Subject: Transmittal of the Groundwater Monitoring Report April–June 2015
Lockheed Martin Middle River Complex, Middle River, Maryland

Dear Mr. Carroll:

For your review, please find enclosed two hard copies with CD of the above-referenced document. This report groundwater monitoring report summarizes the April–June 2015 groundwater sampling round at Lockheed Martin's Middle River Complex in Middle River, Maryland. If possible, we respectfully request to receive MDE's comments by February 1, 2016.

Please let me know if you have any questions. My office phone is (301) 548-2227.

Sincerely,

Lynnette Drake
Remediation Analyst, Environmental Remediation

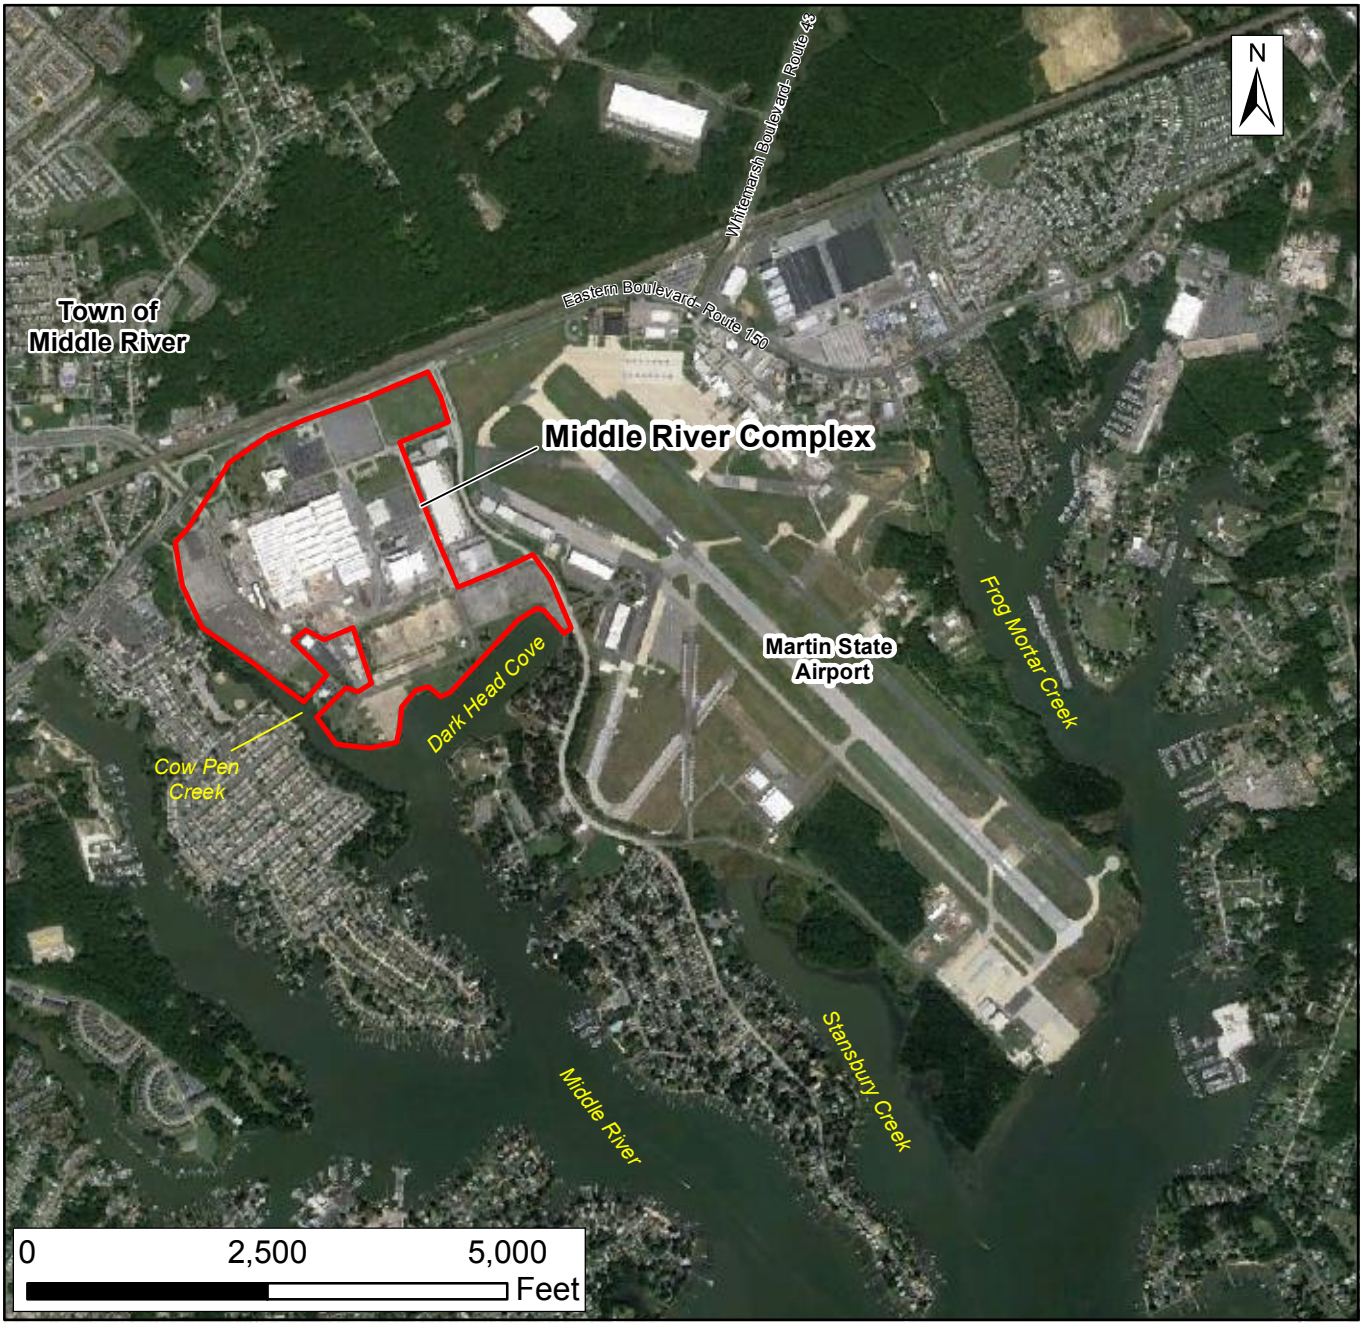
Section 1
Introduction

This groundwater monitoring report summarizes the April–June 2015 groundwater sampling round at the Lockheed Martin Corporation (Lockheed Martin) Middle River Complex (MRC) in Middle River, Maryland. Figure 1-1 shows the location of the Middle River Complex. This sampling event provides a current round of groundwater levels and chemical data for selected wells as part of ongoing environmental investigations at the facility. These data will be used to better understand the nature and extent of chemical contamination in groundwater, evaluate the trends of chemical plumes in on-site groundwater, and evaluate the natural attenuation of groundwater chemicals of concern at the Middle River Complex.

Groundwater samples were analyzed for volatile organic compounds (VOCs), 1,4-dioxane (a semivolatile organic compound [SVOC]), polychlorinated biphenyls (PCBs), metals, natural-attenuation assessment (NAA) parameters, and perchlorate. All wells were inspected to assess their integrity and any need for repairs during the sampling event; 13 wells were repaired. This report is organized as follows:



Section 2—Site Background: Briefly summarizes the site and references recent reports containing detailed background information related to groundwater.

Section 3—Investigational Approach: Presents the technical approach to the investigation and describes the field methodologies used.

Section 4—Investigation Results: Presents the investigation results.

Section 5—Summary: Summarizes the investigation findings.

Section 6—References: Cites references used to compile this report.

Section 2
Site Background

2.1 MIDDLE RIVER COMPLEX HISTORY AND SITE CHARACTERISTICS

The Middle River Complex (MRC), part of the Chesapeake Industrial Park at 2323 Eastern Boulevard in Middle River, Maryland, is approximately 11.5 miles northeast of downtown Baltimore. It comprises approximately 161 acres, including 12 main buildings, an active industrial area and yard, perimeter parking lots, an athletic field, a vacant concrete lot, trailer and parts storage areas, and numerous grassy spaces along its perimeter. It is bounded by Eastern Boulevard (Route 150) to the north, Martin State Airport (MSA) to the east, Dark Head Cove to the south, and Cow Pen Creek to the west. Figure 2-1 is a map showing the MRC layout.

MRC is owned by LMC Properties, Inc. (LMCPI), a subsidiary of Lockheed Martin Corporation (Lockheed Martin). Currently, LMCPI's primary activities at the MRC are facility and building management and maintenance. The main site tenant, MRA Systems, Inc., (MRAS) (a subsidiary of General Electric Company), designs, manufactures, fabricates, tests, overhauls, repairs, and maintains aeronautical structures, parts, and components for military and commercial applications. Lockheed Martin Mission Systems & Training (a Lockheed Martin business segment) conducts engineering and fabricates, assembles, tests, and otherwise supports vertical-launch systems. Applied NanoStructured Solutions LLC (a subsidiary of Lockheed Martin) also occupies a portion of the MRC, and is engaged in research and design of nanotechnology applications.

In 1929, the Glenn L. Martin Company (GLM) (a predecessor entity of Lockheed Martin) acquired large parcels of undeveloped land in Middle River, Maryland on which to manufacture aircraft for United States government and commercial clients. In the early 1960s, GLM merged with American-Marietta Company to form Martin Marietta Corporation. Around 1975, the adjacent eastern airport area (currently MSA), comprised of approximately 750 acres, was transferred to the State of Maryland. In 1995, Martin Marietta Corporation merged with Lockheed to form Lockheed Martin Corporation. Shortly after the merger, General Electric Company acquired most

of Lockheed Martin's aeronautical business in Middle River, and MRAS began operations at the site.

The MRC is an industrial facility surrounded primarily by commercial, industrial, and residential establishments. Six facilities adjacent to the MRC comprise the remaining portion of the Chesapeake Industrial Park. These include Tilley Chemical Company, Inc. (a food- and pharmaceutical-chemical distributor), North American Electric, Inc. (an industrial and commercial electrical contractor), Johnson and Towers (a heavy-duty automotive and boat repair and maintenance company), Ashley Furniture, Exxon (a gasoline filling station and convenience store), and the Middle River Post Office. Residential developments are on the opposite shores of Cow Pen Creek, Dark Head Cove, and Dark Head Creek, and north of Eastern Boulevard (Route 150).

2.2 GROUNDWATER

Investigations of MRC groundwater began in 1988 and are ongoing. Groundwater at MRC is encountered at depths ranging from less than one foot to nearly 18 feet below grade. Shallow groundwater follows site topography and flows radially from the hydraulically upgradient northern portion of the MRC at Eastern Boulevard and immediately south of Buildings A, B, and C to the southeast, south, and southwest toward Dark Head Cove and Cow Pen Creek. Deeper groundwater is typically under hydraulically confined conditions at the MRC. Lithologic logging of the soils beneath the MRC has identified a very heterogeneous stratigraphy. Underlying soils are composed primarily of silty sands, fine- to medium-grained sands, silty clays, clayey silts, and plastic clay, with the primary lithology being clay to silty clay. Areas along the waterfront have been filled to their present elevation over past decades.

A risk assessment (Tetra Tech, Inc., [Tetra Tech], 2006) identified trichloroethene (TCE), tetrachloroethene (PCE), vinyl chloride (VC), benzene, and certain metals as the most significant contaminants in groundwater at the MRC. The two largest groups of organic chemicals of concern are chlorinated volatile organic compounds (cVOCs) and petroleum-related hydrocarbons. CVOCs include the commonly used solvents PCE and TCE, which degrade into a variety of other cVOCs and volatile organic compounds (VOCs). CVOCs are in groundwater in several areas of the facility; three areas of elevated cVOCs (Figure 2-2) in groundwater are targeted by the current groundwater remedy program (Tetra Tech, 2012a).

Petroleum-based fuels such as gasoline have numerous chemical constituents. Several VOCs associated with fuels are fairly soluble in groundwater and are therefore mobile in the subsurface. The most commonly detected petroleum-VOCs at MRC are benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl *tert*-butyl ether (MTBE).

1,4-Dioxane is also a groundwater chemical of concern because it has been detected at concentrations above its selected screening-concentration for MRC groundwater, and because it is an emerging contaminant nationwide. The screening level used for 1,4-dioxane is the California Department of Health Services advisory level of 3 µg/L (see Section 4.2); Maryland currently has no drinking water or groundwater standard/advisory for 1,4-dioxane. Metals (primarily nickel, cobalt, beryllium, and zinc) have also been detected in groundwater at concentrations above Maryland Department of the Environment (MDE) groundwater standards.

The MRC *Groundwater Response Action Plan* (Tetra Tech, 2012a) was approved by MDE in 2012. Construction of the groundwater treatment remedy for cVOCs in Tax Blocks E, G, and I began in early summer 2013. During installation of the groundwater remedy in Block E, two underground storage tanks (USTs) were discovered near the foundation of former Building D. UST 2, which contained high concentrations of TCE, was identified and removed during installation of the *in situ* bioremediation system. UST 1, which was nearly empty when discovered, was also removed. Subsequent investigations indicate that the mass and concentrations of TCE in the immediate vicinity of UST 2 would not be readily addressed solely via *in situ* bioremediation. With MDE approval, Tetra Tech installed a multi-phase extraction (MPE) system in Block E in 2014. The system is scheduled to cease operating in late 2015. The purpose of the MPE system is to remove TCE mass from the subsurface near former UST 2.

This groundwater response action is being conducted in accordance with a pending consent order with MDE. The groundwater response action uses enhanced anaerobic-bioremediation in three areas of MRC to treat areas with high groundwater concentrations of TCE. The response action is being conducted in the southeastern TCE area (Block E), the southwestern TCE area (Block G), and the northern TCE area (Block I). These three areas are shown on Figure 2-2.

Semi-permanent injection wells were installed to inject biological amendments into the subsurface. These wells are arranged in rows and connected via underground conveyance piping to injection equipment in each of three TCE areas. The injection equipment and controls are housed in two

modified shipping containers (the equipment modules). The system allows flexibility in selecting and setting system parameters, such as the number of operational injection wells, substrate type and dosage, and injection rates, volumes, and durations. A tracer study was done at Blocks G and I (May–July 2014) before the full-scale injection event to evaluate the effects of injection and determine the main injection parameters for a full-scale injection event (*Operation and Maintenance Plan for Groundwater Remediation System Appendix A,* [Tetra Tech, 2014a]).

The first injection was made in Blocks G and I in February–June 2015. Block E operations are delayed by the need to address the TCE source associated with UST 2 found in the injection area, and will begin later in 2015. The general operational procedures and details of the system operation are described in *Operation and Maintenance Plan for Groundwater Remediation System* (Tetra Tech, 2014a). Additional details regarding MRC background and history, including details of previous environmental investigations and discussions of contaminant source areas, are in the response action plan (RAP) and subsequent groundwater monitoring reports (Tetra Tech, 2009, 2012a–d; 2013; 2014b).

Section 3
Investigational Approach

The 2015 groundwater sampling program for the Middle River Complex (MRC) included synoptic groundwater-level measurements and the collection of groundwater samples for laboratory chemical analyses. This sampling round augments groundwater data and level measurements obtained from 2003–2014.

