Overview

The sample set for Martin State Airport-Greater Strawberry Point, SDG 240-681-1, consists of twenty four (24) soil environmental samples. This SDG contained no field duplicate pairs.

All samples were analyzed for select metals: antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc. The samples were collected by Tetra Tech NUS on June 1st, 2011 and analyzed by TestAmerica. Metals analyses were conducted using SW-846 method 6010C. Mercury analyses were conducted using SW-846 method 7471B.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike recoveries, laboratory duplicate results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Barium [1]	0.0916 mg/kg	0.458 mg/kg
Zinc [1]	1.04 mg/kg	5.2 mg/kg
Barium [2]	0.11 mg/kg	0.55 mg/kg
Molybdenum [2]	0.35 mg/kg	1.75 mg/kg
Barium [3]	0.113 mg/kg	0.565 mg/kg
Molybdenum [3]	0.33 mg/kg	1.65 mg/kg
Lead [3]	0.25 mg/kg	1.25 mg/kg
Zinc [3]	1.48 mg/kg	7.4 mg/kg
Molybdenum [4]	17.1 ug/L	8.5 mg/kg
Antimony [4]	1.95 ug/L	0.97 mg/kg
Vanadium [4]	0.79 ug/L	0.39 mg/kg
Thallium [4]	5.07 ug/L	2.5 mg/kg
Molybdenum [5]	21.7 ug/L	10.85 mg/kg

[1] The following maximum concentration found in a preparation blank affecting samples in preparation batch 240-5004.
[2] The following maximum concentration found in a preparation blank affecting samples in preparation batch 240-5038.
[3] The following maximum concentration found in a preparation blank affecting samples in preparation batch 240-5161.
[4] The following maximum concentration found in a calibration blank affecting samples analyzed on 7/5/11.
[5] The following maximum concentration found in a calibration blank affecting samples analyzed on 7/8/11.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level were qualified as non-detected due to blank contamination.

- The CRDL standards analyzed on 7/5/11 had percent recoveries> 110% for lead, zinc, chromium, thallium, copper, and molybdenum. All samples analyzed on 7/5/11 were affected. Positive results< 2X CRDL were qualified as either biased high (K) or estimated (J) due to conflicting to directional bias.

- The CRDL standard analyzed on 7/8/11 had percent recoveries > 110% for lead, zinc, and thallium. Sample GSP-SB-97-0-2 was affected. The positive lead result was qualified as biased high. Non-detected zinc and thallium results were not qualified.

- The matrix spike and matrix spike duplicate with a percent recovery less than the lower quality control limit for antimony. Samples in preparation batch 240-5004 were affected. Non-detected results were qualified as biased low (UL).

- The matrix spike and matrix spike duplicate with a percent recovery less than the lower quality control limit for antimony. Samples in preparation batch 240-5038 were affected. Non-detected results were qualified as biased low (UL).

- Positive results greater than the method detection limit but less than the reporting limit were qualified as estimated (J).

Notes

Non-detected sample results were reported on the Form 1s at the RL. The validator changed the non-detected results to be reported at the MDL to meet project requirements.

Executive Summary

Laboratory Performance: Preparation and calibration blank contamination resulted in the qualification of sample results. The CRDL standard non-compliances resulted in the qualification of sample results.

Other Factors Affecting Data Quality: Matrix spike and matrix spike duplicate non-compliances for vanadium resulted in the qualification of sample results. Positive results greater than the MDL but less than the RL were qualified as estimated.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993. The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech NUS Inc

Project: MSA Greater Strawberry Point PH. II 2011

Report Number: 240-681-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 06/02/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.4, 4.7, 5.4, and 5.9 C.

Analysis for the following sample(s) were cancelled by the client on 06/02/11: SVOCs only on GSP-SB-91-22-24, GSP-SB-92-22-25, GSP-SB-93-22-24, GSP-SB-94-20-22, GSP-SB-95-20-22, and GSP-SB-96-22-24; and all tests on GSP-SB-104-22-24 and GSP-SB-106-20-22.

All other samples were received in good condition within temperature requirements.

