Re: Transmittal of the 2018 Groundwater Monitoring Report for the
Dump Road Area and Main Terminal Area
Martin State Airport, 701 Wilson Point Road, Middle River, Maryland

Dear Mr. Carroll:

For your review, please find enclosed two hard copies with CDs of the above-referenced document. This document presents groundwater monitoring results from 2018 monitoring of the Dump Road Area and the Main Terminal Area on Martin State Airport in Middle River, Maryland.

If you have any questions or require any additional information please contact me by phone at 301-548-2223, or via e-mail at charles.trione@lmco.com.

Sincerely,

Charles Trione

SECTION 1
INTRODUCTION

On behalf of Lockheed Martin Corporation (Lockheed Martin), Tetra Tech, Inc. (Tetra Tech) has prepared this 2018 Groundwater Monitoring Report for the Dump Road Area and Main Terminal Area summarizing groundwater sampling procedures and chemical analytical results for groundwater samples collected in May–July 2018 at Martin State Airport (MSA) in Middle River, Maryland (Figure 1-1). Sampling objectives in accordance with the groundwater monitoring work plan (Tetra Tech, Inc. [Tetra Tech], 2018a) were to:

- provide a current round of groundwater data for selected monitoring wells in the Dump Road Area and Main Terminal area
- better understand the nature and extent of contamination in groundwater
- evaluate the natural attenuation of the chemicals of concern in groundwater at Martin State Airport

These data, in conjunction with previously collected site data, support numerical modeling of shallow-groundwater flow-patterns, including that imparted by the groundwater interim remedial action (IRA) and direct groundwater discharge to Frog Mortar Creek. These data also support review of the ongoing Dump Road Area (DRA) groundwater extraction and treatment system that has been operating since November 2017.

All groundwater samples were chemically analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs) including 1,4-dioxane, total metals, and dissolved metals. Some groundwater samples were also analyzed for perchlorate (a propellant constituent), total petroleum hydrocarbons (TPH)-diesel-range organics (DRO), TPH-gasoline-range organics (GRO), hexavalent chromium, total radium, radium-228, haloacetic acids (HAAs), and natural-attenuation assessment (NAA) parameters. This report is organized as follows:

Section 2—Site Background: Briefly summarizes the site background and references recent reports containing detailed background information related to the project.

Section 3—Investigation Approach and Methodology: Presents the technical approach for groundwater monitoring and describes the field methodology employed for the investigation.

Section 4—Results: Presents the investigation results.

Section 5—Summary: Summarizes the investigation findings.

Section 6—References: Cites references used to compile this report.

SECTION 2
SITE BACKGROUND

Martin State Airport (MSA) is at 701 Wilson Point Road in Middle River, Maryland. It is bounded by Frog Mortar Creek to the east, Stansbury Creek to the west, and Eastern Boulevard to the north (Figure 2-1). These creeks conjoin at the southern site boundary and continue south to feed Middle River and Chesapeake Bay. The Dump Road Area (DRA), in the southeastern portion of MSA, is bounded by Frog Mortar Creek to the east and the main airport runway to the west. The Main Terminal (MT) area comprises approximately 280 acres in the northwestern portion of MSA, just east of Wilson Point Road and Dark Head Cove. The MT area consists of the main terminal building, aircraft hangars and fueling stations, several taxiways, and the northern portion of the runway. Figure 2-1 shows the locations of Martin State Airport, the Dump Road Area, and the Main Terminal area.

Lockheed Martin Corporation (Lockheed Martin) has conducted detailed environmental investigations at the DRA and at the MT since 1999 and 2010, respectively. Lockheed Martin has also conducted additional investigations at Strawberry Point, Greater Strawberry Point, and Frog Mortar Creek (Figure 2-1). Investigations of these latter areas are reported separately.

2.1 DUMP ROAD AREA

Environmental investigations of MSA began in the mid-1980s, when the Maryland Department of the Environment (MDE) made site inspections related to stored drums and a reported chemical dump. In 1989, MDE conducted a preliminary assessment of MSA that identified fill areas and ponds, the latter of which were reportedly used from the 1930s through the 1960s to dispose of spent battery acid, acid-type strippers, and other acidic solutions (MDE, 1989). Detailed investigations of the DRA began after July 1991, when the Maryland Aviation Administration (MAA) encountered four buried drums adjacent to Taxiway Tango while excavating trenches to install an electrical cable. Discovery of these drums led to an investigation of the surrounding area

for possible soil and groundwater contamination, as MDE required in its letters of January 6, 1992 and January 14, 1997 to MAA (MDE, 1992; 1997).

MAA conducted several investigations of the DRA from 1991–1998. These studies identified four areas where environmental sampling investigations have been focused: the Taxiway Tango Median Area (TT Median Area), the Petroleum Hydrocarbon Area (PHA), Pond 1, and the Drum Area (DA). These early investigation areas are shown on Figure 2-2.

From 1999–2010, Lockheed Martin conducted a remedial investigation (Tetra Tech, 2012c) and supplemental fieldwork to further delineate the extent of chemical contamination in soil, groundwater, and pond-sediment indicated by earlier DRA studies. Large areas of buried fill and debris, and surface and subsurface soil contamination were identified through geophysical surveys, membrane-interface probe field data, test pits, soil borings, and chemical analyses of soil and pond-sediment samples. The extent of buried fill and debris at the DRA was estimated to be approximately 25 acres (see Figure 2-2).

A 2012 review of historical aerial photographs (Tetra Tech, 2013b) identified what appear to be open burning areas, open pits or ponds, soil or debris piles, possible ammunition bunkers, ground scars, and fill areas (see shaded areas in Figure 2-2). Several of these historical features coincide with areas of elevated contaminant concentrations in soil and/or groundwater; these areas were later identified as possible contaminant-source areas and were subsequently investigated in 2012–2014 (Tetra Tech, Inc. [Tetra Tech], 2013a and 2014a, b).

Trichloroethene (TCE) and TCE-degradation daughter-products have been detected in groundwater throughout the investigation area, with the highest concentrations appearing in the upper and intermediate regions of the surficial aquifer. TCE has been detected in DRA groundwater at concentrations up to 490,000 micrograms per liter (µg/L) and is therefore a primary contaminant of concern in groundwater at the DRA. 1,4-Dioxane, benzene, toluene, xylenes, and several metals (typically co-located with chlorinated solvents) are also considered chemicals of concern in groundwater. TCE-degradation daughter-products (e.g., dichloroethene [DCE], vinyl chloride [VC], etc.) are typically co-located with TCE at MSA and are considered primary contaminants of concern in DRA groundwater. Additional details regarding DRA background and

history, including details of previous environmental investigations and discussions of contaminant-source areas at the DRA, are in the Dump Road Area Characterization of Possible Source Areas Report (Tetra Tech, 2013a), and therefore are discussed only briefly below. A detailed chronological discussion of investigations at the DRA from 1985–2012 is in Appendix A of the Dump Road Source-Areas Investigation Work Plan (Tetra Tech, 2012a).

2.2 MAIN TERMINAL

Previous investigations directly related to the MT area include the Environmental Evaluation Report for Martin State Airport Main Terminal (Tetra Tech, 2010b) and its addendum (Tetra Tech, 2010a). These evaluations concentrated on environmental impacts resulting from practices carried out between 1929–1975, when the Glenn L. Martin Company and Martin Marietta owned and operated on the property. Possible areas of environmental concern in the MT area were identified through local and federal library documents, historical aerial photographs, facility records, museum records, regulatory data, environmental database reviews, interviews with former employees, and environmental reports and data.

The environmental evaluation identified nine recognized environmental conditions (RECs)[1] (RECs #1–9) in the MT area (Tetra Tech, 2010b), along with five potential RECs (RECs #10–14). The addendum report (Tetra Tech, 2010a) identified eight additional RECs (RECs #15–22) and provided supplemental details on 10 of 14 initial/possible RECs. Additional information obtained during development of the addendum report led to upgrading potential REC #14 to a full REC, because an underground storage tank (UST) had once been located there. MT area RECs (exclusive of potential RECs #10–13) are shown in Figure 2-3.

A Phase II environmental site assessment for the MT area was conducted in 2010–2012 (Tetra Tech, 2012b and 2013c). Soil and groundwater samples were collected and analyzed for possible organic and inorganic constituents. Twelve shallow-aquifer wells (MT-MW-01S through MT-MW-12S) were installed around the perimeter of the airport hangars and the airport terminal building near the identified MT area RECs. Benzene (a petroleum-related volatile organic

[1]*Recognized environmental conditions (RECs) are based on the presence or likely presence of hazardous substances and/or petroleum products under conditions that could indicate a historical, existing, or potential release to the property's structures, soil, groundwater, or surface water.*

compound [VOC]) was detected in groundwater samples collected from well MT-MW02S in 2011 (50.5 micrograms per liter [µg/L]) and 2012 (87 µg/L); both concentrations exceed the MDE groundwater standard (5 µg/L) for benzene.

Seven other VOCs (acetone, carbon disulfide, carbon tetrachloride, chloroform, chloromethane, naphthalene, and toluene) were detected in groundwater samples collected in 2012, but concentrations of those analytes were below MDE groundwater standards. However, concentrations of total petroleum hydrocarbons (TPH)-gasoline-range organics (GRO), TPH-diesel-range organics (DRO), beryllium, nickel, and vanadium exceeded MDE groundwater standards in several samples. Detected concentrations of semivolatile organic compounds (SVOCs), including 1,4-dioxane, did not exceed MDE groundwater standards in the 2010–2012 samples. Additional details regarding the background and history of the MT area, including details of environmental investigations and REC discussions, are available in several previous documents (Tetra Tech, 2010a, 2010b, 2012b, and 2013c), and therefore are not repeated herein.

SECTION 3
INVESTIGATION APPROACH AND METHODOLOGY

This section summarizes the 2018 groundwater sampling program for the Dump Road Area (DRA) and Main Terminal (MT) area of Martin State Airport performed in accordance with the approved work plan (Tetra Tech, 2018a). The 2018 investigation includes synoptic groundwater-level measurements and laboratory analysis of collected groundwater samples. It augments previous data obtained from the DRA (between 2003 and 2016) and the MT area (between 2010 and 2016).

3.1 SYNOPTIC GROUNDWATER-LEVEL MEASUREMENTS

A round of synoptic groundwater-level measurements was conducted by a team of two field scientists for DRA and MT wells on July 3, 2018. Static water levels were measured using an electronic, graduated, water-level meter. The static water level was determined by lowering the meter's probe into the well until an audible tone indicated that the air/water interface had been reached. The water level relative to the top of the well casing was recorded to the nearest 0.01 foot. Groundwater-level measurement sheets are in Appendix A.

3.2 GROUNDWATER SAMPLING

Groundwater samples were collected from 107 wells at the DRA and from 12 wells at the MT area in May–July 2018 as part of the annual monitoring program (Figure 3-1). The four deep wells (MW-27D, MW-29D, MW-30D, and MW-31D) installed in permeable zones below the surficial aquifer of concern were also sampled as part of this investigation. Table 3-1 summarizes the groundwater sampling program. The following sections describe procedures for well purging and groundwater sampling, and describe the chemical analyses performed on the samples collected.

Well purging—Monitoring wells were purged using United States Environmental Protection Agency (USEPA) low-flow purging techniques before sample collection. Groundwater was purged using a peristaltic pump fitted with dedicated, disposable Teflon®-lined tubing, or by using a submersible pump positioned in the center of the well's saturated screen. The pumping rate

during purging ranged between 100–300 milliliters per minute (mL/min) and was frequently measured using a graduated cylinder. The purge rate was adjusted (but not allowed to fall below 100 mL/min) to minimize groundwater drawdown from the initial static water level.

During groundwater purging, water-level drawdown and groundwater parameters (including pH [a measure of acidity and alkalinity], temperature, specific conductance, dissolved oxygen [DO], oxidation-reduction potential [ORP], and turbidity) were measured and recorded every five to 10 minutes until purging was complete. Data were recorded in the appropriate site-specific logbook and on low-flow-purge data sheets. Water-quality parameters were measured using an inline water-quality meter. Turbidity readings were collected using a separate turbidity meter.

