Baltimore, MD 21230

Subject: Transmittal of the Block F Underground Storage Tank Closure Report
(Appendix H to the Construction Completion Report)
Lockheed Martin Corporation; Middle River Complex
2323 Eastern Boulevard, Middle River, Baltimore County, Maryland

Dear Ms. Jackson:

Please find enclosed two hard copies with a CD of the above-referenced document. This document presents detailing underground storage tank (UST) removal activities at the Middle River Complex in Middle River, Maryland.

We respectfully request to receive Maryland Department of the Environment's approval by May 30, 2016.

Please let me know if you have any questions. My office phone is (301) 548-2209.

Sincerely,

Thomas D. Blackman
Project Lead, Environmental Remediation

# Section 1
# Narrative

On behalf of Lockheed Martin Corporation (Lockheed Martin), Tetra Tech Inc. (Tetra Tech) has prepared this report detailing underground storage tank (UST) removal activities at the Middle River Complex (MRC), located in Baltimore County at 2323 Eastern Boulevard, Middle River, Maryland. The MRC site is comprised of approximately 160 acres with 12 main buildings. The property includes an active industrial area and yard, perimeter parking lots, an athletic field, a vacant concrete-covered lot, a trailer and parts storage lot, and numerous grassy areas along the facility perimeter. Locked chain-link fences surround all exterior lots and the main industrial area. The site is bounded by Eastern Boulevard (Route 150) to the north, Dark Head Cove to the south, Cow Pen Creek to the west, and Martin State Airport (MSA) to the east.

A Phase I environmental site assessment (ESA) was conducted at Middle River Complex in February 2003 to identify recognized environmental conditions (RECs) through a desktop study of historical documents and cursory site inspection. The Phase I ESA identified Former Aviation Fuel underground storage tanks, including seven closed-in-place 1,000-gallon underground storage tanks beneath the Boat Launch Area's concrete tarmac, as REC #5. The tanks were reportedly last used in 1954 and closed in place in 1986-1987. During the Phase I ESA investigation, no closure records were available for these underground storage tanks, and MRC personnel interviewed did not know whether confirmatory sampling had been conducted as part of the tank closure.

Due to the unknown status of the underground storage tanks, Lockheed Martin included tank removal and disposal into the Block F soil remedial action plan (RAP) which evaluated soil remedial alternatives for the remediation of polycyclic aromatic hydrocarbons (PAHs), expressed as benzo(a)pyrene equivalent concentrations, in Block F soil (Tetra Tech, 2013). The Block F soil remedial action plan was submitted and approved by Maryland Department of the Environment Controlled Hazardous Substance Enforcement Division in December 2013. The underground storage tank removal was then incorporated in the *100% Soil Remedial Action Design for Blocks D,*

*D Panhandle, F, G, and H* (Tetra Tech, 2015b) that was approved by state regulators in January 2015.

The seven 1,000-gallon underground storage tanks and a network of piping were uncovered approximately seven feet below ground surface in the concrete tarmac area of Block F during remedial activities on August 3-10, 2015 (Appendix A). All seven tanks had been previously filled with a concrete slurry. A sheet piling system was installed to stabilize the excavation area and safely remove the tanks.

The seven 1,000-gallon tanks were removed on November 4, 2015 and confirmation samples were collected from the base of the excavation on November 5, 2015 as directed by Ellen Jackson, the onsite Maryland Department of the Environment Oil Control Program (OCP) inspector. No sidewall samples were collected from the underground storage tank area because the sidewalls were covered by the sheet-piling system installed to stabilize the excavation area during tank removal. No evidence of contamination (via visual inspection or elevated photoionization detector readings) were encountered during excavation and removal of the tanks. The tanks were cut, cleaned, and secured for recycling at an approved recycling facility.