The samples were analyzed on 06/11/2011, 06/12/2011, 06/13/2011 and 06/14/2011.

o Methylene Chloride was detected in method blank MB 240-3932/1-A at a level exceeding the reporting limit.
o Naphthalene was detected in method blank MB 240-3932/1-A at a level that was above the method detection limit but below the reporting limit.
o 1,2,4-Trichlorobenzene, 4-Methyl-2-pentanone and Naphthalene were detected in method blank MB 240-4449/6 at levels that were above the method detection limit but below the reporting limit.
o Methylene Chloride was detected in method blank MB 240-4514/6 at a level exceeding the reporting limit.
o Acetone and Naphthalene were detected in method blank MB 240-4514/6 at levels that were above the method detection limit but below the reporting limit.

o Methylene Chloride was detected in method blank MB 240-4663/6 at a level exceeding the reporting limit.
o Acetone and Naphthalene were detected in method blank MB 240-4663/6 at levels that were above the method detection limit but below the reporting limit.

In each of these cases, the values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

o Chloroethane failed the recovery criteria high for LCS 240-3932/2-A.
o Chloroethane and Chloromethane failed the recovery criteria high for LCS 240-4514/5.
o Chloroethane and Chloromethane failed the recovery criteria high for LCS 240-4663/5.
Refer to the QC report for details.

The continuing calibration verification (CCV) for analytical batch 240-4663 recovered above the upper control limit for Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 240-4663 exceeded control limits for the following analytes: Chloroethane, Chloromethane and Cyclohexane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The method blanks associated with batches 240-4663 and 240-4514 contained Methylene Chloride greater than the reporting limit (RL). As Methylene Chloride is an identified common laboratory contaminant and the detection in the MB was less than 5X the RL, the data have been qualified and reported.

The continuing calibration verification (CCV) for analytical batch 240-4514 recovered above the upper control limit for Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 240-4514 exceeded control limits for the following analytes: Chloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 3932 recovered outside acceptance limits for carbon disulfide, 1,2-dibromo-3-chloropropane, cis-1,3-dichloropropene, styrene, dichlorobromomethane, chloroethane, trans-1,3-dichloropropene, chlorodibromomethane, methylene chloride, and 1,1,1,2-tetrachloroethane. There was insufficient sample to perform a re-extraction or re-analysis; therefore, the data have been reported.

The method blank for preparation batch 3932 contained methylene chloride above the reporting limit (RL). There was insufficient sample to perform a re-extraction and/or re-analysis; therefore, the data have been reported.

There were no client requested matrix spike/matrix spike duplicate (MS/MSD) samples for batches 3932, 4449 and 4514.

All other samples were received in good condition within temperature requirements.

No other analytical or quality issues were noted.

The samples were analyzed on 06/23/2011 and 06/24/2011.

Bis(2-ethylhexyl) phthalate was detected in method blanks MB 240-4146/1-A and 240-4323/23A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

o 2-Fluorobiphenyl (Surr) failed the surrogate recovery criteria low for GSP-SB-104-6-8 (240-681-5), GSP-SB-95-6-8 (240-681-8), GSP-SB-113-22-24 (240-681-15) and GSP-SB-106-6-8 (240-681-23).
o 3,3'-Dichlorobenzidine failed the recovery criteria low for LCS 240-4323/24-A. Refer to the QC report for details.
o 2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol and Hexachlorocyclopentadiene failed the recovery criteria low for the MS of sample GSP-SB-106-6-8MS (240-681-23) in batch 240-5756.
o Several analytes failed the recovery criteria low for the MSD of sample GSP-SB-106-6-8MSD (240-681-23) in batch 240-5756. Caprolactam and Hexachlorocyclopentadiene exceeded the rpd limit.

Refer to the QC report for details.

The following sample(s) contained one acid and/or one base surrogate outside acceptance limits: GSP-SB-104-6-8 (240-681-5), GSP-SB-106-6-8 (240-681-23), GSP-SB-113-22-24 (240-681-15), GSP-SB-95-6-8 (240-681-8). The laboratory's SOP allows one acid surrogate and/or one base surrogate to be outside acceptance limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

The continuing calibration verification (CCV5756) for Bis(2-chloroethyl)ether, Benzaldehyde, and 4-Nitrophenol recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

3,3'-Dichlorobenzidine is out of control for LCS 4323. However no correction is necessary due to this compound not being a control analyte.

