCs) in the soil piles near that former building at the Middle River Complex (MRC) in Middle River, Maryland. Figure 1-1 shows the Middle River Complex site location. This report documents the advancement and sampling of five direct-push technology (DPT) borings and four hand auger borings to assess the concentrations of volatile organic compounds that might be in the soil piles along the northern and western perimeters of the former Building D slab and investigating floor tiles to determine if asbestos containing material (ACM) is present.

Extensive multimedia sampling has been conducted in Block E, primarily to evaluate the extent of polychlorinated biphenyls (PCBs) in soil and groundwater. The soil piles in Block E were originally sampled in 2014 and 2016 for polychlorinated biphenyls, polycyclic aromatic hydrocarbons (PAHs), metals, total petroleum hydrocarbons (TPH), and radionuclides to determine if this soil would be satisfactory as backfill when remediation was complete. Results from these investigations are summarized in the *Remedial Investigation Block E Soil (Tetra Tech, 2018a)*. Volatile organic compound analyses were not conducted during these previous two events, and volatiles characterization is required to support the design of the Block E soil remedy as well as to satisfy the requirements of the Soil Management Plan for Blocks E and I (Tetra Tech, 2019b). Additionally, investigation was conducted to determine if ACM is present in floor/brick tile or adhesive/grout remaining on the concrete foundation slab of former Building D.

Sampling objectives in accordance with the *Block E Asbestos and Soil Pile Sampling Investigation Work Plan* (Tetra Tech, 2019a) were to:

- subcontracting a professional asbestos sampling firm to conduct an asbestos investigation of any remaining floor tile possibly installed using an asbestos based adhesive mastic during building construction

- collecting soil samples from nine continuously cored soil borings from the Block E soil pile area, including three borings along the western portion and six borings along the northern portion of the former building D slab

- selecting a sample from each boring by identifying the soil interval likely impacted by volatiles, using a photoionization detector (PID) for screening

The volatile organic compound results from these soil piles will be used to fulfill data requirements of the Soil Management Plan for Blocks E and I (Tetra Tech, 2019b) and the asbestos results will provide information needed for disposal recommendations for Block E. This report is organized as follows:

Section 2—Background and Site Description: Briefly summarizes the site background and references recent reports containing detailed background information related to the project.

Section 3—Investigation Approach and Methodology: Presents the technical approach for soil sampling and describes the field methodology employed for the investigation.

Section 4—Results: Presents the investigation results.

Section 5—Summary: Summarizes the investigation findings.

Figures, tables, and appendices are at the end of this report, following Section 6.

SECTION 2
BACKGROUND AND SITE DESCRIPTION

Block E is one of several properties at the Middle River Complex (MRC) being managed by Lockheed Martin Corporation (Lockheed Martin) as part of environmental stewardship efforts to address contamination from former industrial operations. MRC consists of approximately 161 acres, including Tax Blocks A through I, and is currently occupied by 12 main buildings with surrounding parking and storage areas. MRC is bounded by Eastern Boulevard (Route 150) to the north, Dark Head Cove to the south, Cow Pen Creek to the west, and Martin State Airport to the east. The area currently includes active industrial properties, perimeter parking lots, an athletic field, a vacant concrete-covered lot (Block E), a trailer storage lot, and numerous grassy areas along the facility perimeter also including a former seaplane launch ramp. Locked and access-controlled chain-link fences surround the main industrial area and all external properties, including Block E.

Block E is in the southern portion of the MRC and is 15.97 acres in area. Block E is bounded on the north by the active industrial portion of the complex (Block I), to the east by parking lot No. 6 (Block D), to the south by waterfront lot (Block F), and to the west by the Tilley Chemical Company. The former location of Building D encompasses approximately half of the Block E area. It was constructed very rapidly in the early 1940s and demolished in December 1971. During former Building D record searches, demolition records indicating material disposal plans or manifests were not located. The remaining concrete floor slab, corresponding to the former basement floor of the building, defines the current grade.

The basement floor consists of concrete slabs with ceramic tiles overlaying the concrete in several locations. Construction joints or expansion joints (with associated cracking) are between the slabs. Former sumps and floor drains associated with the building's manufacturing processes, some of which have been plugged with concrete or grouted, remain within the existing concrete slab. Areas off the foundation slab are either ancillary concrete parking and access points, or are covered in

grass or other vegetation. Steep soil slopes (with elevation differences of approximately 12 feet) are in areas where the existing topography was cut into to construct the building; these slopes characterize the western and northwestern edges of Block E. In these areas, the soil slumped onto the outer edge of the foundation slab after the building was removed, or excess soil from site operations has accumulated in this area over time.

