4.	Air Samples: Cassettes / Tubes Intact	Canisters Pressurized	Tedlar® Bags Inflated (N/A)

Explain any discrepancies:

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	*	*						

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: ____

Bottle lot numbers: 072913-2Amb 072413-2Amb

Other Comments:

PC Secondary Review: MK 10/21/13

*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

Analytical Results Summary

FROM: **MEGAN CARSON** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION- HEXAVALENT CHROMIUM**
LOCKHEED-MARTIN STATE AIRPORT (MSA)
SDGs R1307933 AND R1307888

SAMPLES: 1/Aqueous/SDG R1307933
MSA-MW43S-102213

6/Aqueous/SDG R1307888

MSA-DUP01-102113	MSA-MW44S-102113
MSA-MW50D-102113	MSA-MW51D-102113
MSA-MW51I-102113	MSA-MW51S-102113

Overview

The sample sets for Lockheed MSA, SDGs R1307933 and R1307888 consists of one (1) aqueous environmental sample and SDG R1307888 consists of six (6) aqueous environmental samples. SDG R1307888 contained one field duplicate pair: MSA-DUP01-102113/ MSA-MW44S-102113.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on October 21st and 22nd, 2013 and analyzed by ALS Environmental. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, laboratory control sample recoveries, matrix spike recoveries, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- None.

Minor Problems-

- Samples MSA-MW50D-102113 and MSA-MW51S-102113 were analyzed a few hours beyond the 24 hour holding time. The non-detected results were qualified as biased low (UL).
- The matrix spike for sample MSA-MW43S-102213 had a percent recovery <90% for hexavalent chromium. The non-detect result for sample MSA-MW43S-102213 was qualified as biased low (UL).
- The matrix spike duplicate for sample MSA-MW44S-102113 had a percent recovery <90% for

biased low (UL). No other validation action was warranted as the other MS/MSD in the preparation batch was within QC limits.

Notes

Sample MSA-MW43S-102213 was mistakenly identified as MSA-MW435-102213 by the lab. The validator corrected the Form 1 to match the COC.

It was noted by the lab the COC for SDG R1307888 was labeled as site Frog Mortar Creek but the bottles were labeled Dump Road. These samples were collected at the Dump Road site.

The lab filtered the samples upon receipt and preserved them to a pH between 9.3 and 9.7.

Non-detected results were reported to the method detection limit (MDL).

Executive Summary

Laboratory Performance: Holding time non-compliances resulted in the qualification of sample results.

Other Factors Affecting Data Quality: Matrix spike non-compliances results in the qualification of samples results.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

CASE NARRATIVE

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1307933
Project:	MSA Dump Road GW	**Project Number:**	112IC04882
Sample Matrix:	Water	**Date Received:**	10/23/13

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 10/22/13 and received at ALS in good condition at a cooler temperature of 1.3 °C as noted on the cooler receipt and preservation check form. The samples were immediately preserved to a pH of 9.3 – 9.7 and stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CLP Batching sheets for a cross-reference between Client ID and ALS Job # and analyses requested. All samples were lab filtered.

Hexavalent Chromium Analysis – 218.6

One water sample was analyzed for Dissolved CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Note: All samples were analyzed within 24 hours of sample receipt and within the method specified holding time.

All the initial and continuing calibration criteria of 95 – 105 % were met.

The Blank Spike (LCS) recovery was within QC limits.

A Matrix Spike/Matrix Spike duplicate was analyzed on sample MSA-MW435. The matrix spike recoveries for MSA-MW435 were outside the 90 – 110 % QC limits and have been flagged with an "*". The RPDs were all with QC limits.

The Laboratory Blank associated with these samples was free of contamination.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

CASE NARRATIVE

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1307888
Project:	MSA Dump Road SW	**Project Number:**	112IC04882
Sample Matrix:	Water	**Date Received:**	10/22/13

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 10/21/13 and received at ALS in good condition at a cooler temperature of 1.7 °C as noted on the cooler receipt and preservation check form. The samples were immediately preserved to a pH of 9.3 – 9.7 and stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CLP Batching sheets for a cross-reference between Client ID and ALS Job # and analyses requested. All samples were lab filtered.

Hexavalent Chromium Analysis – 218.6

Six water samples were analyzed for Dissolved CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Note: All samples were analyzed several hours outside of the client requested 24 hours holding time from sampling time. Samples were analyzed the same day as sample receipt and within the method specified holding time.

All the initial and continuing calibration criteria of 95 – 105 % were met.

The Blank Spike (LCS) recovery was within QC limits.

A Matrix Spike/Matrix Spike duplicate was analyzed on samples MSA-MW44S and MSA-DUP01. The matrix spike recoveries for MSA-MW44S were outside the 90 – 110 % QC limits and have been flagged with an "*". The recoveries for sample MSA DUP02 were within QC limits. The RPDs were all with QC limits.

The Laboratory Blank associated with these samples was free of contamination.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Cooler Receipt and Preservation Check Form

Project/Client Tetra Tech Folder Number R13-1788

Cooler received on 10/22/13 by: JFS **COURIER:** ALS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	YES	NO (N/A)
5.	Were **Ice** or **Ice packs** present?	(YES)	NO
6.	Where did the bottles originate?	(ALS/ROC)	CLIENT

7.	Soil VOA samples received as:	Bulk Jar	Encore	TerraCore	Lab5035set	(N/A)
8.	Temperature of cooler(s) upon receipt:	1.7				
	Is the temperature within 0° - 6° C?:	(Y) N	Y N	Y N	Y N	Y N

If No, Explain Below Date/Time Temperatures Taken: 10/22/13 0754

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: (Temp Blank) / Sample Bottle

If out of Temperature, note packing/ice condition &Client Approval to Run Samples:

All Samples held in storage location floor by JFS on 10/22 at 0754

5035 samples placed in storage location _____ by _____ on _____ at _____

PC Secondary Review: [redacted]

Cooler Breakdown: Date: 10/22/13 Time: 0840 by: [redacted]

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	(NO)
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact	Canisters Pressurized	Tedlar® Bags Inflated (N/A)

Explain any discrepancies: bottles say project site is "Dump Rd."

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	*	*						

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: Client covered, BBB2601301

Other Comments:

C.OC. says MSA Frog Hortor Creek Surface Water sampling

FROM: **EDWARD SEDLMYER** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MARTIN – MARTIN STATE ARIPORT (MSA) – DUMP ROAD
SDG 240-27392-1

SAMPLES: 8/Aqueous/VOC

DR-DPT-23-20	DR-DPT-23-25	DR-DPT-23-30
DR-DPT-23-35	DR-DPT-23-40	DR-DPT-23-45
DR-DPT-23-50	TB-073013	

Overview

The sample set for Lockheed Martin – MSA, SDG 240-27392-1 consists of seven (7) aqueous environmental samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOCs).

The samples were collected by Tetra Tech on July 30, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Method 8260B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX10. The non-detected results reported for tert-butyl alcohol and vinyl acetate were rejected (UR). The positive tert-butyl alcohol results were qualified as estimated (J).

Minor

- The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for bromomethane, chloroethane, carbon tetrachloride, trans-1,3-dichloropropane, dibromochloromethane and bromoform, for instrument A3UX10 on 08/01/13 @ 12:08. No action was taken on the nondetected results for the aforementioned compounds in the affected samples DR-DPT-23-20, DR-DPT-23-25 and DR-DPT-23-30. The positive chloroethane result for sample DR-DPT-23-30 was qualified as estimated (J).

- The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for bromomethane, acetone, carbon tetrachloride, dibromochloromethane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene, for instrument A3UX10 on 08/02/13 @ 13:31. No action was taken on the nondetected results for the aforementioned compounds in the affected samples DR-DPT-23-35, DR-DPT-23-50 and TB-073013. The positive acetone result for sample TB-073013 was qualified as estimated (J).

- The following contaminants were detected in the laboratory method or trip blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Methylene chloride[1]	1.79 ug/L	17.9 ug/L
Acetone[2]	4.7 ug/L	47 ug/L

[1] Maximum concentration present in Method blank 96551/6 affecting samples DR-DPT-24-30, DR-DPT-24-35, and DR-DPT-24-45.
[2] Maximum concentration present in the trip blank affecting all samples.

An action level of 10X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level were qualified (B) as a result of laboratory blank contamination.

- Sample DR-DPT-23-50 had a pH >2.The positive and nondetected results for sample DR-DPT-23-50 were qualified estimated (J) and (UJ), respectively.

- Sample DR-DPT-23-50 had sediment in all vials. The laboratory decanted off the water from the sediment so the purge needle would not be imbedded in the sediment. Twelve milliliters of sample was decanted and diluted with 28 milliliters of ultra-pure deionized water. Because of the sample preparation process potentially losing volatile analytes employed by the laboratory to analyze the sample, the detected and nondetected results for sample DR-DPT-23-50 have been qualified as estimated (J) and (UJ), respectively.

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for bromomethane, chloroethane, 2,2-dichloropropane, carbon tetrachloride, trans-1,3-dichoroproene, dibromochloromethane, bromoform, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene, for instrument A3UX10 on 08/05/13 @ 12:52. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

The laboratory control sample (LCS) associated with batch 95820/4 had percent recoveries greater than the quality control limit for 1,1,1,2-tetrachloroethane, trans-1,3-dichloropropene, and dibromochloromethane. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

The LCS associated with batch 96208/4 had a percent recovery greater than the quality control limit for dibromochloromethane. No action was taken on this basis because the affected sample results were nondetected for dibromochloromethane.

Samples DR-DPT-23-40 and DR-DPT-23-50 were diluted due to concentrations greater than the linear calibration range of the instrument. This accounts for the elevated detection limit for the nondetected compounds.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data. Two VOC compounds had %D noncompliances resulting in qualification of the data. Blank contamination resulted in the qualification of data.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified due to uncertainty near the detection limit. Preservation noncompliance resulted in the qualification of data for one sample. Sample preparation process of decanting water from sediment in sample vial resulted in the qualification of data for one sample.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Areas

Report Number: 240-27392-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT
The samples were received on 07/31/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.2 C.

