Subject: Transmittal of the Groundwater Monitoring Well and Vapor Monitoring Point Installation Report, Block I Maintenance Building and Surrounding Areas
Lockheed Martin Corporation; Middle River Complex
2323 Eastern Boulevard, Middle River, Baltimore County, Maryland

Dear Mr. Carroll:

For your review please find enclosed two hard copies with a CD of the above-referenced document. This document presents data collected to address data gaps in groundwater (both vertically and horizontally) and to assess vapor intrusion pathways to the Maintenance Building in Block I at Lockheed Martin's Middle River Complex in Middle River, Maryland.

If possible, we respectfully request to receive MDE's comments by June 8, 2018.

Please let me know if you have any questions. My office phone is (301) 548-2227.

Sincerely,

Lynnette Drake
Remediation Analyst, Environmental Remediation

SECTION 1
INTRODUCTION

This report summarizes activities completed as part of an ongoing investigation west of Building A and the Building A basement in Tax Block I at the Middle River Complex (MRC) in Middle River, Maryland (Figure 1-1). This investigation was conducted to address data gaps in groundwater (both vertically and horizontally) and to assess vapor intrusion pathways to the Maintenance Building in Block I. The objectives of this report are to document:

- installation and sampling of 11 groundwater monitoring wells west of Building A and the Building A basement to assess the vertical and horizontal distribution of chlorinated volatile organic compounds (VOCs) (primarily trichloroethene [TCE]), and to determine if a contiguous plume is emanating from source areas under Building A
- installation of seven direct-push technology (DPT) borings and vertical water-screening/sampling intended to refine additional groundwater monitoring well locations and the depths of screened intervals
- installation (using Vapor Pin® technology) and sampling of 10 sub-slab soil vapor monitoring points (VMPs) in the Maintenance Building to assess potential vapor intrusion (VI) pathways

Recent investigations in Building A and the Building A basement have identified elevated TCE concentrations in sub-slab soil vapor (SV), infiltrated water, and, on occasion, in basement indoor air. In March and April 2017, a gas chromatography/mass spectrometer (GC/MS) with an electron-capture detector (ECD) was used to continuously monitor trichloroethene concentrations at targeted floor features and within breathing zones in the southern portion of the Building A basement. Water samples were collected from targeted floor features (i.e., sumps, storm drains) and analyzed for volatile organic compounds. Trichloroethene was detected in eight of the 15 floor features sampled, ranging from 0.70*J* (estimated value) to 5,100 micrograms per liter (µg/L), with the highest concentration (5,100 µg/L) detected in heater room sump HRS5. HRS5 is associated with former heater room (A-9) near column D26 in the Building A basement. This sump has

historically exhibited the highest trichloroethene levels in air, water, and portable-gas chromatograph (GC)/mass spectrometer (MS) sampling.

These results prompted an additional investigation to assess chemical concentrations in groundwater flowing downgradient (i.e., westward) from Building A and the Building A basement toward Cow Pen Creek. This site investigation was performed in 2017. Additional wells were advanced downgradient of known trichloroethene plumes (and toward Cow Pen Creek) to evaluate the vertical and horizontal extent of groundwater contamination. Borings were advanced via direct-push technology, and vertical groundwater profiling was used to refine additional monitoring well locations and targeted screen intervals. Soil vapor samples were also collected to assess sub-slab conditions under the Maintenance Building. This building is west of Building A and within the contaminated groundwater flow field emanating from Building A. The Maintenance Building is currently used by the on-site maintenance contractor (EMCOR), and includes a small office area, a lunchroom, and open warehouse space.

SECTION 2
SITE DESCRIPTION

This section briefly summarizes groundwater conditions west of Building A and the Building A basement. Four areas of trichloroethene (TCE) in groundwater have been identified west of Building A and heading toward Cow Pen Creek (identified as TCE Areas #1 through #4 on Figure 2-1). Downgradient TCE plumes associated with possible source areas identified under Building A might be affecting indoor air via vapor intrusion (VI) in Building A and the Building A basement, the Maintenance Building, and the Drop Hammer Building (TCE Areas #1 and #3 on Figure 2-1), and/or by groundwater infiltrating into sumps.

TCE in shallow subsurface soil beneath Building A likely resulted from releases from former vapor degreasers, underground storage tanks, and possibly from former plating, painting, and/or milling operations. Releases might also have occurred through leaking equipment or equipment overflows and/or spills (Tetra Tech, 2017a). Vapor degreasers were historically in Building A at the locations of current sub-slab vapor monitoring points (VMPs) SV-136-A and SV-168-A; vapor degreasers were also once in the former plating shop area (Figure 2-1). The groundwater emanating from Building A that exhibits elevated TCE concentrations is downgradient of these known and possible source areas.

Before the 2017 site investigation, the conceptual side model (CSM) for this area of the MRC identified four TCE areas west of Building A as being in the surficial aquifer (Figure 2-1), at: well MW96A–B (west of Building A and east of the maintenance building); wells MW53A-B (west of the Maintenance Building and hydraulically downgradient of wells MW96A–B); well MW90B (west of the Drop Hammer Building and Building A); and well MW08B (downgradient, toward Cow Pen Creek). The surficial aquifer beneath the site has been historically divided into three hydraulically connected zones for study purposes: the upper (A), intermediate (B), and lower (C) surficial aquifer. “A” wells typically range from approximately seven to 40 feet below grade; the “B” wells typically range from approximately 20–50 feet below grade, and the “C” wells typically range from approximately 45–80 feet below grade. These relatively shallow permeable zones (part

of the Patapsco formation) are underlain by the Arundel formation at depths of 70–100 feet. The Arundel formation is a regionally extensive, thick, dense clay, confining-unit.

Maximum TCE concentrations have been consistently detected in the first (and largest) area (labeled TCE Area #1 on Figure 2-1) west of Building A at well MW96A (3,300–4,000 micrograms per liter [µg/L] from 2010–2016). Lower TCE concentrations were detected hydraulically upgradient at wells MW109A (0.21–12 µg/L) and MW109B (4.1–110 µg/L). The width of the TCE-impacted groundwater within Area #1 extends north from well MW49A (0.33 µg/L) and southward to well MW17A (17 µg/L). TCE Area #1 is directly downgradient of two of the known TCE sources, including the former location of vapor degreasers near VMPs 136-A and 168-A, and the former plating shop to the south.

The second TCE area (labeled TCE Area #2 on Figure 2-1) is defined by two well pairs (MW53A [10–350 µg/L TCE] and MW53B [12–246 µg/L TCE], and MW110A [17–33 µg/L TCE] and MW110B [11–38 µg/L TCE]). Area #2 is southwest and hydraulically downgradient of well MW96A–B. TCE concentrations detected here are approximately one order of magnitude lower than those detected at MW96A (3,300–4,000 µg/L) between 2010 and 2016. Whether the TCE source for wells MW53A–B is the same as the source for MW96A–B is currently unknown, because volatile organic compounds (VOCs) have not been detected at downgradient and side-gradient wells installed in the surficial-aquifer (MW69A–B, MW41A, MW75A, and MW52A). However, TCE might be present in a deeper permeable -zone below the screened interval of these wells.

The third TCE area (labeled TCE Area #3 on Figure 2-1) has been identified at the western and northern extent of the Drop Hammer Building at well MW90B. TCE concentrations at MW90B ranged from 28 to 370 µg/L between 2009 and 2016; these concentrations fluctuate and are higher than those detected in shallow upgradient wells MW64A (TCE not detected to 0.4 µg/L) and MW17A (TCE at 5–63 µg/L). A fourth area of TCE contamination in groundwater (labeled TCE Area #4 on Figure 2-1) has been identified at well MW08B, where TCE concentrations below the state groundwater standard have been detected near Cow Pen Creek. However, well MW08B might be too far north to be directly downgradient of TCE-impacted groundwater detected at wells

MW110A–B, MW53A–B, and MW90B. TCE Area #4 is farther downgradient from TCE Areas #1 and #2, and might also be influenced by two of the known upgradient TCE sources under Building A, including the former locations of vapor degreasers near VMPs 136-A and 168-A, and the former plating shop to the south.

Additional cross-sectional analysis of the new wells installed for this investigation indicate upper and deeper high permeable zones separated by a thick clay unit throughout most of the localized region west of Building A toward Cow Pen Creek. Whether the four areas of TCE described above are isolated or contiguous was previously unknown. Groundwater samples with elevated TCE levels obtained from the newly installed wells in September 2017 appear to indicate that these three areas might not be distinct (i.e., might not originate from separate TCE sources), but rather might be part of a larger TCE plume emanating from beneath Building A.

SECTION 3
INVESTIGATION APPROACH AND FIELD METHODOLOGY

This report documents field activities conducted as part of an ongoing investigation west of Building A and the Building A basement at the Lockheed Martin Middle River Complex (MRC), in Middle River, Maryland. This investigation was conducted to fill data-gaps for groundwater west of Building A, both vertically and horizontally, and to assess possible vapor intrusion pathways to the Maintenance Building in Block I, with a focus on trichloroethene (TCE) contamination. The scope of work associated with this field investigation includes:

- installation and sampling of 11 groundwater monitoring wells west of Building A
- installation of seven direct-push technology (DPT) borings with vertical groundwater screening and sampling
- installation of 10 vapor monitoring points (VMPs) in the Maintenance Building using Vapor Pin® technology
- subsequent soil vapor (SV) sampling

Results from this investigation assisted with further delineation of TCE in groundwater flowing downgradient from Building A and the Building A basement toward Cow Pen Creek, and documented sub-slab conditions under the Maintenance Building.

3.1 MOBILIZATION/DEMOBILIZATION

On September 5, 2017, Tetra Tech mobilized the drilling subcontractor (Cascade Drilling) and Tetra Tech field personnel and equipment to the site for groundwater well drilling and installation. Subsequent mobilizations occurred on September 18, 2017 for the DPT vertical groundwater screening (performed by Ground Zero Field Services), and on September 25, 2017 for VMP installation. Mobilization includes:

- coordinating with Lockheed Martin Corporation (Lockheed Martin) and MRC personnel for facility access and approval of boring locations
- constructing an equipment decontamination area
- obtaining "Miss Utility" and MRC utility clearances for the DPT vertical groundwater screening boring and monitoring well and VMP locations, along with using a private utility-locating firm
- implementing a site-specific health and safety plan (HASP)
- managing investigation-derived waste (IDW)
- mobilizing subcontractors, equipment, and materials to the site

Demobilization includes the following:

- demobilizing subcontractors, equipment, and materials from the site
- general site cleanup and trash removal
- managing IDW

Tetra Tech provided notification to and coordinated access arrangements through Lockheed Martin Security, EMCOR (site maintenance), and MRA Systems, Inc. (MRAS) to gain access to the Maintenance Building and areas west of Building A and the Building A basement. MRC tenants were informed and updated about the field investigation at biweekly meetings conducted by LMC Properties, Inc., (LMCPI). LMCPI was notified of the field tasks and schedule, and approved the work and schedule before Tetra Tech mobilized to the field.

The field operations leader coordinated mobilization and demobilization (including equipment inventories, to ensure equipment availability), purchasing and leasing equipment, and staging equipment for efficient loading and transport to and from the site before and after each field activity. Before field operations began, Tetra Tech personnel reviewed the site-specific HASP and the respective "safe work" permits therein. Tetra Tech held mandatory daily health and safety tailgate meetings before all field events.

Subcontractors present for that day's field activities were included in these daily meetings. The Tetra Tech site health and safety officer documented pertinent topics covered and personnel in

attendance. Tetra Tech also followed the waste management plan (WMP) conforming to *Lockheed Martin Energy, Environment, Safety, and Health (EESH) Remediation Waste Management Procedure No. EROP 03, Revision 4* (effective April 17, 2009).

3.2 SITE ACCESS AND UTILITY CLEARANCE

Site access, utility clearances, notifications and approvals, and project documentation conform to the provisions of *Lockheed Martin's Remediation Contractor's Environment, Safety and Health (ESH) Handbook, Revision 4, May 1, 2016*. Before starting any intrusive field activities, Tetra Tech obtained the required permits, completed the digging authorization form and risk-handling checklist, and obtained the required signatures. Each location for DPT borings, monitoring wells, and VMPs was screened for subsurface utilities. In addition to calling in a "Miss Utility" ticket, Tetra Tech obtained available MRC-facility engineering and utility maps, and contracted with a private utility-locating service (Enviroscan, Inc. [Enviroscan]) to locate and mark any underground utilities. Enviroscan used standard utility-locating equipment representing the best available technology. Examples of such commonly used equipment include a Fisher TW-6 electromagnetic pipe- and cable-locator/tracer, a RadioDetection cable-avoidance tool, a Genny pipe- and cable locator/tracer, a RadioDetection RD4000 multi-frequency pipe- and cable-tracer, and a Geophysical Survey Systems, Inc. subsurface interface radar system (GSSI SIR-2000) ground-penetrating radar (GPR)-system.

All utilities within a 30-foot radius of each designated outdoor location were located and marked on the ground with the appropriate unique paint color corresponding to each utility. Utilities in the Maintenance Building were not marked with paint. Alternative methods were used indoors for VMP installation, including using removable tape for marking and measuring utility and VMP locations. All new sampling locations were recorded in the site logbook. Permits, the "Miss Utility" clearance, and the Enviroscan utility-screening report are in Appendix A.

Boring locations were offset in the field based on the subsurface utility mark-out. No site operations were affected during these actions. Tetra Tech coordinated with EMCOR to install VMPs in the Maintenance Building when the areas were not in use (i.e., VMPs were not installed in the lunchroom area while workers were eating or taking breaks). During the DPT and well

installation, Tetra Tech used traffic cones and caution tape to isolate the work areas, and maintained open pathways for pedestrian and vehicle traffic.

3.3 MONITORING WELL INSTALLATION AND DEVELOPMENT

Eleven new groundwater monitoring wells (MW117B, MW118A/B, MW119A/B, MW120A/B, MW121A/B, MW122A, and MW131B) were installed west of Building A on September 6–12, 2017, as shown on Figure 3-1. Ten wells were originally planned, but an additional shallow monitoring well (MW122A) was also installed, based on field observations. While drilling the borehole for MW117A/B, two permeable layers were identified for target screened intervals. The shallower screened interval, originally targeted as MW117A, was set in the deeper of the two shallow permeable layers. The actual depth of this screened interval (which was more in the typical range for an intermediate "B" well) led to changing the well identification for MW117A to MW131B. Therefore, two intermediate "B" wells (MW131B and MW117B) were nested in the same borehole. An additional shallow well (MW122A) was installed east of MW131B/MW117B (toward Building A) to target the upper permeable layer identified while drilling the original MW/117A/B borehole. Although the same shallow permeable layer was not present in the offset borehole for MW122A (because the subsurface geology west of Building A is heterogeneous), well MW122A was nevertheless installed, following discussion among and subsequent approval from the project team.

These 11 monitoring wells were installed to provide additional groundwater data to determine if a contiguous plume is emanating from source areas under Building A, if distinct separate source areas are present, or if multiple releases over time from the same source have occurred. A detailed summary of monitoring well locations and rationale is in Table 3-1. Figure 3-1 shows the monitoring well locations. A shallow ("A") monitoring well and an intermediate ("B") monitoring well were installed at each location, with the exception of MW122A and MW131B, which were installed based on the geology (permeable layers) encountered in the field while drilling the boring for nearby well cluster MW117. A permeable layer from 31 to 38 feet below grade (in the typical "B" well-screen depth range) was identified when drilling the boring for well pair MW117A/B. Since the screened interval originally designated as MW117A was set in this deeper permeable

layer, the well was renamed MW131B, and an additional well (MW122A) was installed nearby to target the original target shallow layer (12–16 feet below grade).

3.3.1 Borehole Drilling and Soil Sampling

Borings for the monitoring wells were advanced using a low-profile mini-sonic rig (rotasonic method) operated by a Maryland-licensed driller (Cascade Drilling, Marietta, Ohio). The rotasonic method used a four-inch by six-inch drill-rod/override-casing setup (with temporary casing) for the single well (MW122A), and a six-inch by eight-inch drill-rod/override-casing setup (with temporary casing) for nested wells (two wells in one borehole). Nested wells were installed at locations MW131B/MW117B, MW118A/B, MW119A/B, MW120A/B, and MW121A/B. Boring logs are in Appendix B.

Soil was continuously sampled during drilling using a 10-foot core barrel. Soil samples were collected for soil screening, including lithologic characterization, visual observations (e.g., staining, discolorations, etc.), and odor detection. Soil samples were screened for volatile organic compounds (VOCs) using a portable photoionization detector (PID) and a consistent headspace-screening methodology (e.g., sealable plastic-bag technique). Headspace sampling in the field consisted of cutting the soil core along its long axis, instantly placing one side of the core sample into a sealable plastic bag, and immediately closing the top of the bag. The other portion of the sample was placed into a sample container to prevent VOC dissipation during screening.

The soil in the bag was gently disturbed to allow VOCs to be released from the soil matrix. The samples were then allowed to stand for five to 10 minutes before a PID reading was obtained. After five to 10 minutes, the tip of the PID was inserted into the plastic bag and readings were monitored until a peak (i.e., maximum) total-VOC concentration had been reached. The peak VOC concentration was then recorded on the soil boring form and in the field notebook.

The soil in the bag used for PID screening was not used as the laboratory VOC sample aliquot. Ten soil samples were collected for laboratory analyses based on field screening results, and targeting the well-screen intervals, permeable zones, and changes in geology. Soil samples collected during soil boring drilling were analyzed for the following parameters using the listed methods:

- VOCs by SW846 Method 8260C
- semivolatile organic compounds (SVOCs), including 1,4-dioxane, by SW846 Method 8270D SIM
- total petroleum hydrocarbons (TPH) gasoline-range organics (GRO) and diesel-range organics (DRO) by SW846 Method 8015D

Soil sample identifications, sampling depths, and PID readings for the 10 soil samples collected for laboratory analysis are in the table below:

Soil sample ID	Depth below grade (feet)	Photoionization detector (PID) reading (parts per million)
SB-131B-33–35	33–35	3.2
SB-117B-47–50	47–50	0.5
SB-118A-10–13	10–13	0.1
SB-118B-53–55	53–55	2.1
SB-119A-10–12.5	10–12.5	1.4
SB-119B-56–58	56–58	5.5
SB-120B-43–45	43–45	5.0
SB-120B-48–50	48–50	2.8
SB-121A-26.5–28.5	26.5–28.5	0.0
SB-121B-30.5–32.5	30.5–32.5	1.4

No evidence of contamination (e.g., staining, sheen, etc.) was observed in any soil sample collected from the monitoring well borings. Collected soil samples were analyzed by the laboratory chemical methods listed in Table 3-1. “Soil Sample Log Sheets” are in Appendix C.

3.3.2 Well Construction

Groundwater monitoring wells were constructed of two-inch-diameter, flush-threaded, Schedule-40 polyvinyl chloride (PVC) well casing with a manufactured PVC well-screen. Well screens ranged from five to 10 feet in length, with 0.010-inch wire-wrapped openings. The screen length was based on the depth to groundwater and thickness of the targeted permeable formation. A sand filter-pack of washed #1 filter sand was placed around the well screen to at least two feet above the top of the well screen. Following placement of the sand pack, each well was

pre-developed (using a combination of surging and pumping) via a submersible pump to clear fine soil. The depth to sand was measured using a weighted tape.

A two-foot-thick bentonite seal was installed above the sand pack using bentonite pellets, and it was allowed to hydrate during installation. Project-approved water from an on-site fire hydrant was used to hydrate the bentonite. Grout (consisting of Type II Portland cement and powdered bentonite) was placed above the bentonite seal to approximately two feet below grade. Grout was made by mixing a 94-pound bag of Type II Portland cement, nine pounds of powdered sodium bentonite, and no more than eight gallons of water per bag of cement.

A protective, locking, flush-mounted well cover was secured over each well casing for protection. The PVC well casing was cut below grade and made watertight by installing a locking, expandable, sanitary seal in the well casing top. Concrete was installed above the grout in the annular space between the well borehole and outer well casing, up to approximately six-inches below grade, to provide a surface seal for the well, and to support the flush-mounted cover. The flush-mounted cover was set in a two square-foot concrete pad.

The highest point on the top of the PVC well casing was marked using an indelible marker. A Maryland-licensed surveyor surveyed the marked location of the well. Well construction details were recorded in the field logbook and on a well construction form. Well construction details are in the boring logs in Appendix B.

3.3.3 Well Development

Each well was developed following installation to remove fines from the well filter pack and casing, and to ensure a hydraulic connection between the well and the geologic formation. Well development was done as soon as possible after installation, and (once a minimum of 24-hours had elapsed following well construction) to allow the grout to set up. Each well was developed by hand bailing to remove heavy sediment, then by gentle surging and purging with a submersible pump to remove fines and sediment from the sand pack and well screen. Well development at four shallow wells (MW119A through MW122A) was performed via hand bailing only, because the water volume generated was inadequate for pump bailing.