The area occupied by former Building D has not been redeveloped since the building was demolished in 1971. Portions of the area are currently used to store lowboy trailers and, at times, airplane carcasses belonging to the Glenn L. Martin Aviation Museum at Martin State Airport. A building used to store road salt is in the northwestern corner of the former Building D footprint. A 500,000-gallon aboveground storage tank (AST) and pump-house associated with the facility fire suppression system are in the southeastern corner of Block E. Tilley Chemical Company occupies the adjoining property to the west, and stores trailers in the southwestern corner of Block E on the concrete parking apron of former Building D.

Tetra Tech, Inc. (Tetra Tech) conducted a remedial investigation for Block E soil on behalf of Lockheed Martin Corporation (Lockheed Martin); the report for that investigation was produced in August 2018 (Tetra Tech, 2018a). The remedial investigation report presents the collective understanding of site conditions and environmental impacts at Block E, and is a vital resource that summarizes the investigations completed at Block E. Development of the Block E soil remedial action plan began in 2018 (Tetra Tech, 2019c), and it was approved by the Maryland Department of the Environment (MDE) in 2019. Lockheed Martin has started developing the full remedy design for Block E soil based on the selected remedial alternative from that plan, and will be obtaining necessary permits for execution of the plan; Lockheed Martin is also submitting a risk-based disposal approval application (RBDAA) in accordance with United States Environmental Protection Agency (USEPA) regulations at 40 CFR 761.61(c) implementing the Toxic Substances Control Act (TSCA) for Block E soil. The data resulting from this investigation will facilitate the development of the soil remedial design. The approach and methodology for asbestos characterization and soil pile sampling are described in the sections below.

SECTION 3
INVESTIGATION APPROACH AND METHODOLOGY

This report documents field activities for conducting additional soil sampling to characterize volatile organic compounds (VOCs) in soil within the soil piles located on the western and northern portion of the former Building D concrete slab in Block E and potential asbestos containing materials in Block E. The scope of work associated with this field program included:

- an asbestos investigation, completed using a professional asbestos sampling firm to assess any remaining tile potentially containing asbestos-based adhesive mastic
- advancement of nine soil borings, to approximately 15 feet below ground surface (bgs), along the northern and western portions of the former Building D slab in Block E
- sample collection at each soil boring (including one duplicate) at the depth interval associated with the highest field-screening result, for analysis of VOCs by United States Environmental Protection Agency (USEPA) Method 8260C

3.1 ASBESTOS INVESTIGATION

On April 15, 2019, Tetra Tech met with personnel from A&I Environmental Services, a professional asbestos removal and waste handling firm, to perform a visual inspection of possible asbestos-containing material (ACM) at former Building D in Block E. During the inspection, no visible ACM was noted onsite. To confirm this finding, Tetra Tech met with personnel from IH Services, a professional asbestos sampling contractor, on July 19, 2019, and conducted a similar ACM inspection. IH Services personnel agreed with and confirmed the findings of A&I Environmental Services (i.e., no visible ACM was onsite). Personnel from IH Services also noted that since the former Building D slab/site had been exposed to atmospheric elements for an extended time, ACM was unlikely to be present, as extensive weathering had undoubtedly occurred, and stated that ACM sampling was therefore unnecessary. Nonetheless, to confirm these conclusions, Tetra Tech selected three floor and/or brick tile locations for ACM sampling (Figure 3-1) to confirm the contractors' conclusions. Six samples, one each tile material and

associated adhesive, were collected by IH Services, Inc. from each of the three separate sampling locations shown on Figure 3-1 and submitted for asbestos analysis.

3.2 SOIL PILE DRILLING MOBILIZATION/DEMOBILIZATION

On December 16, 2019, Tetra Tech mobilized equipment, the drilling subcontractor (Ground Zero, Inc. [GroundZero]), and Tetra Tech field personnel to the site for soil sampling. Mobilization included:

- coordinating with Lockheed Martin Corporation (Lockheed Martin) and Middle River Complex (MRC) personnel for facility access and approval of boring locations
- mobilizing subcontractors, equipment, and materials to the site
- obtaining "Miss Utility" and MRC utility clearances for the soil boring locations, along with utility clearance of selected boring locations using a private utility-locating firm
- implementing a site-specific health and safety plan (HASP)
- preparing to manage investigation-derived waste (IDW)

Work was completed on December 17, 2019. Demobilization included the following:

- demobilizing subcontractors, equipment, and materials from the site
- general site cleanup and trash removal
- managing IDW

MRC tenants were informed and updated about the field investigation at biweekly meetings conducted by LMC Properties, Inc., (LMCPI). LMCPI was notified of the field tasks and schedule and approved the proposed work prior to field mobilization.