3.1 SYNOPTIC GROUNDWATER-LEVEL MEASUREMENTS

A synoptic round of groundwater level measurements was conducted on March 31–April 1, 2015. The air- and water-tight sanitary seals on flush-mounted well casings were opened the day before water levels were measured to allow air pressure and groundwater in the casings to reach equilibrium. Static water levels were measured using a graduated electronic-sounding water-level meter. The static water level was determined by lowering the meter's probe into the well until the liquid level-indicator emitted an audible tone, indicating the air/water interface. The water level was read from the probe cable and recorded to the nearest 0.01 foot as the depth to water, with respect to the top of the plastic well casing. Water levels and the time of measurement were recorded for the monitoring wells on a field form and used to develop groundwater-elevation contour maps for the surficial aquifer. Several wells could not be accessed due to large equipment on the well covers. Other wells were not measured because they provided redundant data for adjacent or nearby wells. Groundwater-level field forms are in Appendix A.

3.2 GROUNDWATER SAMPLING

Groundwater samples were collected from 122 on-site wells from April 13–June 25, 2015. Chemical analyses of groundwater samples varied by well and depended on the data needed for that particular area. Most samples were analyzed for volatile organic compounds (VOCs) and total (i.e., unfiltered) metals. Less frequent chemical analyses include 1,4-dioxane (a semivolatile organic compound [SVOC]), perchlorate (a component of propellants), polychlorinated biphenyls (PCBs), dissolved gasses (i.e., methane, ethane, and ethane [MEE]), and natural-attenuation

assessment (NAA) parameters. Wells sampled for this round are shown on Figure 3-1; the chemical analyses performed for each sample are listed in Table 3-1.

Some variations from the 2014–2015 work plan occurred during the 2015 sampling round. An attempt was made to sample well MW08B, which was scheduled to be sampled for VOCs, 1,4-dioxane, and perchlorate. However, well MW08B appeared to be compromised and was not sampled this round. Well MW72B was sampled for 1,4-dioxane in place of the sample that was scheduled for well MW08B. Additionally, wells MW113A and MW114A were sampled for 1,4-dioxane because it has been detected in earlier sampling rounds (see Table 3-1 of the 2014–2015 work plan). Well MW113A was also sampled for perchlorate, because a recent sampling round (2013) indicated a concentration above the groundwater standard of 2.6 µg/L, but a second round (2014) indicated a perchlorate concentration below the standard.

Wells were purged and sampled using the following procedures:

- ***Well purging***—Monitoring wells were purged before sample collection using low-flow-purging techniques via a peristaltic pump (fitted with dedicated, disposable, Teflon®-lined tubing) positioned in the center of the well's saturated-screen length. The pumping rate during purging ranged between 100 to 300 milliliters per minute (ml/min) and was constantly measured using a graduated cylinder. The purge rate was adjusted but was not allowed to fall below 100 ml/min, to minimize drawing the water level below its static water level.

  Water-level-drawdown measurements and groundwater parameters were collected every five to 10 minutes until purging was complete. Groundwater parameters (including pH [a measure of acidity and alkalinity], temperature, specific conductance, dissolved oxygen [DO], oxidation-reduction potential [ORP], and turbidity) were also measured during purging. These data were recorded on low-flow-purge data sheets. Water-quality parameters were measured with an inline water-quality meter. Turbidity readings were collected using a separate turbidity meter. Groundwater purging and sample record sheets are in Appendix B.

  Purging was considered complete when the monitored water-quality parameters stabilized, when three saturated well-casing volumes had been removed, or the well had been purged dry. Stabilization was considered achieved when three consecutive readings taken at five-minute intervals were within ±0.1 standard units for pH, ±3% for specific conductance and temperature, ±10% for DO and ORP, and less than 10 nephelometric turbidity units for turbidity. If the monitoring well was purged dry, the water level was allowed to recover at least 80% of its initial static water level before groundwater sampling occurred. All purged water was collected in United States Department of Transportation (USDOT)-approved 55-gallon steel drums that were staged in the central portion of the MRC D-lot.

- ***Sample collection—***Monitoring wells were sampled after purging, using the same dedicated tubing or submersible pump that had been used during purging. Groundwater was pumped directly into certified-clean sample containers supplied by the analytical laboratory. Sample containers for VOC analyses were filled directly, to minimize VOC losses. Groundwater samples for VOCs were collected first, followed by samples to be analyzed for 1,4-dioxane, PCBs, metals, perchlorate, and NAA parameters.

3.3 WELL REPAIR

All MRC monitoring wells were inspected during the 2015 groundwater sampling program, and 13 wells were repaired. Documentation for the 2015 inspection includes a written survey of existing well conditions and a list of the repairs required. Groundwater was sampled before repairs were made; the condition of the wells requiring repair did not affect sampling or groundwater quality. Needed repairs included replacing well cover parts (four wells) and replacing concrete pads and flush-mounted covers (nine wells). Details of these well repairs are in the *2015 Monitoring Well Repair Report* (Tetra Tech, Inc. [Tetra Tech], 2015) and are not discussed further herein.

3.4 LABORATORY ANALYSES

Samples from the subject wells were analyzed for the following chemicals (Table 3-1):

- VOCs, by United States Environmental Protection Agency (USEPA) Method 8260C
- 1,4-dioxane, by USEPA Method 522
- PCBs, by USEPA Methods 8082A (Aroclors) and 680 (PCB homologs)
- total metals, by USEPA Methods 6020A, 6010C, and 7470A (mercury)
- perchlorate, by USEPA Method 6850
- NAA parameters, by USEPA SW846 protocols (for nitrate/nitrite, ammonia nitrogen, orthophosphate, potassium, sulfate, chloride, total alkalinity, total iron, total manganese, silicon dioxide, total dissolved solids, and dissolved organic carbon)
- MEE by USEPA Method RSK-175

Samples were analyzed at a fixed-base laboratory by ALS Environmental of Middletown, Pennsylvania. Duplicates were collected at a rate of 5% (1:20 basis) to evaluate laboratory analytical precision. Trip blank (TB) samples were analyzed for VOCs for quality assurance (QA)

and quality control (QC). Trip blanks were submitted at a rate of one per cooler of VOCs per day. Matrix-spike/matrix-spike-duplicate samples were also collected and analyzed on a 1:20 basis.

3.5 DOCUMENTATION

A master site logbook was maintained to document field activities. Sample documentation consists of completed chain-of-custody (COC) reports and matrix-specific sample log sheets. The COC report is a standardized form summarizing and documenting pertinent sample information such as sample identification and type, the sampled matrix, date and time of collection, preservation, and requested analysis. Sample custody procedures document sample acquisition and integrity. COC reports are in Appendix C with the data validation reports.

3.6 EQUIPMENT DECONTAMINATION

Reusable equipment (e.g., water-level meter, submersible pump) was decontaminated before and after each use. Decontamination of reusable small equipment involved the following:

- Liquinox® (a laboratory-grade, phosphate-free, ionic/anionic surfactant) and potable-water wash
- potable-water rinse
- distilled-water rinse
- air drying

Decontamination-rinsate water was transferred into 55-gallon drums staged in the central portion of the MRC D-lot for subsequent disposal. Dedicated and/or disposable equipment that did not require decontamination was used for groundwater purging/sampling.

3.7 WASTE MANAGEMENT

Well purge-water was collected as investigation-derived waste (IDW) in USDOT-approved 55-gallon steel drums. The drums were stored at an approved central staging area on the facility's D-lot, pending waste-profile-sampling results. Clean Harbors, Inc. (a state-licensed waste transporter) sampled the IDW and deemed it nonhazardous. Upon receipt of the IDW analytical data, Clean Harbors, Inc. removed the IDW from the MRC and properly disposed of it as nonhazardous waste at the Clean Harbors, Inc. Cleveland, Ohio facility (a Lockheed Martin

Corporation- [Lockheed Martin-] approved waste treatment facility) in accordance with federal, state, and local regulations.

3.8 GENERAL SAMPLING PROCEDURES, NOMENCLATURE, AND HANDLING

A master site logbook was maintained for the sampling program to document field activities. Each sample collected was given a unique sample identification consisting of the well name and sampling date (e.g., MRC-MW-25A-051315). Trip blanks were labeled with a "TB" prefix followed by a six-digit submittal date (e.g., TB-051315). Sample handling includes field-related considerations concerning selection of sample containers, preservatives, allowable holding times, and analyses requested.

Proper custody procedures were followed throughout all phases of sample collection and handling. COC protocols were used throughout sample handling to document the integrity of sample containers. These protocols demonstrate that samples were handled and transferred in a manner that eliminates (or detects) possible tampering. Sample containers were released under signature from the laboratory and were accepted under signature by a responsible individual who maintained custody until the sample containers were transferred to the sampling team. Groundwater samples were released under signature from the sampling team and were accepted under signature by the laboratory.

Transport containers returning to the laboratory were sealed with strapping tape and a tamper-resistant custody seal. The custody seal shows the signature of the individual releasing the transport container, along with the date and time. Signed COC are in Appendix C along with the data validation reports.

3.9 DATA VALIDATION

Data validation involves having a party independent of the analytical laboratory review the laboratory data to ensure that specific criteria established in the sampling and analysis work plan and in the analytical method are met. These criteria are concerned with specifications that are not sample-dependent; they specify performance requirements that should be fully under a laboratory's control. For organic-data analyses, specific validation areas include blanks, performance-evaluation-standard materials, and instrument-performance checks. For

inorganic-data analyses, specific validation areas include blanks, calibration standards, calibration-verification standards, laboratory-control standards, and interference-check standards. Once the investigation was complete, chemical data were validated by Tetra Tech in accordance with established USEPA protocols to assess the reliability and accuracy of the data. This review was based on the USEPA Region 3 modifications to the *National Functional Guidelines for Data Review* (USEPA, 1993 and 1994) and the specifics of the analytical method used. Data-validation reports are in Appendix C (on compact disc).

Validation of these data concluded that they are acceptable for their intended uses (i.e., risk screening and risk assessment), except for data qualified as unreliable (UR or *R* flags). The data qualifiers (i.e., flags) applied to the chemical results during data validation are listed below:

J The analyte is considered present in the sample, but the value is estimated and may not meet highest accuracy or precision standards. In this program, samples were qualified with "*J*" because quantitation was above the method detection limit but below the practical quantitation limit. A "*J*" qualifier can also be applied if one or more quality control specifications were not met. In these cases, if non-conformance did not affect correct identification of the analyte, but could have resulted in quantitation that did not meet highest accuracy or precision standards, a "*J*" qualifier would be applied.

U Not detected; the analyte is considered not detected at the reported value.

UJ The analyte was not detected. However, the quantitation or detection limit may be inaccurate or imprecise.

UR The non-detect result is considered qualitatively or quantitatively unreliable. Results flagged with "UR" data qualifiers include 1,4-dioxane (27 samples using the VOC analytical method 8260C) and methyl acetate (three samples).

R The detected result is considered qualitatively or quantitatively unreliable. Results flagged with an "*R*" data qualifier include 1,4-dioxane (two samples using the VOC analytical method 8260C).

Two of these flags (i.e., *J,* and *U*) appear on the chemical-results tables in Section 4; all flags are in Appendices C and D.

3.10 DATA MANAGEMENT

Laboratory data-handling procedures met the requirements set forth in the laboratory subcontract. All analytical and field data are maintained in the project files. The project files contain copies of the COC, sampling log forms, sampling location maps, and data quality-assurance documentation.

3.10.1 Data Tracking and Control

A "cradle to grave" sample tracking system was used from the beginning to the end of the sampling event. The field operations leader coordinated sample tracking before field mobilization. Sample jar labels were handwritten in the field. Labels were reviewed to ensure their accuracy and adherence to work plan requirements. The project manager's (PM) assistant coordinated with the analytical laboratory to ensure that they were aware of the number and type of samples and analyses to expect.

When field sampling was underway, the field operations leader forwarded the COC to the PM's assistant and to the laboratory for each day that samples were collected. The PM's assistant confirmed that the COC provided the information required by the work plan. This allowed early detection of errors made in the field so adjustments could be made while the field team was mobilized. The laboratory submitted an electronic deliverable for the sample delivery groups. When all electronic deliverables had been received from the laboratory, the PM's assistant confirmed that the laboratory performed all analyses requested.

3.10.2 Sampling Information

Data from field measurements were recorded using the appropriate log sheets, as per Tetra Tech's standard operating procedure SA-6.3. Reduction of field data entailed summarizing and presenting these data in tabular form. Reduction of laboratory data entailed manipulating raw data-instrument output into reportable results. Laboratory data were verified by the group supervisor and then by the laboratory's QC/documentation department.

3.10.3 Project Data Compilation

The analytical laboratory generated an Adobe *Acrobat*® portable document format (PDF) file of the analytical data packages, as well as an electronic database deliverable. The electronic database was checked against the PDF file provided by the laboratory and updated as required, based on data qualifier flags applied during data validation. Data generated during implementation of the sampling and analysis plan were incorporated into the MRC environmental geographic information system (GIS) database. All data (such as units of measure and chemical nomenclature) were checked to maintain consistency with the project database.

3.10.4 Geographical Information System

The data management system for this effort consists of a relational database and GIS to manage environmental information pertaining to MRC. The relational database stores chemical, geological, hydrogeologic, and other environmental data collected for the MRC environmental investigations. The GIS is built from the relational database and contains subsets of the larger data pool. Using the GIS, environmental data were posted onto base maps to represent the information graphically for this report.

Section 4
Investigation Results

This section presents the results of the 2015 groundwater-elevation data and groundwater sampling and chemical analyses program for the Middle River Complex (MRC). Although most well designations begin with the prefix "MRC-," that prefix is dropped in the discussions below to improve readability.

4.1 GROUNDWATER LEVEL DATA

Table 4-1 lists the 2015 groundwater level measurements and computed groundwater elevations for wells at the MRC. Figures 4-1 and 4-2 show the groundwater-elevation contour maps for the upper/intermediate and lower surficial-aquifer zones, respectively. As presented in Table 4-1, static groundwater levels in the wells were recorded as groundwater depths measured from the top of the well casings and converted to elevations based on the North American Vertical Datum of 1988 (NAVD88). Several wells could not be accessed because of equipment stored over the casings. Other wells were not measured because they provided redundant data for adjacent or nearby wells.

Groundwater elevations for the surficial aquifer ranged from 0.94 feet above NAVD88 at well MW112A (southeastern portion of MRC near Dark Head Cove) to 32.46 feet above NAVD88 at well MW57A (south of Buildings B and C). Accounting for well-casing stick-down for flush-mounted well designs, groundwater depths ranged from less than one foot to approximately 21 feet below grade in the surficial aquifer. Shallow groundwater was encountered near the ground surface along the shorelines of Cow Pen Creek and Dark Head Cove (at wells MW08A, MW09A, MW10A, MW15A, and MW39A) and in Block E (at wells MW30A, MW43A, MW44A, and MW62A).

Groundwater depth measurements at or near 0.00 feet indicate groundwater levels at or near the top of the well casing, which is near the ground surface for most wells. A negative value, such as that for MW08B (-3.00), indicates a static water level above the casing as measured using a temporary well-casing extension. Depth to surficial aquifer groundwater was measured at

13–18 feet deep north and west of Building A (at wells MW67A, MW50A, and MW05A); approximately 15 feet deep in the northwestern corner of Block E (at well MW101A); approximately 6–9 feet deep south of Building A (MW19A and MW20A); and approximately 10 feet deep south of Building C (MW42A).

Figures 4-1 and 4-2 show the groundwater-elevation contour maps for the upper ("A" and "B") and lower ("C") surficial-aquifer wells, respectively. The March 31–April 1, 2015 groundwater flow for the surficial aquifer is similar to that depicted in previous investigations. However, the March–April 2015 surficial-aquifer groundwater elevations are generally higher than those collected in September 2014.