The following volatile sample was received with headspace in 3 of 3 sample vials: DR-DPT-23-50 (240-27392-7).

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-DPT-23-20 (240-27392-1), DR-DPT-23-25 (240-27392-2), DR-DPT-23-30 (240-27392-3), DR-DPT-23-35 (240-27392-4), DR-DPT-23-40 (240-27392-5), DR-DPT-23-45 (240-27392-6), DR-DPT-23-50 (240-27392-7)and TB-073013 (240-27392-8) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/01/2013, 08/02/2013 and 08/05/2013.

Methylene Chloride was detected in method blank MB 240-96032/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-23-40 (240-27392-5)[8.33X] and DR-DPT-23-50 (240-27392-7)[3.33X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 95820 recovered outside control limits for the following analytes: trans-1,3-Dichloropropene, Chlorodibromomethane and 1,1,1,2-Tetrachloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 96208 recovered outside control limits for the following analytes: Chlorodibromomethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

The following sample submitted for volatiles analysis was received with insufficient preservation(pH >2): DR-DPT-23-50 (240-27392-7).

Elevated reporting limits are provided for the following sample(s) due to insufficient sample provided for preparation/analysis: DR-DPT-23-50 (240-27392-7). Sample DR-DPT-23-50 had significant amounts of sediment in each vial. The lab had to decant the vials in order to obtain enough liquid volume so the needle on the instrument could reach the water level. The lab was able to decant 12mL of sample liquid from the vials and used 28mL of ultra pure DI water to fill the 40mL vial so the instrument needle could reach the water level inside the vial.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MARTIN – MARTIN STATE ARIPORT (MSA) – ROAD SOURCE AREAS
SDG 240-27440-1

SAMPLES: 9/Aqueous/VOC

DR-DPT-24-15	DR-DPT-24-25	DR-DPT-24-30
DR-DPT-24-35	DR-DPT-24-40	DR-DPT-24-45
DR-DPT-24-50	DR-DPT-24-55	TB-073113

Overview

The sample set for Lockheed Martin – MSA Road Source Areas, SDG 240-27440-1 consists of eight (8) aqueous environmental samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOCs).

The samples were collected by Tetra Tech on July 31, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Method 8260B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX17. The non-detected results reported for tert-butyl alcohol and vinyl acetate were rejected (UR). The positive tert-butyl alcohol result for sample DR-DPT-24-55 was qualified as estimated (J).

Minor

- A VOC continuing calibration percent difference (%D) was greater than the quality control limit of 20% and greater than 50% for naphthalene for instrument A3UX17 on 08/06/13 @ 12:23. The nondetected naphthalene results for samples DR-DPT-24-15, DR-DPT-24-25, DR-DPT-24-40, DR-DPT-24-50, DR-DPT-24-55, and TB-073113 were qualified as estimated (UJ).

- The following contaminants were detected in the laboratory method or trip blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Methylene chloride[1]	0.936 ug/L	9.36 ug/L
Acetone[2]	7.1 ug/L	71 ug/L

(1) Maximum concentration present in Method blank 96551/6 affecting samples DR-DPT-24-30, DR-DPT-24-35, and DR-DPT-24-45.
(2) Maximum concentration present in the trip blank affecting all samples.

An action level of 10X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level were qualified (B) as a result of laboratory blank contamination.

- Sample DR-DPT-24-55 had a pH >2.The positive and nondetected results for sample DR-DPT-24-55 were qualified estimated (J) and (UJ), respectively.

- Sample DR-DPT-24-55 had sediment in all vials. The laboratory decanted off the water from the sediment so the purge needle would not be imbedded in the sediment. This resulted in headspace in the vial which probably resulted in a loss of VOC compounds. The positive and nondetected results for sample DR-DPT-24-55 have been qualified as estimated (J) and (UJ), respectively.

- Sample DR-DPT-24-55 had a trichloroethene concentration greater than the linear calibration range of the instrument. The sample was not diluted and rerun due to the lack of sample volume. The positive trichloroethene result for sample DR-DPT-24-55 was qualified as estimated (J).

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for bromomethane, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, and 1,2,3-trichlorobenzene, for instrument A3UX17 on 08/06/13 @ 12:23. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for bromomethane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene, for instrument A3UX17 on 08/07/13 @ 12:14. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

Samples DR-DPT-24-25, DR-DPT-24-30, DR-DPT-24-35, DR-DPT-24-40, DR-DPT-24-45, DR-DPT-24-50, and DR-DPT-24-55 were diluted due to concentrations greater than the linear calibration range of the instrument. This accounts for the elevated detection limit for the nondetected compounds.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data. One VOC compound had a %D noncompliance resulting in qualification of the data. Blank contamination resulted in the qualification of data.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified due to uncertainty near the detection limit. Preservation noncompliance resulted in the qualification of data for one sample. Sample headspace noncompliance resulted in the qualification of data for one sample.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: DUMP ROAD SOURCE AREAS

Report Number: 240-27440-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT
The samples were received on 08/01/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 5.8 C.

The following volatile sample was received with headspace in 3 of 3 sample vials.: DR-DPT-24-55 (240-27440-8). There was also quite a bit of sediment in each vial.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-DPT-24-15 (240-27440-1), DR-DPT-24-25 (240-27440-2), DR-DPT-24-30 (240-27440-3), DR-DPT-24-35 (240-27440-4), DR-DPT-24-40 (240-27440-5), DR-DPT-24-45 (240-27440-6), DR-DPT-24-50 (240-27440-7), DR-DPT-24-55 (240-27440-8) and TB-073113 (240-27440-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/06/2013 and 08/07/2013.

Methylene Chloride was detected in method blank MB 240-96551/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-24-25 (240-27440-2)[100X], DR-DPT-24-30 (240-27440-3)[625X], DR-DPT-24-35 (240-27440-4)[66.67X], DR-DPT-24-40 (240-27440-5)[11.11X], DR-DPT-24-45 (240-27440-6)[50X], DR-DPT-24-50 (240-27440-7)[33.33X] and DR-DPT-24-55 (240-27440-8)[5.88X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) submitted for volatiles analysis was received with insufficient preservation (pH >2): DR-DPT-24-55 (240-27440-8).

Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation/analysis: DR-DPT-24-55 (240-27440-8). Sample DR-DPT-24-55 had a lot of sediment in all 3 vials. The lab had to decant the water, with permission from the client, from all 3 vials in order to have enough volume in a vial so the instrument needle could reach the water level and not imbed into sediment.

Sample DR-DPT-24-55 (240-27440-8) was reported with an "E" flag for Trichloroethene. After the initial run the lab did not have much volume left to do a rerun. Also there was so much headspace left in the vial that was used to decant the sample into there was going to be a large loss of volatiles into the headspace. The analyst and MS Supervisor both thought the run with the "E" flag was going to be a more accurate run.

No MS/MSD in batch 96551 due to analyst prep error.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc

Job Number: 240-27440-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Indicates an Estimated Value for TICs
	U	Indicates the analyte was analyzed for but not detected.
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	N	This flag indicates the presumptive evidence of a compound.

Method 8260B

Overview

The sample set for Lockheed Martin – MSA Dump Road Source Areas, SDG 240-27487-1 consists of eight (8) aqueous environmental samples. The samples were analyzed for volatile organic compounds (VOCs).

The samples were collected by Tetra Tech on August 1, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Method 8260B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX10. The non-detected results reported for tert-butyl alcohol and vinyl acetate were rejected (UR). The positive tert-butyl alcohol results were qualified as estimated (J).

- Tentatively identified compounds (TICS) containing silanol were qualified as rejected (R) in several samples. This compound is indicative of column bleed.

Minor

- The following contaminant was detected in the laboratory method blank at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Acetone	1.51 ug/L	15.1 ug/L

An action level of 10X the maximum contaminant level for acetone has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive results less than the blank action level were qualified (B) as a result of laboratory blank contamination.

- Samples DR-DPT-24-60, DR-DPT-29-35 and DR-DPT-29-40 had a pH >2.The positive and nondetected results for samples DR-DPT-24-60, DR-DPT-29-35 and DR-DPT-29-40 were qualified estimated (J) and (UJ), respectively.

- Samples DR-DPT-24-60 and DR-DPT-29-40 had sediment in all vials. The laboratory decanted off the water from the sediment so the purge needle would not be imbedded in the sediment. This resulted in headspace in the vial which probably resulted in a loss of VOC compounds. The positive and nondetected results for samples DR-DPT-24-60 and DR-DPT-29-40 have been qualified as estimated (J) and (UJ), respectively.

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for bromomethane, chloroethane, 2,2-dichloropropane, carbon tetrachloride, bromodichloromethane, trans-1,3-dichoroproene, dibromochloromethane, 1,1,1,2-tetrachloroethane, bromoform, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene, for instrument A3UX10 on 08/06/13 @ 12:29. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

Samples DR-DPT-24-60 and DR-DPT-29-40 were diluted due to sample matrix problems. This accounts for the elevated detection limit for the nondetected compounds.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data. TICs containing silanol were rejected.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified due to uncertainty near the detection limit. Preservation noncompliance resulted in the qualification of data for three samples. Sample headspace noncompliance resulted in the qualification of data for two samples.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: DUMP ROAD SOURCE AREAS

Report Number: 240-27487-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/02/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.4 C.

The following volatile sample was received with headspace in 3 of 3 sample vials and there was a lot of sediment in all of the vials.: DR-DPT-24-60 (240-27487-1)

The following volatile sample was received with headspace in 6 of 6 sample vials and there was a lot of sediment in all of the vials: DR-DPT-29-40 (240-27487-8)

The lab did not receive the trip blanks (TB-080113) listed on the chain of custody.