Purging was deemed complete when the monitored water-quality parameters stabilized, when three saturated well-casing volumes had been removed, or when the well had been purged dry, and stabilization was achieved when three consecutive readings (taken at five-minute intervals) were within ±0.1 standard units for pH, ±3% for specific conductance and temperature, ±10% for DO and ORP, and less than 10 nephelometric turbidity units (NTUs) for turbidity. If the monitoring well was purged dry, the water level in the well was allowed to recover a minimum of 80% of its initial static water level before groundwater was sampled. Well-purging and sample-record sheets are in Appendix B. All purged water was collected in clean, previously unused, United States Department of Transportation (USDOT)-approved 55-gallon steel drums, which were properly labeled and staged at a location approved by the Maryland Air National Guard (MDANG) and Lockheed Martin Corporation (Lockheed Martin).

Sample collection—Monitoring wells were sampled after purging using the same dedicated tubing or submersible pump that had been used during purging. Groundwater samples were collected using low-flow sampling protocols at the same pumping rate that had been used during well purging. Groundwater was pumped directly into the appropriate sample containers (for all VOC samples), or into a certified-clean disposable container supplied by the laboratory that was then used to pour the collected water directly into the appropriate sample containers.

3.3 LABORATORY ANALYSES

Groundwater samples were collected and analyzed by an off-site laboratory using the following methods (see Table 3-1 for details):

- analysis for VOCs plus tentatively identified compounds (TICs), Freon 22 (dichlorodifluoromethane), and Freon 113 (1,1,2-trichlorotrifluoroethane) by USEPA Method 8260C—(107 DRA monitoring wells and 12 MT-area wells)
- 1,4-dioxane by USEPA Method 8270C SIM— (107 DRA wells and 12 MT-area wells)
- perchlorate by USEPA SW846 Method 6850— (45 DRA wells)
- mercury by USEPA SW846 Method 7470A— (107 DRA wells and 12 MT-area wells)
- hexavalent chromium by USEPA Method 218.6— (39 DRA wells)
- total and dissolved priority pollutant metals by USEPA Method 6020B— (107 DRA wells and 12 MT-area wells)
- radium-224, 226, and 228 by USEPA 900-series methods— (10 DRA wells in the upper, intermediate, and lower surficial-aquifers)
- gasoline-range organics (GRO) and diesel-range organics (DRO) by SW846 Method 8015B— (45 DRA wells and 12 MT-area shallow monitoring wells screened in the upper surficial-aquifer)
- haloacetic acids (HAAs) by USEPA Method 552.1–552.4— (three DRA monitoring wells within the chlorinated solvent plume in the upper surficial aquifer)
- nine monitoring wells were analyzed for natural-attenuation assessment (NAA) parameters (nitrate, nitrite, ammonia nitrogen, phosphate, sulfate, total alkalinity, dissolved organic carbon, total iron, total manganese, total potassium, total calcium, total magnesium, total chloride, total sodium, total silica, and total dissolved solids [TDS]) using USEPA SW846 protocols. Methane, ethane, and ethene were analyzed using Microseeps® AM 20GAX protocols.

Wells selected for sampling and chemical analyses were based on current data needs for the remedial design, past sampling results, and optimization of data collection and cost. Wells that did not affect the site evaluation (i.e., wells with VOC concentrations consistently below Maryland Department of the Environment [MDE] groundwater standards or other screening values) were not sampled for VOCs during this round.

Perchlorate and radium-224, 226, and 228 were sampled at strategic locations to determine site concentrations of these "emerging contaminants"[2] in groundwater. Radium samples were collected from 10 groundwater-monitoring wells within the lateral boundaries of the DRA. Samples for TPH-GRO and TPH-DRO analyses were only collected from wells in the upper surficial-aquifer, because petroleum-related constituents are lighter than water and are typically found at or near the water table.

Hexavalent chromium was analyzed using USEPA Method 218.6 (ion chromatography), with a specified detection limit of 0.02 µg/L, a value lower than the method's published detection limit (0.10 µg/L). Perchlorate was analyzed for by USEPA Method 6850, with a specified detection limit of 1 µg/L.

One trip blank per cooler (of VOC samples) per day was collected for quality assurance/quality control (QA/QC) purposes. Matrix-spike and matrix-spike-duplicate samples were collected on a 1:20 basis. Chemical results for this sampling event are discussed in Section 4. A table listing chemical results for all samples is in Appendix C.

3.4 DOCUMENTATION

A master site logbook was maintained by the field sampling team as an overall record of field activities. Sample documentation consisted of completed chain-of-custody reports and matrix-specific sample-log sheets. The chain-of-custody report is an individual laboratory-supplied standardized form summarizing and documenting pertinent sample information, such as sample identification and type, matrix, date and time of collection, preservation, and requested analyses. Sample custody procedures document sample acquisition and integrity. Chain-of-custody reports are with the data-validation reports in Appendix D.

[2]*Emerging contaminants are chemicals not commonly monitored by regulatory agencies, but which have recently been identified by USEPA and MDE as contaminants that pose possible environmental or public health risk if present in drinking water supplies or groundwater. Adequate data are not available to fully determine the risk of these contaminants.*

3.5 EQUIPMENT DECONTAMINATION

Reusable equipment (e.g., water-level meter) was decontaminated before and after each use. Small, reusable equipment was decontaminated as follows:

- Liquinox® and potable-water wash
- potable-water rinse
- distilled-water rinse
- air drying
- collecting decontamination solutions for disposal

Decontamination rinsate was transferred to properly labeled 55-gallon drums staged at a facility-approved location. Dedicated and/or disposable equipment used for groundwater purging and sampling did not require decontamination.

3.6 WASTE MANAGEMENT

Investigation-derived waste (IDW) consisting of decontamination-rinsate water, monitoring well purge water, disposable sampling equipment, and personal protective equipment (PPE) was generated during groundwater sampling. PPE was brushed off, placed in trash bags, and disposed of in a designated facility trash receptacle. Disposable equipment was also rinsed off and disposed of in a facility-approved trash receptacle. Well purge-water and decontamination fluids were collected and stored in USDOT-approved 55-gallon drums. All drums were properly labeled and logged on a drum inventory form. The drum contents were profiled and managed in accordance with Lockheed Martin corporate waste management procedures and the MSA waste management plan (Tetra Tech, 2018b). All IDW drums were characterized and removed from the site as nonhazardous waste.

3.7 GENERAL SAMPLING PROCEDURES, NOMENCLATURE, AND HANDLING

Each sample received a unique sample identification consisting of the site location, well number, and six-digit sampling date. For example, a groundwater sample collected on May 13, 2018 from monitoring well MSA-MW-06 was labeled MSA-MW-06-051318. Trip blanks were labeled with

a "TB" prefix, followed by the blank's six-digit submittal date (e.g., TB-071318). Field-related sample-handling considerations include selection of sample containers, preservatives, allowable holding times, and requested analyses.

Proper chain-of-custody procedures were followed throughout all phases of sample collection and handling. Empty sample containers were released under signature from the laboratory and accepted under signature by the sampler or other individual responsible for maintaining custody until the sample containers were transferred to the sampling team. Groundwater samples were collected in these containers, released under signature from the sampling team, and then accepted under signature by the laboratory. Transport containers returning to the laboratory were sealed with strapping tape and a tamper-resistant custody seal. The custody seal shows the signature of the individual releasing the transport container, along with the date and time.

3.8 DATA VALIDATION

Data validation involves having an independent (non-laboratory) party review data provided by the laboratory to ensure that specific criteria have been met. These criteria concern specifications that are not sample dependent; they specify performance requirements that should be fully under a laboratory's control. For data analyses of organic chemicals, specific validation areas include blanks, performance-evaluation standard materials, and instrument performance checks. For data analyses involving inorganic chemicals, specific validation areas include blanks, calibration standards, calibration verification standards, laboratory control standards, and interference check standards. The analytical laboratory supplies the chemical data as hard-copy reports and electronic databases.

Once the investigation was complete, chemical data were validated by Tetra Tech, Inc. (Tetra Tech) in accordance with established USEPA protocols to assess the reliability and accuracy of the data. This review was based on the USEPA *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA, 2017a), the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA, 2017b), and the specifics of the analytical method used. Data validation reports are in Appendix D (on compact disc).

Validation of these data concluded that they are acceptable for their intended uses (i.e., risk screening and risk assessment), except for data qualified as unreliable (UR flags). The data qualifiers (i.e., flags) applied to the chemical results during data validation are listed below:

J The analyte is considered present in the sample, but the value is estimated and may not meet highest accuracy or precision standards. In this program, samples were also qualified with "*J*" because quantitation was above the method detection limit but below the laboratory reporting-limit.

J+ The analyte is considered present in the sample, but the value is estimated and is biased high.

J– The analyte is considered present in the sample, but the value is estimated and is biased low.

NJ The analyte has been tentatively identified. This qualifier indicates presumptive evidence of a compound. Special methods may be required to confirm its presence or absence in future sampling efforts.

U Not detected; the analyte was not detected at the reported value.

UJ The analyte was not detected. However, the quantitation or detection limit may be inaccurate or imprecise.

UR The non-detect result is considered qualitatively or quantitatively unreliable. Results flagged with "UR" data qualifiers include 2-chloroethyl vinyl-ether (most DRA and all MT samples), tertiary-butyl alcohol (33 DRA samples), and hexavalent chromium (seven DRA samples).

Only one of these flags (i.e., *J*) appears on the chemical results tables in Section 4; all flags are noted in Appendices C and D.

SECTION 4
RESULTS

This section presents groundwater-elevation data and chemical analysis results for groundwater samples collected from the Dump Road Area (DRA) and Main Terminal (MT) area of Martin State Airport (MSA) in May-July 2018. These results are compared against current Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008) and other pertinent federal/state standards/criteria (if MDE has not established standards for an analyzed chemical).

At present, MDE has not established an advisory level or standard for 1,4-dioxane in drinking water or groundwater. Several states (e.g., California, Colorado, Connecticut, Florida, Maine, Massachusetts, Michigan, and North Carolina) have established drinking water standards or action levels for 1,4-dioxane. These values range from the Massachusetts Office of Research and Standards guideline of 0.3 micrograms per liter (µg/L) to Michigan's drinking water standard of 85 µg/L (Massachusetts Department of Environmental Protection, 2015, and United States Environmental Protection Agency [USEPA] 2006, respectively). USEPA has published a preliminary remedial goal of 6.1 µg/L for 1,4-dioxane in tap water (USEPA, 2006) and a risk-based regional screening-level of 0.46 µg/L for tap water (USEPA, 2017c). The current drinking water guideline used by the Massachusetts Office of Research and Standards (0.3 µg/L), the most conservative of these three screening values, is used as the comparison criterion to evaluate 1,4-dioxane groundwater concentrations in this report.

4.1 DUMP ROAD AREA

Groundwater samples were collected for chemical analyses from 107 DRA monitoring wells over a period of eight weeks (May 14–July 10, 2018). DRA groundwater levels were measured on July 3, 2018. The measurement of groundwater levels was postponed until July 2018, near the end of the sampling period, due to on-going activities and groundwater table fluctuation related to operation of the treatment system for the MSA groundwater interim remedial action (IRA), which started operation in November 2017.

Note that all groundwater well designations at the DRA contain the same "MSA" prefix; this prefix is left off in the following discussions to increase readability.

4.1.1 Groundwater-Level Data

Table 4-1 lists July 2018 groundwater-level measurements and computed groundwater elevations for sampled MSA wells. Figures 4-1 through 4-3 show groundwater-elevation contour maps for the upper, intermediate, and lower surficial-aquifer zones (respectively) at the DRA. Table 4-1 lists static groundwater levels recorded as groundwater depths measured from the top of the sampled well casings and includes their converted elevations based on the North American Vertical Datum of 1988 (NAVD88). For one month prior to groundwater-level measurements (June 7 to July 7, 2018), the groundwater IRA extraction and treatment system was inactive, allowing water levels in the area to equilibrate.