Development began at the bottom of the well screen, working up incrementally to the top of the screened interval, and then back down to the bottom of the well. During well development, water-level drawdown measurements and groundwater parameters (including pH, temperature, specific conductance, dissolved oxygen [DO], oxidation-reduction potential [ORP], and turbidity) were collected periodically using a Horiba U-22 water-quality meter until pumping was complete, and recorded in the appropriate site-specific logbook and on a well development record (Appendix D). Water quality parameters measured using a water quality meter were recorded only for wells that produced an adequate volume of water. Water quality parameters were not recorded for the four shallow wells that were hand bailed.

Turbidity readings were also collected, using a separate turbidity meter (due to the instability of turbidity meters on multi-meters), and recorded in the field logbook and on a well development record (see Appendix D). Well development continued until groundwater was clear and free of suspended solids, or for a maximum of three hours, whichever occurred first. All development water was collected in United States Department of Transportation (USDOT)-approved, properly labeled, 55-gallon steel drums and stored in a facility-approved location.

3.4 WELL PURGING AND SAMPLING

Water levels in monitoring wells were measured before sampling and after allowing equilibration with the aquifer (following development) for at least one week. Water level measurements were recorded in the appropriate site-specific field logbook and on "Groundwater Sample Log Sheets" (Appendix E). Well depths were also recorded when water level measurements were collected.

Groundwater was sampled from the new monitoring wells on October 9–11, 2017. The wells were sampled using the low-flow purging/sampling method, whereby water was pumped from the wells at a low flow rate and water quality parameters were monitored and recorded during the purging. The wells were purged using a peristaltic pump and disposable Teflon® tubing, or hand bailed (for wells that did not contain an adequate volume of water for pumping). Groundwater was withdrawn using the peristaltic pump at flow rates between 100 and 300 milliliters per minute for wells that produced an adequate volume of water. The final adjustment of the purge rate depended upon water stabilization and how fast the well recharged without significant drawdown.

During groundwater purging, water-level drawdown measurements and groundwater parameters (including pH, temperature, specific conductance, DO, ORP, and turbidity) were collected approximately every five minutes until purging was complete. Water quality parameters were measured using an in-line Horiba U-22 water quality meter. Turbidity readings were collected using a separate LaMotte turbidity meter (due to the instability of turbidity readings from multi-meters). Purging continued until the parameters stabilized, as described below. Water quality parameters were recorded in the appropriate site-specific logbook, as well as on groundwater sample log sheets (Appendix E).

Stabilization was considered achieved when three consecutive readings were within ±0.1 standard unit for pH, ±3% for conductivity, ±10 millivolts for ORP, and ±10% for turbidity (target of <50 nephlometric turbidity units [NTUs]), or when the well had been purged dry, or after a maximum of two hours had elapsed. If the monitoring well had been purged dry, the water level in the well was allowed to recover at least 80% of its initial static water level before groundwater was sampled. All purged water was collected in 55-gallon steel drums, which were staged in the Lockheed Martin-approved central staging area at the facility's fenced Lot D. Groundwater samples collected from the newly installed wells (with the exception of MW119A and MW122A) were analyzed at TestAmerica, Inc. of North Canton, Ohio and ALS Environmental of Middletown, Pennsylvania (for hexavalent chromium only) for the following parameters:

- VOCs by SW846 Method 8260C
- SVOCs, including 1,4-dioxane, by SW846 Method 8270D SIM
- TPH-GRO and -DRO by SW846 Method 8015D
- total and dissolved metals by SW846 Method 6020A (including mercury by Method 7471A)
- polychlorinated biphenyls (PCBs) by United States Environmental Protection Agency (USEPA) Method 680
- hexavalent chromium by USEPA Method 218.6

MW119A and MW122A were only analyzed for VOCs and TPH-GRO because these wells produced only a small volume of water.

Groundwater samples to be analyzed for VOCs and TPH-GRO were collected first, followed by samples to be analyzed for SVOCs/1,4-dioxane, TPH-DRO, metals, PCBs, and hexavalent chromium. Samples for each analytical parameter were placed in a cooler containing ice immediately upon collection (for example, VOC containers were placed in a cooler containing ice immediately after the VOC containers had been filled and closed). Before sampling each day, a trip blank was placed in each cooler that would hold VOC samples for that sampling day; the trip blank accompanied the VOC samples throughout the day and was sent along with the samples to the laboratory. Trip blanks were analyzed for VOCs by SW846 Method 8260C. No other quality assurance/quality control (QA/QC) samples were collected. Samples were analyzed on a standard turnaround of 21 calendar days.

3.5 DIRECT-PUSH TECHNOLOGY VERTICAL GROUNDWATER SCREENING

On September 18–20, 2017, a Maryland-licensed driller (Ground Zero Field Services) used a Geoprobe™ 6000 series direct-push technology (DPT) drill rig to advance temporary borings in the area downgradient of well clusters MRC-MW53A/B, MRC-MW110A/B, and MRC-MW90B. The Geoprobe® SP-15 sampling system was also used to collect groundwater samples. Borings were advanced along transects using a Triad approach to a target depth of approximately 40 feet below ground surface (bgs), with the aim of finding the center of the groundwater TCE plumes (Figure 3-1). A FROG-4000™ field-portable gas chromatograph (GC) photoionization detector (PID) was used to analyze water samples for TCE, which allowed for real-time data and decision-making. Real-time data allowed effective placement of successive borings and selection of targeted sampling intervals.

The objective of advancing these DPT borings was to characterize the downgradient extent of VOCs (specifically TCE) and to refine future groundwater monitoring well locations and screening depths. Borings were located along two transects (transects #1 and #2 on Figure 3-1) perpendicular to the expected center-axis of each targeted TCE plume. Vertical water-profiling data was collected along the two transects to help identify the center axis of the downgradient TCE plumes (Figure 3-1).

Advancement of up to five borings was proposed along each transect (up to 10 borings total). Transect #1 is approximately 200 feet downgradient from monitoring well clusters MRC-MW53A/B and MRC-MW110A/B, and transect #2 is approximately 150 feet downgradient from monitoring well MRC-MW90B. Groundwater samples were to be collected every five feet in each boring, starting from the water table (approximately 10 feet bgs) down to a targeted depth of 40 feet bgs, for up to seven samples per boring. Drill rig refusal prevented some borings from reaching terminal depth; refusal was encountered in DPT-1B at 43.5 feet, and at 35 feet in DPT-1C. A significant clay layer was encountered to approximately 40–50 feet bgs that did not produce water, and it prevented sampling of many targeted intervals. The original target depth of the DPT borings was 40 feet below grade; however, after identifying the clay unit throughout most of the shallow subsurface, the field program was adjusted to target sampling groundwater in the permeable layer beneath the clay, in lieu of conducting the vertical water profiling; this permeable unit extends deeper than 40 feet below grade.

Groundwater samples were collected by inserting a stainless-steel screen inside a stainless-steel sheath and attaching a drive head to the sheath. A steel expendable point was then attached to the other end of the sheath and a drive rod was threaded to the top. Once attached, the entire assembly was driven into the subsurface using the percussion of the Geoprobe® rig. Drive rods were added to the string of tools as the sampler was advanced to the targeted depth interval. Once the target depth had been reached, stainless-steel extension rods were inserted down the center of the drive rods to hold the expendable point in place, and the drive rods were then retracted. With the stainless-steel screen exposed to groundwater, the extension rods were removed. New Teflon® tubing was then lowered into the screen section.

The subsurface geology observed during the DPT investigation consists of impermeable, tight clays and silts that did not produce water. A thick clay layer was encountered starting from approximately five to 10 feet bgs to approximately 40–50 feet bgs. On the second day of the field program (September 19, 2017), the driller brought a Geoprobe™ 7000 series drill rig to the site in an attempt to get through the thick clay layer; this rig has more torque and power than the 6000 series drill rig. Eight of 10 proposed borings were successfully drilled; borings DPT-1D and DPT-1E were not attempted, due to unsuccessful results. Water was not produced throughout the

length of the borehole in five (DPT-1B, DPT-1C, DPT-2A, DPT-2B, and DPT-2E) of eight borings. Water samples were collected from the deeper zone (below the thick clay unit) in three borings (DPT-1A, DPT-2C, and DPT-2D).

A peristaltic pump was used to collect the groundwater samples, which were analyzed for TCE by experienced Tetra Tech personnel using a FROG-4000™ field portable GC PID immediately after each sample had been collected. In addition, two split samples (DPT-1A-40–45 and DPT-2D-45–50) were sent to an off-site laboratory for VOC analysis by SW846 Method 8260C to provide a relative comparison of data from the laboratory vs. field instrumentation. No soil samples were collected from the DPT borings. Detected TCE values at each depth sampled per boring location were recorded in a field book. After sampling was concluded at a targeted interval, all downhole equipment was withdrawn from the borehole and decontaminated using a mild detergent (Alconox) solution wash and a potable water rinse. The above sampling procedure was then repeated for each successive sampling interval. Boreholes were abandoned with bentonite in accordance with Maryland abandonment standards set forth in *Code of Maryland Regulations* (COMAR) 26.04.04.11.

3.6 VAPOR MONITORING POINT INSTALLATION AND SAMPLING

Historical groundwater data indicate that TCE-impacted groundwater is moving west from Building A and might be under the EMCOR Maintenance Building. Maximum TCE concentrations in the first (and largest) area of TCE west of Building A have been consistently detected at well MRC-MW96A (3,300–4,000 µg/L between 2010 and 2017), located east and upgradient of the Maintenance Building. The objective of this investigation was to verify whether soil vapor (SV) is accumulating under the building.

3.6.1 Vapor Monitoring Point Installation

Before VMP installation, appropriate procedures were followed to address the potential presence of asbestos-containing materials (ACM). An outside contractor (A&I), licensed in Maryland to manage all aspects of asbestos, was consulted about the proposed VMP locations before any intrusive work began to determine if ACM were present. ACM was not found at any of the VMP

installation locations in the Maintenance Building, based on the contractor's site knowledge of the floor material and subsequent visual inspection.

On September 25–26, 2017, 10 new VMPs (SV-178-MB through SV-187-MB) were installed in the Maintenance Building (Figure 3-2). VMP locations strategically targeted enclosed areas where staff congregates (office space and lunch/break room), and provided spatial coverage across the building. VMPs were located away from any significant breaches/cracks or sumps/drains in the building floor that might be possible preferential pathways and allow for venting of soil vapor from the subsurface that may affect actual subsurface concentrations. Table 3-2 summarizes the VMP locations and rationales.

Vapor Pins® were installed at each location using a standard hammer drill. Dust generated during hammer drilling was collected using a standard Shop-Vac®. The collected concrete dust was bagged and disposed of in the facility solid-waste stream. The Vapor Pin® probe is self-sealing, so bentonite and Portland cement are not necessary for installation; therefore, water was not required. The installation of Vapor Pins® did not generate investigation-derived waste (IDW) (e.g., concrete-cutting water or residual soil cuttings) that would require containerization, characterization, and off-site disposal. Following installation, probe seals were leak-tested using a helium tracer gas and a monitor, and no leaks were detected. After installation and leak testing, all VMPs were allowed to stand unused for at least two weeks to allow SV to equilibrate. This time span exceeds the minimum recommended by USEPA guidance (USEPA, 2015).

3.6.2 Vapor Monitoring Point Sampling

Each SV sample was collected over one hour using preconditioned Summa® canisters to assure subsurface equilibration and avoid high negative pressure that might mobilize subsurface vapor and bias the results. Each sampling location was routinely inspected during the sampling period to ensure appropriate operation of sampling devices, sample integrity, and to document conditions within the area that might affect results. Samples were collected and analyzed for VOCs by USEPA Method Toxic Organic-15 (TO-15) (USEPA, 1999). SV samples were collected in accordance with standard operating procedures developed by the USEPA Environmental Response Team for soil

vapor sampling (USEPA, 1996), and methodologies developed by the USEPA Office of Research and Development (USEPA, 2004).

Individual evacuated Summa® canisters were used to collect all SV samples, in accordance with USEPA Method TO-15. These specially treated, stainless steel, one-liter canisters were equipped with in-line particulate filters and integral controllers to set the rate of filling during sampling. SV samples were collected through Teflon® tubing attached to the stainless steel Vapor Pins®. Before sampling, the Teflon® tubing was purged of atmospheric air by attaching the tubing to a low-flow sampling pump set at a flow rate of approximately 200 cubic centimeters per minute to minimize mobilization of subsurface vapor and prevent sample bias. One to three volumes (i.e., the volume of the sampling probe and tube) were purged to ensure that collected samples represented sub-slab conditions.

Samples were collected by opening the valve on the canister, which allowed air to enter the canister at the rate set by the controller. Controllers were calibrated in the laboratory and shipped to the field with a sufficient flow rate that maintained the necessary vacuum pressure in the Summa® canister for the one-hour sampling interval. All starting pressures of the Summa® canister ranged between -30 and -25 inches of mercury (Hg), and ending pressures ranged between -6 and 0 inches Hg. Summa® canisters were certified clean (less than 0.2 parts per billion [ppb] by volume of targeted compounds) by the laboratory before sending, in accordance with Section 8.4 of the TO-15 methodology (USEPA, 1999). SV sample log sheets are in Appendix F.

After sampling had been completed, each canister was closed and sent to an off-site laboratory (TestAmerica, Inc. in Knoxville, Tennessee) under proper chain of custody procedures. Each sample was submitted for analysis by USEPA Method TO-15. Tetra Tech's *Site Characterization Report* (Tetra Tech, 2006) identified specific compounds considered primary contributing factors to potential risk at MRC via a vapor intrusion (VI) exposure scenario. These target compounds identified in groundwater and SV samples might have been historically used and released at the MRC, and could potentially enter indoor air via subsurface migration. All samples collected during this investigation were analyzed for the following contaminants of concern (COC):

- benzene
- carbon tetrachloride
- chlorodifluoromethane (Freon 22)
- chloroform
- dichlorodifluoromethane
- 1,1-dichloroethane (1,1-DCA)
- 1,2-dichloroethane (1,2-DCA)
- 1,1-dichloroethene (1,1-DCE)
- *cis*-1,2-dichloroethene (cis-1,2-DCE)
- *trans*-1,2-dichloroethene (*trans*-1,2-DCE)
- ethylbenzene
- methyl-tertiary-butyl ether (MTBE)
- methylene chloride
- naphthalene
- tetrachloroethene (PCE)
- toluene
- 1,2,4-trichlorobenzene
- 1,1,1-trichloroethane (1,1,1-TCA)
- 1,2,3-trimethylbenzene (1,2,3-TMB)
- 1,2,4-trimethylbenzene (1,2,4-TMB)
- 1,3,5-trimethylbenzene (1,3,5-TMB)
- TCE
- 1,1,2-trichloroethane (1,1,2-TCA)
- vinyl chloride (VC)
- xylenes (total)

3.7 SAMPLE NOMENCLATURE

A master site logbook was maintained at the site as an overall record of field activities. Each soil sample collected during this investigation was identified with a unique sample-identification tag consisting of the sample-type designation (i.e., SB for soil boring), followed by the well boring number, followed by the sampling depth. For example, the soil sample collected at well location 117A at a depth of 33–35 feet bgs is identified as "SB-117A-33–35." Each groundwater sample collected during this investigation was identified with a unique sample-identification tag consisting of the site designation (i.e., MRC for Middle River Complex), followed by the sample-type designation (i.e., MW for monitoring well) and well location number (i.e., 118B), followed by the sampling date. For example, the groundwater sample collected at well location 118B on October 11, 2017 is identified as "MRC-MW118B-101117."

Each DPT water sample collected during this investigation is identified with a unique sample-identification tag consisting of the sample-type designation (i.e., DPT for direct-push technology), followed by the transect number (1 or 2), followed by a letter (A, B, C…) for its transect location, followed by the sampling depth. For example, the DPT water sample collected along transect #1 at location A at a depth of 40–45 feet bgs is identified as "DPT-1A-40–45." Each SV sample collected during this investigation is identified with a unique sample-identification tag consisting of the sample-type designation (i.e., SV for soil vapor), followed by the location number, followed by the building identifier (i.e., MB for Maintenance Building), followed by "1" for the first sampling event. For example, the SV sample from the Maintenance Building at location SV-178 was identified as "SV-178-MB-1."

3.8 SURVEYING

On November 28, 2017 a professional Maryland-licensed field surveyor (Precision Surveying and Mapping of Baltimore, Maryland) from a qualified, state licensed, land-surveying firm provided horizontal and vertical coordinates for each new groundwater monitoring well. Surveyed locations are accurate to the nearest 0.01 foot for vertical elevations in the North American Vertical Datum 1988 and to the nearest 0.1 foot horizontal coordinates in the North American Datum 1983 at the top of the well casings. Ground elevations at the wells were surveyed within a vertical accuracy of 0.1 foot. The survey data were used to update the MRC environmental geographic information system (EGIS).

3.9 DOCUMENTATION

A bound field logbook with consecutively numbered pages was assigned specifically for this project. All entries were recorded in indelible black ink. Any erroneous data in the logbook requiring corrections or modifications were crossed out using a single line, dated, and initialed. At the end of each workday, the responsible sampler signed the logbook pages, and any unused portions of logbook pages were crossed out, signed, and dated. The logbook contained all pertinent project information.

Sample documentation consists of chain of custody reports and matrix-specific sampling log sheets. The chain of custody report is a standardized form summarizing and documenting pertinent

sample information, such as sample identification and type, matrix, date and time of collection, preservation, and requested analysis. Sample custody procedures to document sample acquisition and integrity were properly followed. Signed chains of custody are provided in the data validation reports in Appendix G. Field sheets were also completed for each VMP, DPT, and monitoring well sampling location, including sample log sheets, boring logs, and well construction diagrams. Information recorded on the field sheets includes start and stop times, Summa® can and regulator identification numbers, start and stop pressures, water level data, water quality parameters, and general field observation notes.

3.10 SAMPLE HANDLING

Proper custody procedures were followed throughout all phases of sample collection and handling. Chain of custody protocols were used throughout sample handling to establish the evidentiary integrity of sample containers. These protocols demonstrate that the samples were handled and transferred in a manner that would eliminate (or detect) possible tampering. Sample containers were released under signature from the laboratory and were accepted under signature by the sampler or individual responsible for maintaining custody until the sample containers were transferred to the sampling team.

Samples were released under signature from the sampling team and were accepted under signature by the laboratory. Transport containers returning to the laboratory were sealed with strapping tape and a tamper-resistant custody seal. The custody seal includes the signature of the individual releasing the transport container, along with the date and time.

3.11 EQUIPMENT DECONTAMINATION

Drilling equipment at each boring/well location was cleaned using a high-pressure steam cleaner or manually washed (the latter for the DPT sampling equipment). For well drilling, decontamination water was collected in the recirculation basin and pumped into 55-gallon drums for storage. Drilling and DPT equipment was also cleaned before beginning work, between drilling locations, and at the conclusion of the drilling/DPT program. During well development and groundwater sampling, reusable groundwater level measuring and sampling equipment (e.g., water level meter) was decontaminated before and after each use. Dedicated, disposable equipment (such

as pump tubing) was used for groundwater purging and sampling. Decontamination of reusable small equipment entailed an Alconox® and potable water wash. All decontamination fluids were collected in USDOT-approved 55-gallon steel drums and stored at the Lockheed Martin-approved central staging area at the facility's Lot D, pending waste-profile sampling results.

3.12 WASTE MANAGEMENT

The 2017 MRC waste management plan (Tetra Tech, 2017b) conforming to *Lockheed Martin's Remediation Contractor's ESH Handbook*, *Revision 2* was followed during this investigation to store, manage, test, and dispose of IDW. IDW (consisting of all drill cuttings and soil cuttings, decontamination rinse water, purge water, tubing, and personal protective equipment [PPE]) was generated during this investigation. PPE and tubing IDW was placed in trash bags and then in a facility trash receptacle to be disposed of as general refuse. Soil cuttings and water were collected and stored in USDOT-approved 55-gallon drums. All drums were appropriately labeled and logged on a drum inventory form. Wastes were characterized and disposed of in accordance with applicable state and federal regulations and the 2017 MRC waste management plan.

After IDW generation, the drums were relocated to a drum staging area (located in Block E/Lot D) identified by Lockheed Martin personnel. Samples of IDW were collected and submitted to be analyzed for VOCs, PCBs, toxicity characteristic leaching procedure (TCLP) metals, and ignitability. All IDW was profiled as nonhazardous based on waste characterization sampling, and all drums were removed from the site on November 16, 2017 by Clean Harbors of Baltimore, Maryland. IDW documentation is in Appendix H.

3.13 DATA VALIDATION

Following receipt of the soil, groundwater, and SV analytical data, data were validated by an independent chemist in accordance with USEPA Region 3 protocols. Chemical data were supplied by the laboratory as hard-copy reports and electronic databases. All data were validated for all QA/QC parameters, including laboratory QA/QC and accuracy, precision, completeness, and comparability, in accordance with USEPA guidance. This review is based on the *USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA, 2017a), *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA, 2017b), and the

specifics of the analytical method used. Data validation reports, including complete chain of custody documentation, are in Appendix G (on compact disc). Chemical data tables are also in Appendix G.