The septums of the vials for sample DR-DPT-29-40 are bulging outwards, but are still intact.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-24-60 (240-27487-1), DR-DPT-29-10 (240-27487-2), DR-DPT-29-15 (240-27487-3), DR-DPT-29-20 (240-27487-4), DR-DPT-29-25 (240-27487-5), DR-DPT-29-30 (240-27487-6), DR-DPT-29-35 (240-27487-7) and DR-DPT-29-40 (240-27487-8) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/06/2013.

Acetone was detected in method blank MB 240-96359/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-24-60 (240-27487-1)[2X] and DR-DPT-29-40 (240-27487-8)[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) submitted for volatiles analysis was received with insufficient preservation (pH >2): DR-DPT-24-60 (240-27487-1), DR-DPT-29-35 (240-27487-7), DR-DPT-29-40 (240-27487-8).

Elevated reporting limits are provided for the following sample(s) due to insufficient sample provided for preparation/analysis: DR-DPT-24-60 (240-27487-1), DR-DPT-29-40 (240-27487-8). Samples DR-DPT-24-60 and DR-DPT-29-40 had a significant amount of sediment in each vial for each sample. The lab had to decant the water from the vials in order to have enough volume where the needle from the instrument could reach the water level without embedding into the sediment.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SUBJECT: **ORGANIC DATA VALIDATION- VOC**
DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-27547-1

SAMPLES: 5/Aqueous/VOC

DR-DPT-28-15	DR-DPT-28-30	DR-DPT-28-35
DR-DPT-28-40	TB-080213	

Overview

The sample set for Dump Road Source Areas, SDG 240-27547-1 consisted of four (4) aqueous environmental samples and a trip blank analyzed for volatile organic compounds (VOCs).

The samples were collected on August 2, 2013 and analyzed by Test America Laboratories Inc. All analyses were conducted in accordance with SW-846 Methods 8260B for VOCs analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate, internal standard recoveries, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration relative response factors (RRFs) for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on July 2, 2013 for instrument A3UX10 and the continuing calibration on August 8, 2013 @ 11:51. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR).

- The VOC initial calibration RRFs for tert-butyl alcohol and vinyl acetate were less than 0.05 quality control limit on July 2, 2013 for instrument A3UX17 and the continuing calibrations on August 13, 2013 @ 11:57 and August 14, 2013 @ 12:38. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the trip blank.

- Tentatively identified compound (TIC) containing silanol was detected in the trip blank. This compound is indicative of column bleed and was qualified as rejected (R).

Minor

- The continuing calibration percent difference (%D) for naphthalene exceeded 50% on August 13, 2013 @ 11:57 and August 14, 2013 @ 12:38 on instrument A3UX17. The nondetected naphthalene results were qualified as estimated (UJ) in the affected samples DR-DPT-28-30, DR-DPT-28-35, DR-DPT-28-40 and TB-080213.

- Contamination was detected in the VOC laboratory method blank associated with batch 240-97250/6 analyzed on August 13, 2013 on instrument A3UX17.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Methylene chloride	0.394	3.94

An action level of 10X the maximum concentration of common laboratory contaminant, methylene chloride, was established in order to evaluate samples for blank contamination. Sample aliquot, and dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (B) in the affected samples DR-DPT-28-30 and DR-DPT-28-35.

- Contamination was detected in the VOC laboratory method blank associated with batch 240-97431/5 analyzed on August 14, 2013 on instrument A3UX17 affecting sample DR-DPT-28-40.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
1,2,3-trichlorobenzene	0.928	4.64
1,2,4-trichlorobenzene	1.06	5.3
Hexachlorobutadiene	1.14	5.7
Naphthalene	0.678	3.39
Methylene chloride	0.872	8.72

An action level of 10X the maximum concentration of common laboratory contaminant, methylene chloride, and 5X the maximum concentration of other contaminants was established in order to evaluate samples for blank contamination. Sample aliquot, and dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (B) in the affected sample DR-DPT-28-40.

- The trip blank contained acetone.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Acetone	1.2	12

An action level of 10X the maximum concentration of common laboratory contaminant, acetone, was established in order to evaluate samples for blank contamination. Sample aliquot, and dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (B) in the affected samples.

- The matrix spike/ matrix spike duplicate (MS/MSD) percent recoveries of cis-1,2-dichloroethene were both below and above quality control limits in sample DR-DPT-28-30. The detected cis-1,2-dichloroethene result was qualified as estimated (J) in sample DR-DPT-28-30.

- TICs were detected in several samples and qualified as presumptively present (NJ).

- Positive results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

Notes

Contamination was detected in the VOC laboratory method blank associated with batch 240-96742 analyzed on August 28, 2013 on instrument A3UX10 affecting sample DR-DPT-28-15.

Contaminant	Maximum Concentration (ug/L)
Methylene chloride	0.712

No action was taken on the nondetected result in sample DR-DPT-28-15.

The continuing calibration percent differences (%Ds) for several compounds were greater than the 20% quality control limit and less than 50% on August 8, 2013 @ 11:51 on instrument A3UX10 affecting sample DR-DPT-28-15. The compounds were bromomethane, chloroethane, acetone, 2,2-dichloropropane, 1,1,1-trichloroethane, carbon tetrachloride, 1,2-dichloroethane, bromodichloromethane, cis-1,3-dichloropropene, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-tetrachloroethane, bromoform, hexachlorobutadiene, naphthalene and 1,2,3-trichlorobenzene. The detected acetone result in sample DR-DPT-28-15 was qualified due to trip blank contamination. No action was taken on the nondetected results of the aforementioned compounds.

The continuing calibration %Ds for several compounds were greater than the 20% quality control limit and less than 50% on August 13, 2013 @ 11:57 and 12:20 on instrument A3UX17. The compounds were bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, carbon tetrachloride, 2-chloroethyl vinyl ether, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, hexachlorobutadiene, 1,2,3-trichlorobenzene, and ethyl-t-butyl ether. No action was taken on the nondetected results of the aforementioned compounds in the affected samples DR-DPT-28-30, DR-DPT-28=35 and TB-080213.

The continuing calibration %Ds for several compounds were greater than the 20% quality control limit and less than 50% on August 14, 2013 @ 12:38 and 13:01 on instrument A3UX17. The compounds were bromomethane, chloroethane, trichlorofluoromethane, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, 1,2-dibromo-3-chloropropane, 1,2,3-trichlorobenzene and tert-amyl-methyl ether. No action was taken on the nondetected results of the aforementioned compounds in the affected sample DR-DPT-28-40.

The laboratory control sample (LCS) percent recoveries (%Rs) of 2,2-dichloropropane, bromoform, carbon tetrachloride, cis-1,3-dichloropropene, bromodichloromethane, trans-1,3-dichloropropene and dibromochloromethane were greater than the upper quality control limit in batch 240-96742/4 affecting sample DR-DPT-28-15. No action was taken on the nondetected results of the aforementioned compounds in the affected sample.

Several compounds had MS/MSD %Rs outside quality control limits in sample 240-27430-3. The compounds were bromodichloromethane, tetrachloroethene, dibromochloromethane, carbon tetrachloride, cis-1,3-dichloropropene, and trans-1,3-dichloropropene. No action was taken since this sample is not included in this SDG.

Sample DR-DPT-28-15 was not properly preserved (pH>2). However, because the sample was analyzed within seven days, no action was taken.

Nondetected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC RRFs for tert-butyl alcohol and vinyl acetate were less than the quality control limit resulting in the rejection of nondetected results. Contamination was detected in laboratory blanks. The continuing calibration %Ds for acetone and naphthalene exceeded quality control limits resulting in the qualification of results.

Other Factors Affecting Data Quality: TICs were detected in several samples. The MS/MSD percent recoveries for cis-1,2-dichloroethene were outside the quality control limits in sample DR-DPT-28-30. Trip blank contained acetone. Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: DUMP ROAD SOURCE AREAS

Report Number: 240-27547-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT
The samples were received on 08/03/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.6 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-DPT-28-15 (240-27547-1), DR-DPT-28-30 (240-27547-2), DR-DPT-28-35 (240-27547-3), DR-DPT-28-40 (240-27547-4) and TB-080213 (240-27547-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/08/2013, 08/13/2013 and 08/15/2013.

Methylene Chloride was detected in method blank MB 240-96742/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank MB 240-97250/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

1,2,4-Trichlorobenzene and Hexachlorobutadiene were detected in method blank MB 240-97431/5 at levels exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

1,2,3-Trichlorobenzene, Methylene Chloride and Naphthalene were detected in method blank MB 240-97431/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-28-30 (240-27547-2)[83.33X], DR-DPT-28-35 (240-27547-3)[14.28X] and DR-DPT-28-40 (240-27547-4)[16.67X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) submitted for volatiles analysis was received with insufficient preservation (pH >2): DR-DPT-28-15 (240-27547-1).

The laboratory control sample (LCS) for batch 96742 recovered outside control limits for several analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

There was an MS/MSD analyzed in batch 97431 but could not be reported because the associated sample needed reanalyzed in a different batch.

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MARTIN – MARTIN STATE ARIPORT (MSA) – DUMP ROAD SOURCE AREAS
SDG 240-27585-1

SAMPLES: 4/Aqueous/VOC

DR-DPT-27-20 DR-DPT-27-25 DR-DPT-27-30
TB-080513

Overview

The sample set for Lockheed Martin – MSA Dump Road Source Areas, SDG 240-27585-1 consists of four (4) aqueous environmental samples. The samples were analyzed for volatile organic compounds (VOCs).

The samples were collected by Tetra Tech on August 5, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Method 8260B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX15. The non-detected results reported for tert-butyl alcohol and vinyl acetate were rejected (UR).

- The matrix spike / matrix spike duplicate (MS/MSD) performed on sample DR-DPT-27-20 had a zero percent recovery in the MS/MSD for 2-chloroethyl vinyl ether. The nondetected 2-chloroethyl vinyl ether result for sample DR-DPT-27-20 was rejected (UR).

