CASE NARRATIVE

Client: Tetra Tech, Inc

Project: MRC 2013 GW Sampling

Report Number: 240-23530-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6020 Metals and 7470A Mercury analysis were performed at the TestAmerica Irvine Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

Overview

The sample set for Lockheed Martin – MRC, SDG 240-23592-1 consists of three (3) aqueous environmental samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), perchlorate, and metals as outlined above.

The samples were collected by Tetra Tech on April 1, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Methods 8260B, 8270D, 6010C, 6020A, 7470A, 6850, 9060, dissolved gases by method RSK-175, and standard methods 160.1, 300.0, 310.1, and 350.3 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on

instrument A3UX15. Only non-detected results were reported for tert-butyl alcohol and vinyl acetate and these results were rejected (UR).

Minor

- The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for dichlorodifluoromethane, carbon disulfide, cis-1,3-dichloropropene, trans-1,3-dichloropropene, 1,2,3-trichloropropane, hexachlorobutadiene, and naphthalene for instrument A3UX15 on 04/29/13 @ 12:03. The positive carbon disulfide results for MRC-MW-22B-042313 and MRC-MW90B-042313 were qualified as estimated. No action was taken on the nondetected results in the affected samples.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Copper[(1)]	0.503 ug/L	2.5 ug/L
Molybdenum[(1)]	1.43 ug/L	7.15 ug/L
Silver[(2)]	0.167 ug/L	0.835 ug/L
Mercury[(3)]	0.110 ug/L	0.55 ug/L

(1) Maximum concentration present in MB 100766/1-A affecting all samples.
(2) Maximum concentration present in CCB 103335/32 affecting all samples.
(3) Maximum concentration present in CCB 101574/4-A affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level reported for copper, silver, and molybenum were qualified (B) as a result of laboratory blank contamination.

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

Sample MRC-MW90B-042313 was diluted two fold due to a concentration for trichloroethene greater than the linear calibration range of the instrument. This accounts for the elevated detection limits for the nondetected compounds.

The batch VOC matrix spike / matrix spike duplicate (MS/MSD) had several percent recoveries outside of the quality control limit in the MS and MSD. No action was taken on this basis because the MS/MSD was not performed on a Tetra Tech sample.

The CRDL percent recoveries for mercury on 05/01/13 at 13:00 and at 16:17 were > 120% quality control limit. No validation actions were required as all results were nondetects.

The contract required detection limit (CRDL) percent recovery for copper, nickel, and zinc on 04/30/13 at 12:47 were > 110% quality control limit affecting all samples. No validation actions were required as all results were either qualified as a result of blank contamination or were > 2X CRDL.

The metals MS/MSD performed on sample MRC-MW-59A-042313 had a percent recovery for barium greater than the quality control limit in the MSD. No action was taken on this basis because the post digestion, MS and LCS recoveries were acceptable.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data. Blank contamination resulted in the qualification of data for the metals fraction. A VOC CCAL %D noncompliance resulted in the qualification of VOC results.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: MRC GW Sampling

Report Number: 240-23592-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6020 Total Recoverable Metals and the 7470A Total Mercury analyses were performed at the TestAmerica Irvine laboratory. The 6850 Perchlorate analysis was performed at the TestAmerica Sacramento laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 04/24/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.3 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples TB-042313 (240-23592-1), MRC-MW90B-042313 (240-23592-2), MRC-MW-58A-042313 (240-23592-5), MRC-MW-22B-042313 (240-23592-7) and MRC-MW-57A-042313 (240-23592-8) were analyzed for volatile organic compounds (GC-MS)in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 04/29/2013.

Sample MRC-MW90B-042313 (240-23592-2)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MRC-MW90B-042313 (240-23592-2), MRC-MW91A-042313 (240-23592-3), MRC-MW-58A-042313 (240-23592-5) and MRC-MW-22B-042313 (240-23592-7) were analyzed for semivolatile organic compounds (GC-MS)in accordance with EPA SW-846 Method 8270D. The samples were prepared on 04/25/2013 and analyzed on 04/29/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 83555.bna

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

PERCHLORATE

Samples MRC-MW90B-042313 (240-23592-2) and MRC-MW75A-042313 (240-23592-4) were analyzed for Perchlorate in accordance with EPA SW846 Method 6850. The samples were prepared on 05/02/2013 and analyzed on 05/08/2013.