As shown in Figure 4-1, shallow groundwater follows the site topography and flows radially from the hydraulically upgradient northern portion of the MRC (at Eastern Boulevard and immediately south of Buildings A, B, and C) to the southeast, south, and southwest toward Dark Head Cove and Cow Pen Creek. Subsurface sandy zones act as preferential pathways for contaminant transport in groundwater, possibly originating from an upgradient source in the clay-rich materials. Groundwater in the lower surficial-aquifer (Figure 4-2) flows southeast from the area south of Buildings A–C toward Dark Head Cove.

4.2 GROUNDWATER CHEMICAL RESULTS

Validated groundwater-chemical data were used to generate a statistical summary table (Table 4-2) and a "hits" table (Table 4-3) summarizing positive detections of chemical analytes in the 2015 groundwater samples. Appendix D presents all analytical data for 2015, including non-detects. The groundwater results for volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), metals, and perchlorate (Table 4-3) are compared against current Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008).

At present, MDE has not established an advisory level or standard for 1,4-dioxane in drinking water or groundwater. Several states (e.g., California, Colorado, Connecticut, Florida, Maine, Massachusetts, Michigan, and North Carolina) have established drinking water standards or action levels for 1,4-dioxane, ranging from California's action level of 3 micrograms per liter (µg/L) to Michigan's drinking water standard of 85 µg/L (United States Environmental Protection Agency [USEPA], 2006 and 2009, respectively). USEPA has also published a preliminary remedial goal of

6.1 µg/L for 1,4-dioxane in tap water (USEPA, 2006) and a risk-based regional screening-level of 0.67 µg/L for tap water (USEPA, 2014).

Regional tap-water screening levels are not typically adopted as enforceable standards; therefore, the current advisory level or the standard most protective of human health is used as a comparison criterion to evaluate groundwater concentrations of 1,4-dioxane in this report. The California Department of Health Services advisory level (3 µg/L) is used herein as the groundwater screening level. Gray shading in Table 4-3 indicates results exceeding Maryland groundwater standards (or the California action level used for 1,4-dioxane). Chemical results for the 2015 groundwater sampling episode are discussed below according to analyte group (i.e., VOCs, SVOCs [1,4-dioxane], PCBs, etc.).

4.2.1 Volatile Organic Compounds

Trichloroethene (TCE) and benzene groundwater plumes previously identified in the central and downgradient portions of the MRC are confirmed by the 2015 results, and consistent with earlier results showing TCE and benzene in groundwater at concentrations exceeding the Maryland groundwater standard (i.e., 5 µg/L for each constituent). Tetrachloroethene (PCE), chlorobenzene, and several chlorobenzene compounds also exceed MDE standards, and have formed a small plume in the southwestern portion of Lot D. TCE and benzene results are discussed herein because they are primary indicators of solvent and petroleum VOC contamination, and most frequently exceed groundwater standards at MRC. Chlorinated VOC-degradation daughter products (e.g., dichloroethenes, vinyl chloride [VC], etc.) or other petroleum-related VOCs (e.g., methyl *tert*-butyl ether [MTBE], benzene isomers, naphthalene, etc.) are typically co-located with these primary VOCs.

Chlorinated volatile organic compounds (cVOCs)—TCE results are in Table 4-2 and in Figure 4-3. TCE was detected in shallow groundwater at several areas at concentrations ranging from 0.38*J* µg/L at well MW111A (southwestern portion of MRC, northeast of Tilley Chemical) to 21,800 µg/L at well MW74B (southeastern portion of MRC near the water tank). PCE, another chlorinated solvent and degreaser, was detected less frequently (21% of samples), at concentrations ranging from 0.35*J* µg/L at well MW79B (north side of Block E, south of the vertical-launch system building) to 45.7 µg/L at newly installed well MW113A (southwestern corner of Lot D), with an average detected concentration of 5.74 µg/L. TCE is co-located with detected PCE in all

cases, and PCE exceeds its groundwater standard (5 µg/L) at well MW113A (45.7 µg/L) in the southwestern portion of Block E; wells MW60A (11 µg/L) and MW60B (14.8 µg/L) near the southern end of Building C; wells MW21B (8.4 µg/L) and MW98B (6.1 µg/L) near the former 2,000-gallon waste oil underground storage tank (UST), northeast of the Tilley Chemical building; and well MW16A (9.9 µg/L) in parking Lot 3, southwest of the Drop Hammer Building and Building A.

- *Eastern TCE plume:* The largest contiguous area containing samples with the highest concentrations of TCE in groundwater extends southeast from MW60B (4,070 µg/L) and MW81B (3,010 µg/L) (at the southern end of Building C) to well MW112A (2.5 µg/L) (near Dark Head Cove). Maximum detected TCE concentrations of 21,800 µg/L, 4,070 µg/L, and 3,010 µg/L are reported for wells MW74B, MW60B, and MW81B, respectively. MW74B is in the southeastern portion of the plume, west of the aboveground water tank, whereas wells MW60B and MW81B are south of Building C.

    - The high concentrations at the north and south ends of the eastern plume, with no high concentrations between them, suggest at least two distinct TCE-source areas. A third area of elevated TCE is at well MW27B (1,250 µg/L), but this area is considered an extension of the northern end plume because it is hydraulically downgradient of well MW81B. Its apparent isolation is unlikely to be the result of any other "B-level" wells between MW81B and MW27B.

    - Two of the higher concentrations of TCE detected in the intermediate depth of the surficial aquifer were from wells MW60B and MW81B, screened 30 feet below grade. This plume may originate from the southern end of the Building C Basement (MW60B), or possibly from spills of material handled near MW60B.

    - VOCs in groundwater at wells MW72B and MW74B (near the southern end of the eastern TCE plume) are considered to originate at least in part from a recently discovered TCE-containing underground storage tank. The leaking tank was discovered in 2013 when soil was remediated for the Block E groundwater treatment area. The tank contained full-strength TCE, and was removed from its location near the former Building D foundation. Soil under the tank had been impacted by the TCE in the tank.

    - High TCE concentrations at MW74B over time (shown below) suggest the well was close to non-aqueous source material. Recent remedial actions in this area appear to have lowered the TCE concentration from 2013 to 2014 by a factor of 21, but concentrations rebounded somewhat in 2015:

Date	TCE concentration
2007	70,000
2008	12,000
2009	17,000
2010	19,000
2011	23,000
2012	30,000
2013	40,000
2014	1,900
2015	21,800

Changes in the pumping rates of the multi-phase extraction (MPE) system and resulting shifts in the plume might explain these concentration changes. This area will be subject to *in situ* anaerobic dechlorination after operation of the MPE system is shut down in 2015.

- At both of the eastern TCE-plume source-areas, residual TCE may be trapped in silt and sand lenses in the clay-rich zones, and/or may be adsorbed to organic material and clays. From these source areas, dissolved TCE has presumably been released to groundwater and now moves preferentially to the southeast along the more permeable sandy and silty material that extends from well MW48 southeastward to well MW37.

- *Western TCE plume:* The second largest contiguous area of TCE in groundwater extends from well MW21B (near recognized environmental condition #9, a former 2,000 gallon waste-oil UST) to MW12 (near Cow Pen Creek). The current maximum reported concentrations of TCE in this area are in wells MW111B (1,270 µg/L) and MW70B (1,170 µg/L) in the center of the plume, and in wells MW12A (838 µg/L) and MW12B (777 µg/L) in the southernmost portion of the plume near Cow Pen Creek. Wells MW21B and MW98B (in the northern portion of the plume) had the next highest TCE concentrations (708 µg/L and 554 µg/L, respectively) for the western TCE plume.

- *Other TCE areas:* TCE exceedances of the groundwater standard (5 µg/L) were also detected at the western portion of the facility in wells MW96A-B (3,870 µg/L and 18.5 µg/L, respectively), MW90B (102 µg/L), MW53A (41 µg/L), MW53B (246 µg/L), MW109B (87.2 µg/L), MW110A-B (33 µg/L and 38.8 µg/L), MW50A (11.7 µg/L), and MW17A (15.5 µg/L). The maximum TCE concentration (3,870 µg/L at well MW96A) is west of Building A.

- *Block E southwest:* A TCE exceedance of the groundwater standard (5 µg/L) was detected at the southwestern portion of Lot D (Block E) at well MW113A (23.5 µg/L).

Benzene—Figure 4-4 presents benzene results for the MRC and chlorobenzene-isomer results for wells in the southwestern portion of Lot D (i.e., Tax Block E). The highest concentrations of

benzene would likely be encountered in shallow groundwater near source areas, because fuels in product form are less dense than water and, when present above the solubility limit, will float on top of the groundwater. Recharge (i.e., infiltrating precipitation) and downward hydraulic gradients may drive dissolved benzene and other petroleum-related contaminants downward in the aquifer as the contaminant travels farther from the source area(s). Benzene is biodegradable, so concentrations will reduce over time in the absence of a continuing source.

The area with the highest benzene concentrations above the groundwater standard (5 µg/L) is west of Building A, near underground wastewater lines at wells MW96B (646 µg/L) and MW17A (163 µg/L). Other areas with benzene concentrations above the groundwater standard include:

- well MW109B (123 µg/L), adjacent to MW96A/B
- wells MW53A and MW110B in parking Lot 2, west of Building A (hydraulically downgradient of wells MW96B/MW17)
- well MW21B (29.5 µg/L) and MW111B (7.9 µg/L), southwest of Building A near a former UST and co-located with the western TCE plume
- well MW14B (25.4 µg/L), co-located with the western TCE plume
- well MW77A (14 µg/L), on the east side of the vertical-assembly building in the area of an abandoned-in-place 25,000-gallon fuel oil UST
- well MW114A (6 µg/L), in the southwestern portion of Lot D (Block E)

With one exception, benzene concentrations in wells with benzene exceedances have increased from 2014–2015 in wells west of Building A, at: MW96B (from 470 µg/L in 2014 to 646 µg/L in 2015), MW109B (from 10 µg/L to 123 µg/L), MW110B (from 18 µg/L to 47.4 µg/L), MW53A (from 1.5 µg/L to 10.3 µg/L), and MW17A (from 160 µg/L to 163 µg/L). Benzene concentrations decreased in well MW53B (from 13 µg/L in 2014 to 1.2 µg/L in 2015) in this area. Lesser increases in benzene concentrations occurred in wells MW14B (from 18 µg/L in 2014 to 25.4 µg/L in 2015), MW21B (from 26*J* µg/L to 29.5 µg/L), MW77A (from 11 µg/L to 14 µg/L), and MW114A (not detected to 6 µg/L).

As shown in Figure 4-4 (and Table 4-3), groundwater concentrations of chlorobenzene isomers in the southwestern portion of Lot D (Block E) exceed groundwater standards at wells MW113A and MW114A (groundwater standards for the chlorobenzene and chlorobenzene compounds range

from 1.8–600 µg/L). Chlorobenzene compounds exceeding groundwater standards include chlorobenzene, 1,2,4-trichlorobenzene, and 1,3-dichlorobenzene. These compounds are typically associated with transformer oil, and are detected in wells located downgradient of PCBs found in the saturated soil zone in the southwestern portion of Block E. 1,2-Dichloropropane and several cVOCs (PCE, TCE, 1,2-dichloroethane, and VC) also exceed groundwater standards in these wells.

***Natural-attenuation parameters*—**In addition to the standard analyses for VOCs, the laboratory analyzed groundwater samples from wells within the plumes for several NAA parameters. The NAA analyses include alkalinity, ammonia nitrogen, chloride, nitrate, nitrite, orthophosphate, sulfate, total dissolved solids, total iron, dissolved organic carbon, manganese, and the dissolved gasses ethane, ethene, and methane. NAA parameters were also measured in the field. Field measurements include groundwater pH (a measure of acidity or alkalinity), oxidation-reduction potential (ORP), dissolved oxygen (DO), and temperature. Pre-remediation evaluations of NAA parameters can be found in several MRC groundwater monitoring reports (Tetra Tech, 2012b, 2012c, 2012d, and 2013). These analyses indicate natural (i.e., existing) support for reductive chlorination of VOCs, and these results will help evaluate future remedial action by providing baseline groundwater conditions that can be compared to groundwater enhanced by adding electron donor and/or pH adjustment to stimulate anaerobic reductive-dechlorination. These results will also be used as input for ongoing groundwater-contaminant modeling.

4.2.2 1,4-Dioxane

1,4-Dioxane is a synthetic industrial chemical used primarily as a solvent in paints, varnishes, lacquers, cosmetics, deodorants, semiconductors, electronic components, and detergent preparations. 1,4-Dioxane often has been used with chlorinated solvents as a stabilizer and corrosion inhibitor. 1,4-Dioxane is highly miscible in water, and can be found in groundwater plumes far in advance of any solvents with which it might have entered the subsurface originally. It migrates rapidly in soil, but biodegrades slowly.

As shown in Table 4-2 and Figure 4-5, the SVOC 1,4-dioxane was detected in all 51 groundwater samples in which it was analyzed for in 2015, at concentrations ranging from 0.022*J* µg/L (at MW12C) to 311 µg/L (at MW70B). Concentrations exceeding the screening level of 3 µg/L are shown within contours on Figure 4-5. The average of all 1,4-dioxane detections is 29.36 µg/L

(Table 4-2). The highest concentrations occur primarily in the upper and intermediate surficial-aquifer wells, with the highest reported concentrations (138–311 µg/L) at wells MW70B, MW12A, MW12B, MW14B, MW111B, and MW98B within the western TCE plume in the southwestern portion of the MRC. 1,4-Dioxane concentrations over time have been steady to slightly decreasing in the western TCE plume and at wells outside of the groundwater remedy areas.

1,4-Dioxane was detected in several wells in the western TCE plume, ranging from 0.022*J* µg/L at well MW12C to 311 µg/L at MW70B. 1,4-Dioxane in this area of the MRC extends from well MW91A (near the rear of Building B) to well MW12A-B (adjacent to Cow Pen Creek), with the highest concentrations in a line from just north of the Tilley Chemical building (wells MW98B and MW111B) to Cow Pen Creek. 1,4-Dioxane was also detected at concentrations exceeding its screening level west and southwest of Building A in samples from wells MW53B (14.1 µg/L), MW90B (5.4 µg/L), MW96A (4.3 µg/L), MW53A (4 µg/L), MW110B (3.8 µg/L), and MW17A (3.7 µg/L). Historically, 1,4-dioxane has not been detected extensively in the eastern part of the MRC; exceptions for this round are wells MW113A and MW114A in the southeastern portion of Lot D, where one of two detected concentrations (0.85 µg/L at MW114A) is lower than the screening level (3 µg/L). 1,4-Dioxane exceeds its screening level at MW113A (5.6 µg/L).

4.2.3 Polychlorinated Biphenyls

Groundwater samples for PCB analyses were collected in an area of Block E where elevated PCBs had previously been detected in soil (Figure 4-6). Although PCBs have been found to be widely distributed in soil along the southern one-third of Block E, the primary presence of Aroclor-1260 PCBs in the southwestern and south-central areas of Block E, and the primary presence of Aroclor-1254 PCBs in the southeastern portion of Block E (around the above-ground water tank), indicate that two likely sources or releases of PCBs exist within Block E. Groundwater samples from three wells (MW62A, MW62C, and MW113A) in the southwestern portion of Block E were analyzed for PCB homologs (Tables 4-2 and 4-3).

Homologs are groups of chlorobiphenyls based on the number and location of chlorine atoms in the PCB molecule. Monochlorobipenyls and dichlorobiphenyls, for example, are lower-chain chlorobiphenyls that contain only one and two chlorine atoms (respectively) in their structures. Lower-chain chlorobiphenyls are lighter, generally more soluble in water (i.e., less stable in the

environment), and are considered less toxic than the intermediate- and higher-chain chlorobiphenyls.