The following compounds were outside control limits in the continuing calibration verification (CCV) associated with batch 4146: 2-Methylphenol, 4-Nitrophenol, Benzaldehyde and bis(2-ethylhexyl)phthalate. These compounds are not classified as Calibration Check Compounds (CCCs) in the reference method, and the laboratory defaults to in-house and/or project-specific criteria for evaluation. Due to the large number of analytes contained in the CCV, the laboratory's SOP allows for 12 analytes to be outside limits; therefore, the data have been reported.

No other analytical or quality issues were noted.

All other quality control parameters were within the acceptance limits.

Tetrachloro-m-xylene failed the surrogate recovery criteria low for GSP-SB-98-6-8 (240-681-34). Refer to the QC report for details.

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: GSP-SB-114-0-2 (240-681-1), GSP-SB-114-6-8 (240-681-2), GSP-SB-104-0-2 (240-681-4), GSP-SB-104-6-8 (240-681-5), GSP-SB-95-0-2 (240-681-7), GSP-SB-95-6-8 (240-681-8), GSP-SB-91-0-2 (240-681-10), GSP-SB-91-8-10 (240-681-11), GSP-SB-113-0-2 (240-681-13), GSP-SB-94-0-2 (240-681-16), GSP-SB-94-6-8 (240-681-17), GSP-SB-96-0-2 (240-681-19), GSP-SB-106-0-2 (240-681-22), GSP-SB-106-6-8 (240-681-23), GSP-SB-97-0-2 (240-681-25), GSP-SB-97-6-8 (240-681-26), SB-93-0-2 (240-681-27), GSP-SB-93-12-14 (240-681-28), GSP-SB-92-0-2 (240-681-30), GSP-SB-92-6-8 (240-681-31), GSP-GSP-SB-98-0-2 (240-681-33), GSP-SB-98-6-8 (240-681-34).

The following sample appears to contain polychlorinated biphenyls (PCBs); however, due to weathering or other environmental processes, the PCBs in the sample do not closely match any of the laboratory's Aroclor standards used for instrument calibration: GSP-SB-96-0-2 (240-681-19). The sample(s) has been quantified and reported as Aroclor 1260. Due to the poor match with the Aroclor standard(s), there is increased qualitative and quantitative uncertainty associated with this result.

Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: GSP-SB-98-6-8 (240-681-34). These results have been reported and qualified.

Surrogate recovery for the following sample was outside control limits: GSP-SB-106-6-8 (240-681-23). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results.

No other analytical or quality issues were noted.

All other quality control parameters were within the acceptance limits.

Overview

The sample set for Lockheed Martin – Greater Strawberry Point, SDG 240-741-1 consists of twenty (20) soil environmental samples. The samples were analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), gasoline range organics (GRO), and diesel range organics (DRO).

The samples were collected by Tetra Tech on June 2, 2011 and analyzed by Test America (North Canton) for all analytical fractions except, GRO, which was analyzed by Tast America (Chicago). All analyses were conducted in accordance with SW-846 Methods 8260B, 8270D, 8082A, and 8015C analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX14. Only non-detected results were reported for tert-butyl alcohol and vinyl acetate and these results were rejected (UR).

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol, vinyl acetate, and 2-chloroethyl vinyl ether on instrument A3UX8. Only non-detected results were reported for tert-butyl alcohol, vinyl acetate, and 2-chloroethyl vinyl ether. and these results were rejected (UR).

An action level of 10X for acetone and methylene chloride and 5x the maximum contaminant concentration was established for naphthalene and 1,2,4-trichlorobenzene to evaluate laboratory contamination. Dilution factors and sample aliquots were taken into consideration during the application of all action levels. Positive results for acetone, methylene chloride, and naphthalene less than the action limit have been qualified as (B). Field quality control samples were not qualified for blank contamination. Acetone was detected in all trip blanks no action was taken on this basis.

