Case Narrative
TMM-033

Sample Management

This report contains the results of the analysis of twelve (12) water samples collected on May 12-13, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 13, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Two (2) samples were subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Eight (8) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2180033, bromomethane was detected at 0.51J µg/L; carbon disulfide was detected at 0.39J µg/L; 1,4-dichlorobenzene was detected at 0.31J µg/L.
- In 2181443, chlorobenzene was detected at 0.25J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

Light Hydrocarbon Gases by RSK-175

Sample Handling. Three (3) water samples were submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Duplicate Sample. A duplicate sample, identified as 2178232, was prepared from project sample MRC-MW-25A-051315 (2070699005). Target analytes were detected as follows:

- Methane was detected at 302 µg/L in the sample and at 10.9 µg/L in the duplicate sample with a %RPD of 186%.

1,4-Dioxane by Method 522

Sample Handling. Three (3) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Matrix Spikes. A matrix spike and matrix spike duplicate, identified as 2184607 and 2184608, was prepared from project sample MRC-MW-07A (2070699002). Results for precision and accuracy were within control limits.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Six (6) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had a detectible level in the MB at 0.00082 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Six (6) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike and matrix spike duplicate identified as 2179720 and 2179721 were prepared and analyzed on sample 2070699005 (MRC-MW-25A-051315), in this deliverable group. All MS/MSD recoveries and their associated RPDs were within method control limits, except the following;

- The iron analyte concentration in the sample were greater than four times the concentration of our spiking solution. For this reason, spike recoveries were not calculated (NSC).

Total Mercury in Water by EPA Method 7470A

Sample handling. Six (6) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2070699012 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Dear Ms. Thomson:

Enclosed are the analytical results for samples received by the laboratory between Wednesday, May 13, 2015 and Tuesday, May 19, 2015.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Debra J. Musser (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Samantha Brenner , Mr. Tony Apanavage

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Debra J Musser

SAMPLE SUMMARY

Workorder: 2070699 TMM033|112IL06247

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1513562

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1567 (149278)

General Set Information: There were five field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 448332) was less than 1/2 the CRDL. The recovery for the LCS (448333) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1513562001 (Client ID: 2070699 008). The percent recoveries and the relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 26MAYP-02/03/11/13/16.

ANALYTICAL REPORT

Workorder: 34-1513562
Client: ALS Environmental
Project Manage Kevin W. Griffiths

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
BROMOFLUOROBENZENE (BFB)

Lab Name: ALS Contract: HPJ019

Lab Code: VOA Case No.: SAS No.: SDG NO.: TMM-033

Lab File ID: 15051950.D BFB Injection Date: 5/19/2015

Instrument ID: ms15.i BFB Injection Time: 17:56

GC Column: RTXVMS ID: 0.25 (mm) Heated Purge: Y/N N

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	15.1
75	30.0 - 60.0% of mass 95	48.1
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	6.7
173	Less than 2.0% of mass 174	0.7(0.8) 1
174	50.0 - 100.0% of mass 95	92.7
175	5.0 - 9.0% of mass 174	6.6 (7.1) 1
176	95.0 - 101.0% of mass 174	88.4 (95.3) 1
177	5.0 - 9.0% of mass 176	5.8 (6.5) 2

1-Value is % mass 174

2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Instrument MDL: **0.06µg/L** Reported PQL: **0.2µg/L**

SAMPLE PREPARATION/ANALYSIS:

Water: Samples were prepared by TNB. 10.0mL of each sample was pipetted into a 15-mL centrifuge tube, and 50µL of an oxygen-18 labeled perchlorate solution was added as an internal standard. The samples were capped, vortexed, and filtered with Phenex PES membrane 0.45µm Syringe filters prior to analysis.

REAGENTS: Eluent A1: 95% ASTM Type II water (ALS)/ 5% ACN (B&J Lot DI735)/0.1% glacial acetic acid (JT-Baker Lot 04802).
Eluent B1: 95% ACN (B&J Lot DI735)/ 5% ASTM Type II water (ALS)/0.1% glacial acetic acid (JT-Baker Lot 04802).

STANDARDS: Internal Standard Spiking Solution Horizon# 27894. Dilutions of Working Standard Solution ID 27896 used for CCV's, LODV's, RLVS and IPC.

CALIBRATION CURVE: Used curve from 08/14/2014, sequence 14AUG14P.s Offline Quantitation Method: CLO4OFF1.M

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1100 LC/MSD system, in negative SIM mode, monitoring m/z 83, 85, and 89. Tuned: 8/14/2014 Tune Checked: 8/14/2014
Instrument ID: LCMS04 Online Acquisition Method: CLO4-AQN.M Fragmentor: 160 Output Gain: 1 Injection Volume: 30µL
Column: KP-RPPX C8 separator, 250mm Mobile Phase: 85% Eluent A1; 15% Eluent B1

FLOW GRADIENT:

Time (min.)	Flow (mL/min)
0	0.52
4.0	0.52
5.0	0.25
14.5	0.25
15.0	0.52
17.5	0.52

QC DATA: 5.0µL of QC Solution Horizon ID 27897 was used for LCS 448333; Target = 5.0µg/L. ASTM type II water was used for LMB 448332.

MS/MSD: MS/MSD was performed on sample 1513562001 (Client ID: 2070699 008). 5.0µl of Working Standard Solution Horizon ID 27895 was added to 10.0mL of sample preparation. Spike target = 5.0µg/L.

COMMENTS:
1) Results reported in µg/L.
2) All QC, Blank, CCV, and MS/MSD results were within method parameters. The ion ratio of m/z 83 to 85 often fails at levels near or below the Limit of Detection (LODV). The ion ratio failed for the LODV's-1,2 (448330/337).
3) Sample data can be viewed at two directories within the ALS system: \ALSLTWS013\DataReview\HBN# or throughNuGenesis\Tree\PrintData\LCMS\DefaultView.
4) Due to limitations of the Chemstation Software, many of the chromatographic peaks require manual integration. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 26MAYP-02/03/11/13/16.

CERTIFICATE OF ANALYSIS

AccuIon™ Reference Standard

Item Number: IC-PER-10X-1

Element: Perchlorate
Storage Condition: Ambient
Hazards: IRRITANT
Matrix: Water

Lot: 213025072-01
Date Certified: 1/24/2014
Expiration: Jan / 2016
Sample Size: 100 mL

[X] Included on ISO/IEC 17025 Scope of Accreditation
[X] Included on ISO Guide 34 Scope of Accreditation

Actual Lot Analysis

Perchlorate 1000 µg/mL

The gravimetric uncertainty for this product is ±0.24%. The CRM uncertainty is ±5%. See reverse side for details.