Groundwater samples from five wells (MW43A, MW44A, MW103A, MW103B, and MW114A) were analyzed for PCB Aroclors, but they were not detected in these samples and, therefore, are not shown in Tables 4-2 and 4-3 (see Appendix D for PCB Aroclor results). Monochlorobiphenyls were detected in well MW113A (0.011 µg/L), and total trichlorobiphenyls were detected in well MW62A (0.0048*J* µg/L). These concentrations are one to two orders of magnitude (i.e., 10–100 times) lower than the groundwater standard (0.5 µg/L). PCB results for MW113A indicate that higher-chain chlorobiphenyls are not migrating in groundwater from the source area near well MW43A.

4.2.4 Metals

Total metals (i.e., unfiltered) concentrations above MDE standards are found throughout the MRC (previous site-wide plots of beryllium, cobalt, and nickel can be found in Tetra Tech [2009]). Table 4-3 summarizes detections of metals in the groundwater samples. Table 4-4 includes a statistical summary of metals in site groundwater that exceed Maryland groundwater standards.

Concentrations of 12 metals exceed Maryland groundwater standards in one or more samples. Manganese (99%), iron (87%), and nickel (64%) exceed their standards most frequently, with maximum concentrations more than two orders of magnitude (greater than 100 times) above their respective groundwater standards (Table 4-4). Concentrations of beryllium, vanadium, and cadmium exceed their standards in 42%, 33%, and 13% of samples, respectively, and their maximum concentrations (300 µg/L, 130 µg/L, and 10 µg/L, respectively) exceed groundwater standards by approximately two times (for cadmium) to more than 10 times (i.e., one order of magnitude, for beryllium and vanadium). Concentrations of the remaining metals (arsenic, selenium, lead, chromium, copper, and barium) exceed standards in two or fewer samples (in 1–2% of samples collected); all concentrations (except those for lead) exceed standards by a factor of approximately five or less. The lead concentration is approximately six times its standard.

4.2.5 Perchlorate

As shown in Table 4-2 and Figure 4-7, perchlorate was detected in 13 (52%) of 25 groundwater samples in which it was analyzed for. Detected concentrations of perchlorate range from

0.14*J* µg/L (MW74A) to 4.1 µg/L (MW53B), but only three concentrations (4.1 µg/L at MW53B, and 3.6 µg/L at MW96B and MW01A) exceed its groundwater standard (2.6 µg/L). The low concentrations and few groundwater exceedances for perchlorate in MRC wells are consistent with previous sampling results. One of the exceedances is at a background well (MW01A) near Eastern Boulevard. The higher concentrations of perchlorate at wells MW53B, MW96B, and MW110B are west of Building A, in the western portion of the MRC where elevated concentrations of VOCs (i.e., TCE and benzene) are also present. A low (non-exceedance) concentration of perchlorate was detected in newly installed well MW113A (0.17*J* µg/L) in the southwestern portion of Lot D (Block E).

Concentrations of perchlorate only slightly exceed the groundwater standard and are limited to wells in the TCE areas west of Building A (wells MW53A and MW96B). Concentrations of perchlorate over time in this area have been stable, and perchlorate has not been detected in downgradient wells (MW08A and MW08B). Groundwater samples from wells site-wide were collected for perchlorate analysis from 2009–2015, and wells in areas of elevated TCE concentrations (e.g., MW14A/B, MW53A/B, MW60A/B, MW74A/B, MW96A/B) have been sampled. Perchlorate exceedances of the MDE groundwater standard (2.6 µg/L) were detected only at the TCE areas west of Building A (wells MW53A and MW96B) and at a background location (MW01A). Perchlorate is not a contaminant of concern in the groundwater risk assessment and data on its concentrations are not required to assess the groundwater remedy effectiveness. Therefore, we recommend discontinuing perchlorate analysis in future groundwater sampling at MRC.

1 Includes results from duplicate (-D) analyses

-- not applicable because analyte was detected in all samples.

J - chemical detected, concentration is estimated due to technical non-compliance

µg/L - micrograms per liter

mg/L - milligrams per liter

U - not detected (concentration shown is detection limit)

Notes:

Shaded cells indicate detected concentration exceeds groundwater screening level

1 Screening levels for all analytes except 1,4-dioxane are Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008).

2 The screening level for 1.4-dioxane is State of California drinking water action level (MDE standard not available).

3 A "B" was inadvertantly used for the Sample ID for well MRC-MW77A.

-- not detected

MDE - Maryland Department of the Environment

µg/L - micrograms per liter

mg/L - milligrams per liter

J - estimated concentration

NA - not applicable (second column) or not analyzed (all other columns)

-D (in Sample ID) - duplicate sample

AVG - avverage concentration for the sample and its duplicate (i.e., "D") sample

Section 5
Summary

The findings of the 2015 groundwater sampling and analyses and the groundwater level measurements for the Lockheed Martin Corporation (Lockheed Martin) Middle River Complex (MRC) are summarized below:

- All accessible wells were inspected during the 2015 sampling program to assess their need for repairs; 13 wells were repaired in 2015.
- Groundwater samples were collected from monitoring wells in April–June 2015. Samples were analyzed for one or more of the following: volatile organic compounds (VOCs), 1,4-dioxane, total metals, perchlorate, polychlorinated biphenyls (PCBs), natural-attenuation assessment (NAA) parameters, and field water-quality parameters. A round of synoptic groundwater measurements was obtained from the wells on March 31–April 1, 2015.
- Groundwater flow in March–April 2015 is similar to that depicted by previous groundwater investigations. Shallow groundwater follows site topography and flows radially from the hydraulically upgradient northern portion of the Middle River Complex at Eastern Boulevard and immediately south of Buildings A, B, and C to the southeast, south, and southwest toward Dark Head Cove and Cow Pen Creek. Groundwater in the deep surficial-aquifer flows southeasterly from Eastern Boulevard toward Dark Head Cove. March–April surficial-aquifer groundwater elevations are generally higher than those measured in 2014.
- Concentrations of chlorinated volatile organic compounds exceed Maryland groundwater standards at three main areas of the facility and at multiple depths. Trichloroethene (TCE), a common industrial solvent and metal degreaser, is the primary volatile organic compound exceeding its Maryland groundwater standard. Trichloroethene-degradation products, such as dichloroethenes and vinyl chloride (VC), also exceed Maryland groundwater standards at the facility, as do tetrachloroethene (PCE), chlorobenzene compounds, and the fuel-related volatile organic compound benzene.
    - These data confirm three trichloroethene and trichloroethene-degradation-product plumes: the eastern trichloroethene plume (likely originating from a solvent spill south of Building C and possibly related to past handling and storage practices, and from the area of a former underground storage tank [UST] near the aboveground water tanks in Block E).
    - The western trichloroethene plume originates from a solvent spill from a waste-oil tank north of Tilley Chemical and a possible secondary trichloroethene source at the former

wastewater treatment plant south of Tilley Chemical and Chesapeake Park Plaza in Block G.

- A smaller trichloroethene plume is also found west of Building A.

- The eastern and western trichloroethene plumes extend southeast and southwest, respectively, to areas adjacent to Dark Head Cove and Cow Pen Creek. The three source areas for the eastern and western trichloroethene plumes are being addressed as part of the groundwater remedy program (Tetra Tech, 2012a). Trichloroethene has also been detected at several isolated locations in the western portion of the facility, in the southwestern portion of Lot D (Block E), and in previous rounds, east of Building C.

- The maximum concentration of trichloroethene was detected in groundwater near the southern end of the eastern trichloroethene plume at well MW74B and is possibly associated with a recently discovered underground storage tank that was located (and removed) near the former Building D foundation; this tank contained trichloroethene product.

- Other high concentrations of trichloroethene are in the intermediate depth of the surficial aquifer in wells MW60B and MW81B, screened 30 feet below grade. The source(s) of this plume may originate from the south end of the Building C Basement (MW60B), or possibly from spills of material handled near MW60B. The two source areas for the eastern trichloroethene plume (near wells MW60A/B and MW74A/B) are being addressed as part of the groundwater remedy program (Tetra Tech, 2012a).

- Trichloroethene in well MW74B had reduced in previous years by a factor of 21 (from 40,000 micrograms per liter [µg/L] in 2013 to 1,900 µg/L in 2014), but rebounded in 2015 (to 21,800 µg/L). Changes in pumping rates of the multi-phase extraction system and resulting shifts in the plume may explain these concentration changes. This area will be subject to *in situ* anaerobic dechlorination after operation of the multi-phase extraction system is shut down in 2015.

- Benzene concentrations at areas west of Building A, in the western trichloroethene plume and near the vertical-assembly building, exceed the state groundwater standard of five micrograms per liter. However, these concentrations decline rapidly to levels below the standard at nearby downgradient wells. Most wells with benzene exceedances in 2015 exhibited increases in concentrations from 2014–2015.

- Chlorobenzene and chlorobenzene compounds exceed groundwater standards in two shallow wells (MW113A and MW114A) in the southwestern portion of Lot D (Tax Block E). Chlorobenzene compounds exceeding the groundwater standards include chlorobenzene, 1,2,4-trichlorobenzene, and 1,3-dichlorobenzene. 1,2-Dichloropropane and several chlorinated volatile organic compounds (including tetrachloroethene, trichloroethene, 1,2-dichloroethane, and vinyl chloride) also exceed their groundwater standards at one or more of these wells.

- 1,4-Dioxane was detected in several wells in the western trichloroethene plume. The highest concentrations occur primarily in the upper and intermediate surficial-aquifer wells. The highest 1,4-dioxane concentrations occur along a southwesterly line originating

just north of the Tilley Chemical building to Cow Pen Creek. 1,4-Dioxane exceedances were detected in six wells west and southwest of Building A. 1,4-Dioxane also exceeds the screening level at newly installed well MW113A, in the southwestern corner of Lot D. 1,4-Dioxane concentrations over time have been steady to slightly decreasing in the western trichloroethene plume and at wells outside of the groundwater remedy areas.

- Polychlorinated biphenyls (PCBs), analyzed and reported as Aroclors, were not detected in groundwater samples collected from five wells in the southwestern portion of Lot D (Tax Block E).

- Polychlorinated biphenyl homologs were analyzed and reported as homolog groups in groundwater in and downgradient of a deep polychlorinated biphenyl deposit in former Building D. They were only detected in groundwater samples from two wells (MW62A and newly installed well MW113A). However, the detected concentrations were more than one order of magnitude (i.e., 10 times) below the groundwater standard. Only monochlorobiphenyls were detected downgradient of the Block E polychlorinated biphenyl source area (i.e., near well MW43A) at well MW113A; the more toxic and less mobile higher-chain chlorobiphenyls do not appear to be migrating from the Block E source area.

- Concentrations of 12 metals exceed Maryland groundwater standards in one or more groundwater samples this round. Concentrations of manganese, iron, and nickel exceed their respective standards most frequently, with maxima exceeding standards by more than two orders of magnitude (greater than 100 times). Other metals exceed their respective standards less frequently, with the maxima of most of those metals less than one order of magnitude above their respective groundwater standards.

- Perchlorate was detected in 13 of 25 groundwater samples analyzed in 2015, including newly installed well MW113A in the southwestern portion of Lot D (Block E). Only three concentrations (at wells MW53B, MW01A, and MW96B) exceed its groundwater standard. One of the exceedances is at a background well (MW01A) near Eastern Boulevard. Several of the higher concentrations of perchlorate (at wells MW53B, MW96B, and MW110B) are west of Building A, in the western portion of the Middle River Complex where elevated concentrations of trichloroethene and benzene are also present.

- We recommend removing perchlorate from future groundwater sampling at Middle River Complex. Groundwater samples from 89 wells were collected for perchlorate analysis from 2009–2015. Wells in areas of elevated trichloroethene concentrations (e.g., MW14A/B, MW53A/B, MW60A/B, MW74A/B, MW96A/B), have been sampled for perchlorate, but concentrations above the Maryland Department of the Environment groundwater standard (2.6 µg/L) were found only at the trichloroethene areas west of Building A (wells MW53A and MW96B) and at a background location (MW01A). Perchlorate is not a contaminant of concern in the groundwater risk assessment and it is not required to assess the groundwater remedy's effectiveness.

APPENDIX C—DATA-VALIDATION REPORTS

TETRA TECH INTERNAL CORRESPONDENCE

TO: **T. APANAVAGE** **DATE:** **AUGUST 14, 2015**

FROM: **LEIGH A. CIOFANI** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC DATA VALIDATION – DISSOLVED GASES**
LOCKHEED-MRC – FULL REVIEW
SAMPLE DELIVERY GROUP (SDG) 240-53120-1

SAMPLES: 3 / Aqueous /

MRC-MW-24A-051315 MRC-MW-25A-051315 MRC-MW-48A-051315

OVERVIEW

The sample set for Lockheed-MRC, SDG 240-53120-1, consists of three (3) aqueous environmental samples. Samples were analyzed for dissolved gases (methane, ethane, and ethane). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech, Inc. on May 12 and 13, 2015 and analyzed by Test America, Inc. Analyses were conducted in accordance to SW-846 Methods 8260C (VOCs), 6010C (iron), 7470A (mercury), 6020A (other metals), 6850 (perchlorate), and 9060A (total organic carbon), and RSK-157 (dissolved gases), EPA Method 522 (1,4-dioxane), A2320 (alkalinity), 300.0 (anions), 365.3 (orthophosphate), 4500 NH3 C-1997 (ammonia), and SM2540C (total dissolved solids) analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, laboratory control sample results, compound quantitation, and detection limits. Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The laboratory control sample (LCS) 240-189404/5 associated with batch 240-189404 had percent recoveries (%Rs) greater than the laboratory quality control limits for methane, ethane, and ethene affecting all samples analyzed on 07/16/15. The laboratory reanalyzed the samples with LCS 240-189672/5 (batch 240-189672) on 07/18/15, and all %Rs for this LCS were within quality control limits. The laboratory reported the following results from the analysis on 07/16/15: ethane in MRC-SWMW-1I-071315, ethane in MRC-SWMW-2I-071315, and ethane and ethene in MRC-SWMW-4S-071315. All other results were reported from the 07/18/15 analysis. Detected results reported from the 07/16/15 analysis (batch 240-189404) were qualified as estimated (J). Non-detected results were not qualified because they are not affected by high LCS %Rs.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

NOTES

The laboratory case narrative states that insufficient sample volume was available to perform matrix spike

(MS)/matrix spike duplicate (MSD) analyses. No action was taken.

Non-detected results were reported to the MDL.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several detected results were qualified due to LCS recovery noncompliance.

Other Factors Affecting Data Quality: Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Organic Data Review (June 2008). The text of this report has been formulated to address only those problem areas affecting data quality.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Samples processed by:

15. SAMPLE CONDITION

Sample(s) were received after the recommended holding time had expired.

Sample(s) were received in a broken container.

Sample(s) were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) were further preserved in the laboratory.

Time preserved: Preservative(s) added/Lot number(s):

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: Block G GW Remedy

Report Number: 240-53120-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 7/14/2015 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.8º C.

DISSOLVED GASES

Samples MRC-SWMW-1I-071315 (240-53120-1), MRC-SWMW-2I-071315 (240-53120-2) and MRC-SWMW-4S-071315 (240-53120-3) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 07/16/2015 and 07/18/2015.

