Purge Vol: 500.000 mL

Dil. Factor: 1.0000

ALS Bottle#: 14

Method: MG_TO15

Limit Group: MSA TO14A_15 Routine ICAL

Column: RTX-5 (0.32 mm)

TestAmerica Knoxville

Data File: \\chromna\Knoxville\ChromData\MG\20190109-10492.b\GA11IC08.D

Injection Date: 11-Jan-2019 21:51:30

Instrument ID: MG

Lims ID: IC L8

Client ID:

Operator ID: 007126

ALS Bottle#: 14

Worklist Smp#: 16

Purge Vol: 500.000 mL

Dil. Factor: 1.0000

Method: MG_TO15

Limit Group: MSA TO14A_15 Routine ICAL

Column: RTX-5 (0.32 mm)

Detector: MS SCAN

A 122 C8 Range, CAS: STL00834

Instrument/Date	MG 2/26/2019		Routine	DOD	OHIO VAP
CCAL Chrom WL #	10931	CCAL Batch #	27931		
ICAL Chrom WL #	10492	ICAL Batch # / Event #	26755 / 1781	/	/
Chrom Review			1st	If No, why is data reportable?	2nd
1. Are the reagents & init/final volumes correct? (Verify reagents & amt. injected) [WL Sample Reagent Tab]			/		na
2. Did BFB meet tune criteria? [F8]			/	<input type="checkbox"/> [Failed TO-14A, but passes TO-15]	/
3. Was the CCAL compared to the most recent & correct ICAL (correct last ICAL File batch #/start/end Cal date/time)? [F8]			/	List Target analytes outside CCV limits: _____ _____	/
4. Elution order checked on isomeric pairs? [Chrom]					
• dichlorodifluoromethane / 1,2-dichlorotetrafluoroethane			/		/
• 2-methyl butane / acrolein			/		/
• trichlorofluoromethane / 1,1,2-trichlorotrifluoroethane			/		/
• vinyl acetate / hexane			/		/
• cis- and trans- isomers			/		/
• ethyl benzene / m/p-xylene / o-xylene			/		/
• n-propylbenzene/4-ethyl toluene/1,3,5-trimethylbenzene/1,2,4-trimethylbenzene/sec-butylbenzene/1,2,3-trimethylbenzene			/		/
• tert-butylbenzene/4-isopropyltoluene			/		/
• 1,3-, 1,4-, and 1,2-dichlorobenzene			/		/
• 1,2-dimethyl-4-ethylbenzene/1,2,4,5-, 1,2,3,5-, and 1,2,3,4-tetramethylbenzenes			NA		NA
• 1,2,4-trichlorobenzene/1,2,3-trichlorobenzene			/		/
• 2-, and 1-methylnaphthalene			/		/
5. "Range" analytes & internal standard RIC ID'd correctly, inspected for interferences & proper integration?			NA		NA
6. Has the RT been updated to the method?			/		/
Analyst/date	Suphawan K 2/27/2019		2nd Level Reviewer/date W 03/01/19		
7. Has the vol injected been verified vs Entech & corrected if actual amount differs >5%? [WL Sample Info: init amt = sample amt; final amt = 500 mL]			/		/
8. Do the lab ID, Info 1 and Dilution Factor columns correlate in Chrom? [Sample List - Lab ID vs. Info 1 vs. Dilution]			/		/
9. Can dilution history verified? [Mgmt Report]			/		/
10. Are all analytes present in the system blank < RL? (<1/2 RL for DoD). If no, list blank ID:			/	<input type="checkbox"/> Method Blank - Report, ND (NCM# _____) <input type="checkbox"/> Method Blank - Report, 10X (NCM# _____)	/
11. All runs - peaks ID'd correctly and false positives removed?			/		/
12. If manual integrations performed, are they properly performed, baseline clearly identified, and correct reason given?			/		/
13. IS/Surr within limits? List samples and reason (e.g., 1 thru 5): [Batch Results IS & SUR Tab]			/	<input type="checkbox"/> (1) Surrogate - Matrix (NCM# _____) <input type="checkbox"/> (2) Surrogate - High, ND (NCM# _____) <input type="checkbox"/> (3) ISTD - RA/RA Concur (NCM# _____) <input type="checkbox"/> (4) Surrogate -RX concur, Report both (NCM# _____) <input type="checkbox"/> (5) ISTD - Matrix, DL required (NCM# _____)	/
Sample Reason Sample Reason					
14. Samples outside calibration range scheduled for dilution?			NA	<input type="checkbox"/> ICAL - Range Exceeded; Minimum Dilution	NA
Chrom Review			1st	If No, why is data reportable?	2nd
15. For first analysis that is at a dilution, is highest target analyte >20% cal range? List samples and reason:			/	<input type="checkbox"/> (1) Reporting Limit - Dilution, Matrix (NCM# _____) <input type="checkbox"/> (2) Reporting Limit - Dilution, Non-Target (NCM# _____) <input type="checkbox"/> (3) Issues with initial collection volume; see DRC.	/
Sample Reason Sample Reason					
16. RIC inspected for proper integration for TPH?			NA		NA
17. Obvious non-TPH peaks excluded?			/		/
18. Individual TPH peak area < octane high point area?			/		/

TESTAMERICA KNOXVILLE SAMPLE RECEIPT/CONDITION UPON RECEIPT ANOMALY CHECKLIST

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Are the shipping containers intact?	/			<input type="checkbox"/> Containers, Broken	
2. Were ambient air containers received intact?			/	<input checked="" type="checkbox"/> Checked in lab	
3. The coolers/containers custody seal if present, is it intact?	/			<input type="checkbox"/> Yes <input type="checkbox"/> NA	
4. Is the cooler temperature within limits? (> freezing temp. of water to 6°C, VOST: 10°C) Thermometer ID: _____ Correction factor: _____			/	<input type="checkbox"/> Cooler Out of Temp, Client Contacted, Proceed/Cancel <input type="checkbox"/> Cooler Out of Temp, Same Day Receipt	
5. Were all of the sample containers received intact?	/			<input type="checkbox"/> Containers, Broken	
6. Were samples received in appropriate containers?	/			<input type="checkbox"/> Containers, Improper; Client Contacted; Proceed/Cancel	
7. Do sample container labels match COC? (IDs, Dates, Times)	/			<input type="checkbox"/> COC & Samples Do Not Match <input type="checkbox"/> COC Incorrect/Incomplete <input type="checkbox"/> COC Not Received	
8. Were all of the samples listed on the COC received?	/			<input type="checkbox"/> Sample Received, Not on COC <input type="checkbox"/> Sample on COC, Not Received	
9. Is the date/time of sample collection noted?	/			<input type="checkbox"/> COC; No Date/Time; Client Contacted	Labeling Verified by: _____ Date: _____
10. Was the sampler identified on the COC?	/			<input type="checkbox"/> Sampler Not Listed on COC	pH test strip lot number: _____
11. Is the client and project name/# identified?	/			<input type="checkbox"/> COC Incorrect/Incomplete	
12. Are tests/parameters listed for each sample?	/			<input type="checkbox"/> COC No tests on COC	
13. Is the matrix of the samples noted?	/			<input type="checkbox"/> COC Incorrect/Incomplete	
14. Was COC relinquished? (Signed/Dated/Timed)	/			<input type="checkbox"/> COC Incorrect/Incomplete	Box 16A: pH Preservation Box 18A: Residual Chlorine
15. Were samples received within holding time?	/			<input type="checkbox"/> Holding Time - Receipt	Preservative: _____
16. Were samples received with correct chemical preservative (excluding Encore)?			/	<input type="checkbox"/> pH Adjusted, pH Included (See box 16A) <input type="checkbox"/> Incorrect Preservative	Lot Number: _____ Exp Date: _____ Analyst: _____
17. Were VOA samples received without headspace?			/	<input type="checkbox"/> Headspace (VOA only) <input type="checkbox"/> Residual Chlorine	Date: _____ Time: _____
18. Did you check for residual chlorine, if necessary? (e.g. 1613B, 1668) Chlorine test strip lot number: _____			/		
19. For 1613B water samples is pH<9?			/	<input type="checkbox"/> If no, notify lab to adjust	
20. For rad samples was sample activity info. Provided?			/	<input type="checkbox"/> Project missing info

APPENDIX D—DATA VALIDATION REPORTS

TO: S. BRENNER
DATE: 5/7/19

PAGE 2
SDG 140-14386-1

NOTES

Twenty-five VOC target compounds were reported for the TO-15 analysis of the samples.

Non-detected results were reported to the MDL.

The following VOC samples/analytes were analyzed at dilution factors greater than 1:

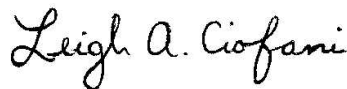

Sample	Dilution Factor
IA-117-A-26	1.66
IA-168-A-26	1.57

EXECUTIVE SUMMARY

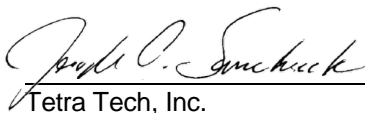

Laboratory Performance: Some VOC results were qualified due to calibration noncompliance. Some results for one analyte were qualified due to chromatographic interference noted by the laboratory.

Other Factors Affecting Data Quality: Results above the MDL but below the RL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and USEPA Method TO-15 analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

- Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate
- Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
- Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Appendix C

Support Documentation

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: MRC Indoor Air - MRC

TestAmerica Job ID: 140-14386-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
CI	The peak identified by the data system exhibited chromatographic interference that could not be resolved. There is reason to suspect there may be a high bias.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job Narrative
140-14386-1

Receipt

The samples were received on 2/23/2019 at 10:10 AM. The samples arrived in good condition and properly preserved.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The COC listed canister asset number as 12276, but it should be 11276.

Air - GC/MS VOA - Method TO-15LL

EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

No additional comments.

