Comments

Quality Control: EPA 6850 - (HBN: 147840)

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect. The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

Tetra Tech, Inc.
MRC-GW 2015 Sampling

ALS-Middletown
Case Narrative
TMM-021

Sample Management

This report contains the results of the analysis of eight (8) ground water samples collected on April 22, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 22, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontract Data

Two (2) samples were subcontracted to ALS – Salt Lake City for the analysis of Perchlorate by Method USEPA 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Six (6) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2170306, bromomethane was detected at 0.52J µg/L; carbon disulfide was detected at 0.38J µg/L; 1,4-dichlorobenzene was detected at 0.27J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2170379 and 2170380, was prepared from project sample MRC-MW-81B-042215 (2066604007). Results for precision and accuracy were within control limits; except as follows:

- In 2170379, 1,1-dichloroethane, cis-1,2-dichloroethene, trans-1,2-dichloroethene and o-xylene were recovered below the control limits; 1,1-dichloroethene and trichloroethene had no recovery; methyl acetate and methyl cyclohexane were recovered above the control limits.

- In 2170380, 1,1-dichloroethane, trans-1,2-dichloroethene and vinyl chloride were recovered below the control limits; 1,1-dichloroethene and trichloroethene had no recovery; cis-1,2-dichloroethene, methyl acetate and methyl cyclohexane were recovered above the control limits.

Internal Standards. All internal standard results met method criteria.

<u>1,4-Dioxane by Method 522</u>

Sample Handling. One (1) water sample was extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

<u>Light Hydrocarbon Gases by RSK-175</u>

Sample Handling. Two (2) water samples were submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Duplicate Sample. A duplicate sample, identified as 2170110, was prepared from project sample MRC-MW-60B-042215 (2066604005). Target analytes were detected as follows:

- Methane was detected at 54.9 µg/L in the sample and at 59.4 µg/L in the duplicate sample. The %RPD was recovered at 7.8%.

<u>Total Metals by SW-846 Method 6020A</u>

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.00078 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was prepared on sample, 2066604006, in this deliverable group. The spike recoveries and associated RPDS were within method control limits with the exception of the following:

- Co was outside method control limits for one of the spike recoveries.

Total Metals by SW-846 Method 6010C

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Five (5) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Ammonia-Nitrogen by SM4500NH3D

Sample handling. Two (2) aqueous samples were analyzed for ammonia-nitrogen by Standard Method 4500NH3D. The samples were distilled and analyzed within the 28-day holding time established for the method.

Calibration. Initial calibrations were properly established on the days of analysis, and a second source standard was analyzed throughout the analyses to verify the calibrations. The recoveries were within the QC limits.

Blank. Preparation blanks, identified as 2173012 and 2174296, were distilled and analyzed with the samples. Initial and continuing method blanks were also analyzed. Ammonia-nitrogen was not detected above the reporting limit in the blanks.

Laboratory Control Sample. Laboratory control samples, identified as 2173013 and 2174297, were distilled and analyzed with the samples. The recoveries were within QC limits.

Anions by EPA 300.0

Sample handling. Two (2) aqueous samples were analyzed for chloride, nitrate-nitrogen, nitrite-nitrogen and sulfate by EPA Method 300.0. The samples were run within method recommended holding time for each analyte.

Calibration. Initial calibrations, identified as Method A (high range) and Method L (low range), were properly established. Initial and continuing calibration verification standards were recovered within the QC limits.

Blanks. Initial and continuing blanks were analyzed with the samples. No analytes were detected above the reporting limits in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as 2168430, 2168142 and SSL, were analyzed initially and every 20 samples. Recoveries were within the QC limits.

Dissolved Total Organic Carbon by SW-846 9060A

Sample handling. Two (2) aqueous samples were analyzed for dissolved total organic carbon by SW-846 Method 9060A. The samples were analyzed within the 28-day holding time established for the method.

Calibration. On the day of analysis, a four-point low curve calibration was properly established, and initial and continuing calibration standards were analyzed throughout the run. The recoveries were all within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Total organic carbon was not detected above the reporting limit in the blanks.

A dissolved TOC blank, identified as DISS. BLANK, was analyzed with the samples. Dissolved total organic carbon was not detected above the reporting limit in the blank.

Laboratory Control Samples. A dissolved TOC laboratory control sample, identified as 5.0 QC DISS., was analyzed with the samples. The recovery was within the QC limits.

Orthophosphate by EPA 365.3

Sample handling. Two (2) aqueous samples were analyzed for orthophosphate by EPA Method 365.3. The samples were analyzed within the hold time established for the method.

Calibration. An initial calibration was established. Initial and continuing calibration verification standards were analyzed on the day of analysis to verify the calibration. All recoveries were within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Orthophosphate was not detected above the reporting limit in the blanks.

Total Alkalinity by SM 2320B

Sample handling. Two (2) aqueous samples were analyzed for total alkalinity by Standard Method 2320B. The samples was analyzed within the 14-day holding time established for the method.

Blanks. Method blanks were analyzed with the sample. Total alkalinity was not detected above the reporting limit in the blanks.

Calibration. The autotitrator was pH calibrated on the day of analysis. Total alkalinity and pH standards were analyzed initially and throughout the analysis. The standards were recovered within QC limits.

Total Dissolved Solids by SM2540C

Sample handling. Two (2) aqueous samples were analyzed for total dissolved solids by Standard Method 2540C. The samples were analyzed within the 7-day holding time established for the method.

Blank. A preparation blank, identified as 2169216, was analyzed with the samples. Total dissolved solids were not detected above the reporting limit in the blank.

Laboratory Control Sample. A laboratory control sample, identified as 2169217, was analyzed with the samples. The recovery was within the QC limits.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1511256; 1511257; 1511258; 1211437; 1511439

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1562 (147840)

General Set Information: There were ten field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 444330) was less than 1/2 the CRDL. The recovery for the LCS (444331) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1511256001. The percent recoveries were outside of performance limits. The relative percent difference (RPD) was within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 28APR15C-02/03/11/20.