Minor

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

Notes

The VOC continuing calibration %Ds were greater than the quality control limit of 20% and less than 50% for

bromomethane, acetone, 2-chloroethyl vinyl ether, 2-hexanone, and naphthalene, for instrument A3UX15 on 08/12/13 @ 10:18. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

Samples DR-DPT-27-20, DR-DPT-27-25, and DR-DPT-27-30 were diluted due to concentrations for cis-1,2-dichloroethene and trichloroethene greater than the linear calibration range of the instrument. This accounts for the elevated detection limits for the nondetected compounds.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data.

Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified due to uncertainty near the detection limit. Matrix spike percent recovery noncompliance resulted in the rejection of data for one compound for one sample.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Areas

Report Number: 240-27585-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/06/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.6 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-27-20 (240-27585-1), DR-DPT-27-25 (240-27585-2), DR-DPT-27-30 (240-27585-3)and TB-080513 (240-27585-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/12/2013.

2-Chloroethyl vinyl ether failed the recovery criteria low for the MS/MSD of sample DR-DPT-27-20MS/MSD (240-27585-1) in batch 240-97045. Refer to the QC report for details.

Samples DR-DPT-27-20 (240-27585-1)[33.33X], DR-DPT-27-25 (240-27585-2)[333.33X] and DR-DPT-27-30 (240-27585-3)[40X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

240-27585 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification
☒ Non-Hazard ☐ Flammable ☐ Skin Irritant Poison B ☐ Unknown ☐

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ Return To Client ☒ Disposal By Lab ☐ Archive For _____ Months

Special Instructions/QC Requirements & Comments: 5 day TAT

Client TETRA TECH Site Name _____ Cooler unpacked by:

Cooler Received on 6-6-13 Opened on 6-6-13

FedEx: 1st Grd (Exp) UPS FAS Stetson Client Drop Off TestAmerica Courier Other _____

TestAmerica Cooler # _____ Foam Box (Client Cooler) Box Other _____

Packing material used: (Bubble Wrap) Foam Plastic Bag None Other _____

COOLANT: (Wet Ice) Blue Ice Dry Ice Water None

1. Cooler temperature upon receipt

IR GUN# A	(CF –1 °C) Observed Cooler Temp. _____ °C	Corrected Cooler Temp. _____ °C	
IR GUN# 4	(CF 0 °C) Observed Cooler Temp. _____ °C	Corrected Cooler Temp. _____ °C	☐ See Multiple Cooler Form
IR GUN# 5	(CF +1 °C) Observed Cooler Temp. 2.6 °C	Corrected Cooler Temp. 3.6 °C	
IR GUN# 8	(CF -0 °C) Observed Cooler Temp. _____ °C	Corrected Cooler Temp. _____ °C	

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity _____	Yes (No)	
-Were custody seals on the outside of the cooler(s) signed & dated?	Yes No (NA)	
-Were custody seals on the bottle(s)?	Yes (No)	
3. Shippers' packing slip attached to the cooler(s)?	(Yes) No	
4. Did custody papers accompany the sample(s)?	(Yes) No	
5. Were the custody papers relinquished & signed in the appropriate place?	(Yes) No	
6. Did all bottles arrive in good condition (Unbroken)?	(Yes) No	
7. Could all bottle labels be reconciled with the COC?	(Yes) No	
8. Were correct bottle(s) used for the test(s) indicated?	(Yes) No	
9. Sufficient quantity received to perform indicated analyses?	(Yes) No	
10. Were sample(s) at the correct pH upon receipt?	(Yes) No (NA)	pH Strip Lot# HC376062
11. Were VOAs on the COC?	(Yes) No	
12. Were air bubbles >6 mm in any VOA vials?	Yes (No) NA	
13. Was a trip blank present in the cooler(s)?	(Yes) No	

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other

Concerning _____

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES Samples processed by:

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.

Sample(s) _____ were received in a broken container.

Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in the laboratory.

Time preserved: _____ Preserved(s) added/Lot number(s): _____

LOCKHEED MIDDLE STATE AIRPORT (MSA) DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-27624-1

SAMPLES: 6 / Aqueous / VOC

DR-DPT-27-35	DR-DPT-27-40	DR-DPT-27-45
DR-DPT-27-49	DR-DPT-41-25	TB-080613

Overview

The sample set for Lockheed MSA Dump Road Source Areas, SDG 240-27624-1, consisted of six (6) aqueous samples including one (1) aqueous trip blank sample. All aqueous samples were analyzed for volatile organic compounds (VOC) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on August 6, 2013 and analyzed by TestAmerica Laboratories, Inc., North Canton OH for the analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260B for VOCs, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank/preparation results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol and vinyl acetate on instrument A3UX15 on 07/08/13 and instrument A3UX17 on 07/02/13. Additionally, all continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 criteria for both instrument A3UX15 and instrument A3UX17.
  Affected Samples: All samples
  Action: The affected sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR).

Minor Problems

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The VOC CCV %D was greater than the 20% and greater than the 50% quality control limit for naphthalene for instrument A3UX17 on 08/13/13 @ 11:57.
  Affected Samples: DR-DPT-27-40, DR-DPT-27-49, and DR-DPT-41-25
  Actions: The samples had non-detected results naphthalene which were qualified estimated, (UJ).

- The following laboratory VOC contaminant was detected in a method blank at the maximum concentration indicated below.

Analytes	Maximum Conc. µg/l	Action Level µg/l
Methylene chloride [1]	0.394	3.94

[1] Method blank MB 240-97250/6 affecting samples DR-DPT-27-40, DR-DPT-27-49, and DR-DPT-41-25.

An action level of ten times the maximum level for methylene chloride has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less than the action level were qualified non-detected, (B), for blank contamination.

- Samples DR-DPT-27-45, DR-DPT-27-49, and TB-080613 contained tentatively identified compounds (TICs).
  Actions: TIC results were qualified as presumptively present, (NJ).

Notes

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for bromomethane, acetone, 2-chloroethyl vinyl ether, 2-hexanone, and naphthalene for instrument A3UX15 on 08/12/13 @ 10:18.
Affected Samples: DR-DPT-27-35 and DR-DPT-27-45
Actions: The samples had non-detected results for bromomethane, acetone, 2-chloroethyl vinyl ether, 2-hexanone, and naphthalene which were not qualified.

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for bromomethane, carbon disulfide, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, 2-hexanone, 1,2,4-trichlorobenzene, naphthalene, and 1,2,3-trichlorobenzene for instrument A3UX15 on 08/13/13 @ 10:26.
Affected Sample: TB-080613
Actions: The sample had non-detected results for bromomethane, carbon disulfide, 2-chloroethyl vinyl ether, 4-methyl-2-pentanone, 2-hexanone, 1,2,4-trichlorobenzene, naphthalene, and 1,2,3-trichlorobenzene which were not qualified.

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, carbon tetrachloride, 2-chloroethyl vinyl ether, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, hexachlorobutadiene, 1,2,3-trichlorobenzene, ethyl-t-butyl ether, and tert-amyl-methyl ether for instrument A3UX17 on 08/13/13 @ 11:57 and @ 12:20.
Affected Samples: DR-DPT-27-40, DR-DPT-27-49, and DR-DPT-41-25
Actions: The samples had non-detected results for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, carbon tetrachloride, 2-chloroethyl vinyl ether, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, hexachlorobutadiene, 1,2,3-trichlorobenzene, ethyl-t-butyl ether, and tert-amyl-methyl ether which were not qualified.

The MS and MSD %Rs were non-compliant for many VOC analytes for spiked samples from other SDGs (SDG samples 240-27585-B-1, 240-27504-B-6, and 240-27547-B-2). No validation action was taken as the samples were not from this SDG.

Samples were analyzed at dilutions for VOCs, as listed below, resulting in elevated levels for non-detected VOC analytes.

Sample	Dilution
DR-DPT-27-35	33.33X
DR-DPT-27-40	16.67X
DR-DPT-27-45	16.67X
DR-DPT-27-49	10X
DR-DPT-41-25	1250X

The laboratory reported non-detected sample results to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC tert-butyl alcohol and vinyl acetate non-detected sample results were rejected due to initial calibration average RRF and CCV RRF criteria non-compliances. Sample non-detected naphthalene results were qualified for a CCV %D non-compliance. Sample VOC results were qualified for blank contamination.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260B and the Region III EPA Functional Guidelines for Organic Data Validation (9/94).

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient $r < 0.995$
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Areas

Report Number: 240-27624-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/07/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.2 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-27-35 (240-27624-1), DR-DPT-27-40 (240-27624-2), DR-DPT-27-45 (240-27624-3), DR-DPT-27-49 (240-27624-4), DR-DPT-41-25 (240-27624-5) and TB-080613 (240-27624-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/12/2013 and 08/13/2013.

Methylene Chloride was detected in method blank MB 240-97250/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Xylenes, Total failed the recovery criteria low for MRL 240-97217/10.

Samples DR-DPT-27-35 (240-27624-1)[33.33X], DR-DPT-27-40 (240-27624-2)[16.67X], DR-DPT-27-45 (240-27624-3)[16.67X], DR-DPT-27-49 (240-27624-4)[10X] and DR-DPT-41-25 (240-27624-5)[1250X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc

Job Number: 240-27624-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	J	Indicates an Estimated Value for TICs
	U	Indicates the analyte was analyzed for but not detected.
	F	MS or MSD exceeds the control limits
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	N	This flag indicates the presumptive evidence of a compound.

MSA DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-27719-1

SAMPLES: 9/Aqueous/VOC

DR-DPT-40-20	DR-DPT-40-25	DR-DPT-40-30	DR-DPT-40-35
DR-DPT-40-40	DR-DPT-41-35	DR-DPT-41-40	DR-DPT-41-45
TB-080713			

Overview

The sample set for MSA Dump Road Source Areas, SDG 240-27719-1 consisted of eight (8) aqueous environmental samples and a trip blank analyzed for volatile organic compounds (VOCs).

