Overview

The sample set for LMC - MRC, SDG 140-9562-1 consisted of ten (10) soil vapor samples. All samples were analyzed for select Volatile Organic Compounds (VOC). No field duplicate sample pairs were included in this SDG.

The samples were collected by Tetra Tech on October 12, 2017 and analyzed by TestAmerica. All analyses were conducted in accordance with EPA Method TO-15 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times/sample preservation, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike results, laboratory control sample results, internal standard areas, chromatographic resolution, compound identification, and detection limits. Areas of concern are listed below.

Major

No major issues were identified.

Minor

- 1,1,1-Trichloroethane was detected in a laboratory method blank at the following maximum concentrations:

Compound	Maximum Concentration	Action Level
1,1,1-Trichloroethane(1)	0.0175 ppb	0.0875 ppb
1,1,1-Trichloroethane(1)	0.0956 µg/m3	0.478 µg/m^3
1,1,1-Trichloroethane(2)	0.0167 ppb	0.0835 ppb
1,1,1-Trichloroethane(2)	0.0909 µg/m3	0.4545 µg/m^3

1 Concentration in method blank affecting samples in batch 15146.
2 Concentration in method blank affecting samples in batch 15230.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. Detected results for 1,1,1-trichloroethane less than the blank action level were qualified as nondetect (U).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

All internal standard areas were within ±40% of the standard.

The surrogate spike compound and Laboratory Control Sample (LCS) had Percent Recoveries (%Rs) within the quality control limits.

Twenty-five VOC target compounds were reported for the TO-15 analysis of the samples.

All sample canisters opened to the approximately -30 psig (-29 psig) and finished at approximately 0 psig.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: 1,1,1-Trichloroethane was detected in a laboratory method blank.

Other Factors Affecting Data Quality: Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017) and EPA Method TO-15 analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

Receipt
The samples were received on 10/13/2017 at 9:40 AM. The samples arrived in good condition and properly preserved.

Air - GC/MS VOA - Method TO-15 LL
This report includes canister certification data for the batch certified and/or individually certified canisters used to collect samples as well as for any canisters used for dilution of those samples. All of the canisters used for sample collection or sample dilution for this job were certified to be clean to the levels listed on the results page. Please note that results for individually certified canisters that were not used for sample collection or sample dilution may also be included in the report because these canisters were in the same cleaning batch as the canisters used for this project. Since these canisters were not used for this job, the results have no bearing on the sample results.

EPA methods TO-14A and TO-15 specify the use of humidified “zero air” as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of “zero air” by TestAmerica Knoxville.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

Quantitation Limit Exceptions Summary

Client: Tetra Tech, Inc. TestAmerica Job ID: 140-9562-1
Project/Site: Maintenance Building VMPs - Middle River

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Matrix	Analyte	Units	Client RL	Lab PQL
TO 15 LL	Air	1,2,4-Trichlorobenzene	ppb v/v	0.080	0.4
TO 15 LL	Air	Naphthalene	ppb v/v	0.040	0.2

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg

Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig

Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)

14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

Overview

The sample set for LMC-MRC, SDG 240-84753-1 consisted of six (6) soil environmental samples. All six (6) soil samples were analyzed for Volatile Organic Compounds (VOC), Semi-Volatile Organic Compounds (SVOC), Gasoline Range Organics (GRO), and Diesel Range Organics (DRO). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on September 6-8, 2017 and analyzed by TestAmerica, Inc. All analyses were conducted in accordance with SW-846 Methods 8260B, 8270D, and 8015C analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times and sample preservation, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, internal standard areas, sample quantitation, and detection limits. Areas of concern are listed below.

Major

No major issues were identified.

Minor

- The VOC continuing calibration performed on 09/13/2017 @ 04:03 had Percent Differences (%Ds) for chloroethane, 1,2,4-trimethylbenzene, sec-butylbenzene, and n-butylbenzene and a Percent Drift (%Drift) for bromomethane which exceeded the 20% quality control limit. All samples were affected. The non-detected results reported these compounds the affected samples were qualified as estimated, (UJ).

- The SVOC continuing calibration performed on 09/14/2017 @ 07:40 had a %D for pentachlorophenol which exceeded the 20% quality control limit. All samples were affected. The non-detected results reported for pentachlorophenol in the affected samples were qualified as estimated, (UJ).

- The following parameter was detected in the laboratory method blank at the following maximum concentration:

Parameter	Maximum Concentration	Action Level
GRO [(1)]	55.2 µg/Kg	276 µg/Kg

[(1)] - Maximum concentration detected in the laboratory method blank, MB

(1) - Maximum concentration detected in the laboratory method blank, MB 240-294460/1-A, affecting all samples.

An action level of 5X was established to evaluate for blank contamination. Dilution factor, if applicable, was taken into consideration during the application of the action level. The detected result reported in the affected sample below the established action level was qualified as non-detected, (U).