Groundwater elevations for the surficial aquifer range from 2.13 feet below NAVD88 at well MW-53S (in the south-central portion of the DRA) to 7.23 feet above NAVD88 at well MW-44S (adjacent to Pond 2). Accounting for well-casing stick-up for aboveground well-casing risers and well stick-down for flush-mounted well designs, groundwater depths in the surficial aquifer range from approximately 1–21 feet below grade. Shallow groundwater was encountered adjacent to Pond 2 (well MW-44S) and in the western part of the site near the airport runway (e.g., wells MW-24S and DMW-11S); deeper groundwater was found in the eastern portion of the site along the top of the fill embankment near Frog Mortar Creek (e.g., wells DMW-02S, DMW-04S, and DMW-05S).

As shown in Figures 4-1 through 4-3, groundwater in the upper, intermediate, and lower surficial-aquifers generally flows east–northeast from the runway and taxiway toward Frog Mortar Creek. Consistent with previous water-level measurements, the 2018 results show higher groundwater levels at DMW-03S, MW-53S, MW-43S, and MW-44S (Figure 4-1), indicating local groundwater mounding near Ponds 1 and 2. The shallow wells installed there are in a clay-rich material above more permeable sand (in which the surrounding wells are installed). Therefore, groundwater levels in these wells may reflect localized perched groundwater.

4.1.2 Groundwater-Chemical Data

Groundwater samples were collected from the DRA wells to evaluate and confirm the horizontal and vertical extent of groundwater contamination at the DRA, to assess the natural attenuation of VOCs in the subsurface, and to evaluate any changes in groundwater conditions in the groundwater treatment system flow field. Validated analytical results are in Appendices C and D. Validated groundwater-chemical data were used to generate a statistical summary table (Table 4-2) that lists only detected analytes.

Table 4-3 lists positive detections (or "hits") generated from these data. Gray shading in Table 4-3 indicates results that exceed comparison criteria (MDE groundwater standards or the Massachusetts advisory level for 1,4-dioxane). Table C-1 in Appendix C summarizes both detected and non-detected results but does not list screening criteria. Data-validation reports and chain-of-custody forms are on compact disc (CD) in Appendix D. Results of the groundwater-chemical analyses for the DRA are below.

4.1.2.1 Volatile Organic Compounds

Several volatile organic compounds (VOCs) were detected in groundwater (Table 4-2) during this sampling event. *cis*-1,2-Dichloroethene (*cis*-1,2-DCE), trichloroethene (TCE), and vinyl chloride (VC) are the most frequently detected constituents. These chlorinated VOCs (cVOCs) were detected in approximately 80%, 65%, and 69% of the samples collected, respectively (Table 4-2). The maximum detected concentrations of TCE (37,000 micrograms per liter [µg/L]), *cis*-1,2-DCE (27,000 µg/L), and VC (13,000 µg/L) are several orders of magnitude (i.e., powers of 10) greater than their groundwater standards (5 µg/L, 70 µg/L, and 2 µg/L, respectively).

Petroleum-related VOCs (e.g., benzene, toluene, ethylbenzene, and xylenes [BTEX]) were detected less frequently, ranging from 5% of samples for ethylbenzene to 30% of samples for benzene. The maximum BTEX concentrations are generally lower than concentrations of the three most frequently detected cVOCs; e.g., the maximum toluene concentration was 18,000 µg/L in MW-54S, while the maximum concentrations of *cis*-1,2-DCE and TCE in the same well were 27,000 µg/L and 37,000 µg/L (respectively).

VOCs exceeding groundwater standards in the upper, intermediate, and lower surficial-aquifer zones are shown in Figures 4-4, 4-5, and 4-6, respectively. The results for the current round are similar to those of previous groundwater sampling rounds. The lateral and vertical distributions of cVOCs in groundwater confirm that several source areas contribute to groundwater contamination at the site (Figures 4-4 through 4-6). These areas include the Taxiway Tango Median Area (TT Median Area), the Petroleum Hydrocarbon Area (PHA), Taxiway Tango Area East (TT Area East), former Pond 3, the Drum Area (DA), and the area east of Pond 1; see Figure 2-2 for the locations of these areas.

Taxiway Tango Median Area—The TT Median Area is in the western portion of the DRA near wells MW-54S/I and DMW-11S (Figures 4-4 through 4-6; Tables 4-2 and 4-3). Historically, DMW-11S has contained the highest concentrations of cVOCs in this area (up to 52,000 µg/L for TCE, and up to 53,000 µg/L for *cis*-1,2-DCE in 2004). Wells MW-54S/I were installed northeast of wells DMW-11S/I, in an area where elevated cVOC concentrations had been detected in the upper and intermediate surficial-aquifer zones during vertical aquifer-sampling (VAS) in 2013. Groundwater samples collected from MW-54S and MW-54I in 2018 have TCE concentrations (37,000 and 18,000 µg/L, respectively), more than 20 times greater than the TCE concentration at DMW-11S (780 µg/L). The 2018 TCE concentration in MW-54S is slightly less than the 2017 TCE concentration in this well (50,000 µg/L), which was the highest concentration in this area. In monitoring wells MW-54S and MW-54I, respectively, carbon tetrachloride (4,300 µg/L and 5,500 µg/L), chloroform (3,200 µg/L and 1,800 µg/L), toluene (18,000 µg/L and 1,700 µg/L), *cis*-1,2-DCE (27,000 µg/L and 4,000 µg/L), and VC (2,200 and 240*J* µg/L) were also detected at concentrations exceeding their respective MDE groundwater standards. Carbon tetrachloride, chloroform, toluene, *cis*-1,2-DCE, and VC have MDE groundwater standards of 5 µg/L, 80 µg/L, 1,000 µg/L, 70 µg/L, and 2 µg/L, respectively.

From 2004–2010, TCE concentrations at DMW-11S ranged from 29,000–52,000 µg/L, but they have declined sharply since 2011, to 780 µg/L in 2018. Historical data are not available for MW-54S/I, so it is unclear if TCE at DMW-11S migrated downgradient to MW-54S/I, or if MW-54S/I is simply an extension of the TCE-source area at the TT Median Area. An elevated TCE concentration was detected in a shallow soil sample (260,000 micrograms per kilogram at 6–8 feet below ground surface) when MW-54S/I was installed, suggesting that elevated

concentrations detected in this area are an extension of the TT Median Area source area (Tetra Tech, 2014d).

Petroleum Hydrocarbon Area—This area is in the central portion of the site (Figure 2-2) near well DMW-09 and Pond 1 (Figures 4-4 through 4-6). DMW-09S, with seven VOC exceedances, has the highest number of VOC exceedances among PHA wells (see Figures 4-4 through 4-6, and Table 4-3). *cis*-1,2-DCE (460 µg/L) and VC (3,700 µg/L) were six times and 1,850 times their respective criteria (70 µg/L and 2 µg/L). Higher concentrations of TCE (as compared to surrounding wells in the PHA) were detected in wells DMW-09I (590 µg/L) and DMW-09D (2,200*J* µg/L).

The benzene concentration at DMW-09S (170 µg/L [*J* qualified]) is the highest detected during this groundwater monitoring round (Table 4-2 and Figure 4-7). This concentration is 34 times higher than its groundwater standard (5 µg/L). Another well in this area with a benzene exceedance, MW-16S (6.6 µg/L), is hydraulically downgradient of DMW-09S (Figure 4-1). The groundwater sample from monitoring well DMW-09S also exhibited elevated concentrations of *o*-xylene (1,400 µg/L), *m*+*p*-xylenes (14,000 µg/L), total xylenes (15,000 µg/L), ethylbenzene (1,200 µg/L), and 1,2,4-trimethylbenzene (170*J* µg/L), although of these compounds only total xylenes and ethylbenzene concentrations exceeded their respective groundwater standards (10,000 µg/L and 700 µg/L); these five VOC concentrations were greater than those detected at all other DRA wells during this sampling event.

TT Area East—This area is in the central portion of the DRA, encompassing wells MW-45S, MW-41S/I, and DMW-01A/B. Historical aerial photographs indicate that an open burning area and a pond/pit formerly occupied this area. Well MW-45S appears to be installed in the TCE source-area at TT Area East. Benzene, TCE, VC, and *cis*-1,2-DCE concentrations exceed their MDE groundwater standards in each of the five wells in this area. The most notable concentrations are from MW-45S; its total cVOC concentration (69,000 µg/L) consisted of TCE (35,000 µg/L), *cis*-1,2-DCE (21,000 µg/L), and VC (13,000 µg/L).

Former Pond 3—This area is in the central portion of the DRA, south of Pond 1 (Figure 2-2), at wells MW-53S/I and DMW-08S/I/D. Wells MW-53S/I were installed in the former Pond 3 area, where elevated concentrations of cVOCs were detected in the upper and intermediate

surficial-aquifer zones during VAS in 2013. TCE concentrations at MW-53S (1.8 µg/L) and MW-53I (5,600 µg/L) in 2018 are similar to those collected in 2017 (2.0 µg/L and 4,300 µg/L, respectively); however, they are in the lower range of TCE concentrations (3,600–490,000 µg/L) previously detected during the 2013 VAS at similar depths.

Drum Area—This area is in the southern portion of the site between wells MW-02/MW-19, MW-05/DMW-07, and MW-40S/I. It extends downgradient and to the east at wells DMW-04, DMW-05, MW-50, and MW-51. The highest VOC concentrations in this area are in the upper surficial-aquifer near wells MW-19, DMW-07, MW-40S/I, and DMW-05; one or more of the three primary cVOCs (TCE, *cis*-1,2-DCE, and VC) exceed their respective groundwater standards in these wells (see Figures 4-4 through 4-6 and Table 4-3). The highest total cVOC concentrations (33,400 µg/L in 2007) in this area were generally detected at well DMW-07S. Concentrations of TCE (890 µg/L), *cis*-1,2-DCE (8,400 µg/L), and VC (2,100 µg/L) at DMW-07S in this round (2018) total 11,390 µg/L; all are exceedances of their respective MDE groundwater standards (5 µg/L, 70 µg/L, and 2 µg/L).

Area east of Pond 1—This area is in the northeastern portion of the site between Pond 1 and Frog Mortar Creek. The highest cVOC concentrations are generally near Frog Mortar Creek (Figures 4-4 through 4-6). In 2018, TCE concentrations at wells MW-52I (20,000 µg/L) and MW-52D (17,000 µg/L) were consistent with levels detected in these wells over several years (2014 through 2017). This area is east of a wetland and a former pond or pit observed in historical photographs and appears to be at the lowest drainage point behind the berm that was constructed when the former Limehouse Cove was filled.

TCE (510 µg/L), *cis*-1,2-DCE (320 µg/L), and VC (260 µg/L) in well MW-46I also exceed their respective MDE groundwater standards, with VC detected at concentrations 130 times its MDE groundwater standard (2 µg/L). cVOC concentrations in 2015 through 2017 were as much as 75 times their MDE groundwater standards. These current and historical concentrations at MW-46I suggest that high cVOC concentrations extend north of the area currently being monitored at the DRA. Additional wells with notable concentrations of cVOCs greater than screening levels were DMW-03S (with *cis*-1,2-DCE [830 µg/L] and VC [1,300 µg/L] concentrations 12 times and 650 times their standards, respectively); and DMW-03I (with *cis*-1,2-DCE [1,500 µg/L], TCE

[2,500 µg/L], and VC [520 µg/L] concentrations approximately 20 times, 500 times, and 260 times their standards, respectively).

Taxiway Tango Area North—TCE exceeds its groundwater standard (5 µg/L) at several intermediate wells north and west of Pond 2, with exceedances of 1,200 µg/L and 510 µg/L (respectively) detected at wells MW-16I and MW-17I (see Table 4-3 and Figure 4-5). These exceedances suggest that the groundwater-contaminant plume extends northwest of wells DMW-9S/I/D (Figures 4-4 and 4-5).