Comments

The percent recoveries for the matrix spike and matrix spike duplicate (MS/MSD) were outside of performance limits, due to matrix effect.
The Limit of Detection Verification standard failed percent recovery (LODV2 – 444335).

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for Lockheed- MRC, SDG 2066900R consists of seven (7) aqueous environmental samples and a trip blank. Six (6) aqueous environmental samples and the trip blank were analyzed for volatile organic compounds (VOCs). Two (2) aqueous environmental samples were analyzed for 1.4-dioxane. Five (5) aqueous environmental samples were analyzed for metals. There is one field duplicate pair included in this SDG: MRC-DUP02-042315 and MRC-MW-58A-042315.

The samples were collected on April 23, 2015 and analyzed by ALS. Analyses were conducted in accordance to SW-846 Method 8260, 6020A, 6010C, 7470A, and EPA Method 522 analytical and reporting protocol.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, field duplicate precision and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems

- The initial calibration relative response factor (RRF) for 1,4-dioxane was less than the 0.01 quality control limit in the VOC fraction on April 29, 2015 on instrument ms15.i. The nondetected 1,4-dioxane results were qualified as rejected (UR).

Minor Problems

- The continuing calibration percent difference (%D) for 2-butanone was greater than the 20% quality control limit on April 30, 2015 @ 01:48 on instrument ms15.i. The nondetected 2-butanone results in the affected samples were qualified as estimated (UJ).

- Contamination was detected in the trip blank TB-042315.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
bromomethane	0.56	2.8

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. The detected result less than the action level was qualified as (U).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Contamination was detected in the laboratory method blank associated with batch 2170306 affecting the trip blank.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Bromomethane	0.52	2.6
Carbon disulfide	0.38	1.9
1,4-dichlorobenzene	0.27	1.35

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. No action was taken on the field quality blank due to laboratory blank contamination.

The matrix spike/ matrix spike duplicate (MS/MSD) percent recoveries of iron were not calculated in spiked sample MRC-MW-76B-042315. The sample concentration was greater than 4X the spike amount. No action was taken.

1,4-dioxane was reported in both the 8260B method and 522 method.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: The RRF of 1,4-dioxane was less than the quality control limit in the VOC fraction. Bromomethane were detected in the trip blank. The continuing calibration %D for 2-butanone exceeded quality control limits.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA National Functional for Organic Data Review (June 2008) and EPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Case Narrative
TMM-022

Sample Management

This report contains the results of the analysis of five (5) ground water samples collected on April 23, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 23, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Seven (7) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2170306, bromomethane was detected at 0.52J µg/L; carbon disulfide was detected at 0.38J µg/L; 1,4-dichlorobenzene was detected at 0.27J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Two (2) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was prepared on sample, 2066900002, in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

Total Metals by SW-846 Method 6010C

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike and matrix spike duplicate identified as 2169366 and 2169367 were prepared and analyzed on sample 2066900005 (MRC-MW-76B-042315), in this deliverable group. All MS/MSD recoveries and their associated RPDs were within method control limits, except the following;

- The iron analyte concentration in the sample were greater than four times the concentration of our spiking solution. For this reason, spike recoveries were not calculated (NSC).

Total Mercury in Water by EPA Method 7470A

Sample handling. Five (5) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

SUBJECT: **ORGANIC AND INORGANIC DATA VALIDATION- VOC / METALS**
LOCKHEED-MRC
SAMPLE DELIVERY GROUP (SDG) 2067191R

SAMPLES: 2/Aqueous/VOC

MRC-MW-57A-042415 TB-042415

3/Aqueous/Metals

MRC-MW-49A-042415 MRC-MW-57A-042415 MRC-MW-59A-042415

Overview

The sample set for Lockheed- MRC, SDG 2067191R consists of three (3) aqueous environmental samples and a trip blank. One (1) aqueous environmental samples and the trip blank were analyzed for volatile organic compounds (VOCs). Three (3) aqueous environmental samples were analyzed for metals. There is no field duplicate pair included in this SDG.

The samples were collected on April 24, 2015 and analyzed by ALS. Analyses were conducted in accordance to SW-846 Method 8260, 6020A, 6010C, and 7470A analytical and reporting protocol.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation and detection limits.

Areas of concern with respect to data quality are listed below.

Minor Problems

- The continuing calibration percent difference (%D) for 2-butanone was greater than the 20% quality control limit on April 30, 2015 @ 01:48 on instrument ms15.i. The detected 2-butanone result in the affected sample MRC-MW-57A-042415 was qualified as estimated (J).

- Contamination was detected in the trip blank.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Bromomethane	0.50	2.5

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. The detected bromomethane result in sample MRC-MW-57A-042415 was qualified as (U).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Contamination was detected in the laboratory method blank associated with batch 2170306 affecting the trip blank.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Bromomethane	0.52	2.6
Carbon disulfide	0.38	1.9
1,4-dichlorobenzene	0.27	1.35

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. No action was taken on the field quality blank due to laboratory blank contamination.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: The continuing calibration %D for 2-butanone was greater than the 20% quality control limit.

Other Factors Affecting Data Quality: Trip blank contained bromomethane. No validation action was required.