The Tetra Tech field operations leader coordinated mobilization and demobilization (including equipment inventories, to ensure equipment availability), purchasing and leasing equipment, and staging equipment for efficient loading and transport to and from the site before and after each field activity. Before field operations began, Tetra Tech personnel reviewed the site-specific HASP (Tetra Tech, 2018b) and the respective "safe work" permits therein. Before daily field events, Tetra Tech held mandatory health and safety tailgate meetings to review site conditions and anticipated

work for each day. Subcontractors present for that day's field activities were included in the daily tailgate meetings. The Tetra Tech site health and safety officer documented pertinent topics covered and personnel in attendance. Each day, Tetra Tech used traffic cones to isolate the work area and all field personnel wore high-visibility safety vests.

As part of daily IDW management, Tetra Tech followed the waste management plan (WMP [Tetra Tech, 2019d]) conforming to *Lockheed Martin Energy, Environment, Safety, and Health (EESH) Remediation Waste Management Procedure No. EROP 03, Revision 4,* effective April 17, 2009 (Lockheed Martin, 2009).

3.3 SITE ACCESS AND UTILITY CLEARANCE

Site access, utility clearances, notifications and approvals, and project documentation conformed to the provisions of *Lockheed Martin Remediation Contractor's Environment, Safety and Health (ESH) Handbook, Revision 4, May 1, 2016* (Lockheed Martin, 2016). Before starting any intrusive field activities, Tetra Tech obtained the required permits, completed the digging authorization form and risk-handling checklist, and obtained required signatures. Each proposed soil boring location was screened for the presence of subsurface utilities. In addition to calling in a "Miss Utility" ticket, Tetra Tech obtained available MRC-facility engineering and utility maps and contracted with a private utility-locating service (RETTEW, formerly Enviroscan, Inc. [RETTEW]) to locate and mark out any underground utilities. RETTEW used standard utility-locating equipment representing the best available technology including a RadioDetection RD-8000, a RadioDetection C.A.T. 3, and a GSSI dual-frequency ground-penetrating radar (GPR) system.

Subsurface utilities within a 30-foot radius of each designated boring was located and marked on the ground with the industry standard paint color corresponding to each utility. No borings were relocated resulting from utility clearance. Permits, the "Miss Utility" clearance, and the RETTEW utility-screening report are in Appendix A.

No site operations were affected during the field activities. Tetra Tech used traffic cones and caution tape to isolate the work areas and maintained open pathways for pedestrian and vehicle traffic during this investigation.

3.4 FIELD METHODOLOGY

3.4.1 Investigation Approach

As shown on Figure 3-2 and presented in Table 3-1, the sampling strategy consisted of advancing nine borings along the western and northern perimeter of the former Building D concrete slab. The boring locations were placed near historical boring locations (shown on Figure 3-2) to close the data gap present for volatile organic compounds (VOCs) not completed during prior investigations. The boring depth was determined based on the depth to the concrete slab at each location. This was determined by cross-referencing its global positioning system (GPS) location with known elevations of the concrete slab. Borings were terminated when Geoprobe signs of refusal were observed, and varied from 3 feet to 15 feet. All samples were analyzed for VOCs by United States Environmental Protection Agency (USEPA) SW846 Method 8260C. Four locations were inaccessible by the drill rig and were completed using a hand auger, while the remaining five locations were completed with the direct-push technology (DPT) drill rig.

A soil sample was collected from the depth interval associated with the highest field screening values (as determined by photoionization detector [PID] readings) and were submitted to a State of Maryland accredited laboratory (Eurofins TestAmerica, North Canton, Ohio) for VOC analysis by USEPA Method 8260C.

All samples were sent with a standard 21-day turnaround time and analyzed by a state-accredited laboratory (Eurofins TestAmerica). One duplicate sample was collected for quality control (QC).

3.4.2 Drilling and Sampling

Five soil borings (E-SB-1793, E-SB-1794, E-SB-1797, E-SB-1798, and E-SB 1799) were advanced by a Maryland state-licensed driller using a track-mounted DPT rig equipped with a 1.5-inch diameter, four-foot-long, stainless steel macrocore sampler fitted with a disposable acetate liner. The remaining four borings (E-SB-1791, E-SB-1792, E-SB-1795, and E-SB-1796) were advanced by the field team using a stainless steel three-inch hand auger.

Samples were collected from each soil boring for lithological characterization and field screening. Soil was screened by visual observation (e.g., staining, discolorations, etc.) and odor detection. In

addition, the soil samples were screened for VOCs with a PID using a consistent headspace screening methodology (i.e., zip-top bag technique) to detect VOC vapors. Soil in the bag was gently disturbed to allow VOCs to be released from the soil matrix, and the bag was allowed to stand for five to 10 minutes before obtaining a PID reading by inserting the tip of the detector into the plastic bag. The peak VOC concentration was then recorded on the soil boring form. Soil boring logs were generated using *gINT Professional* software and are included in Appendix B.