SUBJECT: ORGANIC DATA VALIDATION – VOC
LOCKHEED MARTIN CORPORATION (LMC) – MIDDLE RIVER COMPLEX (MRC)
SAMPLE DELIVERY GROUP (SDG) 140-14387-1

SAMPLES: 16 / Air / VOC

SV-081-A-26	SV-093-A-26	SV-116-A-26
SV-138-A-26	SV-171-A-26	SV-173-A-26
SV-174-A-26	SV-179-MB-3	SV-180-MB-3
SV-181-MB-3	SV-182-MB-3	SV-183-MB-3
SV-184-MB-3	SV-185-MB-3	SV-186-MB-3
SV-DUP03-A-26		

OVERVIEW

The sample set for LMC – MRC, SDG 140-14387-1, consists of sixteen (16) soil vapor (SV) environmental samples. All samples were analyzed for select volatile organic compounds (VOCs). One (1) field duplicate pair is included in this SDG: SV-116-A-26 / SV-DUP03-A-26.

The samples were collected by Tetra Tech on February 21, 2019, and analyzed by TestAmerica. All analyses were conducted in accordance with EPA Method TO-15 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, laboratory control sample results, internal standard areas, field duplicate precision, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The continuing calibration performed on 02/25/19 at 09:47 on instrument MH had percent differences (%Ds) for 1,2,4-trichlorobenzene and naphthalene that were greater than the 20% quality control limit. Samples SV-180-MB-3, SV-179-MB-3, SV-181-MB-3, SV-182-MB-3, SV-183-MB-3, SV-184-MB-3, SV-185-MB-3, SV-186-MB-3, SV-116-A-26, SV-DUP03-A-26, SV-138-A-26, SV-093-A-26, SV-173-A-26, SV-174-A-26, SV-171-A-26, and SV-081-A-26 were affected. Detected and non-detected results for these analytes were qualified as estimated (J and UJ, respectively) in the affected samples.
- The laboratory control sample (LCS) associated with preparation batch 140-27935 had a percent recovery (%R) for naphthalene that was less than the laboratory quality control limits. The following samples were affected: SV-180-MB-3, SV-179-MB-3, SV-181-MB-3, SV-182-MB-3, SV-183-MB-3, SV-184-MB-3, SV-185-MB-3, SV-186-MB-3, SV-116-A-26, SV-DUP03-A-26, SV-138-A-26, SV-093-A-26, SV-173-A-26, SV-174-A-26, SV-171-A-26, and SV-081-A-26. The non-detected naphthalene results were qualified as estimated (UJ) in the affected samples.

PAGE 2
SDG 140-14387-1

- The laboratory qualified the results for 1,3,5-trimethylbenzene in sample SV-185-MB-3 with a "C1" qualifier. According to the laboratory report, this qualifier indicates that the peak identified by the data system exhibited chromatographic interference that could not be resolved, and there is reason to suspect there may be a high bias. This result was qualified as estimated (J+) with a high bias on this basis.
- Detected results reported below the RL but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Twenty-five VOC target compounds were reported for the TO-15 analysis of the samples.

Non-detected results were reported to the MDL.

The chain of custody includes a sample SV-187-MB-3 but notes that this sample was not collected due to issue opening vapor canister.

The chain of custody includes a sample SV-170-A-26. The laboratory case narrative notes that this sample was not received.

The result for 1,2,3-trimethylbenzene in sample SV-081-A-26 exceeded the instrument calibration range during the initial analysis. The result was reported from the reanalysis.

The result for trichloroethene in sample SV-171-A-26 exceeded the instrument calibration range during the initial analysis. The result was reported from the reanalysis.

The results for 1,1-dichloroethene and trichloroethene in sample SV-173-A-26 exceeded the instrument calibration range during the initial analysis. The results were reported from the reanalysis.

The results for 1,1-dichloroethane in samples SV-182-MB-3 and SV-183-MB-3 exceeded the instrument calibration range during the initial analysis. The results were reported from the reanalyses.

The initial calibration performed on 01/11/19 on instrument MG had a percent relative standard deviation (%RSD) that was greater than the 30% quality control limit for methylene chloride. The reanalyses of samples SV-182-MB-3, SV-173-A-26, and SV-171-A-26 were affected. No qualification was necessary because no methylene chloride results were reported from these analyses.

The following analyte was detected in the method blanks at the following concentrations:

<u>Analyte</u>	<u>Maximum Concentration</u>	<u>< or > RL</u>
1,2,4-Trichlorobenzene	0.513 ug/m ³⁽¹⁾	< RL
1,2,4-Trichlorobenzene	0.505 ug/m ³⁽²⁾	< RL

1 - Concentration detected in method blank associated with preparation batch 140-27980 affecting the reanalysis of sample SV-081-A-26 DL.

2 - Concentration detected in method blank associated with preparation batch 140-27981 affecting the reanalysis of SV-183-MB-3.

No qualification was necessary because no results for 1,2,4-trichlorobenzene were reported from these reanalyses.

PAGE 3
SDG 140-14387-1

EXECUTIVE SUMMARY

Laboratory Performance: Some results were qualified due to calibration noncompliance. Some VOC results were qualified due to LCS noncompliance. One result for one analyte was qualified due to chromatographic interference noted by the laboratory.

Other Factors Affecting Data Quality: Results above the MDL but below the RL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and USEPA Method TO-15 analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

Qualified Analytical Results

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate
- Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
- Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Support Documentation

Job Narrative
140-14387-1

Receipt

The samples were received on 2/23/2019 at 10:10 AM. The samples arrived in good condition and properly preserved.

Receipt Exceptions

Sample SV-170-A-26 (140-14387-17) was listed on the Chain of Custody (COC); however, no sample was received.

Per note on the Chain of Custody, sample SV-187-MB-3 was not logged for analysis.

Air - GC/MS VOA - Method TO-15 LL

EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

The continuing calibration verification (CCV) associated with batch 140-27935 exhibited % difference of > 30% for the following analytes 1,2,4-Trichlorobenzene and Naphthalene; however, the results were within the LCS acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. According to the laboratory standard operating procedure, the continuing calibration is acceptable if it meets the laboratory control sample acceptance criteria.

Naphthalene recovered outside control limits for the LCS associated with analytical batch 140-27935. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

No additional comments.

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: MRC Indoor Air, MRC

TestAmerica Job ID: 140-14387-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
E	Result exceeded calibration range.
CI	The peak identified by the data system exhibited chromatographic interference that could not be resolved. There is reason to suspect there may be a high bias.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Log In Number:

Page 236 of 236

03/07/2019

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Are the shipping containers intact?	/		/	<input type="checkbox"/> Containers, Broken	8, SV-170-A-26
2. Were ambient air containers received intact?			/	<input checked="" type="checkbox"/> Checked in lab	
3. The coolers/containers custody seal if present, is it intact?	/			<input type="checkbox"/> Yes <input type="checkbox"/> NA	
4. Is the cooler temperature within limits? (> freezing temp. of water to 6°C, VOST: 10°C) Thermometer ID : _____ Correction factor: _____			/	<input type="checkbox"/> Cooler Out of Temp, Client Contacted, Proceed/Cancel <input type="checkbox"/> Cooler Out of Temp, Same Day Receipt	
5. Were all of the sample containers received intact?	/			<input type="checkbox"/> Containers, Broken	
6. Were samples received in appropriate containers?	/			<input type="checkbox"/> Containers, Improper; Client Contacted; Proceed/Cancel	
7. Do sample container labels match COC? (IDs, Dates, Times)	/			<input type="checkbox"/> COC & Samples Do Not Match <input type="checkbox"/> COC Incorrect/Incomplete <input type="checkbox"/> COC Not Received	
8. Were all of the samples listed on the COC received?	/	/		<input type="checkbox"/> Sample Received, Not on COC <input checked="" type="checkbox"/> Sample on COC, Not Received	
9. Is the date/time of sample collection noted?	/			<input type="checkbox"/> COC; No Date/Time; Client Contacted	
10. Was the sampler identified on the COC?	/			<input type="checkbox"/> Sampler Not Listed on COC	
11. Is the client and project name/# identified?	/			<input type="checkbox"/> COC Incorrect/Incomplete	
12. Are tests/parameters listed for each sample?	/			<input type="checkbox"/> COC No tests on COC	
13. Is the matrix of the samples noted?	/			<input type="checkbox"/> COC Incorrect/Incomplete	
14. Was COC relinquished? (Signed/Dated/Timed)	/			<input type="checkbox"/> COC Incorrect/Incomplete	
15. Were samples received within holding time?	/			<input type="checkbox"/> Holding Time - Receipt	
16. Were samples received with correct chemical preservative (excluding Encore)?			/	<input type="checkbox"/> pH Adjusted, pH Included (See box 16A) <input type="checkbox"/> Incorrect Preservative	
17. Were VOA samples received without headspace?			/	<input type="checkbox"/> Headspace (VOA only)	
18. Did you check for residual chlorine, if necessary? (e.g. 1613B, 1668) Chlorine test strip lot number: _____			/	<input type="checkbox"/> Residual Chlorine	
19. For 1613B water samples is pH<9?			/	<input type="checkbox"/> If no, notify lab to adjust	
20. For rad samples was sample activity info. Provided?			/	<input type="checkbox"/> Project missing info	

Labeling Verified by: _____		Date: _____	
pH test strip lot number: _____			
Box 16A: pH Preservation		Box 18A: Residual Chlorine	
Preservative: _____		Lot Number: _____	
Exp Date: _____		Analyst: _____

OVERVIEW

The sample set for LMC – MRC, SDG 140-14389-1, consists of eighteen (18) soil vapor (SV) environmental samples. All samples were analyzed for select volatile organic compounds (VOCs). Three (3) field duplicate pairs are included in this SDG: SV-131-C-26 / SV-DUP01-C-26, SV-153-C-26 / SV-DUP02-C-26, and SV-079-A-26 / SV-DUP04-A-26.