In order to verify the concentrations, the final solution was checked against material traceable to the following NIST SRMs: Ind. Std.

RESULTS: This solution standard was certified for accuracy of the listed components via methodology traceable to primary or well characterized secondary standards.

This standard was prepared gravimetrically to contain the concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All solutions are filtered through a 0.2 µm filter prior to being bottled. All bottles are triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

ULTRAgrade™ Ion Chromatography Solution: 1000 µg/mL Perchlorate in low TOC water (< 50 ppb)
Catalog Number: ICC-013
Lot Number: R00158
Job Number: J00015917
Lot Issue Date: 02/22/2013
Expiration Date: 03/31/2017

Starting Material:	potassium perchlorate
Starting Material Purity:	99.9%
Starting Material Lot No.:	BH02444

Certified Value: 1001 ± 2 µg/mL

This Certified Reference Material (CRM) was manufactured and verified in accordance with ULTRA's ISO 9001 registered quality system. The analyte concentrations were verified by our ISO 17025 accredited laboratory to be within ± 2.5%, when compared to calibration standards independently prepared using NIST SRM(s). The certified value and uncertainty value at the 95% confidence level for each analyte is determined gravimetrically.

Confirmation by Ion Conductivity (IC) vs. second source (CRM)

Confirmation by Inductively Coupled Plasma Spectroscopy (ICP / ICP-MS) vs. NIST SRM 3141a

ULTRA uses purified acids, 18 megohm double deionized water, calibrated Class A glassware & meticulously cleaned bottles in the manufacturing of ULTRAgrade standards. Balances used in the manufacturing of this standard are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z-540-1 and ISO 9001.

CERTIFICATE OF ANALYSIS

Product Name: PERCHLORIC ACID, SODIUM SALT
(Isotopic Label & Enrichment Specification) (18O4, 90%+) 100 UG/ML IN WATER

Lot Number: SDDG-013

Catalog Number: OLM-7310-S

Product Information

Chemical Purity Specification:	≥ 98%
Labeled CAS Number:	NA
Unlabeled CAS Number:	7601-89-0
MW*:	130.4
Chemical Formula:	NaCl*O4
Storage:	Store at room temperature away from light and moisture.
Stability:	See storage and expiration date.

Certification

Cambridge Isotope Laboratories, Inc. guarantees that this material meets or exceeds the specifications stated. Absolute identity as well as chemical and isotopic purities are assured by the use of unambiguous synthetic routes and multiple chemical analyses whenever possible. Results are representative of QC testing at time of release from Quality Control unless otherwise stated.

Volumetric measurements were made with Class A glassware. Gravimetry is traceable to the NIST through calibrated balances and certified, calibrated, standard weights. The calibrations are traceable to the NIST under Test No. 822/270236-04. The calibrations also meet specifications outlined in ISO 9001, ISO/IEC 17025, ANSI/NSCL Z540-1-1994, NCR Document 10CFR50 Appendix B, and applicable subdocuments.

This COA references the bulk catalog number before packaging. The COA also applies to the CIL finished good catalog number . Some possible packaging sizes and their corresponding suffix are -1.2, -1, -0.5, -10, or -0.1.

* *For isotopically labeled compounds, MW listed is for the fully enriched product.*

Overview

The sample set for LMC-MRC, SDG 2071034 consisted of six (6) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), organic volatile gases (OVG), 1,4-dioxane, metals, perchlorate, and/or miscellaneous parameters (alkalinity, ammonia, chloride, dissolved organic carbon, nitrate, nitrite, orthophosphate, sulfate, and total dissolved solids). One field duplicate sample pair was included in this SDG: MRC-MW-21B-051415/ MRC-MW-DUP07-051415.

The samples were collected by Tetra Tech, Inc. on May 14, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, and 9060A, EPA Methods 300, 365.3, 522, and 6850, Standard Methods 4500NH3D, 2320B, and 2540C, and RSK-175 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation

blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, detection limits, and field duplicate precision. Areas of concern are listed below.

Major – None.

Minor

- The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Bromomethane	0.51	2.55
Carbon disulfide	0.39	1.95
1,4-Dichlorobenzene	0.31	1.55

Maximum concentration detected in the laboratory method blank 2180033 affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U). The trip blank was not qualified for laboratory blank contamination.

- The following analytes were detected in the laboratory calibration and preparation blanks at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Alkalinity(1)	1.82	9.1
Ammonia(2)	0.044	0.22

1 – Maximum concentration in calibration blank.
2 – Maximum concentration in preparation blank 2179819.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

Trichloroethene was reported at a 20X dilution in sample MRC-MW-21B-051415 and cis-1,2-dichloroethene was reported at a 10X dilution in sample MRC-MW-109B-051415. The results for these compounds in undiluted samples exceeded the calibration range.

Barium, cobalt, manganese, and nickel were analyzed at a 10X dilution in sample MRC-MW-93A-051415.

Executive Summary

Laboratory Performance: Contaminants were detected in the laboratory method blanks.

Other Factors Affecting Data Quality:

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Sample Management

This report contains the results of the analysis of seven (7) water samples collected on May 14, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 14, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

One (1) sample was subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Six (6) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2180033, bromomethane was detected at 0.51J µg/L; carbon disulfide was detected at 0.39J µg/L; 1,4-dichlorobenzene was detected at 0.31J µg/L.
- In 2181443, chlorobenzene was detected at 0.25J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Two (2) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Light Hydrocarbon Gases by RSK-175

Sample Handling. One (1) water sample was submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Duplicate Sample. A duplicate sample, identified as 2181089, was prepared from project sample MRC-MW-21B-051415 (2071034006). Target analytes were detected as follows:

- Methane was detected at 16.8 µg/L in the sample and at 18.3 µg/L in the duplicate sample with a %RPD of 8.5%.

Total Metals by SW-846 Method 6020A

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was not prepared on a sample in this deliverable group.