3.5 SAMPLING NOMENCLATURE

Each soil sample collected was identified with a unique sample identification tag. The sample identification tag consisted of the location ("E" for Block E), followed by "SB" and the boring number. Samples from each depth interval consisted of a two-number hyphenated suffix indicating the bottom depth of the boring. For example, E-SB-1793-12-14 represents a soil sample collected in Block E from soil boring SB-1793 at a depth of 12-14 feet bgs. The sampling depths from each boring were recorded on the boring log forms (Appendix B).

3.6 SURVEYING

Horizontal coordinates for each boring were located using global positioning system (GPS) technology with sub-meter accuracy.

3.7 DOCUMENTATION

A field iPad equipped with FormConnect software was used for recording daily reports for this project. Daily reports included the following information: weather and duration of site activities, tailgate health and safety topics, summary of work completed, inspections completed, delays or problems encountered, planned schedule, safety actions taken, safe work procedures, and photographs of site activities. Daily field reports signed activity hazard analysis forms, and equipment (PID) calibration records are in Appendix C. Sample documentation consisted of chain of custody reports and matrix-specific sampling log sheets. Signed chains of custody are provided in the support documentation section of the data validation and full laboratory reports in Appendix D.

3.8 SAMPLE HANDLING

Proper custody procedures were followed throughout all phases of sample collection and handling. Chain of custody protocols were used throughout sample handling to establish the evidentiary integrity of sample containers. These protocols demonstrate that the samples were handled and transferred in a manner that would eliminate (or detect) possible tampering. Sample containers were released under signature from the laboratory and were accepted under signature by the sampler or individual responsible for maintaining custody until the sample containers were transferred to the sampling team.

Samples were released by the sampling team under signature and were accepted under signature by the laboratory. Transport containers returning to the laboratory were sealed with strapping tape and a tamper-resistant custody seal. The custody seal includes the signature of the individual releasing the transport container, along with the date and time.

3.9 EQUIPMENT DECONTAMINATION

Reusable drilling equipment (e.g., DPT rods, augers, scoops) were decontaminated before use at each boring location. The equipment was cleaned using a motorized water spraying nozzle, followed by an Alconox® wash, followed by a three-step rinse using potable-water, reagent-grade isopropanol, and analyte-free water. Resulting wash/rinse waters were collected and containerized in a five-gallon bucket. Decontamination water was collected in a five-gallon bucket, which was placed inside a United States Department of Transportation (USDOT)-approved 55-gallon drum and sampled for waste characterization. Due to the minimal (under two gallons) amount of decontamination water generated, the waste characterization sample collected depleted the generated volume. Therefore, the decontamination water drum was removed from the site as an empty drum.

3.10 WASTE MANAGEMENT

The MRC waste management plan (Tetra Tech, 2019d) conforming to *Lockheed Martin's Remediation Contractor's ESH Handbook, Revision 2* was followed during this investigation to store, manage, test, and dispose of IDW. IDW, consisting drill cuttings and decontamination water, was generated during the investigation. Personal protective equipment (PPE) was placed in trash

bags and then in a facility trash receptacle to be disposed of as general refuse. Soil cuttings and decontamination water were collected and stored in United States Department of Transportation (USDOT)-approved 55-gallon drums. The drums were appropriately labeled and logged on a drum inventory form.

After IDW generation, the drums were relocated to a drum staging area (located in Block E/Lot D) as directed by Lockheed Martin personnel. Samples of IDW were collected and submitted to be analyzed for VOCs, polychlorinated biphenyls (PCBs), toxicity characteristic leaching procedure (TCLP) metals, and ignitability. All IDW was profiled as nonhazardous based on waste characterization sampling, and the drums were removed from the site on February 18, 2020 by Clean Harbors of Baltimore, Maryland. IDW documentation is in Appendix E.

3.11 DATA VALIDATION

Following receipt of the soil analytical results, data were validated by an independent chemist in accordance with USEPA Region 3 protocols. Chemical data were supplied by the laboratory as hard-copy reports and electronic databases. All data were validated for all quality assurance (QA)/ quality control (QC) parameters, including laboratory QA/QC and accuracy, precision, completeness, and comparability, in accordance with USEPA guidance. This review is based on the *USEPA National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA, 2017), and the specifics of the analytical method used. Data validation and full laboratory reports, including complete chain of custody documentation, are in Appendix D (on compact disc). Chemical data tables are also in Appendix D.

Collectively, these data are acceptable for their intended use, except for data that have been qualified as unreliable. For this validation, the following data qualifiers (i.e., flags) were applied to the chemical results presented in this report:

U Not detected; the analyte is considered not detected at the reported value.