Due to the high concentration of Perchlorate, the matrix spike / matrix spike duplicate (MS/MSD) for batch 15484 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

No other difficulties were encountered during the perchlorate analyses. All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MRC-MW75A-042313 (240-23592-4), MRC-MW-59A-042313 (240-23592-6), MRC-MW-22B-042313 (240-23592-7) and MRC-MW-57A-042313 (240-23592-8) were analyzed for total recoverable metals (ICPMS)in accordance with EPA SW-846 Method 6020. The samples were prepared on 04/26/2013 and analyzed on 04/30/2013.

Copper and Molybdenum were detected in method blank MB 440-100766/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Barium failed the recovery criteria high for the MSD of sample MRC-MW-59A-042313MSD (240-23592-6) in batch 440-103335.

The matrix spike duplicate (/MSD) percent recovey and 100766 were outside control limits for Ba. This is attributed to matrix interferences.

No other difficulties were encountered during the metals analyses. All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MRC-MW75A-042313 (240-23592-4), MRC-MW-59A-042313 (240-23592-6), MRC-MW-22B-042313 (240-23592-7) and MRC-MW-57A-042313 (240-23592-8) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 05/01/2013.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Overview

The sample set for Lockheed Martin – MRC, SDG 240-23812-1 consists of six (6) aqueous environmental samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), dissolved gases, perchlorate, metals, and miscellaneous as outlined above.

The samples were collected by Tetra Tech on April 29, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Methods 8260B, 8270D, 6010C, 6020A, 7470A, 6850, 9060, dissolved gases by method RSK-175, and standard methods 160.1, 300.0, 310.1, and 350.3 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibrations relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and acetone on instrument A3UX11. Only non-detected results were reported for tert-butyl alcohol and vinyl acetate and these results were rejected (UR).

- The matrix spike / matrix spike duplicate (MS/MSD) performed on sample MRC-MW98B-042913 had zero percent recoveries for 2-chloroethyl vinyl, low recoveries for 1,1-dichloroethene, and high recoveries for tert-butyl alcohol in the MS and MSD. The nondetected 2-chloroethyl vinyl ether result for sample MRC-MW98B-042913 has been rejected (UR). The positive 1,1-dichloroethene result for sample MRC-MW98B-042913 has been qualified biased low (L). No action was taken on the tert-butyl alcohol result because the result was rejected previously due to a more severe noncompliance.

Minor

- The following compound was detected in the method blank at the maximum concentration indicated below:

Compound	Concentration	Action Level
Methane[1]	0.103 ug/L	0.515 ug/L

1 – Detected in the method blank associated with sample MRC-MW-48A-042913.

An action level of 5 times the maximum contaminant concentration was established for methane to evaluate laboratory contamination. Dilution factors and sample aliquots were taken into consideration during the application of all action levels. No action was taken on this basis because the methane result was greater than the action level.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Calcium[1]	216 ug/L	1080 ug/L
Magnesium[1]	72.4 ug/L	362 ug/L
Manganese[1]	1.2 ug/L	6 ug/L
Silver[2]	0.131 ug/L	0.655 ug/L
Cobalt[3]	0.168 ug/L	0.84 ug/L
Chloride[4]	0.264 mg/L	1.32 mg/L
Ammonia[5]	0.0524 mg/L	0.2885 mg/L

(1) Maximum concentration present in MB 84271/1-A affecting sample MRC-MW-48A-042913.
(2) Maximum concentration present in CCB 103278/18 affecting all samples.
(3) Maximum concentration present in CCB 103278/30 affecting all samples.
(4) Maximum concentration present in MB 84749/3 affecting sample MRC-MW-48A-042913.
(5) Maximum concentration present in MB 84533/7 affecting sample MRC-MW-48A-042913.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive result less than the blank action level reported for cobalt and ammonia for sample MRC-MW98A-042913 were qualified (B) as a result of laboratory blank contamination.