- The VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% and greater than 50% for chloroethane for instrument A3UX14 on 06/15/11 @ 12:31. Only nondetected results were reported for chloroethane in the affected samples. The nondetected chloroethane results for samples GSP-SB-99-0-2, GSP-SB-99-6-8, GSP-SB-100-2-4, GSP-SB-109-0-2, GSP-SB-109-6-8, GSP-SB-108-0-2, GSP-SB-108-6-8, GSP-SB-110-0-2, GSP-SB-110-6-8, GSP-SB-102-6-8, and GSP-SB-107-0-2 were qualified as estimated (UJ).

Only nondetected results were reported for chloroethane in the affected samples. The nondetected chloroethane results for samples GSP-SB-100-6-8, GSP-SB-102-0-2, and GSP-SB-107-6-8 were qualified as estimated (UJ).

- The VOC internal standard 1,4-dichlorobenzene-d4 was less than 50% recovery for sample GSP-SB-101-0-2. The nondetected results for compounds quantitated using this internal standard have been qualified as estimated (UJ) for sample GSP-SB-101-0-2.

- The SVOC internal standard 1,4-dichlorobenzene-d4 was less than the 50% recovery for sample GSP-SB-110-6-8. The nondetected results for compounds quantitiated using this internal standard have been qualified as estimated (UJ) for sample GSP-SB-110-6-8.

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% and less than 50% for dichlorodifluoromethane, chloromethane, bromomethane, trichlorofluoromethane, bromoform, and 1,2-dibromo-3-chloropropane for instrument A3UX14 on 06/14/11 @ 12:31. All associated sample results were non-detects for the aforementioned compounds and no data qualification was necessary.

The VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% and less than 50% for carbon disulfide, bromoform, and 1,2-dibromo-3-chloropropane for instrument A3UX14 on 06/14/11 @ 12:31. All associated sample results were non-detects for the aforementioned compounds and no data qualification was necessary.

The VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% and less than 50% for dichlorofluoromethane for instrument A3UX8 on 06/14/11 @ 20:22. All associated sample results were non-detects for the aforementioned compounds and no data qualification was necessary.

The VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% and less than 50% for carbon tetrachloride, dibromochloromethane, bromoform, and 1,2-dibromo-3-chloropropane, dichlorofluoromethane for instrument A3UX8 on 06/14/11 @ 20:22. All associated sample results were non-detects for the aforementioned compounds and no data qualification was necessary.

The laboratory control sample (LCS) associated with batch 4867 had percent recoveries greater than the quality control limit for chloroethane and chloromethane. No action was taken on this basis because only nondetects were reported for these compounds.

The laboratory control sample (LCS) associated with batch 4936 had a percent recovery greater than the quality control limit for bromodichloromethane. No action was taken on this basis because only a nondetect was reported for bromodichloromethane.

The LCS and matrix spike / matrix spike duplicate (MS/MSD) associated with batch 5027 had percent recoveries greater than the quality control limit for chloroethane. No action was taken on this basis because only nondetects were reported for chloroethane.

The VOC laboratory matrix spikes associated with batch 4766 and 4936 had percent recovery less than the quality control limit for tetrachloroethene in the MS and vinyl acetate in the MSD. No action was taken on this basis because the samples were not Tetra Tech samples.

The following samples required a dilution due to concentrations greater than the linear calibration range:

Sample Number	Dilution Factor	Compound
GSP-SB-101-0-2	5	Several PAHs
GSP-SB-102-6-8	5	Several PAHs
GSP-SB-105-0-2	5	Several PAHs

GSP-SB-109-0-2	10	Several PAHs
GSP-SB-110-6-8	10	Several PAHs
GSP-SB-109-6-8	25	Several PAHs
GSP-SB-109-6-8	2	DRO

The laboratory only submitted one run for the aforementioned samples so this accounts for the elevated detection limits for the nondetected compounds.

Napthalene and hexachlorobutadiene were reported in both the VOC and SVOC analytical fractions. No validation action was taken on this basis.