Shoreline wells—Wells MW-46S/I/D through MW-52S/I/D form a northwest–southeast trending line on the embankment along the Frog Mortar Creek shoreline. MW-46S, MW-48S, and MW-52S produced the only samples collected along the shoreline that did not contain a TCE concentration (all were non-detect) above its MDE groundwater standard (5 µg/L). TCE concentrations range from 12*J* µg/L (MW-51D) to 20,000 µg/L (MW-52I), with an average of approximately 3,335 µg/L, in the remaining 18 monitoring wells along the shoreline. Of the 21 shoreline monitoring wells, more than 65% (14 wells) produced TCE concentrations more than one order of magnitude (10 times) the MDE groundwater standard, with nearly 50% (ten wells) with TCE concentrations two orders of magnitude (or 100 times) higher than the MDE groundwater standard (5 µg/L). Intermediate and deep surficial-aquifer monitoring wells in the central region of the coastline (MW-52, MW-48, and MW-49) produced the highest shoreline TCE concentrations. In contrast, TCE concentrations north of the central area at MW-51S (4,300 µg/L) and in the central area at MW-49S (670 µg/L) are the highest detected TCE concentrations of the shoreline wells screened in the upper surficial-aquifer. These TCE concentrations are similar to those detected in shoreline wells in 2016. Note that over the last five annual monitoring events (2013–2018), TCE concentrations in some shallow-aquifer wells along the shoreline have fluctuated (e.g., at MW-51S, TCE was detected at 13,000 µg/L in 2013, 730 µg/L in 2014, 250 µg/L in 2015, 160 µg/L in 2016, 5,500 µg/L in 2017, and 4,300 µg/L in 2018). The concentrations of TCE daughter products *cis*-1,2-DCE and VC trending over time appear proportional to those of TCE.

Deep confined-aquifer wells—VOCs were not detected in the four wells (MW-27D, MW-29D, MW-30D, and MW-31D) screened in the deep confined aquifer.

Natural-attenuation assessment parameters and haloacetic acids—Nine groundwater samples in the current (2018) round were analyzed for natural-attenuation assessment (NAA) parameters, and three samples were analyzed for haloacetic acids (HAA). Groundwater samples for NAA parameters were collected from four wells in the upper surficial-aquifer zone (DMW-09S, DMW-11S, MW-18S, and MW-48S), from three wells in the intermediate surficial-aquifer zone (DMW-09I, MW-18I, and MW-48I), and from two wells in the lower surficial-aquifer zone (DMW-09D and MW-48D). These wells are in presumed VOC source-areas. Wells DMW-02S, DMW-03S, and DMW-05S were analyzed for HAA; all three wells are screened in a portion of the upper surficial-aquifer impacted by chlorinated solvents. Locations of these wells are shown in Figures 4-4 through 4-6.

HAAs, common byproducts of water treatment by chlorination or ozonation, include bromoacetic acid, chloroacetic acid, dibromoacetic acid, dichloroacetic acid, and trichloroacetic acid. HAAs were not detected in the three samples analyzed, except for a detection of dichloroacetic acid 2*J* µg/L in DMW-02S (see Appendix C1). NAA parameters include alkalinity, chloride, dissolved organic carbon, nitrate, nitrite, orthophosphate, sulfate, total dissolved solids, calcium, iron, magnesium, manganese, potassium, sodium, and analysis for dissolved gasses ethane, ethene, and methane. Some NAA parameters were measured in the field as well as at the laboratory. Field measurements of NAA parameters used for this evaluation (i.e., groundwater pH [a measure of acidity or alkalinity], oxidation-reduction potential [ORP], dissolved oxygen [DO], and temperature) are recorded on the field forms in Appendix B.

NAA evaluates whether anaerobic reductive-dechlorination of cVOCs is occurring at the site. This information will be used during the evaluation of remedial alternatives to determine the extent of natural attenuation occurring, and the potential for continued attenuation to occur at the site, and whether site conditions can be stimulated to undergo anaerobic reductive-dechlorination by adding electron donors and/or by adjusting groundwater pH. Anaerobic reductive-dechlorination is evident at the site, as shown by multiple detections of *cis*-1,2-DCE, a breakdown product of TCE, and VC, a breakdown product of dichloroethene, in areas of elevated TCE groundwater concentrations.

cis-1,2-DCE also appears to be degrading readily in the upper and intermediate zones, as indicated by the relatively high concentrations of VC detected in wells DMW-09S/I, DMW-11S, and MW-48S/I/D, and the presence of VC in eight of nine wells sampled for NAA parameters. Furthermore, ethene concentrations greater than 10 µg/L at seven of nine wells, and elevated chloride concentrations at all nine wells, indicate that complete mineralization of VOC contaminants is likely occurring at these locations. Methane concentrations at these wells also indicate anaerobic conditions. BTEX at DMW-09S provides a carbon source that is expected to enhance biodegradation of cVOCs at the PHA and Pond 1 Area plumes.

Other NAA parameters indicate favorable conditions for reductive dechlorination in the upper and intermediate surficial-aquifer zones. Elevated methane concentrations (greater than 700 µg/L) detected at DMW-09S, DMW-11S, and MW-48I are slightly above the favorable assessment criterion. High methane concentrations at these locations indicate fermentation is occurring; thus, the potential for complete anaerobic dechlorination exists at these locations.

4.1.2.2 1,4-Dioxane

1,4-Dioxane was detected in 61% of groundwater samples collected in 2018 (Table 4-2 and Figure 4-8), at concentrations ranging from 0.92 (MW-51D) to 650 µg/L (MW-45S). The average of the detected 1,4-dioxane concentrations is 75.02 µg/L. 1,4-Dioxane concentrations exceeded the Massachusetts Office of Research and Standards drinking water guideline (0.3 µg/L) in all samples in which it was detected. The highest concentrations occur primarily in the upper and intermediate surficial-aquifer zones in wells east of Pond 1 (DMW-03S/DMW-03I [220 µg/L and 140 µg/L, respectively], and MW-52I/MW-52D [390 µg/L and 310 µg/L, respectively]). Elevated 1,4-dioxane concentrations are also present in two other areas at DRA. The first area includes the TT Area East (MW-45S, MW-41S, and MW-41I [650 µg/L, 210 µg/L, and 380 µg/L, respectively]) and area downgradient (DMW-02S, MW-53I, and MW-53S [220 µg/L, 240 µg/L, and 94 µg/L, respectively]). The second area of elevated 1,4-dioxane concentrations is in one sample from the TT median area (MW-54S [510 µg/L]).

An elevated concentration (230 µg/L) was also reported for MW-16S, north of the PHA. Substantially lower concentrations of 1,4-dioxane are reported for wells at the Drum Area plume (the highest concentration in the area was 54 µg/L [DMW-07S]). 1,4-Dioxane was not detected in

the deep confined-aquifer groundwater samples (i.e., MW-27D, MW-29D, MW-30D, and MW-31D).

In general, 1,4-dioxane levels in high cVOC-concentration areas have decreased from 2009 to 2018. The largest decrease occurred at well DMW-1A; the concentration (490 µg/L in 2009) decreased in 2010 (91 µg/L), remained steady in 2011 (93 µg/L), decreased again in 2012 (68 µg/L), increased slightly between 2013 and 2014 (170 µg/L to 180 µg/L, respectively), but then steadily decreased thereafter to 51 µg/L in 2015, 24 µg/L in 2016, but slightly increased to 36 µg/L in 2017. The 1,4-dioxane concentration at DMW-1A increased only slightly (to 71 µg/L) in 2018.

4.1.2.3 Metals

Tables 4-2 and 4-3 summarize descriptive statistics and detections, respectively, of total metals (unfiltered groundwater samples) and dissolved metals (filtered groundwater samples) in DRA monitoring wells. Metals concentrations that exceed MDE groundwater standards are listed in Table 4-3 and Figures 4-9 through 4-13. Concentrations of 13 total metals and 10 dissolved metals exceed groundwater standards in one or more groundwater samples collected in 2018.

As shown in Table 4-3, the maximum concentrations of cadmium, chromium, iron, manganese, nickel, and vanadium exceed standards by more than one order of magnitude in both the total and dissolved metals fractions. Maximum concentrations of arsenic in both the total and dissolved metals fractions (52 µg/L and 37 µg/L, respectively) are more than three times its standard of 10 µg/L. Additionally, maximum concentrations of total and dissolved selenium (68 µg/L and 66 µg/L, respectively) are slightly above its standard of 50 µg/L. Table 4-2 shows the maximum total (unfiltered) and dissolved (filtered) metals concentrations. Well MW-45S appears to be installed in the cadmium and chromium source-area in TT Area East. Total cadmium and chromium concentrations at MW-45S during this round (2,600 µg/L and 4,000*J*- µg/L, respectively) are several times higher than the respective cadmium and chromium concentrations in nearby wells DMW-01A (260 µg/L and 11 µg/L) and DMW-01B (86 µg/L and 2.3 µg/L).

Maximum concentrations of total and dissolved nickel and vanadium were detected in well MW-24S, south of Taxiway Tango and MW-45S. The maximum concentrations of total and

dissolved iron and selenium, and dissolved beryllium, were also detected in MW-24S. No exceedances of hexavalent chromium were detected in any of the 39 samples in which it was analyzed for. Only the common-earth metals iron and/or manganese exceed groundwater standards in samples collected from the deep confined-aquifer wells (i.e., in MW-27D and MW-31D).

4.1.2.4 Petroleum Hydrocarbons

Forty-five samples from the upper surficial-aquifer were submitted for total petroleum hydrocarbons (TPH)-diesel-range organics (DRO) and TPH-gasoline-range organics (GRO) analysis. As shown in Table 4-2, TPH-DRO were detected in 84% of the groundwater samples collected in 2018, at concentrations ranging from 200*J* to 5,100 µg/L, whereas TPH-GRO were detected in 53% of groundwater samples in 2018, at concentrations ranging from 52*J*–94,000 µg/L. TPH-DRO and TPH-GRO exceedances of the groundwater standard (47 µg/L for both) are in Figure 4-14. The average detected concentration of TPH-DRO is 1,054 µg/L; the highest concentration reported is for well MW-52S. The average detected concentration of TPH-GRO is 6,463 µg/L, with the highest concentration reported for 2018 at well MW-54S.

4.1.2.5 Perchlorate

Forty-five groundwater samples were analyzed for perchlorate (Table 4-2). Perchlorate was detected in 17 of 45 (38%) groundwater samples, at concentrations ranging from 0.1*J*–2.3 µg/L. None of the detected perchlorate concentrations in 2018 exceeded its MDE groundwater standard (2.6 µg/L).

4.1.2.6 Radium-228 and Total Alpha Radium

As shown in Table 4-2, radium-228 and total alpha radium were detected in six and five of 10 groundwater samples, respectively. Radium-228 concentrations range from 0.33–9.34 picocuries per liter (pCi/L). The average detected radium-228 concentration is 4.22 pCi/L, and the highest radium-228 concentration reported is at well DMW-06I, screened in the intermediate surficial-aquifer in the southeastern portion of the DRA. The radium-228 concentrations at DMW-06D (6.76 pCi/L), in the southeastern portion of the DRA, and DMW-03I (7.22 pCi/L), east of Pond 1, also exceed its groundwater standard (5 pCi/L). All concentrations of total alpha radium are less than the groundwater standard (5 pCi/L).

4.2 MAIN TERMINAL

Static groundwater-levels and groundwater samples for laboratory chemical analyses were collected from 12 MT-area monitoring wells. This section presents groundwater-elevation data collected on July 3, 2018, and the chemical results from groundwater samples collected on May 7-10, 2018. The MT-area groundwater samples were analyzed for VOCs, 1,4-dioxane, total and dissolved metals, TPH-DRO, and TPH-GRO.

4.2.1 Groundwater-Level Data

Groundwater-level measurements and computed elevations for upper surficial-aquifer wells MT-MW01S through MT-MW12S are in Table 4-1; these data are graphically depicted in Figure 4-15. Depth to groundwater ranged from level with the ground surface (in the low elevation area south of hangars H-1 to H-3 at well MT-MW03S) to approximately 11 feet below the ground surface (at the upslope ends of the hangar buildings at well MT-MW10S [hangar H-6; see Figure 2-1]). As shown in Figure 4-15, groundwater from the airport terminal area generally flows southwest toward Dark Head Cove.