Collectively, these data are acceptable for their intended use, except for data that have been qualified as unreliable. For this validation, the following data qualifiers (i.e., flags) were applied to the chemical results presented in this report:

U Not detected. The analyte is considered not detected at the reported value.

J The analyte is considered present in the sample. However, the value is estimated and might not be accurate or precise.

J- The result is an estimated quantity, but the result might be biased low.

NJ The analyte has been tentatively identified. This qualifier indicates presumptive evidence of a compound. Special methods might be required to confirm its presence or absence in future sampling efforts.

UJ The analyte was not detected. However, the quantitation or detection limit might be inaccurate or imprecise.

These flags appear on the chemical results tables in Section 4 and Appendix G.

SECTION 4
RESULTS

This section presents the results of the groundwater monitoring well installation and sampling, the vertical groundwater screening conducted west of Building A and the Building A basement, and the sub-slab vapor sampling conducted in the Maintenance Building. Also presented below are cross-sections and an analysis of trichloroethene (TCE) based on the data in this report.

4.1 SOIL

Ten soil samples were collected from the monitoring well soil borings for laboratory analyses based on field screening results targeting the well-screen intervals, permeable zones, and changes in geology. Tables in Appendix G present all analytical data, including nondetects. Validated soil chemical data were used to generate a statistical summary table (Table 4-1) and a detection table (Table 4-2) summarizing positive detections of chemical analytes in the monitoring well boring soil samples. Table 4-1 lists chemicals detected in the soil samples, ranked from the most frequently to the least frequently detected (this table does not include analytes that were not detected in any sample). Table 4-2 shows the detected analyte concentrations screened against Maryland Department of the Environment (MDE) residential and nonresidential soil cleanup standards. No chemical detected in soil samples exceeds its respective screening criterion.

TCE was detected in six of 10 soil samples at concentrations ranging from 0.62*J* to 77 micrograms per kilogram (µg/kg), with the highest detection in sample SB-120B-43–45. Other chlorinated VOCs detected include *cis*-1,2-dichloroethene (*cis*-1,2-DCE) in four of 10 samples at concentrations ranging from 2.8*J* to 47 µg/kg (highest detection in sample SB-131B-33–35); 1,1-dichloroethene (1,1-DCE) in three of 10 samples at concentrations ranging from 1.4*J* to 9.3 µg/kg (highest detection in sample SB-120B-43–45; and *trans*-1,2-dichloroethene (*trans*-1,2-DCE) and vinyl chloride, each detected in two of 10 samples, at concentrations of 1.3*J* to 1.9*J* µg/kg and 0.72*J* to 2.1*J* µg/kg, respectively, with the highest concentrations of both in

sample SB-131B-33–35. Petroleum-related compounds, including benzene (14 µg/kg), xylenes (0.53*J* µg/kg), and methyl tert-butyl ether (MTBE) (1.7*J* µg/kg) were detected in one of 10 soil samples (SB-119B-56–58). This coincides with an existing localized benzene plume east of the Maintenance Building near monitoring wells MW96B (720 µg/kg benzene, detected in 2017) and MW17A (110 µg/kg benzene, detected in 2017) (Tetra Tech, 2017b).

4.2 GROUNDWATER

4.2.1 Vertical Groundwater Screening

Eight vertical groundwater screening borings were advanced during this investigation. Two of 10 proposed borings (DPT-1D and DPT-1E) were not advanced, due to unsuccessful results. Water could not be collected from five (DPT-1B, DPT-1C, DPT-2A, DPT-2B, and DPT-2E) of eight borings attempted. Water was collected from the deeper zone below the thick clay unit in three borings (DPT-1A, DPT-2C and DPT-2D). Figure 4-1 shows vertical groundwater screening results for TCE.

On September 18, 2017, three borings were attempted along Transect #1 (DPT-1A, DPT-1B and DPT-1C). No water was observed in DPT-1C, but two water samples were collected from DPT-1A (0–5 feet and 5–10 feet) and one water sample was collected from DPT-1B (0–5 feet). No TCE was detected in either water sample collected. Refusal was encountered at 43.5 feet bgs in DPT-1B and at 35 feet bgs in DPT-1C. Shallow groundwater collected from DPT-1A and DPT-1B was most likely water perched on top of the thick clay layer.

Two borings (DPT-1A and DPT-2C) were advanced on September 19, 2017. A water sample was collected for TCE analysis at 40–45 feet bgs from boring DPT-1A, which had a TCE concentration of 28.9 parts per billion (ppb). Water was observed in boring DPT-2C from 0–5 feet bgs and 45-50 feet bgs. Samples collected from these two intervals were also analyzed for TCE using the FROG 4000™, but TCE was not detected in either sample.

Drilling refusal with the Geoprobe™ 6000 series drill rig prompted the project team to consider other viable drilling options that would increase the potential of reaching the permeable layer below the clay. After collaboration, Tetra Tech instructed the driller to mobilize a higher-powered

Geoprobe™ 7000 series drill rig to the site. Borings DPT-1B and DPT-1C were re-drilled using the new drill rig; however, attempts to collect water samples from the permeable layer below the thick clay layer were unsuccessful. Advancement of boring DPT-2E to a depth of 40–45 feet bgs succeeded, but the boring was dry and no water was collected.

Detection of TCE at 28.9 ppb in boring DPT-1A below the clay layer prompted Tetra Tech to collect grab water samples from three of the newly installed wells (MW119B, MW120B, and MW121B). These grab samples were field-analyzed using the FROG 4000™ portable GC PID, which indicated TCE in all three wells at concentrations of 624 ppb (MW119B), 794 ppb (MW120B), and 124 ppb (MW121B). These data confirm that contamination is present at depth, that it is likely associated with the Building A TCE source area, and that the permeable zone below the thick clay layer in the area of the transects might be the target zone for TCE contamination further west of Building A and the Building A basement heading toward Cow Pen Creek.

On September 20, 2017, borings DPT-2A and DPT-2B were advanced to 50 feet bgs; both borings were dry. Soil in this area was tight and difficult to penetrate. Boring DPT-2D was also advanced to 50 feet bgs, and approximately 15 feet of water was observed in the borehole. TCE (9.9 ppb) was detected in the groundwater sample collected from DPT-2D at 50 feet bgs. Field-screening of the vertical groundwater samples was limited to samples that could be collected despite the thick clay layer; however, two field detections of TCE beneath the clay layer in DPT-1A (28.9 ppb) and DPT-2D (9.9 ppb) indicate that TCE is present in groundwater at depth.

In addition to the water samples analyzed by the FROG 4000™ GC PID, two split samples (DPT-1A-40–45 and DPT-2D-45–50) were sent to an off-site laboratory for VOC analysis by SW846 Method 8260C, to provide a relative comparison of laboratory vs. field instrument data. TCE was detected in DPT-1A-40–45 at a concentration of 31 µg/L (approximately six times the screening criterion), and was nondetect (ND) in DPT-2D-45–50. In comparing the FROG 4000™ data to the laboratory analytical data (using a direct 1 ppb to 1 µg/L comparison based on the instruments reading in different units), the results for DPT-1A-40–45 are very similar, with 28.9 ppb detected with the FROG 4000™ and 31 µg/L detected in the laboratory sample. For

sample DPT-2D-45–50, the FROG 4000™ was nondetect, whereas the laboratory analytical sample was 9.9 µg/L.

Drilling refusal encountered by both DPT drill rigs indicates that rotasonic drilling is required to drill through the clay layer at 5–10 feet bgs to approximately 40–50 feet bgs in this area of the MRC. Proper vertical groundwater screening in the permeable zone beneath the clay was not possible using the DPT rigs scoped for the investigation. This determination led Tetra Tech to end the DPT field program after three days.

4.2.2 Monitoring Wells

Groundwater level data—Eleven new groundwater monitoring wells (MW117B, MW118A/B, MW119A/B, MW120A/B, MW121A/B, MW122A, and MW131B) were installed from September 6–12, 2017 in the area west of Building A and the Building A basement. Groundwater samples were collected from the newly installed wells on October 9–11, 2017. The table below presents the October 9–11, 2017 groundwater level measurements and computed elevations for the newly installed monitoring wells.

These groundwater level data will be incorporated into future investigations to establish the groundwater elevation contour maps for the shallow "A" and intermediate "B" surficial aquifer wells. Historically, shallow groundwater flow follows the site topography and flows radially from the hydraulically upgradient northern portion of the MRC (at Eastern Boulevard and immediately south of Buildings A, B, and C) to the southeast, south, and southwest, toward Dark Head Cove and Cow Pen Creek. In the area west of Building A, groundwater tends to flow west/southwest toward Cow Pen Creek.

Well ID	Elevation at top of PVC well casing NAVD 1988 (feet)	Depth to groundwater below top of PVC casing October 9–11, 2017 (feet)	Groundwater elevation October 9–11, 2017 NAVD 1988 (feet)

MW—monitoring well
NAVD—North American Vertical Datum
PVC—polyvinyl chloride

Groundwater chemical data—Validated groundwater chemical data were used to generate a statistical summary table (Table 4-3) and a detection table (Table 4-4) summarizing analytes detected in monitoring well groundwater samples. Table 4-3 lists chemicals detected in the groundwater samples, ranked from the most frequently to the least frequently detected. (This table does not include analytes that were not detected in any sample.) Table 4-4 shows the detected analyte concentrations screened against current Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008). Appendix G presents all analytical data for 2017, including chemicals analyzed for but not detected. TCE and benzene results are the primary focus of discussion, because they are primary indicators of solvent and petroleum VOC contamination, and they most frequently exceed groundwater standards at MRC. Chlorinated VOC-degradation daughter products of TCE (e.g., dichloroethenes, vinyl chloride [VC], etc.) or other petroleum related VOCs (e.g., methyl tert butyl ether [MTBE], benzene isomers, naphthalene, etc.) are typically co-located with these primary VOCs.

Chlorinated VOCs—TCE was detected in 11 of 13 groundwater samples at concentrations ranging from 1.2 to 1,400 micrograms per liter (µg/L), with the highest detection in well MW120B. TCE concentrations in groundwater are presented on Figure 4-1. TCE exceeds its screening criteria (5 µg/L) in eight of 13 groundwater samples. The highest TCE detected in the newly installed wells was found predominantly in the "B" zone intermediate wells (MW119B and MW120B) screened below the thick clay layer (referred to as the deep high-permeable zone). TCE in the lower permeable zone below the shallow clay layer appears to extend from MW109B in a south/southwest direction, with the highest concentration at MW120B, and continuing south of MW90B toward DPT transect #2.

The highest historical TCE concentrations in groundwater have been detected in the upper permeable zone in well MW96A (3,300 µg/L). TCE in newly installed shallow well MW122A was detected at only 1.2 µg/L; however, this well is screened within a clay unit. TCE in newly installed well MW131B, located close to Building A and within 15 feet of well MW122A, was detected at 71 µg/L; this well is screened deeper (28.3 to 38.3 feet below grade) in the lower permeable zone.

TCE in the lower permeable zone appears to extend from MW131B off Building A, and head south/southwest past MW119B toward well MW120B. MW131B is due west of two known TCE source areas (SV-136-A and SV-168-A) beneath the main floor of Building A. These are the former vapor degreaser locations, and these results appear to substantiate the elevated TCE concentration detected immediately west of the building. However, significantly higher TCE concentrations detected slightly downgradient of MW131B at MW96A appear to indicate an additional localized, shallow source near or just upgradient of MW96A, as TCE concentrations in this well are three orders of magnitude higher (i.e., three powers of 10) than what has been detected upgradient. TCE in the upper permeable zone appears to have more of an overall westerly flow from Building A, past the Maintenance Building and heading toward transect #1 and Cow Pen Creek (Figure 4-1).

Other chlorinated VOCs detected include: *cis*-1,2-DCE in nine of 13 samples at concentrations ranging from 0.66 to 320 µg/L (highest detection in well MW117A), and 1,1-DCE in five of 13 samples at concentrations ranging from 0.33*J* to 200 µg/L (highest detection in well MW120B). *cis*-1,2-DCE exceeds its screening criterion in three of 13 samples, whereas 1,1-DCE exceeds its

screening criterion in two of 13 samples. Vinyl chloride was only detected in one well (MW131B), at a concentration of 17 µg/L, which is approximately eight times higher than its screening criterion (2 µg/L). This high VC concentration might indicate degradation of TCE from upgradient sources farther east and under Building A (where vapor degreasers were formerly located at SV-136-A and SV-168-A).

Petroleum compounds—Benzene was detected in four of 13 groundwater samples ranging from 0.53*J* to 53 µg/L, with the highest concentration detected in well MW119B. Benzene exceeds its screening criterion (5 µg/L) in two wells (MW119B and MW120A). Toluene was detected below its screening criterion (1000 µg/L) in seven of 13 groundwater samples, ranging from 0.23 to 2.7 µg/L, with the highest concentration detected in well MW119A. Xylenes were also detected below its screening criterion (10,000 µg/L) in three of 13 groundwater samples, ranging from 0.72*J* to 2.1 µg/L, with the highest concentration detected in well MW120A. This coincides with an existing localized benzene plume east of the Maintenance Building near monitoring wells MW96B (720 µg/kg benzene detected there in 2017) and MW17A (110 µg/kg benzene detected in 2017). These wells are near underground wastewater lines that act as preferential pathways for contaminants. Data from MW120A suggest that benzene in groundwater extends farther south.

Benzene exceedances have increased from 2016–2017 in two wells west of Building A: MW17A (from 42 µg/L in 2016 to 110 µg/L in 2017) and MW96B (from 670 µg/L in 2016 to 720 µg/L in 2017). However, benzene concentrations decreased in several other wells: MW109B (98 µg/L to 34 µg/L), MW110B (49 µg/L to 42 µg/L), and MW53B (130 µg/L to 17 µg/L). Benzene was not detected in wells MW113A and MW114A in 2017, but had previously been detected since well installation in 2014.

TPH-DRO was detected in six of nine groundwater samples at concentrations ranging from 230*J* to 1,200 µg/L, with the highest detection in well MW120A. TPH-GRO was detected in four of 11 groundwater samples, at concentrations ranging from 120 to 440 µg/L, with the highest detection in well MW120B. All detections of TPH-DRO and TPH-GRO exceed their respective screening criteria (47 µg/L).

***1,4-Dioxane*—**The screening level used for 1,4-dioxane is the California Department of Health Services advisory level (3 µg/L); Maryland has no drinking water or groundwater standard or advisory for 1,4-dioxane. 1,4-Dioxane was detected in four of nine samples ranging in concentration from 2.7 to 10 µg/L. Two detections exceed the screening criteria: 10 µg/L in MW120B and 6.4 µg/L in MW131B. 1,4-Dioxane was also detected west of Building A at concentrations exceeding its screening level during annual groundwater monitoring in spring 2017, in samples from wells MW69A (6.3 µg/L), MW96A (4 µg/L), MW110A (5.8 µg/L), and MW110B (5.8 µg/L). No additional investigations for 1,4-dioxane are warranted, however, due to its low concentrations and its presence in downgradient wells (MW08A and MW08B) near Cow Pen Creek at concentrations less than 3 µg/L.

***Metals*—**Total metals (from unfiltered samples) concentrations above MDE standards are typically found throughout the MRC. Table 4-3 includes a statistical summary of metals in site groundwater, and Table 4-4 summarizes detections of metals in groundwater samples and exceedances of Maryland groundwater standards. Concentrations of three metals exceed Maryland groundwater standards (for drinking water) in one or more samples. Nickel (in four of nine samples), beryllium (in one of nine samples), and vanadium (in two of nine samples) exceed their standards; their maximum concentrations (1,700, 12, and 23 µg/L, respectively) exceed their respective groundwater standards by approximately 20 times (nickel), three times (beryllium), and six times (vanadium). Concentrations of the remaining metals do not exceed standards. Other typical metals detected at MRC, but below MDE standards, include barium, cobalt, lead, and zinc. Metals have not contributed to site risk, and additional investigation and/or remediation for metals is not planned.

***Hexavalent chromium*—**Hexavalent chromium was detected in three of nine samples, at concentrations well below its MDE standard (100 µg/L); concentrations range from 0.17*J*- to 54.9*J*- µg/L, with the highest detection in well MW118A. Monitoring well MW118A is west of the former plating shop area in Building A, where hexavalent chromium was historically used in plating operations. A deionization system operated off of a Building A dock near MW118A; rinse water from the former plating shop rinse (used to demineralize and strip off metals and acids) was

recirculated back to the system at that location. Hexavalent chromium was not detected above the Maryland standards in any sample collected (Tetra Tech, 2017b).

Polychlorinated biphenyls (PCBs)—PCBs were not detected in any groundwater sample, and have not been historically detected in and around the area of the Maintenance Building west of Building A.

4.3 SUB-SLAB SOIL VAPOR

On September 25–26, 2017, 10 new VMPs (SV-178-MB through SV-187-MB) were installed in the Maintenance Building. VMP locations strategically targeted enclosed areas where staff congregates (office space and lunch/break room), and provide spatial coverage across the building. Samples were collected and analyzed for VOCs by USEPA Method Toxic Organic 15 (TO-15) (USEPA, 1999).

Three large bay doors on the east side of the Maintenance Building were open during sampling. The outside temperature during sampling was approximately 62 degrees Fahrenheit, and the barometric pressure was 30.28 inches, with overcast skies. Winds averaged approximately nine miles per hour, out of the northeast.

Validated sub-slab soil vapor (SV) chemical data were used to generate a statistical summary table (Table 4-5) and a detection table (Table 4-6) summarizing positive detections of chemical analytes in the SV samples. Table 4-5 lists chemicals detected in the SV samples, ranked from the most frequently to the least frequently detected (this table does not include analytes that were not detected in any sample). Table 4-6 shows the detected analyte concentrations screened against target shallow soil gas concentrations derived using the United States Environmental Protection Agency (USEPA) vapor intrusion screening level (VISL) calculator, and the commercial/industrial values based on lowest value (1×10^{-5} cancer risk [i.e., a one-in-100,000 probability] or a hazard index [HI] of 1). (USEPA, 2014).

The calculator divides indoor-air (IA) screening levels by a conservative (i.e., more protective of human health and the environment) attenuation factor of 0.03. The attenuation factor represents the adjustment applied to IA screening levels to account for concentration reductions due to

diffusive, advective, and/or other attenuating mechanisms as vapor migrates from the sub-slab to IA. No analytes detected in SV exceed their respective screening criteria. Sub-slab soil vapor results are on Figure 4-2.

Trichloroethene (TCE) was detected in two of 10 SV samples at concentrations ranging from 0.39*J* to 2*J* µg/m^3, with the highest detection in sample SV-183-MB. 1,1-DCA was detected in all 10 samples at concentrations ranging from 0.52*J* to 1,700 µg/m^3 (highest concentration at SV-183-MB). Other chlorinated VOCs detected include 1,1-DCE (in four of 10 samples at concentrations ranging from 1.6 to 270 µg/m^3) and 1,1,1-trichloroethane (1,1,1-TCA) (in two of 10 samples at concentrations ranging from four to 190 µg/m^3), both exhibiting the highest detection at SV-183-MB.

The petroleum compounds benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected at low concentrations in all samples, except for SV-183-MB, where only benzene was detected. All petroleum concentrations are several orders of magnitude below their respective screening criteria. Similar to the soil sampling data, this coincides with an existing localized benzene plume upgradient and east of the Maintenance Building (Figure 4-1) near monitoring wells MW96B and MW17A. Low-level petroleum concentrations beneath the Maintenance Building might also be attributable to historical operations in and around the building.

The highest VOC concentrations were detected in the open central portion of the warehouse at sampling locations SV-182-MB and SV-183-MB. No elevated concentrations were detected in the enclosed areas (office space and lunch/break room) of the Maintenance Building. The absence of elevated SV concentrations indicates that the elevated VOC groundwater concentrations detected east of the Maintenance Building are not affecting SV, possibly due to the thick clay layer identified in the shallow subsurface that would hinder vapor intrusion.

4.4 2017 CROSS-SECTION AND TCE PLUME ANALYSIS

This section discusses geological cross-sections and trichloroethene (TCE) concentrations west of Building A and the Building A basement. Additional cross-sectional analysis of the wells newly installed for this investigation identifies the geology and maps a permeable layer beneath the thick clay unit, referred to as the deeper, high-permeable zone. The cross-section locations are shown

on Figure 4-1, and the geological cross-sections with associated groundwater TCE concentrations are in Appendix I.

The cross-sectional analysis distinctly indicates an upper permeable zone and a lower permeable zone throughout most of the localized region west of Building A toward Cow Pen Creek. Four cross-sections (A–A', B–B', C–C', and D–D') transecting this area are in Appendix I. The locations of these cross-sections are on Figure 4-1. Whether the four areas of TCE described in Section 2 are isolated or contiguous was previously unknown. Groundwater samples with elevated TCE levels obtained in September 2017 from the newly installed wells appear to indicate that these three areas might not be distinct (i.e., might not originate from separate TCE sources), but are rather part of a larger TCE plume emanating from beneath the building (Figure 4-1).