Executive Summary

Laboratory Performance: Three VOC compounds had RRF noncompliances resulting in the rejection of data. Chloroethane was qualified as estimated in several samples due to a percent difference calibration noncompliance. Blank contamination for the VOC and DRO fraction resulted in the qualification of data. Internal standard recovery noncompliances resulted in the qualification of data for VOC and SVOC fractions.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech NUS Inc

Project: MSA Greater Strawberry Point PH. II 2011

Report Number: 240-741-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 06/03/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.0 and 3.9 C.

Overview

The sample set for Lockheed Martin State Airport Greater Strawberry Point, 240-820-1 consisted of fourteen (14) soil samples. All fourteen (14) soil samples were analyzed for volatile organic compounds (VOC), semi-volatile organic compounds (SVOC), diesel range organics (DRO)/total petroleum hydrocarbons (TPH), and gasoline range organics (GRO), and twelve (12) of the samples were analyzed for polychlorinated biphenyls (PCB) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on June 6, 2011 and analyzed by TestAmerica Inc. All analyses were conducted in accordance with SW-846 Methods 8260B VOCs, 8270D SVOCs, 8082A PCBs, and 8015C TPH & GRO, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration relative response factor (RRF) was <0.05 the quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX14 on 05/13/11, and instrument A3UX8 on 06/10/2001, and all continuing calibration verifications (CCV) for both instruments affecting all soil samples. All soil non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR).

- The VOC initial calibration RRF was <0.05 the quality control limit for 2-chloroethyl vinyl ether on instrument A3UX8 on 06/10/2001 as well as the CCV RRF on 06/16/11 @ 19:16 affecting soil samples GSP-SB-123-6-8, GSP-SB-124-0-2, GSP-SB-124-6-8, GSP-SB-126-0-2, GSP-SB-126-8-10, GSP-SB-

126-20-22, GSP-SB-127-0-2, GSP-SB-127-6-8, GSP-SB-130-0-2, GSP-SB-130-6-8, and GSP-SB-130-20-22. The aforementioned soil non-detected results for 2-chloroethyl vinyl ether were qualified rejected, (UR).

- The SVOC percent recoveries (%R) were less than the quality control limit at 0% for the analytes 2,4-dinitrophenol 4,6-dinitro-2-methylphenol, hexachlorocyclopentadiene, and pentachlorophenol for both the MS and the MSD for spiked sample GSP-SB-123-0-2. The non-detected aforementioned analyte results were qualified rejected, (UR), for sample GSP-SB-123-0-2.

Minor Problems

- The following VOC contaminants were detected in the method blanks at the following maximum concentration affecting all samples.

Analyte	Maximum Conc. µg/kg	Action Level µg/kg
Naphthalene [1]	0.448	2.240
1,2,4-Trichlorobenzene [2]	0.349	1.745
Naphthalene [2]	0.533	2.665
Acetone [3]	13.3	133.0
Methylene chloride [3]	5.88	58.8
2-Butanone [4]	1.90	19.0

(1) Method blank MB 240-5027/6 affecting samples GSP-SB-128-0-2, GSP-SB-128-6-8, and GSP-SB-123-0-2.
(2) Method blank MB-240-5087/7 affecting samples GSP-SB-123-6-8, GSP-SB-124-0-2, GSP-SB-124-6-8, GSP-SB-126-0-2, GSP-SB-126-8-10, GSP-SB-126-20-22, GSP-SB-127-0-2, GSP-SB-127-6-8, GSP-SB-130-0-2, GSP-SB-130-6-8, and GSP-SB-130-20-22.
(3) Method blank 240-5027/6 affecting all samples for the common laboratory contaminants acetone and methylene chloride.
(4) Method blank MB-240-5087/7 affecting all samples for the common laboratory contaminant 2-butanone.

An action level of ten times the maximum level for the common laboratory contaminants 2-butanone, acetone, and methylene chloride, and an action level of five times the maximum level for the other laboratory contaminants has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample analyte results if less than the action level were qualified non-detected, (B), due to blank contamination.

- The VOC CCV percent difference (%D) was greater than the 20% and greater than 50% quality control limit for chloroethane for instrument A3UX14 on 06/16/11 @ 12:19 affecting samples GSP-SB-128-0-2, GSP-SB-128-6-8, and GSP-SB-123-0-2. The aforementioned sample non-detected results for the chloroethane were qualified estimated, (UJ).