Total Metals by SW-846 Method 6010C

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike and matrix spike duplicate identified as 2179724 and 2179725 were prepared and analyzed on sample 2071034002 (MRC-MW-93A-051415), in this deliverable group. All MS/MSD recoveries and their associated RPDs were within method control limits, except the following;

- The iron analyte concentration in the sample were greater than four times the concentration of our spiking solution. For this reason, spike recoveries were not calculated (NSC).

Total Mercury in Water by EPA Method 7470A

Sample handling. Five (5) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2071034006 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

Ammonia-Nitrogen by SM4500NH3D

Sample handling. One (1) aqueous sample was analyzed for ammonia-nitrogen by Standard Method 4500NH3D. The sample was distilled and analyzed within the 28-day holding time established for the method.

Calibration. An initial calibration was properly established on the day of analysis, and a second source standard was analyzed throughout the analysis to verify the calibration. The recoveries were within the QC limits.

Blank. A preparation blank, identified as 2179819, was distilled and analyzed with the sample. Initial and continuing method blanks were also analyzed. Ammonia-nitrogen was not detected above the reporting limit in the blanks.

Laboratory Control Sample. A laboratory control sample, identified as 2179820, was distilled and analyzed with the sample. The recovery was within QC limits.

Anions by EPA 300.0

Sample handling. One (1) aqueous sample was analyzed for chloride, nitrate-nitrogen, nitrite-nitrogen and sulfate by EPA Method 300.0. The sample was run within method recommended holding time for each analyte.

Calibration. Initial calibrations, identified as Method A (high range) and Method L (low range), were properly established. Initial and continuing calibration verification standards were recovered within the QC limit.

Blanks. Initial and continuing blanks were analyzed with the samples. No analytes were detected above the reporting limits in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as 2178252 and SSL, were analyzed initially and every 20 samples. Recoveries were within the QC limits.

Dissolved Total Organic Carbon by SW-846 9060A

Sample handling. One (1) aqueous sample was analyzed for dissolved total organic carbon by SW-846 Method 9060A. The sample was analyzed within the 28-day holding time established for the method.

Calibration. On the day of analysis, a four-point low curve calibration was properly established, and initial and continuing calibration standards were analyzed throughout the run. The recoveries were all within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Total organic carbon was not detected above the reporting limit in the blanks.

A dissolved TOC blank, identified as DISS. BLANK, was analyzed with the sample. Dissolved total organic carbon was not detected above the reporting limit in the blank.

Laboratory Control Samples. A dissolved TOC laboratory control sample, identified as 5.0 QC DISS., was analyzed with the samples. The recovery was within the QC limits.

Orthophosphate by EPA 365.3

Sample handling. One (1) aqueous sample was analyzed for orthophosphate by EPA Method 365.3. The sample was analyzed within the hold time established for the method.

Calibration. An initial calibration was established. Initial and continuing calibration verification standards were analyzed on the day of analysis to verify the calibration. All recoveries were within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the sample. Orthophosphate was not detected above the reporting limit in the blanks.

Total Alkalinity by SM 2320B

Sample handling. One (1) aqueous sample was analyzed for total alkalinity by Standard Method 2320B. The sample was analyzed within the 14-day holding time established for the method.

Blanks. Method blanks were analyzed with the sample. Total alkalinity was not detected above the reporting limit in the blanks.

Calibration. The autotitrator was pH calibrated on the day of analysis. Total alkalinity and pH standards were analyzed initially and throughout the analysis. The standards were recovered within QC limits.

Total Dissolved Solids by SM2540C

Sample handling. One (1) aqueous sample was analyzed for total dissolved solids by Standard Method 2540C. The sample was analyzed within the 7-day holding time established for the method.

Blank. A preparation blank, identified as 2178727, was analyzed with the sample. Total dissolved solids were not detected above the reporting limit in the blank.

Laboratory Control Sample. A laboratory control sample, identified as 2178728, was analyzed with the samples. The recovery was within the QC limits.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1513939

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1567 (149278)

General Set Information: There were five field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 448332) was less than 1/2 the CRDL. The recovery for the LCS (448333) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1513562001 (Client ID: 2070699 008). The percent recoveries and the relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 26MAYP-02/03/11/13/16.

Overview

The sample set for LMC-MRC, SDG 2071807 consisted of seven (7) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), 1,4-dioxane, select total metals, and/or perchlorate. One field duplicate sample pair was included in this SDG: MRC-MW-DUP08-051815.

The samples were collected by Tetra Tech, Inc. on May 18, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, 9060A, and EPA Method 6850 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, detection limits, and field duplicate precision. Areas of concern are listed below.

Major - None

Minor

- The following VOCs were detected in the laboratory blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Chlorobenzene(1)	0.25	1.25
Bromomethane(2)	0.43	2.15
Carbon Disulfide(2)	0.41	2.05
1,3-Dichlorobenzene(2)	0.25	1.25
1,4-Dichlorobenzene(2)	0.37	3.5
1,2,3-Trichlorobenzene(3)	1.2	6
1,2,4-Trichlorobenzene(3)	1.0	5

  1- Maximum concentration detected in the method blank 2181443 affecting all samples, except MRC-MW-109A-051815.
  2- Maximum concentration detected in the method blank 2183121 affecting sample MRC-MW-109A-051815.
  3- Maximum concentration detected in the method blank 2184389 affecting diluted samples MRC-MW-111B-051815 and MRC-MW-98B-051815.

  An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetected (U). The trip blank was not qualified for laboratory blank contamination.

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

The laboratory noted on the chain of custody that sample MRC-MW-90B-051815 was not received for total metals analysis and sample MRC-MW-109A-051815 was not received for 1,4-dioxane analysis.

Results for several VOCs exceeded the calibration limit and were therefore analyzed at dilution.

VOC continuing calibration verification on 5/30/2015 @ 00:01 had percent differences (%Ds) for bromoform, 1,2-bromo-3-chloropropane, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene that were greater than the quality control limit (20%) affecting diluted samples MRC-MW-111B-051815 and MRC-MW-98B-051815. No action was taken as results for these compounds were reported from the non-diluted analysis.

VOC laboratory control sample (LCS) (2184390) percent recoveries (%Rs) were less than quality control (QC) limits for bromoform and greater than QC limits for 1,2-dibromoethane and methylene chloride affecting diluted samples MRC-MW-111B-051815 and MRC-MW-98B-051815. No action was taken as results for these compounds were reported from the non-diluted analysis.