The piping network extended approximately 100-feet from the area where the underground storage tanks were removed. The piping network consisted of seven two-inch steel pipes and two three-inch steel pipes, located approximately six feet below ground surface. All piping within the erosion and sediment controls was removed on November 13, 2015. The remaining pipe located outside of the erosion and sediment control was removed on December 28, 2015 when no rain was forecasted and the excavation area was backfilled on the same day. Confirmation base and sidewall samples were collected from the pipe excavation areas as directed by the Oil Control Program inspector. No visually impacted material or elevated photoionization detector readings above background concentrations were encountered during excavation and removal of the piping network. The pipes were cut, cleaned, and secured for off-site disposal at an approved waste disposal facility.

Photographic documentation of the removal of the underground storage tank and associated piping is in Appendix B. The subsequent sections of this closure report detail the soil sampling methodology, sampling results, and recommendations.

# Section 2
# Soil Sampling

Fourteen soil samples (F-VB-UST-1 through F-VB-UST-14) were collected from the bottom of the underground storage tank (UST) excavation area following removal of the tanks at Tax Block (Block) F. Verification samples were collected from a depth of fourteen feet below ground surface in areas directed by the onsite Maryland Department of the Environment Oil Control Program (OCP) inspector. No sidewall samples were collected from the UST area because of the sheet piling system installed to stabilize the excavation area.

Additionally, eight soil samples (F-VB-UST-P-1 through F-VB-UST-P-8) were collected from the bottom of the pipe excavation area and four soil samples (F-VS-UST-P-1 through F-VS-UST-P-4) were collected from the sidewalls of the pipe excavation area. Pipe verification base samples were collected as grab samples from the excavation base at a frequency of one sample per fifteen linear feet. Pipe verification sidewall samples were collected as grab samples at locations directed by the OCP inspector, at the depth the pipes were before removal.

All soil samples were placed in wide-mouth laboratory-supplied glass jars and immediately placed on ice in a clean cooler. The cooler temperature was maintained at less than or equal to four degrees Celsius. Soil samples were delivered to TestAmerica Inc. and analyzed as directed by the onsite OCP inspector for full-suite volatile organic compounds by United States Environmental Protection Agency (USEPA) Method 8260, for semivolatile organic compounds by USEPA Method 8270, for total petroleum hydrocarbon (TPH) -diesel-range organics and TPH-gasoline-range organics by Method 8015, and for polychlorinated biphenyls by USEPA method 8082.

Per the OCP inspector’s guidance, collection of groundwater samples was not required after tanks were removed. Sampling locations are in Appendix C.

# Section 3
# Analytical Results

Table 3-1 presents positive detections in the fourteen soil samples (F-VB-UST-1 through F-VB-UST-14) collected after the underground storage tanks (USTs) were removed. The soil samples were compared to Maryland Department of the Environment (MDE) soil standards (MDE, 2008). No exceedances of non-residential screening criteria were detected in the soil samples collected beneath the seven USTs. The complete analytical results for the base samples are in Appendix E.

Table 3-2 presents the detections in the soil sidewall and base samples collected after the piping network was removed. The pipe soil samples were compared to MDE soil standards. One exceedance of the MDE non-residential cleanup standard for benzo(a)pyrene (390 micrograms per kilogram [µg/kg]) was detected in the pipe removal area in sample F-VS-UST-P-3 at a concentration of 700 µg/kg. As presented in Section 1, polycyclic aromatic hydrocarbons, expressed as benzo(a)pyrene equivalents (BaPEq)[1], are the contaminant of concern evaluated in the Tax Block F soil remedial action plan (RAP). The BaPEq 95% upper confidence limit (UCL) for all pipe verification base and sidewall samples was calculated and compared to the site-specific remedial goal of 2,900 µg/kg as defined in the Block F RAP developed for the protection of industrial workers. As discussed below, the BaPEq RG for the industrial worker is also protective of the construction worker or utility worker (the likely receptor for subsurface soils).