The data for these analyses were reviewed with reference to the EPA National Functional for Organic Data Review (June 2008) and EPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Sample Management

This report contains the results of the analysis of four (4) ground water samples collected on April 24, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 24, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Two (2) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2170306, bromomethane was detected at 0.52J µg/L; carbon disulfide was detected at 0.38J µg/L; 1,4-dichlorobenzene was detected at 0.27J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

Total Metals by SW-846 Method 6020A

Sample handling. Three (3) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Three (3) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Three (3) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
BROMOFLUOROBENZENE (BFB)

Lab Name: ALS Contract: HPJ019

Lab Code: VOA Case No.: SAS No.: SDG NO.: TMM-023

Lab File ID: 15042850.D BFB Injection Date: 4/28/2015

Instrument ID: ms15.i BFB Injection Time: 23:20

GC Column: RTXVMS ID: 0.25 (mm) Heated Purge: Y/N N

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	18.1
75	30.0 - 60.0% of mass 95	49.5
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	6.7
173	Less than 2.0% of mass 174	0.6(0.7) 1
174	50.0 - 100.0% of mass 95	76.6
175	5.0 - 9.0% of mass 174	5.3 (6.9) 1
176	95.0 - 101.0% of mass 174	73.9 (96.4) 1
177	5.0 - 9.0% of mass 176	4.6 (6.2) 2

1-Value is % mass 174

2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-023 **Method Type:** 6010C 3015 **SOW No.:**

Contract: TMM023|112IC06247 **Lab Code:** CAS **Case No.:** **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
2067191001	MRC-MW-57A-042415	
2067191002	MRC-MW-59A-042415	
2067191003	MRC-MW-49A-042415	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

Overview

The sample set for LMC-MRC, SDG 2067368R consisted of five (5) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), 1,4-dioxane, polychlorinated biphenyl (PCB) homologs, select total metals, and/or perchlorate. The trip blank was analyzed for VOCs. One field duplicate sample pair was included in this SDG: MRC-MW-113A-042715 / MRC-MW-DUP03-042715.

The samples were collected by Tetra Tech, Inc. on April 27, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6850, 6020A/6010C, 7470A and EPA Methods 522 and 680 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

No major issues were noted.

Minor

- The following compounds were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane	0.6	3.0
Carbon Disulfide	0.38	1.9
1,4-Dichlorobenzene	0.27	1.35

Maximum concentration detected in the method blank 2170306 affecting samples MRC-MW-113A-042715 and MRC-MW-DUP03-042715.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Detected results reported below the established action levels were qualified as non-detected, (U), due to blank contamination. The trip blank was not qualified for blank contamination.

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

Samples MRC-MW-113A-042715 and MRC-MW-DUP03-042715 were analyzed at 1X and 20X dilution for VOCs. Results were reported from the 20X dilution for 1,2,3-trichlorbenzene and trichlorofluoromethane.

One SVOC surrogate (terphenyl-d14) was greater than the QC limit. No action was taken.

Executive Summary

Laboratory Performance: Three VOCs were detected in the laboratory method blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

VQL – Validation Qualifier
QLCD – Validation Qualifier Code

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Sample Management

This report contains the results of the analysis of six (6) ground water samples collected on April 27, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 27, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Three (3) samples were subcontracted to ALS – Salt Lake City, Utah for the analysis of Perchlorate by 6850. The results have been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Two (2) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2170306, bromomethane was detected at 0.52J µg/L; carbon disulfide was detected at 0.38J µg/L; 1,4-dichlorobenzene was detected at 0.27J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Two (2) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

PCB Homolog Compounds

Sample Handling. Two (2) water samples were extracted by SW-846 Method 3546 and analyzed by Method 680 for PCB homolog compounds. The extraction and analysis were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes.

Initial Calibration Verification Check. Initial calibration verification standards (ICV) were properly analyzed and all results were within method criteria.

Continuing Calibration Verification. Continuing calibration standards were properly analyzed and met method criteria.

Blanks. Target analytes were not detected in the blank.

Surrogates. Recoveries were within control limits; except as follows:

- In sample MRC-MW-DUP03-042715 (2067368003), terphenyl-d14 was recovered above the control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. Internal standard results met method criteria.

Total Metals by SW-846 Method 6020A

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. One (1) water sample was analyzed for total mercury using EPA method 7470A. The sample was digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2067368004 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1511952

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1565 (148273)

General Set Information: There were three field samples in this Work Order. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 445605) was less than 1/2 the CRDL. The recovery for the LCS (445606) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1511952001 (Client ID: 2067368 002). The percent recoveries and the relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 06MAYP-02/03/07/10/11/13.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

Total Metals by 6010C Summary Forms

6010C 3015
- COVER PAGE -
INORGANIC ANALYSIS DATA PACKAGE

Client: Tetra Tech Pittsburgh

SDG No.: TMM-024 **Method Type:** 6010C 3015 **SOW No.:**

Contract: TMM024|112IC06247 **Lab Code:** CAS **Case No.:** **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
2067368004	MRC-MW-105A-042715	

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Date: Title: **Metals Manager**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

LOCKHEED – MIDDLE RIVER CENTER (MRC)
SAMPLE DELIVERY GROUP (SDG) – 2067593R

SAMPLES: 4/Water/ VOC

MRC-MW-104A-042815 MRC-MW-104B-042815 MRC-MW-112A-042815
TB-042815

2/Water/ TOTAL METALS

MRC-MW-104B-042815 MRC-MW-112A-042815

Overview

The sample set for Lockheed MRC, SDG 2067593R consisted of three (3) water samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOC) and total metals as outlined above.

The samples were collected by Tetra Tech on April 28, 2015 and analyzed by Test America Laboratories, Inc. All analyses were conducted in accordance with SW-846 Methods 8260C, 6010C, 6020A, and 7470A analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), internal standard recoveries, ICP interference results, laboratory duplicate results, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- No major noncompliances were noted.

Minor

- The following contaminant was detected in the trip blank (TB-042815) at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Bromomethane	0.58 ug/L	2.9 ug/L

An action level of 5X the maximum contaminant level for bromomethane was used as the minimum detectable concentration. Dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The detected results for bromomethane less than the action limit were qualified (U) due to blank contamination.

- A VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% for 2-butanone for instrument MS15 on 04/30/15 @01:48. The nondetected results for 2-butanone in all samples were qualified as estimated (UJ).