J The analyte is considered present in the sample; however, the value is estimated and might not be accurate or precise.

NJ The analyte is tentatively identified and presumed present in the sample; however, the concentration is estimated

UJ The analyte was not detected; however, the quantitation or detection limit might be inaccurate or imprecise.

UR The sample result (non-detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

These flags appear on the chemical results tables in Section 4 and Appendix D.

SECTION 4
RESULTS

This section presents the results of the asbestos investigation in Block E and results for soil sampling conducted within the soil pile areas along the western and northern perimeter of the concrete slab of former Building D in Block E. All soil pile samples were analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C and samples collected for asbestos assessment were analyzed by EPA method 600/R-93/116.

Validated soil-chemical data were used to generate a statistical summary table (Table 4-1) and a detection table (Table 4-2) summarizing positive detections of VOCs in soil samples. As shown on Table 4-1, acetone was the only VOC detected.[1] Acetone concentrations ranged from 0.027*J* milligrams per kilogram (mg/kg) at E-SB-1796 to 2.7 mg/kg at E-SB-1791; all detected concentrations were well (more than three orders of magnitude [1,000 times]) below the most stringent screening criterion of 6,100 mg/kg, which is the USEPA-recommended screening level for soil exposure by a residential child, determined using a target risk level of 1×10^{-6} and a hazard quotient of 0.1 (USEPA, 2019). Figure 4-1 shows the locations and depths of acetone detections.

Block E site surveys performed by professional asbestos firms, A&I Environmental Services and IH Services, concluded that no asbestos-containing materials (ACM) are visually present on-site. Co-located samples of brick and adhesive material, 1E-BRK, 2E-BRK, and 3E-BRK, were collected and analysed for asbestos containing material. No asbestos was detected in these three samples. Asbestos sampling results are included in Appendix F.

[1]Trace concentrations of two (volatile) tentatively identified compounds were also detected (see Tables 4-1 and 4-2).

SECTION 5
SUMMARY

Acetone, a volatile organic compound (VOC), was detected in five of nine samples at concentrations ranging from 0.027*J* milligrams per kilogram (mg/kg) to 2.7 mg/kg. All concentrations were well below the most stringent screening level. No other volatile organic compounds were detected. Based on VOCs analytical results, the soil is suitable for reuse on Block E in accordance with the Soil Management Plan for Blocks E and I (Tetra Tech, 2019b).

Block E site surveys and asbestos sampling and analysis of tile and adhesive indicate that asbestos is not present in these site features.

The maximum depth of each boring was determined by cross-referencing its global positioning system (GPS) location with known elevations of the concrete slab. Borings were terminated when geoprobe signs of refusal are observed, and varied from 3 feet to 15 feet. All samples were analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) SW846 Method 8260C.

One soil sample (including one duplicate) was collected at each boring location, from the interval that was associated with the highest photoionization detector (PID) value during field screening.

Risk Handling Checklist

Project Manager: Use this checklist to develop risk handling plans before the dig starts. You must also review Enterprise Operations Procedure EO-28, Digging Projects.