The samples were collected by Tetra Tech on February 19 and 21, 2019, and analyzed by TestAmerica. All analyses were conducted in accordance with EPA Method TO-15 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, laboratory control sample results, internal standard areas, field duplicate precision, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

MAJOR PROBLEMS

- None.

MINOR PROBLEMS

- The initial calibration performed on 01/11/19 on instrument MG had a percent relative standard deviation (%RSD) that was greater than the 30% quality control limit for methylene chloride. Samples SV-079-A-26, SV-DUP04-A-26, SV-131-C-26, SV-DUP01-C-26, SV-001-C-26, SV-004-C-26, SV-102-C-26, and SV-155-C-26 were affected. Detected and non-detected methylene chloride results were qualified as estimated (J and UJ, respectively) in the affected samples.
- The laboratory qualified the results for chlorodifluoromethane in samples SV-152-C-26 and SV-DUP04-A-26 with a “CI” qualifier. According to the laboratory report, this qualifier indicates that the peak identified by the data system exhibited chromatographic interference that could not be resolved, and there is reason to suspect there may be a high bias. These results were qualified as estimated (J+) with a high bias on this basis.
- Detected results reported below the RL but above the method detection limit (MDL) were qualified as estimated (J).

TO: S. BRENNER
DATE: 04/19/19

PAGE 2
SDG 140-14389-1

NOTES

Twenty-five VOC target compounds were reported for the TO-15 analysis of the samples.

Non-detected results were reported to the MDL.

The laboratory case narrative notes that the chain of custody The COC listed a canister asset number as 11785, but it should be 11745 and listed a canister asset number as 11745, but it should be 11721.

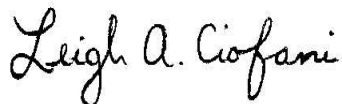

Sample SV-102-C-26 was analyzed at a dilution factor of 3.7.

EXECUTIVE SUMMARY

Laboratory Performance: Some results were qualified due to calibration noncompliance. Two results for one analyte were qualified due to chromatographic interference noted by the laboratory.

Other Factors Affecting Data Quality: Results above the MDL but below the RL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and USEPA Method TO-15 analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

Qualified Analytical Results

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate
- Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
- Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Support Documentation

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: MRC Indoor Air, MRC

TestAmerica Job ID: 140-14389-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
CI	The peak identified by the data system exhibited chromatographic interference that could not be resolved. There is reason to suspect there may be a high bias.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job Narrative
140-14389-1

Receipt

The samples were received on 2/23/2019 at 10:10 AM. The samples arrived in good condition and properly preserved.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The COC listed a canister asset number as 11785, but it should be 11745.

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The COC listed a canister asset number as 11745, but it should be 11721.

Air - GC/MS VOA - Method TO-15 LL

Method(s) TO 15 LL, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

No additional comments.

SV-101-B-26 SV-118-A-26 SV-126-C-26
SV-136-A-26 SV-168-A-26

Overview

The sample set for LMC – MRC, SDG 140-14390-1 consisted of four (4) background air, three (3) indoor air, and eleven (11) soil vapor samples. All eighteen (18) samples were analyzed for select Volatile Organic Compounds (VOC). One field duplicate sample pair was included in this SDG: IA-DUP01-C-26 (SDG 140-14391-1)/IA-131-C-26.

The samples were collected by Tetra Tech, Inc. on February 19 & 21, 2018 and analyzed by TestAmerica. All analyses were conducted in accordance with EPA Method TO-15 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times/sample preservation, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike results, laboratory control sample results, internal standard areas, field duplicate precision, chromatographic resolution, compound identification, and detection limits. Areas of concern are listed below.

Major

- Sample IA-131-C-26 was received with the canister valve in the open position. The samples were at ambient pressure (approximately 0 psi). As stated in the laboratory case narrative, the integrity of the samples could have been jeopardized due to changes in ambient pressure after the sample was taken. The client was contacted and told the laboratory to proceed with the analyses. The detected results were qualified as estimated, (J). The non-detected results were qualified as rejected, (R). It should be noted that a field duplicate (IA-DUP01-C-26) was collected at this location.

Minor

- The differences between the detected and/or non-detected results for toluene and total xylenes exceeded 2X the Reporting Limit (RL) in the field duplicate pair IA-DUP01-C-26/IA-131-C-26. The detected and non-detected results reported for these compounds in the field duplicate pair were qualified as estimated, (J) and (UJ), respectively. Comparability of results for this field pair is limited because the original sample arrived at the laboratory with the valve on the canister open.
- The laboratory indicated that the peaks for chlorodifluoromethane in sample SV-101-B-26 and 1,3,5-trimethylbenzene in sample SV-168-A-26 identified by the data system exhibited chromatographic interference that could not be resolved. The detected results reported for these compounds in the associated samples were qualified as estimated with a high bias, (J+).
- Detected results reported below the RL limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The compound, 1,2,4-trichlorobenzene, was detected in the laboratory method blank, MB 140-27980/5. No action was necessary because this compound was not detected in the associated sample.

All initial and continuing calibration criteria were acceptable.

All internal standard areas were within $\pm 40\%$ of the standard.

The surrogate spike compound and Laboratory Control Sample (LCS) had Percent Recoveries (%Rs) within the quality control limits.

The following compounds exceeded the calibration range of the instrument and were reported from dilutions:

<u>Sample</u>	<u>Compound</u>
SV-060-C-26	Trichloroethene
SV-118-A-26	1,1-Dichloroethene
	Trichloroethene
SV-126-C-26	1,1-Dichloroethene
	Vinyl Chloride

Twenty-five VOC target compounds were reported for the TO-15 analysis of the samples.

All sample canisters opened to approximately -30 psig (-26 to -30 psig) and finished at between -6 to -0 psig.

Non-detected results were reported to the MDL. Sample IDs for SV-100-B-26 and SV-101-B-26 were incorrectly identified with a "C" on the chain of custody records.

Executive Summary

Laboratory Performance: 1,2,4-Trichlorobenzene was detected in a laboratory method blank. Two compound results were biased high because chromatographic interference could not be resolved.

Other Factors Affecting Data Quality: The sample integrity of one sample was compromised because the valve was open upon sample receipt. Field duplicate imprecision was noted for two compounds. Some samples were further diluted. Results below the RL were estimated.

SDG: 140-14390-1

PAGE 3

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017) and EPA Method TO-15 analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Appendix A

Qualified Analytical Results

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate
- Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
- Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Job Narrative
140-14390-1

Receipt

The samples were received on 2/23/2019 at 10:10 AM. The samples arrived in good condition and properly preserved.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The COC listed a canister asset number as 10796, but it should be 10960.

Samples IA-131-C-26 (140-14390-18) and IA-113-C-26 (140-14391-16) were received with the canister valve in the open position. The samples were at ambient pressure (approximately 0 psi). The samples' integrity could have been jeopardized due to changes in ambient pressure after the sample was taken (i.e., ambient air not associated with the sampling event could have been introduced into the canisters at any point after the sampling was completed).

The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

Air - GC/MS VOA - Method TO-15 LL

Method(s) TO 15 LL, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

No additional comments.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
CI	The peak identified by the data system exhibited chromatographic interference that could not be resolved. There is reason to suspect there may be a high bias.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Summa Canister Dilution Worksheet

Client: Tetra Tech, Inc.

Job No.: 140-14390-1

Lab Sample ID	Canister Volume (L)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Date	Time	Analyst
140-14390-11	1	-8.6	0.71	0.71	2.8	1.19	1.19		1.67	1.67	02/25/19	16:43	Barlozhetskaya, Anna F

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg

Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig

Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury ("Hg)

14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

IA-DUP01-C-26	IA-DUP02-C-26	

Overview

The sample set for LMC - MRC, SDG 140-14391-1 consisted of twenty (20) indoor air samples. All twenty (20) samples were analyzed for select Volatile Organic Compounds (VOC). Two field duplicate sample pairs were included in this SDG: IA-DUP01-C-26/IA-131-C-26 (SDG 240-14390-1) and IA-DUP02-C-26/IA-153-C-26.

The samples were collected by Tetra Tech, Inc. on February 19, 2018 and analyzed by TestAmerica. All analyses were conducted in accordance with EPA Method TO-15 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times/sample preservation, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike results, laboratory control sample results, internal standard areas, field duplicate precision, chromatographic resolution, compound identification, and detection limits. Areas of concern are listed below.

Major

- Sample IA-113-C-26 was received with the canister valve in the open position. The samples were at ambient pressure (approximately 0 psi). As stated in the laboratory case narrative, the integrity of the samples could have been jeopardized due to changes in ambient pressure after the sample was taken. The client was contacted and told the laboratory to proceed with the analyses. The detected results were qualified as estimated, (J). The non-detected results were qualified as rejected, (R).

Minor

- The initial calibration performed on instrument MG on 01/11/2019 had a Percent Relative Standard Deviation (%RSD) for methylene chloride which exceeded the 30% quality control limit. The detected results reported for this compound in the affected samples, IA-100-B-26 and IA-101-B-26, were qualified as estimated, (J).
- The differences between the detected and/or non-detected results for toluene and total xylenes exceeded 2X the Reporting Limit (RL) in the field duplicate pair IA-DUP01-C-26/IA-131-C-26. The

TO: S. BRENNER
SDG: 140-14391-1

PAGE 2

detected and non-detected results reported for these compounds in the field duplicate pair were qualified as estimated, (J) and (UJ), respectively. Comparability of results for this field pair is limited because the original sample arrived at the laboratory with the valve on the canister open.