- The VOC CCV %Ds were greater than the 20% and less than 50% quality control limit for bromomethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, vinyl acetate, 1,2-dichloroethane, trichloroethene, tetrachloroethene, chlorodibromomethane, bromoform, and 1,2-dibromo-3-chloropropane for instrument A3UX8 on 06/16/11 @ 19:16 affecting samples GSP-SB-123-6-8, GSP-SB-124-0-2, GSP-SB-124-6-8, GSP-SB-126-0-2, GSP-SB-126-8-10, GSP-SB-126-20-22, GSP-SB-127-0-2, GSP-SB-127-6-8, GSP-SB-130-0-2, GSP-SB-130-6-8, and GSP-SB-130-20-22. As the samples had non-detected results for bromomethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane,

1,2-dichloroethane, tetrachloroethene, chlorodibromomethane, bromoform, and 1,2-dibromo-3-chloropropane, the sample results for these analytes were not qualified. The sample non-detected vinyl acetate results were rejected due to the RRF quality control limit non-compliances and no further validation action was necessary. The positive trichloroethene results for samples GSP-SB-124-6-8, GSP-SB-126-0-2, GSP-SB-126-8-10, and GSP-SB-130-20-22 were qualified estimated, (J).

- The SVOC %Rs were less than the quality control limit for 1,1'-biphenyl, acetophenone, and butyl benzyl phthalate for the laboratory control sample (LCS) LCS 240-4859/24-A affecting samples GSP-SB-126-8-10, GSP-SB-124-6-8, GSP-SB-127-6-8, GSP-SB-130-6-8, GSP-SB-126-0-2, GSP-SB-127-0-2, GSP-SB-124-0-2, and GSP-SB-130-0-2. The non-detected results for 1,1'-biphenyl, acetophenone, and butyl benzyl phthalate for the aforementioned samples were qualified estimated, (UJ).

- The spiked sample GSP-SB-123-0-2 MS had %Rs less than the quality control limit at 0% for the SVOC analytes 2,4,6-trichlorophenol, 2,4,5-trichlorophenol, 4-chloro-3-methylphenol, and 4-nitrophenol. The RPDs for the MS/MSD for the aforementioned analytes were also non-compliant. The non-detected results for the aforementioned analytes were qualified estimated, (UJ), for sample GSP-SB-123-0-2.

- The spiked sample GSP-SB-123-0-2 MSD had %Rs less than the quality control for the SVOC analytes benzaldehyde, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)-fluoranthene, and di-n-octyl phthalate (0%R with a non-compliant MS/MSD RPD). The non-detected aforementioned analytes were qualified estimated, (UJ), for sample GSP-SB-123-0-2.

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

Notes

The VOC laboratory sample Form I data for Tentatively Identified Compounds (TIC) was included in the Appendix B section for informational purposes. The compounds listed on the laboratory TIC Form I's were qualified estimated, (NJ), as they were not calibrated for by the laboratory and were not evaluated by the chemistry data evaluator. Samples GSP-SB-123-0-2 and GSP-SB-128-0-2 had TIC identifications for methyl acetate.

The VOC CCV %Ds were greater than the 20% and less than 50% quality control limit for carbon disulfide, tert-butyl alcohol, vinyl acetate, bromoform and 1,2-dibromo-3-chloropropane for instrument A3UX14 on 06/16/11 @ 12:19 affecting samples GSP-SB-128-0-2, GSP-SB-128-6-8, and GSP-SB-123-0-2. As the samples had non-detected results for carbon disulfide, bromoform, and 1,2-dibromo-3-chloropropane, the sample results were not qualified. The sample non-detected tert-butyl alcohol and vinyl acetate results were previously rejected due to the RRF quality control limit non-compliances and no further validation action was necessary.