Executive Summary

Laboratory Performance: Contaminants were detected in the laboratory method blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Sample Management

This report contains the results of the analysis of eight (8) water samples collected on May 18, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on May 19, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracted Data

Two (2) samples were subcontracted to ALS – Salt Lake City for Perchlorate analysis by Method 6850. The data has been attached at the end of this data package.

Volatile Organics by SW-846 Method 8260

Sample Handling. Seven (7) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2181443, chlorobenzene was detected at 0.25J µg/L.
- In 2183121, bromomethane was detected at 0.43J µg/L; carbon disulfide was detected at 0.41J µg/L; 1,3-dichlorobenzene was detected at 0.25J µg/L; 1,4-dichlorobenzene was detected at 0.37J µg/L.
- In 2184389, 1,2,3-trichlorobenzene was detected at 1.2J µg/L; 1,2,4-trichlorobenzene was detected at 1.0J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2184390, bromoform was recovered below the control limits; 1,2-dibromoethane and methylene chloride were recovered above the control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Five (5) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

Total Metals by SW-846 Method 6020A

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was prepared on a sample, 2071807008 in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

Total Metals by SW-846 Method 6010C

Sample handling. Five (5) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. Five (5) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2071807008 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Case Narrative

Method: 6850
Analysis: Perchlorate
Analysis SOP: LC-MS-CLO4
ALS WO ID(s): 1514147

Client: ALS Laboratories (Middletown, PA)
Matrix: Water
ELMS Batch (HBN): 1567 (149278)

General Set Information: There were five field samples in these Work Orders. The samples were analyzed for perchlorate.

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1100 LC/MSD system in select ion monitoring (SIM) mode at m/z 83 and 85, which corresponds to the loss of one oxygen atom from the perchlorate molecule. ChemStation software was used for instrument control and data analysis. The ion ratio of m/z 83 to 85 was used to positively identify the response peak as perchlorate. Quantitation was performed using the m/z 83 peak area. An internal standard of ^{18}O labeled perchlorate was added to each sample to establish the perchlorate peak retention time and used in quantitation.

Sample Preparation: A 10.0mL aliquot of each sample was transferred into a 15-mL centrifuge tube. 50µL of an ^{18}O labeled perchlorate solution was added to each sample as an internal standard. The samples were then capped, vortexed, and filtered into autosampler vial using Phenex PES membrane 0.45µm Syringe filters.

Holding Times: Holding times were met for all analyses.

Dilutions: NA

Method QC data: The method blank (LMB 448332) was less than 1/2 the CRDL. The recovery for the LCS (448333) was within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate (MS/MSD) was performed on sample 1513562001 (Client ID: 2070699 008). The percent recoveries and the relative percent difference (RPD) were within the performance limits.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with published procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B),

where: A = Analyte concentration from the standard curve (µg/L)
B = Dilution performed at time of analysis

Miscellaneous Comments: These samples were analyzed in accordance with the requirements found in the DOD QSM Version 4.2, Table F-12. Manual Integrations were performed for all of the Initial Calibration analyses (datafiles: 14AUGP001-10) along with datafiles 26MAYP-02/03/11/13/16.

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◆ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

Overview

The sample set for LMC-MRC, SDG 2078952 consisted of four (4) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), organic volatile gases (OVG), 1,4-dioxane, metals, perchlorate, and/or miscellaneous parameters (alkalinity, ammonia, chloride, dissolved organic carbon, nitrate, nitrite, orthophosphate, sulfate, and total dissolved solids). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on June 24, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, and 9060A, EPA Methods 300, 350.3, 365.3, and 522, 5310B, 2320B, and 2540D, and RSK-175 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, detection limits, and field duplicate precision. Areas of concern are listed below.

Minor

- The following VOCs were detected in the trip blank at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Acetone	8.2	82
2-butanone	3.8	38

An action level of 10X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U). The trip blank was not qualified for laboratory blank contamination.

- The continuing calibration analyzed on 6/27/15 contained a % difference for 1,4-dioxane in the volatile fraction that was greater than the 20% criterion. The detected result for 1,4-dioxane in sample MRC-MW14B-062415 was qualified as estimated (J).

- Mercury was detected in the laboratory preparation blank at the following maximum concentration:

Analyte	Maximum Concentration (mg/L)	Action Level (mg/L)
Mercury	0.000107	0.000535

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Results less than the blank action level were qualified as nondetect (U).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

The continuing calibration analyzed on 6/27/15 contained several analytes with % differences greater than the 20% criterion. The analytes greater than 20% were 2-butanone, acetone, 1,2-dibromo-3-chloropropane, 2-hexanone, methyl acetate, 4-methyl-2 pentanone, and vinyl acetate. No action was required because these analytes were not reported during this analytical sequence. The analysis on this day was performed in order to quantify dilution results for trichloroethene and cis-1,2-dichloroethene.

Executive Summary

Laboratory Performance: A calibration noncompliance was noted for 1,4-dioxane in the volatile analysis of one sample. Contaminants were detected in the trip blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

ALS-Middletown
Case Narrative
TMM-046

Sample Management

This report contains the results of the analysis of five (5) water samples collected on June 24, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on June 24, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Five (5) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Four (4) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits; except as follows:

- In sample MRC-MW14B-062415 (2078952002), 1,4-dioxane-d8 was recovered below the control limits. This sample was originally analyzed at a 1:1 dilutions and recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criteria.

Light Hydrocarbon Gases by RSK-175

Sample Handling. Three (3) water samples were submitted for the analysis of light hydrocarbon gases by Method RSK-175. The samples were analyzed within the method specified holding time of fourteen days.

Calibrations. The initial calibrations met method criteria for all light hydrocarbon gases.

Calibration verification. Prior to the analysis of samples in this group, the initial calibrations were successfully verified by the analysis of calibration verification standards. The samples were then successfully bracketed with alternating calibration verification standards (CCV) throughout the analysis.

Blanks. Light hydrocarbon gases were not detected in the method blank.

Duplicate Sample. A duplicate sample, identified as 2197469, was prepared from project sample MRC-MW14B-062415 (2078952002). Target analytes were detected as follows:

- Methane was detected at 1110 µg/L in the sample and at 1220 µg/L in the duplicate sample with a %RPD of 9%. All other target analytes were not detected above the reporting limit.