- The following contaminants were detected in the laboratory calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Molybdenum	0.0008 mg/L	0.004 mg/L
Iron	0.025 mg/L	0.125 mg/L

An action level of 5X the maximum contaminant level for molybdenum and iron were used as the minimum detectable concentrations. Dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The detected results for molybdenum and iron less than the action limit were qualified (U) due to blank contamination for sample MRC-MW-104B-042815.

- Positive results below the Reporting Limit (RL) and above the detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The preparation blanks for VOCs and metals parameters were reported to the reporting limit not the MDL. No action was taken on this basis.

Nondetected results were reported to the method detection limit (MDL).

Executive Summary

Laboratory Performance: Blank contamination resulted in the qualification of bromomethane, molybdenum, and iron data. Continuing calibration %D noncompliance resulted in the qualification of 2-butanone data.

Other Factors Affecting Data Quality: Positive results below the Reporting Limit (RL) and above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those issues affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Sample Management

This report contains the results of the analysis of four (4) ground water samples collected on April 28, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 28, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Four (4) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

Total Metals by SW-846 Method 6020A

Sample handling. Two (2) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following;

- Mo had detectible levels in the CCBs analyzed at 11:39 and 13:36 at 0.0008 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Two (2) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3a represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Three (3) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Project Name:	**GW sampling**	Workorder:	**2067593**
Purchase Order:	**1103811**	Workorder ID:	**TMM025|112IC06247**

Dear Ms. Thomson:

Enclosed are the analytical results for samples received by the laboratory on Tuesday, April 28, 2015.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Debra J. Musser (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

TO: **A. APANAVAGE** **DATE:** **JUNE 10, 2015**

FROM: **L. GANSER** **COPIES:** **DV FILE**

SUBJECT: **DATA VALIDATION – VOCs/1,4-DIOXANE/TOTAL METALS**
LOCKHEED MARTIN CORPORATION (LMC) – MIDDLE RIVER COMPLEX (MRC)
SDG 2068168R

SAMPLES:

3/Aqueous/VOCs

MRC-MW-94B-043015 MRC-MW-95B-043015 TB-043015

1/Aqueous/SVOCs/

EXT-MW06-043015

1/Aqueous/Metals

MRC-MW-04B-043015

Overview

The sample set for LMC-MRC, SDG 2067368R consisted of four (4) aqueous environmental samples and one (1) trip blank. Samples MRC-MW-94B-043015, MRC-MW-95B-043015, and the trip blank (TB-043015) were analyzed for volatile organic compounds (VOCs). Sample EXT-MW06-043015 was analyzed for 1,4-dioxane. Sample MRC-MW-04B-043015 was analyzed for select total metals. No field duplicate sample pairs were included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 30, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A and EPA Method 522 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major - No major issues were noted.

Minor

- Metals internal standard recovery for Ge_72 was greater than the QC limit. Detected results for associated metals were qualified as estimated, (J).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

The following compounds were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Carbon Disulfide	0.41	2.05
1,4-Dichlorobenzene	0.33	1.65

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as results for samples MRC-MW-94B-043015 and MRC-MW-95B-043015 were nondetects. The trip blank was not qualified for blank contamination.

Iron was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Iron	0.026	0.13

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as the iron result for sample MRC-MW-04B-043015 was greater than the blank action level.

Executive Summary

Laboratory Performance: Contaminants were detected in the laboratory method blanks. Internal standard recovery noncompliance was noted affecting 6020 analysis.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

VQL – Validation Qualifier
QLCD – Validation Qualifier Code

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

ALS-Middletown
Case Narrative
TMM-027

Sample Management

This report contains the results of the analysis of five (5) water samples collected on April 30, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 30, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Three (3) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. The batch LCS also serves as a second source (ICV).

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2173978, carbon disulfide was detected at 0.41J µg/L and 1,4-dichlorobenzene was detected at 0.33J µg/L..

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. One (1) water sample was extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had detectible levels in the ICB and CCB analyzed at 00:02 and 01:03 at 0.0012 J mg/L and 0.0009 J mg/L respectively.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3b represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. One (1) water sample was analyzed for total mercury using EPA method 7470A. The sample was digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

TETRA TECH

INTERNAL CORRESPONDENCE

TO: **A. APANAVAGE** **DATE:** **AUGUST 3, 2015**

FROM: **L. GANSER** **COPIES:** **DV FILE**

SUBJECT: **DATA VALIDATION – VOCs/OVG/TOTAL METALS/MISCELLANEOUS PARAMETERS LOCKHEED MARTIN CORPORATION (LMC) – MIDDLE RIVER COMPLEX (MRC) SDG 2068544**

SAMPLES:

4/Aqueous/

MRC-MW-37A-050415 MRC-MW-37B-050415 MRC-MW-37C-050415
TB-050415

Overview

The sample set for LMC-MRC, SDG 2068544 consisted of three (3) aqueous environmental samples and one (1) trip blank. All samples and the trip blank were analyzed for volatile organic compounds (VOCs). Samples MRC-MW-37A-050415 and MRC-MW-37B-050415 were analyzed for organic volatile gases (OVG) and miscellaneous parameters (alkalinity, ammonia, chloride, dissolved organic carbon, nitrate, nitrite, orthophosphate, sulfate, and total dissolved solids). Sample MRC-MW-37A-050415 was analyzed for metals. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on May 4, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, and 9060A, EPA Methods 300 and 365.3, Standard Methods 4500NH3D, 2320B, and 2540C, and RSK-175 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, detection limits, and field duplicate precision. Areas of concern are listed below.

Major - None

Minor

- The following analytes were detected in the laboratory calibration and preparation blanks at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Alkalinity(1)	3.12	15.6
Ammonia(2)	0.090	0.45
Chloride(1)	0.15	0.75
Sulfate(1)	0.08	0.4

1 – Maximum concentration in calibration blank.
2 – Maximum concentration in preparation blank.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Carbon disulfide	0.41	2.05
1,4-Dichlorobenzene	0.33	1.65

Maximum concentration detected in the laboratory method blank 2180033 affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as all results were nondetects.