The BaPEq 95% UCL was calculated to be 810 µg/kg which is less than the industrial worker remedial goal of 2,900 µg/kg. Additionally, the cancer risk calculated for the future industrial worker was $3\times10^{-6}$, a value less than the MDE cancer risk limit of $1x10^{-5}$. The BaPEq 95% UCL

[1] Per current United States Environmental Protection Agency (USEPA) guidance (USEPA, 1993b), concentrations of benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene can be combined in an adjusted risk-weighted concentration that is expressed in terms of benzo(a)pyrene toxicity. This calculated value, called a *benzo(a)pyrene equivalent concentration* (BaPEq), uses USEPA-recommended toxicity equivalency factors (TEFs) to estimate the potency of each of these polycyclic aromatic hydrocarbon (PAH) compounds relative to that of benzo(a)pyrene. The TEFs are then used to convert each individual PAH concentration into an equivalent concentration of benzo(a)pyrene; these values are summed to arrive at the calculated BaPEq concentration.

of 810 µg/kg was also less than a construction worker remedial goal of 16,000 µg/kg. It should be noted that remedial goals developed for BaPEq for construction workers or utility workers exceed those developed for a typical industrial worker primarily because the exposure frequency/duration assumptions for the typical industrial worker are more conservative than those for the construction worker or utility worker. Thus, the BaPEq remedial goal for the industrial worker is also protective of the construction worker or utility worker. The remedial goal of 16,000 µg/kg, based on a target risk level of $1\times10^{-5}$, was developed for construction workers exposed to BaPEq in subsurface soil in the 2012 human health risk assessment (HHRA) (Tetra Tech, 2012) (Appendix D).

A residual risk technical memorandum detailing the UCL calculation along with the ProUCL calculation output sheet and risk is in Appendix D[2]. Laboratory analytical reports are in Appendix E.

[2] Note that the subsurface soil samples collected for the Block F UST closure are not included in the surface soil data set used for the residual risk analysis (RRA) conducted for the remaining Block F soils (see Appendix D). The RRA evaluates cancer and noncancer risks to industrial workers exposed to surface (the top two feet) soil.

# Section 4
# Conclusions and Recommendations

Tax Block (Block F) of Middle River Complex (MRC) is an industrial site at 2323 Eastern Boulevard in Middle River, Maryland. Block F occupies approximately 11.94 acres in the southern portion of MRC. Block F is bounded on the north by the concrete foundation of former Building D (Block E) and properties formerly owned by Lockheed Martin now occupied by the Tilley Chemical Company and North American Electric. Block F is bounded to the east by the waterfront lot portion of Block D and Dark Head Cove, to the south by Dark Head Cove, and to the west by Cow Pen Creek. East of MRC is the Martin State Airport, totaling approximately 750 acres, which in 1975 was transferred from Martin Marietta to the State of Maryland.

Sampling results from the soil sample F-VS-UST-P-3 indicate the presence of benzo(a)pyrene above the Maryland Department of the Environment non-residential soil cleanup standard (390 µg/kg); however, when included in the overall benzo(a)pyrene equivalent (BaPEq) calculation of 810 µg/kg, the concentration is below the remedial goal of 2,900 µg/kg for industrial workers established and approved by the Maryland Department of the Environment for Block F (Appendix D). Additionally, the cancer risk to the industrial worker was calculated to be $3\times10^{-6}$ which is less than the $1\times10^{-5}$ cancer risk set in the remedial action plan for BaPEq in Block F soils. The BaPEq exposure point concentration calculation was also less than a remedial goal of 16,000 µg/kg based on a target risk level of $1\times10^{-5}$ developed for construction workers exposed to BaPEq in subsurface soil.

Because the current and future use of the site is industrial, and sampling results indicate the cancer risk posed by remaining benzo(a)pyrene in subsurface soil is below $1\times10^{-5}$ for industrial workers and construction workers, Lockheed Martin Corporation recommends performing no additional work with regard to the underground storage tanks removed from Block F.