The samples were collected on August 7, 2013 and analyzed by Test America Laboratories Inc. All analyses were conducted in accordance with SW-846 Methods 8260B for VOCs analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method /preparation blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate, internal standard recoveries, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- VOC initial calibration relative response factors (RRFs) for tert-butyl alcohol and vinyl acetate were less than 0.05 quality control limit on July 2, 2013 for instrument A3UX10 and the continuing calibration on August 15, 2013 @ 13:05. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples.

- The tentatively identified compound (TIC), trimethylsilanol, was qualified as rejected in sample TB-080713. This compound is indicative of column bleed.

Minor

- The continuing calibration percent differences (%Ds) for several compounds were greater than 20% and less than 50% on August 15, 2013 @ 13:05 on instrument A3UX10. The compounds were dichlorodifluoromethane, chloroethane, acetone, 2,2'-dichloropropane, 1,1,1-trichloroethane, carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-tetrachloroethane and bromoform. The detected acetone and 1,1,1-trichloroethane results were qualified as estimated (J), except for the acetone result in sample DR-DPT-40-40 acetone result which was qualified due to blank contamination. No action was taken on the nondetecetd results of the aforementioned analytes. The continuing calibration %D for tert-butyl alcohol was greater than 50%. The nondetected tert-butyl alcohol results were qualified as rejected due to a more severe noncompliance. No action was taken.

- Contamination was detected in the VOC laboratory method blank associated with batch 240-97617/6.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Methylene Chloride	1.1	11

An action level of 10X the maximum concentration of common laboratory contaminant, methylene chloride, was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were applied. The detected methylene chloride result in sample DR-DPT-41-45 was qualified as (B).

- Contamination was detected in the trip blank TB-080713.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Acetone	6.8	68

An action level of 10X the maximum concentration of common laboratory contaminant, acetone, was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were applied. The detected acetone result in sample DR-DPT-40-40 was qualified as (B).

- The matrix spike/ matrix spike duplicate (MS/MSD) %Rs for 1,1,1,2-tetrachloroethane, carbon tetrachloride, trichloroethene, and dibromochloromethane in sample DR-DPT-41-35. The detected trichloroethene was qualified as estimated high (K). No action was taken on the nondetected 1,1,1,2-tetrachloroethane, carbon tetrachloride and dibromochloromethane results. The MSD %R of bromodichloromethane was greater than the upper quality control limit. No action was taken on the nondetected bromodichloromethane result. The MS/MSD %R of tert-butyl alcohol was less the lower quality control limit. No action was taken on the nondetected tert-butyl result which was qualified as rejected due to a more severe noncompliance.

- The non-target compound methylcyclohexane results in samples DR-DPT-41-40 and DR-DPT-41-45 were qualified estimated (J).

- Positive results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

Notes

The laboratory control sample (LCS) percent recoveries (%Rs) for 1,1,1,2-tetrachloroethane, and dibromochloromethane were greater than the upper quality control limit. No action was taken on the nondetected 1,1,1,2-tetrachloroethane, and dibromochloromethane results. The LCS %R of tert-butyl alcohol was less than the lower quality control limit. No action was taken on the nondetected tert-butyl results which were qualified as rejected due to a more severe noncompliance.

Nondetected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC RRFs for tert-butyl alcohol and vinyl acetate were less than the quality control limit resulting in the rejection of nondetected results. The continuing calibration %Ds for acetone and 1,1,1-trichloroethane were greater than 20% and less than 50%.

Other Factors Affecting Data Quality: Methylene chloride was detected in the laboratory method blank. The trip blank contained acetone. TICs were detected in several samples. The MS/MSD %R of trichloroethene was greater than the upper quality control limit. Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-27719-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/08/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.4 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-41-35 (240-27719-1), DR-DPT-41-40 (240-27719-2), DR-DPT-41-45 (240-27719-3), DR-DPT-40-20 (240-27719-4), DR-DPT-40-25 (240-27719-5), DR-DPT-40-30 (240-27719-6), DR-DPT-40-35 (240-27719-7), DR-DPT-40-40 (240-27719-8) and TB-080713 (240-27719-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/15/2013.

Methylene Chloride was detected in method blank MB 240-97617/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-41-35 (240-27719-1)[833.33X], DR-DPT-41-40 (240-27719-2)[40X], DR-DPT-41-45 (240-27719-3)[25X], DR-DPT-40-20 (240-27719-4)[333.33X], DR-DPT-40-25 (240-27719-5)[125X], DR-DPT-40-30 (240-27719-6)[333.33X], DR-DPT-40-35 (240-27719-7)[250X] and DR-DPT-40-40 (240-27719-8)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 97617 recovered outside control limits for the following analytes: Chlorodibromomethane and 1,1,1,2-Tetrachloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 97617 recovered outside control limits for the following analyte(s): 2-Methyl-2-propanol--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

Overview

The sample set for Lockheed MSA, SDG 240-27760-1, consists of four (4) aqueous environmental samples and one trip blank.

All samples were analyzed for volatile organic compounds (VOCs). The samples were collected by Tetra Tech August 8th, 2013and analyzed by TestAmerica. VOC analyses were conducted using method 8260B.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, internal standard recoveries, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on 7/2/13 on instrument A3UX10 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. All samples were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed 8/15/13 at 13:05 on instrument A3UX10 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-38-15, DR-DPT-38-30, and DR-DPT-38-35 were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed 8/16/13 at 00:03 on instrument A3UX10 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-38-40 and TB-0808135 were affected. Non-detected results were qualified as rejected (UR).

Minor Problems-

- The following contaminants were detected in method and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Acetone [1]	2.1 ug/L	21 ug/L
Methylene chloride [2]	1.10 ug/L	11 ug/L
Tert-butyl alcohol [3]	8.04 ug/L	40.2 ug/L

[1] Maximum concentration found in a trip blank.
[2] Maximum concentration found in a preparation blank affecting samples in 240-97617.
[3] Maximum concentration found in a preparation blank affecting samples in 240-97692.

An action level of 5X and 10X (methylene chloride and acetone only) the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level were qualified (B) for blank contamination.

- The continuing calibration standard analyzed on 8/15/13 at 13:05 on instrument A3UX10 had a percent difference > 20% but less than 50% for dichlorodifluoromethane, chloroethane, acetone, 2,2-dichloropropane, carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-trichloroethane, bromoform, dichlorofluoromethane, and a percent recovery > 50% for tert butyl alcohol. Samples DR-DPT-38-15, DR-DPT-38-30, and DR-DPT-38-35 were affected. Positive tert-butyl alcohol results were qualified as estimated (J). Non-detected dichlorodifluoromethane, chloroethane, acetone, 2,2-dichloropropane, carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-trichloroethane, bromoform, dichlorofluoromethane results were not qualified as %D< 50%. No validation action was warranted for non-detect tert-butyl alcohol as sample results were rejected for RRF non-compliances.

- The continuing calibration standard analyzed on 8/16/13 at 00:03 on instrument A3UX10 had a percent difference > 20% but less than 50% for chloroethane, tert butyl alcohol, 2,2-dichloropropane, 1,1,1-trichloroethane, carbon tetrachloride, bromodichloromethane, dibromochloromethane, 1,1,1,2-trichloroethane, bromoform, naphthalene, and dichlorofluoromethane . Samples DR-DPT-38-40 and TB-080813 were affected. The detected bromodichloromethane result was qualified as estimated (J). Non-detected chloroethane, tert butyl alcohol, 2,2-dichloropropane, 1,1,1-trichloroethane, carbon tetrachloride, bromodichloromethane, dibromochloromethane, 1,1,1,2-trichloroethane, bromoform, naphthalene, and dichlorofluoromethane results were not qualified as %D< 50%. No validation action was warranted for tert-butyl alcohol as sample results were rejected for RRF non-compliances.

- The laboratory control spike for preparation batch 240-97617 had a percent recovery greater than the upper QC limit for 1,1,1,2-tetrachloroethane, dibromochloromethane, and a percent recovery less than the lower limit for tert-butyl alcohol. Samples DR-DPT-38-15, DR-DPT-38-30, and DR-DPT-38-35 were affected. Detected tert-butyl alcohol results were qualified as estimated (J). Non-detected 1,1,1,2-tetrachloroethane dibromochloromethane, and tert-butyl alcohol results were not qualified.

- The laboratory control spike for preparation batch 240-97692 had percent recovery less than the lower limit for tert-butyl alcohol. Samples DR-DPT-38-40 and TB-080813 were affected. No validation action was warranted as sample results were either qualified for blank contamination or rejected for calibration RRF non-compliances.

- Silanol TIC compounds were rejected (R) because silanol is used in operation of the instrumentation.

Notes

Non-detected results were reported at the MDL.

Tentatively Identified Compounds (TICs) were also analyzed for VOC analyses..

Compound chlorodibromomethane was listed in the lab data as dibromochloromethane.

The following samples were analyzed at the following dilutions for all VOCs:

Sample ID	Dilution Factor
DR-DPT-38-35	5.26X
DR-DPT-38-40	1.82X

Executive Summary

Laboratory Performance: Preparation blank contamination for acetone and tert-butyl alcohol resulted in the qualification of sample results. Initial and continuing calibration RRF non-compliances resulted in the rejection of tert-butyl alcohol and vinyl acetate results. Continuing calibration %D non-compliances for bromodichloromethane and tert-butyl alcohol resulted in the qualification of sample results. Laboratory spike non-compliances for tert-butyl alcohol resulted in the qualification of sample results.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-27760-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.0 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-38-15 (240-27760-1), DR-DPT-38-30 (240-27760-2), DR-DPT-38-35 (240-27760-3), DR-DPT-38-40 (240-27760-4) and TB-080813 (240-27760-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/15/2013 and 08/16/2013.

