SAMPLES: 3 / Aqueous / VOC / 1,4-Dioxane / PCB Homologs / DRO / GRO / Total and Dissolved Metals

MRC-MW121B-100917 MRC-MW131B-100917 TRIP BLANK*

*Analyzed for VOC only.

OVERVIEW

The sample set for MRC SDG 240-86215-1, consists of two (2) aqueous environmental samples and one (1) trip blank. Environmental samples were analyzed for volatile organic compounds (VOC), 1,4-dioxane, polychlorinated biphenyl (PCB) homologs, diesel range organics (DRO), gasoline range organics (GRO), and total and dissolved metals. No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on October 09, 2017, and analyzed by TestAmerica. Analyses were conducted in accordance with SW-846 Methods 8260C (for VOC), 8207D (for 1,4-dioxane), 8015C (for DRO and GRO), 7470A (for mercury), and 6020A (for metals other than mercury) as well as EPA Method 680 (for PCB homologs) analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, interference check sample results, serial dilution results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The VOC continuing calibration performed on 10/13/17 at 12:47 on instrument A3UX9 had percent differences (%Ds) for chloromethane, vinyl chloride, and chloroethane that were greater than the 20% quality control limit. All VOC samples were affected by the noncompliances for chloromethane and chloroethane. For vinyl chloride, only samples MRC-MW121B-100917 and TRIP BLANK were affected, as the result for vinyl chloride in sample MRC-MW131B-100917 was associated with the continuing calibration performed on 10/19/17 at 09:16 on instrument A3UX16. Non-detected results for chloromethane and chloroethane in all VOC samples and for vinyl chloride in samples MRC-MW121B-100917 and TRIP BLANK were qualified as estimated (UJ).

- The following analyte was detected in the VOC method blanks at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Methylene chloride	0.692 ug/L	6.92 ug/L

1 – Concentration detected in method blank associated with preparation batch 240-298976 affecting samples MRC-MW121B-100917, MRC-MW131B-100917, and TRIP BLANK.

An action level of 10x the maximum concentration of the common laboratory contaminant methylene chloride was used to evaluate sample data for blank contamination. Sample dilution factors, if applicable, were considered in applying the action level. The detected concentration of methylene chloride in sample MRC-MW131B-100917 was less than the sample-specific action level and was qualified as non-detected (U).

- Detected results below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Sample TRIP BLANK was not listed on the chain of custody. No action was taken.

Non-detected results were reported to the MDL.

VOC sample MRC-MW131B-100917 was analyzed at a dilution factor of 10.

The VOC laboratory control sample (LCS) 240-298976/4 associated with preparation batch 240-298976 had a percent recovery (%R) for chloromethane that was greater than the laboratory quality control limits. Samples MRC-MW121B-100917, MRC-MW131B-100917, and TRIP BLANK were associated with this LCS. No action was necessary because results for chloromethane were non-detected in the associated samples.

The VOC matrix spike (MS)/matrix spike duplicate (MSD) analysis performed on sample 240-86277-B-4 (laboratory identifier) had a relative percent difference (RPD) that was greater than the laboratory quality control limits for chloromethane. No action was necessary because this MS/MSD was not performed on a sample from this SDG.

The VOC MS/MSD analysis performed on sample 200-40412-B-5 (laboratory identifier) had RPDs that was greater than the laboratory quality control limits for chloroform and cis-1,2-dichloroethene. No action was necessary because this MS/MSD was not performed on a sample from this SDG.

The laboratory case narrative report notes that for the PCB homologs analysis, the method requires samples to be preserved to a pH of 5 to 9. Sample MRC-MW121B-100917 was received with insufficient preservation at a pH of greater than 10 (shown on the preparation forms in Appendix C of this validation report). The case narrative indicates that the laboratory preserved the sample to the appropriate pH. No validation action was taken.

Sample MRC-MW117B-100917 was incorrectly recorded on the chain of custody record. The sample ID should have been MW131B. The laboratory updated the data report and the database was revised.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some detected and non-detected VOC results were qualified due to calibration noncompliance. One VOC result was qualified as non-detected due to method blank contamination.