# APPENDIX D—UNDERGROUND STORAGE TANK RESIDUAL RISK TECHNICAL MEMORANDUM

**Technical Memorandum**
**Block F Underground Storage Tank**
**Lockheed Martin, Middle River Complex**
**Middle River, Maryland**
**May 2016**

*Block F UST Pipe Samples*

Detected concentrations in the Block F underground storage tank (UST) pipe samples (eight base samples and four sidewall samples plus one duplicate) were compared to Maryland Department of the Environment (MDE) Cleanup Standards for residential and non-residential soil and United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) for residential and industrial soil, and concentrations of benzo(a)pyrene equivalents (BaPEq) were compared to the remedial goal (RG) of 2,900 µg/kg. BaPEq were calculated for the carcinogenic polycyclic aromatic hydrocarbons (cPAHs) benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3 cd)pyrene using a toxicity equivalence factor (TEF) approach based on the relative potency of each compound to that of benzo(a)pyrene (USEPA, 1993). The TEFs are used to convert each individual cPAH concentration into an equivalent concentration of benzo(a)pyrene; these individual concentrations are then summed. That summation is referred to as the BaPEq concentration. BaPEq concentrations were calculated two different ways. First, a BaPEq-half non-detect value was calculated using one-half of the detection limit of non-detected cPAHs to represent non-detected cPAH concentrations in the calculation. Second, the BaPEq-positive results value was calculated using a value of 0 for non-detected results. In either case, if all the cPAHs were not detected in a sample, then the sample quantitation limit for benzo(a)pyrene was used as the BaPEq concentration for that sample. The relevant data and calculations are presented in Table 1. The cPAHs were the only target analytes detected at concentrations exceeding the RSLs or MDE standards.

Concentrations of benzo(a)pyrene and BaPEq exceeded the MDE Cleanup Standards for residential and non-residential soil in one sample, F-VS-UST-P-3, and several additional detected concentrations of cPAHs exceeded the MDE Cleanup Standard for residential soil but did not exceed the MDE Cleanup Standard for non-residential soil (in samples F-VB-UST-P-8,

F-VS-UST-P-1-D, F-VS-UST-P-3, and F-VS-UST-P-4). Concentrations of BaPEq and benzo(a)pyrene exceeded the USEPA RSLs for industrial and residential soil in sample F-VS-UST-P-3, and concentrations of one or more cPAHs exceeded RSLs for residential soil only in samples F-VB-UST-P-8, F-VS-UST-P-1, F-VS-UST-P-1-D, F-VS-UST-P-2, F-VS-UST-P-3, and F-VS-UST-P-4. However, BaPEq concentrations reported for all samples collected are less than the RG for the industrial worker. It should be noted that RGs developed for BaPEq for construction workers or utility workers would exceed those developed for a typical industrial worker primarily because the exposure frequency/duration assumptions for the typical industrial worker are more conservative than those for the construction worker or utility worker. Thus, the BaPEq RG for the industrial worker is also protective of the construction worker or utility worker. An RG of 16,000 µg/kg was developed for construction workers exposed to BaPEq in subsurface soil in the 2012 human health risk assessment (HHRA) (Tetra Tech, 2012). A calculation showing how this RG was developed is attached. The construction worker RG is based on a target risk level of $1\times10^{-5}$.

Conservatively, a cancer risk estimate was developed assuming that an industrial worker might (hypothetically) be exposed to BaPEq concentrations in the soils. The analysis (presented below) demonstrates that the risk estimate would not exceed the MDE's cumulative cancer risk benchmark. This analysis is included for informational purposes only. Typical worker exposure to subsurface soils will be prevented by land use controls.