Methylene Chloride was detected in method blank MB 240-97617/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

tert-Butyl alcohol was detected in method blank MB 240-97692/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-38-35 (240-27760-3)[5.26X] and DR-DPT-38-40 (240-27760-4)[1.82X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 97617 recovered outside control limits for the following analytes: Chlorodibromomethane and 1,1,1,2-Tetrachloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 97617 recovered outside control limits for the following analyte(s):
2-Methyl-2-propanol--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

The laboratory control sample (LCS) for batch 97692 recovered outside control limits for the following analyte(s):
2-Methyl-2-propanol--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

There was an MS/MSD analyzed in batch 97692 but could not be reported because the associated sample needed reanalyzed in a different batch.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SUBJECT: **ORGANIC DATA VALIDATION- VOC**
MSA DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-27831-1

SAMPLES: 7/Aqueous/VOC

DR-DPT-42-10	DR-DPT-42-15	DR-DPT-42-20	DR-DPT-42-25
DR-DPT-42-30	DR-DPT-42-35	TB-080913	

Overview

The sample set for MSA Dump Road Source Areas, SDG 240-27831-1 consisted of six (6) aqueous environmental samples and a trip blank analyzed for volatile organic compounds (VOCs).

The samples were collected on August 9, 2013 and analyzed by Test America Laboratories Inc. All analyses were conducted in accordance with SW-846 Methods 8260B for VOCs analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method /preparation blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate, internal standard recoveries, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial calibration relative response factors (RRFs) for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on July 2, 2013 for instrument A3UX10 and the continuing calibration on August 17, 2013 @ 13:02. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples. The detected tert-butyl alcohol results were qualified due to blank contamination.

- The tentatively identified compound (TIC), containing silanol, was qualified as rejected (R). This compound is indicative of column bleed.

Minor

- Contamination was detected in the VOC laboratory method blank associated with batch 240-97899/6 analyzed on August 17, 2013 on instrument A3UX10.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Methylene chloride	1.81	18.1
Tert-butyl alcohol	7.63	38.15

An action level of 5X the maximum concentration of contaminant of tert-butyl alcohol and 10X the maximum concentration of common laboratory contaminant, methylene chloride, was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were applied. The detected methylene chloride and tert-butyl alcohol results were qualified as (B).

- The continuing calibration percent differences (%Ds) for acetone, 1,2-dichloroethane, bromodichloromethane, was greater than 20% and less than 50% on August 17, 2013 @ 13:02 on instrument A3UX10. The detected acetone, 1,2-dichloroethane and bromodichloromethane results were qualified as estimated (J) in the affected samples. No action was taken on the nondetected acetone, 1,2-dichloroethane and bromodichloromethane results. The continuing calibration %D for tert-butyl alcohol was greater than 50%. The detected tert-butyl alcohol results were qualified due to blank contamination and the nondetected results were qualified as rejected due to a more severe noncompliance.

- Several TICs were detected and qualified as presumptively present (NJ) in several samples.

- Positive results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

Notes

The continuing calibration %Ds for bromomethane, chloroethane, 2,2-dichlorpropane, 1,1,1-trichloroethane, carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-tetrachloroethane and bromoform were greater than 20% and less than 50% on August 17, 2013 @ 13:02 on instrument A3UX10. No action was taken on the bromomethane, chloroethane, 2,2-dichlorpropane, 1,1,1-trichloroethane, carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-tetrachloroethane and bromoformresults in the affected samples.

The laboratory control sample (LCS) percent recovery (%R) for 1,1,1,2-tetrachloroethane and dibromochloromethane were greater than the upper quality control limit in batch 240-97899/4. No action was taken on the nondetected 1,1,1,2-tetrachloroethane and dibromochloromethane results. The LCS %R of tert-butyl alcohol was less than the lower quality control limit. No action was taken. The detected tert-butyl alcohol results were qualified due to blank contamination and the nondetected results were qualified as rejected due to a more severe noncompliance.

The matrix spike/ matrix spike duplicate (MS/MSD) %Rs of 1,1,1,2-tetrachloroethane, carbon tetrachloride, and dibromochloromethane were greater than the upper quality control limit in sample 240-27638-1. The MSD %Rs of bromodichloromethane and trans-1,3-dichloropropene were greater than the upper quality control limit. No action was taken since this sample is not included in this SDG.

Nondetected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC RRFs for tert-butyl alcohol and vinyl acetate were less than the quality control limit resulting in the rejection of nondetected results. Methylene chloride and tert-butyl alcohol were detected in thelaboratory method blank. The continuing calibration %Ds for acetone, 1,2-dichloroethane, bromodichloromethane, was greater than 20% and less than 50%. The continuing calibration %D for tert-butyl alcohol was greater than 50%.

Other Factors Affecting Data Quality: TICs were detected in several samples. Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-27831-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/10/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.2 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-42-10 (240-27831-1), DR-DPT-42-15 (240-27831-2), DR-DPT-42-20 (240-27831-3), DR-DPT-42-25 (240-27831-4), DR-DPT-42-30 (240-27831-5), DR-DPT-42-35 (240-27831-6) and TB-080913 (240-27831-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/17/2013.

Methylene Chloride was detected in method blank MB 240-97899/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

tert-Butyl alcohol was detected in method blank MB 240-97899/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-42-25 (240-27831-4)[5.71X], DR-DPT-42-30 (240-27831-5)[8X] and DR-DPT-42-35 (240-27831-6)[8X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 97899 recovered outside control limits for the following analyte(s):
2-Methyl-2-propanol--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

The laboratory control sample (LCS) for batch 97899 recovered outside control limits for the following analytes: Chlorodibromomethane and 1,1,1,2-Tetrachloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MIDDLE STATE AIRPORT (MSA) DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-27864-1

SAMPLES: 6 / Aqueous / VOC

DR-DPT-37-25	DR-DPT-37-30	DR-DPT-37-35
DR-DPT-37-40	DR-DPT-37-45	TB-081213

Overview

The sample set for Lockheed MSA Dump Road Source Areas, SDG 240-27864-1, consisted of six (6) aqueous samples, including one (1) trip blank sample. All aqueous samples were analyzed for volatile organic compounds (VOC) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on August 12, 2013 and analyzed by TestAmerica Laboratories, Inc., North Canton OH for the analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260B for VOCs, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank/preparation results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol and vinyl acetate on instrument A3UX11 on 08/16/13. Additionally, the continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 criteria for instrument A3UX11 on 08/19/13 @ 09:47 and 08/20/19 @ 10:56.
  Affected Samples: All samples
  Action: The affected sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR), and the positive tert-butyl alcohol result for sample DR-DPT-35-45 was qualified estimated, (J).

- Trimethyl silanol, detected as a tentatively identified compound (TIC), was qualified rejected, (R), in samples DR-DPT-37-30 and DR-DPT-37-35.

Minor Problems

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The VOC CCV percent differences (%Ds) were greater than the 20% and less than the 50% quality control limit for acetone and carbon disulfide for instrument A3UX11 on 08/19/13 @ 09:47.
  Affected Samples: DR-DPT-37-30 and TB-081213
  Actions: The sample DR-DPT-37-30 positive results for acetone and carbon disulfide were qualified estimated, (J). The sample TB-081213 non-detected results for acetone and carbon disulfide were not qualified.

- Results reported as TICs were qualified presumptively present, (NJ).

Notes

The laboratory reported detections for VOCs which were calibrated for but which were not analytes of interest as listed below.

Samples	Results
DR-DPT-37-25	cyclohexane
DR-DPT-37-30	1,4-dioxane, hexane
DR-DPT-37-45	1,4-dioxane
TB-081213	1,4-dioxane

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for methylene chloride, 2,2-dichloropropane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, 4-isopropyltoluene, and naphthalene for instrument A3UX11 on 08/19/13 @ 09:47.
Affected Samples: DR-DPT-37-30 and TB-081213
Actions: The samples had non-detected results for methylene chloride, 2,2-dichloropropane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, 4-isopropyltoluene, and naphthalene which were not qualified.

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for bromoform and 1,1,2,2-tetrachloroethane for instrument A3UX11 on 08/20/13 @ 10:56.
Affected Samples:
DR-DPT-37-25 DR-DPT-37-35 DR-DPT-37-40
DR-DPT-37-45
Actions: The samples had non-detected results for bromoform and 1,1,2,2-tetrachloroethane which were not qualified.

The matrix spike duplicate (MSD) percent recovery %R was less than the quality control limit for chlorobenzene for a spiked sample from another SDG (SDG 240-27914-C-2). No validation action was taken as the sample was from another SDG.

Samples were analyzed at dilutions for VOCs, as listed below, resulting in elevated levels for non-detected VOC analytes.

Sample	Dilution
DR-DPT-37-25	6.67X
DR-DPT-37-40	2.5X
DR-DPT-37-45	10X

The laboratory reported non-detected sample results to the Method Detection Limit (MDL).

The laboratory report was missing forms for a BFB instrument performance check, CCV %D Form VIIs, and the internal standard recovery Form VIIIs for 08/20/13. The laboratory was contacted and the appropriate forms were provided.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC tert-butyl alcohol and vinyl acetate non-detected sample results were rejected and a sample detected tert-butyl alcohol result was qualified due to initial calibration average RRF and CCV RRF criteria non-compliances. Sample VOC results were qualified for CCV %D non-compliances.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). Sample trimethyl silanol results were rejected as due to column bleed.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260B and the Region III EPA Functional Guidelines for Organic Data Validation (9/94).

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's r < 0.995
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-27864-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT
The samples were received on 08/13/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.8 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-DPT-37-25 (240-27864-1), DR-DPT-37-30 (240-27864-2), DR-DPT-37-35 (240-27864-3), DR-DPT-37-40 (240-27864-4), DR-DPT-37-45 (240-27864-5) and TB-081213 (240-27864-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/19/2013 and 08/20/2013.