- Detected results reported below the RL but above the MDL were qualified as estimated, (J).

Notes

As stated in the laboratory case narrative, the VOC Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyses had a %R for 1,2,3-trimethylbenzene above the upper quality control limit. The LCS/LCSD Form IIIs and associated raw data were missing from the data package. The data validator requested this information from the laboratory. No action was necessary because this compound was not detected in the associated samples.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: VOC and SVOC continuing calibration %Ds exceeded 20%. GRO was detected in the VOC method blank. The VOC LCS/LCSD had a noncompliant %R.

Other Factors Affecting Data Quality: Results below the RL were estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MRC SOIL REMEDY

Report Number: 240-84753-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 9/9/2017 9:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.6º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples SB-121A-26.5-28.5' (240-84753-1), SB-121B-30.5-32.5' (240-84753-2), SB-118A-10-13' (240-84753-3), SB-118B-53-55' (240-84753-4), SB-120B-43-45' (240-84753-5) and SB-120B-48-50' (240-84753-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared and analyzed on 09/13/2017.

1,2,3-Trimethylbenzene was detected in method blank MB 240-294570/11 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for preparation batch 240-294587 and analytical batch 240-294570 recovered outside control limits for the following analyte: 1,2,3-Trimethylbenzene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples SB-121A-26.5-28.5' (240-84753-1), SB-121B-30.5-32.5' (240-84753-2), SB-118A-10-13' (240-84753-3), SB-118B-53-55' (240-84753-4), SB-120B-43-45' (240-84753-5) and SB-120B-48-50' (240-84753-6) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 09/12/2017 and analyzed on 09/14/2017.

The target analyte pentachlorophenol had a %D outside acceptance criteria in the CCV associated with analytical batch 294777. An LODV was analyzed to demonstrate sensitivity for this compound at the reporting limit thus supporting any ND results. The following samples were affected: SB-121A-26.5-28.5' (240-84753-1), SB-121B-30.5-32.5' (240-84753-2), SB-118A-10-13' (240-84753-3), SB-118B-53-55' (240-84753-4), SB-120B-43-45' (240-84753-5) and SB-120B-48-50' (240-84753-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS

Overview

The sample set for LMC-MRC, SDG 240-81286-1 consisted of two (2) aqueous environmental samples. The samples were analyzed for volatile organic compounds (VOC). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech on September 20, 2017 and analyzed by TestAmerica, Inc. All analyses were conducted in accordance with analytical and reporting protocols for SW-846 Method 8260C.

The data contained in this SDG were validated with regard the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method/preparation blanks, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, matrix spike/matrix spike duplicate results, internal standard areas and recoveries, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major – None.

Minor

- VOC continuing calibration percent difference (%D) was greater than quality control (QC) limits (20%) on 9/27/2017 at 17:35 for cyclohexane affecting all samples. All results for cyclohexane were nondetect and were qualified as estimated (UJ).

- Detected results reported below the RL limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

Non-detected results were reported to the MDL.

Methylene chloride was detected in the laboratory method blank at the following maximum concentration:

Maximum Concentration (µg/L)	Action Level (µg/L)
1.2	12

An action level of 10X the maximum contaminant level for the common lab contaminant has been used to evaluate sample data for blank contamination. Sample dilution factor, if applicable, was taken into consideration when evaluating for blank contamination. No action was taken as methylene chloride was nondetect in all samples.

Matrix spike/matrix spike duplicate (MS/MSD) relative percent difference was outside QC limits. No action was taken as MS/MSD percent recoveries were acceptable.

Executive Summary

Laboratory Performance: Calibration noncompliance was noted for VOCs. Methylene chloride was present in the laboratory blank.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: LMC Assessment

Report Number: 240-85360-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 9/22/2017 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DPT-1A-40-45' (240-85360-1) and DPT-2D-45-50' (240-85360-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 09/27/2017.

Methylene Chloride was detected in method blank MB 240-296578/8 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) analyzed in batch 240-296578 was outside the method criteria for cyclohexane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The method blank for analytical batch 240-296578 contained methylene chloride above the reporting limit (RL). This compound is considered a common laboratory contaminant. The associated samples were not re-extracted and/or re-analyzed because the concentration of the common lab contaminant in the method blank was less than 5 times the RL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

MRC-BLOCK E – FULL REVIEW
SAMPLE DELIVERY GROUP (SDG) 240-84819-1

SB-131B-33-35'

OVERVIEW

The sample set for MRC-Block E, SDG 240-84819-1, consists of four (4) soil environmental samples. All samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), diesel range organics (DRO), and gasoline range organics (GRO). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on September 9 and 10, 2017, and analyzed by TestAmerica. Analyses were conducted in accordance with SW-846 Methods 8260C (for VOCs), 8207D (for SVOCs), and 8015C (for DRO and GRO) analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blanks, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The VOC continuing calibration performed on 09/13/17 at 09:29 on instrument A3UX14 had a percent difference (%D) for methylene chloride that was greater than the 20% quality control limit. All samples were associated with this calibration. Non-detected results for methylene chloride were qualified as estimated (UJ) in all samples.