Maximum TCE concentrations have been consistently detected at well MW96A in the upper high permeable zone; elevated TCE concentrations have also been detected in surrounding wells screened in the deeper high-permeable zone (MW119B and MW131B). TCE was detected at a low concentration (nondetect to 1.2 µg/L) at monitoring wells MW109A and MW122A. MW109A is screened within the upper high permeable zone upgradient of MW96A. The screened interval for MW122A is in the upper zone; however, the well screen is set within the clay unit. This suggests a possible localized source of TCE just upgradient of, or near, MW96A. TCE concentrations at MW117A are evidently in the deeper permeable zone, as its well screen was set deeper, due to the presence of a thick clay unit.

The area west of Building A is characterized by heterogeneous geology, as indicated by the aforementioned clay layer and intermittent sand layers, as seen in boring logs from wells MW96 and MW109 (Appendix B). MW96 has moist, sandy lithology from 12 to 15 feet below grade that does not exist in nearby well MW109, located only 39 feet upgradient. Both wells are screened at 10–15 feet bgs; however, MW96A had a TCE concentration of 3,300 µg/L, whereas TCE was not detected in MW109A. A groundwater TCE concentration of 550 µg/L detected in new well MW119B, south of MW96A/B, indicates that the plume within the upper high permeability zone extends farther south.

Subsurface heterogeneity might account for the differences observed in contaminant concentrations between these two wells, and/or a separate source area might exist near MW96A. Dense clay and silty-clay soil beneath Building A, together with the absence of precipitation infiltration (due to the large building footprint and associated pavement), has likely limited downward movement of TCE to soil directly beneath the building floor, and subsequently to groundwater. This is supported by historical soil and groundwater data that indicate low or no concentrations of TCE in soil borings under Building A. However, elevated TCE concentrations have been detected in sumps in water collected from beneath the Building A basement, and in lower permeable zone wells (e.g., MW120B), indicating a downward movement of TCE through preferential pathways moving westward from Building A toward Cow Pen Creek.

The upper permeable zone is evident throughout most of the localized region west of Building A, but appears to pinch out in areas moving west toward Cow Pen Creek. Analysis of the cross sections indicates that the shallow TCE found near wells MW53A and MW110A might be in a shallow permeability zone that pinches out. The upper permeable zone pinches out west of MW110A in cross-section A–A'; it is not evident in DPT-1A and MW08. The upper permeable-zone is evident in cross-sections B–B' and C–C', except near well MW109, where TCE was not detected in 2017.

The upper permeable zone does not appear in any transect #2 DPT borings (DPT-2A through DPT-2E); thick clay was encountered in these borings from the surface to approximately 45–50 ft below grade. TCE in the “B”-level wells in this area might be part of a more contiguous impacted zone in deeper groundwater beneath the clay unit, as seen in cross-section A–A'. TCE (28.9 µg/L) was detected in September 2017 in groundwater at boring DPT-1A from a depth of 40–44 feet below ground surface (bgs), indicating that the deeper plume extends farther west toward Cow Pen Creek.

The lower permeable zone west of Building A toward Cow Pen Creek has not been completely delineated by historical borings and monitoring wells installed to date. The lower permeable zone is evident in cross-section A–A' from MW131B/MW117B, close to Building A, and extends toward Cow Pen Creek and MW08B; however, the lower permeable zone is only evident in borings

installed during previous investigations at depths deep enough to intercept it. The lower permeable zone is evident at the bottom of DPT boring DPT-1A in transect #1, and in DPT borings DPT-2C and DPT-2D in transect #2, but DPT refusal prevented access to this zone at other borings in the transect.

These results indicate that the lower permeable zone is shallower closer to Building A, and dips to approximately 20–30 feet as this stratigraphic unit extends toward Cow Pen Creek. TCE was detected at 9.9 µg/L in the lower permeable zone at DPT-2D, with much higher concentrations detected in new upgradient wells MW119B (550 µg/L) and MW120B (1,400 µg/L); all these concentrations indicate that TCE is in groundwater at elevated concentrations in the lower permeable zone. This suggests that TCE from either a local source or an upgradient source in Building A (i.e., former plating shop and/or vapor degreasers) has migrated to depth, and was not detected by shallow wells closer to Building A. The deeper western groundwater investigation scheduled for 2018 will provide additional characterization of the lower permeable zone, and will further delineate the vertical and horizontal extent of TCE-impacted groundwater west of Building A toward Cow Pen Creek.

SECTION 5
SUMMARY AND CONCLUSIONS

The investigation objectives were to:

- install and sample 11 groundwater monitoring wells west of Building A and the Building A basement to assess the vertical and horizontal distribution of chlorinated volatile organic compounds (VOCs) (primarily trichloroethene [TCE]) and to determine if a contiguous plume is emanating from source areas under Building A
- conduct direct-push technology (DPT) borings and vertical water screening and sampling to refine additional groundwater monitoring well locations and the depths of screened intervals, and to install them using Vapor Pin® technology
- sample 10 sub-slab soil vapor monitoring points (VMPs) in the Maintenance Building to assess potential vapor intrusion (VI) pathways

5.1 GROUNDWATER

Groundwater screening has identified elevated trichloroethene (concentrations in downgradient samples collected from newly installed lower permeable zone monitoring wells (e.g., MW119B, MW120B, MW121B, and MW131B) and direct-push technology (DPT) boring locations (DPT-1A and DPT-2D). Trichloroethene was also detected at lower levels in newly installed upper permeable zone monitoring wells (e.g., MW119A and MW121A). Subsurface soil west of Building A, heading toward Cow Pen Creek, appears to consist of an upper and lower permeable zone separated by a thick clay layer.

The highest historical trichloroethene concentration in groundwater was detected in the upper permeable zone in well MW96A (3,300 micrograms per liter [µg/L] in 2017) east of the Maintenance Building. In the upper permeable zone, the trichloroethene plume appears to flow to the west. Trichloroethene in newly installed upgradient well MW122A (located just west of Building A) was detected at only 1.2 µg/L; however, this well is screened within a clay unit. Trichloroethene in newly installed well MW131B, located close to Building A and within 15 feet

west of well MW122A, was detected at 71 µg/L; this well is screened deeper (28.3–38.3 feet below grade) in the lower permeable zone.

Trichloroethene in the lower permeable zone appears to extend from MW131B off Building A, heading south/southwest past MW119B toward well MW120B. Residual source material underneath Building A might contribute to contaminant concentrations observed at wells MW117A, MW119B, and MW120B. MW131B is due west of two known trichloroethene source areas (SV 136-A and SV-168-A) beneath the main floor of Building A; these are the former locations of vapor degreasers, and this might substantiate the elevated trichloroethene detected immediately west of the building. However, significantly higher trichloroethene concentrations detected slightly downgradient of MW131B at MW96A appear to indicate an additional localized shallow source near or just upgradient of MW96A, rather than being associated with a current source area upgradient beneath Building A, as trichloroethene concentrations in this well are three orders of magnitude higher than what has been detected upgradient.

This, along with the multiple plumelets observed, suggests that several contaminant releases to the subsurface might have occurred during historical operations both under Building A and possibly west of Building A (e.g., area of MW96A). An elevated concentration of trichloroethene was also found in downgradient well MW120B (1,400 µg/L) in the lower permeable zone, as compared to that in upgradient well MW119B (550 µg/L), which also seems to support this area as the source of several contaminant releases.

Refusal was encountered during direct-push technology drilling that prevented full vertical and horizontal delineation of trichloroethene in groundwater. Elevated trichloroethene concentrations detected in water samples collected previously from target floor features in the Building A basement, and the detection of trichloroethene in groundwater on the western side of Building A, suggest that additional investigation is needed. This will be completed in 2018 to assess the downgradient groundwater flowing from beneath Building A and the Building A basement toward Cow Pen Creek. Additional deeper soil borings, groundwater screening within borings, and the installation of deeper groundwater monitoring wells, will be used to evaluate the vertical and

horizontal extent of contamination. Borings in 2018 will be advanced via rotosonic technology, because of the significant clay layers detected in shallow subsurface soil during this investigation.

The supplemental deeper groundwater investigation will target permeable intervals identified in several borings west of Building A; this zone is beneath a shallow, relatively thick clay unit encountered during the direct-push technology (DPT) investigation detailed in this report. These permeable layer(s), when encountered, have produced groundwater with detectable levels of trichloroethene. The vertical and lateral groundwater profiling to be conducted during the supplemental deeper groundwater investigation will help refine additional monitoring well locations and help determine the appropriate depth for the deep monitoring well screens installed downgradient of the known trichloroethene plumes and toward Cow Pen Creek.

5.2 SUB-SLAB SOIL VAPOR

Ten vapor monitoring points (VMPs) were installed in the Maintenance Building that strategically targeted enclosed areas where staff congregate (office space and lunch/break room), and that provide spatial coverage across the building. Detected analyte concentrations were screened against target shallow soil gas concentrations derived using commercial/industrial values from the United States Environmental Protection Agency (USEPA) vapor intrusion screening level (VISL) calculator, and based on lowest value for either a 1×10^{-5} cancer risk or a hazard index (HI) of 1 (USEPA, 2014).

No analytes detected in sub-slab soil vapor (SV) exceed their respective screening criteria. Trichloroethene (TCE) was detected in two of 10 sub-slab soil vapor samples collected from the Maintenance Building, at concentrations of 0.39*J* and 2*J* micrograms per cubic meter, with the highest detection in sample SV-183-MB. The petroleum compounds benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected at low concentrations in all samples, except for SV-183-MB, where only benzene was detected. All petroleum concentrations are several orders of magnitude below their respective screening criteria. The highest volatile organic compound concentrations were detected in the open central portion of the warehouse at sampling locations SV-182-MB and SV-183-MB. Elevated concentrations of volatiles were not detected in the enclosed areas (office space and lunch/break room) of the Maintenance Building.

The absence of elevated sub-slab soil vapor concentrations indicates that the elevated volatile organic compound concentrations detected in groundwater east of the Maintenance Building are not affecting sub-slab soil vapor, possibly due to the thick clay layer in the shallow subsurface that might hinder vapor intrusion. A second round of confirmation sampling will be conducted in February 2018. A sub-slab soil vapor investigation in this building is unwarranted at present, based on the presence of trichloroethene in groundwater in the lower permeable zone, rather than in the upper permeable zone near the Maintenance Building. Future annual groundwater sampling will include nearby shallow wells, and sub-slab soil vapor sampling in the Maintenance Building might be conducted if elevated trichloroethene concentrations are detected in those wells.

Table 3-1

Monitoring Well and DPT Soil and Groundwater Sample Summary and Rationale
Block I Maintenance Building and Surrounding Areas
Lockheed Martin Middle River Complex, Middle River, Maryland

Well number	Location	Well/Boring bottom depth[1]	Soil sample analysis (method)	Groundwater sample analysis (method)	Rationale/purpose
MRC-MW131B/MW117B	Outside of and adjacent to Building A near northern TCE soil vapor area (SV-168-A)	131B – 38.3 feet below grade 117B – 50.5 feet below grade	Collected two soil samples for laboratory chemical analyses based on field screening results and/or indications of contamination (e.g., staining, sheen, etc.) VOCs (8260C); SVOCs including 1,4-dioxane (8270D SIM); TPH-GRO and diesel–range organics (DRO) by (8015D).	VOCs (8260C); SVOCs including 1,4-dioxane (8270D SIM); TPH-GRO and TPH-DRO (8015D); total and dissolved metals (6020A, 7471A); PCBs (680); hexavalent chromium (218.6)	To provide groundwater chemical-monitoring data points to assess downgradient groundwater conditions adjacent to three soil-vapor VOC source areas beneath Building A. Well depths were selected to monitor the area directly west of Building A targeting the permeable silty and sandy soil located in these two areas. The well screens targeted two permeable water-bearing intervals while targeting similar elevations coincident with the well screen intervals of existing impacted downgradient wells. While drilling the borehole for MW117A/B, two permeable layers were identified for target screened intervals. The screened interval originally designated asMW117A was set in the deeper of the two permeable layers, therefore the well was renamed MW131B. An additional shallow well (MW122A) was installed east of MW131B/MW117B toward Building A targeting the shallow permeable layer identified while drilling the boring for original well pair MW117.
MRC-MW118A/B	Outside of and adjacent to Building A near southern TCE soil vapor area (SV-118-A and SV-175-A)	A - 13 feet below grade B - 55 feet below grade	As above	As above	

Table 3-1

Monitoring Well and DPT Soil and Groundwater Sample Summary and Rationale
Block I Maintenance Building and Surrounding Areas
Lockheed Martin Middle River Complex, Middle River, Maryland

Well number	Location	Well/Boring bottom depth	Soil sample analysis (method)	Groundwater sample analysis (method)	Rationale/purpose
MRC-MW119A/B	In asphalt lot area between Building A and Maintenance Building, and between wells MRC-MW96A/B and MRC-MW-64A.	A - 13 feet below grade B - 60 feet below grade	As above	As above **Due to a low volume of water, MW119A was only analyzed for VOCs, TPH-GRO and hexavalent chromium*	To provide groundwater chemical-monitoring data to assess groundwater conditions downgradient of and between two soil-vapor VOC source areas beneath Building A. These wells filled a data gap by refining the southern extent of elevated VOCs in groundwater in an area not previously evaluated between well MRC-MW96A with the maximum TCE concentration for the area (4,000 µg/L), and well MRC-MW17A near the edge of the TCE plume with a relatively low TCE concentration (17 µg/L). MRC-MW119A will monitor the more permeable silty and sandy soil above shallow clay in this area. MRC-MW119B will monitor deeper silty and sandy soil below clay in this area. Well screens were placed targeting similar elevations coincident with the well screen intervals of existing impacted upgradient wells.

Table 3-1

Monitoring Well and DPT Soil and Groundwater Sample Summary and Rationale
Block I Maintenance Building and Surrounding Areas
Lockheed Martin Middle River Complex, Middle River, Maryland

Well number	Location	Well/Boring bottom depth	Soil sample analysis (method)	Groundwater sample analysis (method)	Rationale/purpose
MRC-MW120A/B	In asphalt roadway between Maintenance Building and Drop Hammer Building	A – 13.5 feet below grade B - 50 feet below grade	As above	As above	The rationale for these wells was the same as MRC-MW119A/B (above) except that they filled soil and groundwater chemical data gaps further south and west (i.e., hydraulically downgradient) between the Maintenance Building and Drop Hammer Building. Well screens were placed targeting similar elevations coincident with the well screen intervals of existing impacted upgradient and downgradient wells.
MRC-MW121A/B	In asphalt roadway downgradient of the Maintenance Building and between two known TCE plumes.	A - 29 feet below grade (screened within clay unit showing some moisture) B - 42 feet below grade	As above	As above	The rationale for these wells was the same as MRC-MW119A/B (above), except that they addressed gaps in soil and groundwater chemical data downgradient of the Maintenance Building and between two known TCE plumes centered around wells MRC-MW53A/B and MRC-MW90B. Well screens were placed targeting similar elevations coincident with the well screen intervals of the existing impacted upgradient and sidegradient wells.

Table 3-1

Monitoring Well and DPT Soil and Groundwater Sampling Summary and Rationale
Block I Maintenance Building and Surrounding Areas
Lockheed Martin Middle River Complex, Middle River, Maryland

Well number	Location	Well/Boring bottom depth	Soil sample analysis (method)	Groundwater sample analysis (method)	Rationale/purpose
MRC-MW122A	East of MW117B/MW131B toward Building A.	A – 15 feet below grade	No sample collected	**Due to a low volume of water, MW122A was only analyzed for VOCs and TPH-GRO.*	While drilling the borehole for MW117B/MW131B, two shallow permeable layers were identified for target screened intervals. The screened interval for MW131B was set in the deeper of the two permeable layers, and an additional shallow well (MW122A) was installed east of MW117B/MW131B toward Building A in the upper the permeable layer identified while drilling MW117B/MW131B. Although the same shallow permeable layer was not present in the borehole for MW122A (the subsurface geology is heterogeneous in the area west of Building A), the well was still installed.

Table 3-1

Monitoring Well and DPT Soil and Groundwater Sample Summary and Rationale
Block I Maintenance Building and Surrounding Areas
Lockheed Martin Middle River Complex, Middle River, Maryland

Well number	Location	Well/Boring bottom depth	Soil sample analysis (method)	Groundwater sample analysis (method)	Rationale/purpose
DPT-1A through DPT-1C DPT-2A through DPT-2E	Southern portion of Block H/ Parking Lot 2, downgradient of well clusters MRC-MW53A/B and MRC-MW110A/B. Northeastern portion of Block G/Parking Lot No. 3Parking Lot 2 downgradient of well location MRC-MW90B.	Eight of ten proposed borings were drilled. Borings DPT-1D and DPT-1E were not attempted based on unsuccessful results. Water was not able to be collected from five (DPT-1B, DPT-1C, DPT-2A, DPT-2B and DPT-2E) of the eight borings attempted. Water was collected from the deeper zone below the thick shallow clay unit in three borings (DPT-1A, DPT-2C and DPT-2D).	No soil samples were collected.	TCE analysis using Frog 4000™ portable gas chromatograph/mass spectrometer.	The rationale for these borings was to refine additional groundwater monitoring well locations and depth of screen intervals for deeper wells to be installed further downgradient of the known TCE plumes heading toward Cow Pen Creek.

DPT = direct-push technology
DRO = diesel-range organics
GRO = gasoline-range organics
MRC = Middle River Complex
MW = monitoring well
PCB = polychlorinated biphenyl
SV = soil vapor
SVOCs = semi-volatile organic compounds
TCE = trichloroethene
TPH = total petroleum hydrocarbons
µg/L = micrograms per liter
USEPA = United States Environmental Protection Agency
VOCs = volatile organic compounds

Table 3-2

Summary of Vapor Monitoring Point Sampling Locations and Rationale
Maintenance Building
Middle River Complex, Middle River, Maryland

Vapor monitoring point number	Vapor monitoring point location	Sample analysis (laboratory method)	Rationale/ purpose
SV-178-MB	Maintenance Building office space in northeastern corner of building	VOCs (TO-15)	To assess the sub-slab conditions in a small office space within the Maintenance Building.
SV-184-MB	Maintenance Building lunchroom in east/central portion of building	VOCs (TO-15)	To assess the sub-slab conditions in the lunchroom space within the Maintenance Building.
SV-179-MB, SV-180-MB, SV-181-MB, SV-182-MB, SV-183-MB,SV-185-MB, SV-186-MB, SV-187-MB	Maintenance Building open warehouse space	VOCs (TO-15)	To assess the sub-slab conditions in the open warehouse space of the Maintenance Building.

MB = Maintenance Building
SV = soil vapor
TCE = trichloroethene
VOCs = volatile organic compounds

Shaded cells indicate detected concentration exceeds groundwater screening level

1 Screening levels for all analytes except 1,4-dioxane are Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008).
2 The screening level for 1.4-dioxane is State of California drinking water action level (MDE standard not available).