Total Metals by SW-846 Method 6010C

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Metals by SW-846 Method 6020A

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had detectible levels in the ICB and CCBs at 0.0011 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was prepared on a sample, 2079226002 in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

Ammonia-Nitrogen by SM4500NH3D

Sample handling. Three (3) aqueous samples were analyzed for ammonia-nitrogen by Standard Method 4500NH3D. The samples were distilled and analyzed within the 28-day holding time established for the method.

Calibration. An initial calibration was properly established on the day of analysis and a second source standard was analyzed throughout the analysis to verify the calibration. The recoveries were within the QC limits.

Blank. A preparation blank, identified as 2197117, was distilled and analyzed with the samples. Initial and continuing method blanks were also analyzed. Ammonia-nitrogen was not detected above the reporting limit in the blanks.

Laboratory Control Sample. A laboratory control sample, identified as 2197118, was distilled and analyzed with the samples. The recovery was within QC limits.

Anions by EPA 300.0

Sample handling. Three (3) aqueous samples were analyzed for chloride, nitrate-nitrogen, nitrite-nitrogen and sulfate by EPA Method 300.0. The samples were run within method recommended holding time for each analyte.

Calibration. Initial calibrations, identified as Method A (high range) and Method L (low range), were properly established. Initial and continuing calibration verification standards were recovered within the QC limits.

Blanks. Initial and continuing blanks were analyzed with the samples. No analytes were detected above the reporting limits in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as 2197073 and SSL, were analyzed initially and every 20 samples. The bracketing LCS (2197073) was above the QC limit for sulfate. The effected samples were inadvertently not commented

on in LIMS. No other analyte was affected by the failing QC. All other recoveries were within the QC limits.

Ortho-Phosphate by SM 4500PE

Sample handling. Three (3) aqueous samples were analyzed for ortho-phosphate by Standard Method 4500PE. The samples were analyzed within the holding time established for this method.

Calibration. An initial calibration was established. Continuing calibration verification standards were analyzed on the day of analysis to verify the calibration. All recoveries were within the QC limits.

Blanks. Initial and continuing method blanks were analyzed with the samples. Ortho-phosphate was not detected above the reporting limit in the blanks.

Total Alkalinity by SM 2320B

Sample handling. Three (3) aqueous samples were analyzed for total alkalinity by Standard Method 2320B. The samples were analyzed within the 14-day holding time established for the method.

Blanks. Method blanks were analyzed with the samples. Total alkalinity was not detected above the reporting limit in the blanks.

Calibration. The autotitrator was pH calibrated on the day of analysis. Total alkalinity and pH standards were analyzed initially and throughout the analysis. The standards were recovered within QC limits.

Total Dissolved Solids by SM2540C

Sample handling. Three (3) aqueous samples were analyzed for total dissolved solids by Standard Method 2540C. The samples were analyzed within the 7-day holding time established for the method.

Blank. A preparation blank, identified as 2197183 MB, was analyzed with the samples. Total dissolved solids were not detected above the reporting limit in the blank.

Laboratory Control Sample. A laboratory control sample, identified as 2197184, was analyzed with the samples. The recovery was within the QC limits.

Duplicate. A duplicate analysis, identified as 2197185, was performed on sample 2078952004 (MRC-MW12B-062415). The relative percent difference between the results was within the QC limit.

Total Organic Carbon by SM 5310B

Sample handling. Three (3) aqueous samples were analyzed for total organic carbon by Standard Method 5310B. The samples were analyzed within the 28-day holding time established for the method.

Calibration. All calibrations were properly established. The recoveries were within the QC limits.

Blanks. Method blanks were analyzed with the samples. Total organic carbon was not detected above the reporting limit in the blanks.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

Overview

The sample set for LMC-MRC, SDG 2079226 consisted of nine (9) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), 1,4-dioxane, and/or metals. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on June 25, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6020A/6010C, 7470A, and 9060A, EPA Method 522 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, trip blank results, Interference Check Sample (ICS), surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard areas and recoveries, ICP serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major – None.

Minor

- The VOC continuing calibration performed on instrument ms05.i on 6/27/2015 @ 10:28 had percent differences/ percent drift (%Ds) that exceeded the 20% quality control (QC) limit for acetone, 2-butanone, 1,2-dibromo-3-chloropropane, 1,4-dioxane, 2-hexanone, methyl acetate, and 4-methyl-

2-pentanone affecting all samples, except MRC-MW-11C-062515. The results reported for these compounds in the affected samples were qualified as estimated, (J) for detected and (UJ) for nondetected results.

- The VOC continuing calibration performed on instrument ms05.i on 6/29/2015 @ 19:04 had percent differences/ percent drift (%Ds) that exceeded the 20% quality control (QC) limit for acetone, bromomethane, 2-butanone, chloromethane, 1,2-dibromo-3-chloropropane, 1,4-dioxane, 2-hexanone, methyl acetate, and 4-methyl-2-pentanone affecting samples MRC-MW-11C-062515 and MRC-MW-70B-062515 (20X dilution analysis). The results reported for these compounds in the affected samples were qualified as estimated, (J) for detected and (UJ) for nondetected results.

- Surrogate recovery was less than QC limits for MRC-MW-70A-062515 for 1,4-dioxane (method 522). The detected result in this sample was qualified as estimated (J).

- Molybdenum was detected in the laboratory calibration blanks at the following maximum concentrations

Compound	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum	0.011	0.055

Maximum concentration detected in the calibration blank on 6/29/15 @ 11:13 affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Detected results less than the blank action level were qualified as nondetect (U).

- Internal standard %R was greater than 125% for Ge_72 in all samples analyzed for metals by method 6020. Results for arsenic, cadmium, chromium, cobalt, copper, manganese, molybdenum, nickel, selenium, silver, and vanadium were qualified as estimated (J) for detected and (UJ) for nondetected results.

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

- The trip blank contained the following compounds:

Compound	Maximum Concentration (ug/L)	Action Level (ug/L)
Acetone	3.4	34
2-butanone	4	40

Maximum concentrations affected all samples.

An action level of 10X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Detected results less than the blank action level were qualified as nondetect (U).

Notes

Non-detected results were reported to the MDL.

Results for 1,1-dichloroethene and trichloroethene were reported at a 20X dilution in sample MRC-MW-70B-062515. The results for these compounds in undiluted samples exceeded the calibration range.

The result for 1,4-dioxane (method 522) was reported at a 200X dilution in sample MRC-MW-70B-062515. The result for 1,4-dioxane in the undiluted sample exceeded the calibration range.