- The laboratory indicated that the peak for chlorodifluoromethane identified by the data system exhibited chromatographic interference that could not be resolved in samples IA-141-C-26, IA-142-C-26, IA-144-C-26, IA-145-C-26, IA-146-C-26, IA-150-C-26, IA-152-C-26, and IA-DUP02-C-26. The detected results reported for this compound in the associated samples were qualified as estimated with a high bias, (J+).
- Detected results reported below the RL limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The compound, 1,2,4-trichlorobenzene, was detected in the laboratory method blank, MB 140-27980/5. No action was necessary because this compound was not detected in the associated sample.

All continuing calibration criteria were acceptable.

All internal standard areas were within $\pm 40\%$ of the standard.

The surrogate spike compound and Laboratory Control Sample (LCS) had Percent Recoveries (%Rs) within the quality control limits.

Twenty-five VOC target compounds were reported for the TO-15 analysis of the samples.

All sample canisters opened to approximately -30 psig (-25 to -30 psig) and finished at between -11 to -0 psig.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: Some detected results for chlorodifluoromethane were biased high because chromatographic interference could not be resolved.

Other Factors Affecting Data Quality: The sample integrity of one sample was compromised because the valve was open upon sample receipt. Field duplicate imprecision was noted in one field duplicate pair. Results below the RL were estimated.

SDG: 140-14391-1

PAGE 3

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017) and EPA Method TO-15 analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Appendix A

Qualified Analytical Results

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate
- Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
- Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Are the shipping containers intact?	/			<input type="checkbox"/> Containers, Broken	
2. Were ambient air containers received intact?			/	<input checked="" type="checkbox"/> Checked in lab	
3. The coolers/containers custody seal if present, is it intact?	/			<input type="checkbox"/> Yes <input type="checkbox"/> NA	
4. Is the cooler temperature within limits? (> freezing temp. of water to 6°C, VOST: 10°C) Thermometer ID : _____ Correction factor: _____			/	<input type="checkbox"/> Cooler Out of Temp, Client Contacted, Proceed/Cancel <input type="checkbox"/> Cooler Out of Temp, Same Day Receipt	
5. Were all of the sample containers received intact?	/			<input type="checkbox"/> Containers, Broken	
6. Were samples received in appropriate containers?	/			<input type="checkbox"/> Containers, Improper; Client Contacted; Proceed/Cancel	
7. Do sample container labels match COC? (IDs, Dates, Times)	/			<input type="checkbox"/> COC & Samples Do Not Match <input type="checkbox"/> COC Incorrect/Incomplete <input type="checkbox"/> COC Not Received	
8. Were all of the samples listed on the COC received?	/			<input type="checkbox"/> Sample Received, Not on COC <input type="checkbox"/> Sample on COC, Not Received	
9. Is the date/time of sample collection noted?	/			<input type="checkbox"/> COC; No Date/Time; Client Contacted	Labeling Verified by: _____ Date: _____
10. Was the sampler identified on the COC?	/			<input type="checkbox"/> Sampler Not Listed on COC	pH test strip lot number: _____
11. Is the client and project name/# identified?	/			<input type="checkbox"/> COC Incorrect/Incomplete	
12. Are tests/parameters listed for each sample?	/			<input type="checkbox"/> COC No tests on COC	
13. Is the matrix of the samples noted?	/			<input type="checkbox"/> COC Incorrect/Incomplete	
14. Was COC relinquished? (Signed/Dated/Timed)	/			<input type="checkbox"/> COC Incorrect/Incomplete	Box 16A: pH Preservation Box 18A: Residual Chlorine
15. Were samples received within holding time?	/			<input type="checkbox"/> Holding Time - Receipt	Preservative: _____ Lot Number: _____ Exp Date: _____ Analyst: _____ Date: _____ Time: _____
16. Were samples received with correct chemical preservative (excluding Encore)?			/	<input type="checkbox"/> pH Adjusted, pH Included (See box 16A) <input type="checkbox"/> Incorrect Preservative	
17. Were VOA samples received without headspace?			/	<input type="checkbox"/> Headspace (VOA only)	
18. Did you check for residual chlorine, if necessary? (e.g. 1613B, 1668) Chlorine test strip lot number: _____			/	<input type="checkbox"/> Residual Chlorine	
19. For 1613B water samples is pH<9?			/	<input type="checkbox"/> If no, notify lab to adjust	
20. For rad samples was sample activity info. Provided?			/	<input type="checkbox"/> Project missing info	
Project #: _____ PM Instructions: _____					

Sample Receiving Associate: *[Signature]* Date: 2-25-19

Job Narrative
140-14391-1

Receipt

The samples were received on 2/23/2019 at 10:10 AM. The samples arrived in good condition and properly preserved.

Receipt Exceptions

Samples IA-131-C-26 (140-14390-18) and IA-113-C-26 (140-14391-16) were received with the canister valve in the open position. The samples were at ambient pressure (approximately 0 psi). The samples' integrity could have been jeopardized due to changes in ambient pressure after the samples were taken (i.e., ambient air not associated with the sampling event could have been introduced into the canister at any point after the sampling was completed).

The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

Air - GC/MS VOA - Method TO-15 LL

EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

No additional comments.

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: MRC Indoor Air, MRC

TestAmerica Job ID: 140-14391-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
CI	The peak identified by the data system exhibited chromatographic interference that could not be resolved. There is reason to suspect there may be a high bias.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

SECTION 1 INTRODUCTION

1.1 SITE LOCATION AND BACKGROUND INFORMATION

This report documents the monitoring activities completed from October 1, 2018 to March 31, 2019 [the 43rd and 44th quarters of operation] for the sub-slab depressurization systems operating in the Building A lay-up room (former plating shop), eastern area, and basement, and the Building C basement of the Lockheed Martin Corporation Middle River Complex in Middle River, Maryland. The locations of the systems' influence are shown on Figure 1. These remedial systems control (by creating a vacuum) and remove volatile organic compounds from sub-slab vapor, thus preventing their migration into indoor air. The systems are operated in accordance with the operation, maintenance, and monitoring manuals for the Building A and Building C systems (Tetra Tech, Inc., 2019a and 2019b, respectively).

1.2 DESCRIPTION OF SUB-SLAB DEPRESSURIZATION SYSTEMS

1.2.1 Building A System

The sub-slab depressurization system in Building A includes the following soil vapor extraction points (see Figure 2):

- Two (2) horizontal soil vapor extraction laterals in the lay-up room (North and South)
- Two (2) laterals in the basement (Basement North and Basement South)
- Six (6) vertical soil vapor extraction points (SSD-34-A, SSD-35-A, SSD-36-A, SSD-37-A, SSD-38-A, and SSD-39-A)
- Extraction piping connected to basement sump HRS-5

The soil vapor extraction points serve as conduits for drawing vapor from beneath the building slab and from a covered sump in the basement, thus mitigating vapor intrusion into indoor air. Sub-slab vapors are pulled through the extraction points, vapor-extraction manifold, and “pre-blower” moisture separator using a single 10-horsepower regenerative blower. The blower is

mounted on a skid along with the pre-blower moisture separator, a heat exchanger, filters, and vacuum, pressure, temperature, and flow gauges (collectively referred to as the “blower skid”). The extracted vapors are cooled as they are pushed through the heat exchanger. Following the heat exchanger, the vapors enter the post-blower moisture separator where entrained condensate droplets are removed to reduce saturation and pressure buildup in the vapor-phase carbon drums. The extracted vapors are then filtered to remove volatile organic compounds (VOCs) using four 400-pound granular activated-carbon (GAC) drums, in two-by-two configuration (two parallel trains of two drums in series)¹. Vapors are discharged to the atmosphere via an exhaust stack that extends above the roof of the building. Figure 3 shows the process and instrumentation diagram for the Building A sub-slab depressurization system.

The Building A system is also equipped with one drain for each of the granular activated-carbon drums, three pipe sumps (PS-1-A [near SSD-37-A], PS-2-A [near SSD-34-A], and PS-3-A [in the basement]), and one exhaust stack sump. The pipe sumps are installed at low points to allow accumulation and manual drainage of condensation in the pipe. In addition, two freestanding drain stacks adjacent to the south side of the system’s equipment skid are available for use in winter months to drain condensate in the vapor entering the two trains of granular activated-carbon drums.

Six IQAir® GC™ Series-GC VOC indoor-air filters also operate in the basement of Building A near vapor monitoring points (VMPs) 093-A, 093-A-X, and 138-A, in response to elevated trichloroethene (TCE) concentrations in the indoor air. The filters were installed south of the sub-slab depressurization system extraction laterals in January 2015 (designated AF-N, AF-M, and AF-S) and May 2017 (designated AF-NX, AF-MX, and AF-SX), and are continuously operated to filter 300 standard cubic feet per minute (SCFM) of air. Each filter consists of a high-efficiency particulate air pre-filter, a granular activated-carbon filter, and a post-filter sleeve (collectively referred to as “filter elements”). The pre-filter (GC™ HyperHEPA® Pre-Filter H11 [S]) weighs three pounds; it removes coarse, fine, and ultra-fine dust particles and protects

¹ Originally, vapor treatment consisted of one train of two 400-pound carbon drums; the two-by-two configuration was completed in February 2017 to decrease pressure, increase flow of the system, and better capture VOCs; details are in Section 2.4.

subsequent filters. The granular activated-carbon filter (GC VOC filter cartridge set) removes volatile organic compounds from indoor air; it is comprised of four granular activated-carbon cartridges, collectively weighing nine pounds. The post-filter sleeve (GC™ post-filter sleeve set) is placed over the granular activated-carbon cartridges, and removes any remaining fine and ultra-fine particulate matter.