- The following VOC analyte was detected in the method blank at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Acetone	5.29 ug/kg	52.9 ug/kg

An action level of 10x the maximum concentration of the common laboratory contaminant acetone was used to evaluate sample data for blank contamination. Sample percent solids and dilution factors, if applicable, were considered in evaluating for blank contamination. The detected result for acetone in sample SB-119A-10-12.5' was less than the action level and was qualified as non-detected due to blank contamination.

- Tentatively identified compounds (TICs) were identified in several VOC samples. TICs were qualified as estimated (NJ) and these compounds are assumed to be presumptively present.

- Detected results below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Sample SB-122A-13-15' is listed on the chain of custody but is marked as hold.

Non-detected results were reported to the MDL.

In the VOC fraction, the following compounds were not listed on the laboratory control sample (LCS) Form III: 1,2,3-trimethylbenzene, diisopropyl ether, ethyl tert-butyl ether, and tert-amyl methyl ether. These compounds were included in the database and on the LCS Form I, which is in Appendix C of this report.

Although not included on the VOC LCS Form III, the database results for LCS 240-294629/6 and case narrative report indicate the LCS percent recovery (%R) for diisopropyl ether was greater than the laboratory quality control limits. All samples were associated with this LCS. No action was necessary because diisopropyl ether was non-detected in the associated samples.

The following TICs were detected in the method blank at the following maximum concentrations:

TIC	Concentration
Acetonitrile	7.08 ug/kg
Hexane	0.504 ug/kg
2-Methylnaphthalene	2.15 ug/kg

No action was taken on this basis.

The SVOC continuing calibration performed on 09/16/17 at 10:30 on instrument A4HP9 had a %D for dibenzo(a,h)anthracene that was greater than the 20% quality control limit. No action was necessary because no environmental samples from this SDG were associated with this calibration.

Sample SB-117A-33-35' was incorrectly recorded on the chain of custody record. The sample ID should have been MW131B. The laboratory updated the data report and the database was revised.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Non-detected results for one VOC analyte were qualified due to calibration noncompliance. One VOC result was qualified as non-detected due to laboratory blank contamination.

Other Factors Affecting Data Quality: TIC results were qualified as estimated and assumed to be presumptively present. Detected results below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

QUALIFIED ANALYTICAL RESULTS

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted method detection limit for sample and method.
J	The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: LM MRC

Report Number: 240-84819-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 9/12/2017 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples SB-119A-10-12.5' (240-84819-1), SB-119B-56-58' (240-84819-2), SB-117A-33-35' (240-84819-3) and SB-117B-47-50' (240-84819-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were prepared and analyzed on 09/13/2017.

Acetone was detected in method blank MB 240-294629/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) analyzed in batch 240-294629 was outside the method criteria for the following analytes: Pentachloroethane and Acetonitrile. An MRL standard at or below the reporting limit (RL) was analyzed with the affected samples SB-119A-10-12.5' (240-84819-1), SB-119B-56-58' (240-84819-2), SB-117A-33-35' (240-84819-3), SB-117B-47-50' (240-84819-4), (CCV 240-294629/4), (CCVIS 240-294629/3), (LCS 240-294629/5), (LCS 240-294629/6) and (MB 240-294629/7) and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample (LCS) for preparation batch 240-294658 and analytical batch 240-294629 recovered outside control limits for the following analytes: Isopropyl Ether. These analytes were biased high in the LCS and were not detected in the associated samplesSB-119A-10-12.5' (240-84819-1), SB-119B-56-58' (240-84819-2), SB-117A-33-35' (240-84819-3), SB-117B-47-50' (240-84819-4), (LCS 240-294629/5), (LCS 240-294629/6) and (MB 240-294629/7) ; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples SB-119A-10-12.5' (240-84819-1), SB-119B-56-58' (240-84819-2), SB-117A-33-35' (240-84819-3) and SB-117B-47-50' (240-84819-4) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 09/14/2017 and analyzed on 09/18/2017.

The continuing calibration verification (CCV) associated with batch 240-295100 recovered above the upper control limit for Dibenz(a,h)anthracene. The samples associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported. The following sample is impacted: (MB 240-294797/23-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Samples SB-119A-10-12.5' (240-84819-1), SB-119B-56-58' (240-84819-2), SB-117A-33-35' (240-84819-3) and SB-117B-47-50' (240-84819-4) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were prepared and analyzed on 09/13/2017 and 09/15/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The samples were prepared on 09/21/2017 and analyzed on 09/22/2017 and 09/23/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples SB-119A-10-12.5' (240-84819-1), SB-119B-56-58' (240-84819-2), SB-117A-33-35' (240-84819-3) and SB-117B-47-50' (240-84819-4) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 09/13/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