- The contract required detection limits (CRDLs) analyzed on 5/08/13 @ 11;52 and 11;54 had percent recoveries for barium, chromium, and nickel, and zinc > 110% and selenium < 80% quality control limit affecting all samples. Positive result < 2X CRDL reported for zinc in sample MRC-MW41A-042913 was qualified as biased high (K). Positive result < 2X CRDL reported for selenium in sample MRC-MW98A-042913 was qualified as estimated (J) due to conflicting directional bias. The nondetected selenium results for the affected samples were qualified as biased low (UL).

- The CRDL percent recovery for mercury on 05/06/13 at 12:11 was < 80% quality control limit. The nondetected mercury result for sample MRC-MW-48A-042913 was qualified as biased low (UL).

- The orthophosphate matrix spike (MS) performed on sample MRC-MW-48A-042913 had a percent recovery less than the quality control limit. The nondetected orthophosphate result has been qualified as biased low (UL).

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

Samples MRC-MW-111B-042913, MRC-MW-48A-042913, and MRC-MW98B-042913 were diluted for VOCs due to concentrations greater than the linear calibration range of the instrument. This accounts for the elevated detection limits for the nondetected compounds.

Samples MRC-MW-111B-042913 and MRC-MW98B-042913 were diluted due to 1,4-dioxane concentrations greater than the linear calibration range of the instrument.

The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for 1,1,2-trichlorotrifluoroethane, naphthalene, and 1,2,3-trichlorobenzene for instrument A3UX11 on 05/09/13 @ 10:28. No action was taken on this basis because only nondetected results were reported for the aforementioned compounds in the affected samples.

The laboratory control sample (LCS) associated with batch 85269/4 had a percent recovery greater than the quality control limit for tert-butyl alcohol. No action was taken on this basis because the tert-butyl alcohol results were previously rejected due to a more severe noncompliance.

The CRDL percent recovery for magnesium 05/02/13 at 14:11 was > 110% quality control limit affecting sample MRC-MW-48A-042913. No validation action was required as the result was > 2X CRDL.

The interfering analyte sodium was present in sample MRC-MW-48A-042913 at a concentration comparable to the concentration of sodium in the interference check sample (ICS) solution. Several analytes namely, antimony, cadmium, chromium, cobalt, and nickel were present in the ICS solution at concentrations that exceeded the absolute value of the instrument detection limit (IDL). No action was taken on this basis because either the results were nondetected or were greater than 2X the CRDL.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data. Blank contamination resulted in the qualification of data for the metals and miscellaneous fractions. A orthphosphate MS had a low percent recovery resulting in qualification of the data. MS/MSD noncompliances resulted in the qualification of data for VOC fraction. The CRDL percent recoveries for several analytes were outside the 90-110% quality control limit.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: MRC 2013 GW SAMPLING, MD

Report Number: 240-23812-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6020 Metals and the 7470A Mercury analyses were performed at the TestAmerica Irvine laboratory. The 6850 Perchlorate analysis was performed at the TestAmerica Sacramento laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

Overview

The sample set for Lockheed MRC, SDG 240-23844-1, consisted of six (6) aqueous samples including one (1) aqueous trip blank sample. All aqueous samples were analyzed for volatile organic compounds (VOC) as listed above. Five (5) aqueous samples were analyzed for the semi-volatile organic compound (SVOC) 1,4-dioxane as listed above. Three (3) aqueous samples were analyzed for total metals as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on April 30, 2013 and analyzed by TestAmerica Laboratories, Inc., North Canton and Irvine for the analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260B for VOCs, 8270D for SVOCs, 6020 for metals, and 7470A for mercury, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank/preparation results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, ICP serial dilution results, ICP interference results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol and acetone on instrument A3UX11 on 05/07/13. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and acetone were also less than the 0.05 criteria for instrument A3UX11 on 05/14/13 @ 10:01.
  Affected Sample: MRC-MW100A-043013
  Action: The sample non-detected results for tert-butyl alcohol and acetone were qualified rejected, (UR).

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol on instrument A3UX16 on 02/07/13. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 criteria for instrument A3UX16 on 05/09/13 @ 12:35.