Iron was detected in the laboratory calibration blanks at the following maximum concentrations

Compound	Maximum Concentration (mg/L)	Action Level (mg/L)
Iron	0.027	0.135

Maximum concentration detected in the calibration blank on 6/29/15 @ 11:26 affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as all results were greater than the blank action level.

Executive Summary

Laboratory Performance: Calibration noncompliance was noted for several VOCs. Surrogate recovery noncompliance was noted for 1,4-dioxane (EPA method 522). Molybdenum was detected in the laboratory calibration blanks. Internal standard percent recovery was outside QC limits for one internal standard affecting several metals in all samples analyzed by SW-846 method 6020.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Sample Management

This report contains the results of the analysis of ten (10) water samples collected on June 25, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on June 26, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Ten (10) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Seven (7) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits; except as follows:

- In sample MRC-MW-70A-062515 (2079226004), 1,4-dioxane-d8 was recovered below the control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criteria.

<u>Total Metals by SW-846 Method 6010C</u>

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3a represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

<u>Total Metals by SW-846 Method 6020A</u>

Sample handling. Four (4) water samples were digested by SW-846 Method 3015, and the digestates were analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The samples were digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had detectible levels in the ICB and CCBs at 0.0011 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was prepared on a sample, 2079226002 in this deliverable group. The spike recoveries and associated RPDs were within method control limits.

<u>Total Mercury in Water by EPA Method 7470A</u>

Sample handling. Four (4) water samples were analyzed for total mercury using EPA method 7470A. The samples were digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was performed on sample 2079226009 in this deliverable group. The RPD and MS/MSD recoveries were within established control limits for this method.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

PROJECT SUMMARY

Workorder: 2079226 TMM047|MRC GW 2015

Sample Comments

Lab ID: 2079226004 **Sample ID:** MRC-MW-70A-062515 **Sample Type:** SAMPLE

The original extract for this sample had low surrogates recovery in the 522 analysis. The original extract was re-analysed and a re-extract of the sample was analysed with similar results, indicating matrix effects. The original extract is reported here.

ICP INTERELEMENT CORRECTION FACTORS

Client: Tetra Tech Pittsburgh **SDG No.:** TMM-047

Contract: TMM047|MRC GW 2015 **Lab Code:** CAS **Case No.:** Lockheed **SAS No.:**

Instrument ID: Thermo ICP 6500_2 **Date:** 1/1/2010

Interelement Correction Factors (apparent ppb analyte/ppm interferent)

Analyte	Wave-Length (nm)	ICP Interelement Correction Factors For:				
Aluminum	308.215					
Antimony	206.838					
Arsenic	189.042					
Barium	493.409					
Beryllium	313.042					
Boron	249.678					
Boron	223.061					
Cadmium	228.802					
Calcium	317.933

MRC-MW-80A-042915

Overview

The sample set for Lockheed- MRC, SDG 2067894R consists of three (3) aqueous environmental samples and a trip blank. Two (2) aqueous environmental samples and the trip blank were analyzed for volatile organic compounds (VOCs). Two (2) aqueous environmental samples were analyzed for 1.4-dioxane. One (1) aqueous environmental samples were analyzed for metals. There is no field duplicate pair included in this SDG.

The samples were collected on April 29, 2015 and analyzed by ALS. Analyses were conducted in accordance to SW-846 Method 8260, 6020A, 6010C, 7470A, and EPA Method 522 analytical and reporting protocol.

Summary

The data contained in this SDG were validated with regard to the following parameters: data completeness, system performance, holding times, GC/MS tuning, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Minor Problems

- The continuing calibration percent difference (%D) for methyl tert butyl ether was greater than the 20% quality control limit on May 1, 2015 @ 00:54 on instrument ms15.i. The nondetected methyl tert butyl ether results in the affected samples were qualified as estimated (UJ).

- Contamination was detected in the laboratory method blank associated with batch 2171725.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Bromomethane	0.50	2.50

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (U).

- The laboratory control sample (LCS) percent recoveries (%Rs) of cis-1,3-dichloropropene and o-xylene were less than the lower quality control limit in batch 2171726. The nondetected cis-1,3-dichloropropene and o-xylene results were qualified as estimated (UJ).

- Contamination was detected in the laboratory preparation blank associated with batch 2172593.

Contaminant	Maximum Concentration (mg/L)	Action Level (mg/L)
Iron	0.026	0.13

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. The detected iron result less than the action level was qualified as (U).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, (J).

Notes

Molybdenum was detected in the continuing calibration blanks analyzed on April 30, 2015 @ 11:39 and 13:36 at the following maximum concentration.

Contaminant	Maximum Concentration (mg/L)	Action Level (mg/L)
Molybdenum	0.0008	0.004

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Dilution factors were taken into account when applying the action level. No action was taken on the nondetected molybdenum result.

1,4-dioxane was reported in both the 8260B method and 522 method.

Nondetected results were reported to the method detection limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: Bromomethane and iron were detected in the laboratory blanks. The continuing calibration %Ds for methyl tert butyl ether exceeded quality control limits. The LCS %R of cis-1,3-dichloropropene and o-xylene were less than the lower quality control limit.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA National Functional for Organic Data Review (June 2008) and EPA National Functional Guidelines for Inorganic Data Validation (January 2010). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

ALS-Middletown
Case Narrative
TMM-026

Sample Management

This report contains the results of the analysis of four (4) water samples collected on April 29, 2015. Analytical results and quality control information are summarized in this data package.

Sample Receipt

Samples arrived at ALS via courier on April 29, 2015. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Volatile Organics by SW-846 Method 8260

Sample Handling. Three (3) ground water samples were analyzed by SW-846 Method 8260 for volatile organic compounds. All analyses were performed within the holding time.

Initial Calibrations. Initial calibrations were properly analyzed and met method criteria for all target analytes. **Note:** The batch LCS also serves as a second source (ICV).

Continuing Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for all target analytes.

Blanks. Target analytes were not detected in the blank; except as follows:

- In 2171725, bromomethane was detected at 0.50J µg/L.

Surrogates. Recoveries were within control limits.

Laboratory control samples. Target analytes were recovered within control limits; except as follows:

- In 2171726, cis-1,3-dichloropropene and o-xylene were recovered below the control limits.