General Questions	☒	What Lockheed Martin processes could be affected by the dig? **No Lockheed Martin processes or operations are expected to be impacted as all work will be conducted outside the secured area in Tax Block E (Lot D). Tetra Tech will work with Lockheed Martin and their tenants to minimize potential impacts, if present.**
	☒	What are the safety hazards? **Utilities, slips/trips/falls, vehicle traffic, DPT rig hazards, pinch points**
	☒	What could fail? **Mechanical components on excavator and auger equipment**
	☒	How could it fail? **A component of the drilling rig and or equipment could potentially fail. An inspection of the equipment will be conducted on arrival at the site and daily to ensure proper working condition. Approved Health and Safety Plan in place (reviewed by corporate EESH)**
	☒	Does the area need to be returned to its normal state when the work is complete? **Yes, soil borings will be grouted to surface upon completion.**
	☐	How could the dig affect operations/test/production? **No operations will be affected, work has been conducted in these areas many times without any impact to facility operations.**
	☐	Have potential risks been addressed with area management? **No risks identified**
	☒	Am I comfortable with any risk handling plans, understanding the potential impact? **Yes**
Traffic Control	☒	Ensure proper signage and communication. **Existing security fencing separates roads from proposed work areas.**
	☒	Coordinate road or access closures through Industrial Security before starting the dig. **Existing fencing separates roads from proposed work areas.**
	☒	Ensure the work area is isolated from foot traffic by placing barriers and warning lights as required by EO-28.
	☒	Ensure that vehicle traffic will be safe. **Access to Chesapeake Park Plaza will proceed with caution.**
	☒	Ensure that product transport will be safe. **Access to Chesapeake Park Plaza will proceed with caution.**
Excavation	☒	Review facility drawings to identify utilities. Research old drawings as necessary. **Available site engineering and utility maps were reviewed.**
	☒	Discuss the project with Facility Engineering/Maintenance staff that may have unique knowledge about the construction area not documented in facility drawings. **Work has been completed in this area many times in the past. All third party utility clearance was completed.**
	☒	Process form EO-28-1, Dig Permit. Use this opportunity to explain the process and relate expectations to the contractor/LM organization that will perform the dig.
	☒	Have LM Telecommunications and the local utility identification service locate and mark utilities/underground obstacles.
	☒	Coordinate with other ongoing projects in the affected area. **N/A**
	☒	Make every effort not to excavate around live utilities in service. Schedule an outage in advance or have Maintenance temporarily shut down and isolate the utilities while excavating. **Underground utilities marked by Miss Utility and private utility locating service, no utilities other than storm drains and water line in the area. All utilities will be avoided.**
	☒	If live utilities cannot be shut down while excavating, know where to isolate or shut them down if they are damaged while excavating. **No utilities will be encountered**
	☒	Have a spotter(s) work with the equipment operator. Hand dig when necessary. **Spotters will always be utilized**
	☒	Excavate along the side of the utility; not on top. **No utilities will be encountered**
	☐	Weather may affect the dig. Ensure water pipes are protected during freezing weather, especially if the trench will be left open over night. Rain may cause the side of the trench to slough, which can undermine and break pipes/conduit. **N/A**
	☐	Ensure care when moving trench boxes in and out of trenches so pipes/conduit aren't damaged by the boxes. **N/A**
	☒	Ensure surface drainage is controlled so that water doesn't get into the excavation and undermine soil supporting utilities. **Protections will be incorporated as necessary to protect storm drain piping and outlets.**
	☐	Ensure stocked material is kept far enough back (minimum 2 feet) so that material and rocks don't fall on utilities in the open hole. **N/A.**
	☒	Ensure backfilling is done carefully: Re-bed utilities with proper material, filling all voids below. Keep inappropriate material from falling on or being placed in the trench. Be careful when compacting backfill in the two feet directly above the utility. **Site restoration consisting of backfilling all auger holes will be completed when each boring is done.**
	☒	Keeps the as-built utility drawing in the field while the excavation site is open. Take pictures if possible (horizontal alignment and elevations), if known utilities deviate from facility drawings or if utilities are found that are not on facility drawings. Give the modified as-built drawings to the Building/Facility Manager, who will update the drawing database.
	☒	Ensure that the equipment operator digs slowly and remains in control. **All site activities will be monitored by Tetra Tech.**

Personal Safety	☐ Ensure that trenching and shoring methods comply with the applicable OSHA regulations and are overseen by a "Competent Person," as defined in those regulations. **NA**	
	☒ Regularly inspect methods to prevent violations. **All construction is monitored by Tetra Tech, all personnel have stop work authority.**	
	☒ Ensure LM employees do not dig or enter any excavation that is more than four feet deep. **All work is being completed by Tetra Tech and its subcontractors.**

MEMORANDUM

TO:	Josh Mullis, Tetra Tech		
FROM:	Bill Steinhart		
CC:	Middle River Aircraft Systems Block E Soil Boring Survey and Building A Vapor Points		
DATE:	December 3, 2019		
PROJECT NAME:	Middle River Block E Soil Borings	**PROJECT NO.:**	019872020
SUBJECT:	Utility Clearence for Block E Soil Borings and Building A Vapor Points		

Dear Mr. Mullis:

On November 22, 2019, RETTEW visited the above-referenced site with the purpose of locating underground metallic and non-metallic utilities (i.e. sanitary, storm, gas, telephone, water and electric lines) at 9 exterior client-designated proposed locations in Block E and 2 interior vapor points in A Building.

During the survey, each location was scanned with a Radiodetection RD-8000, Radiodetection C.A.T.^{3}, a Sensors and Software Noggin ground penetrating radar (GPR) system. Nearby utilities were marked in the field using semi-permanent paint and wire-stem flagging, where appropriate. Please note that many of the soil borings were in highly vegetated areas, eliminating the use GPR and metal detector to located unknown utilities,

The above-referenced subsurface utility survey was completed using standard and/or routinely accepted practices of the geophysical industry and equipment representing the best available technology. RETTEW does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen site-specific conditions. However, we make every effort to identify and notify the client of such limitations or conditions. In addition, please note that the completion of this survey does not relieve any party of applicable legal obligations to notify the appropriate One-Call center prior to digging or drilling.