4.2.2 Groundwater-Chemical Data

Validated groundwater-chemical data in the MT area were used to generate a statistical summary table (Table 4-4), and a positive detections (or "hits") table (Table 4-5). Gray shading in Table 4-5 indicates results that exceed MDE groundwater standards. Table C-2 in Appendix C summarizes both detected and non-detected results, and does not contain screening criteria. Data-validation reports and chain-of-custody forms are on CD in Appendix D. The following sections discuss groundwater results for the MT area. Concentrations of organic compounds and metals exceeding their groundwater standards are illustrated in Figures 4-16 and 4-17, respectively.

4.2.2.1 VOCs and SVOCs

Several VOCs were detected in groundwater at the MT area (Tables 4-4 and 4-5). However, MT-MW02S accounts for nearly all VOC detections; only trace concentrations (well below MDE groundwater standards) of three VOCs were detected in the other 11 wells. MT-MW02S is on the western side of hangar H-1, in an area where former underground storage tanks (USTs) stored fuel. The only VOCs exceeding MDE groundwater standards were benzene (17 µg/L) and naphthalene

(0.75 J µg/L) at well MT-MW02S. The only SVOC analyzed for in the MT area is 1,4-dioxane, and it was not detected in any sample. Therefore, 1,4-dioxane results do not appear in Tables 4-4 or 4-5, but are shown in Table C-2 in Appendix C.

4.2.2.2 Metals

Groundwater samples were analyzed for both total (i.e., unfiltered) and dissolved (i.e., filtered) metals. Sixteen total metals and dissolved metals were detected in MT groundwater samples. Five metals (beryllium, cadmium, iron, manganese, and nickel) were detected at concentrations exceeding MDE groundwater standards. Beryllium exceeded its MDE standard (4 µg/L) in six total metals samples (concentrations ranging from 4.7 µg/L to 110 µg/L) and in six dissolved samples from the same wells (concentrations ranging from 4.2 µg/L to 94 µg/L). Total and dissolved cadmium concentrations (6.2 µg/L and 5.8 µg/L, respectively) exceeded the MDE standard (5 µg/L) in only one well (MT-MW06S). Total iron exceeded its standard (300 µg/L) in nine samples at concentrations ranging from 360 µg/L to 110,000 µg/L, and dissolved iron exceedances (ranging from 320 µg/L to 110,000 µg/L) were detected in seven samples. Manganese exceeded its standard (50 µg/L) in 11 wells sampled, in both total and dissolved fractions, at concentrations ranging from 51 µg/L to 23,000 µg/L, and 56 µg/L to 21,000 µg/L, respectively. Nickel exceeded its standard (73 µg/L) in seven total and six dissolved samples, at concentrations ranging from 97 µg/L to 3,200 µg/L, and 380 µg/L to 2,700 µg/L, respectively.

Vanadium (4.9*J* µg/L) exceeded its MDE groundwater standard (3.7 µg/L) in one well sample (MT-MW01S) in the dissolved fraction only; vanadium in the total (unfiltered) sample did not exceed its standard. Other metals detected in MT groundwater samples, but at concentrations below MDE standards, consisted of arsenic, barium, chromium, copper, lead, selenium, silver, and thallium. Two detected metals have no MDE groundwater standards: cobalt (in all 12 samples) and molybdenum (in two total and dissolved samples).

4.2.2.3 Petroleum Hydrocarbons

TPH-GRO was detected in four of 12 MT wells at concentrations (50*J*–430 µg/L) exceeding its MDE groundwater standard (47 µg/L). All GRO results except the maximum detected concentration are *J*-qualified (i.e., estimated). The highest GRO exceedance was detected at MT-MW02S (430 µg/L), with the others occurring at MT-MW04S, MT-MW08S, and

MT-MW09S, at concentrations ranging from 50*J* to 56*J*. TPH-DRO concentrations exceeded the MDE groundwater standard (47 µg/L) in all five samples in which it was detected, at concentrations ranging from 230*J* µg/L (MT-MW08S) to 7,000 µg/L (MT-MW02S). TPH-DRO at similar concentrations was detected at MT-MW02S during previous sampling rounds (4,700 µg/L in 2013, 5,200 µg/L in 2014, 4,500 µg/L in 2015, 8,400 µg/L in 2016, and 7,800 in 2017).

SECTION 5
SUMMARY

The following summarizes the findings of the 2018 groundwater sampling and analysis program for the Dump Road Area (DRA) and Main Terminal (MT) area of Martin State Airport (MSA):

Dump Road Area—

- Groundwater in the upper, intermediate, and lower surficial-aquifer zones flows east and northeast to Frog Mortar Creek. The Groundwater Interim Remedial Action extraction and treatment system, which started operation in November 2017, has operated discontinuously and was inactive for the month preceding water-level measurements. When the system is operating, the groundwater flow field at all aquifer levels is directed towards the 16 extraction wells in the Dump Road Area.

- Concentrations of chlorinated volatile organic compounds (cVOCs) exceed Maryland Department of the Environment (MDE) groundwater standards throughout much of the Dump Road Area, and at multiple depths. The two highest trichloroethene (TCE) concentrations observed in the current sampling round are 37,000 micrograms per liter (µg/L) and 35,000 µg/L, reported for upper surficial-aquifer wells MW-54S (west of MW-45S in the Taxiway Tango median area) and MW-45S (east of Taxiway Tango), respectively. The trichloroethene concentration in the intermediate-aquifer zone in the same well, MW-54I (18,000 µg/L), is less (approximately one-half the concentration) than the upper-surficial aquifer concentration. Multiple volatile organic compound (VOC) sources at the site have resulted in volatile organic compound plumes in groundwater that extend to areas north of Pond 2, south to wells DMW-06I and DMW-07I, and west to the area between Taxiway Tango and the airport runway. Concentrations of chlorinated volatile organic compounds in groundwater are consistent with the May-June 2017 results, with some exceptions.

- Samples from nine groundwater wells were analyzed for natural-attenuation assessment (NAA) parameters and their impacts. Anaerobic reductive-dechlorination is indicated by the presence of the trichloroethene-breakdown product cis-1,2-dichloroethene. Vinyl chloride (VC), methane, ethene, and elevated chloride concentrations indicate that complete dechlorination is likely occurring in the upper, intermediate, and lower surficial-aquifer zones at the Dump Road Area. However, higher oxidation-reduction potential values and lower groundwater pH indicate that the conditions for reduction dechlorination may be less favorable in the lower surficial zone.

- Volatile organic compounds were detected in groundwater at concentrations greater than the Maryland Department of the Environment groundwater standards in delineated areas north, east, and west of the waste material in the central portion of the Dump Road Area.

- The semivolatile organic compound (SVOC) 1,4-dioxane was detected primarily in groundwater samples from the upper and intermediate surficial-aquifer zones. 1,4-Dioxane is co-located in areas that contain the highest concentrations of chlorinated volatile organic compounds (west of Taxiway Tango at MW-54S, east of Taxiway Tango at MW-45S and MW-41S/I, the area hydraulically downgradient of MW-45S, and near and east of Pond 1).

- Concentrations of 13 (total) metals exceed groundwater standards in one or more surficial-aquifer groundwater samples. Maximum detected concentrations of cadmium, chromium, iron, manganese, nickel, and vanadium exceed Maryland Department of the Environment groundwater standards by more than one order of magnitude.

- Well MW-45S appears to be installed in the cadmium and chromium source-area east of Taxiway Tango. During this round, total cadmium (2,600 µg/L) and chromium (4,000*J* µg/L) concentrations at MW-45S are several times higher than any other cadmium and chromium concentrations detected during the sampling event. Measured dissolved concentrations were similar, 2900 µg/L and 4800*J* µg/L, respectively.

- Concentrations of hexavalent chromium were detected in 10 of 39 samples; however, no concentrations exceed the Maryland Department of the Environment groundwater standard.

- Total petroleum hydrocarbons (TPH) diesel-range organics (DRO) and gasoline-range organics (GRO) were frequently detected in upper surficial-aquifer groundwater samples. Most concentrations exceed the Maryland Department of the Environment groundwater standard (47 µg/L).

- Perchlorate was detected in 17 of 45 groundwater samples. However, none of the detected concentrations (ranging from 0.1J µg/L to 2.3 µg/L) exceed the Maryland Department of the Environment groundwater standard of 2.6 µg/L.

- Radium-228 and total alpha radium were detected in five and four of 10 groundwater samples, respectively. Detected radium-228 concentrations range from 0.33 picocuries per liter (pCi/L) to 9.34 pCi/L, and detected total alpha radium concentrations range from 0.379 pCi/L to 3.66 pCi/L. Detected concentrations of radium-228 exceed the groundwater standard of 5 pCi/L in samples from three monitoring wells. Alpha radium concentrations were below the standard.

Main Terminal—

- Groundwater elevation data indicate that groundwater at the Main Terminal area flows southwest from the airport terminal area toward Dark Head Cove.

- Benzene and other petroleum-related volatile organic compounds (e.g., naphthalene, 1,2,3- and 1,2,4-trimethylbenzene, xylenes, etc.) were detected infrequently (in one or two samples), primarily in well MT-MW02S. This well is on the western side of hangar H-1, in an area where former underground storage tanks (USTs) were previously used to store fuel.

- Benzene and naphthalene are the only volatile organic compounds exceeding Maryland Department of the Environment groundwater standards. The benzene concentration in the groundwater sample collected at well MT-MW02S was 17 µg/L, which is slightly higher than the concentrations detected during the 2016 sampling (11 µg/L) and 2017 (14 µg/L). Naphthalene in the same well (MT-MW02S) at a concentration of 0.75J µg/L slightly exceeded its Maryland Department of the Environment groundwater standard (0.65 µg/L).

- Five metals (beryllium, cadmium, iron, manganese, and nickel) were detected at concentrations exceeding Maryland Department of the Environment groundwater standards.

- Gasoline-range organics were detected in, and concentrations exceed Maryland Department of the Environment groundwater standards (47 µg/L) in, four of 12 wells. Diesel-range organic concentrations exceed the groundwater standard (47 µg/L) in all samples in which it was detected (five of 12 wells). Diesel-range-organics exceedances of the groundwater standard were detected at two of 12 locations sampled in 2017.