1.2.2 Building C System

The sub-slab depressurization system in the Building C basement consists of 11 vertical soil vapor extraction points: two in the southern-basement area (SSD-21-C and SSD-23-C) and nine in the mid-basement area (SSD-26-C, SSD-27-C, SSD-28-C, SSD-29-C, SSD-30-C, SSD-31-C, SSD-32-C, SSD-33-C, and SSD-34-C); see Figure 4. These extraction points serve as conduits for drawing vapor from beneath the building slab, thus creating a vacuum under the floor slab preventing vapor intrusion into indoor air. The vapors are pulled through the extraction points using a single 7.5-horsepower regenerative blower that is mounted on a skid along with a moisture separator, heat exchanger, filters, and vacuum, pressure, temperature, and flow gauges (collectively referred to as the “blower skid”). Following extraction, the vapors enter the first moisture separator (MS-1) where entrained condensate droplets are removed to reduce fouling of the vapor lines and saturation of the granular activated-carbon. The extracted vapors are cooled as they are pushed through the heat exchanger; any remaining extracted condensate droplets are removed via a second moisture separator (MS-2) [separate from the blower skid] before being treated. The vapors are treated by passing through two 400-pound granular activated-carbon drums and one 600-pound potassium permanganate-impregnated zeolite drum (to remove residual vinyl chloride), in-series, before being discharged to the atmosphere via an exhaust stack that extends above the roof of the building (Figure 5).

The Building C system is also equipped with one drain for each granular activated-carbon and potassium permanganate-impregnated zeolite drum, five pipe sumps (PS-1 [near SSD-25-C and column N35, PS-2 [near SSD-30-C and column N26], PS-3 [near SSD-27-C and column O20], PS-4 [near SSD-32-C and column R19], and PS-5 [near SSD-29-C and column V12]), and one exhaust stack sump. The sumps are installed at low points to allow drainage of condensation in the pipe.

This page intentionally left blank.

SECTION 2 SITE ACTIVITIES

2.1 BIWEEKLY SYSTEM CHECKS

Biweekly system checks were conducted to monitor the performance of the sub-slab depressurization (SSD) systems and to make necessary adjustments to optimize effectiveness. System checks were conducted between October 1, 2018 through March 31, 2019 (the 43rd and 44th quarters of operation) on the dates listed below.

- October 12, 2018
- October 23, 2018
- November 9, 2018
- November 19, 2018
- December 5, 2018
- December 19, 2018
- January 3, 2019
- January 16, 2019
- January 30, 2019
- February 14, 2019
- March 1, 2019
- March 13, 2019
- March 28, 2019

Biweekly system checks were conducted in accordance with the latest operation, maintenance, and monitoring (OM&M) manuals (Tetra Tech, Inc. [Tetra Tech], 2019a and 2019b), and included general system monitoring, vacuum influence monitoring, and any necessary adjustments to extraction laterals and wells. Biweekly system checks forms are in Appendix A.

Ten additional site visits were made from November 2018 through March 2019 to drain condensate from the Building A SSD system moisture separators and sumps to prevent high water levels (see Section 2.4.1).

2.1.1 General System Monitoring

Gauge readings on the blower skid were checked, and the vacuum and velocity at each extraction lateral/well were measured. The condition of system components was also checked, and moisture separators/sumps were emptied as necessary. The following specific tasks were performed:

1. Recorded:
 - a. vacuum at pre-air filter
 - b. vacuum at post-air filter
 - c. pressure at post-blower
 - d. temperature at post-blower
 - e. temperature at post-heat exchanger
 - f. system flow
 - g. time counter display
 - h. vacuum from each extraction lateral/well
 - i. velocity from each extraction lateral/well
 - j. vacuum from each vapor monitoring point (VMP)
2. Checked the following for damage, leaks, and/or signs of heat stress:
 - a. system components
 - b. granular activated-carbon (GAC) drums
 - c. potassium permanganate-impregnated zeolite (PPZ) drum (Building C only)
 - d. GAC and PPZ fittings and flexible hoses
3. Checked the following for condensate, and drained, as necessary:
 - a. moisture separators
 - b. pipe sumps
 - c. exhaust stack sumps
 - d. GAC and PPZ drains
4. Confirmed that zip-ties on the GAC- and PPZ-drum cam locks were present and secure
5. Confirmed that the ambient air valve was closed
6. Confirmed that the vacuum relief valve was closed
7. Noted any adjustments to extraction laterals/wells
8. Checked that flow, pressure, and vacuum gauges fell to zero, and that temperature gauges fell, when systems were turned off

-
9. Checked each of the Building A basement IQAir® GC™ Series-GC indoor air filters to:
 - a. verify filter was on
 - b. verify fan was running
 - c. check control panel for filter-life status
 - d. document any signs of tampering

2.1.2 Vacuum Influence Monitoring

The objective for the SSD systems is to maintain a vacuum of at least 0.01 inches water column (WC) in the targeted areas. The vacuum influence (differential sub-slab vapor vacuum versus indoor air) at sub-slab VMPs was monitored using a dual²-port manometer (Fieldpiece Instruments, Inc. model SDMN5). This instrument was used to identify sub-slab-air short-circuiting or other problems (indicated by a significant drop in vacuum at one or more VMPs), and to determine each system's area of influence. Short-circuiting was not identified at the Building A or Building C SSD systems during this reporting period. Figures 6 through 9 show induced vacuum over time; Figures 10 through 13 show induced vacuum influence contours on plan views using induced vacuum readings from March 28, 2019.

Vacuum influence in the Building A target areas consistently³ exceeded the vacuum influence objective (0.01 inches WC) during the reporting period at the following monitoring points:

- At seven of eight VMPs in the layup room (SSD-12-A-X, SSD-11-A-X, SSD-13-A-X, SSD-2-A-X, 15-A-X, SSD-16-A-X, and SSD-3-A-X) with vacuums ranging from 0.16 to 4.39 inches WC (see Figure 10)
- At all four of the VMPs in the Building A basement (SSD-19-A, SSD-20-A, SSD-21-A, and SSD-22-A) with vacuums ranging from 0.01 to 3.03 inches WC (see Figure 10)
- At one of two VMPs in the western area of Building A (168-A) with vacuums ranging from 0.06 to 2.66 inches WC (see Figure 10)
- At nine of 15 VMPs in the eastern area of Building A (165-A, 166-A, 167-A, 117-A, 164-A, 136-A-S, 136-A, 161-A, and 160-A) with vacuums ranging from 0.01 to

² Only one port is used for monitoring vacuum influence; the second port is used to measure static pressure.

³ Exceeded vacuum monitoring objective of 0.01 inches water column at more than half of the biweekly system checks completed.

2.14 inches WC (see Figure 11)

Negative vacuum⁴ (pressure) readings were measured at VMP 163-A in the eastern area of Building A during most biweekly system checks, indicating higher pressure in the sub-slab than in the indoor air. Induced vacuum has not been observed at 79-A, 119-A, 121-B, 162-A, 136-A-N, or 188-A. The lack of induced vacuum at 119-A and 121-B might possibly be due to the greater distance to the nearest extraction point. The reason for the lack of vacuum influence at the remaining locations (79-A, 162-A, 136-A-N, 163-A, and 188-A) is not clear, but could be related to subsurface preferential pathways and heterogeneity.

Vacuum influence in the Building C target areas consistently exceeded the vacuum influence objective (0.01 inches WC) during the reporting period in the following monitoring points:

- At six of seven VMPs in the southern-basement area (001-C, SSD-2-C, SSD-3-C, SSD-22-C, SSD-24-C, and SSD-25-C) with vacuums ranging from 0.01 to 1.55 inches WC (see Figure 12)
- At 14 of 20 VMPs in the mid-basement area (135-C, 113-C, 156-C, 151-C, 126-C, 149-C, 127-C, 150-C, 152-C, 111-C, 155-C, 133-C, 154-C, and 153-C) with vacuums ranging from 0.01 to 2.99 inches WC (see Figure 13)

VMPs SSD-4-C, SSD-60-C, SSD-141-C, and 157-C could not be accessed for monitoring for most or all of the monitoring period as they were covered by equipment moved to those areas. The reason for the lack of vacuum influence at 050-C, 158-C, and 159-C is not clear but could be related to subsurface preferential pathways and heterogeneity.

Vacuum Summary

Induced vacuum measurements indicate that the systems are performing as designed, except near extraction point SSD-36-A in the eastern area of Building A. The sub-slab vapor extraction laterals in the Building A lay-up room induce a vacuum influence over an approximately 5,900-square foot area, and consistently encompass the five VMPs that had elevated volatile organic

⁴ Negative vacuum readings indicate higher pressure in the sub-slab than in the indoor air, which may be related to subsurface heterogeneity or preferential pathways.

compound (VOC) concentrations before system start-up. The extraction laterals in the Building A basement induce a vacuum influence over an approximately 1,900-square foot area, and consistently encompass all four VMPs that measure the system's induced vacuum in the basement (Figure 10). The vertical extraction points in the eastern area of Building A induce a vacuum influence over an approximately 6,100-square foot area, and consistently encompass nine of 15 VMPs (Figure 11). Extraction point SSD-39A in the western area of Building A is inducing vacuum at one of two nearby VMPs; the area of induced vacuum is approximately 1,100-square feet (Figure 11).

In Building C, the sub-slab vapor extraction points in the southern-basement area induce a vacuum influence over an approximately 4,200-square foot area, with six of six accessible VMPs showing consistent influence (Figure 12). Extraction points in the mid-basement area induce a vacuum influence over an approximately 36,800-square foot area, with 14 of 17 accessible VMPs showing consistent influence (Figure 13).

2.1.3 Adjustments to Extraction Points

There were no adjustments made to the extraction points during the reporting period.

2.2 VAPOR SAMPLING

Grab vapor samples were collected monthly at Building A and every other month at Building C during the reporting period. Samples were collected from each SSD system at the influent, mid-GAC (between lead and lag vessels), and effluent positions of the treatment drums. Samples were collected from the Building A SSD system on October 18, November 9 and 14, and December 28, 2018, and January 16, February 6, and March 13, 2019. The November 14, 2018 sample was taken from the Building A SDD system mid-GAC stream due to problems with the November 9, 2018 sampling canister. Samples were collected from the Building C SSD system on November 9, 2018, and January 16 and March 13, 2019. Samples were collected directly from each sampling port using the following steps:

- A piece of Teflon[®] tubing was connected to the sampling port.
- A clean, one-liter Summa[®] canister under vacuum was connected to the tubing, and the canister valve was opened until the canister gauge reached zero or stopped falling

(approximately one minute).