Other Factors Affecting Data Quality: Detected results below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and National Functional Guidelines for Inorganic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Groundwater Sampling

Report Number: 240-86215-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 680_PCB analysis was performed at TestAmerica Savannah Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 10/10/2017 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples MRC-MW121B-100917 (240-86215-1), MRC-MW117B-100917 (240-86215-2) and TRIP BLANK (240-86215-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 10/13/2017 and 10/19/2017.

Methylene Chloride was detected in method blank MB 240-298976/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Sample MRC-MW117B-100917 (240-86215-2)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) associated with batch 240-298976 recovered above the upper control limit for some analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: MRC-MW121B-100917 (240-86215-1), MRC-MW117B-100917 (240-86215-2), TRIP BLANK (240-86215-3) and (CCVIS 240-298976/3).

The laboratory control sample (LCS) for analytical batch 240-298976 recovered outside control limits for chloromethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Samples MRC-MW121B-100917 (240-86215-1) and MRC-MW117B-100917 (240-86215-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 10/11/2017 and analyzed on 10/13/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)
Samples MRC-MW121B-100917 (240-86215-1) and MRC-MW117B-100917 (240-86215-2) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015C - GRO. The samples were analyzed on 10/16/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)
Samples MRC-MW121B-100917 (240-86215-1) and MRC-MW117B-100917 (240-86215-2) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 10/13/2017 and analyzed on 10/18/2017.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-498449.

The reference method requires samples to be preserved to a pH of 5 - 9. The following sample was received with insufficient preservation at a pH of >10. The sample was preserved to the appropriate pH in the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

OVERVIEW

The sample set for MRC SDG 240-86291-1, consists of six (6) aqueous environmental samples and one (1) trip blank. Environmental samples were analyzed for volatile organic compounds (VOC), 1,4-dioxane, polychlorinated biphenyl (PCB) homologs, diesel range organics (DRO), gasoline range organics (GRO), and total and dissolved metals. Sample MRC-MW117B-101017 was analyzed for dissolved metals only; sample MRC-MW117B-100917 was analyzed for total metals and not dissolved metals. No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on October 9 and 10, 2017, and analyzed by TestAmerica. Analyses were conducted in accordance with SW-846 Methods 8260C (for VOC), 8207D (for 1,4-dioxane), 8015C (for DRO and GRO), 7470A (for mercury), and 6020A (for metals other than mercury) as well as EPA Method 680 (for PCB homologs) analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, interference check sample results, serial dilution results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The VOC continuing calibration performed on 10/22/17 at 17:32 on instrument A3UX9 had percent differences (%Ds) for carbon tetrachloride, cis-1,3-dichloropropene, and bromoform that were greater than the 20% quality control limit. Samples MRC-MW119B-101017, MRC-MW122A-101017, and TRIP BLANK were associated with this calibration. Non-detected results for these analytes were qualified

- Tentatively identified compounds (TICs) were identified in several VOC samples. TICs were qualified as estimated (NJ) and these compounds are assumed to be presumptively present.

- Detected results below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Sample SB-122A-13-15' is listed on the chain of custody but is marked as hold.

Non-detected results were reported to the MDL.

In the VOC fraction, the following compounds were not listed on the laboratory control sample (LCS) Form III: 1,2,3-trimethylbenzene, diisopropyl ether, ethyl tert-butyl ether, and tert-amyl methyl ether. These compounds were included in the database and on the LCS Form I, which is in Appendix C of this report.

Although not included on the VOC LCS Form III, the database results for LCS 240-294629/6 and case narrative report indicate the LCS percent recovery (%R) for diisopropyl ether was greater than the laboratory quality control limits. All samples were associated with this LCS. No action was necessary because diisopropyl ether was non-detected in the associated samples.

The following TICs were detected in the method blank at the following maximum concentrations:

TIC	Concentration
Acetonitrile	7.08 ug/kg
Hexane	0.504 ug/kg
2-Methylnaphthalene	2.15 ug/kg

No action was taken on this basis.

The SVOC continuing calibration performed on 09/16/17 at 10:30 on instrument A4HP9 had a %D for dibenzo(a,h)anthracene that was greater than the 20% quality control limit. No action was necessary because no environmental samples from this SDG were associated with this calibration.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Non-detected results for one VOC analyte were qualified due to calibration noncompliance. One VOC result was qualified as non-detected due to laboratory blank contamination.