Because concentrations of individual cPAHs and the BaPEq (which represents the cPAHs) exceeded one or more screening criteria (i.e., the RSLs and MDE standards), the cPAHs were evaluated as chemicals of potential concern (COPC), and 95% upper confidence limits (UCLs) on the arithmetic mean for BaPEq (for both BaPEq-half non-detect and BaPEq-positive results) were calculated using USEPA ProUCL (Version 5.0.00) software (USEPA, 2013). Samples (all were subsurface soil collected greater than 2 feet below ground surface [bgs]) used for calculating the 95% UCLs and their BaPEq concentrations are listed in the following table:

| Sample | BaPEq-Half Non-Detect (µg/kg) | BaPEq-Positive Results (µg/kg) |
|---|---|---|
| F-VB-UST-P-1 | 0.75 U | 0.75 U |
| F-VB-UST-P-2 | 0.76 U | 0.76 U |
| F-VB-UST-P-3 | 0.78 U | 0.78 U |

| Sample | BaPEq-Half Non-Detect (µg/kg) | BaPEq-Positive Results (µg/kg) |
|---|---|---|
| F-VB-UST-P-4 | 0.77 U | 0.77 U |
| F-VB-UST-P-5 | 0.78 U | 0.78 U |
| F-VB-UST-P-6 | 0.75 U | 0.75 U |
| F-VB-UST-P-7 | 0.78 U | 0.78 U |
| F-VB-UST-P-8 | 150 | 150 |
| F-VS-UST-P-1-AVG | 20 | 19 |
| F-VS-UST-P-2 | 17 | 16 |
| F-VS-UST-P-3 | 1000 | 1000 |
| F-VS-UST-P-4 | 170 | 170 |

The 95% UCLs for the BaPEq are similar whether using one-half the value of non-detected results or positive results only in the calculation, and the higher of the UCLs, 810 µg/kg, was selected to represent the BaPEq. This UCL is less than the RG of 2,900 µg/kg. The ProUCL output file is included at the end of this appendix.

The 95% UCL was also used to calculate risk for an industrial worker, using the following equation:

$$\text{Cancer risk} = [(95\%\ \text{UCL} \times \text{Target risk}) / \text{Risk-based concentration}]$$

This simple risk estimation technique is presented in the User's Guide for the USEPA's RSL Tables. The target risk level in the calculation was set to $1\times10^{-6}$ (i.e., the RSL is set at a concentration representing the one-in-one million excess chance of developing cancer), and the RSL for industrial soil (USEPA, 2015) was used as the risk-based concentration.

For the industrial scenario, the residual risk would be:

$$\text{Cancer risk} = [(810\ \mu g/kg \times 1\times10^{-6}) / 290\ \mu g/kg] = 3\times10^{-6}.$$

The residual cancer risk for the industrial scenario ($3\times10^{-6}$) is less than MDE's cumulative cancer risk management benchmark of $1\times10^{-5}$.

*Block F UST Base Samples*

Detected concentrations in the Block F UST Area base samples (14 samples plus 1 duplicate) were compared to MDE and USEPA residential and industrial soil criteria. Detected results did not exceed the criteria, and cPAHs were not detected. Therefore, no COPCs were identified, and no further evaluation was necessary.

# CASE NARRATIVE

## Client: Tetra Tech, Inc.

## Project: MRC Soil Remedy Block F UST

## Report Number: 240-57597-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

**RECEIPT**

The samples were received on 11/6/2015 10:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.9º C and 2.2º C.

**VOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9), F-VB-UST-10-14 (240-57597-10), F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14) and F-VB-UST-DUP (240-57597-15) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were prepared and analyzed on 11/10/2015 and 11/11/2015.

2-Butanone (MEK), Naphthalene and Toluene were detected in method blank MB 240-206267/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

2-Butanone (MEK) was detected in method blank MB 240-206089/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) associated with batch 240-206051 recovered above the upper control limit for 1,1,1-Trichloroethane; 1,1,2-Trichloro-1,2,2-trifluoroethane; 2,2-Dichloropropane; Carbon tetrachloride; Dichloro-difluoromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 240-206267 was outside the method criteria for the following analyte(s): 2-Hexanone, Acetone, 2-Methyl-2-propanol, 2-Chloroethyl Vinyl Ether, 4-Methyl-2-Pentanone, 2,2-Dichloropropane, and 2-Butanone. An MRL standard at or below the reporting limit (RL) was analyzed with the affected samplesF-VB-UST-DUP (240-57597-15), (CCV 240-206267/4), (CCVIS 240-206267/3), (LCS 240-206267/5), (MB 240-206267/6), (240-57597-B-15-C MS) and (240-57597-B-15-D MSD) and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**VOLATILE ORGANIC COMPOUNDS (GCMS)**

Sample TB-110515 (240-57597-16) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 11/12/2015.