The following analytes were detected in the laboratory preparation blanks at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Barium	0.00273	0.014
Chromium	0.00083	0.0042

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as results were above the blank action level.

Chloride, dissolved organic carbon, nitrate, nitrite, and sulfate were analyzed at dilution. Resulting in elevated detection limits for nitrite.

Executive Summary

Laboratory Performance: Contaminants were detected in the laboratory method blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

VQL – Validation Qualifier
QLCD – Validation Qualifier Code

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Case Narrative
TMM-029

Sample Management

This report contains the results of the analysis of four (4) ground water samples collected on May 4, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 4, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Four (4) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Samples were analyzed immediately following the initial calibration.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2173978, carbon disulfide was detected at 0.41J µg/L; 1,4-dichlorobenzene was detected at 0.33J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

Light Hydrocarbon Gases by RSK-175

Sample Handling. One (1) water sample was submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Duplicate Sample. A duplicate sample, identified as 2174783, was prepared from project sample MRC-MW-37B-050415 (2068544002). No target analytes were detected above the reporting limit.

Total Metals by SW-846 Method 6020A

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Ba and Cr had detectible levels in the MB at 0.00273 J mg/L and 0.00083 J mg/L respectively.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was prepared on sample, 2068544003, in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

Total Metals by SW-846 Method 6010C

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. One (1) water sample was analyzed for total mercury using EPA method 7470A. The sample was digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Ammonia-Nitrogen by SM4500NH3D

Sample handling. Two (2) aqueous samples were analyzed for ammonia-nitrogen by Standard Method 4500NH3D. The samples were distilled and analyzed within the 28-day holding time established for the method.

Calibration. An initial calibration was properly established on the day of analysis, and a second source standard was analyzed throughout the analysis to verify the calibration. The recoveries were within the QC limits.

Blank. A preparation blank, identified as 2174296, was distilled and analyzed with the samples. Initial and continuing method blanks were also analyzed. Ammonia-nitrogen was not detected above the reporting limit in the blanks.

Laboratory Control Sample. A laboratory control sample, identified as 2174297, was distilled and analyzed with the samples. The recovery was within QC limits.

Anions by EPA 300.0

Sample handling. Two (2) aqueous samples were analyzed for chloride, nitrate-nitrogen, nitrite-nitrogen and sulfate by EPA Method 300.0. The samples were run within method recommended holding time for each analyte.

Calibration. Initial calibrations, identified as Method A (high range) and Method L (low range), were properly established. Initial and continuing calibration verification standards were recovered within the QC limits.

Blanks. Initial and continuing blanks were analyzed with the samples. No analytes were detected above the reporting limits in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as 2173084, 2173645 and SSL, were analyzed initially and every 20 samples. Recoveries were within the QC limits.

Dissolved Total Organic Carbon by SW-846 9060A

Sample handling. Two (2) aqueous samples were analyzed for dissolved total organic carbon by SW-846 Method 9060A. The samples were analyzed within the 28-day holding time established for the method.

Calibration. On the day of analysis, a four-point low curve calibration was properly established, and initial and continuing calibration standards were analyzed throughout the run. The recoveries were all within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Total organic carbon was not detected above the reporting limit in the blanks.

A dissolved TOC blank, identified as DISS. BLANK, was analyzed with the samples. Dissolved total organic carbon was not detected above the reporting limit in the blank.

Laboratory Control Samples. A dissolved TOC laboratory control sample, identified as 5.0 QC DISS., was analyzed with the samples. The recovery was within the QC limits.

Orthophosphate by EPA 365.3

Sample handling. Two (2) aqueous samples were analyzed for orthophosphate by EPA Method 365.3. The samples were analyzed within the hold time established for the method.

Calibration. An initial calibration was established. Initial and continuing calibration verification standards were analyzed on the day of analysis to verify the calibration. All recoveries were within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Orthophosphate was not detected above the reporting limit in the blanks.

Total Alkalinity by SM 2320B

Sample handling. Two (2) aqueous samples were analyzed for total alkalinity by Standard Method 2320B. The samples was analyzed within the 14-day holding time established for the method.

Blanks. Method blanks were analyzed with the sample. Total alkalinity was not detected above the reporting limit in the blanks.

Calibration. The autotitrator was pH calibrated on the day of analysis. Total alkalinity and pH standards were analyzed initially and throughout the analysis. The standards were recovered within QC limits.

Total Dissolved Solids by SM2540C

Sample handling. Two (2) aqueous samples were analyzed for total dissolved solids by Standard Method 2540C. The samples were analyzed within the 7-day holding time established for the method.

Blank. A preparation blank, identified as 2174384, was analyzed with the samples. Total dissolved solids were not detected above the reporting limit in the blank.

Laboratory Control Sample. A laboratory control sample, identified as 2174385, was analyzed with the samples. The recovery was within the QC limits.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Overview

The sample set for Lockheed- MRC, SDG 2068842R consisted of eight (8) aqueous environmental samples. Four (4) aqueous samples and a trip blank were analyzed for volatile organic compounds (VOC). Three (3) aqueous samples were analyzed for 1,4-dioxane. Six (6) aqueous samples were analyzed for total metals and five (5) aqueous samples were analyzed for perchlorate. There is one (1) field duplicate sample pair was associated with this SDG: MRC-MW-DUP04-050515 and MRC-MW-50A-050515.

The samples were collected by Tetra Tech, Inc. on May 5, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with EPA Methods SW-846 8260B, 6010C, 6020A, 7470A, 6850 and EPA Method 522 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip blanks, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard areas, chromatographic resolution, ICP Interference Analysis, serial dilution differences, compound identification, tentatively identified compounds, compound quantitation, Field Duplicate Imprecision and detection limits. Areas of concern are listed below.