As always, we appreciate this opportunity to have worked with you again. If you have any questions, please do not hesitate to contact me.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block E Soil Pile Inv

Report Number: 240-124062-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The 1010A and 1020B Flashpoint analyses were performed at Eurofins TestAmerica, Pittsburgh laboratory.
The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT
The samples were received on 12/18/2019 11:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.3º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples E-SB-1796-0-1 (240-124062-2), E-SB-DUP-01 (240-124062-3), E-SB-1791-0-1 (240-124062-4), E-SB-1792-1-2 (240-124062-5) and WC-S-PILES-121719 (240-124062-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared and analyzed on 12/28/2019 and 12/29/2019.

Vinyl acetate failed the recovery criteria low for the MS of sample E-SB-DUP-01MS (240-124062-3) in batch 240-417563. Acetone failed the recovery criteria high.

For the MSD of sample E-SB-DUP-01MSD (240-124062-3) in batch 240-417563, Vinyl acetate failed the recovery criteria low. Acetone failed the recovery criteria high. Also, Several analytes exceeded the RPD limit.

1,2,4-Trichlorobenzene was detected in method blank MB 240-417546/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Internal standard (ISTD) response for the following sample was outside control limits: E-SB-1791-0-1 (240-124062-4). The sample was re-extracted and/or re-analyzed with concurring results, and the original set of data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples TB-121719 (240-124062-1) and WC-W-PILES-121719 (240-124062-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 12/30/2019 and 12/31/2019.

Sample WC-W-PILES-121719 (240-124062-7)[1250X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following samples were received in hydrochloric acid vials: TB-121719 (240-124062-1) and WC-W-PILES-121719 (240-124062-7). The requested target analyte list includes 2-Chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

The laboratory control sample (LCS) for analytical batch 240-417817 recovered outside control limits for the following analytes: 1,3-Dichloropropane and Chlorodibromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. WC-W-PILES-121719 (240-124062-7) and (LCS 240-417817/4)

The pH of sample WC-W-PILES-121719 (240-124062-7) was 7. The sample was analyzed within the normal 14 day holding time; however, experimental evidence suggests that some aromatic compounds in wastewater samples, notably, Benzene, Toluene, and Ethylbenzene are susceptible to biological degradation if sample is not preserved to a pH of 2.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

FLASHPOINT
Sample WC-S-PILES-121719 (240-124062-6) was analyzed for flashpoint in accordance with EPA SW-846 Method 1020B. The sample was analyzed on 12/24/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)
Sample WC-S-PILES-121719 (240-124062-6) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The sample was prepared on 12/20/2019 and analyzed on 12/24/2019.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

The following sample required a copper clean-up to reduce matrix interferences caused by sulfur: WC-S-PILES-121719 (240-124062-6). Reagent: 4418903

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)
Sample WC-W-PILES-121719 (240-124062-7) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The sample was prepared on 12/24/2019 and analyzed on 12/27/2019.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

DCB Decachlorobiphenyl and Tetrachloro-m-xylene failed the surrogate recovery criteria low for WC-W-PILES-121719 (240-124062-7).

Sample WC-W-PILES-121719 (240-124062-7)[100X] required dilution prior to analysis due to the nature of the sample matrix. As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-417140.

Single-Element Aqueous CRM

Product #: G34-S4400-10M76

Boron (B) – 10,000 µg/mL

Lot #: 999843-1

Matrix: NH_4OH

Element	Certified Concentration & Uncertainty
B	10,020 ± 30 µg/mL (w/v)
	9843 ± 28 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO Guide 34**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 10,000 µg/mL by gravimetric methods using 99.9995% pure boric acid (H_3BO_3) dissolved in high purity ammonium hydroxide (NH_4OH) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3107, lot #110830**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Preparation Information:

This standard is prepared using **99.9998%** pure **Mercury Metal** which was purchased from a qualified vendor per ISO 9001 guidelines and assayed by analytical methods for conformity prior to use. This standard was manufactured under appropriate laboratory conditions using the methods developed at NIST for SRM Spectrometric Standard Solutions. Sub-boiling distilled high-purity acid has been used to place the materials in solution and stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. Stability of this product is based upon rigorous short-term and long-term testing of the solution for the certified value. This testing includes, but is not limited to, the effect of temperature and packaging on the product. If, during the period of validity, a recall is instituted due to substantial changes in the stability of this product, the purchaser will be notified.