Internal Standards. All internal standard results met method criteria.

1,4-Dioxane by Method 522

Sample Handling. Two (2) water samples were extracted and analyzed by EPA Method 522 for 1,4-dioxane. All extractions and analyses were performed within the holding time.

Initial Calibrations. An initial calibration was properly analyzed and met method criteria for 1,4-dioxane.

Calibration Checks. Continuing calibration standards were properly analyzed and met method criteria for 1,4-dioxane.

Blanks. 1,4-dioxane was not detected in the method blank.

Surrogates. Surrogate recoveries were within control limits.

Blank Spikes. 1,4-dioxane was recovered within control limits in the blank spike.

Internal Standards. Internal standards met method criterial.

<u>Total Metals by SW-846 Method 6020A</u>

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the Agilent 7700x ICP-MS, using SW-846 Method 6020A. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks with the exception of the following:

- Mo had detectible levels in the CCBs analyzed at 11:39 and 13:36 at 0.0008 J mg/L.

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike/matrix spike dup was prepared on sample, 2067894, in this deliverable group. The spike recoveries and their associated RPDs were within method control limits.

<u>Total Metals by SW-846 Method 6010C</u>

Sample handling. One (1) water sample was digested by SW-846 Method 3015, and the digestate was analyzed for total metals on the ThermoFisher ICP6500_2, using SW-846 Method 6010C. The sample was digested and analyzed within the six-month holding time established for the method.

Calibration. All criteria associated with the calibration and calibration verification standards were within control limits

Blanks. Metals were not detected in the blanks, except the following;

- The j-flag on form 3b represents a detection greater than the MDL, but less than 2.2x the MDL. This value is within method control limits

Laboratory Control Samples. Recoveries were within the control limits.

Spikes. A matrix spike was not prepared from the sample in this deliverable group.

Total Mercury in Water by EPA Method 7470A

Sample handling. One (1) water sample was analyzed for total mercury using EPA method 7470A. The sample was digested and analyzed within the 28-day holding time established for the method.

Calibration. All criteria associated with the calibration and check standards were within control limits.

Blanks. Mercury was not detected in the method blank.

Laboratory Control Sample. The laboratory control sample was recovered within the control limits of 85-115%.

Spikes. A matrix spike/matrix spike duplicate was not performed on samples in this deliverable group.

Overview

The sample set for LMC-MRC SDG R1502645 consisted of six (6) aqueous environmental samples and one (1) trip blank. Four (4) aqueous environmental samples and the one (1) trip blank were analyzed for Volatile Organic Compounds (VOC). One (1) aqueous environmental sample were analyzed for Volatile Organic Gases (OVG) and miscellaneous parameters (ammonia as N, carbonate alkalinity, chloride, nitrate, nitrite, orthophosphate as P, sulfate, Total Dissolved Solids (TDS), and Total Organic Carbon (TOC)). Two (2) aqueous environmental samples were analyzed for Polychlorinated Biphenyl Compound (PCB) homologues. Three (3) aqueous environmental samples were analyzed for metals. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on April 13, 2015 and analyzed by ALS Environmental. All analyses were conducted in accordance with SW-846 Methods 8260C, 6010C, 6020A, and 7470A, RSK-175, EPA Methods 300.0, 365.1, and 680, Standard Methods 2320B, 2540C, and 5310B/C, USGS I-2700-85, and ASTM D6919 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, Interference Check Sample (ICS) results, laboratory method/preparation and trip blank results, surrogate spike recoveries, laboratory control sample results, internal standard areas, serial dilution results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

No major issues were identified.

Minor

- The continuing calibration performed on 04/16/15 @ 10:58 had Percent Differences (%Ds) for 2-chloroethyl vinyl ether and bromomethane which exceeded the 20% quality control limit. All the VOC samples were affected. The non-detected results reported for these compounds in the affected samples were qualified as estimated, (UJ).

- The VOC Laboratory Control Sample (LCS) analysis had a Percent Recovery (%R) for 2-chloroethyl vinyl ether below the lower quality control limit. All VOC samples were affected. The samples were reanalyzed with an acceptable LCS %R. However, the results from the initial analyses were used in the data validation because the continuing calibration standard in the reanalyses more noncompliant %Ds, including 2-chloroethyl vinyl ether. The non-detected results reported for 2-chloroethyl vinyl ether were qualified as estimated, (UJ), in all VOC samples.

- The following analytes below were detected in the laboratory method and preparation blanks at the following maximum concentrations:

Compound/Analyte	Maximum Concentration (µg/L)	Action Level (µg/L)
Methane (1)	0.30	1.5
Tetrachlorobiphenyls (2)	0.013	0.065
Pentachlorobiphenyls (2)	0.022	0.11
Chromium (3)	0.744	3.72
Silver (3)	0.071	0.355
Thallium (3)	0.051	0.255
Molybdenum (3)	0.281	1.405
Antimony (4)	0.557	2.785
Potassium (4)	72.02	360.1
Manganese (4)	0.92	4.6
Iron (4)	18.05	90.25
Silica (5)	0.003 mg/L	0.015 mg/L
TDS (6)	6 mg/L	30 mg/L

(1) - Maximum concentration detected in the laboratory method blank RQ1503815-01, from preparation batch #440888 affecting sample MRC-MW-34B-041315.
(2) - Maximum concentration detected in the laboratory method blank RQ1503633-01, from preparation batch #233594 affecting samples MRC-MW-62A-041315 and MRC-MW-62C-041315.
(3) - Maximum concentration detected in the laboratory method blanks affecting all metals samples.
(4) - Maximum concentration detected in the initial and/or continuing calibration blanks affecting all metals samples.
(5) - Maximum concentration detected in the laboratory method blank affecting sample MRC-MW-34B-041315.
(6) - Maximum concentration detected in the laboratory method blank affecting sample MRC-MW-34B-041315.

Action levels of 5X the maximum concentration were established to evaluate for laboratory blank contamination. Dilution factor, if necessary, was taken into consideration during the application of the action level. The detected results reported for these compounds in the affected samples below the established action level were qualified as non-detected, (U).

- Detected results reported below the RL but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The PCB homologue samples were reanalyzed due to low LCS internal standard area. The samples were re-extracted outside the 7 day holding time and reanalyzed. The internal standard areas were acceptable in the initial analyses of the PCB homologue samples, therefore, the initial analyses were used in the data validation.