Samples DR-DPT-37-25 (240-27864-1)[6.67X], DR-DPT-37-40 (240-27864-4)[2.5X] and DR-DPT-37-45 (240-27864-5)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc

Job Number: 240-27864-1

Lab Section	Qualifier	Description
GC/MS VOA		
	J	Indicates an Estimated Value for TICs
	U	Indicates the analyte was analyzed for but not detected.
	*	LCS or LCSD exceeds the control limits
	F	MS or MSD exceeds the control limits
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	N	This flag indicates the presumptive evidence of a compound.

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MIDDLE STATE AIRPORT (MSA) DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-27914-1

SAMPLES: 6 / Aqueous / VOC

DR-DPT-35-20	DR-DPT-35-25	DR-DPT-35-30
DR-DPT-35-35	DR-DPT-35-40	DR-DPT-35-45

Overview

The sample set for Lockheed MSA Dump Road Source Areas, SDG 240-27914-1, consisted of six (6) aqueous samples. All aqueous samples were analyzed for volatile organic compounds (VOC) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on August 13, 2013 and analyzed by TestAmerica Laboratories, Inc., North Canton OH for the analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260B for VOCs, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank/preparation results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol and vinyl acetate on instrument A3UX11 on 08/16/13. Additionally, the continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 criteria for instrument A3UX11 on 08/19/13 @ 09:47.
  Affected Samples: All samples
  Action: The affected sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR), and the positive tert-butyl alcohol result for sample DR-DPT-35-45 was qualified estimated, (J).

- Trimethyl silanol, detected as a tentatively identified compound (TIC), was qualified rejected, (R), in sample DR-DPT-35-20.

Minor Problems

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The laboratory narrative noted that samples were received with bubbles >6mm in all of the sample vials for the samples listed below.

  Affected Samples:

  DR-DPT-35-20 DR-DPT-35-30 DR-DPT-35-35
  DR-DPT-35-40 DR-DPT-35-45

  Action: The affected sample positive and non-detected results were qualified estimated, (J) and (UJ), respectively, with the exception of the tert-butyl alcohol and vinyl acetate non-detected results which were rejected for RRF criteria non-compliances.

- The VOC CCV percent differences (%Ds) were greater than the 20% and less than the 50% quality control limit for acetone, carbon disulfide, and naphthalene for instrument A3UX11 on 08/19/13 @ 09:47.

  Affected Sample: All samples

  Actions: The sample positive results for acetone, carbon disulfide, and naphthalene were qualified estimated, (J). The sample non-detected results for acetone, carbon disulfide, and naphthalene were not qualified.

- Results reported as TICs were qualified presumptively present, (NJ).

Notes

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for methylene chloride, 2,2-dichloropropane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, and 4-isopropyltoluene for instrument A3UX11 on 08/19/13 @ 09:47.

Affected Sample: All samples

Actions: The samples had non-detected results for methylene chloride, 2,2-dichloropropane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, and 4-isopropyltoluene which were not qualified.

The matrix spike duplicate (MSD) percent recovery %R was less than the quality control limit for chlorobenzene for spiked sample DR-DPT-35-25.

Affected Sample: DR-DPT-35-25

Action: No validation action was taken as the matrix spike (MS) %R and the relative percent difference (RPD) for the MS and MSD chlorobenzene %Rs were compliant.

Samples were analyzed at dilutions for VOCs, as listed below, resulting in elevated levels for non-detected VOC analytes.

Sample	Dilution
DR-DPT-35-25	166.67X
DR-DPT-35-30	33.33X
DR-DPT-35-35	16.67X
DR-DPT-35-40	7.14X
DR-DPT-35-45	50X

The Chain of Custody record indicated a vial was submitted to the laboratory for the trip blank TB-081313 but the laboratory stated that no vials were received for the trip blank. This item is noted for completeness.

The laboratory reported non-detected sample results to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC tert-butyl alcohol and vinyl acetate non-detected sample results were rejected due to initial calibration average RRF and CCV RRF criteria non-compliances. Sample VOC results were qualified for CCV %D non-compliances.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J). A sample trimethyl silanol result was rejected as due to column bleed.

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260B and the Region III EPA Functional Guidelines for Organic Data Validation (9/94).

Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient $r < 0.995$
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

Sample(s) _____ were received after the recommended holding time had expired.
Sample(s) _____ were received in a broken container.
Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in the laboratory.
Time preserved: _____ Preservative(s) added/Lot number(s): _____

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-27914-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/14/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.2 C.

All the vials for each sample had a bubble greater than 6mm in them, except for 2X40mL vials for sample DR-DPT 35-25.

The following sample was listed on the Chain of Custody (COC); however, no sample volume was received: TB-081313.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-35-20 (240-27914-1), DR-DPT-35-25 (240-27914-2), DR-DPT-35-30 (240-27914-3), DR-DPT-35-35 (240-27914-4), DR-DPT-35-40 (240-27914-5) and DR-DPT-35-45 (240-27914-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/19/2013.

Samples DR-DPT-35-25 (240-27914-2)[166.67X], DR-DPT-35-30 (240-27914-3)[33.33X], DR-DPT-35-35 (240-27914-4)[16.67X], DR-DPT-35-40 (240-27914-5)[7.14X] and DR-DPT-35-45 (240-27914-6)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) submitted for volatiles analysis was received with insufficient preservation (pH >2): DR-DPT-35-45 (240-27914-6).

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc

Job Number: 240-27914-1

Lab Section	Qualifier	Description
GC/MS VOA		
	J	Indicates an Estimated Value for TICs
	U	Indicates the analyte was analyzed for but not detected.
	F	MS or MSD exceeds the control limits
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	N	This flag indicates the presumptive evidence of a compound.

Overview

The sample set for Lockheed MSA Dump Road Source Areas, SDG 240-27964-1, consisted of nine (9) aqueous samples. All aqueous samples were analyzed for volatile organic compounds (VOC) as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on August 14, 2013 and analyzed by TestAmerica Laboratories, Inc., North Canton OH for the analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260B for VOCs, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank/preparation results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol and vinyl acetate on instrument A3UX17 on 08/17/13. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 criteria for instrument A3UX17 on 08/20/13 @ 13:40, and on 08/21/13 @ 12:34.
  Affected Samples: All samples
  Action: The affected sample non-detected results for tert-butyl alcohol and vinyl acetate were qualified rejected, (UR).

Minor Problems

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

- The laboratory narrative noted that samples were received with bubbles >6mm in 3 of 3 sample vials for the samples listed below.

  Affected Samples:

DR-DPT-33-40	DR-DPT-33-45	DR-DPT-34-35
DR-DPT-34-40	DR-DPT-34-45.	

  Action: The affected sample positive and non-detected results were qualified estimated, (J) and (UJ), respectively, with the exception of the tert-butyl alcohol and vinyl acetate non-detected results which were rejected for RRF criteria non-compliances.

- The following laboratory VOC contaminants were detected in the method blanks and the trip blank sample at the maximum concentrations indicated below.

Analytes	Maximum Conc. µg/l	Action Level µg/l
Methylene chloride [1]	1.53	15.3
Benzene [1]	0.130	0.650

  [1] Method blank MB 240-98372/6 affecting samples DR-DPT-33-15 and DR-DPT-34-15.

  An action level of ten times the maximum level for methylene chloride and five times the maximum level for benzene has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive sample results less than the action level were qualified non-detected, (B), for blank contamination.

Notes

Samples were analyzed at dilutions for VOCs, as listed below, resulting in elevated levels for non-detected VOC analytes.

Sample	Dilution
DR-DPT-33-25	18.18X
DR-DPT-33-30	100X
DR-DPT-33-40	333.33X
DR-DPT-33-45	66.67X
DR-DPT-34-15	2500X
DR-DPT-34-35	500X
DR-DPT-34-40	833.33X
DR-DPT-34-45	40X

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for tert-butyl alcohol, vinyl acetate, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene for instrument A3UX17 on 08/20/13 @ 13:40.

Affected Samples:

DR-DPT-33-25	DR-DPT-33-30	DR-DPT-33-40
DR-DPT-33-45	DR-DPT-34-35	DR-DPT-34-40
DR-DPT-34-45		

Actions: The samples had non-detected results for 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene which were not qualified. The sample non-detected tert-butyl alcohol and vinyl acetate results were rejected for RRF criteria non-compliances and no further action was necessary.

The VOC CCV %Ds were greater than the 20% and less than the 50% quality control limit for bromomethane, chloroethane, tert-butyl alcohol, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene for instrument A3UX17 on 08/21/13 @ 12:34.

Affected Samples: DR-DPT-33-15 and DR-DPT-34-15

Actions: The samples had non-detected results for bromomethane, chloroethane, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene which were not qualified. The sample non-detected tert-butyl alcohol results were rejected for RRF criteria non-compliances and no further action was necessary.

The MS and MSD %Rs and the MS/MSD VOC analyte RPDs were non-compliant for many VOC analytes for spiked samples from another SDG (SDG samples 240-28014-B-3 and 240-28014-B-4). No validation action was taken as the samples were not from this SDG.

The Chain of Custody record indicated a vial was submitted to the laboratory for the trip blank TB-081413 but the laboratory stated that no vials were received for the trip blank. This item is noted for completeness.

The laboratory reported non-detected sample results to the Method Detection Limit (MDL).

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC tert-butyl alcohol and vinyl acetate non-detected sample results were rejected due to initial calibration average RRF and CCV RRF criteria non-compliances. VOC samples results were qualified for bubbles >6mm in the sample vials received by the laboratory. Sample VOC results were qualified for blank contamination.

Other Factors Affecting Data Quality: Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to EPA SW-846 Methods 8260B and the Region III EPA Functional Guidelines for Organic Data Validation (9/94).

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES

Samples processed by:

Did not receive TB-081413.

15. SAMPLE CONDITION

Sample(s) were received after the recommended holding time had expired.
Sample(s) were received in a broken container.
Sample(s) 3 @ each (DPT-34-35, 33-40, 34-40, 33-45, 34-45) were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) were further preserved in the laboratory.
Time preserved: Preservative(s) added/Lot number(s):

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-27964-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/15/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.4 C.