The laboratory control sample (LCS) for batch analytical batch 240-189404 recovered outside control limits for multiple analytes:Ethane, Ethene and Methane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batches 240-189404 and 240-189672.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SAMPLE SUMMARY

Client: Tetra Tech, Inc. Job Number: 240-53120-1

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc. Job Number: 240-53120-1

Lab Section	Qualifier	Description
GC VOA		
	U	Indicates the analyte was analyzed for but not detected.
	*	LCS or LCSD is outside acceptance limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

INTERNAL CORRESPONDENCE

TO: **T. APANAVAGE** **DATE:** **AUGUST 3, 2015**

FROM: **A. COGNETTI** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC AND INORGANIC DATA VALIDATION- VOC / METALS**
LOCKHEED-MRC
SAMPLE DELIVERY GROUP (SDG) 2068377R

SAMPLES: 2/Aqueous/VOC

MRC-MW-88B-05-115 TB-050115

2/Aqueous/Metals

MRC-MW-46A-050115 MRC-MW-61A-050115

Overview

The sample set for Lockheed- MRC, SDG 2068377R consists of three (3) aqueous environmental samples and a trip blank. One (1) aqueous environmental samples and the trip blank were analyzed for volatile organic compounds (VOCs). Two (2) aqueous environmental samples were analyzed for metals. There is no field duplicate pair included in this SDG.

The samples were collected on May 1, 2015 and analyzed by ALS. Analyses were conducted in accordance to SW-846 Method 8260, 6020A, 6010C, and 7470A analytical and reporting protocol.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation and detection limits.

Areas of concern with respect to data quality are listed below.

Minor Problems

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Contamination was detected in the laboratory method blank associated with batch 2173978.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Carbon disulfide	0.41	2.05
1,4-dichlorobenzene	0.33	1.65

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. No action was taken on the nondetected carbon disulfide and 1,4-dichlorobenzene results.

Molybdenum was detected in the initial calibration blank analyzed on May 5, 2015 @ 00:02 and the continuing calibration blank analyzed at 01:03. The maximum concentration detected was 0.0012 ug/L. Molybdenum was reported in the analyses run at 2:27 and 2:30 on May 5, 2015. The continuing calibration blanks bracketing these samples did not contain molybdenum. No action was taken.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: The Trip Blank contained bromomethane. The detected bromomethane result was qualified due to trip blank contamination.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA National Functional for Organic Data Review (June 2008) and EPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Case Narrative
TMM-028

Sample Management

This report contains the results of the analysis of four (4) water samples collected on May 1, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 1, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Two (2) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Samples were analyzed immediately following the initial calibration.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2173978, carbon disulfide was detected at 0.41J µg/L; 1,4-dichlorobenzene was detected at 0.33J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2173980 and 2173981, was prepared from project sample MRC-MW-88B-050115 (2068377003). Results for precision and accuracy were within control limits.

Internal Standards. All internal standard results met method criteria.

Total Metals by SW-846 Method 6020A

Sample handling. Two (2) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had detectible levels in the ICB and CCB analyzed at 00:02 and 01:03 at 0.0012 J mg/L and 0.0009 J mg/L respectively.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Two (2) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Two (2) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

Lab Code: VOA Case No.: SAS No.: SDG NO.: TMM-028

Lab File ID: 15050650.D BFB Injection Date: 5/6/2015

Instrument ID: ms15.i BFB Injection Time: 17:19

GC Column: RTXVMS ID: 0.25 (mm) Heated Purge: Y/N N

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	15.8
75	30.0 - 60.0% of mass 95	47.2
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	7.1
173	Less than 2.0% of mass 174	0.5(0.7) 1
174	50.0 - 100.0% of mass 95	79.8
175	5.0 - 9.0% of mass 174	5.8 (7.3) 1
176	95.0 - 101.0% of mass 174	75.9 (95.2) 1
177	5.0 - 9.0% of mass 176	4.9 (6.4) 2

1-Value is % mass 174

2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-028 **Method Type:** 6020 3015 **SOW No.:**

Contract: TMM028|112IC06247 **Lab Code:** CAS **Case No.:** Lockhee **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
2068377002	MRC-MW-61A-050115	
2068377004	MRC-MW-46A-050115	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-028 **Method Type:** 6010C 3015 **SOW No.:**

Contract: TMM028|112IC06247 **Lab Code:** CAS **Case No.:** Lockhee **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
2068377002	MRC-MW-61A-050115	
2068377004	MRC-MW-46A-050115	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-028 Method Type: 7470A SOW No.:

Contract: TMM028|112IC06247 Lab Code: CAS Case No.: Lockhee SAS No.:

Lab Sample ID	Client Sample ID	QC Description
2068377002	MRC-MW-61A-050115	
2068377004	MRC-MW-46A-050115	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

2/Aqueous/Metals

MRC-MW-46A-050115 MRC-MW-61A-050115

Overview

The sample set for Lockheed- MRC, SDG 2068377R consists of three (3) aqueous environmental samples and a trip blank. One (1) aqueous environmental samples and the trip blank were analyzed for volatile organic compounds (VOCs). Two (2) aqueous environmental samples were analyzed for metals. There is no field duplicate pair included in this SDG.

The samples were collected on May 1, 2015 and analyzed by ALS. Analyses were conducted in accordance to SW-846 Method 8260, 6020A, 6010C, and 7470Aanalytical and reporting protocol.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- The initial calibration relative response factor (RRF) for 1,4-dioxane was less than the 0.01 quality control limit in the VOC fraction on May 6, 2015 on instrument ms15.i. The nondetected 1,4-dioxane results were qualified as rejected (UR).

Minor Problems

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Contamination was detected in the laboratory method blank associated with batch 2173978.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Carbon disulfide	0.41	2.05
1,4-dichlorobenzene	0.33	1.65

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. No action was taken on the nondetected carbon disulfide and 1,4-dichlorobenzene results.

Molybdenum was detected in the initial calibration blank analyzed on May 5, 2015 @ 00:02 and the continuing calibration blank analyzed at 01:03. The maximum concentration detected was 0.0012 ug/L. Molybdenum was reported in the analyses run at 2:27 and 2:30 on May 5, 2015. The continuing calibration blanks bracketing these samples did not contain molybdenum. No action was taken.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: The RRF of 1,4-dioxane was less than the quality control limit in the VOC fraction.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA National Functional for Organic Data Review (June 2008) and EPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Case Narrative
TMM-028

Sample Management

This report contains the results of the analysis of four (4) water samples collected on May 1, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 1, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Two (2) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Samples were analyzed immediately following the initial calibration.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2173978, carbon disulfide was detected at 0.41J µg/L; 1,4-dichlorobenzene was detected at 0.33J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2173980 and 2173981, was prepared from project sample MRC-MW-88B-050115 (2068377003). Results for precision and accuracy were within control limits.

Internal Standards. All internal standard results met method criteria.

Total Metals by SW-846 Method 6020A

Sample handling. Two (2) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had detectible levels in the ICB and CCB analyzed at 00:02 and 01:03 at 0.0012 J mg/L and 0.0009 J mg/L respectively.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Two (2) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Two (2) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Lab ID	Sample ID	Matrix	Date Collected	Date Received	Collected By
2068377001	TB-050115	Water	5/1/2015 19:45	5/1/2015 19:45	Collected by Client
2068377002	MRC-MW-61A-050115	Water	5/1/2015 09:00	5/1/2015 19:45	Collected by Client
2068377003	MRC-MW-88B-050115	Water	5/1/2015 10:20	5/1/2015 19:45	Collected by Client
2068377004	MRC-MW-46A-050115	Water	5/1/2015 13:15	5/1/2015 19:45	Collected by Client

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

5A

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
BROMOFLUOROBENZENE (BFB)

Lab Name: ALS Contract: HPJ019

Lab Code: VOA Case No.: SAS No.: SDG NO.: TMM-028

Lab File ID: 15050650.D BFB Injection Date: 5/6/2015

Instrument ID: ms15.i BFB Injection Time: 17:19

GC Column: RTXVMS ID: 0.25 (mm) Heated Purge: Y/N N

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	15.8
75	30.0 - 60.0% of mass 95	47.2
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	7.1
173	Less than 2.0% of mass 174	0.5(0.7) 1
174	50.0 - 100.0% of mass 95	79.8
175	5.0 - 9.0% of mass 174	5.8 (7.3) 1
176	95.0 - 101.0% of mass 174	75.9 (95.2) 1
177	5.0 - 9.0% of mass 176	4.9 (6.4) 2

1-Value is % mass 174

2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-028 **Method Type:** 6010C 3015 **SOW No.:**

Contract: TMM028|112IC06247 **Lab Code:** CAS **Case No.:** Lockhee **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
2068377002	MRC-MW-61A-050115	
2068377004	MRC-MW-46A-050115	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-028 Method Type: 7470A SOW No.:

Contract: TMM028|112IC06247 Lab Code: CAS Case No.: Lockhee SAS No.:

Lab Sample ID	Client Sample ID	QC Description
2068377002	MRC-MW-61A-050115	
2068377004	MRC-MW-46A-050115	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

Overview

The sample set for LMC-MSA, SDG 2065603R consisted of twelve (12) aqueous environmental samples and one (1) trip blank. Four (4) aqueous environmental samples and the one (1) trip blank were analyzed for Volatile Organic Compounds (VOC). Four (4) aqueous environmental samples were analyzed for 1,4-dioxane. One (1) aqueous environmental sample were analyzed for Volatile Organic Gases (OVG), perchlorate, and miscellaneous parameters (ammonia as N, carbonate alkalinity, chloride, nitrate, nitrite, sulfate, and Total Organic Carbon (TOC)). Five (5) aqueous environmental samples were analyzed for Polychlorinated Biphenyl Compounds (PCB). Five (5) aqueous environmental samples were analyzed for metals. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 14-15, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 8082A, 6850, 6010C, 6020A, 7470A, and 9060A, RSK-175, EPA Methods 300.0, 522, and 680, and Standard Methods 4500NH3 and 2320B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, Interference Check Sample (ICS) results, laboratory method/preparation and trip blank results, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard areas, serial dilution

results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial and continuing calibrations performed on instrument ms15.i had Relative Response Factors (RRFs) for 1,4-dioxane below the 0.005 minimum response criterion. All VOC samples were affected. The detected and non-detected results reported for this compound in the affected samples were qualified as estimated, (J) and rejected, (UR), respectively.

Minor

- The continuing calibration performed on 04/23/15 @ 11:17 had Percent Differences (%Ds) for carbon disulfide, dichlorodifluoromethane, and methyl cyclohexane and a Percent Drift (%Drift) for bromomethane which exceeded the 20% quality control limit. Samples MRC-MW-16A-041515, MRC-MW-33A-041515, and MRC-MW-73B-041515 were affected. No action was taken for bromomethane because the affected results were qualified for blank contamination. The detected and non-detected results reported for the remaining compounds in the affected samples were qualified as estimated, (UJ).

- The PCB opening Continuing Calibration Verification (CCV) on both GC columns had an average %D for Aroclor 1260 greater than the 20% quality control limit. In addition, the average %Ds for Aroclor 1016 and Aroclor 1260 on GC column 1 exceeded 20% in the closing CCV. All samples were affected. The non-detected results reported for these PCBs in the affected samples were qualified as estimated, (UJ).

- The closing Limit of Detection Verification (LODV) for perchlorate exceeded the ± 50% quality control criteria. The detected results reported for perchlorate in the affected sample, MRC-MW-72B-041515, were qualified as estimated, (J).

- The following compounds/analytes below were detected in the laboratory method and preparation blanks at the following maximum concentrations:

Compound/Analyte	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane (1)	0.67	3.35
Bromomethane (2)	0.62	3.1
Tetrachloroethene (3)	0.64	3.2
Molybdenum (4)	0.00142 mg/L	0.0071 mg/L
Total Alkalinity (5)	2.88 mg/L	14.4 mg/L
Chloride (6)	0.22 mg/L	1.1 mg/L
DOC (7)	0.295 mg/L	1.475 mg/L

(1) - Maximum concentration detected in the laboratory method blank 2167095 (MB), from preparation batch #68557 affecting sample MRC-MW-114A-041415, MRC-MW-72B-041515, and Trip Blank.

(2) - Maximum concentration detected in the laboratory method blank, 216253 (MB), from preparation batch #68943 affecting samples MRC-MW-16A-041515, MRC-MW-33A-041515, and MRC-MW-73B-041515.
(3) - Maximum concentration detected in the Trip Blank affecting all VOC samples.
(4) - Maximum concentration detected in the 6020A laboratory method blank affecting all metals samples.
(5) - Maximum concentration detected in the continuing calibration blank affecting sample MRC-MW-72B-041515.
(6) - Maximum concentration detected in the continuing calibration blank affecting sample MRC-MW-72B-041515.
(7) - Maximum concentration detected in the continuing calibration blank affecting sample MRC-MW-72B-041515.

Action levels of 5X the maximum concentration were established to evaluate for laboratory blank contamination. Dilution factor, if necessary, was taken into consideration during the application of the action level. The detected results reported for these compounds in the affected samples below the established action level were qualified as non-detected, (U).

- The VOC Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses performed on sample MRC-MW-72B-041515 had Percent Recoveries (%Rs) for cis-1,3-dichloropropene below the lower quality control limit. In addition, the MS %R for trans-1,2-dichloroethene and the MS/MSD %Rs for methylcyclohexane were above the upper quality control limits. No action was taken for trans-1,2-dichloroethene and methylcyclohexane because these compounds were not detected in the parent sample. The non-detected result reported for cis-1,3-dichloropropene in the parent sample was qualified as estimated, (UJ).

- Detected results reported below the RL but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The trip blank was not included on the Chain of Custody (COC) form.

The VOC Laboratory Control Sample (LCS) analysis had %Rs for trans-1,2-dichloroethene and methylene chloride above the upper quality control limits. No action was taken because these compounds were not detected in the associated samples.

The perchlorate MS/MSD analyses %Rs for below the lower quality control limit. No action was taken in the associated sample because the unspiked sample was not in this SDG.

The following samples were diluted due to concentrations of VOC compounds:

Sample	Compound	Dilution
MRC-MW-114A-041415	1,2,4-Trichlorobenzene	10X
	1,2-Dichloroethane	10X
	Chlorobenzene	10X
MRC-MW-72B-041515	Trichloroethene	100X

The diluted results were used in the data validation.

Sample MRC-MW-72B-041515 was diluted 2X in the chloride and nitrite analyses, and 5X in the nitrate and

sulfate analyses.

1,4-Dioxane was reported in both the VOC fraction and the EPA Method 522 analysis for sample MRC-MW-72B-041515.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: 1,4-Dioxane was rejected in the VOC analyses due to low RRFs. VOC continuing calibration %Ds exceeded 20%. Average PCB CCVs exceeded 20%. Contaminants were detected in the laboratory preparation and method blanks. The VOC LCS had high %Rs for two compounds.

Other Factors Affecting Data Quality: Some samples were diluted. The VOC and perchlorate MS/MSD analyses had noncompliant %Rs. Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

ANALYTICAL REPORT

Workorder: 34-1511257
Client: ALS Environmental
Project Manager: Kevin W. Griffiths

Analytical Results

Sample ID: 2065603 011	Sampling Site: NA	Collected: 04/15/2015
Lab ID: 1511257001	Media: 125 mL Nalgene	Received: 04/22/2015
Matrix: Water	Sampling Parameter: NA	

Analysis Method - EPA 6850

Preparation: Not Applicable	**Analysis:** EPA 6850, Water	**Instrument ID:** LCMS04
	Batch: ELMS/1562 (HBN: 147840)	**Percent Solid:** NA
	Analyzed: 04/28/2015 16:21	**Report Basis:** Wet

Analyte	ug/L	MDL (ug/L)	RL (ug/L)	Dilution	Qual.
Perchlorate	0.15	0.060	0.20	1	J

Comments

Quality Control: EPA 6850 - (HBN: 147840)

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

Case Narrative
TMM-016

Sample Management

This report contains the results of the analysis of thirteen (13) ground water samples collected on April 14-15, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 15, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

One (1) sample was subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Eight (8) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2167095, bromomethane was detected at 0.67J µg/L.
- In 2168253, bromomethane was detected at 0.62J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2167096, cis-1,3-dichloropropene was recovered below the control limits.
- In 2168254, trans-1,2-dichloroethene and methylene chloride were recovered above the control limits.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2167151 and 2167152, was prepared from project sample MRC-MW-72B-041515(2065603011). Results for precision and accuracy were within control limits; except as follows:

- In 2167151, cis-1,3-dichloropropene and trichloroethene were recovered below the control limits; trans-1,2-dichloroethene and methyl cyclohexane were recovered above the control limits.
- In 2167152, cis-1,3-dichloropropene was recovered below the control limits; methyl cyclohexane and trichloroethene were recovered above the control limits.