2-Butanone (MEK) was detected in method blank MB 240-206461/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) for analytical batch 206461 exceeded control criteria for Hexachlorobutadiene. The samples associated with this CCV were non-detect for the affected analyte. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compound was detected; therefore the data has been reported. No further corrective action was required. TB-110515 (240-57597-16)

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample. TB-110515 (240-57597-16)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9), F-VB-UST-10-14 (240-57597-10), F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14) and F-VB-UST-DUP (240-57597-15) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 11/09/2015 and analyzed on 11/11/2015.

The analyte benzaldehyde had an Rf below method recommendations in analytical batch 206233. An LODV was analyzed to demonstrate sensitivity for this analyte at the reporting limit for the following samples:F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14), F-VB-UST-DUP (240-57597-15), (LCS 240-205866/9-A), (MB 240-205866/8-A), (240-57597-D-15-E MS) and (240-57597-D-15-F MSD).

Two analytes had Rfs below method recommendations: Benzaldehyde and Hexachlorocyclopentadiene. A LODV was analyzed to demonstrate sensitivity for these analytes at the reporting limit for the following samples: F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9) and F-VB-UST-10-14 (240-57597-10).

The continuing calibration verification (CCV) associated with analytical batch 206233 recovered above the upper control limit for N-Nitrosodi-n-propylamine. The samples associated with this CCV were non-detect for this analyte; therefore, the data have been reported. The following samples are impacted: F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14), F-VB-UST-DUP (240-57597-15), (MB 240-205866/8-A), (240-57597-D-15-E MS) and (240-57597-D-15-F MSD).

The continuing calibration verification (CCV) for analytical batch 206233 was below method recommendations for the analyte benzaldehyde (>20%D). Benzaldehyde was present in sample F-VB-UST-11-14 (240-57597-11) at an estimated amount of 19ug/kg J. Had the response of benzaldehyde been within method recommendations the amount of benzaldehyde measured in the sample would likely have still been a small estimated concentration (J flag). Therefore, no additional analysis or corrective action was initiated. The results have been flagged accordingly and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GASOLINE RANGE ORGANICS**

Samples F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9), F-VB-UST-10-14 (240-57597-10), F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14) and F-VB-UST-DUP (240-57597-15) were analyzed for gasoline range organics in accordance with EPA SW-846 Method 8015C - GRO. The samples were prepared and analyzed on 11/11/2015 and 11/12/2015.

The matrix spike duplicate (MSD) precision for 206211 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**DIESEL RANGE ORGANICS (DRO)**

Samples F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9), F-VB-UST-10-14 (240-57597-10), F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12),

F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14) and F-VB-UST-DUP (240-57597-15) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015C - DRO. The samples were prepared on 11/09/2015 and analyzed on 11/10/2015 and 11/11/2015.

Total Petroleum Hydrocarbons (C10-C32) was detected in method blank MB 240-205788/22-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**POLYCHLORINATED BIPHENYLS (PCBS)**

Samples F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9), F-VB-UST-10-14 (240-57597-10), F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14) and F-VB-UST-DUP (240-57597-15) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 11/09/2015 and analyzed on 11/11/2015.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: F-VB-UST-5-14 (240-57597-5) and F-VB-UST-13-14 (240-57597-13).Reagents 2266653, 1848564 and 2283702.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**PERCENT SOLIDS**