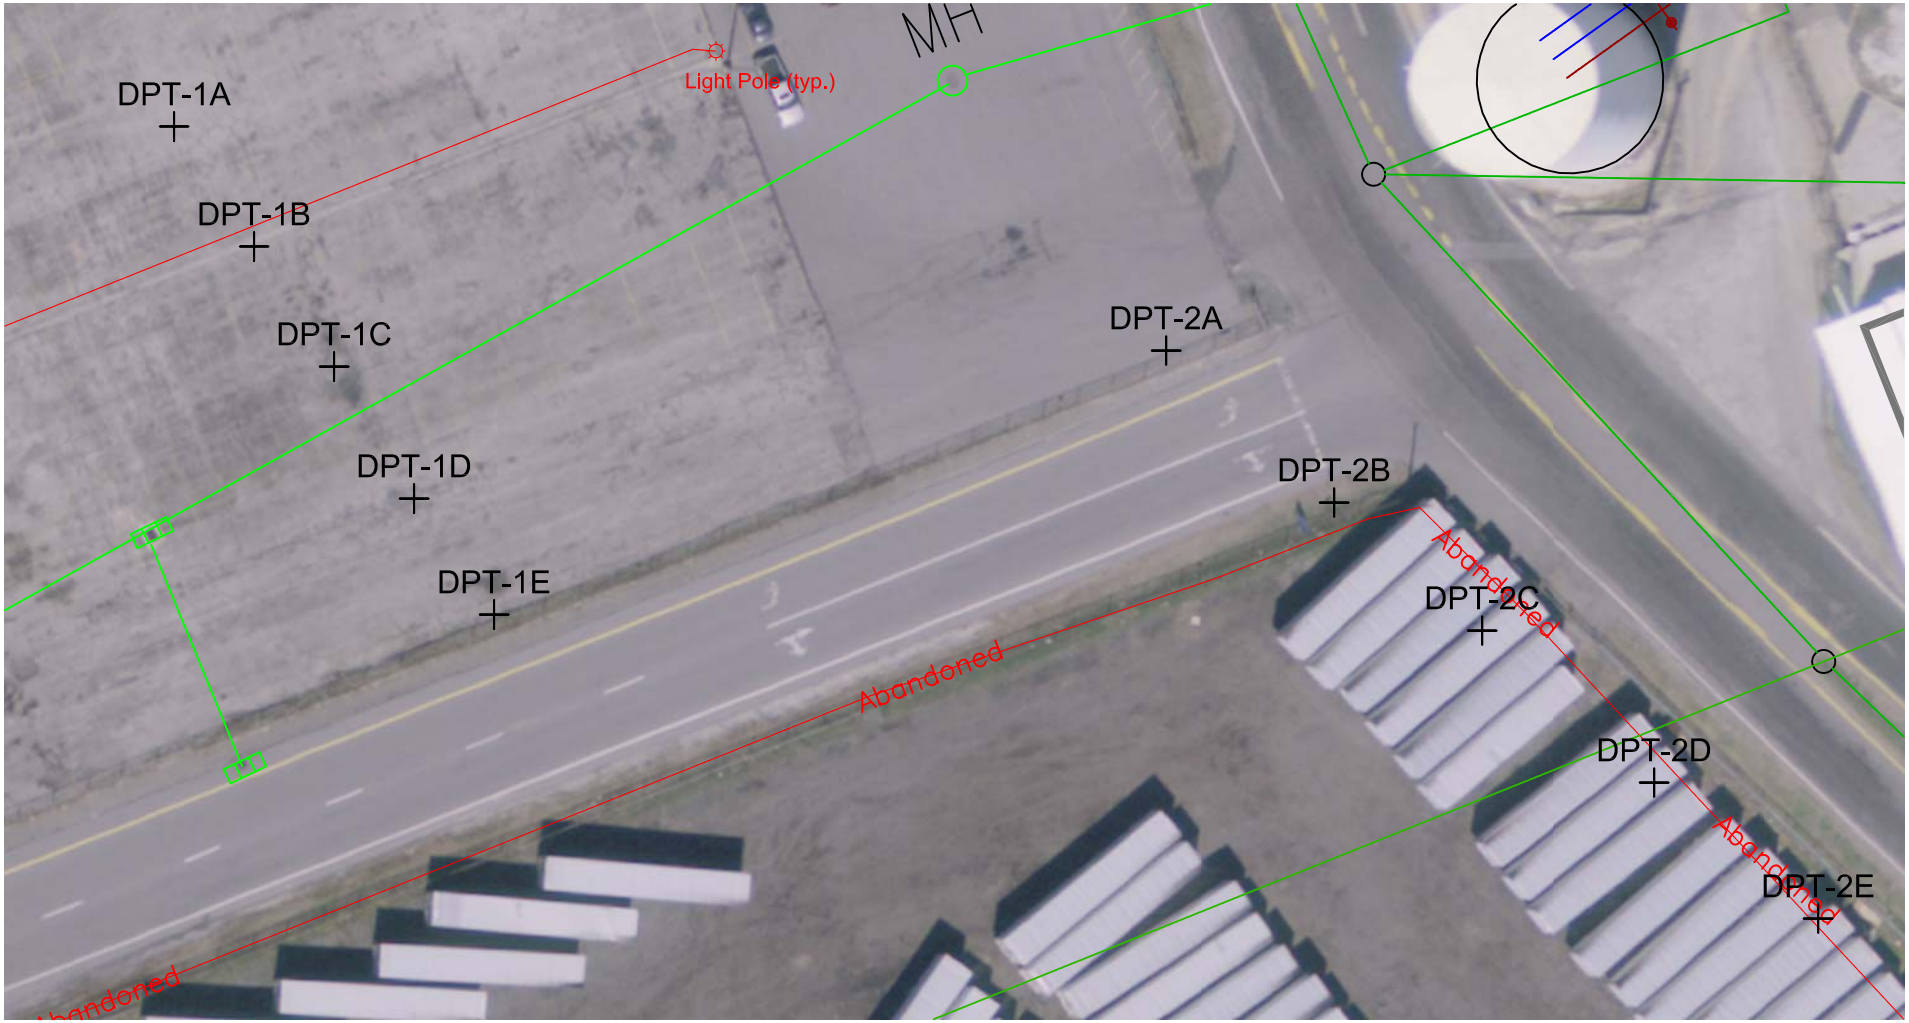
RE: Geophysical Survey
Utility Clearance – Client Designated Areas
Lockheed Martin Corporation
Middle River, MD
Enviroscan Reference Number 081732

Dear Mr. Apanavage:

On August 24, 2017, Enviroscan, Inc. visited the above-referenced site with the purpose of locating underground metallic and non-metallic utilities (i.e. sanitary, storm, gas, telephone, water and electric lines) at client-designated areas (see Figures 1 and 2).

During the survey, each location was scanned with a Radiodetection RD-8000, Radiodetection C.A.T.^{3}, and a GSSI dual frequency ground penetrating radar (GPR) system. Electric lines, signal lines, storm pipes, and unknown utilities were marked on the ground with semi-permanent marking paint. Please note that several underground utilities are shown on Figure 2 where historic maps, provided by the client, show possible utilities at location MRC-MW120A/B. The geophysical survey was unable to detect these underground utilities; however, they are indicated on the figure for cautionary purposes. Extreme caution should be taken at **MRC-MW120A/B**.



The above-referenced geophysical survey was completed using standard and/or routinely accepted practices of the geophysical industry and equipment representing the best available technology. Enviroscan does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen site-specific conditions. However, we make every effort to identify and notify the client of such limitations or conditions. In addition, please note that the completion of this survey does not relieve any party of applicable legal obligations to notify the appropriate One-Call center prior to digging or drilling.

As always, we appreciate this opportunity to have worked with you again. If you have any questions, please do not hesitate to contact me.

Sincerely,
Enviroscan, Inc.

Charles H. Rhine, M.Sc., P.G.
Senior Geophysics Project Manager

RE: Geophysical Survey
Utility Clearance – Ten Client-Designated Areas Inside Maintenance Building
Lockheed Martin Corporation – Middle River Complex
Middle River, MD
Enviroscan Reference Number 091731

Dear Mr. Apanavage:

On September 22, 2017, Enviroscan, Inc. visited the above-referenced site with the purpose of locating underground metallic and non-metallic utilities (i.e. sanitary, storm, gas, telephone, water and electric lines) at ten client-designated proposed soil vapor intrusion point locations inside the building.

During the survey, each location was scanned with a Radiodetection RD-8000, Radiodetection C.A.T.^{3}, a GSSI ground penetrating radar (GPR) system with a dual-frequency 300/800 megaHertz (mHz) scanning antenna, and a higher frequency GSSI HandyScan GPR system with a 1.6 gigaHertz (gHz) scanning antenna. No utilities or other structures were detected beneath any of the ten locations.

The above-referenced geophysical survey was completed using standard and/or routinely accepted practices of the geophysical industry and equipment representing the best available technology. Enviroscan does not accept responsibility for survey limitations due to inherent technological limitations or unforeseen site-specific conditions. However, we make every effort to identify and notify the client of such limitations or conditions. In addition, please note that the completion of this survey does not relieve any party of applicable legal obligations to notify the appropriate One-Call center prior to digging or drilling.

As always, we appreciate this opportunity to have worked with you again. If you have any questions, please do not hesitate to contact me.

Sincerely,
Enviroscan, Inc.

Maxwell E. Griffiths
Project Geophysicist

LOCKHEED MARTIN

Dig Permit

See Enterprise Operations Procedure EO-28, Digging Projects, for instructions.

Date	Project Manager
August 23, 2017	Tom Blackman (Lockheed Martin) Tony Apanavage (Tetra Tech)

Building/Location

Total of 5 monitoring well locations and 10 direct push soil borings west of Building A, and in Lot #2 and Lot #3

Purpose of investigation

Investigate TCE plumes emanating from Building A/Building A basement heading west to Lot 2/3 and Cow Pen Creek.

Company/LM organization performing dig

Tetra Tech overseeing Ground Zero and Cascade Drilling

Planned dig date	Duration	Start time
September 5, 2017 to September 22, 2017.	Total of 18 days	0700
Expected depth	**Width**	**Length**
Depth up to approximately 50 feet	Approximately 3-6 inches	N/A

Underground utilities identified?	Overhead utilities?	Electrical lines?	Gas lines?
☒ Yes ☐ No	☒ Yes ☐ No ☐ N/A	☒ Yes ☐ No	☐ Yes ☒ No
Sewer?	**Water?**	**Telecommunications?**	**Other? Specify: Storm drain**
☒ Yes ☐ No	☒ Yes ☐ No	☒ Yes ☐ No ☐ N/A	☒ Yes ☐ No

Site-specific or customer utility locating requirements completed?

☒ Yes ☐ No ☐ N/A

Sketch of dig project (or attach drawing)

See Attached

A private utility locating contractor (Enviroscan) will be used to mark subsurface utilities on August 24, 2017.

Miss Utility Ticket # TBD.

LOCKHEED MARTIN

Risk Handling Checklist

Project Manager: Use this checklist to develop risk handling plans before the dig starts. You must also review Enterprise Operations Procedure EO-28, Digging Projects.

General Questions	☒	What Lockheed Martin processes could be affected by the dig? **No Lockheed Martin processes or operations are expected to be impacted, work areas will be localized and coned off to allow traffic to get by. Tetra Tech will work with Lockheed Martin and their tenants to minimize potential impacts.**
	☒	What are the safety hazards? **Utilities, slips/trips/falls, vehicle traffic, drill rig safety, pinch points**
	☒	What could fail? **Drill rig components**
	☒	How could it fail? **A component of the drill rig could potentially fail. An inspection of the equipment will be conducted daily to ensure proper working condition. Each drill rig shall have an operating emergency stop button.**
	☒	Does the area need to be returned to its normal state when the work is complete? **Yes, each boring will be properly abandoned, brought back to grade and surface completed to match the surrounding area or with a flush mount well casing.**
	☐	How could the dig affect operations/test/production? **No operations will be affected**
	☐	Have potential risks been addressed with area management? **No risks identified**
	☒	Am I comfortable with any risk handling plans, understanding the potential impact? **YES**
Traffic Control	☒	Ensure proper signage and communication. **Proper signage, traffic cones etc... will be placed to safely divert traffic around the work area.**
	☒	Coordinate road or access closures through Industrial Security before starting the dig. **LMCPI, Security, EMCOR and the site tenant leads will be notified of the field schedule.**
	☒	Ensure the work area is isolated from foot traffic by placing barriers and warning lights as required by EO-28.
	☒	Ensure that vehicle traffic will be safe. **Use of traffic cones, barriers and/or caution tape**
	☐	Ensure that product transport will be safe. **N/A**
Excavation	☒	Review facility drawings to identify utilities. Research old drawings as necessary. **Available site engineering and utility maps**
	☒	Discuss the project with Facility Engineering/Maintenance staff that may have unique knowledge about the construction area not documented in facility drawings.
	☒	Process form EO-28-1, Dig Permit. Use this opportunity to explain the process and relate expectations to the contractor/LM organization that will perform the dig.
	☒	Have LM Telecommunications and the local utility identification service locate and mark utilities/underground obstacles.
	☒	Coordinate with other ongoing projects in the affected area. **Will coordinate with nearby sediment removal action project**
	☐	Make every effort not to excavate around live utilities in service. Schedule an outage in advance or have Maintenance temporarily shut down and isolate the utilities while excavating. **Underground utilities marked by Miss Utility and private utility locating service, borings will be offset if required based on utility mark out**
	☐	If live utilities cannot be shut down while excavating, know where to isolate or shut them down if they are damaged while excavating.**N/A**
	☐	Have a spotter(s) work with the equipment operator. Hand dig when necessary. **N/A**
	☐	Excavate along the side of the utility; not on top. **N/A**
	☐	Weather may affect the dig. Ensure water pipes are protected during freezing weather, especially if the trench will be left open over night. Rain may cause the side of the trench to slough, which can undermine and break pipes/conduit. **N/A**
	☐	Ensure care when moving trench boxes in and out of trenches so pipes/conduit aren't damaged by the boxes. **N/A**
	☒	Ensure surface drainage is controlled so that water doesn't get into the excavation and undermine soil supporting utilities.
	☒	Ensure stocked material is kept far enough back (minimum 2 feet) so that material and rocks don't fall on utilities in the open hole. **Well materials will be staged in Lot D away from the drilling locations.**
	☒	Ensure backfilling is done carefully: Re-bed utilities with proper material, filling all voids below. Keep inappropriate material from falling on or being placed in the trench. Be careful when compacting backfill in the two feet directly above the utility. **Borings will be abandoned with bentonite and surface completed appropriately**
	☐	Keeps the as-built utility drawing in the field while the excavation site is open. Take pictures if possible (horizontal alignment and elevations), if known utilities deviate from facility drawings or if utilities are found that are not on facility drawings. Give the modified as-built drawings to the Building/Facility Manager, who will update the drawing database. **Field geologist will maintain site maps onsite and photographs will be taken to document all phases of the project**
	☒	Ensure that the equipment operator digs slowly and remains in control. **Drill rig will be operated by Maryland licensed well driller**
Personal	☐	Ensure that trenching and shoring methods comply with the applicable OSHA regulations and are overseen by a "Competent Person," as defined in those regulations. **N/A**
	☒	Regularly inspect methods to prevent violations.

☐ Ensure LM employees do not dig or enter any excavation that is more than four feet deep. **N/A**	
Project Manager signature indicating completion of checklist review Anthony  Apanavage	Date August 23, 2017

Project No.: 112IC08102

Sample ID No.: SB-121B-30.5-32.5'	Sampled By: W. ONEIL
Sample Location: Middle River, MD	Sample Date: 09/06/17
QA/QC Duplicate ID: N/A	MS/MSD Collected: YES (NO)

MATRIX / CONCENTRATION:

[ ] Surface Soil
[ ] Subsurface Soil
[X] Sediment
[ ] Low Concentration
[ ] High Concentration

GRAB SAMPLE DATA:

Time: 1315
Method: Rotosonic
Monitor Reading (ppm): 1.4

Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)
30.5'-32.5'	10YR7/8	silty sand

MULTIPLE / COMPOSITE SAMPLE DATA:

Method:
PID Readings (Range in ppm):

Sample ID	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)

SAMPLE COLLECTION INFORMATION:

Analysis	Method	Preservative	Number	Vol. oz	Bottle Type	Collected
VOCs	8260C	4°C	1	4	clear glass	✓
SVOCs incl. 1,4-dioxane	8270D SIM	1'	1	4	1'	✓

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Waste Characterization Block I

Report Number: 240-85941-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 10/4/2017 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Sample WC-IS-100317 (240-85941-2) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The sample was prepared and analyzed on 10/11/2017.

Carbon disulfide was detected in method blank MB 240-298471/8 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) associated with batch 240-298471 recovered above the upper control limit for: Carbon disulfide and 2-Chloroethyl vinyl ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples TB-100317 (240-85941-1) and WC-IW-100317 (240-85941-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 10/12/2017.

Hexachlorobutadiene was detected in method blank MB 240-298687/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) analyzed in batch 240-298687 was outside the method criteria for 1,1,2-Trichloro-1,2,2-trifluoroethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

The following samples were received preserved with hydrochloric acid: TB-100317 (240-85941-1) and WC-IW-100317 (240-85941-3).

The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)
Sample WC-IS-100317 (240-85941-2) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The sample was prepared on 10/05/2017 and analyzed on 10/06/2017.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: WC-IS-100317 (240-85941-2), (240-85941-C-2-B MS) and (240-85941-C-2-C MSD). Reagents: 3261309, 3154251 and 3277006.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)
Sample WC-IW-100317 (240-85941-3) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The sample was prepared on 10/05/2017 and analyzed on 10/07/2017.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)
Samples WC-IS-100317 (240-85941-2) and WC-IW-100317 (240-85941-3) were analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The samples were leached on 10/05/2017 and 10/12/2017, prepared on 10/06/2017 and 10/13/2017 and analyzed on 10/09/2017 and 10/17/2017.

Barium, Chromium and Selenium were detected in method blank LB 240-297819/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Arsenic, Chromium and Selenium were detected in method blank LB 240-298849/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY
Samples WC-IS-100317 (240-85941-2) and WC-IW-100317 (240-85941-3) were analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 10/05/2017 and 10/12/2017, prepared on 10/06/2017 and 10/13/2017 and analyzed on 10/06/2017 and 10/17/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

FLASHPOINT
Sample WC-IS-100317 (240-85941-2) was analyzed for flashpoint in accordance with EPA SW-846 Method 1010. The sample was analyzed on 10/05/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

FLASHPOINT
Sample WC-IW-100317 (240-85941-3) was analyzed for flashpoint in accordance with EPA SW-846 Method 1010. The sample was analyzed on 10/12/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Sample WC-IS-100317 (240-85941-2) was analyzed for percent solids in accordance with ASTM Method D2216-80. The sample was analyzed on 10/05/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

MB 240-297693/10-A	Method Blank	78	102

Surrogate Legend

TCX = Tetrachloro-m-xylene
DCB = DCB Decachlorobiphenyl

Surrogate Summary

Client: Tetra Tech, Inc.
Project/Site: MRC Waste Characterization Block I

TestAmerica Job ID: 240-85941-1

Method: 8082A - Polychlorinated Biphenyls (PCBs) by Gas Chromatography

Matrix: Water **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)	
		TCX1	DCB1
Lab Sample ID	Client Sample ID	(21-120)	(10-120)
240-85941-3	WC-IW-100317	50	20
240-85882-AU-1-A MSD	Matrix Spike Duplicate	59	38
240-85882-BB-1-A MS	Matrix Spike	60	34
LCS 240-297775/22-A	Lab Control Sample	60	69
MB 240-297775/21-A	Method Blank	58	73

Surrogate Legend

TCX = Tetrachloro-m-xylene

DCB = DCB Decachlorobiphenyl

Method: 8260C - Volatile Organic Compounds by GC/MS

Lab Sample ID: MB 240-298471/8
Matrix: Solid
Analysis Batch: 298471

Client Sample ID: Method Blank
Prep Type: Total/NA

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ACCREDITED
ISO Guide 34 Accredited
Reference Material Producer
Certificate #3222.01

ilac-MRA

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 32000 **Lot No.:** A0125833

Description : Pesticide Surrogate Mix

Pesticide Surrogate Mix 200 µg/mL, Acetone, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : June 30, 2023 **Storage:** 10°C or colder

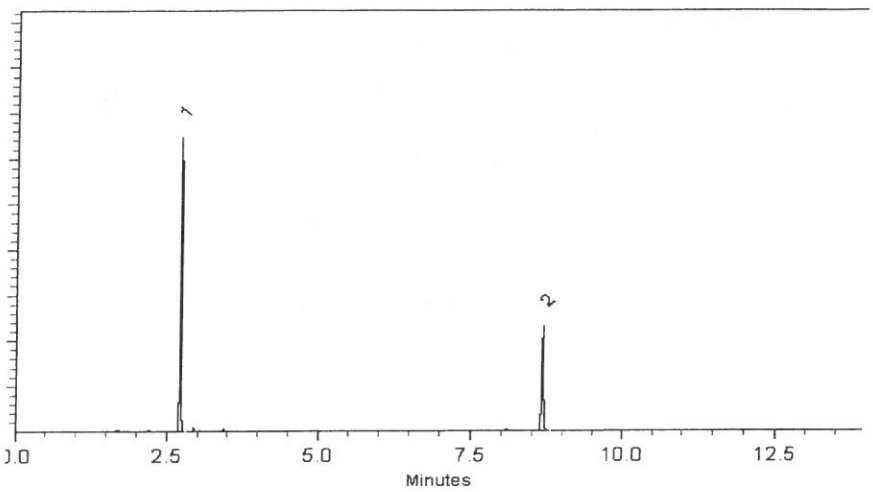
Handling: Contains PCBs - sonicate prior to use.

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)		
1	2,4,5,6-Tetrachloro-m-xylene	201.5 µg/mL	+/- 1.1742	µg/mL	Gravimetric
	CAS # 877-09-8 (Lot 0052481)		+/- 6.3844	µg/mL	Unstressed
	Purity 98%		+/- 8.3410	µg/mL	Stressed
2	Decachlorobiphenyl (BZ# 209)	201.9 µg/mL	+/- 1.1766	µg/mL	Gravimetric
	CAS # 2051-24-3 (Lot ER071509-01)		+/- 6.3975	µg/mL	Unstressed
	Purity 99%		+/- 8.3581	µg/mL	Stressed

Solvent: Acetone
CAS # 67-64-1
Purity 99%

Column:
30m x .25mm x .2um
Rtx-CLP II (cat.# 11323)



Carrier Gas:
helium-constant pressure 20 psi.

Temp. Program:
200°C to 300°C
@ 25°C/min. (hold 10 min.)