Internal Standards. All internal standard results met method criteria.

<u>1,4-Dioxane by Method 522</u>

Sample Handling. Five (5) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

<u>Polychlorinated Biphenyls as Aroclors Method 8082</u>

Sample Handling. Five (5) water samples were extracted by SW-846 Method 3510 and analyzed for PCBs by SW-846 Method 8082. The extractions and analyses were performed within the holding times associated with each method.

Reporting. The samples were analyzed using dual-column instrumentation. Detected analytes were reported from the column yielding the lower result, unless quality control data or poor chromatography warranted the selection of the higher result.

If the difference in results above the reporting limit between the two columns exceeds 40% RPD, and that difference cannot be explained by matrix interferences evident from the chromatography, the results are qualified on the Certificate of Analysis.

Initial Calibrations. Prior to sample analysis, initial calibrations were performed and verified with an initial calibration verification standard. All results met method criteria.

Calibration verification. The initial calibration was verified prior to sample analysis and every 12 hours, thereafter. The average peak concentration results for each Aroclor were within control limits.

Blanks. Target analytes were not detected in the method blank.

Surrogates. All surrogate results were within control limits.

Spiked Blanks. Target analytes were recovered within control limits in both analytical columns.

Light Hydrocarbon Gases by RSK-175

Sample Handling. One (1) water samples was submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Duplicate Sample. A duplicate sample, identified as 2167216, was analyzed from project sample MRC-MW-72B-041515 (2065603011). Light hydrocarbon gases were not detected above the reporting limit.

Total Metals by SW-846 Method 6020A

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.00142 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was prepared on sample 2065603009 in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

Total Metals by SW-846 Method 6010C

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury by EPA Method 7470A

Sample handling. Five (5) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Ammonia-Nitrogen by SM4500NH3D

Sample handling. One (1) aqueous sample was analyzed for ammonia-nitrogen by Standard Method 4500NH3D. The sample was distilled and analyzed within the 28-day holding time established for the method.

Calibration. An initial calibration was properly established on the day of analysis and a second source standard was analyzed throughout the analysis to verify the calibration. The recoveries were within the QC limits.

Blank. A preparation blank, identified as 2170002, was distilled and analyzed with the sample. Initial and continuing method blanks were also analyzed. Ammonia-nitrogen was not detected above the reporting limit in the blanks.

Laboratory Control Sample. A laboratory control sample, identified as 2170003, was distilled and analyzed with the sample. The recovery was within QC limits.

Anions by EPA 300.0

Sample handling. One (1) aqueous sample was analyzed for chloride, nitrate-nitrogen, nitrite-nitrogen and sulfate by EPA Method 300.0. The sample was run within method recommended holding time for chloride, nitrate-nitrogen, and sulfate. The sample was originally run within method recommended holding time for nitrite-nitrogen, but required further analysis that exceeded that holding time.

Calibration. Initial calibrations, identified as Method A (high range) and Method L (low range), were properly established. Initial and continuing calibration verification standards were recovered within the QC limits.

Blanks. Initial and continuing blanks were analyzed with the sample. No analytes were detected above the reporting limits in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as 2165544, 2164899 and SSL, were analyzed initially and every 20 samples. Recoveries were within the QC limits.

Dissolved Total Organic Carbon by SW-846 9060A

Sample handling. One (1) aqueous sample was analyzed for dissolved total organic carbon by SW-846 Method 9060A. The sample was analyzed within the 28-day holding time established for the method.

Calibration. On the day of analysis, a four-point low curve calibration was properly established, and initial and continuing calibration standards were analyzed throughout the run. The recoveries were all within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the sample. Total organic carbon was not detected above the reporting limit in the blanks.

A dissolved TOC blank, identified as DISS. BLANK, was analyzed with the sample. Dissolved total organic carbon was not detected above the reporting limit in the blank.

Laboratory Control Samples. A dissolved TOC laboratory control sample, identified as 5.0 QC DISS., was analyzed with the sample. The recovery was within the QC limits.

Total Alkalinity by SM 2320B

Sample handling. One (1) aqueous sample was analyzed for total alkalinity by Standard Method 2320B. The sample was analyzed within the 14-day holding time established for the method.

Blanks. Method blanks were analyzed with the sample. Total alkalinity was not detected above the reporting limit in the blanks.

Calibration. The autotitrator was pH calibrated on the day of analysis. Total alkalinity and pH standards were analyzed initially and throughout the analysis. The standards were recovered within QC limits.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

SAMPLE SUMMARY

Workorder: 2065603 TMM016|MRC-GW 2015 Sampling

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

Revised 1/1/15

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1511256; 1511257; 1511258; 1211437; 1511439

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1562 (147840)

General Set Information: There were ten field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 444330) was less than 1/2 the CRDL. The recovery for the LCS (444331) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1511256001. The percent recoveries were outside of performance limits. The relative percent difference (RPD) was within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APR15C-02/03/11/20.

ANALYTICAL REPORT

Workorder: 34-1511257
Client: ALS Environmental
Project Manager: Kevin W. Griffiths

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

SAMPLE PREPARATION/ANALYSIS:

Water: Samples were prepared by TNB. 10.0mL of each sample was pipetted into a 15-mL centrifuge tube, and 50µL of an oxygen-18 labeled perchlorate solution was added as an internal standard. The samples were capped, vortexed, and filtered with Phenex PES membrane 0.45µm Syringe filters prior to analysis.

REAGENTS: Eluent A1: 95% ASTM Type II water (ALS)/ 5% ACN (B&J Lot DI735)/0.1% glacial acetic acid (JT-Baker Lot 04802).
Eluent B1: 95% ACN (B&J Lot DI735)/ 5% ASTM Type II water (ALS)/0.1% glacial acetic acid (JT-Baker Lot 04802).

STANDARDS: Internal Standard Spiking Solution Horizon# 27894. Dilutions of Working Standard Solution ID 27896 used for CCV's, LODV's, RLVS and IPC.

CALIBRATION CURVE: Used curve from 08/14/2014, sequence 14AUG14P.s Offline Quantitation Method: CLO4OFF1.M

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1100 LC/MSD system, in negative SIM mode, monitoring m/z 83, 85, and 89. Tuned: 8/14/2014 Tune Checked: 8/14/2014
Instrument ID: LCMS04 Online Acquisition Method: CLO4-AQN.M Fragmentor: 160 Output Gain: 2 Injection Volume: 30µL
Column: KP-RPPX C8 separator, 250mm Mobile Phase: 85% Eluent A1; 15% Eluent B1

FLOW GRADIENT:

Time (min.)	Flow (mL/min)
0	0.52
4.0	0.52
5.0	0.25
14.5	0.25
15.0	0.52
17.5	0.52

QC DATA: 5.0µL of QC Solution Horizon ID 27897 was used for LCS 444331; Target = 5.0µg/L. ASTM type II water was used for LMB 444330.

MS/MSD: MS/MSD was performed on sample 1511256001 (Client ID: 2065944 003). 5.0µl of Working Standard Solution Horizon ID 27895 was added to 10.0mL of sample preparation. Spike target = 5.0µg/L.

COMMENTS:
1) Results reported in µg/L.
2) All QC, Blank, CCV, and MS/MSD results were within method parameters, except for the following. The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335). The ion ratio of m/z 83 to 85 often fails at levels near or below the Limit of Detection (LODV). The ion ratio failed for the LODV's-1,2 (444328/335) and field samples 1511256002 and 1511257001.
3) Sample data can be viewed at two directories within the ALS system: \ALSLTWS013\DataReview\HBN# or throughNuGenesis\Tree\PrintData\LCMS\DefaultView.
4) Due to limitations of the Chemstation Software, many of the chromatographic peaks require manual integration. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APRC-02/03/11/20.

Perchlorate	0.145	0.100	145	0.163	0.100	* 163

Comments

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect.
The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

QC Data Approved and Reviewed by

Thomas Bosch	Thomas T. McKay	4/29/2015
Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for Lockheed- MRC, SDG 2065612R consists of six (6) aqueous environmental samples and a trip blank. Six (6) aqueous environmental samples and the trip blank were analyzed for volatile organic compounds (VOCs). Six (6) aqueous environmental samples were analyzed for 1.4-dioxane. Six (6) aqueous environmental samples were analyzed for metals. Four (4) aqueous environmental samples were analyzed for perchlorate. There is one (1) field duplicate pair included in this SDG: MRC-MW-DUP01-041615 and MRC-MW-71B-041615.

The samples were collected on April 16, 2015 and analyzed by ALS. Analyses were conducted in accordance to SW-846 Method 8260, 6020A, 6010C, 7470A, and 6850 and EPA Method 522 analytical and reporting protocol.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- The initial calibration relative response factor (RRF) for 1,4-dioxane was less than the 0.01 quality control limit in the VOC fraction on April 17, 2015 on instrument ms15.i and in the continuing calibration on April 21, 2015 @ 10:19 and April 23, 2015 @ 11:17. The nondetected 1,4-dioxane results were qualified as rejected (UR).

Minor Problems

- The continuing calibration percent differences (%Ds) for bromomethane, carbon disulfide, methyl cyclohexane, and dichlorodifluoromethane on April 23, 2015 @ 11:17 on instrument ms15.i. The nondetected bromomethane, carbon disulfide, methyl cyclohexane, and dichlorodifluoromethane results in the affected samples were qualified as estimated (UJ).

- Contamination was detected in the laboratory method blank associated with batches 2167095 and 2168523.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Bromomethane (1)	0.67	3.35
Bromomethane (2)	0.62	3.1

(1) Maximum concentration detected in laboratory method blank associated with batch 2167095 analyzed on 4/21/15.
(2) Maximum concentration of contaminant detected in laboratory method blank associated with batch 2168523 analyzed on 4/23/15.

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (U).

- The laboratory control sample (LCS) percent recovery (%R) of cis-1,3-dichloropropene was less than the lower quality control limit in batch 2167096. The nondetected cis-1,3-dichloropropene results were qualified as estimated (UJ).

- Molybdenum was detected in the laboratory preparation blank associated with batch 2166237.

Contaminant	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum	0.00075	0.00375

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (U).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

The LCS %Rs of trans-1,2-dichloroethene and methylene chloride were greater than the upper quality control limit in batch 2168254. No action was taken on the nondetected trans-1,2-dichloroethene and methylene chloride results in the affected samples.

1,4-dioxane was reported in both the 8260B method and 522 method.

The matrix spike/ matrix spike duplicate (MS/MSD) percent recoveries (%Rs) of perchlorate were less than the lower quality control limit in spiked sample 1511256001. This sample is not included in this SDG. No action was taken.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: The RRF of 1,4-dioxane was less than the quality control limit in the VOC fraction. Bromomethane and molybdenum were detected in the laboratory blanks. The continuing calibration %Ds for several VOC analytes exceeded quality control limits. The LCS %R of cis-1,3-dichloropropene was less than the lower quality control limit.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA National Functional for Organic Data Review (June 2008) and EPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Case Narrative
TMM-017

Sample Management

This report contains the results of the analysis of eight (8) ground water samples collected on April 16, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 16, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Four (4) samples were subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Seven (7) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2167095, bromomethane was detected at 0.67J µg/L.
- In 2168253, bromomethane was detected at 0.62J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2167096, cis-1,3-dichloropropene was recovered below the control limits.
- In 2168254, trans-1,2-dichloroethene and methylene chloride were recovered above the control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Seven (7) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Six (6) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.00142 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was prepared on sample 2065612004 in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

Total Metals by SW-846 Method 6010C

Sample handling. Six (6) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike and matrix spike duplicate identified as 2166228 and 2166229 were prepared and analyzed on sample 2065612004 (MRC-MW-DUP01-041615), in this deliverable group. All MS/MSD recoveries and their associated RPDs were within method control limits, except the following;

- The iron analyte concentration in the sample were greater than four times the concentration of our spiking solution. For this reason, spike recoveries were not calculated (NSC).

Total Mercury in Water by EPA Method 7470A

Sample handling. Six (6) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2065612006 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1511256; 1511257; 1511258; 1211437; 1511439

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1562 (147840)

General Set Information: There were ten field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 444330) was less than 1/2 the CRDL. The recovery for the LCS (444331) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1511256001. The percent recoveries were outside of performance limits. The relative percent difference (RPD) was within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APR15C-02/03/11/20.

Comments

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect.
The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

QC Data Approved and Reviewed by

Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◓ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

MRC-MW-110A-041715 MRC-MW-110B-041715

Overview

The sample set for LMC-MRC, SDG 2065944R consisted of four (4) aqueous environmental samples and one (1) trip blank. Three (3) aqueous environmental samples and the one (1) trip blank were analyzed for Volatile Organic Compounds (VOC). Three (3) aqueous environmental sample were analyzed for 1,4-dioxane and metals. Two (2) aqueous environmental samples were analyzed for perchlorate. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 17, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6010C, 6020A, 7470A, and 6850, and EPA Method 522 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, Interference Check Sample (ICS) results, laboratory method/preparation and trip blank results, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard areas, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial and continuing calibrations performed on instrument ms15.i had Relative Response Factors (RRFs) for 1,4-dioxane below the 0.005 minimum response criterion. All VOC samples were affected. The non-detected results reported for this compound in the affected samples were qualified as rejected, (UR).

Minor

- The VOC continuing calibration performed on 04/23/15 @ 11:17 had a Percent Drift (%Drift) for bromomethane and Percent Differences (%Ds) for carbon disulfide, dichlorodifluoromethane, and methyl cyclohexane which exceeded the 20% quality control limit. Samples MRC-MW-102A-

042015, and MRC-MW-102B-042015 were affected. No action was taken for bromomethane in sample MRC-MW-110B-041715 because the detected result was qualified for laboratory blank contamination. The detected and non-detected results reported for these compounds in the affected samples were qualified as estimated, (J) and (UJ), respectively.

- The closing Limit of Detection Verification (LODV) for perchlorate exceeded the ± 50% quality control criteria. The detected results reported for perchlorate in the affected samples, MRC-MW-110A-041715 and MRC-MW-110B-041715, were qualified as estimated, (J).

- The following analytes below were detected in the laboratory method/preparation and/or trip blanks at the following maximum concentrations:

Compound/Analyte	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane (1)	0.67	3.35
Bromomethane (2)	0.62	3.1
Tetrachloroethene (3)	0.39	1.95
Molybdenum (3)	0.0075 mg/L	0.0375 mg/L
Iron (4)	0.029 mg/L	0.145 mg/L

(1) - Maximum concentration detected in the laboratory method blank, 2167095, affecting sample TB-041715.
(2) - Maximum concentration detected in the laboratory method blank, 2168253, affecting samples MRC-MW-102A-042015 and MRC-MW-102B-042015.
(3) - Maximum concentration detected in the trip blank, TB-041715, affecting all VOC samples.
(3) - Maximum concentration detected in the 6020A initial calibration blank affecting all metals samples.
(4) - Maximum concentration detected in the 6010C laboratory preparation blank affecting all metals samples.