Notes:
1. Perchlorate was analyzed by USEPA Method 6850 with a specified detection limit of 1 µg/L.
2. Hexavalent chromium was analyzed by USEPA Method 218.6 (ion chromotography) with a specified detection limit of 0.02 ug/L which is lower than the method's published detection limit of 0.10 µg/L.
3. Natural attenuation parameters: nitrate, nitrite, ammonium nitrogen, phosphate, sulfate, total alkalinity, dissolved organic carbon, total iron total calcium, total manganese, total potassium, total magnesium, total chloride, total silica, total dissolved solids, methane, ethane and ethene. ***Ferrous iron*** was measured in the field at the same 9 wells at the time of sampling using a wet chemistry field kit.
4. Natural attenuation parameters were analyzed by USEPA Method SW846, and methane, ethane, and ethene were analyzed using Microseeps © AM 20GAX HACH or Chemetrics test kits for ferrous iron determination in the field.
5. Dissolved gases (2 x 40 mL with hydrochloric acid); ammonia (250mL plastic with sulfuric acid); dissolved organic carbon (2 x 40 mL vial with sulfuric acid); remaining parameters of alkalility, total dissolved solids, anions (1 liter plastic)
6. Methane, ethane and ethene (2 x 40 mL vials with hydrochloric acid)

Wells not Sampled:

RW1S	MW19I	DMW5D
OW1S	MW22I	DMW8D
MW2	MW23I	MW18D
DMW8S	MW26I	
MW15S	MW28I	

Abbreviations:

µg/L - micrograms per liter	PPM - priority pollutant metals
DRO - diesel-range organics	TICs - tentatively identified compounds
GRO - gasoline-range organics	USEPA - Unites States Environmental Protection Agency
mL - milliliter	VOCs - volatile organic compounds

NULL - constituwnt was detected in 100% of the samples; not applicable
For non-detects, 1/2 sample quantitation limit was used as a proxy concentration.
1/2 the detection limit was used for B qualified data.
J - estimated value
µg/L - micrograms per liter
mg/L - milligrams per liter
Pci/L - picocuries per liter
GW - groundwater
MSA - Martin State Airport
DRA - DRA

Notes:
1 Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008) unless noted.
2 United States Environmental Protection Agency $1x10^{-6}$ Regional Screening Level for 1,4-dioxane. MDE standard not available.
3 United States Environmental Protection Agency Radionuclides Rule 66 FR 76708. MDE standard not available.
Gray shading indicates value exceeds groundwater standard.
µg/L - micrograms per liter
DRO - diesel-range organic
GRO - gasoline-range organic
J - chemical detected, concentration is estimated
J+ - chemical detected, concentration is estimated high
J- - chemical detected, concentration is estimated low
-- - not detected
MT - Main Terminal
MW - monitoring well
NA - value not available (second column) or not analyzed
NJ - analyte tentatively identified; concentration is estimated
TPH - total petroleum hydrocarbons

NULL - constituent was detected in 100% of the samples; not applicable
For non-detects, 1/2 sample quantitation limit was used as a proxy concentration.
1/2 the detection limit was used for B qualified data.
J - estimated value
µg/L - micrograms per liter
MT - Main Terminal
GW - groundwater

1 Maryland Department of the Environment (MDE) groundwater standards (MDE, 2008) unless noted.
Gray shading indicates value exceeds groundwater standard.

-- - not detected
µg/L - micrograms per liter
DRO - diesel-range organic
GRO - gasoline-range organic
J - detected, concentration is estimated
MT - Main Terminal
MW - monitoring well
NA - not available (column 2) or not analyzed
NJ - tentatively identified; concentration is estimated
TPH - total petroleum hydrocarbons

Notes:
DRO - diesel-range organics
GRO - gasoline-range organics
J - estimated concentration
J+ - estimated concentration, biased high
J - - estimated concentration, biased low
NA - not analyzed.
NJ - tentatively identified compound
TPH - total petroleum hydrocarbons
U - analyte is not detected at the concentration shown left of the letter.
Pci/L - picocurie per liter
UG/L - micrograms per liter (i.e., parts per billion)
UJ - analyte is not detected and estimated at the concentration shown left of the letter.
UR - not detected. Result is not considered reliable.

Notes:
DRO - diesel-range organics
GRO - gasoline-range organics
J - estimated concentration
NA - not analyzed.
NJ - tentatively identified compound
TPH - total petroleum hydrocarbons
U - analyte is not detected at the concentration shown left of the letter.
UG/L - micrograms per liter (i.e., parts per billion)
UJ - analyte is not detected and estimated at the concentration shown left of the letter.
UR - not detected. Result is not considered reliable.

OVERVIEW

The sample set for MSA Groundwater/Surface Water Monitoring, SDG 240-95314-1, consists of fifteen (15) aqueous environmental samples and three (3) trip blanks. Samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), gas range organics (C6-C10), diesel range organics (C10-C32) and select total and dissolved metals. The trip blanks were analyzed for VOCs. Additionally, VOC samples were analyzed for tentatively identified compounds (TICs). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on May 7, 8, 9 and 10, 2018, and analyzed by Test America. Analyses were conducted in accordance to SW-846 Methods 8260C, 8270D, 8015C, 6020A and 7470A analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip/instrument blank results, ICP interference recoveries, surrogate spike recoveries, laboratory control sample/laboratory control sample duplicate results, internal standard recoveries, compound identification, tentatively identified compounds, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative indicates that all VOC samples were preserved with hydrochloric acid, and the VOC analyte 2-chloroethyl vinyl ether is an acid-labile compound that degrades in an acidic medium. The non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in all VOC samples.

MINOR PROBLEMS

- The VOC initial calibration, associated with preparation batches 240-95494 and 240-95580, performed on 05/08/18 on instrument A3UX16 had a percent relative standard deviation (%RSD) that was greater than the 20% quality control limit for dichlorodifluoromethane. Samples MSA-MW-35S-051418, MSA-MW-36S-051418, MSA-MW-37S-051418, MT-MW01S-051018, MT-MW02S-051018, MT-MW04S-050918, MT-MW09S-051018, MT-MW10S-050918, MT-MW11S-050918, TB-050918 and TB-051418 were affected. The non-detected results for dichlorodifluoromethane were qualified as estimated (UJ) in the affected samples.

- The VOC initial calibration verification, associated with preparation batches 240-95494 and 240-95580, performed on 05/08/18 @ 23:22 on instrument A3UX16 had percent differences (%Ds) that were greater than the 20% quality control limit for hexachlorobutadiene. Samples MSA-MW-35S-051418, MSA-MW-36S-051418, MSA-MW-37S-051418, MT-MW01S-051018, MT-MW02S-051018, MT-MW04S-050918, MT-MW09S-051018, MT-MW10S-050918, MT-MW11S-050918, TB-050918and TB-051418 were affected. The non-detected results for hexachlorobutadiene were qualified as estimated (UJ) in the affected samples.

- The VOC continuing calibration verification, associated with preparation batch 240-95494, performed on 05/22/18 @ 8:40 and 9:39 on instrument A3UX16 had %Ds that were greater than the 20% quality control limit for dichlorodifluoromethane, vinyl chloride, hexachlorobutadiene, 1,2,3-trichlorobenzene and 1,2,3-trimethylbenzene. Samples MT-MW01S-051018, MT-MW02S-051018, MT-MW04S-050918, MT-MW09S-051018, MT-MW10S-050918, MT-MW11S-050918 and TB-050918 were affected. The detected and non-detected results for the aforementioned compounds were qualified as estimated (J) and (UJ), respectively, in the affected samples.

- The VOC continuing calibration verification, associated with preparation batch 240-95580, performed on 05/24/18 @ 8:45 on instrument A3UX16 had %Ds that were greater than the 20% quality control limit for vinyl chloride, bromomethane, 1,1,2-trichlorotrifluoroethane, 2,2-dichloropropane, bromochloromethane, hexachlorobutadiene and 1,2,3-trichlorobenzene. Samples MSA-MW-35S-051418, MSA-MW-36S-051418, MSA-MW-37S-051418 and TB-051418 were affected. The detected and non-detected results for the aforementioned compounds were qualified as estimated (J) and (UJ), respectively, in the affected samples.

- The VOC initial calibration verification, associated with preparation batch 240-95314, performed on 05/16/18 @ 21:27 on instrument A3UX9 had %Ds that were greater than the 20% quality control limit for dichlorodifluoromethane and 1,1,2-trichlorotrifluoroethane. Samples TB-050718, MT-MW07S-050718, MT-MW08S-050718, MT-MW03S-050718, MT-MW12S-050818, MT-MW05S-050818 and MT-MW06S-050818 were affected. The detected and non-detected results for the aforementioned compounds were qualified as estimated (J) and (UJ), respectively, in the affected samples.

- The VOC continuing calibration verification, associated with preparation batch 240-95314, performed on 05/18/18 @ 17:08 on instrument A3UX9 had %Ds that were greater than the 20% quality control limit for 2-hexanone and hexachlorobutadiene. Samples TB-050718, MT-MW07S-050718, MT-MW08S-050718, MT-MW03S-050718, MT-MW12S-050818, MT-MW05S-050818 and MT-MW06S-050818 were affected. The non-detected results for the aforementioned compounds were qualified as estimated (UJ), in the affected samples.

- The SVOC initial calibration verification, associated with preparation batches 240-95314, 240-95494-2 and 240-95580, performed on 05/11/18 @ 14:56 on instrument A4AG2 had %Ds that were greater than the 20% quality control limit for 1,4-dioxane. All samples were affected. The detected and non-detected

results for 1,4-dioxane were qualified as estimated (J) and (UJ), respectively, in the affected samples.

- The following VOC analytes were detected in the method/trip blanks at the following maximum concentrations:

Contaminant	Maximum Concentration	Reporting Limit (RL) > or <
Acetone[1]	11 ug/L	> RL
Acetone[2]	11 ug/L	> RL
Acetone[3]	10 ug/L	> RL
2-butanone[3]	1.1 ug/L	< RL
Methylene chloride[4]	0.912 ug/L	< RL

[1] Maximum concentration detected in trip blank TB-050718.
[2] Maximum concentration detected in trip blank TB-050918.
[3] Maximum concentration present in trip blank TB-051418.
[4] Maximum concentration present in a method blank affecting sample MSA-MW-35S-051418.

The detected result greater than 2X the blank result for acetone for sample MT-MW02S-051018 was qualified as non-detected, (U). Field blanks are not qualified for field blank contamination.

- The TICs cyclohexane, 2-methyl-3-hexanone, 2,2-dimethyl-3-pentanol, 3-methyl-3-pentanol, 2,2-dimethyl-3-pentanone, 1,2,4,5-tetramethyl-benzene, 1,3,5-trimethyl-benzene, 1-ethyl-2-methyl-benzene, cyclopropyl-benzene and 2-ethyl-butanal were detected in sample MT-MW02S-051018. The GC/MS instrument was not calibrated for this TIC; therefore, the detected compound was qualified as estimated (NJ) and assumed to be presumptively present.

- The TIC butylated hydroxytoluene was detected in sample MSA-MW-35S-051418. The GC/MS instrument was not calibrated for this TIC; therefore, the detected compound was qualified as estimated (NJ) and assumed to be presumptively present.

- The following contaminant was detected in a laboratory instrument blank at the following maximum concentration:

Contaminant	Maximum Concentration	Reporting Limit (RL) > or <
Total beryllium[1]	0.317 ug/L	< RL

[1] Maximum concentration present affecting samples MSA-MW-36S-051418, MSA-MW-37S-051418 and MSA-MW-35S-051418.

The detected results reported below the reporting limit (RL) for beryllium were qualified as non-detected, (U).

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

It was noted that in the original data package the DRO analytical sequences were missing for 05/06/2018 and 05/18/2018. The laboratory was contacted and the missing forms were submitted.

Nondetects were reported to the MDL.

Sample MT-MW12S-050818 was analyzed at a 2X dilution and sample MT-MW06S-050818 was analyzed

at a 5X dilution for total and dissolved manganese.

A TIC search was performed for the compound chlorodifluoromethane.

The VOC laboratory control sample (LCS) associated with preparation batch 240-327925 had percent recoveries above the quality control limits for cis-1,3-dichloropropene and vinyl chloride. Samples TB-050918, MT-MW11S-050918, MT-MW04S-050918, MT-MW10S-050918, MT-MW02S-051019, MT-MW01S-051018 and MT-MW09S-051018 were affected. No validation actions were required as all sample results for the aforementioned compounds were nondetects.

It was noted that the VOC LCS was not analyzed for the following compounds: 1,2,3-trimethylbenzene, 1,2-dibromoethane, diisopropyl ether, ethyl tert-butyl ether and tert-amyl methyl ether. LCS recoveries could not be evaluated.

The following TICs were detected in the method blanks at the following maximum concentrations:

Contaminant	Maximum Concentration	Reporting Limit (RL) > or <
Unknown(1)	10.5 ug/L	< RL
Unknown(1)	9.55 ug/L	< RL
Unknown(2)	12.5 ug/L	< RL
Unknown(2)	10.2 ug/L	< RL
Unknown(3)	9.47 ug/L	< RL
Unknown(4)	8.99 ug/L	< RL

(1) Maximum concentration detected in method blank 240-327569.
(2) Maximum concentration detected in method blank 240-327925.
(3) Maximum concentration present in method blank 240-328313.
(4) Maximum concentration present in method blank 240-328532.

No validation actions were required as the TIC unknown was not present in any samples.

The SVOC surrogate recovery for terphenyl-d14 was above the quality control limits for sample MT-MW05S-050818. No validation actions were required as all sample result were nondetects.