The VOC CCV %Ds were greater than the 20% and greater than 50% quality control limit for 2-chloroethyl vinyl ether for instrument A3UX8 on 06/16/11 @ 19:1621 affecting samples GSP-SB-123-6-8, GSP-SB-124-0-2, GSP-SB-124-6-8, GSP-SB-126-0-2, GSP-SB-126-8-10, GSP-SB-126-20-22, GSP-SB-127-0-2, GSP-SB-127-6-8, GSP-SB-130-0-2, GSP-SB-130-6-8, and GSP-SB-130-20-22. The sample non-detected 2-chloroethyl vinyl ether results were previously rejected due to the RRF quality control limit non-compliance and no further validation action was necessary.

The VOC LCS %R for LCS 240-5027/5 was greater than the quality control limit for chloroethane affecting samples GSP-SB-128-0-2, GSP-SB-128-6-8, and GSP-SB-123-0-2. The aforementioned sample chloroethane results were non-detected and were not qualified.

The VOC MS and the MSD included in the SDG had %Rs for chloroethane greater than the quality control limit. No validation action was necessary as they were not spiked samples from this SDG.

The sample GSP-SB-124-0-2 was analyzed at a 20X dilution and sample GSP-SB-130-0-2 was analyzed at a 4X dilution for SVOCs resulting in elevated non-detected SVOC analyte results.

The SVOC CCV %D was greater than the 20% and less than 50% quality control limit for benzaldehyde for instrument A4HP7 07/14/11 @ 09:03 affecting samples GSP-SB-126-8-10, GSP-SB-124-6-8, GSP-SB-127-6-8, GSP-SB-130-6-8, GSP-SB-126-0-2, GSP-SB-127-0-2, GSP-SB-124-0-2, and GSP-SB-130-0-2. The aforementioned samples had non-detected results for benzaldehyde which were not qualified.

The SVOC CCV %D was greater than the 20% and less than 50% quality control limit for benzaldehyde for instrument A4HP9 06/28/11 @ 16:19 affecting samples GSP-SB-123-0-2 and GSP-SB-126-20-22. The aforementioned samples had non-detected results for benzaldehyde which were not qualified.

The sample GSP-SB-123-0-2 MS/MSD RPDs were greater than the quality control for SVOC analytes fluoranthene and pyrene. No validation action was taken as the MS and MSD %Rs for the aforementioned analytes were within the quality control limits.

The sample GSP-SB-124-0-2 was analyzed at a 10X dilution for DRO/TPH.

The sample GSP-SB-123-0-2 was analyzed at a 5X dilution for Aroclors resulting in elevated LODs for non-detected Aroclor analytes.

The laboratory reported all Aroclor results from the initial column CLP-1 regardless if it was the higher or lower result of the two column analyses.

The analytes naphthalene and hexachlorobutadiene were analyzed in both the VOC and the SVOC analyses.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Calibration RRF QC limit non-compliances in the VOC fraction led to the rejection of tert-butyl alcohol and vinyl acetate non-detected results for all samples, and 2-chloroethyl vinyl ether non-detected results for some SDG samples. VOC acetone and methylene chloride sample results were qualified for method blank contamination. VOC sample non-detected chloroethane and positive trichloroethene results were qualified for CCV %D quality control limit non-compliances. Non-detected SVOC analyte results were qualified for LCS, MS, and MSD %R quality control limit non-compliances. SVOC non-detected analyte results were rejected for sample GSP-SB-123-0-2 due to MS and MSD %Rs at 0% for the analytes.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). MS/MSD analyte %R quality control limit non-compliances were noted affecting sample GSP-SB-123-0-2. The analytes naphthalene and hexachlorobutadiene were analyzed in both the VOC and the SVOC analyses.

The data for these analyses were reviewed with reference to SW-846 Methods 8260B, 8270D, 8082A, and 8015C, the Region III EPA Functional Guidelines for Organic Data Validation (9/94). The text of this report has been formulated to address only those problem areas affecting data quality.

CASE NARRATIVE

Client: Tetra Tech NUS Inc

Project: MSA Greater Strawberry Point PH. II 2011

Report Number: 240-820-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 06/07/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.7 and 3.1 C.