Action levels of 5X the maximum concentration were established to evaluate for blank contamination. Dilution factor, if necessary, was taken into consideration during the application of the action level. The detected results reported for these compounds in the affected samples below the established action level were qualified as non-detected, (U). No action was taken in the trip blank because field quality control blanks are not qualified for laboratory blank contamination.

- The VOC Laboratory Control Sample (LCS) analysis analyzed on 04/23/15 had Percent Recoveries (%Rs) for trans-1,2-dichloroethene and methylene chloride above the upper quality control limit. Samples MRC-MW-110A-041715, MRC-MW-110B-041715, and MRC-MW-11A-041715 were affected. No action was taken for methylene chloride because this compound was not detected in the affected samples. The detected result reported for trans-1,2-dichloroethene in sample MRC-MW-110A-041715 was qualified as estimated, (J).

- The VOC LCS analysis analyzed on 04/21/15 had a %R for cis-1,3-dichloropropene below the lower quality control limit. Sample TB-041715 was affected. The non-detected result reported for this compound was qualified as estimated, (UJ), in the affected trip blank.

- The perchlorate Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses performed on sample MRC-MW-110A-041715 had %Rs for below the lower quality control limit. The detected result reported for perchlorate in the parent sample was qualified as estimated, (J).

- Detected results reported below the RL but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The 1,4-dioxane MS/MSD analyses performed on sample MRC-MW-11A-041715 had a MSD %R for 1,4-dioxane above the upper quality control limit. The Relative Percent Difference (RPD) exceeded the 50% quality control criterion. No action was taken in the parent sample because the MS and LCS %Rs were compliant.

Manganese was reported at a 10X dilution in sample MRC-MW-110A-041715.

1,4-Dioxane was reported in both the VOC fraction and the EPA Method 522 analysis for samples MRC-MW-110A-041715, MRC-MW-110B-041715, and MRC-MW-11A-041715.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC initial an continuing RRFs for 1,4-dioxane were below 0.005. VOC continuing calibration %Drifts and %Ds exceeded 20%. Contaminants were detected in the VOC and metals laboratory preparation/method blanks. The VOC LCS analyses had noncompliant %Rs.

Other Factors Affecting Data Quality: The trip blank contained bromomethane and tetrachloroethene. The 1,4-dioxane and perchlorate MS/MSD analyses had noncompliant %Rs and/or RPDs. Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Comments

Quality Control: EPA 6850 - (HBN: 147840)

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

Case Narrative
TMM-018

Sample Management

This report contains the results of the analysis of four (4) ground water samples collected on April 17-18, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 18, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Two (2) samples were subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Four (4) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2167095, bromomethane was detected at 0.67J µg/L.
- In 2168253, bromomethane was detected at 0.62J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2167096, cis-1,3-dichloropropene was recovered below the control limits.
- In 2168254, trans-1,2-dichloroethene and methylene chloride were recovered above the control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Three (3) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2167684 and 2167685, was extracted and analyzed from project sample MRC-MW-11A-041715 (2065944002). Results for precision and accuracy were recovered within control limits; except as follows:

- In 2167685, 1,4-dioxane was recovered above the control limits.
- The %RPD for 1,4-dioxane was above the control limits.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Three (3) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.00075 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Three (3) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3b represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

<u>Total Mercury by EPA Method 7470A</u>

Sample handling. Three (3) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
2065944001	1	TB-041715	SW846 8260C	cis-1,3-Dichloropropene

The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte cis-1,3-Dichloropropene. The % Recovery was reported as 80.9 and the control limits were 81 to 121.

2065944003	1	MRC-MW-110A-041715	SW846 8260C	trans-1,2-Dichloroethene

The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 130 and the control limits were 71 to 122.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

PROJECT SUMMARY

Workorder: 2065944 TMM018|MRC GW 2015

Workorder Comments

See attached subcontracted perchlorate results from ALS-SLC. VLF 5/1/15

Sample Comments

Lab ID: 2065944004 **Sample ID:** MRC-MW-110B-041715 **Sample Type:** SAMPLE

Due to the sodium content, this sample required a 1/2 dilution for the 6010 total metals analysis. The detection limit was raised accordingly. SRT 04.22.15

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-018 **Method Type:** 6010C 3015 **SOW No.:**

Contract: TMM018|MRC GW 2015 **Lab Code:** CAS **Case No.:** **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
2065944002	MRC-MW-11A-041715	
2065944003	MRC-MW-110A-041715	
2065944004	MRC-MW-110B-041715	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

PROJECT MANAGER COMMENTS:

ALS Project Manager: _____ (Printed Name) Returned to Sample Receipt by: _____ (Signature) Date: _____

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1511256; 1511257; 1511258; 1211437; 1511439

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1562 (147840)

General Set Information: There were ten field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 444330) was less than 1/2 the CRDL. The recovery for the LCS (444331) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1511256001. The percent recoveries were outside of performance limits. The relative percent difference (RPD) was within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APR15C-02/03/11/20.

ANALYTICAL REPORT

Workorder: 34-1511256
Client: ALS Environmental
Project Manager: Kevin W. Griffiths

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

SAMPLE PREPARATION/ANALYSIS:

Water: Samples were prepared by TNB. 10.0mL of each sample was pipetted into a 15-mL centrifuge tube, and 50µL of an oxygen-18 labeled perchlorate solution was added as an internal standard. The samples were capped, vortexed, and filtered with Phenex PES membrane 0.45µm Syringe filters prior to analysis.

REAGENTS: Eluent A1: 95% ASTM Type II water (ALS)/ 5% ACN (B&J Lot DI735)/0.1% glacial acetic acid (JT-Baker Lot 04802).
Eluent B1: 95% ACN (B&J Lot DI735)/ 5% ASTM Type II water (ALS)/0.1% glacial acetic acid (JT-Baker Lot 04802).

STANDARDS: Internal Standard Spiking Solution Horizon# 27894. Dilutions of Working Standard Solution ID 27896 used for CCV's, LODV's, RLVS and IPC.

CALIBRATION CURVE: Used curve from 08/14/2014, sequence 14AUG14P.s Offline Quantitation Method: CLO4OFF1.M

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1100 LC/MSD system, in negative SIM mode, monitoring m/z 83, 85, and 89. Tuned: 8/14/2014 Tune Checked: 8/14/2014
Instrument ID: LCMS04 Online Acquisition Method: CLO4-AQN.M Fragmentor: 160 Output Gain: 2 Injection Volume: 30µL
Column: KP-RPPX C8 separator, 250mm Mobile Phase: 85% Eluent A1; 15% Eluent B1

FLOW GRADIENT:

Time (min.)	Flow (mL/min)
0	0.52
4.0	0.52
5.0	0.25
14.5	0.25
15.0	0.52
17.5	0.52

QC DATA: 5.0µL of QC Solution Horizon ID 27897 was used for LCS 444331; Target = 5.0µg/L. ASTM type II water was used for LMB 444330.

MS/MSD: MS/MSD was performed on sample 1511256001 (Client ID: 2065944 003). 5.0µl of Working Standard Solution Horizon ID 27895 was added to 10.0mL of sample preparation. Spike target = 5.0µg/L.

COMMENTS:
1) Results reported in µg/L.
2) All QC, Blank, CCV, and MS/MSD results were within method parameters, except for the following. The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335). The ion ratio of m/z 83 to 85 often fails at levels near or below the Limit of Detection (LODV). The ion ratio failed for the LODV's-1,2 (444328/335) and field samples 1511256002 and 1511257001.
3) Sample data can be viewed at two directories within the ALS system: \ALSLTWS013\DataReview\HBN# or throughNuGenesis\Tree\PrintData\LCMS\DefaultView.
4) Due to limitations of the Chemstation Software, many of the chromatographic peaks require manual integration. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APRC-02/03/11/20.

Comments

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect.
The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

QC Data Approved and Reviewed by

Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for LMC-MRC, SDG 2066115R consisted of four (4) aqueous environmental samples and one (1) trip blank. Three (3) aqueous environmental samples and the one (1) trip blank were analyzed for Volatile Organic Compounds (VOC). One (1) aqueous environmental sample were analyzed for 1,4-dioxane. Three (3) aqueous environmental samples were analyzed for metals. One (1) aqueous environmental sample was analyzed for perchlorate. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 20, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6010C, 6020A, 7470A, and 6850, and EPA Method 522 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, Interference Check Sample (ICS) results, laboratory method/preparation and trip blank results, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard areas, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial and continuing calibrations performed on instrument ms15.i had Relative Response Factors (RRFs) for 1,4-dioxane below the 0.005 minimum response criterion. All VOC samples were affected. The non-detected results reported for this compound in the affected samples were qualified as rejected, (UR).

Minor

- The VOC continuing calibration performed on 04/23/15 @ 11:17 had a Percent Drift (%Drift) for bromomethane and Percent Differences (%Ds) for carbon disulfide, dichlorodifluoromethane, and methyl cyclohexane which exceeded the 20% quality control limit. Samples MRC-MW-102A-042015 and MRC-MW-102B-042015 were affected. No action was taken for bromomethane because the detected results were qualified for laboratory blank contamination. The detected and non-detected results reported for the remaining compounds in the affected samples were qualified as estimated, (J) and (UJ), respectively.

- The closing Limit of Detection Verification (LODV) for perchlorate exceeded the ± 50% quality control criteria. The non-detected result reported for perchlorate in the affected sample, MRC-MW-52A-042015, was qualified as estimated, (UJ).

- The VOC Laboratory Control Sample (LCS) analysis analyzed on 04/23/15 had Percent Recoveries (%Rs) for trans-1,2-dichloroethene and methylene chloride above the upper quality control limit. Samples MRC-MW-102A-042015 and MRC-MW-102B-042015 were affected. No action was taken for methylene chloride because this compound was not detected in the affected samples. The detected result reported for trans-1,2-dichloroethene in sample MRC-MW-102B-042015 was qualified as estimated, (J).

- The VOC LCS analysis analyzed on 04/27/15 had %Rs for cis-1,3-dichloropropene and o-xylene below the lower quality control limits. Sample MRC-MW-10A-042015 was affected. The non-detected results reported for these compounds in the affected sample were qualified as estimated, (UJ).

- The following analytes below were detected in the laboratory method/preparation and/or trip blanks at the following maximum concentrations:

Compound/Analyte	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane [1]	0.62	3.1
Bromomethane [2]	0.58	2.9
Molybdenum [3]	0.008 mg/L	0.04 mg/L
Iron [4]	0.029 mg/L	0.145 mg/L

[1] - Maximum concentration detected in the laboratory method blank, 2168253, affecting samples MRC-MW-102A-042015 and MRC-MW-102B-042015.
[2] - Maximum concentration detected in the trip blank, TB-042015, affecting sample MRC-MW-10A-042015.
[3] - Maximum concentration detected in the 6020A initial calibration blank affecting all metals samples.
[4] - Maximum concentration detected in the 6010C laboratory preparation blank affecting all metals samples.

Action levels of 5X the maximum concentration were established to evaluate for blank contamination. Dilution factor, if necessary, was taken into consideration during the application of the action level. The detected results reported for these compounds in the affected samples below the established action level were qualified as non-detected, (U).

- Detected results reported below the RL but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The VOC continuing calibration performed on 04/27/15 @ 1:46 had a %Drift for bromomethane which exceeded the 20% quality control limit. Sample MRC-MW-10A-042015 was affected. No action was taken because the detected result was qualified for trip blank contamination.

The perchlorate Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses had %Rs for perchlorate below the lower quality control limit. No action was taken in the associated sample because the unspiked sample was not in this SDG.

Sample MRC-MW-102B-042015 was reanalyzed at a 20X dilution because cis-1,2-dichloroethene exceeded the calibration range of the instrument in the undiluted analysis. The result from the 20X dilution was used in the data validation. The laboratory only reported the diluted result on the electronic deliverable and the date of reanalysis was incorrect on the electronic deliverable.

1,4-Dioxane was reported in both the VOC fraction and the EPA Method 522 analysis for sample MRC-MW-10A-042015.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC initial an continuing RRFs for 1,4-dioxane were below 0.005. VOC continuing calibration %Drifts and %Ds exceeded 20%. Contaminants were detected in the VOC and metals laboratory preparation/method blanks. The VOC LCS analyses had noncompliant %Rs.

Other Factors Affecting Data Quality: One VOC required further dilution. The trip blank contained bromomethane. Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Comments

Quality Control: EPA 6850 - (HBN: 147840)

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

Sample Management

This report contains the results of the analysis of five (5) ground water samples collected on April 20, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 20, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

One (1) sample was subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Four (4) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2168253, bromomethane was detected at 0.62J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2168254, trans-1,2-dichloroethene and methylene chloride were recovered above the control limits.
- In 2169480, cis-1,3-dichloropropene and o-xylene were recovered below the control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. One (1) water sample was extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Three (3) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the ICB at 0.0008 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Three (3) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3b represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Three (3) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2066115003 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

Revised 1/1/15

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1511256; 1511257; 1511258; 1211437; 1511439

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1562 (147840)

General Set Information: There were ten field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 444330) was less than 1/2 the CRDL. The recovery for the LCS (444331) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1511256001. The percent recoveries were outside of performance limits. The relative percent difference (RPD) was within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APR15C-02/03/11/20.

ANALYTICAL REPORT

Workorder: 34-1511439
Client: ALS Environmental
Project Manager: Kevin W. Griffiths

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

SAMPLE PREPARATION/ANALYSIS:

Water: Samples were prepared by TNB. 10.0mL of each sample was pipetted into a 15-mL centrifuge tube, and 50µL of an oxygen-18 labeled perchlorate solution was added as an internal standard. The samples were capped, vortexed, and filtered with Phenex PES membrane 0.45µm Syringe filters prior to analysis.

REAGENTS: Eluent A1: 95% ASTM Type II water (ALS)/ 5% ACN (B&J Lot DI735)/0.1% glacial acetic acid (JT-Baker Lot 04802).
Eluent B1: 95% ACN (B&J Lot DI735)/ 5% ASTM Type II water (ALS)/0.1% glacial acetic acid (JT-Baker Lot 04802).

STANDARDS: Internal Standard Spiking Solution Horizon# 27894. Dilutions of Working Standard Solution ID 27896 used for CCV's, LODV's, RLVS and IPC.

CALIBRATION CURVE: Used curve from 08/14/2014, sequence 14AUG14P.s Offline Quantitation Method: CLO4OFF1.M

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1100 LC/MSD system, in negative SIM mode, monitoring m/z 83, 85, and 89. Tuned: 8/14/2014 Tune Checked: 8/14/2014
Instrument ID: LCMS04 Online Acquisition Method: CLO4-AQN.M Fragmentor: 160 Output Gain: 2 Injection Volume: 30µL
Column: KP-RPPX C8 separator, 250mm Mobile Phase: 85% Eluent A1; 15% Eluent B1

FLOW GRADIENT:

Time (min.)	Flow (mL/min)
0	0.52
4.0	0.52
5.0	0.25
14.5	0.25
15.0	0.52
17.5	0.52

QC DATA: 5.0µL of QC Solution Horizon ID 27897 was used for LCS 444331; Target = 5.0µg/L. ASTM type II water was used for LMB 444330.

MS/MSD: MS/MSD was performed on sample 1511256001 (Client ID: 2065944 003). 5.0µl of Working Standard Solution Horizon ID 27895 was added to 10.0mL of sample preparation. Spike target = 5.0µg/L.