Major

No major issues were identified.

Minor

- The trip blank contained contaminant.

Contaminant	Maximum Concentration (mg/L)	Action Level (mg/L)
Bromomethane	0.39	1.34

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (U).

- Contamination was detected in the preparation blank at the following maximum concentrations:

Contaminant	Maximum Concentration (mg/L)	Action Level (mg/L)
Barium	0.00273	0.01365
Chromium	0.00083	0.00415

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (U).

- The internal standard area of Ge-72 was greater than the 130% quality control limit in samples MRC-MW-17A-050515, MRC-MW-50A-050515, MRC-MW-68A-050515, MRC-MW-69A-050515 and MRC-MW-DUP04-050515. The detected and nondetecetd results associated with this internal standard were qualified as estimated (J) and (UJ), respectively.

Additional Comments

Contamination was detected in the laboratory method blank associated with batch 2173979.

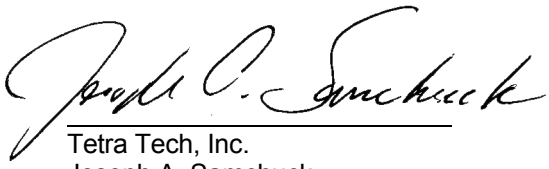
Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Carbon disulfide	0.41	2.05
1,4-dichlorobenzene	0.33	1.65

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. No action was taken on the nondetected carbon disulfide and 1,4-dichlorobenzene results.

The matrix spike (MS) percent recovery (%R) of perchlorate was less than the lower quality control limit in spiked sample The matrix spike duplicate (MSD) %R and relative percent difference (RPD) were within quality control limits. No action was taken.

Detected results reported below the Reporting Limit (RL) but above the Method Detection Limit (MDL) were qualified as estimated, (J). Non-detected results were reported to the MDL.

EXECUTIVE SUMMARY



Laboratory Performance Issues: Contamination was detected in the metal preparation blank. The internal standard area of Ge-72 was greater than the 130% quality control limit in several samples.

Other Factors Affecting Data Quality: Trip blank contained bromomethane. Detected results reported below the Reporting Limit (RL) but above the Method Detection Limit (MDL) were qualified as estimated, (J).

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Case Narrative
TMM-030

Sample Management

This report contains the results of the analysis of eight (8) ground water samples collected on May 5, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 5, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Five (5) samples were subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Six (6) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Samples were analyzed immediately following the initial calibration.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2173978, carbon disulfide was detected at 0.41J µg/L; 1,4-dichlorobenzene was detected at 0.33J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Three (3) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Six (6) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Ba and Cr had detectible levels in the MB at 0.00273 J mg/L and 0.00083 J mg/L respectively.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Six (6) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury by EPA Method 7470A

Sample handling. Six (6) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1512733

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1566 (148781)

General Set Information: There were nine field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 447081) was less than 1/2 the CRDL. The recovery for the LCS (447082) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1512733001 (Client ID: 2068842 004). The percent recovery for the MS analysis failed QC acceptance criteria. The relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 06MAYP-02/03/07/10/17/20.

Comments

The percent recoveries for the MS/MSD analyses failed QC acceptance criteria due to matrix effect.

QC Data Approved and Reviewed by

Thomas Bosch	Thomas T. McKay	5/20/2015
Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◓ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for LMC-MRC, SDG 2069284 consisted of six (6) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), 1,4-dixoane, select total metals, and/or perchlorate. No field duplicate sample pairs were included in this SDG.

The samples were collected by Tetra Tech, Inc. on May 6, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A and EPA Methods 522 and 6850 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major – None

Minor

- Continuing calibration verification on 5/15/2015 @ 11:47 had a percent difference for 1,4'-dioxane analyzed by SW-846 method 8260C that was greater than the quality control limit (20%) affecting

all samples. Results for 1,4'-dioxane were qualified as estimated for detects (J) and nondetected results (UJ).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

Results for MRC-MW-100B-050615 exceeded the calibration limit for 1,4-dioxane (analyzed by EPA Method 522) and trichloroethane Therefore, results for these compounds were reported from a 5X dilution.

The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane	0.51	2.55
Carbon disulfide	0.39	1.39
1,4-Dichlorobenzene	0.31	1.55

Maximum concentration detected in the laboratory method blank 2180033 affecting sample MCR-MW-100-B-050615 analyzed at dilution.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as results for these compounds were reported from the non-diluted sample.

Molybdenum was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum	0.00090	0.0045

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as molybdenum results were nondetects.

Matrix spike (MS) and matrix spike duplicate (MSD) recoveries were outside of quality control (QC) limits for chlorodibromomethane and cis-1,3-dichloropropene. LCS recoveries were acceptable. No action was taken on this basis.

MS recovery was less than QC limits for perchlorate. MSD recovery was acceptable. No action was taken on this basis.

Executive Summary

Laboratory Performance: Calibration noncompliance was noted for one VOC. Contaminants were detected in the laboratory method blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

VQL – Validation Qualifier
QLCD – Validation Qualifier Code

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Sample Management

This report contains the results of the analysis of seven (7) water samples collected on May 6, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 6, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

One (1) sample was subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Six (6) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Samples were analyzed immediately following the initial calibration.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2180033, bromomethane was detected at 0.51J µg/L; carbon disulfide was detected at 0.39J µg/L; 1,4-dichlorobenzene was detected at 0.31J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2178406 and 2178407, was prepared from project sample (2069284003). Results for precision and accuracy were within control limits; except as follows:

- In 2178406 and 2178407, chlorodibromomethane and cis-1,3-dichloropropene were recovered below the control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Five (5) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.0009 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was prepared on sample, 2069284005, in this deliverable group. The spike recoveries and their associated RPDs were within method control limits.