Overview

The sample set for MSA-GSP, SDG 240-820-1 consisted of twelve (12) soil environmental samples. All twelve (12) samples were analyzed for Target Analyte List (TAL) metals. No field duplicate pair was included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on June 6, 2011 and analyzed by Test America, Inc. All analyses were conducted in accordance with SW-846 Methods 6010C and 7471B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, calibration data, laboratory method/preparation blanks, Interference Check Sample (ICS) results, Matrix Spike/Matrix Spike Duplicate (MS/MSD) results, Laboratory Control Sample (LCS) results, ICP serial dilution results, detection limits and analyte quantitation. Areas of concern are listed below.

Major

No major issues were identified.

Minor

- The Contract Required Quantitation Limit (CRQL) Percent Recovery (%R) for copper was greater than 110% quality control limit. All samples were affected. The positive results reported less than 2X CRQL for copper were qualified as either biased high, (K), or estimated, (J), due to conflicting directional bias.

- The CRQL %R for lead was greater than 110% quality control limit. All samples were affected. Positive results for lead reported less than 2X CRQL and not qualified for blank contamination in samples, GSP-SB-128-0-2 and GSP-SB-126-8-10, was qualified as biased high, (K).

- The CRQL %R for zinc exceeded the 110% quality control limit affecting all samples. The positive results reported less than 2X the CRQL for zinc were qualified as estimated, (J), due to conflicting directional bias.

- The following analyte was detected in the preparation blank at the following maximum concentrations:

Analyte	Maximum Concentration (mg/Kg)	Action Level (mg/Kg)
Lead [1]	0.250	1.25

[1] - Affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Percent moisture, sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results reported below the action level were qualified, (B), due to blank contamination.

- The following analyte was detected in the continuing calibration blanks at the following maximum concentration:

Analyte	Maximum Concentration (µg/L)	Action Level (mg/Kg)
Molybdenum [1]	21.7	10.85

[1] - Affecting all samples.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Percent moisture, sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results reported below the action level were qualified, (B), due to blank contamination.

- Positive results reported below the Reporting Limit (RL) but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The CRQL %R for thallium was greater than the 110% quality control limit affecting all samples. No validation actions were warranted as all sample results were non-detects.

The CRQL %R for molybdenum was greater than the 110% quality control limit affecting all samples. No validation actions were warranted as all sample results were non-detects or qualified for blank contamination.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: Some CRQL %Rs were greater than the 110% quality control limits. Analytes were detected in the laboratory method and preparation blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation" (April 1993), SW846 Methods 6010C and 7471B analytical and reporting protocols, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009).

CASE NARRATIVE

Client: Tetra Tech NUS Inc

Project: MSA Greater Strawberry Point PH. II 2011

Report Number: 240-820-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 06/07/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.7 and 3.1 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GSP-SB-128-0-2 (240-820-1), GSP-SB-128-6-8 (240-820-2), GSP-SB-123-0-2 (240-820-4), GSP-SB-123-6-8 (240-820-5), GSP-SB-124-0-2 (240-820-7), GSP-SB-124-6-8 (240-820-8), GSP-SB-126-0-2 (240-820-10), GSP-SB-126-8-10 (240-820-11), GSP-SB-126-20-22 (240-820-12), GSP-SB-127-0-2 (240-820-13), GSP-SB-127-6-8 (240-820-14), GSP-SB-130-0-2 (240-820-16), GSP-SB-130-6-8 (240-820-17) and GSP-SB-130-20-22 (240-820-18) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 06/16/2011 and 06/17/2011.

Methylene Chloride was detected in method blank MB 240-5027/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

o Acetone and Naphthalene were detected in method blank MB 240-5027/6 at levels that were above the method detection limit but below the reporting limit.
o 1,2,4-Trichlorobenzene, 2-Butanone and Naphthalene were detected in method blank MB 240-5087/7 at levels that were above the method detection limit but below the reporting limit.

In these cases, the values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Chloroethane failed the recovery criteria high for LCS 240-5027/5. Refer to the QC report for details.

Chloroethane failed the recovery criteria high for the MS and MSD of sample 240-787-9 in batch 240-5027. Refer to the QC report for details.

Insufficient sample volume was provided to perform matrix spike/matrix spike duplicate (MS/MSD) for batch 240-5087.

No other difficulties were encountered during the volatiles analyses.

All other quality control parameters were within the acceptance limits.