  Affected Samples:

MRC-MW-93D-043013	MRC-MW-94D-043013
MRC-OF07-043013	TB-043013

  Action: The affected sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR). The positive tert-butyl alcohol result for sample TB-043013 was qualified estimated, (J).

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol on instrument A3UX17 on 05/07/13. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 criteria for instrument A3UX17 on 05/13/13 @ 10:30.

  Affected Sample: MRC-MW100B-043013

  Action: The affected sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR).

- Samples had positive VOC tentatively identified compound (TICs) results attributable to analytical column bleed.

Sample	TIC Column Bleed Related Analytes
MRC-OF07-043013	trimethyl silanol
TB-043013	trimethyl silanol

  Actions: Sample positive trimethyl silanol results were qualified rejected, (R), due to being associated with analytical column bleed.

Minor Problems

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The VOC continuing calibration verification (CCV) percent differences (%Ds) were greater than the 20% and greater than the 50% quality control limit for naphthalene and 1,2,3-trichlorobenzene for instrument A3UX11 on 05/14/13 @ 10:01.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC non-detected tert-butyl alcohol, vinyl acetate, and acetone non-detected sample results were rejected due to initial calibration average RRF and CCV RRF criteria non-compliances. A sample positive tert-butyl alcohol result was qualified for RRF criteria non-compliances. Sample VOC and metal results were qualified blank contamination. Sample VOC results were qualified for CCV %D and LCS %R non-compliances. Sample metal analyte results were qualified for CRDL %R non-compliances.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). Sample positive VOC trimethyl silanol results attributed to column bleed were rejected. A sample positive VOC TIC unknown analyte result was qualified as presumptively present.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260B, 8270D, 6020, 7470A, the Region III EPA Functional Guidelines for Organic Data Validation (9/94), and the Region III EPA Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analyses (April 1993).

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: 2013 MRC GW SAMPLING MD

Report Number: 240-23844-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6020 Metals and the 7470A Mercury analyses were performed at the TestAmerica Irvine laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 05/01/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.2 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples TB-043013 (240-23844-1), MRC-MW100A-043013 (240-23844-2), MRC-MW100B-043013 (240-23844-3), MRC-OF07-043013 (240-23844-4), MRC-MW-94D-043013 (240-23844-5) and MRC-MW-93D-043013 (240-23844-6) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 05/09/2013, 05/13/2013 and 05/14/2013.

Methylene Chloride was detected in method blank MB 240-85318/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Benzene was detected in method blank MB 240-85318/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,2,3-Trichlorobenzene and Naphthalene were detected in method blank MB 240-85645/5 at levels exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes were detected in method blank MB 240-85645/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Methylene Chloride was detected in method blank MB 240-85803/5 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Sample MRC-MW100B-043013 (240-23844-3)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 85318 recovered outside control limits for the following analytes: Tetrachloroethene and Trichloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 85318 recovered outside control limits for the following analyte(s): 1,1,2-Trichloro-1,2,2-trifluoroethane and Trichlorofluoromethane–has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

There was an MS/MSD analyzed in batch 85318 but could not be reported because the associated sample needed reanalyzed in a different batch.

The laboratory control sample (LCS) for batch 85803 recovered outside control limits for the following analyte(s): 1,2,3-Trichlorobenzene. This analyte has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

The method blank for preparation batch 85645 contained 1,2,3-trichlorobenzene and naphthalene above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MRC-MW100A-043013 (240-23844-2), MRC-MW100B-043013 (240-23844-3), MRC-OF07-043013 (240-23844-4), MRC-MW-94D-043013 (240-23844-5) and MRC-MW-93D-043013 (240-23844-6) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/06/2013 and analyzed on 05/08/2013, 05/09/2013 and 05/21/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for MRC-MW-93D-043013 (240-23844-6).

The following sample(s) contained one acid and/or one base surrogate outside acceptance limits: MRC-MW-93D-043013 (240-23844-6). The laboratory's SOP allows one acid surrogate and/or one base surrogate to be outside acceptance limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MRC-MW100B-043013 (240-23844-3), MRC-MW-94D-043013 (240-23844-5) and MRC-MW-93D-043013 (240-23844-6) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared and analyzed on 05/08/2013.