- For the Building A mid-GAC samples, the two sample ports were connected using Teflon[®] tubing with a “T” fitting to connect to the canister.

Samples were labeled A-INFLUENT, A-MID-GAC, A-EFFLUENT, C-INFLUENT, C-MID-GAC, and C-EFFLUENT and shipped to TestAmerica Laboratories, Inc. (TestAmerica) in Knoxville, Tennessee. TestAmerica is accredited through the National Environmental Laboratory Accreditation Program and United States Department of Defense Environmental Laboratory Accreditation Program for VOC analysis by United States Environmental Protection Agency Toxic Organic Method 15 (TO-15).

Laboratory results are summarized in Tables 1 through 6; analytical reports are in Appendix B. During this reporting period, total influent VOC concentrations in Building A ranged from 1,161 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) (March 2019) to 2,025 $\mu\text{g}/\text{m}^3$ (December 2018), while VOC influent concentrations in Building C ranged from 47 $\mu\text{g}/\text{m}^3$ (January 2019) to 50 $\mu\text{g}/\text{m}^3$ (November 2018). Average influent VOC concentrations in Building A were approximately 29% lower than those observed during the previous reporting period (April 1 to September 30, 2018); average influent concentrations for the Building C system were approximately 56% lower.

2.3 QUARTERLY SYSTEM CHECKS

Quarterly system checks were completed on December 19, 2018 and March 13, 2019. Quarterly system checks included the following tasks:

1. Inspected the condition of the:
 - a. system components
 - b. system piping
 - c. pre-blower air filter and intake (ambient) air filter; replacing filter(s) as necessary
 - d. GAC and PPZ drums
 - e. GAC and PPZ drum sample ports
 - f. VMP well lids, bolts, and sample tubing
2. Checked that the Building A system shuts down, the control panel alarm lights illuminate, and the auto-dialer activates upon alarms for:
 - a. high temperature – post-blower

-
- b. high temperature – post-heat exchanger
 - c. high-water level – moisture separator
 - d. high pressure
 - e. low vacuum
3. Checked that the Building C system shuts down, the control panel alarm lights illuminate, and the auto-dialer activates upon alarms for:
 - a. high temperature – post-blower
 - b. high temperature – post-heat exchanger
 - c. high-water level – MS-1
 - d. high-water level – MS-2
 - e. high pressure
 - f. low vacuum
 4. Checked vacuum relief valves for proper operation
 5. Recorded amperage draw on blowers
 6. Checked that auto-dialers activate when power is turned off
 7. Checked auto-dialer batteries and replaced, as necessary
 8. Confirmed that a fire extinguisher is next to each system
 9. Vacuumed the underside of the heat exchanger
 10. Cleaned the systems and areas around the systems

No issues were identified for Building A or Building C SSD systems during the quarterly system checks, except those indicated in Section 2.4. Both systems are running within the normal operating parameters. Quarterly system checks forms are in Appendix A.

2.4 NON-ROUTINE SYSTEM MAINTENANCE

2.4.1 Non-Routine Maintenance

The following non-routine system maintenance was completed during the reporting period:

- November 27, 2018: Installed an access point on sump HRS-5 through the sump's vapor barrier to allow for water accumulation pumping for proper off-site disposal. A monitoring point was also installed through the vapor barrier to near the sump bottom to gauge the level of water accumulation in the sump. Both the access and monitoring points were constructed with polyvinyl chloride (PVC) pipe, sealed with epoxy and stego tape; caps were placed on these pipes.
- GAC hoses in Building C SSDS were replaced on March 13, 2019 as a preventative maintenance step.

-
- Site visits were conducted on the following days to drain water accumulated in the Building A SSD system moisture separators and pipe sumps:
 - November 27, 2018: approximately 31 gallons were drained
 - December 12, 2018: approximately 40 gallons were drained
 - December 28, 2018: approximately 33 gallons were drained
 - January 8, 2019: approximately 26 gallons were drained
 - January 25, 2019: approximately 40 gallons were drained
 - February 6, 2019: approximately 35 gallons were drained
 - February 21, 2019: approximately 15 gallons were drained
 - March 1, 2019: approximately 22 gallons were drained
 - March 13, 2019: approximately 6 gallons were drained
 - March 28, 2019: approximately 9 gallons were drained

The combined volume of condensate drained from the Building A SSD system during the reporting period was 442 gallons. The water was transferred to 55-gallon drums temporarily staged in the in the designated drum storage area at the Building C SSD system pending proper off-site disposal. There was no condensate accumulation that required draining at the Building C SSD system.

2.5 GAC AND PPZ CHANGE-OUTS

The two lead GAC drums of the Building A SSD system were changed out on October 18, 2018. The Building C GAC drums and PPZ drum were not changed out during the reporting period.

2.6 SYSTEM SHUTDOWNS

2.6.1 Operator-Controlled Shutdowns

Both systems were briefly turned off during each biweekly system check to: (1) confirm that flow, pressure, temperature, and vacuum gauges fall to zero (thereby indicating proper operation), and (2) check and drain (as necessary) condensate accumulation in the moisture separators and sumps. Both systems were also briefly turned off during the quarterly system checks to test proper operation of the fail-safe alarms. In addition, the Building A and Building C SSD systems were shut down on the following days for semi-annual sub-slab vapor and indoor air sampling events:

-
- February 19-21, 2019: The Building A system was shut down for an estimated 51 hours for the semi-annual sub-slab vapor and indoor air sampling event.
 - February 18-19, 2019: The Building C system was shut down for an estimated 35 hours for a sub-slab and indoor air sampling event.

2.6.2 Alarms and Other Shutdowns

The following alarms and other shutdowns occurred during the reporting period:

- The Building A SSD system was down for approximately 15 hours due to high temperature 2 (post-blower) alarm on December 14, 2018.
- The Building C SSD system operated with no alarms or unplanned shutdowns during this reporting period.

2.6.3 System Uptime

During this reporting period, the Building A and Building C SSD systems were operational for approximately 4,278 hours (98.5%) and 4,309 hours (99%), respectively. Downtime does not include the brief shutdown periods for biweekly and quarterly system checks.

2.7 REMEDIATION SUMMARY

2.7.1 Building A System

Continuous operation of the SSD system in the Building A lay-up room (former plating shop) began on March 31, 2008; the SSD system was expanded on October 22, 2010 to include the basement, and on April 13, 2016 to include select areas on the eastern side of the building. A third-phase expansion was completed on July 6, 2017 to address areas along the western side of Building A (near VMP 168-A) and basement sump HRS-5 near column D26. On February 7, 2017 the GAC drums were modified to add a second parallel treatment train (with two 400-pound GAC drums in series) to increase flow and decrease pressure on the new blower. Building A extraction points are open to allow a combined airflow rate of approximately 360 SCFM. Each extraction point operates at an airflow rate of 7–85 SCFM; the system vacuum and flows are adjusted to maintain a vacuum of 0.01 inches water column (WC) or greater at each vapor monitoring point within areas where elevated concentrations of VOCs are in sub-slab soil.

Since system startup on March 31, 2008 to March 13, 2019, total influent VOC concentrations have decreased more than 98%, from 94,310 $\mu\text{g}/\text{m}^3$ to 1,173 $\mu\text{g}/\text{m}^3$. The addition of the basement extraction laterals in October 2010 did not appear to change influent concentrations. The system expansion in April 2016 including a higher-flow blower and five new vertical extraction points resulted in an increase in Building A influent system concentration for approximately one month. The system expansion in July 2017 resulted in a slight increase in the result for the sample collected on July 6, 2017 immediately following the expansion. The two main chemicals of concern in Building A are 1,1,1-trichloroethane and trichloroethene (see Table 1). VOC trends for the Building A system are shown in Tables 1 through 3 and on Figure 14.

VOC mass removal rates (based on influent concentrations) in Building A ranged from 0.04 to 0.07 pounds per day (lbs/day) during this reporting period. The total VOC mass removed was approximately 8 pounds; total VOC removal since system startup in March 2008 is approximately 190 pounds. VOC mass removal rates are lower than the levels (20 lbs/day VOCs) that require Maryland Department of Environment (MDE) permitting.

2.7.2 Building C System

Continuous operation of the SSD system in the southern-basement area of Building C began on March 31, 2008; the system was expanded to the mid-basement area in May 2013. Extraction points were installed at locations that maximized vacuum influence (based on startup tests). The total flow rate of the Building C system is approximately 180 SCFM. Extraction well SSD-23-C in the southern-basement area was shut off after the expansion to promote higher flow rates from the new wells installed in the mid-basement area. Vacuum influence in the southern-basement area was maintained by the operation of well SSD-21-C only until February 21, 2017, when SSD-23-C was re-opened and SSD-21-C was closed. Vacuum influence and flow rates in the mid-basement area have increased and stabilized since system expansion. On November 7, 2013, mid-basement wells SSD-27-C and SSD-32-C flow rates were reduced to promote higher flow rates from other extraction wells in the mid-basement area. In April 2016, flows at mid-basement extraction points SSD-26-C and SSD-30-C were also reduced to promote high flows from other extraction points. These efforts have been performed to attempt to improve vacuum influence and VOC mass removal in the northern extraction points.

From system startup on March 31, 2008 to April 8, 2013, and before the system expansion, total influent VOCs had decreased by 99%, from 31,170 $\mu\text{g}/\text{m}^3$ to 117 $\mu\text{g}/\text{m}^3$. VOC concentrations increased to 3,100 $\mu\text{g}/\text{m}^3$ after the system was expanded but have since decreased to 49 $\mu\text{g}/\text{m}^3$ (a 98% decrease). Trichloroethene is the primary chemical of concern in Building C (see Table 4). VOC trends for the Building C system are shown in Tables 4 through 6 and on Figure 15.