Inj. Temp:
250°C

Det. Temp:
300°C

Det. Type:
ECD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Matt Fragassi - Mix Technician

Date Mixed: 15-Mar-2017 **Balance:** B345965662

Diane Shaffer - Operations Tech-ARM QC

Date Passed: 17-Mar-2017

Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Catalog No. : 32279 **Lot No.:** A0124315

Description : 1-Bromo-2-nitrobenzene Standard

1-Bromo-2-nitrobenzene Standard 1000 µg/mL, Acetone, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

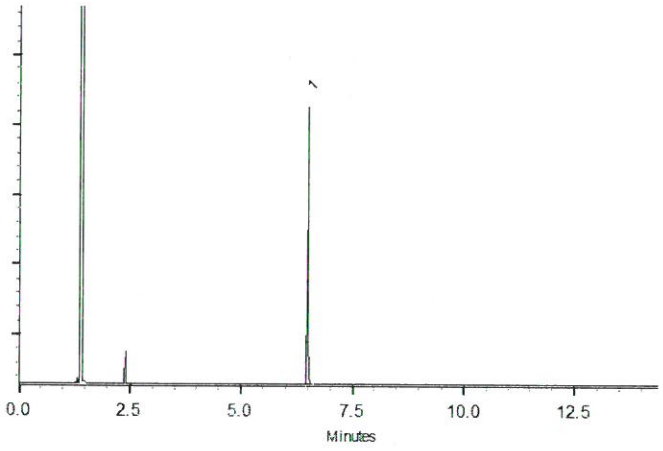
Expiration Date : April 30, 2020 **Storage:** 10°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)		
1	1-Bromo-2-nitrobenzene	1,006.0 µg/mL	+/- 5.9753	µg/mL	Gravimetric
	CAS # 577-19-5 (Lot 643872/1)		+/- 56.4187	µg/mL	Unstressed
	Purity 99%		+/- 57.7382	µg/mL	Stressed

Solvent: Acetone
CAS # 67-64-1
Purity 99%

Column:
30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)



Carrier Gas:
hydrogen-constant pressure 10 psi.

Temp. Program:
75°C (hold 1 min.) to 330°C
@ 20°C/min. (hold 10 min.)

Inj. Temp:
250°C

Det. Temp:
330°C

Det. Type:
FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Certificate of Analysis

Product Description:

Mercury

Product Number:	**S1-Hg-10xVol**
Lot Number:	**1712311**
Matrix:	5% (v/v) HNO_3

Certified Value:

Element	(µg/mL)	SRM ID	SRM Lot#
Mercury	10.0 ± 0.2	3133	061204

The Certified value is based on gravimetric and volumetric preparation, and verified against NIST SRM 3100 series when available via inductively coupled plasma optical emission spectrometry (ICP-OES) and/or inductively coupled plasma mass spectrometry (ICP-MS) using an internal laboratory-developed method. The uncertainty in the certified value is calculated for a 95% confidence interval and coverage factor *k* is about 2.

* Refer to Traceability Information, Section d

Packaging and Storage Conditions:

The standard is packaged in a pre-cleaned polyethylene bottle. To maintain the integrity of this product, the solution should be kept tightly capped and stored under normal laboratory conditions.

Expiration Information:

The expiry date is guaranteed to be valid for twelve months from the shipping date provided and is guaranteed through the month of expiration. For this reason, standards from the same lot may have different expiration dates.

Shipped Date: **June 2017**
Expiration Date: **June 2018**
Certificate Issue Date: **May 9, 2017**

Robert Howard, Product Manager-Standard Solutions

7277 World Communications Dr. | Omaha, NE 68122 USA | Phone: +1.402.991.7800 | Fax: +1.402.991.7799
Email: esi@icpms.com | Web: www.icpms.com

Preparation Information:

This standard is prepared using **99.9998%** pure **mercury metal** which was purchased from a qualified vendor per ISO 9001:2008 guidelines and assayed by analytical methods for conformity prior to use. This standard was manufactured under appropriate laboratory conditions using the methods developed at NIST for SRM Spectrometric Standard Solutions. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water.

Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. This testing includes, but is not limited to, the effect of temperature and packaging on the product.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

a. **Standard Weight and Analytical Balance**
   The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in "NIST Weights and Measures Measurement Assurance Program" with a certificate of measurement traceability to NIST primary standards.
   The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.

b. **Volumetric Device**
   The calibration of volumetric vessels is checked annually using the ASTM method E542.

c. **Thermometer**
   The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.

d. **Calibration Standards:**
   The Calibration Standard is traceable to SRM 3100 Series Spectrometric Standard Solutions. If an SRM is not availabe, a second source standard or independent lot is used.

Refer to Safety Datasheet (SDS) for hazardous information.

Accreditation:

This product has been manufactured by an ISO 9001:2008 registered and ISO/IEC 17025:2005 and ISO Guide 34:2009 accredited laboratory.

NOTICE: HPS products are intended for laboratory use only. All products should be handled and used by trained professional personnel. The responsibility for the safe handling and use of these products rests solely with the buyer and/or user. The data and information as stated was furnished by the manufacturer of the product. The information provided in this certificate pertains only to the lot number specified. None of the information provided in this certificate may be used, reproduced or transmitted in any form or by any means without written approval from High-Purity Standards.

Section 1. Product and Company Identification

Product Identification:	10 µg/mL Mercury in 5% HNO_3
SDS Number:	S1-Hg-10xVol
Recommended Use:	For Laboratory Use.
Company Identification:	High-Purity Standards P.O. Box 41727 Charleston, SC 29423 Telephone: (843) 767-7900 FAX: (843) 767-7906

In case of emergency call INFOTRAC: 800-535-5053

Section 2. Hazard Identification

Classification:
Skin Corrosion/Irritation, Category 1B
Serious Eye Damage/ Eye Irritation, Category 1
Labeling:

Symbol:
Signal Word: Danger.
Hazard Statement: Causes severe skin burns and eye damage. Causes serious eye damage.
Precautionary Statement: Wear protective gloves/clothing and eye/face protection. Wash thoroughly after handling.

Section 3. Composition

Component	CAS/EINECS Registry #	Percent Concentration
Mercury	7439-97-6/231-106-7	0.001
Nitric Acid	7697-37-2/ 231-714-2	5
Water, deionized	7732-18-5/ 231-791-2	Balance

Section 4. First Aid Measures

IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower. Wash contaminated clothing before reuse. Call a physician if irritation develops.

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/physician.

IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.

IF INHALED: Remove to fresh air and keep at rest in a position comfortable for breathing.

IF exposed or concerned: Get medical attention/advice.

Target Organs: Eyes, skin, respiratory system. Increases risk of lung, liver, kidney, and bladder cancer with prolonged exposure.

Section 5. Fire Fighting Measures

Fire & Explosion hazards: While nitric acid is not combustible, it is a strong oxidizing agent that can react with combustible materials; however, it is present in limited quantities in this solution. NO_x compounds can be released in case of fire.

Extinguishing Media: Use any extinguishing media that is suitable for the surrounding area. Use a water spray to dilute nitric acid and to absorb liberated nitrogen oxides.

Specific Methods: Firefighters should wear proper protective equipment and self-contained breathing apparatus with full face piece operated in positive pressure mode.

Section 6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Do not allow to enter drainage systems or water ways. Dike area and dilute spill with water and neutralize with soda ash, limestone, etc. Place the neutralized material into containers suitable for eventual disposal, reclamation, or destruction. Always dispose of in accordance with local regulations.

Section 7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Keep out of direct sunlight and away from heat, water, and incompatible materials. When diluting, the acid should always be added slowly to water and in small amounts. Refer to Section 8 for personal handling instructions.

Section 8. Exposure Controls and Personal Protection

Engineering Controls: Provide exhaust ventilation or other engineering controls to keep any buildup of airborne contaminants below their respective threshold limit value. Ensure the availability of eyewash stations and safety showers.

Respiratory Protection: Provide approved respiratory apparatus for non-routine or emergency use. Use an approved vapor respirator when the vapor or mist concentrations are high. If necessary, refer to the NIOSH document Guide to the Selection and Use of Particulate Respirators Certified under 42 CFR 84 for selection and use of respirators certified by NIOSH.

Personal Protection: Wear proper gloves, safety glasses with side shields, lab coat/apron.

Exposure Limits:

Component	ACGIH TLV	OSHA PEL
Mercury	0.05 mg/m^3	0.025 mg/m^3
Nitric Acid	2 mg/kg	5 mg/m^3

Section 9. Physical and Chemical Properties

Physical State: Liquid
Color: Clear, colorless liquid
Odor: Odorless to a faint pungent odor
Odor threshold: None
pH: <2
Melting point: N/A
Freezing Point: N/A
Boiling Point: Approximately 100°C
Flash point: N/A

Evaporation rate: N/A
Flammability: N/A
Explosion limits: N/A
Vapor Pressure (mm): N/A
Vapor Density (air+1): N/A
Relative density: (H_2O = 1): Approximately 1.0
Solubility in H_2O: Complete
Auto ignition temperature: N/A
Decomposition temperature: N/A
Molecular Weight: 200.59 (Hg)

Section 10. Stability and Reactivity

Stability Indicator: YES
Conditions to Avoid: Metals, chlorine, organic materials, strong alkali, cyanides, heat.
Incompatibles: Strong reducing agents.
Hazardous Decomposition Products: NO_x compounds including nitric oxide (NO), nitrogen dioxide (NO_2), nitrous oxide (N_2O) and nitric acid mist or vapor.
Hazardous Polymerization: Will not occur.

Section 11. Toxicological Information

May affect skin, mucous membranes and eyes. Swallowing may lead to a negative effect on mouth and throat and to the risk of perforation or the corrosion of esophagus and stomach. Mercury is investigated as a tumorigen, mutagen, reproductive effector.
RTECS#
HNO_3; QU5775000
Hg; OV4550000

LD_{LO} Oral, Human: (Nitric Acid) 430 mg/kg.
TC_{LO} Inhalation, Rat: (Mercury) 1 mg/m^3/24hrs/5wks continuous.

Section 12. Ecological Information

Ecotoxicological information: Do not allow material to reach ground water, water bodies, or sewage system. Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Section 13. Disposal Considerations

General: Follow Federal, state and local regulations for waste.

Section 14. Transport Information

D.O.T. Classification: Hazardous by IATA and 49CFR regulations (based on concentration of acid).
D.O.T. Shipping Name: Corrosive liquid, Acidic, Inorganic, n.o.s. (Nitric Acid Solution)
D.O.T. Hazard Class: 8
U.N./N.A. Number: 3264
Packing Group: II
D.O.T. Label: Corrosive (8)

Section 15. Regulations (Not meant to be all inclusive-selected regulation listed)

TSCA Status: Components of this solution are listed on the TSCA Inventory.
RCRA Status: Yes (Mercury–U151)
SARA: Subject to the reporting requirements of Section 313 of SARA Title III and of 40 CFR 372
Risk Phrases: R20/21/22 Harmful by inhalation, skin contact, or if swallowed.
Safety Phrases: S36/37/39 Wear suitable protective clothing, gloves and eye/face protection
WHMIS Information (Canada): E: Corrosive

Section 16. Other Information

HPS products are intended for laboratory use only. All products should be handled and used by trained professional personnel only. The responsibility for the safe handling and use of these products rests solely with the buyer and/or user. The SDS was prepared carefully and represents the best data currently available to us; however, HPS does not certify the data on the SDS. Certified values for this material are given only on the Certificate of Analysis.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two Methods

Certified Value, $X_{CRM/RM}$, where two methods of characterization are used is the weighted mean of the two results:

$X_{CRM/RM} = [(w_a)(X_a) + (w_b)(X_b)]$

X_a = mean of Assay Method A with standard uncertainty $u_{char\ a}$

X_b = mean of Assay Method B with standard uncertainty $u_{char\ b}$

w_a and w_b = the weighting factors for each method calculated using the inverse square of the variance:

$w_a = (1/u_{char\ a})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

$w_b = (1/u_{char\ b})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a\&b} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a\&b} = [(w_a)^2\,(u_{char\ a})^2 + (w_b)^2\,(u_{char\ b})^2]^{1/2}$ where $u_{char\ a}$ and $u_{char\ b}$ are the square root of the sum of the squares of errors from characterization which include instrument measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM}$ = mean of Assay Method A with standard uncertainty $u_{char\ a}$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a}$ = square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag keep cap tightly sealed when not in use. Store and use at 20° ± 4° C. Do not pippette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 10CFR50 Appendix B - Nuclear Regulatory Commission

- Domestic Licensing of Production and Utilization Facilities

10.2 10CFR21 - Nuclear Regulatory Commission

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

May 05, 2017

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **May 05, 2020**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: 9-12-17 ICP

- This CRM/RM should not be used longer than one year from the date of removal from the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being handled and stored in accordance with the instructions given in Sec 7.1.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two Methods

Certified Value, $X_{CRM/RM}$, where two methods of characterization are used is the weighted mean of the two results:

$X_{CRM/RM} = [(w_a)(X_a) + (w_b)(X_b)]$

X_a = mean of Assay Method A with standard uncertainty $u_{char\ a}$

X_b = mean of Assay Method B with standard uncertainty $u_{char\ b}$

w_a and w_b = the weighting factors for each method calculated using the inverse square of the variance:

$w_a = (1/u_{char\ a})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

$w_b = (1/u_{char\ b})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a\&b} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a\&b} = [(w_a)^2 (u_{char\ a})^2 + (w_b)^2 (u_{char\ b})^2]^{1/2}$ where $u_{char\ a}$ and $u_{char\ b}$ are the square root of the sum of the squares of errors from characterization which include instrument measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM}$ = mean of Assay Method A with standard uncertainty $u_{char\ a}$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a}$ = square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

11.1 Certification Issue Date

November 18, 2016

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **November 18, 2019**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: 12/8/16

- This CRM/RM should not be used longer than one year from the date of removal from the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being handled and stored in accordance with the instructions given in Sec 7.1.

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (QSR Certificate Number QSR-1034).

ACCREDITED Testing Laboratory Certificate 883.01 ACCREDITED Reference Material Producer Certificate 883.02

2.0 PRODUCT DESCRIPTION

Product Code:	Multi Analyte Custom Grade Solution
Catalog Number:	TA-ICSAB2
Lot Number:	K2-MEB653539
Matrix:	5% (v/v) HNO3 tr. HF
Value / Analyte(s):	100 000 µg/L ea: Silicon, 10 000 µg/L ea: Silver, Molybdenum, Antimony, 5 000 µg/L ea: Tin, Titanium

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ANALYTE	CERTIFIED VALUE	ANALYTE	CERTIFIED VALUE
Antimony, Sb	10 000.0 ± 70.0 µg/L	Molybdenum, Mo	10 000.0 ± 60.0 µg/L
Silicon, Si	100 000.00 ± 600.00 µg/L	Silver, Ag	10 000.0 ± 70.0 µg/L
Tin, Sn	5 000 ± 38 µg/L	Titanium, Ti	5 000 ± 29 µg/L

Certified Density: 1.025 g/mL (measured at 20 ± 1 °C)

Assay Information:

ANALYTE	METHOD	NIST SRM#	SRM LOT#
Ag	ICP Assay	3151	992212
Ag	Volhard	999c	999c
Mo	ICP Assay	3134	130418
Mo	Calculated		See Sec. 4.2
Sb	ICP Assay	3102a	061229 Sb
Sb	Calculated		See Sec. 4.2
Si	ICP Assay	3150	130912
Sn	ICP Assay	3161a	070330
Ti	ICP Assay	3162a	130925
Ti	Calculated		See Sec. 4.2

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two Methods

Certified Value, $X_{CRM/RM}$, where two methods of characterization are used is the weighted mean of the two results:

$X_{CRM/RM} = [(w_a)(X_a) + (w_b)(X_b)]$

X_a = mean of Assay Method A with standard uncertainty $u_{char\ a}$

X_b = mean of Assay Method B with standard uncertainty $u_{char\ b}$

w_a and w_b = the weighting factors for each method calculated using the inverse square of the variance:

$w_a = (1/u_{char\ a})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

$w_b = (1/u_{char\ b})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a\&b} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a\&b} = [(w_a)^2 (u_{char\ a})^2 + (w_b)^2 (u_{char\ b})^2]^{1/2}$ where $u_{char\ a}$ and $u_{char\ b}$ are the square root of the sum of the squares of errors from characterization which include instrument measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM}$ = mean of Assay Method A with standard uncertainty $u_{char\ a}$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a}$ = square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag keep cap tightly sealed when not in use. Store and use at 20° ± 4° C. Do not pippette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

HF Note: This standard should not be prepared or stored in glass.

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 10CFR50 Appendix B - Nuclear Regulatory Commission

- Domestic Licensing of Production and Utilization Facilities

10.2 10CFR21 - Nuclear Regulatory Commission

- Reporting defects and Non-Compliance

10.3 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.4 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.5 ISO Guide 34 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

November 18, 2016

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **November 18, 2019**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: 12/8/16

- This CRM/RM should not be used longer than one year from the date of removal from the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being handled and stored in accordance with the instructions given in Sec 7.1.

Certificate of Analysis

Certified Reference Material

ISO Guide 34:2009 (RMP) Accreditation Certificate Number AR-1436

ISO/IEC 17025:2005 Accreditation Certificate Number AT-1529

Product Description:

Name:	ICP Spike 1
Part Number:	**SM-606-101 Solution A**
Lot Number:	**1717742**
Matrix:	5% HNO_3
Purity:	99.5% - 99.9999%

Certified Values:

Element	(µg/mL)	SRM ID	SRM Lot#	Element	(µg/mL)	SRM ID	SRM Lot#
Al	2000 ± 20	3101a	140903	Fe	1000 ± 6	3126a	140812
As	2000 ± 20	3103a	100818	Pb	500 ± 5	3128	101026
Ba	2000 ± 12	3104a	140909	Mn	500 ± 8	3132	050429
Be	50.0 ± 0.5	3105a	090514	Ni	500 ± 3	3136	120619
B	1000 ± 10	3107	110830	Se	2000 ± 20	3149	100901
Cd	50.0 ± 0.3	3108	130116	Tl	2000 ± 10	*	
Cr	200 ± 1	3112a	030730	V	500 ± 3	*	
Co	500 ± 3	3113	000630	Zn	500 ± 3	3168a	120629
Cu	250.0 ± 1.5	3114	121207				

Certified values are based on gravimetric and volumetric preparation, and verified against NIST SRM 3100 series when available via inductively coupled plasma optical emission spectrometry (ICP-OES) and/or inductively coupled plasma mass spectrometry (ICP-MS) using an internal laboratory-developed method. The uncertainty in the certified value is calculated for a 95% confidence interval and coverage factor *k* is about 2.

* Refer to Traceability Information, Section d

Packaging and Storage Conditions:

The standard is packaged in a pre-cleaned polyethylene bottle. To maintain the integrity of this product, the solution should be kept tightly capped and stored under normal laboratory conditions.

Expiration Information:

The expiry date is guaranteed to be valid for twelve months from the shipping date provided and is guaranteed through the month of expiration. For this reason, standards from the same lot may have different expiration dates.

Shipped Date: **June 2017**
Expiration Date: **June 2018**
Certificate Issue Date: June 27, 2017

Moven Mututuvari

Moven Mututuvari PhD., Laboratory Manager

Preparation Information:

The Certified Reference Material (CRM) is generally prepared from single element standard solutions that are ISO Guide 34 certified reference materials and manufactured under appropriate laboratory conditions using the methods developed at NIST for SRM Spectrometric Standard Solutions. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water.

Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. This testing includes, but is not limited to, the effect of temperature and packaging on the product. If during the period of validity, a recall is instituted due to substantial changes in the stability of this product, the purchaser will be notified.

Homogeneity:

This product is determined to be homogeneous following in-house procedures developed in accordance with the requirements of ISO Guide 34 and ISO Guide 35.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

a. **Standard Weight and Analytical Balance**
The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in "NIST Weights and Measures Measurement Assurance Program" with a certificate of measurement traceability to NIST primary standards.
The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.

b. **Volumetric Device**
The calibration of volumetric vessels is checked annually using the ASTM method E542.

c. **Thermometer**
The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.

d. **Calibration Standards**
The Calibration Standard is traceable to SRM 3100 Series Spectrometric Standard Solutions. If a SRM is not available, a second source standard or independent lot is used.

Refer to Safety Datasheet (SDS) for hazardous information.

NOTICE: HPS products are intended for laboratory use only. All products should be handled and used by trained professional personnel. The responsibility for the safe handling and use of these products rests solely with the buyer and/or user. The data and information as stated was furnished by the manufacturer of the product. The information provided in this certificate pertains only to the lot number specified. None of the information provided in this certificate may be used, reproduced or transmitted in any form or by any means without written approval from High Purity Standards.

Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. This testing includes, but is not limited to, the effect of temperature and packaging on the product. If during the period of validity, a recall is instituted due to substantial changes in the stability of this product, the purchaser will be notified.

Homogeneity:

This product is determined to be homogeneous following in-house procedures developed in accordance with the requirements of ISO Guide 34 and ISO Guide 35.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

a. **Standard Weight and Analytical Balance**
The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in "NIST Weights and Measures Measurement Assurance Program" with a certificate of measurement traceability to NIST primary standards.
The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.

b. **Volumetric Device**
The calibration of volumetric vessels is checked annually using the ASTM method E542.

c. **Thermometer**
The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.

d. **Calibration Standards**
The Calibration Standard is traceable to SRM 3100 Series Spectrometric Standard Solutions. If a SRM is not available, a second source standard or independent lot is used.