No difficulties were encountered during the metals analyses. All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples MRC-MW100B-043013 (240-23844-3), MRC-MW-94D-043013 (240-23844-5) and MRC-MW-93D-043013 (240-23844-6) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 05/16/2013.

No difficulties were encountered during the mercury analyses. All quality control parameters were within the acceptance limits.

Detection Limit Exceptions Summary

Client: Tetra Tech, Inc
Project/Site: 2013 MRC GW SAMPLING MD

TestAmerica Job ID: 240-23844-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Overview

The sample set for MRC Groundwater, SDG 240-23909-1 consisted of eight (8) aqueous environmental samples and a trip blank analyzed for volatile organic compounds (VOCs). Eight (8) aqueous environmental samples were analyzed for the select semivolatile organic compound (SVOC); 1,4-dioxane. One (1) aqueous environmental sample, MRC-OF-95D-050113, was analyzed for metals.

The samples were collected on May 1, 2013 and analyzed by Test America Laboratories Inc. All analyses were conducted in accordance with SW-846 Methods 8260B for VOCs, 8270D for SVOC, 6020 and 7470A for metals analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, matrix spike/matrix spike duplicate, laboratory control sample recoveries, internal standard recoveries, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration relative response factor (RRF) for tert-butyl alcohol was less than the 0.05 quality control limit on May 7, 2013 for instrument A3UX17 and the continuing calibration on May 14, 2013 @ 12:55. In addition, the RRF for vinyl acetate was less than the 0.05 quality control limit in the continuing calibration. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples.

- The VOC initial calibration RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on May 11, 2013 on instrument A3UX17 and the continuing calibration on May 13, 2013 @ 9:54. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected

(UR) in the affected samples.

- Tentatively identified compounds (TICS) containing siloxane were qualified as rejected (R) in several samples. This compound is indicative of column bleed.

Minor

- The continuing calibration percent difference (%D) for trichlorofluoromethane was greater than 50% on May 13, 2013 @ 9:54 on instrument A3UX16. The nondetected trichlorofluoromethane results were qualified as estimated (UJ) in the affected samples.

- The initial calibration relative standard deviation (%RSD) for 1,4-dioxane was greater than the 15% quality control limit on April 11, 2013 on instrument A4HP10. The nondetected 1,4-dioxane results were qualified as estimated (UJ).

- The CRQL percent recoveries (%Rs) of several analytes were greater than the 110% quality control limit. The analytes were barium, chromium, nickel, zinc, copper, silver and vanadium. The positive silver result less than 2X CRQL was qualified as estimated (J) because of conflicting directional bias.

- Positive results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

Notes

The continuing calibration %Ds for dichlorodifluoromethane, bromomethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, tert-butyl alcohol, 2-butanone, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, naphthalene, 1,2,3-trichlorobenzene, ethyl-t-butyl ether and tert-amyl-methyl ether were greater than the 20% quality control limit but less than 50% on May 14, 2013 @ 12:55 and 13:17 on instrument A3UX17. No action was taken on the nondetected results of the aforementioned analytes.

The continuing calibration %Ds for 1,1,2-trichlorofluoromethane, carbon tetrachloride, bromoform and diisopropyl ether were greater than the 20% quality control limit but less than 50% on May 13, 2013 @ 9:54 and 10:17 on instrument A3UX16. No action was taken on the nondetected results of the aforementioned analytes.

The laboratory control sample (LCS) percent recovery (%R) of diisopropyl ether was greater than the upper quality control in batch 240-85619. No action was taken on the nondetected diisopropyl ether results in the affected samples.

The matrix spike/ matrix spike duplicate (MS/MSD) %Rs of 2-chloroethyl vinyl ether were 0% in sample 240-24004-25. No action was taken because this sample is not included in this SDG.

Contamination was detected for several metals in the laboratory method blank, continuing calibration blanks and initial calibration blank.