Mass removal rates for VOCs in Building C during this reporting period were around 0.0006 pounds per day, for a total mass of approximately 0.12 pounds. Total VOC removal since system startup in March 2008 is approximately 12.2 pounds. Building C VOC removal rates are lower than levels requiring MDE permitting (20 lbs/day VOCs, 20 pounds per year vinyl chloride).

2.7.3 Indoor Air Filters in Building A

Six IQAir® GC™ Series-GC indoor air filters operate in the basement of Building A near VMPs 093-A, 093-A-X, and 138-A (south of the SSD system extraction trenches). These filters were inspected every two weeks. The high-efficiency particulate air (HEPA) pre-filters, GAC cartridges, and post-filter sleeves were replaced on December 19, 2018 and March 13, 2019. The spent filter elements were placed in a dedicated 55-gallon drum in the designated drum storage area at the Building C SSD system pending proper off-site disposal. This waste drum was inspected during the biweekly system checks to ensure it was properly labeled and in good condition.

SECTION 3

CONCLUSIONS AND RECOMMENDATIONS

3.1 SYSTEM PERFORMANCE

Induced vacuum measurements indicate that the sub-slab depressurization systems are performing as designed, except near extraction point SSD-36-A in the eastern area of Building A. Soil vapor extraction points in the Building A lay-up room induce a vacuum influence over an approximately 5,900-square foot area, and consistently encompass all five vapor monitoring points that had elevated volatile organic compound concentrations before system startup. In the Building A basement, the soil vapor extraction points induce a vacuum influence over an approximately 1,900-square foot area that encompasses all four vapor monitoring points installed to measure the system-induced vacuum in the basement (Figure 10). The soil vapor extraction points in the eastern area of Building A induce a vacuum influence over an approximately 6,100-square foot area, and consistently encompass nine of 15 VMPs used to measure the system-induced vacuum in that area (Figure 11). Extraction point SSD-39A in the western area of Building A is inducing vacuum at one of two nearby VMPs; the area of induced vacuum is approximately 1,100-square feet (Figure 10). In the southern-basement area of Building C, the soil vapor extraction points induce a vacuum influence over an approximately 4,200-square foot area, with all six accessible vapor monitoring points showing influence (Figure 12). The soil vapor extraction points in the mid-basement area of Building C induce a vacuum influence over an estimated 36,800-square foot area, with 14 of the 17 accessible vapor monitoring points showing influence (Figure 13).

The sub-slab depressurization systems have removed volatile organic compound mass and have treated emissions with granular activated-carbon (both buildings) and potassium permanganate-impregnated zeolite (Building C only). A summary of the granular activated-carbon drums used during the lifespan of each system follows:

	Number of granular-activated-carbon drums used	
	<u>200-pound drums</u>	<u>400-pound drums</u>
Building A	23	18
Building C	17	5

The 600-pound potassium permanganate-impregnated zeolite drum in Building C has not been changed out since its installation in April 2013. The drum counts listed above do not include the granular activated-carbon drums currently attached to each system, or the potassium permanganate-impregnated zeolite drum currently attached to the Building C system.

The Building A system has used approximately 62 pounds of granular activated-carbon per pound of volatiles removed, while the Building C system has used approximately 443 pounds of granular activated-carbon per pound of volatiles removed. Note that the removal efficiency of granular activated-carbon is reduced as vapor concentrations decrease. Although influent concentrations of volatile organic compounds for both systems have decreased significantly since startup (March 31, 2008), concentration fluctuations have occurred over time (see Figures 14 and 15).

3.2 CONTINUED MONITORING

The Building A and Building C systems will continue to operate during the next semi-annual reporting period (April 1 through September 30, 2019) so that the vapor migration barrier in both buildings is maintained. Operation, maintenance, and monitoring activities conducted during the next reporting period will include biweekly system checks, quarterly system checks, system maintenance, monthly vapor sampling in Building A, and bimonthly (every other month) vapor sampling in Building C. Granular activated-carbon change-outs will occur when the concentration of the sample collected following the lead granular activated-carbon vessel(s) reaches 50% of the influent concentration, or as determined based on change-out history and laboratory result trends (especially trichloroethene adsorption effectiveness trends). Change-out of the potassium permanganate-impregnated zeolite drum is not expected during the next reporting period. The next remedial action progress report will be issued in October 2019.

3.3 FUTURE PLANS

We will continue to analyze vacuum influence and concentrations to optimize operation of the Building A and Building C sub-slab depressurization systems. The Building A SSD extraction piping connected to basement sump HRS-5 is anticipated to be removed during the planned abandonment of the this sump. We are not planning on additional changes to the systems for the remainder of 2019. We may potentially add extraction of vapor from another sump (e.g. SP-1) or extraction point in the Building A basement, depending upon the results of additional indoor air monitoring and studies.

**FIGURE 6
INDUCED VACUUM
MARCH 2017 TO MARCH 2019
BUILDING A SSD SYSTEM - LAY-UP ROOM AND BASEMENT**

All vacuum readings are instantaneous readings collected during the bi-weekly system checks.
Only the past two years of vacuum data are depicted above.

Increase in vacuum influence beginning April 4, 2016 a result of the installation and operation of the larger blower skid associated with the second-phase expansion.

** NOTE: As of May 18, 2015, all vacuum readings for SSD-11-A, SSD-12-A, SSD-13-A, 015-A, SSD-16-A, SSD-2-A, and SSD-3-A were taken from the SSD-11-A-X, SSD-12-A-X, SSD-13-A-X, 015-A-X, SSD-16-A-X, SSD-2-A-X, and SSD-3-A-X VMPs respectively. **

**FIGURE 7
INDUCED VACUUM
MARCH 2017 TO MARCH 2019
BUILDING A SSD SYSTEM - EASTERN AREA**

All vacuum readings are instantaneous readings collected during the bi-weekly system checks.
VMPs we included in bi-weekly system checks upon start-up of the second-phase expansion on April 13, 2016.