The VOC Laboratory Control Sample (LCS) analysis had a Percent Recovery (%R) for dichlorodifluoromethane above the upper quality control limit. No action was taken because this compound was not detected in the associated samples.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: VOC continuing calibration %Ds exceeded 20%. Contaminants were detected in the metals laboratory preparation and method blanks. PCB homologues were detected in the laboratory method blank. The VOC LCS had a low %R for 2-chloroethyl vinyl ether.

Other Factors Affecting Data Quality: Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (June 2008) and the "National Functional Guidelines for Inorganic Review" (January 2010). The text of this report has been formulated to address only those areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

ALS ENVIRONMENTAL

Client:	Tetra Tech	**Service Request No.:**	R1502645
Project:	Middle River	**Date Received:**	4/14/15
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS. This report contains analytical results for samples designated for Tier IV. When appropriate to the method, method blank results and Laboratory Control Samples (LCS) recoveries have been reported with each analytical test.

Sample Receipt

Seven water samples were received for analysis at ALS-Environmental on 4/14/15. The samples were received in good condition consistent with the accompanying chain of custody form enclosed. The samples were received at 1.2°C within the 0-6°C temperature guidelines.

Wet Chemistry

The Method Blanks were free of contamination except for low level detections for Silica and TDS. No data was affected.

Site QC was not requested on these samples.

The Continuing Calibration Blanks for Ammonia (CCB1 to CCB6), Chloride (CCB5), Orthophosphate (CCB1, CCB2) and Silica (CCB2, CCB3) contained low level hits and have been flagged with a "J". No data was affected.

No other analytical or quality control problems were encountered during analysis.

Metals

All Method Blanks were free of contamination above the Method Reporting Limit (MRL).

Site QC was not requested for these samples.

No other analytical or quality control problems were encountered during analysis.

Volatile Organics-5030C/8260C

The Continuing Calibration Verification (CCV) standard exceeded 20% difference for 2-Chloroethyl vinyl ether and Bromomethane on 4/16/15 and2-Chloroethyl vinyl ether, 2-Hexanone and Bromoform on 4/20/15. All detected concentrations for this compound in samples associated with this CCV should be considered as estimated. Please note: The 2-Chloroethyl vinyl ether exceeded 40% on 4/16/15 and all affected samples were repeated under a compliant CCV.

The Method Blank was free of contamination.

The Laboratory Control Sample from 4/16/16 was outside of the control limits low for 2-Chloroethyl vinyl ether and has been flagged with a "*". All affected data has been repeated under a compliant LCS.

No other analytical or quality control problems were encountered during analysis.

Volatile Organics-RSK

The Method Blank contained a low level hit of Methane and has been flagged with a "J". No data was affected as hits in the samples were greater than 10 times the hit in the method blank or not detected.

No other analytical or quality control problems were encountered during analysis.

Extractable Organics- 680

All Internal Standards (IS) were acceptable except on the LCS which was outside limits low. The samples were re-extracted out of holding time (as noted by the "*") and reanalyzed under a compliant IS and both sets of data have been reported.

All surrogate standard recoveries except gamma-GHC was outside limits high on MRC-MW-62A-041315RE and outside limits low on the 04/15/15 LCS and has been flagged with an "*". All affected data was re-extracted and reanalyzed..

The Method blanks were free of contamination except the 04/15/15 blank had low level detections for Tetrachlorobiphenyls and Pentachlorobiphenyls. All affected data has been flagged with a "B".

No other analytical or quality control problems were encountered during analysis.

ALS Environmental

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

\+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% (25% for CLP) difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Lab Control Sample Summary
Dissolved Gases by GC/FID

Analytical Method: RSK 175

Units: µg/L
Basis: NA

Analysis Lot: 440888

Analyte Name	Lab Control Sample RQ1503815-02 Result	Spike Amount	% Rec	% Rec Limits
Ethane	24.9	25.9	96	75 - 118
Ethene	23.6	24.2	98	73 - 129
Methane	25.0	26.1	96	65 - 126

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Spiking Solutions

Name: 680 Matrix Spike 0.5-2.0 ug/mL Inventory ID 79860 Logbook Ref: Expires On: 05/04/2015

Name: 680 PCB Surrogate 1 ug/mL Inventory ID 80334 Logbook Ref: Expires On: 05/04/2015

Preparation Materials

Eppendorf Pipette Repeater EXT #14 (61350) 2mL Graduated Vials (79960) Dichloromethane (Methylene Chloride) 99.9% MeCl2 canister (80036)

Prepared Sodium Sulfate Na2SO4 (80078)

Preparation Steps

Sample Matrix: Water

Service Request: R1502645
Date Analyzed: 4/14/15 - 4/27/15

Lab Control Sample Summary
General Chemistry Parameters

Units: mg/L
Basis: NA

Analyte Name	Method	Lab Control Sample R1502645-LCS Result	Spike Amount	% Rec	% Rec Limits
Alkalinity, Total as CaCO3	SM 2320 B-1997(2011)	17.2	20.0	86	81 - 112
Ammonia as Nitrogen, undistilled	ASTM D6919-09	0.518	0.500	104	90 - 110
Carbon, Total Organic (TOC)	SM 5310B/C-2000(201	9.46	10.0	95	76 - 123
Chloride	300.0	2.04	2.00	102	90 - 110
Nitrate as Nitrogen	300.0	1.02	1.00	101	90 - 110
Nitrite as Nitrogen	300.0	1.06	1.00	106	90 - 110
Orthophosphate as Phosphorus	365.1	0.0252	0.025	101	90 - 110
Silica, Dissolved as SiO2	USGS I-2700-85	0.252	0.250	101	90 - 110
Solids, Total Dissolved (TDS)	SM 2540 C-1997(2011)	896	914	98	90 - 110
Sulfate	300.0	2.09	2.00	105	90 - 110

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

1 A "B" was inadvertantly used for the Sample ID for well MRC-MW77A.

J - chemical detected, concentration is estimated above the method detection limit but below the practical quantitation limit.

MG/L - milligrams per liter

NA - not analyzed

R - detected result is considered to be qualitatively or quantitatively unreliable.

U - not detected at the concentration left of the letter

UG/L - micrograms per liter

UJ - analyte not detected. Quantitation limit or detection limit may be inacurate or imprecise.

UR - non-detect result is considered to be qualitatively or quantitatively unreliable.