The following sample was listed on the Chain of Custody (COC); however, no sample volume was received: TB-081413

The following volatile samples were received with a bubble greater than 6mm in 3 of 3 sample vials: DR-DPT-33-40 (240-27964-6), DR-DPT-33-45 (240-27964-8), DR-DPT-34-35 (240-27964-5), DR-DPT-34-40 (240-27964-7), DR-DPT-34-45 (240-27964-9)

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-34-15 (240-27964-1), DR-DPT-33-15 (240-27964-2), DR-DPT-33-25 (240-27964-3), DR-DPT-33-30 (240-27964-4), DR-DPT-34-35 (240-27964-5), DR-DPT-33-40 (240-27964-6), DR-DPT-34-40 (240-27964-7), DR-DPT-33-45 (240-27964-8) and DR-DPT-34-45 (240-27964-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/20/2013 and 08/21/2013.

Methylene Chloride was detected in method blank MB 240-98372/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Benzene was detected in method blank MB 240-98372/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-34-15 (240-27964-1)[2500X], DR-DPT-33-25 (240-27964-3)[18.18X], DR-DPT-33-30 (240-27964-4)[100X], DR-DPT-34-35 (240-27964-5)[500X], DR-DPT-33-40 (240-27964-6)[333.33X], DR-DPT-34-40 (240-27964-7)[833.33X], DR-DPT-33-45 (240-27964-8)[66.67X] and DR-DPT-34-45 (240-27964-9)[40X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: Tetra Tech, Inc

Job Number: 240-27964-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Indicates an Estimated Value for TICs
	U	Indicates the analyte was analyzed for but not detected.
	F	MS or MSD exceeds the control limits
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	F	RPD of the MS and MSD exceeds the control limits
	N	This flag indicates the presumptive evidence of a compound.

Overview

The sample set for Lockheed MSA, SDG 240-28014-1, consists of twelve (12) aqueous environmental samples and one trip blank. This SDG contained two field duplicate pairs: DR-DPT-DUP01/DR-DPT-26-25 and DR-DPT-DUP02/DR-DPT-30-40.

All samples were analyzed for volatile organic compounds (VOCs). The samples were collected by Tetra Tech August 15th, 2013 and analyzed by TestAmerica. VOC analyses were conducted using method 8260B.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, internal standard recoveries, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on 8/17/13 on instrument A3UX17 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. All samples were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 8/20/13 at 13:40 on instrument A3UX17 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-26-20 and DR-DPT-DUP02 were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 8/21/13 at 12:34 on instrument A3UX17 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-26-25,

DR-DPT-26-30, DR-DPT-26-35, DR-DPT-26-40, DR-DPT-26-45, DR-DPT-30-20, DR-DPT-30-35, and TB-081513-240-28014-1 were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 8/22/13 at 14:38 on instrument A3UX17 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-30-30, DR-DPT-30-40, and DR-DPT-DUP01 were affected. Non-detected results were qualified as rejected (UR).

Minor Problems-

- The following contaminants were detected in method and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Benzene [1]	0.13 ug/L	0.65 ug/L
Methylene Chloride [1]	1.53 ug/L	15.3 ug/L
Methylene chloride [2]	2.27 ug/L	22.7 ug/L

[1] Maximum concentration found in a preparation blank affecting samples in 240-98372.
[2] Maximum concentration found in a preparation blank affecting samples in 240-98511.

An action level of 5X and 10X (methylene chloride only) the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level were qualified (B) for blank contamination.

- The continuing calibration standard analyzed on 8/21/13 at 12:34 on instrument A3UX17 had a percent difference > 20% but less than 50% for bromomethane, chloroethane, tert butyl-alcohol, 1,2-dibromo-3-chloropropane,1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene. Samples DR-DPT-26-25, DR-DPT-26-30, DR-DPT-26-35, DR-DPT-26-40, DR-DPT-26-45, DR-DPT-30-20, DR-DPT-30-35, and TB-081513-240-28014-1 were affected. The detected 1,2,4-trichlorobenzene for sample DR-DPT-26-35 was qualified as estimated (J). Non-detected results were not qualified as %D< 50%.

- The matrix spike and matrix spike duplicate for preparation batch 240-98511 sample DR-DPT-30-30 had 0% percent recoveries for 2-chloroethyl vinyl ether.. Non-detect 2-chloroethyl vinyl ether results were rejected (UR) for sample DR-DPT-30-30.

Notes

The continuing calibration standard analyzed on 8/20/13 at 13:40 on instrument A3UX17 had a percent difference > 20% but less than 50% for tert butyl-alcohol, vinyl acetate, 1,2-dibromo-3-chloropropane,1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and 1,2,3-trichlorobenzene. Samples DR-DPT-26-20 and DR-DPT-DUP02 were affected. Non-detected results were not qualified as %D< 50%.

The continuing calibration standard analyzed on 8/22/13 at 14:38 on instrument A3UX17 had a percent difference > 20% but less than 50% for bromomethane, chloroethane, methylene chloride, tert butyl-alcohol, 1,2-dibromo-3-chloropropane,1,2,4-trichlorobenzene, hexachlorobutadiene, naphthalene, and

1,2,3-trichlorobenzene. Samples DR-DPT-30-30, DR-DPT-30-40, and DR-DPT-DUP01 were affected. Non-detected results were not qualified as %D< 50%.

The matrix spike and matrix spike duplicate for preparation batch 240-98372 (DR-DPT-26-25) had a percent recovery less than the lower QC limit for tert-butyl alcohol. No validation action was warranted as the sample result was previously rejected for calibration non-compliances.
Non-detected results were reported at the MDL.

Tentatively Identified Compounds (TICs) were also analyzed for VOC analyses.

Compound chlorodibromomethane was listed in the lab data as dibromochloromethane.

Samples DR-DPT-26-40 and DR-DPT-26-35 were not listed on the COC but were included in the coolers. The collection date and times were taken from the containers.

The matrix spike and matrix spike duplicate for preparation batch 98201(sample DR-DPT-26-20) had percent recoveries less than the lower quality control limit for a majority of the compound in the VOC list. No validation action was taken as the sample and subsequent MS/MSD were analyzed at a 500X dilution. The spike solution was added to the MS/MSD prior to dilution.

The following samples were analyzed at the following dilutions for all VOCs:

Sample ID	Dilution Factor
DR-DPT-26-20	500X
DR-DPT-26-25	714.28X
DR-DPT-26-30	714.28X
DR-DPT-26-35	50X
DR-DPT-26-40	16.67X
DR-DPT-26-45	4X
DR-DPT-30-20	2.86X
DR-DPT-30-30	40X
DR-DPT-30-35	28.57X
DR-DPT-30-40	7.69X
DR-DPT-DUP01	833.33X
DR-DPT-DUP02	6.67X

Executive Summary

Laboratory Performance: Preparation blank contamination for benzene and methylene chloride resulted in the qualification of sample results. Initial and continuing calibration RRF non-compliances resulted in the rejection of tert-butyl alcohol and vinyl acetate results. Continuing calibration %D non-compliances for 1,2,4-trichlorobenzene for sample DR-DPT-26-35 resulted in the qualification of sample results.

Other Factors Affecting Data Quality: MS/MSD non-compliances for 2-chloroethyl vinyl ether resulted in the rejection of results for sample DR-DPT-30-30.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-28014-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/16/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.2 C.

The laboratory received the following samples that are not listed on the chain of custody: DR-DPT-26-40 collected on 8/15/13 at time 1505 and DR-DPT-26-35 collected on 8/15/13 at time 1450. The laboratory will log the samples for VOCs.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-DUP01 (240-28014-1), DR-DPT-DUP02 (240-28014-2), DR-DPT-26-20 (240-28014-3), DR-DPT-26-25 (240-28014-4), DR-DPT-26-30 (240-28014-5), DR-DPT-30-20 (240-28014-6), DR-DPT-30-30 (240-28014-7), DR-DPT-30-35 (240-28014-8), DR-DPT-30-40 (240-28014-9), DR-DPT-26-45 (240-28014-10), TB-081513 (240-28014-11), DR-DPT-26-40 (240-28014-12) and DR-DPT-26-35 (240-28014-13) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/20/2013, 08/21/2013 and 08/22/2013.

Methylene Chloride was detected in method blank MB 240-98372/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Benzene was detected in method blank MB 240-98372/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank MB 240-98511/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-DUP01 (240-28014-1)[833.33X], DR-DPT-DUP02 (240-28014-2)[6.67X], DR-DPT-26-20 (240-28014-3)[500X], DR-DPT-26-25 (240-28014-4)[714.28X], DR-DPT-26-30 (240-28014-5)[714.28X], DR-DPT-30-20 (240-28014-6)[2.86X], DR-DPT-30-30 (240-28014-7)[40X], DR-DPT-30-35 (240-28014-8)[28.57X], DR-DPT-30-40 (240-28014-9)[7.69X], DR-DPT-26-45 (240-28014-10)[4X], DR-DPT-26-40 (240-28014-12)[16.67X] and DR-DPT-26-35 (240-28014-13)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

FORM IV
GC/MS VOA METHOD BLANK SUMMARY

Lab Name: TestAmerica Canton Job No.: 240-28014-1

SDG No.:

Lab File ID: UXR7075.D Lab Sample ID: MB 240-98201/6

Matrix: Water Heated Purge:(Y/N) N

Instrument ID: A3UX17 Date Analyzed: 08/20/2013 15:10

GC Column: DB-624 ID: 0.18(mm)

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES:

CLIENT SAMPLE ID	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED
	LCS 240-98201/4	UXR7073.D	08/20/2013 14:25
DR-DPT-DUP02	240-28014-2	UXR7095.D	08/20/2013 22:45
DR-DPT-26-20	240-28014-3	UXR7096.D	08/20/2013 23:07