Other Factors Affecting Data Quality: TIC results were qualified as estimated and assumed to be presumptively present. Detected results below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC Block I GW Sampling

Report Number: 240-86291-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 680 Polychlorinated Biphenyls (PCBs) analysis was performed at the TestAmerica Savannah laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 10/11/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.0º C and 2.4º C.

The client changed sample ID MRC-MW122-101017 (240-86291-6) to MRC-MW122A-101017 (240-86291-6) by email on 10/30/17.

**Analyzed for VOC only.

OVERVIEW

The sample set for MRC SDG 240-86380-1, consists of four (4) aqueous environmental samples and one (1) trip blank. Environmental samples were analyzed for volatile organic compounds (VOC), 1,4-dioxane, polychlorinated biphenyl (PCB) homologs, diesel range organics (DRO), gasoline range organics (GRO), and total and dissolved metals. Sample MRC-MW119A-101117 was analyzed for VOCs and GRO only. No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on October 11, 2017, and analyzed by TestAmerica. Analyses were conducted in accordance with SW-846 Methods 8260C (for VOC), 8207D (for 1,4-dioxane), 8015C (for DRO and GRO), 7470A (for mercury), and 6020A (for metals other than mercury) as well as EPA Method 680 (for PCB homologs) analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, interference check sample results, serial dilution results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The VOC continuing calibration performed on 10/20/17 at 17:54 on instrument A3UX12 had percent differences (%Ds) for acetone, 2-butanone, and 2-hexanone that were greater than the 20% quality control limit. All VOC samples were associated with this calibration. Detected and non-detected results for these analytes were qualified as estimated (J and UJ, respectively) in all VOC samples.

- Detected results below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Sample TRIP BLANK was not listed on the chain of custody. No action was taken.

Sample MRC-MW118A-101117 was listed as MRC-MW188A-101117 in the laboratory report and in the database. The database and the Form I reports were changed to MRC-MW118A-101117 to match the chain of custody by the data validator.

Non-detected results were reported to the MDL.

The PCB homologs internal standard areas for chrysene-d12 in samples MRC-MW118B-101117 and MRC-MW118A-101117 were greater than the laboratory quality control limits based on the continuing calibration performed on 10/19/17 at 17:20. The internal standard areas in these samples were within the laboratory quality control limits based on the initial calibration performed on 07/13/17, as noted in the laboratory case narrative report. No qualification was necessary because all PCB homologs results were non-detected in the affected samples.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some detected and non-detected VOC results were qualified due to calibration noncompliance.

Other Factors Affecting Data Quality: Detected results below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and National Functional Guidelines for Inorganic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

SUPPORT DOCUMENTATION

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: LMC Groundwater Sampling

Report Number: 240-86380-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 680 Polychlorinated Biphenyls analysis was performed at the TestAmerica Savannah Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 10/12/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.8º C and 1.6º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples MRC-MW120A-101117 (240-86380-1), MRC-MW119A-101117 (240-86380-2), MRC-MW118B-101117 (240-86380-3), MRC-MW188A-101117 (240-86380-4) and TRIP BLANK (240-86380-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 10/20/2017.

The continuing calibration verification (CCV) analyzed in batch 240-300032 was outside the method criteria for the following analytes: 2-butanone, and 2-hexanone. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Batch 240-300032 is reported without a matrix spike/matrix spike duplicate (MS/MSD), because the MS/MSD was performed on a sample that had to be re-run for dilution. The MS/MSD result does not have immediate bearing on any samples except for the actual sample spiked. The associated laboratory control sample (LCS) met acceptance criteria and provides long-term precision and accuracy for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Samples MRC-MW120A-101117 (240-86380-1), MRC-MW118B-101117 (240-86380-3) and MRC-MW188A-101117 (240-86380-4) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 10/17/2017 and analyzed on 10/20/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)
Samples MRC-MW120A-101117 (240-86380-1), MRC-MW119A-101117 (240-86380-2), MRC-MW118B-101117 (240-86380-3) and MRC-MW188A-101117 (240-86380-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015C - GRO. The samples were analyzed on 10/19/2017.