Homogeneity:

This product is determined to be homogeneous following in-house procedures developed in accordance with the requirements of ISO 17034 and ISO Guide 35.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods. The standard is confirmed homogeneous; therefore, the minimum sample size should be consistent with the end user's measurement capabilities.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

1. **Standard Weight and Analytical Balance**
   The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in 'NIST Weights and Measures Measurement Assurance Program' with a certificate of measurement traceability to NIST primary standards. The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.
2. **Volumetric Device**
   The calibrations of volumetric vessels are verified using the ASTM method E542.
3. **Thermometer**
   The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.
4. **Calibration Standards**
   The Calibration Standard is traceable to SRM 3100 Series Spectrometric Standard Solutions. If an SRM is not available, a second source standard or independent lot is used.

Accreditation:

This product has been manufactured by an ISO 9001 registered and ISO/IEC 17025 and ISO 17034 accredited laboratory

Refer to Safety Datasheet (SDS) for hazardous information.

NOTICE: ESI products are intended for laboratory use only. All products should be handled and used by trained professional personnel. Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Multi-Element Aqueous CRM

Product #: TA-ICP-ICSA

ICP ICSA Mix

Lot #: 1013122-1

Matrix: 5% HNO_3

Element	Certified Concentration & Uncertainty	Element	Certified Concentration & Uncertainty
Al	5000 ± 25 mg/L	Fe	2000 ± 10 mg/L
Ca	5000 ± 25 mg/L	Mg	5000 ± 25 mg/L

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Preparation Information:

This standard is prepared using **99.992%** pure **silver metal** which was purchased from a qualified vendor per ISO 9001:2008 guidelines and assayed by analytical methods for conformity prior to use. This standard was manufactured under appropriate laboratory conditions using the methods developed at NIST for SRM Spectrometric Standard Solutions. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water.

Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. This testing includes, but is not limited to, the effect of temperature and packaging on the product. If during the period of validity, a recall is instituted due to substantial changes in the stability of this product, the purchaser will be notified.

Homogeneity:

This product is determined to be homogeneous following in-house procedures developed in accordance with the requirements of ISO Guide 34 and ISO Guide 35.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods. The standard is confirmed homogeneous; therefore, the minimum sample size should be consistent with the end user's measurement capabilities.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

a. **Standard Weight and Analytical Balance**
   The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in "NIST Weights and Measures Measurement Assurance Program" with a certificate of measurement traceability to NIST primary standards.
   The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.

b. **Volumetric Device**
   The calibration of volumetric vessels are verified using the ASTM method E542.

c. **Thermometer**
   The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.

d. **Calibration Standards:**
   The Calibration Standard is traceable to SRM 3100 Series Spectrometric Standard Solutions. If an SRM is not available, a second source standard or independent lot is used.

Refer to Safety Datasheet (SDS) for hazardous information.

NOTICE: HPS products are intended for laboratory use only. All products should be handled and used by trained professional personnel. The responsibility for the safe handling and use of these products rests solely with the buyer and/or user. The data and information as stated was furnished by the manufacturer of the product. Single-Element Aqueous CRM

Product #: TA-1000511

SE Std Silver (Ag) – 1000 µg/mL

Lot #: 975475-80

Matrix: 5% HNO_3

Element	Certified Concentration & Uncertainty
Ag	996 ± 3 µg/mL (w/v)
	987 ± 3 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure silver (Ag) metal dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3151, lot #992212**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Preparation Information:

This Certified Reference Material (CRM) is generally prepared from single element standard solutions that are ISO 17034 certified reference materials and manufactured under appropriate laboratory conditions using the methods developed at NIST for SRM Spectrometric Standard Solutions. Sub-boiling distilled high-purity acid has been used to place the materials in solution and stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. Stability of this product is based upon rigorous short-term and long-term testing of the solution for the certified value. This testing includes, but is not limited to, the effect of temperature and packaging on the product. If, during the period of validity, a recall is instituted due to substantial changes in the stability of this product, the purchaser will be notified.

Homogeneity:

This product is determined to be homogeneous following in-house procedures developed in accordance with the requirements of ISO 17034 and ISO Guide 35.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods. The standard is confirmed homogeneous; therefore, the minimum sample size should be consistent with the end user's measurement capabilities.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

1. **Standard Weight and Analytical Balance**
   The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in 'NIST Weights and Measures Measurement Assurance Program' with a certificate of measurement traceability to NIST primary standards. The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.
2. **Volumetric Device**
   The calibrations of volumetric vessels are verified using the ASTM method E542.
3. **Thermometer**
   The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.
4. **Calibration Standards**
   The Calibration Standard is traceable to SRM 3100 Series Spectrometric Standard Solutions. If an SRM is not available, a second source standard or independent lot is used.

Refer to Safety Datasheet (SDS) for hazardous information.

NOTICE: HPS products are intended for laboratory use only. All products should be handled and used by trained professional personnel. The responsibility for the safe handling and use of these products rests solely with the buyer and/or user. The data and information as stated was furnished by the manufacturer of the product. Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.