The GRO matrix spike / matrix spike duplicate percent recoveries (%Rs) were greater than the quality control limits for sample MT-MW06S-050818. No validation actions were required as the sample result was nondetected.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several initial and continuing calibration %Ds were noncompliant for the VOC and SVOC fractions. Contaminants were detected in the laboratory trip/method/preparation blanks.

Other Factors Affecting Data Quality: Non-detected results for 2-chloroethyl vinyl ether were rejected due to preservation noncompliance. Several TICs were detected in the VOC fraction. Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA “National Functional Guidelines for Organic Superfund Methods Data Review” (January 2017) and the “National Functional Guidelines for Inorganic Superfund Methods Data Review” (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2018

Report Number: 240-95314-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 5/9/2018 9:30 AM, 5/11/2018 10:25 AM and 5/15/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.3º C, 2.1º C, 2.3º C, 2.3º C and 3.5º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-050718 (240-95314-1), TB-050918 (240-95494-1), TB-051418 (240-95580-1), MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/18/2018, 05/22/2018, 05/24/2018 and 05/25/2018.

Methylene Chloride was detected in method blank MB 240-328532/9 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The continuing calibration verification (CCV) analyzed in 240-327569 was outside the method criteria for the following analytes: 2-hexanone, and hexachlorobutadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The following samples were received preserved with hydrochloric acid: TB-050718 (240-95314-1), MT-MW07S-050718 (240-95314-2), MT-MW08S-050718 (240-95314-3), MT-MW03S-050718 (240-95314-4), MT-MW12S-050818 (240-95314-5), MT-MW05S-050818 (240-95314-6), MT-MW06S-050818 (240-95314-7), TB-050918 (240-95494-1), MT-MW11S-050918 (240-95494-2), MT-MW04S-050918 (240-95494-3), MT-MW10S-050918 (240-95494-4), MT-MW02S-051018 (240-95494-5), MT-MW01S-051018 (240-95494-6), MT-MW09S-051018 (240-95494-7), TB-051418 (240-95580-1), MSA-MW-36S-051418 (240-95580-2), MSA-MW-37S-051418 (240-95580-3) and MSA-MW-35S-051418 (240-95580-4). The requested target analyte list includes 2-Chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

The laboratory control sample (LCS) for analytical batch 240-327925 recovered outside control limits for the following analytes: cis-1,3-Dichloropropene and Vinyl Chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 240-327925 was outside the method criteria for the following analytes:

Hexachlorobutadiene, 1,2,3-Trichlorobenzene, Dichlorodi fluoromethane, Vinyl Chloride, 1,2,3-Trimethylbenzene and Butadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 240-328313 was outside the method criteria for the following analyte(s): Multiple Analytes. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. TB-051418 (240-95580-1), MSA-MW-36S-051418 (240-95580-2), MSA-MW-37S-051418 (240-95580-3), MSA-MW-35S-051418 (240-95580-4) and (CCVIS 240-328313/4)

The initial calibration (ICAL) did not pass the method calibration acceptance criteria for Dichlorodi fluoromethane analyte name(s)]. This variance only affects results measured above the reporting limit. A CCV standard at or below the reporting limit (RL) was analyzed with the samples and found to be acceptable. This demonstrates the reporting limit is valid for the affected analytes. The samples associated with the ICAL were non-detects for the affected analytes; therefore, the results have been reported. The following samples are impacted: TB-051418 (240-95580-1), MSA-MW-36S-051418 (240-95580-2), MSA-MW-37S-051418 (240-95580-3) and MSA-MW-35S-051418 (240-95580-4).

The container used for reanalysis of the following sample contained headspace: MSA-MW-35S-051418 (240-95580-4) The method used for analysis requires that the sample does not contain headspace. Only Vinyl Chloride and 2,2,-Dichloropropane were reported from this analysis.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with analytical batch 240-327925.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/10/2018, 05/15/2018 and 05/16/2018 and analyzed on 05/15/2018 and 05/18/2018.

Terphenyl-d14 (Surr) failed the surrogate recovery criteria high for MT-MW05S-050818 (240-95314-6).

Six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates, per fraction, to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MT-MW05S-050818 (240-95314-6). These results have been reported and qualified.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batches 240-326141, 240-326848 and 240-327250.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015C - GRO. The samples were analyzed on 05/10/2018, 05/15/2018 and 05/17/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for diesel range organics (DRO) in accordance with EPA-SW-846 Method 8015C - DRO. The samples were prepared on 05/10/2018, 05/15/2018 and 05/17/2018 and analyzed on 05/12/2018, 05/16/2018 and 05/18/2018.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batches 240-326204, 240-326204, 240-326893 and 240-327290.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED METALS (ICPMS)
Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Methods 6020A. The samples were prepared on 05/10/2018, 05/14/2018 and 05/16/2018 and analyzed on 05/16/2018, 05/19/2018 and 05/22/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICPMS)
Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 05/10/2018, 05/14/2018 and 05/16/2018 and analyzed on 05/16/2018, 05/19/2018 and 05/22/2018.

Samples MT-MW12S-050818 (240-95314-5)[2X] and MT-MW06S-050818 (240-95314-7)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED MERCURY (CVAA)
Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/10/2018, 05/14/2018 and 05/16/2018 and analyzed on 05/11/2018, 05/15/2018 and 05/17/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY
Samples MT-MW07S-050718 (240-95314-2), MT-MW11S-050918 (240-95494-2), MSA-MW-36S-051418 (240-95580-2), MT-MW08S-050718 (240-95314-3), MT-MW04S-050918 (240-95494-3), MSA-MW-37S-051418 (240-95580-3), MT-MW03S-050718 (240-95314-4), MT-MW10S-050918 (240-95494-4), MSA-MW-35S-051418 (240-95580-4), MT-MW12S-050818 (240-95314-5), MT-MW02S-051018 (240-95494-5), MT-MW05S-050818 (240-95314-6), MT-MW01S-051018 (240-95494-6), MT-MW06S-050818 (240-95314-7) and MT-MW09S-051018 (240-95494-7) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/10/2018, 05/14/2018 and 05/16/2018 and analyzed on 05/11/2018, 05/15/2018 and 05/17/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.

GC/MS VOA TICs

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate is outside control limits

GC VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

GC/MS VOA BATCH WORKSHEET

Lab Name: TestAmerica Canton Job No.: 240-95314-1

SDG No.:

Batch Number: 328532 Batch Start Date: 05/25/18 09:11 Batch Analyst: Bosworth, Heather M

Batch Method: 8260C Batch End Date:

Batch Notes	
pH Indicator ID	HC740840

Basis	Basis Description
T	Total/NA

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

VOC

TB-051518

OVERVIEW

The sample set for MSA Groundwater Monitoring, SDG 240-95742-1, consists of six (6) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), gas range organics (C6-C10), diesel range organics (C10-C32) and select total and dissolved metals. The trip blank was analyzed for VOCs. Additionally, VOC samples were analyzed for tentatively identified compounds (TICs). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on May 15 and 16, 2018, and analyzed by Test America. Analyses were conducted in accordance to SW-846 Methods 8260C, 8270D, 8015C, 6020A and 7470A analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip/instrument blank results, ICP interference recoveries, surrogate spike recoveries, laboratory control sample results, matrix spike / matrix spike duplicate results, internal standard recoveries, compound identification, tentatively identified compounds, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative indicates that all VOC samples were preserved with hydrochloric acid, and the VOC analyte 2-chloroethyl vinyl ether is an acid-labile compound that degrades in an acidic medium. The non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in all VOC samples.

MINOR PROBLEMS

- The VOC initial calibration verification performed on 05/24/18 @ 14:59 on instrument A3UX12 had a percent difference (%D) that were greater than the 20% quality control limit for vinyl acetate. All samples were affected. The non-detected results for vinyl acetate were qualified as estimated (UJ) in the affected samples.

- The VOC continuing calibration verification performed on 05/26/18 @ 11:37 on instrument A3UX12 had %Ds that were greater than the 20% quality control limit for dichlorodifluoromethane and 1,1,2-trichlorotrifluoroethane. Samples TB-051518, MSA-MW-25S-051518 and MSA-MW-25I-051518 were affected. The non-detected results for the aforementioned compounds were qualified as estimated (UJ).

- The VOC continuing calibration verification performed on 05/27/18 @ 9:28 on instrument A3UX12 had %Ds that were greater than the 20% quality control limit for dichlorodifluoromethane, 1,1,2-trichlorotrifluoroethane and tert-butyl alcohol. Samples MSA-MW-4-051518, MSA-MW-20S-051618, MSA-MW20I-051618 and MSA-MW-20D-051618 were affected. The non-detected results for the aforementioned compounds were qualified as estimated (UJ).

- The following VOC analytes were detected in the trip blank at the following maximum concentrations:

Contaminant	Maximum Concentration	Reporting Limit (RL) > or <
2-Butanone	1.2 ug/L	< RL
Acetone	11 ug/L	> RL

The detected results reported below the reporting limit (RL) for acetone were qualified as non-detected, (U). Field blanks are not qualified for field blank contamination.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Nondetects were reported to the MDL.

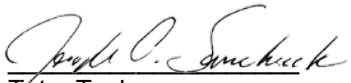
A TIC search was performed for the compound chlorodifluoromethane. Because the compound was not calibrated, nondetected results were qualified as estimated, (UJ).

It was noted that the VOC LCS was not analyzed for the following compounds: 1,2,3-trimethylbenzene, 1,2-dibromoethane, diisopropyl ether, ethyl tert-butyl ether and tert-amyl methyl ether. LCS recoveries could not be evaluated. No validation action was taken.

The metals continuing calibration for beryllium was above the 110% quality control limit on 05/25/2018 @ 20:53. All samples except total and dissolved MSA-MW-20D-051618 were affected. No validation actions were required as all affected sample results were nondetects.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several initial and continuing calibration %Ds were noncompliant for the VOC fraction. Contaminants were detected in trip blank.



Other Factors Affecting Data Quality: Non-detected results for 2-chloroethyl vinyl ether were rejected due

to preservation noncompliance. Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and the "National Functional Guidelines for Inorganic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2018 - Dump Rd.

Report Number: 240-95742-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 5/17/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 3.5º C.

Perchlorates are reported in job 240-95742-2. The TestAmerica Sacramento laboratory is running behind due to their back log.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-051518 (240-95742-1), MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/26/2018 and 05/27/2018.

The continuing calibration verification (CCV) analyzed in batch 240-328734 was outside the method criteria for the following analyte(s): Dichlorodi fluoromethane and 1,1,2-Trichloro-1,2,2-trifluoroethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. TB-051518 (240-95742-1), MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3) and (CCVIS 240-328734/4)

The following samples were received preserved with hydrochloric acid: TB-051518 (240-95742-1), MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7).. The requested target analyte list includes 2-Chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

The continuing calibration verification (CCV) analyzed in batch 240-328770 was outside the method criteria for the following analytes: 1,1,2-Trichloro-1,2,2-trifluoroethane and Dichlorodi fluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated. MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6), MSA-MW-20D-051618 (240-95742-7) and (CCVIS 240-328770/4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/21/2018

and 05/22/2018 and analyzed on 05/24/2018.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-327719.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)
Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-4-051518 (240-95742-4) and MSA-MW-20S-051618 (240-95742-5) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015C - GRO. The samples were analyzed on 05/24/2018 and 05/25/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)
Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-4-051518 (240-95742-4) and MSA-MW-20S-051618 (240-95742-5) were analyzed for diesel range organics (DRO) in accordance with EPA-SW-846 Method 8015C - DRO. The samples were prepared on 05/22/2018 and analyzed on 05/23/2018.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-327915.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED METALS (ICPMS)
Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Methods 6020A. The samples were prepared on 05/18/2018 and analyzed on 05/25/2018 and 05/27/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICPMS)
Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 05/18/2018 and analyzed on 05/25/2018 and 05/27/2018.