**FIGURE 8
INDUCED VACUUM
MARCH 2017 TO MARCH 2019
BUILDING C SSD SYSTEM - SOUTHERN BASEMENT AREA**

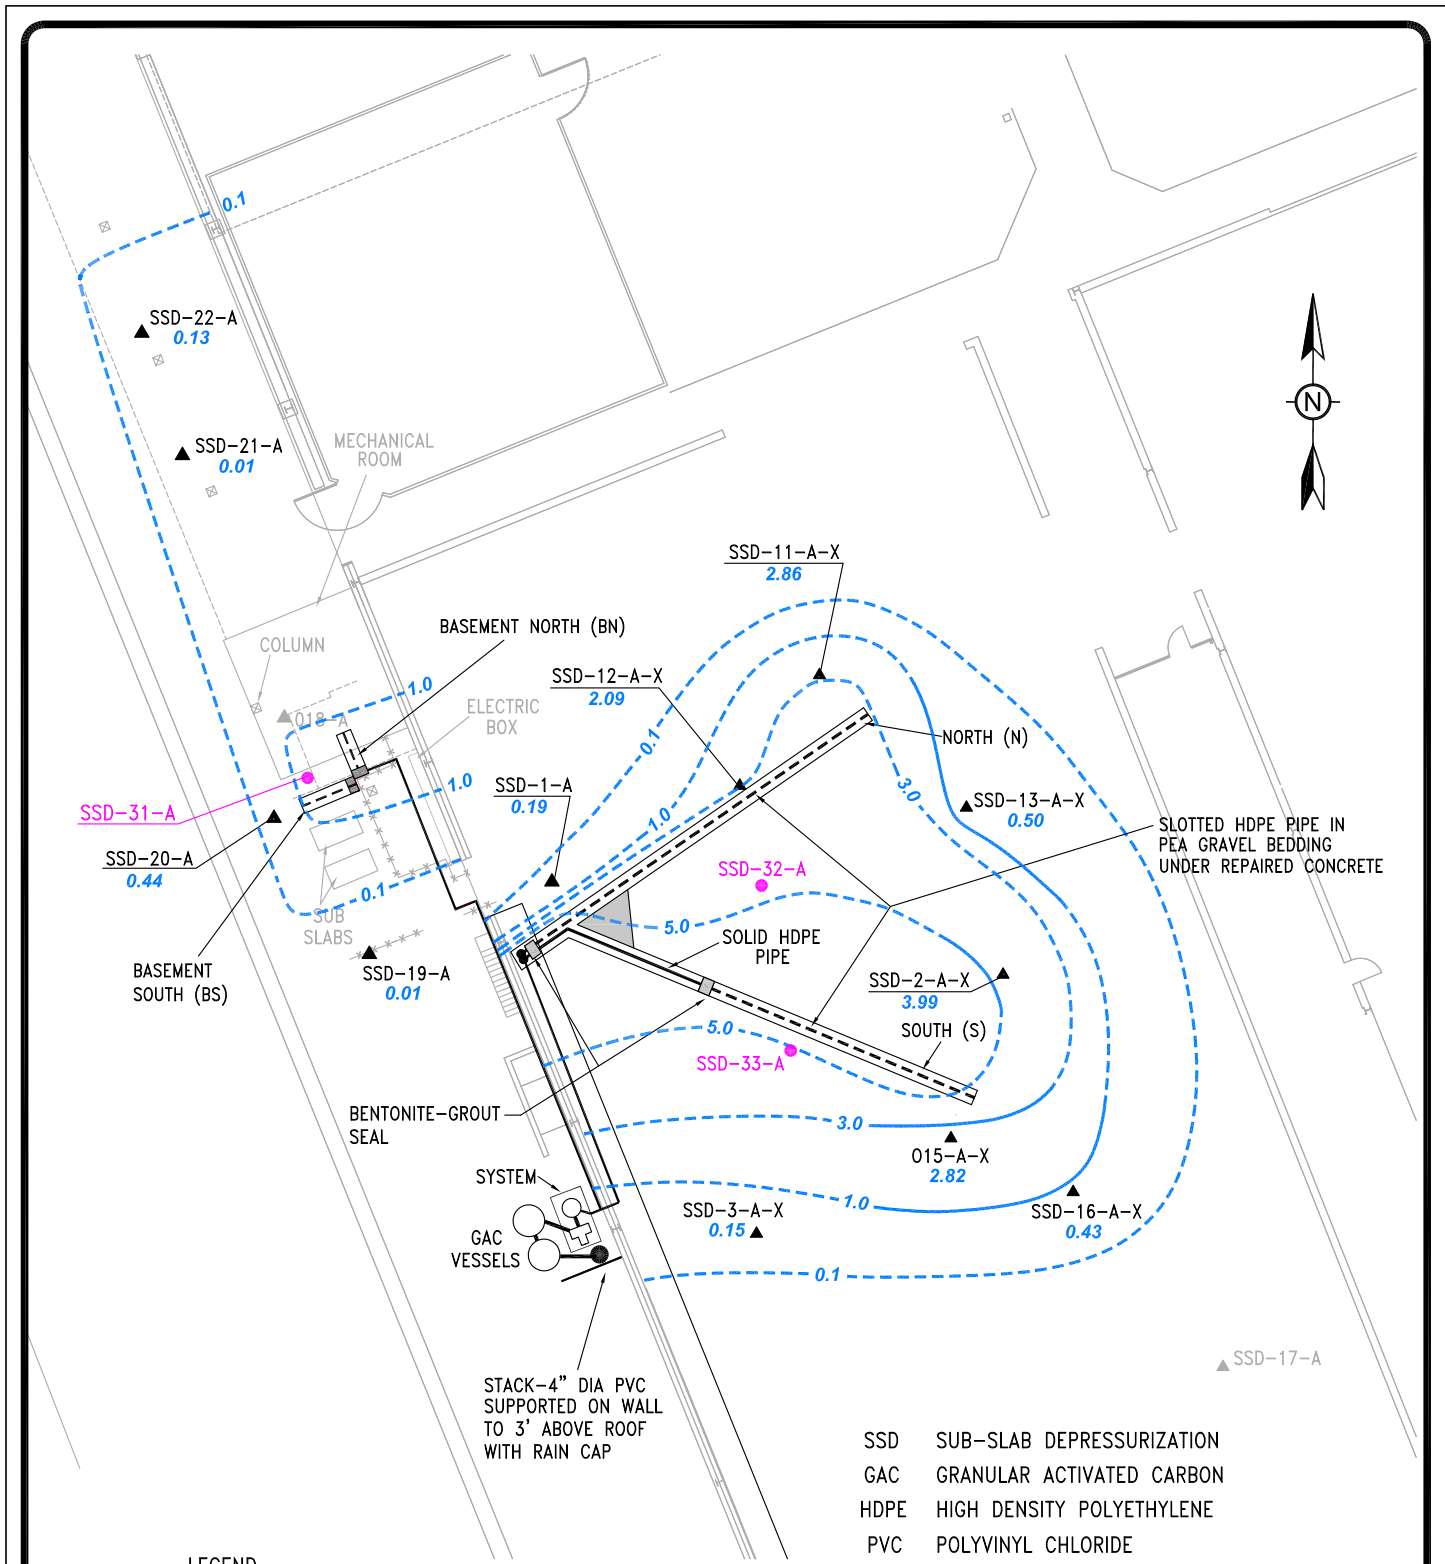

All vacuum readings are instantaneous readings collected during the bi-weekly system checks.
Only the past two years of vacuum data are depicted above.

**FIGURE 9
INDUCED VACUUM
MARCH 2017 TO MARCH 2019
BUILDING C SSD SYSTEM - MID-BASEMENT AREA**

All vacuum readings are instantaneous readings collected during the bi-weekly system checks.
Sub-slab vapor monitoring points routinely monitored beginning May 1, 2013 following second-phase system expansion in the middle basement area of Building C.

NOTES:

a = Average flow rate when operating

c = Lower specification limit

b = Total gallons pumped from ground per total minutes system operational in the month

d = Upper specification limit

1. Recovery pump in well B-3 was turned off on 04/04/14 per test approved by EPA on 03/26/14. Pump will continue to remain off per EPA approval on 10/23/14.

2. Table shows data from January 2018 to present.

3. System shut down on 04/7/16 due to manhole leak on GAC unit. System restarted on 04/27/16 and switched to recycle mode to monitor pH after replacement of GAC unit. Normal system operation resumed on 04/28/16.

4. Recovery well B-4 did not operate from 6/9/17 to 7/14/17 due to a broken pump impeller; the pump was replaced on 7/14/17.

5. System did not operate from 3/22/18 to 3/27/18 due to replacement of inline pH meter.

6. Recovery well B-4 did not operate from 4/6/18 to 4/12/18 due to a pump overload alarm that did not reset properly.

7. Recovery well B-2 did not operate from 8/31/18 to 9/6/18 due to worn out components; the pump was replaced on 9/7/18.

8. System did not operate from 11/16/18 to 12/06/18 due to replacement of air stripper effluent transfer pump and recovery well B-6 pump.

TABLE 1
Building A Influent Concentrations ($\mu\text{g}/\text{m}^3$)

Notes:

µg/m³ - micrograms per cubic meter
 B - compound was found in the blank and sample
 DL - dilution analysis
 E - results exceeded calibration range
 EPA - United States Environmental Protection Agency
 GAC - granular activated-carbon

J - result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value
 lbs./day - pounds per day
 N/A - not applicable (samples not analyzed for compound)
 ND - non-detect (below detection limit)
 OM&M - operation, maintenance, and monitoring
 scfm - standard cubic feet per minute

SSD - sub-slab depressurization
 TO-15 - Toxic Organic Method 15
 VOCs - volatile organic compounds

Completed first-phase system expansion (to Building A basement) on October 22, 2010.
 Completed second-phase system expansion (to eastern area) on April 13, 2016.
 Increase in concentrations following 19-day system shutdown due to blower failure. Blower was replaced on 4/8/13.
 Samples not collected in May 2014 and August 2014 as system was shut down due to firewater line break.
 Samples analyzed from 4/2/08 to 11/7/13 and from 7/1/15 to present analyzed by TestAmerica, Inc. of Knoxville, TN.
 Samples analyzed from 12/5/13 to 6/2/15 analyzed by Pace Analytical Services, Inc. of Minneapolis, MN.

TABLE 2

Building A Mid-GAC Concentrations (µg/m³)

Notes:

µg/m³ - micrograms per cubic meter

B - compound was found in the blank and sample

DL - dilution analysis

E - results exceeded calibration range

EPA - United States Environmental Protection Agency

GAC - granular activated-carbon

J - result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

lbs./day - pounds per day

N/A - not applicable (samples not analyzed for compound)

ND - non-detect (below detection limit)

OM&M - operation, maintenance, and monitoring

CL - result suspected to be biased high due to chromatographic interference

scfm - standard cubic feet per minute

SSD - sub-slab depressurization

TO-15 - Toxic Organic Method 15

VOCs - volatile organic compounds

Samples not collected in May 2014 and August 2014 as system was shut down due to firewater line break.

Samples analyzed from 4/2/08 to 11/7/13 and from 7/1/15 to present analyzed by TestAmerica, Inc. of Knoxville, TN.

Samples analyzed from 12/5/13 to 6/2/15 analyzed by Pace Analytical Services, Inc. of Minneapolis, MN.

TABLE 3
Building A Effluent Concentrations (µg/m³)

Notes:

$\mu\text{g}/\text{m}^3$ - micrograms per cubic meter
 B - compound was found in the blank and sample
 E - results exceeded calibration range
 EPA - United States Environmental Protection Agency
 CL - result suspected to be biased high due to chromatographic interference

J - result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value
 lbs./day - pounds per day
 N/A - not applicable (samples not analyzed for compound)
 ND - non-detect (below detection limit)

OM&M - operation, maintenance, and monitoring
 SSD - sub-slab depressurization
 TO-15 - Toxic Organic Method 15
 VOCs - volatile organic compounds

The chlorodifluoromethane and 1,2,3-trimethylbenzene concentrations reported in the 12/5/2013 sample were reported as tentatively identified compounds and were converted from 238 ppbv and 2.3 ppbv, respectively.

Samples not collected in May 2014 and August 2014 as system was shut down due to firewater line break.

Samples analyzed from 4/2/08 to 11/7/13 and from 7/1/15 to present analyzed by TestAmerica, Inc. of Knoxville, TN.

Samples analyzed from 12/5/13 to 6/2/15 analyzed by Pace Analytical Services, Inc. of Minneapolis, MN.

Notes:

µg/m³ - micrograms per cubic meter

B - compound was found in the blank and sample

EPA - United States Environmental Protection Agency

lbs. - pounds

lbs./day - pounds per day

CL - result suspected to be biased high due to chromatographic interference

Sampling not conducted in July 2012 due to system shutdown test.

Completed first-phase system expansion on October 31, 2012.

Completed second-phase system expansion on May 10, 2013.

Samples analyzed from 4/2/08 to 11/7/13 and from 7/1/15 to present analyzed by TestAmerica, Inc. of Knoxville, TN.

Samples analyzed from 12/5/13 to 6/2/15 analyzed by Pace Analytical Services, Inc. of Minneapolis, MN.

J - result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

N/A - not applicable (samples not analyzed for compound)

ND - non-detect (below detection limit)

OM&M - operation, maintenance, and monitoring

scfm - standard cubic feet per minute

SSD - sub-slab depressurization

TO-15 - Toxic Organic Method 15

VOCs - volatile organic compounds

TABLE 5 Building C Mid-GAC Concentrations ($\mu\text{g}/\text{m}^3$)