POLYCHLORINATED BIPHENYLS (PCBS)
Samples MRC-MW120A-101117 (240-86380-1), MRC-MW118B-101117 (240-86380-3) and MRC-MW188A-101117 (240-86380-4) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA Method 680. The samples were prepared on 10/18/2017 and analyzed on 10/19/2017.

The internal standard response for the following samples was outside of acceptance limits when compared to the area of the CCVIS (continuing calibration verification internal standard). The 680 method allows that the sample also be compared to the average internal standard area of the calibration (ICISAV). Due to limitations in the software, when the areas of the sample are out of control for either the CCVIS or the ICISAV both are flagged. Although a * flag appears on the data, the sample is within the area range for the average internal standard area of the calibration (ICISAV): MRC-MW118B-101117 (240-86380-3) and MRC-MW188A-101117 (240-86380-4).

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 680-498935.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples MRC-MW120A-101117 (240-86380-1), MRC-MW118B-101117 (240-86380-3) and MRC-MW188A-101117 (240-86380-4) were analyzed for diesel range organics (DRO) in accordance with EPA-SW-846 Method 8015C - DRO. The samples were prepared on 10/17/2017 and analyzed on 10/18/2017.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-299363.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Overview

The sample set for LMC MRC, SDGs TMM-093, TMM-094, and TMM-095 consisted of nine (9) aqueous environmental samples. The samples were analyzed for hexavalent chromium. No field duplicate sample pair was included in these SDGs.

The samples were collected by Tetra Tech on October 9 to 11, 2017 and analyzed by ALS Environmental. All analyses were conducted in accordance with EPA Method 218.6 for hexavalent chromium analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method/preparation blanks, laboratory control sample results, surrogate spike recovery, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major – None.

Minor

All samples were collected on 10/09/17 through 10/11/17 and were analyzed 1 to 3 days past the 24 hour sample collection to analysis hold time for hexavalent chromium on 10/13/17. Detected results were qualified estimated with a low bias (J-) and nondetected were qualified as estimated (UJ).

Notes

All samples were properly preserved to a pH of 9.0 – 9.5 and were filtered at the laboratory.

Several of the field sample IDs were recorded as “MRL” on the sample result forms but the actual sample IDs should begin with “MRC”. The data reviewer corrected the results forms that were incorrectly identified and the database was also corrected. No further action was required.

Samples MRC-MW119A-101117 and MRC-MW119B-101117 were named incorrectly on the chain of custody record. The project manager discovered the error and instructed the lab to rename the samples as MRC-MW118A-101117 and MRC-MW118B-101117, respectively. The lab forms and the database was updated to include the change in sample ID names.

Sample MRC-MW117A-100917 was officially changed to MRC-MW131B-100917 at the request of the client. The chain of custody record was modified by the data reviewer. The sample ID was also changed in the database.

Non-detected results were reported to the method detection limit.

Executive Summary

Laboratory Performance: Hexavalent chromium results were qualified as estimated for sample collection to analysis hold time exceedances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review" (January 2017). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Sample Management

This report contains the results of the analysis of two (2) water samples collected on October 9, 2017. Analytical results and quality control information are summarized in this data package.

Sample Receipt

The samples arrived at ALS via courier on October 9, 2017. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Hexavalent Chromium by EPA Method 218.6

Sample handling. Two (2) aqueous samples were analyzed for hexavalent chromium by EPA Method 218.6. The samples were analyzed within the 28-day holding period established for the method.

Calibration. A calibration was properly established. Continuing calibration verification standards were analyzed to verify the calibration. The standards were within the QC limits.

Blanks. Method blanks were analyzed with the samples. Hexavalent chromium was not detected above the reporting limit in the blanks.

Laboratory Control Samples. Laboratory control samples, identified as MRL and 2624787, were analyzed initially and every 20 samples. The recoveries were within the QC limits.

I Jennifer M. Lamoreux, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (717) 944-5541 if there are any questions or problems with the enclosed electronic deliverables.

SAMPLE SUMMARY

Workorder: 2267969 TMM093|Hexavalent Chromium

Notes

-- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
-- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
-- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
-- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
-- The Chain of Custody document is included as part of this report.
-- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
-- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
-- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.
-- For microbiological analyses, the "Prepared" value is the date/time into the incurbator and the "Analyzed" value is the date/time out the incubator.