Total Metals by SW-846 Method 6010C

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Four (4) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Signature:  Title: Reporting Manager Date: 6/9/2015

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1513214

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1566 (148781)

General Set Information: There were nine field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 447081) was less than 1/2 the CRDL. The recovery for the LCS (447082) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1512733001 (Client ID: 2068842 004). The percent recovery for the MS analysis failed QC acceptance criteria. The relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 06MAYP-02/03/07/10/17/20.

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for LMC-MRC, SDG 2070129 consisted of six (6) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), 1,4-dixoane, select total metals, dissolved organic carbon, and/or perchlorate. One field duplicate sample pair was included in this SDG: MRC-MW-02A-051115/MRC-DUP05-051115.

The samples were collected by Tetra Tech, Inc. on May 11, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, 9060A, and EPA Methods 522 and 6850 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, detection limits, and field duplicate precision. Areas of concern are listed below.

Major - None

Minor

- VOC continuing calibration verification on 5/15/2015 @ 11:47 had a percent difference for 1,4'-dioxane that was greater than the quality control limit (20%) affecting samples MRC-MW-74A-051115, MRC-MW-96A-051115, MRC-MW-96B-051115, and TB-051115. Nondetected results for 1,4'-dioxane were qualified as estimated (UJ).

- The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane	0.51	2.55
Carbon disulfide	0.39	1.39
1,4-Dichlorobenzene	0.31	1.55

Maximum concentration detected in the laboratory method blank 2180033 affecting samples MRC-DUP05-051115, MRC-MW-02A-051115, MRC-MW-96A-051115 (analyzed at 200X dilution), and MRC-MW-96B-051115 (analyzed at 5X dilution).

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetected (U). No action was taken for samples MRC-MW-96A-051115 and MRC-MW-96B-051115 as results for these compounds were reported from the non-diluted analysis.

- VOC surrogate recovery for 4-bromofluorobenzene was greater than the QC limit affecting sample MCR-MW-96A-051115. Detected results for benzene, 1,1-dichloroethene, ethylbenzene, toluene, and vinyl chloride for sample MCR-MW-96A-051115 were qualified as estimated. Other detected results for sample MCR-MW-96A-051115 were reported from a dilution and were not affected.

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

Results for several VOCs exceeded the calibration limit and were therefore analyzed at dilution.

The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Chlorobenzene	0.25	1.25

Maximum concentration detected in the laboratory method blank 2181443 affecting sample MRC-MW-96A-051115 (analyzed at 1000X dilution).

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as results for these compounds were reported from the non-diluted sample.

Molybdenum was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum	0.00121	0.00605

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as molybdenum results were nondetects.

Matrix spike (MS) recovery was less than QC limits for perchlorate. Matrix spike duplicate (MSD) recoveries were acceptable. No action was taken on this basis.

Executive Summary

Laboratory Performance: Calibration noncompliance was noted for VOCs. Contaminants were detected in the laboratory method blanks. VOC surrogate recovery noncompliance was noted.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Qualified Analytical Results

Data Validation Qualifier Codes:

VQL – Validation Qualifier
QLCD – Validation Qualifier Code

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Sample Management

This report contains the results of the analysis of twelve (12) water samples collected on May 11, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 11, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Three (3) samples were subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Six (6) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Samples were analyzed immediately following the initial calibration.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2180033, bromomethane was detected at 0.51J µg/L; carbon disulfide was detected at 0.39J µg/L; 1,4-dichlorobenzene was detected at 0.31J µg/L.
- In 2181443, chlorobenzene was detected at 0.25J µg/L.

Surrogates. Recoveries were within control limits; except as follows:

- In sample NRC-MW-96A-051115 (2070129007), 4-bromofluorobenzene was recovered above the control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Two (2) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.0009 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Four (4) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2070129010 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1513347

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1566 (148781)

General Set Information: There were nine field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 447081) was less than 1/2 the CRDL. The recovery for the LCS (447082) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1512733001 (Client ID: 2068842 004). The percent recovery for the MS analysis failed QC acceptance criteria. The relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 06MAYP-02/03/07/10/17/20.

Comments

The percent recoveries for the MS/MSD analyses failed QC acceptance criteria due to matrix effect.

QC Data Approved and Reviewed by

Thomas Bosch	Thomas T. McKay	5/20/2015
Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
● - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

MRC-MW-48A-051315	MRC-MW-74B-051315	

OVERVIEW

The sample set for Lockheed-MRC, SDG 2070699, consists of nine (9) aqueous environmental samples and one trip blank. The trip blank was analyzed for volatile organic compounds (VOCs) only. Environmental samples were analyzed for VOCs, dissolved gases, 1,4-dioxane, metals (total), and miscellaneous parameters. One field duplicate pair is included in this SDG: MRC-MW-87A-051315 (original) / MRC-MW-DUP06 (duplicate).

The samples were collected by Tetra Tech, Inc. on May 12 and 13, 2015 and analyzed by Test America, Inc. Analyses were conducted in accordance to SW-846 Methods 8260C (VOCs), 6010C (iron), 7470A (mercury), 6020A (other metals), 6850 (perchlorate), and 9060A (total organic carbon), and RSK-157 (dissolved gases), EPA Method 522 (1,4-dioxane), A2320 (alkalinity), 300.0 (anions), 365.3 (orthophosphate), 4500 NH3 C-1997 (ammonia), and SM2540C (total dissolved solids) analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory

method/trip blank results, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard recoveries, field duplicate precision, compound identification, compound quantitation, and detection limits. Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The results for cis-1,2-dichloroethene and trichloroethene in sample MRC-MW-48A-051315 exceeded the instrument calibration range. These exceedances were marked by the data validator on the Form I reports. Sample MRC-MW-74B-051315 was reanalyzed at a dilution factor of 25, and the results for cis-1,2-dichloroethene and trichloroethene were reported from the dilution. Remaining results for this sample were reported from the original analysis.