Analyte	Maximum Concentration (ug/L)	Action Level (ug/L)
Antimony (1)	0.332	1.66
Nickel (2)	0.601	3.005

(1) Maximum concentration detected in the initial calibration blank analyzed on May 9, 2013 @ 19:00.

(2) Maximum concentration detected in the continuing calibration analyzed on May 9, 2013 @ 21:58.

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were taken into account when applying the action level. No action was taken because the detected nickel result was greater than the action level.

The serial dilution of barium, chromium, copper and vanadium were greater than the 10% quality control limit. No action was taken because the serial dilution was not conducted on the sample in this SDG.

Nondetected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC RRFs for tert-butyl alcohol and vinyl acetate were less than the quality control limit resulting in the rejection of nondetected results. The continuing calibration %D for trichlorofluoromethane was greater than 50%. The initial calibration %RSD for 1,4-dioxane was greater than 15%. The CRQL %Rs of several analytes were outside quality control limits.

Other Factors Affecting Data Quality: TICs containing siloxane were qualified as rejected. Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and Region III modifications to U.S.EPA National Functional Guidelines for Inorganic Data Validation (April 1993). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: 2013 MRC GW Sampling

Report Number: 240-23909-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6020 Metals and the 7470A Mercury analyses were performed at the TestAmerica Irvine laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 05/02/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 4.8 and 5.6C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MRC-OF08A-050113 (240-23909-1), TB-050113 (240-23909-2), MRC-OF08B-050113 (240-23909-3), MRC-OF08C-050113 (240-23909-4), MRC-OF08D-050113 (240-23909-5), MRC-OF-06B-050113 (240-23909-6), MRC-OF-06C-050113 (240-23909-7), MRC-OF-06A-050113 (240-23909-8) and MRC-OF-95D-050113 (240-23909-9) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 05/13/2013 and 05/14/2013.

1,2,3-Trichlorobenzene and Methylene Chloride were detected in method blank MB 240-85830/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The laboratory control sample(LCS) for batch 85619 recovered outside control limits for the following analyte(s): Isopropyl ether--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

There was an MS/MSD analyzed in batch 85830 but could not be reported because the associated sample needed reanalyzed in a different batch for the following samples MRC-OF08B-050113 (240-23909-3), MRC-OF08C-050113 (240-23909-4), TB-050113 (240-23909-2).

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples MRC-OF08A-050113 (240-23909-1), MRC-OF08B-050113 (240-23909-3), MRC-OF08C-050113 (240-23909-4), MRC-OF08D-050113 (240-23909-5), MRC-OF-06B-050113 (240-23909-6), MRC-OF-06C-050113 (240-23909-7), MRC-OF-06A-050113 (240-23909-8) and MRC-OF-95D-050113 (240-23909-9) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/07/2013 and analyzed on 05/09/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 84947.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)

Sample MRC-OF-95D-050113 (240-23909-9) was analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared and analyzed on 05/09/2013.

Nickel was detected in method blank MB 440-103356/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Sample MRC-OF-95D-050113 (240-23909-9) was analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 05/16/2013.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

Overview

The sample set for Lockheed MRC, SDG 240-24060-1, consists of four (4) aqueous environmental samples and one trip blank. This SDG contained no field duplicate pairs.

All samples were analyzed for volatile organic compounds (VOCs). Samples MRC-MW-96D-050613, MRC-OF-02A-050613, MRC-OF-02B-050613, and MRC-OF-02C-050613 were analyzed for 1,4-dioxane. Sample MRC-MW-96D-050613 was analyzed for target analyte list (TAL) metals. The samples were collected by Tetra Tech May 6th, 2013 and analyzed by TestAmerica. VOC analyses were conducted using method 8260B. 1,4-dioxane analyses were conducted using method 8270D. Metals analyses were conducted using method 6020A. Mercury analyses were conducted using method 7470A

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, ICP internal standard recoveries, ICP serial dilution, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on 5/7/13 on instrument A3UX11 had a relative response factor < 0.05 for tert-butyl alcohol and acetone. All samples were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 5/17/13 on instrument A3UX11 had a relative response factor < 0.05 for tert-butyl alcohol and acetone. All samples were affected. Non-detected results were qualified as rejected (UR).