The continuing calibration verification (CCV) associated with batch 240-328800 recovered above the upper control limit for Beryllium. The samples associated with this CCV were below the requested reporting limit for the affected analyte; therefore, the data have been reported. The following samples are impacted: MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5) and MSA-MW-20I-051618 (240-95742-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED MERCURY (CVAA)
Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/18/2018 and analyzed on 05/21/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY
Samples MSA-MW-25S-051518 (240-95742-2), MSA-MW-25I-051518 (240-95742-3), MSA-MW-4-051518 (240-95742-4), MSA-MW-20S-051618 (240-95742-5), MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/18/2018 and analyzed on 05/21/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method Summary

Client: Tetra Tech, Inc.
Project/Site: MSA GW 2018 - Dump Rd.

Batch Notes	
Acid Used for pH Adjustment ID	3560858
Analyst ID - Concentration	ELIZABETHBORDER JESSICATRUSHEL
Equipment ID - Concentration 1	Steam bath
Analyst ID - Extraction	KYLEDILLON
Na2SO4 ID	2548156
pH Indicator ID	2794736
Pipette/Syringe/Dispenser ID	9
Prep Solvent ID	3594582

Basis	Basis Description
T	Total/NA

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

SUBJECT: **ORGANIC DATA VALIDATION – PERCHLORATE**
LOCKHEED MARTIN CORPORATION (LMC) – MARTIN STATE AIRPORT (MSA)
GROUNDWATER SAMPLING
SAMPLE DELIVERY GROUP (SDG) 240-95742-2

SAMPLES: 2/Aqueous/Perchlorate

MSA-MW-20D-051618 MSA-MW-20I-051618

Overview

The sample set for LMC-MSA, SDG 240-95742-2 consisted of two (2) aqueous environmental samples. The two (2) aqueous environmental samples were analyzed for perchlorate. No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on May 16, 2018 and analyzed by Test America, Inc. All analyses were conducted in accordance with SW-846 Method 6850 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, sample preservation/holding times, initial/continuing calibrations, laboratory method/preparation blanks, surrogate spike recoveries, laboratory control sample results, matrix spike/matrix spike duplicate results, internal standard results, interference check standard results, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

No major issues were identified.

Minor

- The result from chromatographic data which did not meet all the qualitative criteria for a positive identification was reported as an Estimated Maximum Possible Concentration (EMPC) by the laboratory for sample MSA-MW-20I-051618. This result was qualified as estimated, (J).

- The detected result reported below the Reporting Limit (RL) but above the Method Detection Limit (MDL) in sample MSA-MW-20I-051618 was qualified as estimated, (J).

Notes

The non-detected result in sample MSA-MW-20D-051618 was reported to the MDL.

Executive Summary

Laboratory Performance: None.

Other Factors Affecting Data Quality: The detected result was reported as an EMPC. The detected result below the RL was estimated.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Review" (January 2017). The text of this report has been formulated to address only those areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2018 - Dump Rd.

Report Number: 240-95742-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 6850 Perchlorate analysis was performed at the TestAmerica Sacramento laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 5/17/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.9º C and 3.5º C.

PERCHLORATE

Samples MSA-MW-20I-051618 (240-95742-6) and MSA-MW-20D-051618 (240-95742-7) were analyzed for Perchlorate in accordance with EPA SW-846 Method 6850. The samples were prepared on 05/30/2018 and analyzed on 06/08/2018.

The ion ratio is outside of control limits in the following sample: MSA-MW-20I-051618 (240-95742-6). Reanalysis confirms the result. The sample detection is below 1/2 the reporting limit and has no adverse impact on data quality; therefore, the data is reported.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 320-226303.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

LCMS

Qualifier	Qualifier Description
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

TB-052118

OVERVIEW

The sample set for MSA Groundwater Monitoring, SDG 240-96003-1, consists of eight (8) aqueous environmental samples and one (1) trip blank. Samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), gas range organics (C6-C10), diesel range organics (C10-C32) and select total and dissolved metals as referenced above. Additionally, VOC samples were analyzed for tentatively identified compounds (TICs). No field duplicate pairs are included in this SDG.

The samples were collected by Tetra Tech on May 21 and 22, 2018, and analyzed by Test America. Analyses were conducted in accordance to SW-846 Methods 8260C, 8270D, 8015C, 6020A and 7470A analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, ICP/MS tuning, initial/continuing calibrations, laboratory method/trip/instrument blank results, ICP interference recoveries, surrogate spike recoveries, laboratory control sample results, matrix spike / matrix spike duplicate results, internal standard recoveries, compound identification, tentatively identified compounds, analyte quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

MAJOR PROBLEMS

- The laboratory case narrative indicates that all VOC samples were preserved with hydrochloric acid, and the VOC analyte 2-chloroethyl vinyl ether is an acid-labile compound that degrades in an acidic medium. The non-detected results for 2-chloroethyl vinyl ether were rejected (UR) in all VOC samples.

- The VOC matrix spike / matrix spike duplicate (MS/MSD) percent recoveries (%Rs) for 2-chloroethyl vinyl ether were 0% for sample MSA-MW-22D-052118. The nondetected result reported for 2-chloroethyl vinyl ether in the affected samples was qualified as rejected (UR).

MINOR PROBLEMS

- The VOC initial calibration verification performed on 05/24/18 @ 14:59 on instrument A3UX12 had a percent difference (%D) that were greater than the 20% quality control limit for vinyl acetate. All samples were affected. The non-detected results for vinyl acetate were qualified as estimated (UJ) in the affected samples.

- The VOC continuing calibration verifications performed on 05/31/18 @ 17:05 and 17:52 on instrument A3UX12 had %Ds that were greater than the 20% quality control limit for dichlorodifluoromethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, diisopropyl ether, ethyl tert-butyl ether, tert-amyl methyl ether and 1,2,3-trimethylbenzene. All samples were affected. The detected and non-detected results for the aforementioned compounds were qualified as estimated (J) and (UJ), respectively, in the affected samples.

- The metals continuing calibration verification %Rs on 05/26/2018 @ 2:18, 3:12 and 4:05 were above the quality control limits for beryllium. All total and dissolved sample results were affected. The detected results reported in the affected samples were qualified as estimated (J).

- The following VOC analyte was detected in the trip blank at the following maximum concentrations:

Contaminant	Maximum Concentration	Reporting Limit (RL) > or <
Tertiary-butyl alcohol	2.6 ug/L	< RL

The detected results reported below the reporting limit (RL) were qualified as non-detected, (U). Field quality control samples are not qualified for field blank contamination.

- The DRO surrogate recovery for o-terphenyl was below the quality control limit for sample MSA-MW-26S-052118. The laboratory re-prepared the sample 3 days past hold time and the surrogate recovery was within quality control limits. The reanalysis was used for validation. The detected result reported in the affected sample was qualified as estimated (J), as a result of hold time exceedances.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) were qualified as estimated (J).

NOTES

Nondetects were reported to the MDL.

The following samples were analyzed at a dilution. Detection limits of the non-detected results were elevated.

Sample	Compound	Dilution
MSA-MW-42S-052118	All VOCs	200X
MSA-MW-42I-052118	All VOCs	40X
MSA-MW-41S-052218	All VOCs	100X
MSA-MW-41I-052218	All VOCs	40X

A TIC search was performed for the compound chlorodifluoromethane.

The VOC laboratory control sample (LCS) had a percent recovery above the quality control limit for 1,1,2-trichlorotrifluoroethane. All samples were affected. No validation actions were required as all sample results for the aforementioned compound were nondetects.

It was noted that the VOC LCS was not analyzed for the following compounds: 1,2,3-trimethylbenzene, 1,2-dibromoethane, diisopropyl ether, ethyl tert-butyl ether and tert-amyl methyl ether. LCS recoveries could not be evaluated.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Sample MSA-MW-26S-052118 was re-prepared outside of hold time. Several initial and continuing calibration %Ds were noncompliant for the VOC fraction. The continuing calibration %R for beryllium was noncompliant. A contaminant was detected in the trip blank. The MS/MSD %Rs for 2-chloroethyl vinyl ether were 0%. A DRO surrogate recovery was noncompliant.

Other Factors Affecting Data Quality: Non-detected results for 2-chloroethyl vinyl ether were rejected due to preservation noncompliance. Detected results reported below the RL but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA "National Functional Guidelines for Organic Superfund Methods Data Review" (January 2017) and the "National Functional Guidelines for Inorganic Superfund Methods Data Review" (January 2017). The text of this report has been formulated to address only those problem areas affecting data quality.

Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the adjusted detection limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample (due either to the quality of the data generated because certain quality control criteria were not met, or the concentration of the analyte was below the reporting limit).
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for, but was not detected. The reported detection limit is approximate and may be inaccurate or imprecise.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	The sample result (detected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
UR	The sample result (nondetected) is unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA GW 2018

Report Number: 240-96003-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 5/23/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.1º C, 1.9º C and 2.3º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TB-052118 (240-96003-1), MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 05/31/2018 and 06/01/2018.

Samples MSA-MW-42S-052118 (240-96003-4)[200X], MSA-MW-42I-052118 (240-96003-5)[40X], MSA-MW-41S-052218 (240-96003-8) [100X] and MSA-MW-41I-052218 (240-96003-9)[40X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for analytical batch 240-329448 recovered outside control limits for 1,1,2-Trichloro-1,2,2-trifluoroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 240-329448 recovered above the upper control limit for multiple analytes. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: TB-052118 (240-96003-1), MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8), MSA-MW-41I-052218 (240-96003-9), (CCV 240-329448/5) and (CCVIS 240-329448/3).

The following samples were received preserved with hydrochloric acid: TB-052118 (240-96003-1), MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9). The requested target analyte list includes 2-Chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4),

MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/24/2018 and analyzed on 05/28/2018 and 05/30/2018.

Samples MSA-MW-41S-052218 (240-96003-8)[10X] and MSA-MW-41I-052218 (240-96003-9)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GASOLINE RANGE ORGANICS (GRO)

Samples MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-23S-052218 (240-96003-6) and MSA-MW-41S-052218 (240-96003-8) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015C - GRO. The samples were analyzed on 05/25/2018 and 05/26/2018.

Surrogate recovery for the following sample was outside control limits: MSA-MW-26S-052118 (240-96003-3). Re-extraction and re-analysis was performed outside of holding time with acceptable results. Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Samples MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-23S-052218 (240-96003-6) and MSA-MW-41S-052218 (240-96003-8) were analyzed for diesel range organics (DRO) in accordance with EPA-SW-846 Method 8015C - DRO. The samples were prepared on 05/24/2018 and 05/31/2018 and analyzed on 05/25/2018 and 06/01/2018.

o-Terphenyl (Surr) failed the surrogate recovery criteria low for MSA-MW-26S-052118 (240-96003-3).

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batches 240-328316 and 240-329310.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED METALS (ICPMS)

Samples MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9) were analyzed for dissolved metals (ICPMS) in accordance with EPA SW-846 Methods 6020A. The samples were prepared on 05/24/2018 and analyzed on 05/26/2018 and 05/27/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL RECOVERABLE METALS (ICPMS)

Samples MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 05/24/2018 and analyzed on 05/26/2018 and 05/27/2018.

The continuing calibration verification (CCV) associated with batch 240-328800 recovered above the upper control limit for Beryllium. The samples associated with this CCV were below the requested reporting limit for the affected analyte; therefore, the data have been reported. The following samples are impacted: MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISSOLVED MERCURY (CVAA)

Samples MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9) were analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/24/2018 and analyzed on 05/29/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples MSA-MW-22D-052118 (240-96003-2), MSA-MW-26S-052118 (240-96003-3), MSA-MW-42S-052118 (240-96003-4), MSA-MW-42I-052118 (240-96003-5), MSA-MW-23S-052218 (240-96003-6), MSA-MW-23D-052218 (240-96003-7), MSA-MW-41S-052218 (240-96003-8) and MSA-MW-41I-052218 (240-96003-9) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 05/24/2018 and analyzed on 05/29/2018.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS VOA TICs

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
U	Indicates the analyte was analyzed for but not detected.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