- The results for cis-1,2-dichloroethene and trichloroethene in sample MRC-MW-74B-051315 exceeded the instrument calibration range. These exceedances were marked by the data validator on the Form I reports. Sample MRC-MW-74B-051315 was reanalyzed at a dilution factor of 100, and the result for cis-1,2-dichloroethene was reported from this dilution. However, the result for trichloroethene exceeded the instrument calibration range when analyzed at a dilution factor of 100; therefore, sample MRC-MW-74B-051315 was reanalyzed at a dilution factor of 500, and the result for trichloroethene was reported from this analysis. Remaining results for this sample were reported from the original analysis.

- The continuing calibration performed on 05/15/15 at 11:47 on instrument ms03.i had a percent difference (%D) for 1,4-dioxane that was greater than the 20% quality control limit. Samples TB-051215, MRC-MW-25A-051315, MRC-MW-74B-051315, and MRC-MW-48A-051315 were affected. The non-detected results of the aforementioned analytes were qualified as estimated (UJ) in the affected samples.

- The following VOC contaminants were detected in the method/trip blanks at the following maximum concentrations:

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Bromomethane(1)	0.51	2.55
Carbon disulfide(1)	0.39	1.95
1,4-Dichlorobenzene(1)	0.31	1.55
Chlorobenzene(2)	0.25	1.25
2-Butanone(3)	4.6	46
Acetone(3)	5.4	54

(1) Maximum concentration detected in method blank 2180033 (MB) associated with batch 74011 affecting samples MRC-MW-DUP06-051315, MRC-MW-87A-051315, MRC-MW-41A-051315, MRC-MW-48A-051315 at a dilution factor of 25, and MRC-MW-74B-051315 at a dilution factor of 100.
(2) Maximum concentration detected in method blank 2181443 (MB) associated with batch 74523 affecting the reanalysis of sample MRC-MW-74B-051315 at a dilution factor of 500.
(3) Maximum concentration detected in trip blank TB-051215 affecting all samples.

Action levels of 10x the concentrations of the common laboratory contaminants 2-butanone and acetone and 5x the concentrations of remaining contaminants were used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were considered in evaluating for blank contamination. Detected results less than action levels were qualified as non-detected (U) due to blank contamination.

- The internal standard area of Ge-72 was greater than the 125% quality control limit in sample MRC-MW-42A-051315. The detected and nondetected results associated with this internal standard were qualified as estimated (J and UJ, respectively).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

NOTES

Samples MRC-MW-59A-051215 and MRC-MW-57A-051215 were listed on the chain of custody, but results for these samples were not included in the laboratory data package. The laboratory report states that analyses for these samples were cancelled by the sampler. This laboratory statement is included in Appendix C of this report. No action was taken.

The laboratory report did not originally include the wet chemistry section for the miscellaneous parameters. The laboratory was contacted by the data validator and supplied a revised report that included the forms for the wet chemistry section at a later date.

As stated above, the laboratory reanalyzed VOC samples MRC-MW-48A-051315 and MRC-MW-74B-051315 at dilution factors greater than 1 due to results for cis-1,2-dichloroethene and trichloroethene exceeding the calibration range in the original analyses. Therefore, cis-1,2-dichloroethene and trichloroethene in sample MRC-MW-48A-051315 were analyzed at a dilution factor of 25, cis-1,2-dichloroethene in sample MRC-MW-74B-051315 was analyzed at a dilution factor of 100, and trichloroethene in sample MRC-MW-74B-051315 was analyzed at a dilution factor of 500. The correct results to be presented in the database were selected by the data validator to ensure that the correct dilution factors were shown for these results.

Sample TB-051215 is listed with the SDG number as a suffix (TB-051215-2070699) in the database. No action was taken.

The laboratory case narrative reports that a relative percent difference (RPD) of 186% for methane for the laboratory duplicate and sample MRC-MW-25A-051315 in the dissolved gases fraction. This was based on a concentration of 302 ug/L in the sample; however, this result is for sample MRC-MW-24A-051315. When calculated using the result for methane from sample MRC-MW-25A-051315 (11.4 ug/L), the RPD is approximately 4.5%, which is less than the quality control limit of 20%. Therefore, no validation action was taken.

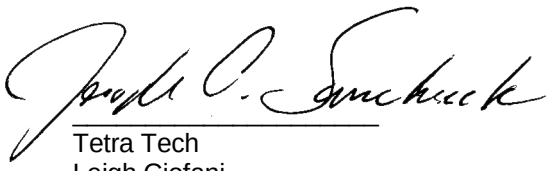
Manganese in samples MRC-MW-41A-051315 and MRC-MW-48A-051315 were analyzed at a dilution factor of 5.

Contamination was detected in the method blanks for the metals fraction as follows:

Contaminant	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum(1)	0.00082	0.0041

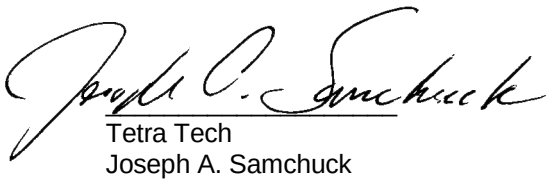
(1) Maximum concentration detected in method blank 2177674 associated with batch 72978.

An action level of 5x the concentration of the contaminant was used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were considered in evaluating for blank contamination. No action was necessary, as all results for molybdenum were non-detected in the affected samples.



Non-detected results were reported to the RL.

EXECUTIVE SUMMARY



Laboratory Performance Issues: Some non-detected VOC results were qualified as due to calibration noncompliance. Some VOC results were qualified due to laboratory blank contamination. Some metals results were qualified due to internal standard recovery noncompliance.

Other Factors Affecting Data Quality: Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Organic Data Review (June 2008) and the National Functional Guidelines for Inorganic Review (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC
