Notes:
1 - State of Maryland Department of the Environment (MDE) Cleanup Standards for Soil and Groundwater, June 2008.
2 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, November 2010. Cancer (C) benchmark value = 1E-06, non-cancer (N) Hazard index (HI) = 0.1.
3 - Concentrations exceeding the MDE Cleanup Standard are shaded gray with black font. Concentrations exceeding the RSL for residential soil are shaded black with white font. Concentrations exceeding both the MDE Cleanup Standard and the RSL are shaded red with white font.
4 - The value for acenaphthene is used as a surrogate for acenaphthylene.
5 - The value for pyrene is used as a surrogate for benzo(g,h,i)perylene and phenanthrene.
6 - One tenth the noncarcinogenic level is less than the carcinogenic level; therefore, the noncarcinogenic level is presented.
7 - The value is for PCB (total).
8 - The value is for polychlorinated biphenyls (high risk).
9 - The value is for trivalent chromium.
10 - The value is for mercury (inorganic/mercuric dichloride).
11 - The value is for mercuric chloride.
12 - The value is for vanadium and compounds.

C = Carcinogenic
N = Noncarcinogenic
NA = Not Applicable or Not Available
sat = Soil Saturation Concentration

Notes:
1 - State of Maryland Department of the Environment (MDE) Cleanup Standards for Soil and Groundwater, June 2008.
2 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, November 2010. Cancer (C) benchmark value = 1E-06, non-cancer (N) Hazard index (HI) = 0.1.
3 - Concentrations exceeding the MDE Cleanup Standard are shaded gray with black font. Concentrations exceeding the RSL for residential soil are shaded black with white font. Concentrations exceeding both the MDE Cleanup Standard and the RSL are shaded red with white font.
4 - The value is for xylenes.
5 - The value is for xylene, mixture.
6 - The value for acenaphthene is used as a surrogate for acenaphthylene.
7 - The value for pyrene is used as a surrogate for benzo(g,h,i)perylene and phenanthrene.
8 - The value is for PCB (total).
9 - The value is for polychlorinated biphenyls (high risk).
10 - The value is for trivalent chromium.
11 - The value is for mercury (inorganic/mercuric dichloride).
12 - The value is for mercuric chloride.
13 - The value is for vanadium and compounds.

C = Carcinogenic
N = Noncarcinogenic
NA = Not Applicable or Not Available
sat = Soil Saturation Concentration

Notes:
1 - State of Maryland Department of the Environment (MDE) Cleanup Standards for Soil and Groundwater, June 2008.
2 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, November 2010. Cancer (C) benchmark value = 1E-06, non-cancer (N) Hazard index (HI) = 0.1.
3 - Concentrations exceeding the MDE Cleanup Standard are shaded gray with black font. Concentrations exceeding the RSL for residential soil are shaded black with white font. Concentrations exceeding both the MDE Cleanup Standard and the RSL are shaded red with white font.
4 - The value for acenaphthene is used as a surrogate for acenaphthylene.
5 - The value is for benzo(b)fluoranthene.
6 - The value for pyrene is used as a surrogate for benzo(g,h,i)perylene and phenanthrene.
7 - One tenth the noncarcinogenic level is less than the carcinogenic level; therefore, the noncarcinogenic level is presented.
8 - The value is for PCB (total).
9 - The value is for polychlorinated biphenyls (high risk).
10 - The value is for trivalent chromium.
11 - The value is for mercury (inorganic/mercuric dichloride).
12 - The value is for mercuric chloride.
13 - The value is for vanadium and compounds.

C = Carcinogenic
N = Noncarcinogenic
NA = Not Applicable or Not Available
sat = Soil Saturation Concentration