Samples F-VB-UST-1-14 (240-57597-1), F-VB-UST-2-14 (240-57597-2), F-VB-UST-3-14 (240-57597-3), F-VB-UST-4-14 (240-57597-4), F-VB-UST-5-14 (240-57597-5), F-VB-UST-6-14 (240-57597-6), F-VB-UST-7-14 (240-57597-7), F-VB-UST-8-14 (240-57597-8), F-VB-UST-9-14 (240-57597-9), F-VB-UST-10-14 (240-57597-10), F-VB-UST-11-14 (240-57597-11), F-VB-UST-12-14 (240-57597-12), F-VB-UST-13-14 (240-57597-13), F-VB-UST-14-14 (240-57597-14) and F-VB-UST-DUP (240-57597-15) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 11/09/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-57597-1

| Lab Section | Qualifier | Description |
|---|---|---|
| GC/MS VOA | | |
| | B | Compound was found in the blank and sample. |
| | U | Indicates the analyte was analyzed for but not detected. |
| | F1 | MS and/or MSD Recovery is outside acceptance limits. |
| | F2 | MS/MSD RPD exceeds control limits |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| GC/MS Semi VOA | | |
| | U | Indicates the analyte was analyzed for but not detected. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| GC VOA | | |
| | U | Indicates the analyte was analyzed for but not detected. |
| | F2 | MS/MSD RPD exceeds control limits |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| GC Semi VOA | | |
| | B | Compound was found in the blank and sample. |
| | U | Indicates the analyte was analyzed for but not detected. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

| Batch Notes | |
|---|---|
| Balance ID | 1339907 |
| Na2SO4 Lot Number | 2204509 |
| Prep Solvent Lot # | 2258960 |

| Basis | Basis Description |
|---|---|
| T | Total/NA |

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

# Method 8082A

## Polychlorinated Biphenyls (PCBs) (GC) by Method 8082A

# CASE NARRATIVE

## Client: Tetra Tech, Inc.

## Project: LM MRC Block F UST Pipe Inv.

## Report Number: 240-57930-1
## Revision 1

This report was revised on 11/30/15 to include the Form III's in the final report that were initially not included due to a linking issue with the laboratory's computer system.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

**RECEIPT**

The samples were received on 11/14/2015 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.4º C.

**VOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10) and F-VS-UST-P-DUP (240-57930-11) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were prepared and analyzed on 11/18/2015, 11/19/2015 and 11/20/2015.

Toluene was detected in method blanks MB 240-207343/6 and MB 240-207560/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Acetone was detected in method blank MB 240-207720/8 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) analyzed in batch 240-207343 was outside the method criteria for the following analytes: Carbon Tetrachloride, 2-Hexanone, 2-Methyl-2-propanol, 2-Chloroethyl Vinyl Ether, 4-Methyl-2-pentanone, 1,1,1-Trichloroethane, 2,2-Dichloropropane, Trichlorofluoromethane, 2-Butanone, and tert-Amyl Methyl Ether. An MRL standard at or below the reporting limit (RL) was analyzed with the affected samples: F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-3 (240-57930-3), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10), F-VS-UST-P-DUP (240-57930-11), (CCV 240-207343/4), (CCVIS 240-207343/3), (LCS 240-207343/5), (LCS 240-207343/7), and (MB 240-207343/6), and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 240-207720 was outside the method criteria for the following analytes: trans-1,3-Dichloropropene and Dichloro-difluoromethane. An MRL standard at or below the reporting limit (RL) was analyzed with the

affected samples: F-VS-UST-P-2 (240-57930-2), (CCV 240-207720/5), (CCVIS 240-207720/4), (LCS 240-207720/6) and (MB 240-207720/8), and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 240-207560 was outside the method criteria for the following analytes: 2-Hexanone, Acetone, 2-Methyl-2-propanol, 2-Chloroethyl Vinyl Ether, Chloromethane, 4-Methyl-2-pentanone, and 2-Butanone. An MRL standard at or below the reporting limit (RL) was analyzed with the affected samples: F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-4 (240-57930-4), (CCV 240-207560/4), (CCVIS 240-207560/3), (LCS 240-207560/5), (LCS 240-207560/7) and (MB 240-207560/6) and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

An MS/MSD was analyzed in batch 240-207343. However due to poor purging or matrix interference the sample and MS/MSD could not be reported. Samples in the batch are: F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-3 (240-57930-3), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10), and F-VS-UST-P-DUP (240-57930-11).