Minor Problems-

- The continuing calibration analyzed on 5/17/13 on instrument A3UX11 had a percent difference >25% for acetone, tert-butyl alcohol, 1,2,4-trichlorobenzene, naphthalene, 1,2,3-trichlorobenzene. All samples were affected. Non-detected 1,2,4-trichlorobenzene, naphthalene, 1,2,3-

trichlorobenzene results were qualified as estimated (UJ).

- The CRDL standard analyzed on 5/9/13 had a percent recovery >110% for barium, chromium, nickel, zinc, copper, and silver and a percent recovery < 90% for arsenic. Sample MRC-MW-96D-050613 was affected. The non-detected arsenic result was qualified as biased low (UL). Positive barium and nickel results were qualified as biased high (K). All other results were either non-detected or greater than 2X CRDL.

- The serial dilution had a percent difference > 10% for vanadium. The non-detected vanadium results for sample MRC-MW-96D-050613 was qualified as estimated (UJ).

Notes

Non-detected results were reported at the MDL.

The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Nickel [1]	0.57 ug/L	2.8 ug/L
Mercury [2]	0.1 ug/L	0.5 ug/L
Antimony [3]	0.33 ug/L	1.65 ug/L
Cobalt [3]	0.11 ug/L	0.55 ug/L
Silver [3]	0.10 ug/L	0.55 ug/L

[1] Maximum concentration found in preparation blank affecting sample MRC-MW-96D-050613.
[2] Maximum concentration found in a calibration blank affecting MRC-MW-96D-050613.
[3] Maximum concentration found in a calibration blank affecting sample MRC-MW-96D-050613.

An action level of 5X or 10X (methylene chloride) the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was warranted as sample results were wither non-detected or greater than the blank action level.

The laboratory control spike had a percent recovery less than the lower control limit for tert-butyl alcohol. No validation action was warranted as sample results were previously qualified as rejected.

Sample MRC-OF-02A-050613 had limited sample volume which for the 1,4-dioxane analysis which resulted in slightly elevated MDL.

No MS/MSD was provided for 1,4-dioxane analyses.

Executive Summary

Laboratory Performance: Continuing calibration and CRDL non-compliances for acetone, tert-butyl alcohol, 1,2,4-trichlorobenzene, naphthalene, 1,2,3-trichlorobenzene, barium, chromium, nickel, zinc, copper, silver, arsenic resulted in the qualification of sample results.

Other Factors Affecting Data Quality: The serial dilution non-compliance resulted in the qualification of a vanadium result.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993) and U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: MRC Groundwater Sampling

Report Number: 240-24060-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6020 Metals and the 7470A Mercury analyses were performed at the TestAmerica Irvine laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT
The samples were received on 05/07/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.4 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples TB-050613 (240-24060-1), MRC-OF-02C-050613 (240-24060-2), MRC-OF-02B-050613 (240-24060-3), MRC-OF-02A-050613 (240-24060-4) and MRC-MW-96D-050613 (240-24060-5) were analyzed for volatile organic compounds (GC-MS)in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 05/17/2013.

The laboratory control sample (LCS) for batch 86304 recovered outside control limits for the following analyte(s): 2-Methyl-2-propanol. This analyte has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No other difficulties were encountered during the VOCs analyses. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples MRC-OF-02C-050613 (240-24060-2), MRC-OF-02B-050613 (240-24060-3), MRC-OF-02A-050613 (240-24060-4) and MRC-MW-96D-050613 (240-24060-5) were analyzed for semivolatile organic compounds (GC-MS)in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/12/2013 and analyzed on 05/16/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 85576.

No other difficulties were encountered during the SVOCs analyses. All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICPMS)
Sample MRC-MW-96D-050613 (240-24060-5) was analyzed for total recoverable metals (ICPMS)in accordance with EPA SW-846 Method 6020. The samples were prepared and analyzed on 05/09/2013.

Nickel was detected in method blank MB 440-103356/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL

and/or RL, the result has been "B" flagged.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Sample MRC-MW-96D-050613 (240-24060-5) was analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 05/20/2013.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.