Refer to Safety Datasheet (SDS) for hazardous information.

NOTICE: HPS products are intended for laboratory use only. All products should be handled and used by trained professional personnel. The responsibility for the safe handling and use of these products rests solely with the buyer and/or user. The data and information as stated was furnished by the manufacturer of the product. The information provided in this certificate pertains only to the lot number specified. None of the information provided in this certificate may be used, reproduced or transmitted in any form or by any means without written approval from High Purity Standards.

Certificate of Analysis

ISO/IEC 17025:2005 Accreditation
Certificate Number AT-1529

Product Description:

Part Number:	**SM-606-080**
Lot Number:	**1630101**
Matrix:	2% HNO_3
Purity:	99.998% - 99.9999%

Certified Values:

Element	(mg/L)	SRM ID	SRM Lot#	Element	(mg/L)	SRM ID	SRM Lot#
As	500 ± 5	3103a	100818	Pb	500 ± 3	3128	101026
Ba	5000 ± 30	3104a	140909	Se	100 ± 1	3149	100901
Cd	100.0 ± 0.5	3108	130116	Ag	100.0 ± 0.5	3151	992212
Cr	500 ± 2.5	3112a	030730				

Certified values are based on gravimetric and volumetric preparation, and verified against NIST SRM 3100 series when available via inductively coupled plasma optical emission spectrometry (ICP-OES) and/or inductively coupled plasma mass spectrometry (ICP-MS) using an internal laboratory-developed method. The uncertainty in the certified value is calculated for a 95% confidence interval and coverage factor *k* is about 2.
* Refer to Traceability Information, Section d

Packaging and Storage Conditions:

The standard is packaged in a pre-cleaned polyethylene bottle. To maintain the integrity of this product, the solution should be kept tightly capped and stored under normal laboratory conditions.

Expiration Information:

The expiry date is guaranteed to be valid for twelve months from the shipping date provided. For this reason, standards from the same lot may have different expiration dates.

Preparation Date:	October 27, 2016
Shipped Date:	**October 28, 2016**
Expiration Date:	**October 28, 2017**
Certificate Issue Date:	October 27, 2016

Moven Mutuvari

Moven Mutuvari PhD., Laboratory Manager

Preparation Information:

The standard is generally prepared from single element standard solutions that are ISO Guide 34 certified reference materials and manufactured under appropriate laboratory conditions using the methods developed at NIST for SRM Spectrometric Standard Solutions. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water.

Intended Use:

This product is intended for use as a calibration standard, quality control standard, and/or for the validation of analytical methods.

Traceability Information:

The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties. The maintenance of the base and derived units of International System of Units (SI) with traceability of measurement results (contemporary metrology) to SI ensures their comparability over time as follows.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM by two independent methods | **Characterization of CRM by one method**

Characterization of CRM/RM by Two Methods

Certified Value, $X_{CRM/RM}$, where two methods of characterization are used is the weighted mean of the two results:

$X_{CRM/RM} = [(w_a)(X_a) + (w_b)(X_b)]$

X_a = mean of Assay Method A with standard uncertainty $u_{char\ a}$

X_b = mean of Assay Method B with standard uncertainty $u_{char\ b}$

w_a and w_b = the weighting factors for each method calculated using the inverse square of the variance:

$w_a = (1/u_{char\ a})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

$w_b = (1/u_{char\ b})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a\&b} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a\&b} = [(w_a)^2 (u_{char\ a})^2 + (w_b)^2 (u_{char\ b})^2]^{½}$ where $u_{char\ a}$ and $u_{char\ b}$ are the square root of the sum of the squares of errors from characterization which include instrument measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM}$ = mean of Assay Method A with standard uncertainty $u_{char\ a}$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a}$ = square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag keep cap tightly sealed when not in use. Store and use at 20° ± 4° C. Do not pippette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

HF Note: This standard should not be prepared or stored in glass.

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 10CFR50 Appendix B - Nuclear Regulatory Commission

- Domestic Licensing of Production and Utilization Facilities

10.2 10CFR21 - Nuclear Regulatory Commission

- Reporting defects and Non-Compliance

10.3 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.4 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.5 ISO Guide 34 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

November 16, 2016

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **November 16, 2019**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year from the date of removal from the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being handled and stored in accordance with the instructions given in Sec 7.1.

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number 010105).

ACCREDITED Testing Laboratory Certificate 883.01
ACCREDITED Reference Material Producer Certificate 883.02

2.0 PRODUCT DESCRIPTION

Product Code:	Multi Analyte Custom Grade Solution
Catalog Number:	CLPP-ICS-A
Lot Number:	J2-MEB572053
Matrix:	2% (v/v) HNO3
Value / Analyte(s):	5 000 µg/mL ea: Al, Ca, Mg, 2 000 µg/mL ea: Fe

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ANALYTE	CERTIFIED VALUE	ANALYTE	CERTIFIED VALUE
Aluminum, Al	5 000 ± 25 µg/mL	Calcium, Ca	5 000 ± 23 µg/mL
Iron, Fe	2 000 ± 9 µg/mL	Magnesium, Mg	5 000 ± 23 µg/mL

Certified Density: 1.085 g/mL (measured at 20 ± 1 °C)

Assay Information:

ANALYTE	METHOD	NIST SRM#	SRM LOT#
Al	ICP Assay	3101a	060502
Al	EDTA	928	928
Ca	ICP Assay	3109a	050825
Ca	EDTA	928	928
Fe	ICP Assay	3126a	051031
Fe	EDTA	928	928
Mg	ICP Assay	3131a	050302
Mg	EDTA	928	928

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Certified Value $(\bar{x}) = \frac{\Sigma x_i}{n}$ ($\bar{x}$) = mean; x_i = individual results; n = number of measurements

Uncertainty (±) = $2\,[\,\Sigma(s_i)^2\,]^{1/2}$ 2 = the coverage factor. $[\,\Sigma(s_i)^2\,]^{1/2}$ = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

CRM/RMs are tested for trace metallic impurities by Axial ICP-OES and ICP-MS. The result from the most sensitive method for each element, is reported below. Solutions tested by ICP-MS were analyzed in an ULPA-Filtered Clean Room. An ULPA-FIlter is 99.9985% efficient for the removal of particles down to 0.3 µm.

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag keep cap tightly sealed when not in use. Store and use at 20° ± 4° C. Do not pippette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 10CFR50 Appendix B - Nuclear Regulatory Commission

- Domestic Licensing of Production and Utilization Facilities

10.2 10CFR21 - Nuclear Regulatory Commission

- Reporting defects and Non-Compliance

10.3 ISO 9001 Quality Management System Registration

- SAI Global File Number 010105

10.4 ISO/IEC Guide 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.5 ISO/IEC Guide 34 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

April 02, 2015

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

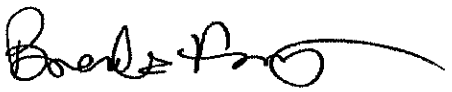
11.2 Lot Expiration Date

- **April 02, 2018**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity



- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year from the date of removal from the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being handled and stored in accordance with the instructions given in Sec 7.1.

Comment:

Catalog No:	Lot No:	Expiration Date:	Matrix:	Description:
G34-4400-090825JC03	1099181	22-May-2018	2% HNO3 + Tr HF	ISO Guide 34 - Z-G34-4400-090825JC03, 100 mL mg/L in 2% HNO_3 + Tr HF

Intended Uses:

This Certified Reference material, CRM, is intended for use as a calibration standard or a quality control standard for Inorganic Speetrometry Equipment such as ICP-OES, ICP-MS, AA, and XRF, It may aslo be used for various USEPA and ASTM methods.

Method of Preparation:

This standard was prepared gravimetrically using balances calibrated with NIST traceable weights (NIST Test Number 822/264157-00). Only calibrated Class A volumetric glassware was used to prepare this standard. Sub-boiled distilled acid and 18 megaohm deionized water were used to stabilize the product. All raw materials were checked for stoichiometry and purity prior to use. This standard has been spectrometrically certified by an independent source, which is directly traceable to NIST.

Packaging and Storage:

The Solution should be kept trightly capped and stored under normal laboratory conditions. Pre-cleaned polyethlene bottles are used to package this material. Special storage information: Ambient

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology (NIST). Balances are checked daily in accordance to in house procedure O2-LB-004. Balances are calibrated annually by an ISO 17025 accredited metrology service.

Homogeneity:

Homogeneity has been established in accordance with internal procedure O2-QS-10 and has a maximum uncertainty of 0.1%. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC Guide 17025:2005 and ISO Guide 34:2009. The homogeneity of this CRM is valid for sample sub-sizes that the end user can quantitatively reproduce.

Calculation of Uncertainty

The following equations are used to calculate the value of the expanded uncertainty:
$U=ku_c$ U=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty
$u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for raw material, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the expiration date listed above.

Accreditation:

This standard was manufactured by an ISO 17025 Chemical Testing Lab (Certificate number 3031.01) and ISO Guide 34 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA). Manufacturer's Quality System audited and registered by NSF-ISR to ISO 9001:2008 (Certificate number IZ391-IS4).

Catalog No:	Lot No:	Expiration Date:	Matrix:	Description:
Z-G34-060047-03-01	1095561	26-Feb-2018	2% HNO_3	ISO Guide 34 - Silver, 100 mL 100 mg/L in 2% HNO_3 (Ag Metal)

Intended Uses:

This Certified Reference material, CRM, is intended for use as a calibration standard or a quality control standard for Inorganic Speetrometry Equipment such as ICP-OES, ICP-MS, AA, and XRF, It may aslo be used for various USEPA and ASTM methods.

Method of Preparation:

This standard was prepared gravimetrically using balances calibrated with NIST traceable weights (NIST Test Number 822/264157-00). Only calibrated Class A volumetric glassware was used to prepare this standard. Sub-boiled distilled acid and 18 megaohm deionized water were used to stabilize the product. All raw materials were checked for stoichiometry and purity prior to use. This standard has been spectrometrically certified by an independent source, which is directly traceable to NIST.

Packaging and Storage:

The Solution should be kept trightly capped and stored under normal laboratory conditions. Pre-cleaned polyethlene bottles are used to package this material. Special storage information: Ambient

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology (NIST). Balances are checked daily in accordance to in house procedure O2-LB-004. Balances are calibrated annually by an ISO 17025 accredited metrology service.

Homogeneity:

Homogeneity has been established in accordance with internal procedure O2-QS-10 and has a maximum uncertainty of 0.1%. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC Guide 17025:2005 and ISO Guide 34:2009. The homogeneity of this CRM is valid for sample sub-sizes that the end user can quantitatively reproduce.

Hazardous information:

Catalog No:	Lot No:	Expiration Date:	Matrix:	Description:
Z-G34-060047-03-01	1095561	26-Feb-2018	2% HNO_3	ISO Guide 34 - Silver, 100 mL 100 mg/L in 2% HNO_3 (Ag Metal)

Calculation of Uncertainty

The following equations are used to calculate the value of the expanded uncertainty:
$U=ku_c$ U=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty
$u_c=\sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for raw material, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the expiration date listed above.

Accreditation:

This standard was manufactured by an ISO 17025 Chemical Testing Lab (Certificate number 3031.01) and ISO Guide 34 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA). Manufacturer's Quality System audited and registered by NSF-ISR to ISO 9001:2008 (Certificate number IZ391-IS4).

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Aroclor 1254 Solution

Product Number: EPA-1352 **Page:** 1 of 1

Lot Number: CK-3221 **Lot Issue Date:** 26-Sep-2013 **Expiration Date:** 31-Oct-2021

This certified Reference Material (RM) was manufactured and verified in accordance with ULTRA's ISO 9001 registered quality system, and the analyte concentrations were verified by our ISO 17025 accredited laboratory. The true value and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	True Value
Aroclor 1254	011097-69-1	RM00922	1002 ± 5 µg/mL

Matrix: isooctane (2,2,4-trimethylpentane)

Storage: Store at Room Temperature (15-30°C)

Rec 9/24/14 @

ULTRA uses balances calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z-540-1 and ISO 9001, and calibrated Class A glassware in the manufacturing of these standards.

Description : 8260 List 1 / Std #6 Vinyl Acetate (2015)

8260 List 1 / Std #6 Vinyl Acetate (2015) 5000 ug/ml, P&T Methanol, 1 ml/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : September 30, 2017 **Storage:** 0°C or colder

Handling: This product is photosensitive.

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Vinyl acetate	5,013.5 µg/mL	+/- 29.3551 µg/mL	Gravimetric
	CAS # 108-05-4 (Lot STBD7333V)		+/- 302.5066 µg/mL	Unstressed
	Purity 99%		+/- 303.2247 µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:
Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569724 **Lot No.:** A0128793

Description : 8260 List 1 / Std #6 Vinyl Acetate (2015)

8260 List 1 / Std #6 Vinyl Acetate (2015) 5000 ug/ml, P&T Methanol, 1 ml/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : December 31, 2017 **Storage:** 0°C or colder

Handling: This product is photosensitive.

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)		
1	Vinyl acetate	5,003.0 µg/mL	+/- 29.2937	µg/mL	Gravimetric
	CAS # 108-05-4 (Lot STBD7333V)		+/- 301.8731	µg/mL	Unstressed
	Purity 99%		+/- 302.5897	µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

ilac-MRA

ACCREDITED
ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 571992 **Lot No.:** A0123711

Description : 8260 List 1 / Std #1 MegaMix (2017)

8260 List 1 / Std #1 MegaMix (2017) 1250-62500 µg/ml, P&T Methanol, 1 ml/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : December 31, 2018 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Diethyl ether (ethyl ether) **CAS #** 60-29-7 (Lot SHBG1462V) **Purity** 99%	2,501.3 µg/mL	+/- 14.5425 µg/mL +/- 150.9115 µg/mL +/- 151.2698 µg/mL	Gravimetric Unstressed Stressed
2	1,1,2-Trichlorotrifluoroethane (CFC-113) **CAS #** 76-13-1 (Lot 00009482) **Purity** 99%	2,505.1 µg/mL	+/- 14.5650 µg/mL +/- 151.1453 µg/mL +/- 151.5041 µg/mL	Gravimetric Unstressed Stressed
3	1,1-dichloroethene **CAS #** 75-35-4 (Lot SHBG8609V) **Purity** 99%	2,511.5 µg/mL	+/- 14.6021 µg/mL +/- 151.5299 µg/mL +/- 151.8897 µg/mL	Gravimetric Unstressed Stressed
4	tert-Butanol (TBA) **CAS #** 75-65-0 (Lot SHBF0688V) **Purity** 99%	25,001.8 µg/mL	+/- 145.3547 µg/mL +/- 1,508.4656 µg/mL +/- 1,512.0470 µg/mL	Gravimetric Unstressed Stressed
5	Methyl acetate **CAS #** 79-20-9 (Lot SHBG4345V) **Purity** 99%	5,000.5 µg/mL	+/- 29.0733 µg/mL +/- 301.7023 µg/mL +/- 302.4186 µg/mL	Gravimetric Unstressed Stressed
6	Iodomethane (methyl iodide) **CAS #** 74-88-4 (Lot SHBF2149V) **Purity** 99%	2,502.9 µg/mL	+/- 14.5519 µg/mL +/- 151.0095 µg/mL +/- 151.3681 µg/mL	Gravimetric Unstressed Stressed
7	Allyl chloride (3-chloropropene) **CAS #** 107-05-1 (Lot SHBF8133V) **Purity** 99%	2,517.1 µg/mL	+/- 14.6348 µg/mL +/- 151.8693 µg/mL +/- 152.2299 µg/mL	Gravimetric Unstressed Stressed

8	Methylene chloride (dichloromethane) **CAS #** 75-09-2 **Purity** 99%	(Lot SHBH2578V)	2,502.1 µg/mL	+/- 14.5476 +/- 150.9643 +/- 151.3227	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
9	Carbon disulfide **CAS #** 75-15-0 **Purity** 99%	(Lot S20A856)	2,501.4 µg/mL	+/- 14.5432 +/- 150.9190 +/- 151.2773	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
10	Acrylonitrile **CAS #** 107-13-1 **Purity** 99%	(Lot T07B2030)	25,001.3 µg/mL	+/- 145.3518 +/- 1,508.4355 +/- 1,512.0167	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
11	Methyl-tert-butyl ether (MTBE) **CAS #** 1634-04-4 **Purity** 99%	(Lot SHBG2655V)	2,505.3 µg/mL	+/- 14.5657 +/- 151.1528 +/- 151.5117	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
12	cis-1,2-Dichloroethene **CAS #** 156-59-2 **Purity** 98%	(Lot MKBV2831V)	2,500.5 µg/mL	+/- 14.5379 +/- 150.8644 +/- 151.2226	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
13	n-Hexane (C6) **CAS #** 110-54-3 **Purity** 99%	(Lot SHBG2674V)	2,503.8 µg/mL	+/- 14.5570 +/- 151.0623 +/- 151.4210	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
14	1,1-Dichloroethane **CAS #** 75-34-3 **Purity** 99%	(Lot 00008621)	2,500.4 µg/mL	+/- 14.5374 +/- 150.8587 +/- 151.2169	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
15	2,2-Dichloropropane **CAS #** 594-20-7 **Purity** 98%	(Lot BCBR0622V)	2,501.0 µg/mL	+/- 14.5408 +/- 150.8940 +/- 151.2522	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
16	trans-1,2-Dichloroethene **CAS #** 156-60-5 **Purity** 99%	(Lot 09431AEV)	2,503.8 µg/mL	+/- 14.5570 +/- 151.0623 +/- 151.4210	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
17	Isobutanol (2-Methyl-1-propanol) **CAS #** 78-83-1 **Purity** 99%	(Lot SHBG8201V)	62,512.5 µg/mL	+/- 363.4341 +/- 3,771.6543 +/- 3,780.6088	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
18	chloroform **CAS #** 67-66-3 **Purity** 99%	(Lot MKBV2089V)	2,501.9 µg/mL	+/- 14.5461 +/- 150.9492 +/- 151.3076	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
19	Bromochloromethane **CAS #** 74-97-5 **Purity** 99%	(Lot 00004559)	2,503.3 µg/mL	+/- 14.5541 +/- 151.0322 +/- 151.3907	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
20	Tetrahydrofuran **CAS #** 109-99-9 **Purity** 99%	(Lot SHBG2910V)	5,001.3 µg/mL	+/- 29.0777 +/- 301.7476 +/- 302.4640	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
21	1,1,1-trichloroethane **CAS #** 71-55-6 **Purity** 99%	(Lot B15W12061)	2,500.3 µg/mL	+/- 14.5367 +/- 150.8512 +/- 151.2093	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
22	Cyclohexane **CAS #** 110-82-7 **Purity** 99%	(Lot MKBX4768V)	2,502.0 µg/mL	+/- 14.5468 +/- 150.9567 +/- 151.3151	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
23	1,1-Dichloropropene **CAS #** 563-58-6 **Purity** 99%	(Lot 160727JLM)	2,500.5 µg/mL	+/- 14.5381 +/- 150.8662 +/- 151.2244	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed

24	carbon tetrachloride **CAS #** 56-23-5 **Purity** 99%	(Lot SHBG1763V)	2,503.3 µg/mL	+/- 14.5541 +/- 151.0322 +/- 151.3907	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
25	n-Heptane (C7) **CAS #** 142-82-5 **Purity** 99%	(Lot SHBG6171V)	2,505.5 µg/mL	+/- 14.5672 +/- 151.1679 +/- 151.5268	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
26	1,2-Dichloroethane **CAS #** 107-06-2 **Purity** 99%	(Lot SHBF9313V)	2,504.8 µg/mL	+/- 14.5628 +/- 151.1227 +/- 151.4815	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
27	Benzene **CAS #** 71-43-2 **Purity** 99%	(Lot SHBH2056V)	2,506.9 µg/mL	+/- 14.5752 +/- 151.2509 +/- 151.6100	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
28	Trichloroethene **CAS #** 79-01-6 **Purity** 99%	(Lot SHBH1955V)	2,502.4 µg/mL	+/- 14.5490 +/- 150.9794 +/- 151.3378	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
29	Methylcyclohexane **CAS #** 108-87-2 **Purity** 98%	(Lot SHBG0634V)	2,500.3 µg/mL	+/- 14.5372 +/- 150.8570 +/- 151.2152	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
30	1,2-Dichloropropane **CAS #** 78-87-5 **Purity** 99%	(Lot 01113D0V)	2,503.0 µg/mL	+/- 14.5527 +/- 151.0171 +/- 151.3756	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
31	1,4-Dioxane **CAS #** 123-91-1 **Purity** 99%	(Lot SHBH2584V)	50,011.4 µg/mL	+/- 290.7552 +/- 3,017.4064 +/- 3,024.5702	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
32	Dibromomethane **CAS #** 74-95-3 **Purity** 98%	(Lot 10183283)	2,501.9 µg/mL	+/- 14.5465 +/- 150.9531 +/- 151.3115	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
33	cis-1,3-Dichloropropene **CAS #** 10061-01-5 **Purity** 99%	(Lot 22622)	2,501.0 µg/mL	+/- 14.5410 +/- 150.8964 +/- 151.2547	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
34	Toluene **CAS #** 108-88-3 **Purity** 99%	(Lot SHBH1932V)	2,504.3 µg/mL	+/- 14.5599 +/- 151.0925 +/- 151.4512	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
35	Ethyl methacrylate **CAS #** 97-63-2 **Purity** 99%	(Lot SHBD9190V)	2,506.9 µg/mL	+/- 14.5752 +/- 151.2509 +/- 151.6100	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
36	trans-1,3-Dichloropropene **CAS #** 10061-02-6 **Purity** 99%	(Lot C584177)	2,503.6 µg/mL	+/- 14.5563 +/- 151.0548 +/- 151.4134	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
37	1,1,2-Trichloroethane **CAS #** 79-00-5 **Purity** 99%	(Lot FGB01)	2,501.0 µg/mL	+/- 14.5410 +/- 150.8964 +/- 151.2547	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
38	1,3-Dichloropropane **CAS #** 142-28-9 **Purity** 99%	(Lot BCBG2162V)	2,503.5 µg/mL	+/- 14.5556 +/- 151.0472 +/- 151.4059	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
39	Tetrachloroethene **CAS #** 127-18-4 **Purity** 99%	(Lot SHBD9374V)	2,500.9 µg/mL	+/- 14.5403 +/- 150.8889 +/- 151.2471	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed

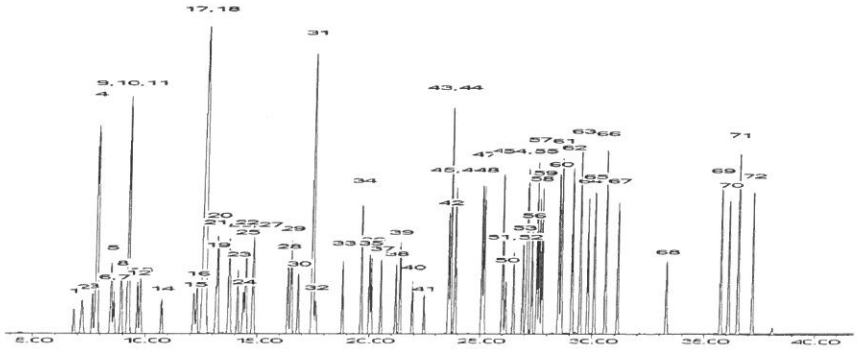
40	dibromochloromethane		2,500.2 µg/mL	+/-	14.5365	µg/mL	Gravimetric
	CAS # 124-48-1	(Lot MKBW3597V)		+/-	150.8497	µg/mL	Unstressed
	Purity 98%			+/-	151.2078	µg/mL	Stressed
41	1,2-Dibromoethane (EDB)		2,501.3 µg/mL	+/-	14.5425	µg/mL	Gravimetric
	CAS # 106-93-4	(Lot BCBH3877V)		+/-	150.9115	µg/mL	Unstressed
	Purity 99%			+/-	151.2698	µg/mL	Stressed
42	Chlorobenzene		2,500.1 µg/mL	+/-	14.5359	µg/mL	Gravimetric
	CAS # 108-90-7	(Lot SHBF0505V)		+/-	150.8436	µg/mL	Unstressed
	Purity 99%			+/-	151.2017	µg/mL	Stressed
43	m-Xylene		1,250.3 µg/mL	+/-	7.2691	µg/mL	Gravimetric
	CAS # 108-38-3	(Lot SHBG4347V)		+/-	75.4331	µg/mL	Unstressed
	Purity 99%			+/-	75.6122	µg/mL	Stressed
44	p-Xylene		1,251.3 µg/mL	+/-	7.2749	µg/mL	Gravimetric
	CAS # 106-42-3	(Lot SHBG3928V)		+/-	75.4935	µg/mL	Unstressed
	Purity 99%			+/-	75.6727	µg/mL	Stressed
45	Ethylbenzene		2,503.3 µg/mL	+/-	14.5541	µg/mL	Gravimetric
	CAS # 100-41-4	(Lot SHBG5920V)		+/-	151.0322	µg/mL	Unstressed
	Purity 99%			+/-	151.3907	µg/mL	Stressed
46	1,1,1,2-Tetrachloroethane		2,500.3 µg/mL	+/-	14.5367	µg/mL	Gravimetric
	CAS # 630-20-6	(Lot MKBS3769V)		+/-	150.8512	µg/mL	Unstressed
	Purity 99%			+/-	151.2093	µg/mL	Stressed
47	o-Xylene		2,504.9 µg/mL	+/-	14.5636	µg/mL	Gravimetric
	CAS # 95-47-6	(Lot SHBH3432V)		+/-	151.1302	µg/mL	Unstressed
	Purity 99%			+/-	151.4890	µg/mL	Stressed
48	Styrene		2,506.3 µg/mL	+/-	14.5716	µg/mL	Gravimetric
	CAS # 100-42-5	(Lot MKBS7097V)		+/-	151.2132	µg/mL	Unstressed
	Purity 99%			+/-	151.5722	µg/mL	Stressed
49	Isopropylbenzene (cumene)		2,501.6 µg/mL	+/-	14.5447	µg/mL	Gravimetric
	CAS # 98-82-8	(Lot 10185056)		+/-	150.9341	µg/mL	Unstressed
	Purity 99%			+/-	151.2925	µg/mL	Stressed
50	bromoform		2,502.9 µg/mL	+/-	14.5519	µg/mL	Gravimetric
	CAS # 75-25-2	(Lot SHBD8459V)		+/-	151.0095	µg/mL	Unstressed
	Purity 99%			+/-	151.3681	µg/mL	Stressed
51	bromodichloromethane		2,506.8 µg/mL	+/-	14.5750	µg/mL	Gravimetric
	CAS # 75-27-4	(Lot MKBW5506V)		+/-	151.2490	µg/mL	Unstressed
	Purity 97%			+/-	151.6081	µg/mL	Stressed
52	1,1,2,2-Tetrachloroethane		2,501.3 µg/mL	+/-	14.5425	µg/mL	Gravimetric
	CAS # 79-34-5	(Lot CFA4D)		+/-	150.9115	µg/mL	Unstressed
	Purity 99%			+/-	151.2698	µg/mL	Stressed
53	1,2,3-Trichloropropane		2,508.5 µg/mL	+/-	14.5846	µg/mL	Gravimetric
	CAS # 96-18-4	(Lot BCBH8722V)		+/-	151.3489	µg/mL	Unstressed
	Purity 99%			+/-	151.7082	µg/mL	Stressed
54	trans-1,4-dichloro-2-butene		2,500.8 µg/mL	+/-	14.5396	µg/mL	Gravimetric
	CAS # 110-57-6	(Lot MKBP6041V)		+/-	150.8817	µg/mL	Unstressed
	Purity 95%			+/-	151.2399	µg/mL	Stressed
55	n-Propylbenzene		2,501.9 µg/mL	+/-	14.5461	µg/mL	Gravimetric
	CAS # 103-65-1	(Lot MKBJ0332V)		+/-	150.9492	µg/mL	Unstressed
	Purity 99%			+/-	151.3076	µg/mL	Stressed

56	Bromobenzene **CAS #** 108-86-1 **Purity** 99%	(Lot MKBD4032V)	2,507.0 µg/mL	+/- 14.5759 +/- 151.2584 +/- 151.6175	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
57	1,3,5-Trimethylbenzene **CAS #** 108-67-8 **Purity** 99%	(Lot BCBQ2165V)	2,501.1 µg/mL	+/- 14.5418 +/- 150.9040 +/- 151.2622	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
58	2-Chlorotoluene **CAS #** 95-49-8 **Purity** 99%	(Lot MKBW5554V)	2,500.6 µg/mL	+/- 14.5388 +/- 150.8738 +/- 151.2320	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
59	4-Chlorotoluene **CAS #** 106-43-4 **Purity** 99%	(Lot MKBL7753V)	2,501.3 µg/mL	+/- 14.5425 +/- 150.9115 +/- 151.2698	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
60	tert-Butylbenzene **CAS #** 98-06-6 **Purity** 99%	(Lot S52237V)	2,507.0 µg/mL	+/- 14.5759 +/- 151.2584 +/- 151.6175	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
61	1,2,4-Trimethylbenzene **CAS #** 95-63-6 **Purity** 98%	(Lot MKBJ6229V)	2,500.8 µg/mL	+/- 14.5401 +/- 150.8866 +/- 151.2448	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
62	sec-Butylbenzene **CAS #** 135-98-8 **Purity** 99%	(Lot MKBR9260V)	2,505.4 µg/mL	+/- 14.5665 +/- 151.1604 +/- 151.5193	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
63	p-Isopropyltoluene (p-Cymene) **CAS #** 99-87-6 **Purity** 99%	(Lot MKBS2604V)	2,503.8 µg/mL	+/- 14.5570 +/- 151.0623 +/- 151.4210	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
64	1,3-Dichlorobenzene **CAS #** 541-73-1 **Purity** 99%	(Lot BCBM5751V)	2,503.9 µg/mL	+/- 14.5577 +/- 151.0699 +/- 151.4285	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
65	1,4-Dichlorobenzene **CAS #** 106-46-7 **Purity** 99%	(Lot MKBS1350V)	2,509.9 µg/mL	+/- 14.5926 +/- 151.4319 +/- 151.7914	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
66	n-Butylbenzene **CAS #** 104-51-8 **Purity** 99%	(Lot 09418JJV)	2,503.3 µg/mL	+/- 14.5541 +/- 151.0322 +/- 151.3907	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
67	1,2-Dichlorobenzene **CAS #** 95-50-1 **Purity** 99%	(Lot SHBD7331V)	2,503.8 µg/mL	+/- 14.5570 +/- 151.0623 +/- 151.4210	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
68	1,2-Dibromo-3-chloropropane **CAS #** 96-12-8 **Purity** 99%	(Lot FBL01)	2,505.0 µg/mL	+/- 14.5643 +/- 151.1378 +/- 151.4966	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
69	1,2,4-Trichlorobenzene **CAS #** 120-82-1 **Purity** 99%	(Lot SHBC5541V)	2,505.3 µg/mL	+/- 14.5657 +/- 151.1528 +/- 151.5117	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
70	Hexachlorobutadiene **CAS #** 87-68-3 **Purity** 98%	(Lot J31X013)	2,506.5 µg/mL	+/- 14.5728 +/- 151.2266 +/- 151.5856	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
71	Naphthalene **CAS #** 91-20-3 **Purity** 99%	(Lot MKBW2603V)	2,500.9 µg/mL	+/- 14.5403 +/- 150.8889 +/- 151.2471	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed

72	1,2,3-Trichlorobenzene		2,511.1	µg/mL	+/-	14.5999	µg/mL	Gravimetric
	CAS # 87-61-6	(Lot 12912PFV)			+/-	151.5073	µg/mL	Unstressed
	Purity 99%				+/-	151.8670	µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)



Carrier Gas:
helium-constant pressure 30 psi

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
MSD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

F. Joseph Tallon - Mix Technician **Date Mixed:** 22-Dec-2016 **Balance:** B251644995

Jennifer Pollino - Operations Tech-ARM QC **Date Passed:** 04-Jan-2017

Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397

Reagent

VM571992S_00001

Rec: 1-25-17
VMS71992S-00001

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 571992.sec **Lot No.:** A0123775

Description : 8260 List 1 / Std #1 MegaMix (2017)

8260 List 1 / Std #1 MegaMix (2017) 1250-62500 µg/ml, P&T Methanol, 1 ml/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : December 31, 2018 **Storage:** 0°C or colder

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Diethyl ether (ethyl ether) **CAS #** 60-29-7.SEC (Lot F23X068) **Purity** 98%	2,501.2 µg/mL	+/- 14.5422 µg/mL +/- 150.9088 µg/mL +/- 151.2671 µg/mL	Gravimetric Unstressed Stressed
2	1,1,2-Trichlorotrifluoroethane (CFC-113) **CAS #** 76-13-1.SEC (Lot 18342) **Purity** 99%	2,501.1 µg/mL	+/- 14.5418 µg/mL +/- 150.9040 µg/mL +/- 151.2622 µg/mL	Gravimetric Unstressed Stressed
3	1,1-Dichloroethene **CAS #** 75-35-4.SEC (Lot 2767000) **Purity** 99%	2,500.5 µg/mL	+/- 14.5381 µg/mL +/- 150.8662 µg/mL +/- 151.2244 µg/mL	Gravimetric Unstressed Stressed
4	tert-Butanol (TBA) **CAS #** 75-65-0.SEC (Lot XYXDO) **Purity** 98%	25,003.1 µg/mL	+/- 145.3626 µg/mL +/- 1,508.5475 µg/mL +/- 1,512.1291 µg/mL	Gravimetric Unstressed Stressed
5	Methyl acetate **CAS #** 79-20-9.SEC (Lot YDGVD) **Purity** 99%	5,000.4 µg/mL	+/- 29.0726 µg/mL +/- 301.6948 µg/mL +/- 302.4111 µg/mL	Gravimetric Unstressed Stressed
6	Iodomethane (methyl iodide) **CAS #** 74-88-4.SEC (Lot Y25A027) **Purity** 99%	2,500.4 µg/mL	+/- 14.5374 µg/mL +/- 150.8587 µg/mL +/- 151.2169 µg/mL	Gravimetric Unstressed Stressed
7	Allyl chloride (3-chloropropene) **CAS #** 107-05-1.SEC (Lot VEBOC) **Purity** 98%	2,500.1 µg/mL	+/- 14.5358 µg/mL +/- 150.8423 µg/mL +/- 151.2004 µg/mL	Gravimetric Unstressed Stressed

8	Methylene chloride (dichloromethane) **CAS #** 75-09-2.SEC (Lot FGM02) **Purity** 99%		2,500.8	µg/mL	+/- 14.5396 +/- 150.8813 +/- 151.2395	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
9	Carbon disulfide **CAS #** 75-15-0.SEC (Lot MKBL1376V) **Purity** 99%		2,500.9	µg/mL	+/- 14.5403 +/- 150.8889 +/- 151.2471	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
10	Acrylonitrile **CAS #** 107-13-1.SEC (Lot UERIL) **Purity** 99%		25,000.9	µg/mL	+/- 145.3496 +/- 1,508.4128 +/- 1,511.9941	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
11	Methyl-tert-butyl ether (MTBE) **CAS #** 1634-04-4.SEC (Lot ZAQTA-MS) **Purity** 99%		2,500.0	µg/mL	+/- 14.5352 +/- 150.8361 +/- 151.1942	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
12	cis-1,2-Dichloroethene **CAS #** 156-59-2.SEC (Lot HGC01-BLKT) **Purity** 98%		2,500.7	µg/mL	+/- 14.5394 +/- 150.8792 +/- 151.2374	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
13	n-Hexane (C6) **CAS #** 110-54-3.SEC (Lot 10188491) **Purity** 99%		2,501.5	µg/mL	+/- 14.5439 +/- 150.9266 +/- 151.2849	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
14	1,1-Dichloroethane **CAS #** 75-34-3.SEC (Lot 5379000) **Purity** 99%		2,500.3	µg/mL	+/- 14.5367 +/- 150.8512 +/- 151.2093	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
15	2,2-Dichloropropane **CAS #** 594-20-7.SEC (Lot I7E8E) **Purity** 98%		2,500.1	µg/mL	+/- 14.5358 +/- 150.8423 +/- 151.2004	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
16	trans-1,2-Dichloroethene **CAS #** 156-60-5.SEC (Lot TS5UB) **Purity** 97%		2,500.2	µg/mL	+/- 14.5362 +/- 150.8466 +/- 151.2048	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
17	Isobutanol (2-Methyl-1-propanol) **CAS #** 78-83-1.SEC (Lot 83NHH) **Purity** 99%		62,506.9	µg/mL	+/- 363.4014 +/- 3,771.3149 +/- 3,780.2687	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
18	Chloroform **CAS #** 67-66-3.SEC (Lot 1297547) **Purity** 99%		2,500.1	µg/mL	+/- 14.5359 +/- 150.8436 +/- 151.2017	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
19	Bromochloromethane **CAS #** 74-97-5.SEC (Lot 5670200) **Purity** 99%		2,501.1	µg/mL	+/- 14.5418 +/- 150.9040 +/- 151.2622	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
20	Tetrahydrofuran **CAS #** 109-99-9.SEC (Lot K3V7J-SJ) **Purity** 99%		5,002.3	µg/mL	+/- 29.0835 +/- 301.8079 +/- 302.5245	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
21	1,1,1-Trichloroethane **CAS #** 71-55-6.SEC (Lot CS160712) **Purity** 98%		2,500.7	µg/mL	+/- 14.5394 +/- 150.8792 +/- 151.2374	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
22	Cyclohexane **CAS #** 110-82-7.SEC (Lot YADRA) **Purity** 99%		2,501.0	µg/mL	+/- 14.5410 +/- 150.8964 +/- 151.2547	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed
23	1,1-Dichloropropene **CAS #** 563-58-6.SEC (Lot 5221100) **Purity** 96%		2,501.3	µg/mL	+/- 14.5427 +/- 150.9133 +/- 151.2716	µg/mL µg/mL µg/mL	Gravimetric Unstressed Stressed

24	Carbon tetrachloride		2,500.5	µg/mL	+/- 14.5381	µg/mL	Gravimetric
	CAS # 56-23-5.SEC	(Lot 11466)			+/- 150.8662	µg/mL	Unstressed
	Purity 99%				+/- 151.2244	µg/mL	Stressed
25	n-Heptane (C7)		2,500.5	µg/mL	+/- 14.5381	µg/mL	Gravimetric
	CAS # 142-82-5.SEC	(Lot OGM01)			+/- 150.8662	µg/mL	Unstressed
	Purity 99%				+/- 151.2244	µg/mL	Stressed
26	1,2-Dichloroethane		2,500.1	µg/mL	+/- 14.5359	µg/mL	Gravimetric
	CAS # 107-06-2.SEC	(Lot FO6PK)			+/- 150.8436	µg/mL	Unstressed
	Purity 99%				+/- 151.2017	µg/mL	Stressed
27	Benzene		2,501.5	µg/mL	+/- 14.5439	µg/mL	Gravimetric
	CAS # 71-43-2.SEC	(Lot B28Y008)			+/- 150.9266	µg/mL	Unstressed
	Purity 99%				+/- 151.2849	µg/mL	Stressed
28	Trichloroethene		2,501.0	µg/mL	+/- 14.5410	µg/mL	Gravimetric
	CAS # 79-01-6.SEC	(Lot H04X050)			+/- 150.8964	µg/mL	Unstressed
	Purity 99%				+/- 151.2547	µg/mL	Stressed
29	Methylcyclohexane		2,500.9	µg/mL	+/- 14.5403	µg/mL	Gravimetric
	CAS # 108-87-2.SEC	(Lot 24MSD-CD)			+/- 150.8889	µg/mL	Unstressed
	Purity 99%				+/- 151.2471	µg/mL	Stressed
30	1,2-Dichloropropane		2,501.1	µg/mL	+/- 14.5418	µg/mL	Gravimetric
	CAS # 78-87-5.SEC	(Lot OGG01)			+/- 150.9040	µg/mL	Unstressed
	Purity 99%				+/- 151.2622	µg/mL	Stressed
31	1,4-Dioxane		50,007.1	µg/mL	+/- 290.7305	µg/mL	Gravimetric
	CAS # 123-91-1.SEC	(Lot MUFZH)			+/- 3,017.1500	µg/mL	Unstressed
	Purity 99%				+/- 3,024.3132	µg/mL	Stressed
32	Dibromomethane		2,501.6	µg/mL	+/- 14.5447	µg/mL	Gravimetric
	CAS # 74-95-3.SEC	(Lot FGI01-OICH)			+/- 150.9341	µg/mL	Unstressed
	Purity 99%				+/- 151.2925	µg/mL	Stressed

Custom Standard

Product Number: CUS-8125 **Page:** 1 of 1

Lot Number: CM-5527 **Lot Issue Date:** 23-Oct-2015 **Expiration Date:** 30-Nov-2017

This ISO Guide 34 Reference Material (RM) was manufactured and verified in accordance with ULTRA Scientific's ISO 9001 registered quality system. A review of the gravimetric preparation data by our ISO 17025 accredited laboratory serves to verify the concentration of each analyte. The true value and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	True Value
4-bromofluorobenzene	000460-00-4	RM05291	25121 ± 126 µg/mL
dibromofluoromethane	001868-53-7	RM04871	25077 ± 125 µg/mL
1,2-dichloroethane-d4	017060-07-0	RM09732	25089 ± 125 µg/mL
toluene-d8	002037-26-5	RM06738	25123 ± 126 µg/mL

Matrix: methanol (methyl alcohol)

Storage: Store Frozen (-25° to -10°C).

ULTRA uses balances calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z-540-1 and ISO 9001, and calibrated Class A glassware in the manufacturing of these standards.
