Air - GC/MS VOA
Methods TO 15 LL, TO-14A, TO-14A Low, TO-15: Initial calibration verification (ICV 140-39100/17) associated with batch 140-39100 had internal standard recoveries above QC limits. There is no impact on the data; since all the analytes recovered well within limits.

Methods TO 15 LL, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

Method TO 15 LL: The continuing calibration verification (CCV) associated with batch 140-39584 exhibited % difference of > 30% for the following analyte(s) 1,2,4-Trichlorobenzene, 1,2-Dichloro-1,1,2,2-tetrafluoroethane, Butadiene, Chloroethane, Naphthalene and Vinyl chloride; however, the results were within the LCS acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. According to the laboratory standard operating procedure, the continuing calibration is acceptable if it meets the laboratory control sample acceptance criteria.

Method TO 15 LL: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 140-39584: 1,2-Dichloro-1,1,2,2-tetrafluoroethane, Chloroethane and Vinyl chloride. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

No additional comments.

Receipt
The samples were received on 6/26/2020 12:08 PM; the samples arrived in good condition, and where required, properly preserved and on ice.

Receipt Exceptions

The Field Sampler was not listed on the Chain of Custody.

Air - GC/MS VOA
Methods TO 15 LL, TO-14A, TO-14A Low, TO-15: Initial calibration verification (ICV 140-39100/17) associated with batch 140-39100 had internal standard recoveries above QC limits. There is no impact on the data; since all the analytes recovered well within limits.

Methods TO 15 LL, TO-14A, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

Methods TO 15 LL, TO-14A, TO-14A Low, TO-15: The Initial Calibration for Methylene Chloride did not meet the %RSD criterion specified in the standard operating procedure for average response factor. An linear calibration model was selected which met the acceptance criterion for coefficient of determination (r2) at 0.998 and the read back criteria for the individual calibration points. (ICIS 140-39464/20)

Methods TO 15 LL, TO-15: Although the BFB is flagged as outside control limits for TO-14 on batch 140-40575, the results are within limits for TO-15, which is required for this project.

Methods TO 15 LL, TO-15: The continuing calibration verification (CCV) associated with batch 140-40629 exhibited % difference of > 30% for the following analyte(s) 1,2-Dichloro-1,1,2,2-tetrafluoroethane and Vinyl chloride; however, the results were within the LCS acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. According to the laboratory standard operating procedure, the continuing calibration is acceptable if it meets the laboratory control sample acceptance criteria.

Methods TO 15 LL, TO-15: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 140-40629: Vinyl chloride. This is not indicative of a systematic control problem because this was random marginal exceedance. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 7/24/2020 9:45 AM; the samples arrived in good condition, and where required, properly preserved and on ice.

Air - GC/MS VOA
Methods 3005A, TO 15 LL, TO-14A, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

Methods TO 15 LL, TO-14A, TO-14A Low, TO-15: The Initial Calibration for Methylene Chloride did not meet the %RSD criterion specified in the standard operating procedure for average response factor. An linear calibration model was selected which met the acceptance criterion for coefficient of determination (r2) at 0.998 and the read back criteria for the individual calibration points.

(ICIS 140-41306/15)

Methods TO 15 LL, TO-15: Although the BFB is flagged as outside control limits for TO-14 on batch 140-41306, the results are within limits for TO-15, which is required for this project.

Methods TO 15 LL, TO-15: Although the BFB is flagged as outside control limits for TO-14 on batch 140-41446, the results are within limits for TO-15, which is required for this project.

Method TO 15 LL: The continuing calibration verification (CCV) associated with batch 140-41417 exhibited % difference of > 30% for the following analyte(s) Dichlorodifluoromethane; however, the results were within the LCS acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. According to the laboratory standard operating procedure, the continuing calibration is acceptable if it meets the laboratory control sample acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

No additional comments.

Receipt
The samples were received on 8/19/2020 10:15 AM; the samples arrived in good condition, and where required, properly preserved and on ice.

Air - GC/MS VOA
Methods 3005A, TO 15 LL, TO-14A, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

Methods TO 15 LL, TO-14A, TO-14A Low, TO-15: The Initial Calibration for Methylene Chloride did not meet the %RSD criterion specified in the standard operating procedure for average response factor. An linear calibration model was selected which met the acceptance criterion for coefficient of determination (r2) at 0.998 and the read back criteria for the individual calibration points.

(ICIS 140-41306/15)

Methods TO 15 LL, TO-15: Although the BFB is flagged as outside control limits for TO-14 on batch 140-41306, the results are within limits for TO-15, which is required for this project.

Method TO 15 LL: The continuing calibration verification (CCV) associated with batch 140-41859 exhibited % difference of > 30% for the following analyte(s) 1,2,4-Trichlorobenzene, Acrolein and Bromoform; however, the results were within the LCS acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. According to the laboratory standard operating procedure, the continuing calibration is acceptable if it meets the laboratory control sample acceptance criteria.

Methods TO 15 LL, TO-15: Although the BFB is flagged as outside control limits for TO-14 on batch 140-41899, the results are within limits for TO-15, which is required for this project.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

No additional comments.

Receipt
The samples were received on 9/29/2020 10:30 AM; the samples arrived in good condition, and where required, properly preserved and on ice.

Air - GC/MS VOA
Methods 3005A, TO 15 LL, TO-14A, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.