Internal standard (ISTD) response for the following sample was outside control limits: F-VS-UST-P-4 (240-57930-4). The sample was re-extracted and/or re-analyzed with concurring results, and the original set of data has been reported.

Sample F-VS-UST-P-2 (240-57930-2) had a reanalysis that had different results than the original analysis. This is most likely due to non-homogeneity in the sample. Both runs are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**VOLATILE ORGANIC COMPOUNDS (GCMS)**

Sample TB-111315 (240-57930-12) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The sample was analyzed on 11/17/2015.

Methylene Chloride was detected in method blank MB 240-207096/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for analytical batch 240-207096 recovered outside control limits for 1,2,3-Trichlorobenzene. This has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed: TB-111315 (240-57930-12).

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample: TB-111315 (240-57930-12).

The continuing calibration verification (CCV) for analytical batch 207096 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required: TB-111315 (240-57930-12).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10) and F-VS-UST-P-DUP (240-57930-11) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 11/16/2015 and analyzed on 11/19/2015.

Bis(2-ethylhexyl) phthalate was detected in method blanks MB 240-206887/23-A and MB 240-206908/21-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Sample F-VS-UST-P-3 (240-57930-3)[2.5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**GASOLINE RANGE ORGANICS**

Samples F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10) and F-VS-UST-P-DUP (240-57930-11) were analyzed for gasoline range organics in accordance with EPA SW-846 Method 8015C - GRO. The samples were prepared and analyzed on 11/16/2015, 11/17/2015 and 11/18/2015.

Gasoline Range Organics [C6 - C10] was detected in method blank MB 240-207078/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**DIESEL RANGE ORGANICS (DRO)**
Samples F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10) and F-VS-UST-P-DUP (240-57930-11) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015C - DRO. The samples were prepared on 11/16/2015 and 11/17/2015 and analyzed on 11/18/2015 and 11/19/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**POLYCHLORINATED BIPHENYLS (PCBS)**
Samples F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10) and F-VS-UST-P-DUP (240-57930-11) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 11/16/2015 and analyzed on 11/18/2015 and 11/19/2015.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-6 (240-57930-10), F-VS-UST-P-DUP (240-57930-11), and (240-57880-E-1-A). Reagents: 2289919, 1848564, and 2283702.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**PERCENT SOLIDS**
Samples F-VS-UST-P-1 (240-57930-1), F-VS-UST-P-2 (240-57930-2), F-VS-UST-P-3 (240-57930-3), F-VS-UST-P-4 (240-57930-4), F-VB-UST-P-1 (240-57930-5), F-VB-UST-P-2 (240-57930-6), F-VB-UST-P-3 (240-57930-7), F-VB-UST-P-4 (240-57930-8), F-VB-UST-P-5 (240-57930-9), F-VB-UST-P-6 (240-57930-10) and F-VS-UST-P-DUP (240-57930-11) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 11/16/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-57930-1

| Lab Section | Qualifier | Description |
|---|---|---|
| GC/MS VOA | | |
| | B | Compound was found in the blank and sample. |
| | ^ | ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits. |
| | U | Indicates the analyte was analyzed for but not detected. |
| | * | ISTD response or retention time outside acceptable limits |
| | * | LCS or LCSD is outside acceptance limits. |
| | F1 | MS and/or MSD Recovery is outside acceptance limits. |
| | E | Result exceeded calibration range. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| GC/MS Semi VOA | | |
| | B | Compound was found in the blank and sample. |
| | U | Indicates the analyte was analyzed for but not detected. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| GC VOA | | |
| | B | Compound was found in the blank and sample. |
| | U | Indicates the analyte was analyzed for but not detected. |