COMMENTS:
1) Results reported in µg/L.
2) All QC, Blank, CCV, and MS/MSD results were within method parameters, except for the following. The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335). The ion ratio of m/z 83 to 85 often fails at levels near or below the Limit of Detection (LODV). The ion ratio failed for the LODV's-1,2 (444328/335) and field samples 1511256002 and 1511257001.
3) Sample data can be viewed at two directories within the ALS system: \ALSLTWS013\DataReview\HBN# or throughNuGenesis\Tree\PrintData\LCMS\DefaultView.
4) Due to limitations of the Chemstation Software, many of the chromatographic peaks require manual integration. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APRC-02/03/11/20.

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for Lockheed MRC, SDG 2066301R consisted of eight (8) water samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOC), total metals, dissolved gases, alkalinity, chloride, nitrate-N, nitrite-N, orthophosphate-P, sulfate, TOC, and TDS as outlined above.

The samples were collected by Tetra Tech on April 21, 2015 and analyzed by Test America Laboratories, Inc. All analyses were conducted in accordance with SW-846 Methods 8260C, 6010C, 6020A, 7470A, EPA Methods RSK-175, 300.0, 680, 6850, 903.0, and 904.0 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- No major noncompliances were noted.

Minor

- The following contaminants were detected in the laboratory method blanks or trip blank at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Bromomethane(1)	0.44 ug/L	2.2 ug/L
Trichloroethene(2)	1.0 ug/L	5.0 ug/L
1,4-Dichlorobenzene(3)	0.27 ug/L	1.35 ug/L

1 – Maximum concentration found in the trip blank (TB-042115) affecting all samples.

2 - Maximum concentrations found in preparation blank 2168253 affecting sample MRC-MW-79B-042115.

3 - Maximum concentrations found in preparation blank 2170306 affecting sample MRC-MW-101B-042115.

An action level of 5X the maximum contaminant level for bromomethane, trichloroethene, and 1,4-dichlorobenzene were used as the minimum detectable concentration. Dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The detected results for bromomethane less than the action limit were qualified (U) due to blank contamination.

- The VOC continuing calibration percent differences (%Ds) were greater than the quality control limit of 20% for bromomethane, carbon disulfide, dichlorodifluoromethane, and methyl cyclohexane for instrument MS15 on 04/23/15 @11:17. The detected and nondetected results for the aforementioned compounds in samples MRC-MW-29A-042115, MRC-MW-77B-042115, MRC-MW-27B-042115, and MRC-MW-79B-042115 were qualified as estimated (J) and (UJ), respectively.

- The VOC LCS (2168254) had percent recoveries greater than the quality control limit for trans-1,2-dichloroethene and methylene chloride. The detected results for trans-1,2-dichloroethene in samples MW-29A-042115, MRC-MW-77B-042115, and MRC-MW-27B-042115 were qualified as estimated (J). No action was taken for methylene chloride because methylene chloride was not detected in the associated samples.

- The VOC LCS (2168334) had percent recoveries greater than the quality control limit for trans-1,2-dichloroethene, methylene chloride, and a recovery for cis-1,3-dichloropropene less than the quality control limit. The detected result for trans-1,2-dichloroethene and the nondetected result for cis-1,3-dichloropropene in sample MW-79B-042115 were qualified as estimated (J) and (UJ), respectively. No action was taken for methylene chloride because methylene chloride was not detected in the associated samples.

- The VOC LCS (2169480) had percent recoveries less than the quality control limit for cis-1,3-dichloropropene and o-xylene. The detected and nondetected results for cis-1,3-dichloropropene and o-xylene in samples TB-042115, MRC-MW-101A-042115, MRC-MW-27C-042115, and MRC-MW-27A-042115 were qualified as estimated (J) and (UJ), respectively.

- The following contaminant was detected in the laboratory preparation or calibration blanks at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Ammonia	0.09 mg/L	0.45 mg/L

An action level of 5X the maximum contaminant level for ammonia was used as the minimum detectable concentration. Dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The detected result for ammonia less than the action limit was qualified (U) due to blank contamination for sample MRC-MW-27B-042115.

- Positive results below the Reporting Limit (RL) and above the detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The VOC continuing calibration (%D) was greater than the quality control limit of 20% for bromomethane for instrument MS15 on 04/27/15 @01:46. No action was taken on this basis because the bromomethane results were previously qualified due to blank contamination.

Samples MRC-MW-27B-042115 and MRC-MW-79B-042115 required dilutions due to concentrations for several VOC compounds greater than the linear calibration range of the instrument.

Sample MRC-MW-27A-042115 required a dilution due to a chloride concentration greater than the linear calibration range of the instrument.

Molybdenum was detected in the ICB at a concentration of 0.0007 mg/L. No action was taken on this basis because molybdenum was not detected in any associated samples.

Iron was detected in a CCB analyzed on 4/22/15 @12:40 at a concentration of 0.023 mg/L. No action was taken on this basis because all detections for iron were greater than the action level of 0.115 mg/L.

Chloride and sulfate were detected in several CCBs at maximum concentrations of 0.27 mg/L and 0.44 mg/L, respectively. No action was taken on this basis because all detections for chloride and sulfate were greater than the action levels of 1.35 mg/L and 2.2 mg/L, respectively.

The preparation blanks for dissolved gases, metals, and wet chemistry parameters were reported to the reporting limit not the MDL. No action was taken on this basis.

Mercury was not analyzed in sample MRC-MW-29A-042115. The reason for the exclusion of this metal in sample MW-29A was not documented on the chain of custody.

Nondetected results were reported to the method detection limit (MDL).

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of bromomethane and ammonia data. Continuing calibration %D noncompliances resulted in the qualification of VOC data. LCS percent recovery noncompliances resulted in the qualification of VOC data.

Other Factors Affecting Data Quality: Positive results below the Reporting Limit (RL) and above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those issues affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Sample Management

This report contains the results of the analysis of nine (9) ground water samples collected on April 21, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 21, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Nine (9) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2168253, bromomethane was detected at 0.62J µg/L.
- In 2168333, bromomethane was detected at 0.63J µg/L; trichloroethene was detected at 1.0 µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2168254, trans-1,2-dichloroethene and methylene chloride were recovered above the control limits.
- In 2168334, trans-1,2-dichloroethene and methylene chloride were recovered above the control limits; cis-1,3-dichloropropene was recovered below the control limits.
- In 2169480, cis-1,3-dichloropropene and o-xylene were recovered below the control limits.

Internal Standards. All internal standard results met method criteria.

Light Hydrocarbon Gases by RSK-175

Sample Handling. Two (2) water samples were submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Total Metals by SW-846 Method 6020A

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the ICB at 0.0008 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3a represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Four (4) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2066301003 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

Ammonia-Nitrogen by SM4500NH3D

Sample handling. Two (2) aqueous samples were analyzed for ammonia-nitrogen by Standard Method 4500NH3D. The samples were distilled and analyzed within the 28-day holding time established for the method.

Calibration. An initial calibration was properly established on the day of analysis and a second source standard was analyzed throughout the analysis to verify the calibration. The recoveries were within the QC limits.

Blank. A preparation blank, identified as 2171207, was distilled and analyzed with the samples. Initial and continuing method blanks were also analyzed. Ammonia-nitrogen was not detected above the reporting limit in the blanks.

Laboratory Control Sample. A laboratory control sample, identified as 2171208, was distilled and analyzed with the samples. The recovery was within QC limits.

Anions by EPA 300.0

Sample handling. Two (2) aqueous samples were analyzed for chloride, nitrate-nitrogen, nitrite-nitrogen and sulfate by EPA Method 300.0. The samples were run within method recommended holding time for chloride, nitrate-nitrogen, and sulfate. Sample 2066301004 (MRC-MW-27A-042115) was originally run within method recommended holding time for nitrite-nitrogen, but required further analysis that exceeded that holding time. Sample 2066301005 (MRC-MW-27B-042115) was run within method recommended holding time for nitrite-nitrogen.

Calibration. Initial calibrations, identified as Method A (high range) and Method L (low range), were properly established. Initial and continuing calibration verification standards were recovered within the QC limits.

Blanks. Initial and continuing blanks were analyzed with the samples. No analytes were detected above the reporting limits in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as 2168162, 2167614 and SSL, were analyzed initially and every 20 samples. Recoveries were within the QC limits.

Orthophosphate by EPA 365.3

Sample handling. Two (2) aqueous samples were analyzed for orthophosphate by EPA Method 365.3. The samples were analyzed within the hold time established for the method.

Calibration. An initial calibration was established. Initial and continuing calibration verification standards were analyzed on the day of analysis to verify the calibration. All recoveries were within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Orthophosphate was not detected above the reporting limit in the blanks.

Total Alkalinity by SM 2320B

Sample handling. Two (2) aqueous samples were analyzed for total alkalinity by Standard Method 2320B. The samples were analyzed within the 14-day holding time established for the method.

Blanks. Method blanks were analyzed with the samples. Total alkalinity was not detected above the reporting limit in the blanks.

Calibration. The autotitrator was pH calibrated on the day of analysis. Total alkalinity and pH standards were analyzed initially and throughout the analysis. The standards were recovered within QC limits.

Total Dissolved Solids by SM2540C

Sample handling. Two (2) aqueous samples were analyzed for total dissolved solids by Standard Method 2540C. The samples were analyzed within the 7-day holding time established for the method.

Blank. A preparation blank, identified as 2168386, was analyzed with the samples. Total dissolved solids were not detected above the reporting limit in the blank.

Laboratory Control Sample. A laboratory control sample, identified as 2168387, was analyzed with the samples. The recovery was within the QC limits.

Duplicate. A duplicate analysis, identified as 2168389, was performed on sample 2066301004 (MRC-MW-27A-042115). The relative percent difference between the results was not within the QC limits. The sample was inadvertently not commented on in LIMS.

Total Organic Carbon by SW-846 9060

Sample handling. Two (2) aqueous samples were analyzed for total organic carbon by SW-846 Method 9060. The samples were analyzed within the 28-day holding time established for the method.

Calibration. On the day of analysis, a four-point low curve calibration was properly established. Initial and continuing calibration verification standards were analyzed throughout the run. The recoveries were all within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Total organic carbon was not detected above the reporting limit in the blanks.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

SAMPLE SUMMARY

Workorder: 2066301 TMM020|MRC GW 2015

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
2066301001	2	TB-042115	SW846 8260C	cis-1,3-Dichloropropene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte cis-1,3-Dichloropropene. The % Recovery was reported as 77.3 and the control limits were 81 to 121.				
2066301001	3	TB-042115	SW846 8260C	o-Xylene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte o-Xylene. The % Recovery was reported as 77.1 and the control limits were 79 to 124.				
2066301004	5	MRC-MW-27A-042115	EPA 300.0	Nitrite-N
The sample was originally run within hold time, but required further analysis that exceeded hold time.				
2066301004	6	MRC-MW-27A-042115	EPA 300.0	Nitrite-N
Due to sample matrix interferences, this analyte was analyzed at a dilution and the detection levels adjusted accordingly.				
2066301004	7	MRC-MW-27A-042115	SW846 8260C	cis-1,3-Dichloropropene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte cis-1,3-Dichloropropene. The % Recovery was reported as 77.3 and the control limits were 81 to 121.				
2066301004	8	MRC-MW-27A-042115	SW846 8260C	o-Xylene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte o-Xylene. The % Recovery was reported as 77.1 and the control limits were 79 to 124.				
2066301005	1	MRC-MW-27B-042115	SW846 8260C	trans-1,2-Dichloroethene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 130 and the control limits were 71 to 122.				
2066301005	2	MRC-MW-27B-042115	S4500NH3D	Ammonia-nitrogen, Total
Due to sample matrix interferences, this analyte was analyzed at a dilution and the detection levels adjusted accordingly.				
2066301006	2	MRC-MW-101A-042115	SW846 8260C	cis-1,3-Dichloropropene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte cis-1,3-Dichloropropene. The % Recovery was reported as 77.3 and the control limits were 81 to 121.				
2066301006	3	MRC-MW-101A-042115	SW846 8260C	o-Xylene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte o-Xylene. The % Recovery was reported as 77.1 and the control limits were 79 to 124.				
2066301008	1	MRC-MW-79B-042115	SW846 8260C	trans-1,2-Dichloroethene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 127 and the control limits were 71 to 122.				
2066301008	2	MRC-MW-79B-042115	SW846 8260C	cis-1,3-Dichloropropene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte cis-1,3-Dichloropropene. The % Recovery was reported as 76.3 and the control limits were 81 to 121.				
2066301009	2	MRC-MW-27C-042115	SW846 8260C	cis-1,3-Dichloropropene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte cis-1,3-Dichloropropene. The % Recovery was reported as 77.3 and the control limits were 81 to 121.				
2066301009	3	MRC-MW-27C-042115	SW846 8260C	o-Xylene
The QC sample type LCS for method SW846 8260C was outside the control limits for the analyte o-Xylene. The % Recovery was reported as 77.1 and the control limits were 79 to 124.

Overview

The sample set for LMC-MRC, SDG 2066604 consisted of seven (7) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), organic volatile gases (OVG), 1,4-dioxane, metals, perchlorate, and/or miscellaneous parameters (alkalinity, ammonia, chloride, dissolved organic carbon, nitrate, nitrite, orthophosphate, sulfate, and total dissolved solids). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 22, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, and 9060A, EPA Methods 300, 365.3, 522, and 6850, Standard Methods 4500NH3D, 2320B, and 2540C, and RSK-175 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation

blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, detection limits, and field duplicate precision. Areas of concern are listed below.

Minor

- The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane	0.52	2.6
Carbon disulfide	0.38	1.9
1,4-Dichlorobenzene	0.27	1.35

Maximum concentration detected in the laboratory method blank 2170306 affecting all samples, except MRC-MW-116A-042215.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U). The trip blank was not qualified for laboratory blank contamination.

- Molybdenum was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum	0.00078	0.0039

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U).

- Matrix spike duplicate (MSD) percent recovery (%R) for cobalt was greater than the quality control (QC) limit. The matrix spike was within QC limits. The result for cobalt in parent sample MRC-MW-81A-042215 was qualified as estimated high (J).

- The following analytes were detected in the laboratory calibration and preparation blanks at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Alkalinity(1)	3.25	16.25
Ammonia(2)	0.093	0.465

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Ammonia(3)	0.090	0.45
Chloride(4)	0.24	1.2

Chloride[5]	0.15	0.75

1 – Maximum concentration in calibration blank.
2 – Maximum concentration in preparation blank 2173012.
3 – Maximum concentration in preparation blank 2174296.
4 – Maximum concentration in calibration blank on 4/23/15.
5 – Maximum concentration in calibration blank on 4/24/15.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

Matrix spike (MS) and MSD %Rs were zero for 1,1-dichloroethene and trichlorethene. LCS %Rs were acceptable No action was taken on this basis.

MS %R was less than QC limits for o-xylene. The MSD %R was acceptable and the LCS %R was acceptable. No action was taken on this basis.

MS and MSD %Rs were greater than QC limits for methyl acetate and methyl cyclohexane. LCS %Rs were acceptable No action was taken on this basis.

MS %R was less than QC limits for perchlorate. The MSD %R was acceptable and the LCS %R was acceptable. No action was taken on this basis.

Chloride, dissolved organic carbon, nitrate, nitrite, and sulfate were analyzed at dilution. Resulting in elevated detection limits for nitrite.

Executive Summary

Laboratory Performance: Calibration noncompliance was noted for VOCs. Contaminants were detected in the laboratory method blanks.

Other Factors Affecting Data Quality: Matrix spike noncompliance was noted for VOCs, metals, and perchlorate.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

VQL – Validation Qualifier
QLCD – Validation Qualifier Code

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity
