Overview

The sample set for Lockheed MSA, SDG 240-28098-1, consists of thirteen (13) aqueous environmental samples and one trip blank. This SDG contained two field duplicate pairs: DR-DPT-DUP03/DR-DPT-36-10 and DR-DPT-DUP04/DR-DPT-36-45.

All samples were analyzed for volatile organic compounds (VOCs). The samples were collected by Tetra Tech August 16, 2013 and analyzed by TestAmerica. VOC analyses were conducted using method 8260B.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, internal standard recoveries, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on 7/2/13 on instrument A3UX10 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-26-48, DR-DPT-32-30, DR-DPT-32-35, DR-DPT-32-45, DR-DPT-36-10, DR-DPT-36-30, DR-DPT-36-35, DR-DPT-36-40, DR-DPT-36-45, DR-DPT-DUP03, DR-DPT-DUP04, and TB-081613 were affected. Detected results were qualified as estimated (J). Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 8/27/13 at 00:19 on instrument A3UX10 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-26-48, DR-DPT-32-30, DR-DPT-32-35, DR-DPT-36-10, DR-DPT-36-35, DR-DPT-36-40, DR-DPT-36-45, DR-DPT-DUP03, DR-DPT-DUP04, and TB-081613 were affected. Detected results were qualified as estimated (J). Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 8/27/13 at 13:03 on instrument A3UX10 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-32-45 and DR-DPT-36-30 were affected. The non-detected results were qualified as rejected (UR).

- The initial calibration analyzed on 8/17/13 on instrument A3UX17 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-32-40 and DR-DPT-32-50 were affected. The non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 8/29/13 on instrument A3UX17 had a relative response factor (RRF) <0.05 for tertiary butyl alcohol and vinyl acetate. Samples DR-DPT-32-40 and DR-DPT-32-50 were affected. The non-detected results were qualified as rejected (UR).

- TICs trimethyl-silanol and tert-butyldimethylsilanol were rejected (R) because silanol is used in operation of the instrumentation.

Minor Problems-

- The following contaminants were detected in method and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Acetone (1)	3.8 ug/L	38 ug/L
Toluene (2)	0.29 ug/L	1.45 ug/L
Toluene (3)	0.34 ug/L	1.7 ug/L
Toluene (4)	0.4 ug/L	2.0 ug/L

(1) Maximum concentration found in a trip blank.
(2) Maximum concentration found in a preparation blank affecting samples in 240-99030.
(3) Maximum concentration found in a preparation blank affecting samples in 240-99157.
(4) Maximum concentration found in a preparation blank affecting samples in 240-99545.

An action level of 5X and 10X (Acetone only) the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level were qualified (B) for blank contamination.

- The continuing calibration standard analyzed on 8/27/13 at 00:19 on instrument A3UX10 had a percent difference > 20% but less than 50% for bromomethane, chloroethane, acetone, tert butyl-alcohol, vinyl acetate, 2,2-dichloropropane, 1,1,1-trichloroethane, carbon tertrachloride, bromodichloromethane, 4-methyl-2-pentanone, trans-1,3-dichloropropene, 1,1,1,2-trichloroethane, dibromochloromethane, bromoform, 1,2-dibromo-3-chloropropane, hexachlorobutadiene, and dichlorofluoromethane. Samples DR-DPT-26-48, DR-DPT-32-30, DR-DPT-32-35, DR-DPT-36-10, DR-DPT-36-35, DR-DPT-36-40, DR-DPT-36-45, DR-DPT-DUP03, DR-DPT-DUP04, and TB-081613 were affected. Positive chloroethane and carbon tetrachloride results were qualified as estimated (J). Non-detected results were not qualified as %D< 50%.

- The continuing calibration standard analyzed on 8/27/13 at 13:03 on instrument A3UX10 had a percent difference > 20% but less than 50% for chloroethane, tert butyl-alcohol, vinyl acetate, 2,2-dichloropropane, 1,1,1-trichloroethane, carbon tertrachloride, trans-1,3-dichloropropene,

dibromochloromethane, 1,1,1,2-trichloroethane, bromoform, 1,2-dibromo-3-chloropropane and a percent recovery > 50% for dichlorofluoromethane. Samples DR-DPT-32-45 and DR-DPT-36-30 were affected. The detected chloroethane result for sample DR-DPT-32-45 was qualified as estimated (J). Non-detected dichlorofluoromethane results were qualified as estimated (UJ). All other non-detected results were not qualified as %D< 50%.

- The laboratory control spike for preparation batch 240-99030 had a percent recovery greater than the upper control limit for tert-butyl alcohol and a percent recovery less than the lower limit for dibromochloromethane. Samples DR-DPT-26-48, DR-DPT-32-30, DR-DPT-32-35, DR-DPT-36-10, DR-DPT-36-35, DR-DPT-36-40, DR-DPT-36-45, DR-DPT-DUP03, DR-DPT-DUP04, and TB-081613 were affected. Detected ter-butyl alcohol results were qualified as estimated (J) and non-detected dibromochloromethane results were qualified as biased low (UL). No validation action was taken for non-detect tert-butyl alcohol as sample results were rejected for calibration non-compliances.

- The laboratory control spike for preparation batch 240-99157 had a percent recovery greater than the upper control limit for 1,1,1,2-tetrachloroethane, carbon tetrachloride, trans-1,3-dichloropropene, dibromochloromethane, and a percent recovery less than the lower control limit for tert-butyl alcohol. Samples DR-DPT-32-45 and DR-DPT-36-30 were affected. The detected carbon tetrachloride result for sample DR-DPT-32-45 was qualified as estimated (J). No validation action was warranted for 1,1,1,2-tetrachloroethane dibromochloromethane. and trans-1,3-dichloropropene as sample results were non-detected. No validation action was taken for tert-butyl alcohol as sample results were rejected for calibration non-compliances.

Notes

Non-detected results were reported at the MDL.

Tentatively Identified Compounds (TICs) were also analyzed for VOC analyses.

Compound chlorodibromomethane was listed in the lab data as dibromochloromethane.

No batch QC were analyzed on samples in this SDG.

Sample DR-DPT-26-48 was not listed on the original COC but want included in the cooler. Collect date and time were taken from the bottle.

The following samples were analyzed at the following dilutions for all VOCs:

Sample ID	Dilution Factor
DR-DPT-26-48	5X
DR-DPT-32-40	3.33X
DR-DPT-32-45	3.33X
DR-DPT-32-50	4X
DR-DPT-36-30	1.54X

The continuing calibration standard analyzed on 8/29/13 on instrument A3UX17 had a percent difference > 20% but these than 50% for tert butyl-alcohol, n-butylbenzene, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzne, hexachlorobutadiene, naphthalene, 1,2,3-trichlorobenzene, and dichlorofluoromethane. Samples DR-DPT-32-40 and DR-DPT-32-50 were affected. No validation action was taken as sample results were non-detected.

Executive Summary

Laboratory Performance: Preparation blank contamination for acetone and toluene resulted in the qualification of sample results. Initial and continuing calibration RRF non-compliances resulted in the rejection of non-detect tert-butyl alcohol and vinyl acetate results. Continuing calibration %D non-compliances for chloroethane, chlorodibromomethane, and carbon tetrachloride resulted in the qualification of sample results. LCS non-compliances for dibromochloromethane, carbon tetrachloride, and tert-butyl alcohol resulted in the qualification of sample results.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix C – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A	=	Lab Blank Contamination
B	=	Field Blank Contamination
C	=	Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01	=	GC/MS Tuning Noncompliance
D	=	MS/MSD Recovery Noncompliance
E	=	LCS/LCSD Recovery Noncompliance
F	=	Lab Duplicate Imprecision
G	=	Field Duplicate Imprecision
H	=	Holding Time Exceedance
I	=	ICP Serial Dilution Noncompliance
J	=	ICP PDS Recovery Noncompliance; MSA's r < 0.995
K	=	ICP Interference - includes ICS % R Noncompliance
L	=	Instrument Calibration Range Exceedance
M	=	Sample Preservation Noncompliance
N	=	Internal Standard Noncompliance
N01	=	Internal Standard Recovery Noncompliance Dioxins
N02	=	Recovery Standard Noncompliance Dioxins
N03	=	Clean-up Standard Noncompliance Dioxins
O	=	Poor Instrument Performance (i.e., base-time drifting)
P	=	Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q	=	Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R	=	Surrogates Recovery Noncompliance
S	=	Pesticide/PCB Resolution
T	=	% Breakdown Noncompliance for DDT and Endrin
U	=	RPD between columns/detectors >40% for positive results determined via GC/HPLC
V	=	Non-linear calibrations; correlation coefficient r < 0.995
W	=	EMPC result
X	=	Signal to noise response drop
Y	=	Percent solids <30%
Z	=	Uncertainty at 2 sigma deviation is less than sample activity
Z1	=	Tentatively Identified Compound considered presumptively present
Z2	=	Tentatively Identified Compound column bleed

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: DUMP ROAD SOURCE AREAS

Report Number: 240-28098-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/17/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.4 C.

The original chain of custody and cooler receipt form were misfiled and can not be located. Another cooler receipt form was created with the information that was on hand that is of certainty. The cooler temperature was taken from the copy of the chain of custody that is given to the project manager after the cooler is triaged. The temperature of the cooler(s) is taken during the triage process and written on the chain of custody before a copy is made to give to the project manager.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-DUP03 (240-28098-1), DR-DPT-DUP04 (240-28098-2), DR-DPT-32-30 (240-28098-3), DR-DPT-32-35 (240-28098-4), DR-DPT-32-40 (240-28098-5), DR-DPT-32-45 (240-28098-6), DR-DPT-32-50 (240-28098-7), DR-DPT-36-10 (240-28098-8), DR-DPT-36-30 (240-28098-9), DR-DPT-36-35 (240-28098-10), DR-DPT-36-40 (240-28098-11), TB-081613 (240-28098-12), DR-DPT-36-45 (240-28098-13) and DR-DPT-26-48 (240-28098-14) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/27/2013 and 08/29/2013.

Toluene was detected in method blank MB 240-99030/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Toluene was detected in method blank MB 240-99157/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Toluene was detected in method blank MB 240-99545/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-32-40 (240-28098-5)[3.33X], DR-DPT-32-45 (240-28098-6)[3.33X], DR-DPT-32-50 (240-28098-7)[4X], DR-DPT-36-30 (240-28098-9)[1.54X] and DR-DPT-26-48 (240-28098-14)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 99030 recovered outside control limits for the following analytes: Chlorodibromomethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

The laboratory control sample (LCS) for batch 99030 recovered outside control limits for the following analyte(s): 2-Methyl-2-propanol--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

The laboratory control sample (LCS) for batch 99157 recovered outside control limits for multiple analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 99157 recovered outside control limits for the following analyte(s): 2-Methyl-2-propanol--has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

Subject: RE: MSA DUMP ROAD SDG 240-28098-1

Hi Megan,

We could not find the original COC that was shipped from the site/field to the lab. We had two people looking for the original COC and Cooler Receipt Form for two days and they could not locate it. We had to use the COC that our receiving department copies when they open the coolers after they are dropped off from Fed Ex. Our receiving department takes the cooler temperature and writes the cooler temperature on the COC before they copy it. The copy of the original COCs then goes to the respective PM so they know what jobs they have in house that day. I still had the copy of the COCs so we knew that the samples arrived in good temp. Sample DR-DPT-26-48 was received at the lab but not listed on the COCs that we had. At the bottom of the 2nd COC in the data package you can see where I hand wrote the sample ID and date and time of the sample. Our receiving department called me about the sample and I wrote it at the bottom. Since we don't have the original paperwork we can not say with 100% accuracy that the sample was not listed on the COC since we can not find the original paperwork. There may have been a third COC that was in the cooler and not copied at the time of receipt.

Thanks,
John

Subject: MSA DUMP ROAD SDG 240-28098-1

HI John,
I have a question regarding the COC for this project. The Sample Receipt Form/Narrative states that "Original COC + CRF misfiled.". What does that mean? Was it lost? The COC supplied in the data package was missing sample DR-DPT-26-48, was this oversight or do you have more information on this?
Thanks!
Megan

Subject: RE: MSA Dump Road, SDG 240-28098-1

Hi Megan,
Our MS Supervisor looked into the issue. He did say we do see this happen sometimes when TICs are requested.
As a quantitated compound based on the area of the quantitation ion for that compound, the methylene chloride result was less than the MDL therefore reported as a non detect. As a TIC the total area of the methylene chloride peak was greater than the threshold for a TIC, therefore had an estimated result. Since the quantitated result is more accurate than the TIC estimated result, the quantitated result of non detect should be used.
Thanks,
John

Subject: MSA Dump Road, SDG 240-28098-1

Hi John,
I had a question regarding sample DR-DPT-32-45 (240-28098-6) in SDG 240-28098-1. Methylene chloride is listed as a TIC but is included in our target compound list as non-detected. Why is this? If it a positive methylene chloride result please include it on an updated form 1.
Thanks
Megan

FORM VIII 8260B

Tetra Tech, Inc. **INTERNAL CORRESPONDENCE**

TO: **A. APANAVAGE** **DATE:** **SEPTEMBER 26, 2013**

FROM: **MICHELLE L. ALLEN** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MARTIN CORPORATION (LMC) – MARTIN STATE AIRPORT (MSA)
DUMP ROAD SOURCE AREAS
SDG 240-28121-1

SAMPLES: 3/Aqueous/VOC

DR-DPT-31-25 DR-DPT-36-50 TB-081913

Overview

The sample set for LMC-MSA Dump Road source areas, SDG 240-28121-1 consisted of two (2) aqueous environmental samples and one (1) trip blank. Three (3) aqueous samples were analyzed for volatile organic compounds (VOC). No field duplicate sample pair was included in this SDG.

The samples were collected by Tetra Tech, Inc. on August 19, 2013 and analyzed by TestAmerica, Inc. All analyses were conducted in accordance with SW-846 Method 8260C analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blanks, trip blank results, surrogate spike recoveries, blank spike results, matrix spike/matrix spike duplicate results, internal standard areas and recoveries, chromatographic resolution, compound identification, tentatively identified compounds, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial and continuing calibrations performed on instrument A3UX10 had Relative Response Factors (RRFs) for tert-butyl alcohol and vinyl acetate below the 0.050 minimum response criterion. All samples were affected. The non-detected results reported for these compounds in the affected samples were qualified as rejected, (UR).

Minor

- The following contaminants were detected in the laboratory method and trip blanks at the following maximum concentrations:

Compound	Maximum Concentration (µg/L)	Action Level (µg/L)
Methylene Chloride [1]	0.342	3.42
Toluene [1]	0.222	1.11
Acetone [2]	1.9 µg/L	19

[1] Maximum concentration detected in the laboratory method blank, MB240-98707/6, affecting the environmental samples.
[2] Maximum concentration detected in the trip blank, TB -081913.

An action level of 10X the maximum concentration for the common laboratory contaminants, acetone and methylene chloride, and an action level of 5X the maximum concentration for toluene were used to evaluate for blank contamination. Sample aliquot and dilution factor, if applicable, were taken into consideration when evaluating for blank contamination. The detected results for the compounds below the established action levels were qualified as non-detected, (B).

- Tetrahydrofuran was detected as a Tentatively Identified Compound (TIC) in sample DR-DPT-36-50. The GCMS instrument was calibrated for this compound. The result for tetrahydrofuran was qualified as estimated, (J).

- Detected results reported below the Reporting Limit (RL) limit but above the Method Detection Limit (MDL) were qualified as estimated, (J).

Notes

The VOC continuing calibration performed on 08/23/13 @ 12:56 had Percent Differences (%Ds) which exceeded the 20% quality control limit but were less than 50% for bromomethane, chloroethane, tert-butyl alcohol, carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, 1,1,1,2-tetrachloroethane, bromoform, 1,2-dibromo-3-chloropropane, and 1,2,3-trimethylbenzene. All samples were affected. No validation action was necessary because no detected results were reported for these compounds in the affected samples.

The blank spike analysis had Percent Recoveries (%Rs) for 1,1,1,2-tetrachloroethane, carbon tetrachloride, trans-1,3-dichloropropene, and dibromochloromethane above the upper quality control limits. No action was taken because the results for these compounds in the affected samples were non-detects.

The Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses had %Rs outside quality control limits. No action was taken because the parent sample was not a sample of interest.

The following samples were diluted prior to analysis in the fraction below:

Sample	Dilution
DR-DPT-31-25	66.7X
DR-DPT-36-50	6.67X

The RLs of the non-detected results were elevated.

Non-detected results were reported to the MDL.

Executive Summary

Laboratory Performance: Initial and continuing calibration RRFs for tert-butyl alcohol and vinyl acetate were below the quality control criterion resulting in the rejection of the non-detected results. VOC continuing calibration %Ds exceeded 20% but were less than 50%. Contaminants were detected in the laboratory method blank. Several blank spike %Rs were high.

Other Factors Affecting Data Quality: The environmental samples were diluted. Contaminants were detected in the trip blank. One TIC was detected. Results below the RL were estimated.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994) and SW-846 Method 8260C analytical and reporting protocols. The text of this report has been formulated to address only those areas affecting data quality.

Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

Sample(s) _____ were further preserved in the laboratory.

Time preserved: _____ Preservative(s) added/Lot number(s): _____

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-28121-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/20/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 1.4 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-36-50 (240-28121-1), DR-DPT-31-25 (240-28121-2) and TB-081913 (240-28121-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/23/2013.

Methylene Chloride and Toluene were detected in method blank MB 240-98707/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

1,1,1,2-Tetrachloroethane, Carbon tetrachloride, Dibromochloromethane and trans-1,3-Dichloropropene failed the recovery criteria high for LCS 240-98707/4.

Samples DR-DPT-36-50 (240-28121-1)[6.67X] and DR-DPT-31-25 (240-28121-2)[66.67X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 98707 recovered outside control limits for the multiple analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SAMPLE SUMMARY

TB-082013			

Overview

The sample set for MSA Dump Road Source Areas, SDG 240-28158-1 consisted of eight (8) aqueous environmental samples and a trip blank analyzed for volatile organic compounds (VOCs). There is one field duplicate pair included in this SDG: DUP05 and DR-DPT-43B-15.

The samples were collected on August 20, 2013 and analyzed by Test America Laboratories Inc. All analyses were conducted in accordance with SW-846 Methods 8260B for VOCs analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method /preparation blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate, internal standard recoveries, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial calibration relative response factors (RRFs) for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on August 22, 2013 for instrument A3UX15 and the continuing calibration on August 27, 2013 @ 11:48. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples.

- The initial calibration RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on August 16, 2013 for instrument A3UX11 and the continuing calibration on August 28, 2013 @ 11:16. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples. The continuing calibration RRF for tert-butyl alcohol was less than the 0.05 quality control limit on August 29, 2013 @ 11:07 affecting sample DR-DPT-43B-20.

- The tentatively identified compound (TIC), containing silanol, were qualified as rejected. This compound is indicative of column bleed.

Minor

- Contamination was detected in the VOC laboratory method blank associated with batch 240-99104/5 analyzed on August 27, 2013 on instrument A3UX15.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Toluene	0.294	1.47

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were applied. The detected toluene results in samples DR-DPT-31-30, DR-DPT-31-35, DR-DPT-31-40 and DR-DPT-31-45 were qualified as (B).

- Contamination was detected in the VOC laboratory method blank associated with batch 240-99528/5 analyzed on August 29, 2013 on instrument A3UX11 affecting sample DR-DPT-43B-20.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Toluene	0.393	1.965

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were applied. The detected toluene result in sample DR-DPT-43B-20 was qualified as (B).

- Several TICs were detected and qualified as presumptively present (NJ) in several samples.

- Field duplicate imprecision was noted in the field duplicate pair DUP05 and DR-DPT-43B-15. The relative percent difference (RPD) was greater than the 30% quality control limit for ethylbenzene and trichloroethene. The detected ethylbenzene and trichloroethene results were qualified as estimated (J) in samples DUP05 and DR-DPT-43B-15.

- Positive results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

Notes

Sample DUP05 is not listed on the chain of custody.

The continuing calibration percent differences (%Ds) for bromomethane, trichlorofluoromethane and tert-butyl alcohol were greater than 20% and less than 50% on August 27, 2013 @ 11:48 on instrument A3UX15. No action was taken on the nondetected bromomethane, trichlorofluoromethane and tert-butyl alcohol results in the affected sample DR-DPT-31-30, DR-DPT-31-35, DR-DPT-31-40 and DR-DPT-31-45.

The laboratory control sample (LCS) percent recovery (%R) for tert-butyl alcohol was greater than the upper quality control limit in batch 240-99104/4. No action was taken on the nondetected tert-butyl results which were qualified as rejected due to a more severe noncompliance.

The LCS %Rs of bromoform and dibromochloromethane were greater than the upper quality control limit in batch 240-99295/4. No action was taken on the nondetected bromoform and dibromochloromethane results in the affected samples.

The LCS %Rs of bromoform, o-xylene and dibromochloromethane were greater than the upper quality control limit in batch 240-99528/4. No action was taken on the nondetected bromoform, o-xylene and dibromochloromethane results in the affected sample DR-DPT-43B-20.

The matrix spike/ matrix spike duplicate (MS/MSD) %Rs of several compounds were outside quality control limits in sample 240-28198-1. This sample is not included in this SDG. No action taken.

Nondetected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC RRFs for tert-butyl alcohol and vinyl acetate were less than the quality control limit resulting in the rejection of nondetected results. Toluene was detected in several laboratory method blanks.

Other Factors Affecting Data Quality: TICs were detected in several samples. Field duplicate imprecision was noted in the field duplicate pair DUP05 and DR-DPT-43B-15. Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-28158-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/21/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.4 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-31-30 (240-28158-1), DR-DPT-31-35 (240-28158-2), DR-DPT-31-40 (240-28158-3), DR-DPT-31-45 (240-28158-4), DR-DPT-43B-10 (240-28158-5), DR-DPT-43B-15 (240-28158-6), DR-DPT-43B-20 (240-28158-7), TB-082013 (240-28158-8) and DUP05 (240-28158-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/27/2013, 08/28/2013 and 08/29/2013.

Toluene was detected in method blank MB 240-99104/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-31-30 (240-28158-1)[2.5X], DR-DPT-43B-15 (240-28158-6)[1000X], DR-DPT-43B-20 (240-28158-7)[1000X] and DUP05 (240-28158-9)[1000X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 99104 recovered outside control limits for the following analyte(s): 2-Methyl-2-propanol. This analyte has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

The laboratory control sample (LCS) for batch 99295 recovered outside control limits for the following analytes: Chlorodibromomethane, Bromoform. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 23000 recovered outside control limits for the following analytes: o-xylene, Chlorodibromomethane, Bromoform. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No MS/MSD in batch 99104 due to an instrument failure.

The MSD for batch 99295 is out of the 12 hour tune time limit by 8 minutes but is still being reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

9. Sufficient quantity received to perform indicated analyses?	(Yes) No	
10. Were sample(s) at the correct pH upon receipt?	Yes No (NA)	pH Strip Lot# HC376062
11. Were VOAs on the COC?	(Yes) No	
12. Were air bubbles >6 mm in any VOA vials?	(Yes) No	NA
13. Was a trip blank present in the cooler(s)?	(Yes) No	

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other

Concerning _____

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES Samples processed by: [signature]

DR-DPT-DUP05 RECEIVED BUT NOT ON COC

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.

Sample(s) _____ were received in a broken container.

Sample(s) DR-DPT 31-45 1X40ml were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in the laboratory.

Time preserved: _____ Preservative(s) added/Lot number(s): _____

SAMPLE SUMMARY

Client: Tetra Tech, Inc

MSA DUMP ROAD SOURCE AREAS
SAMPLE DELIVERY GROUP (SDG) 240-28193-1

SAMPLES: 8/Aqueous/VOC

DR-DPT-43-25	DR-DPT-43-30	DR-DPT-43-35	DR-DPT-43-40
DR-DPT-70-10	DR-DPT-70-15	DR-DPT-DUP06	TB-082113

Overview

The sample set for MSA Dump Road Source Areas, SDG 240-28193-1 consisted of seven (7) aqueous environmental samples and a trip blank analyzed for volatile organic compounds (VOCs). There is one field duplicate pair included in this SDG: DR-DPT-DUP06 and DR-DPT-70-15.

The samples were collected on August 21, 2013 and analyzed by Test America Laboratories Inc. All analyses were conducted in accordance with SW-846 Methods 8260B for VOCs analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method /preparation blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate, internal standard recoveries, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The initial calibration RRFs for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on August 16, 2013 for instrument A3UX11. The RRF for tert-butyl alcohol was less than the 0.05 quality control limit in the continuing calibration on August 26, 2013 @ 12:26. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples.

- The initial calibration relative response factors (RRFs) for tert-butyl alcohol and vinyl acetate were less than the 0.05 quality control limit on August 22, 2013 for instrument A3UX15 and the continuing calibration on August 25, 2013 @ 7:49. The nondetected tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR) in the affected samples.

- The tentatively identified compounds (TICs), containing silanol, were qualified as rejected (R). This compound is indicative of column bleed.

Minor

- Contamination was detected in the VOC laboratory method blank associated with batch 240-98906/5 analyzed on August 26, 2013 on instrument A3UX11.

Contaminant	Maximum Concentration (ug/L)	Action Level (ug/L)
Toluene	0.342	1.71

  An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were applied. The detected toluene results in sample DR-DPT-43-35 was qualified as (B).

- Several TICs were detected and qualified as presumptively present (NJ) in several samples.

- Field duplicate imprecision was noted in the field duplicate pair DR-DPT-DUP06 and DR-DPT-70-15. The relative percent difference (RPD) was greater than the 30% quality control limit for trichloroethene. The detected trichloroethene results were qualified as estimated (J) in samples DR-DPT-DUP06 and DR-DPT-70-15.

- Positive results reported below the quantitation limit but above the method detection limit (MDL) were qualified as estimated, (J).

- Methylene chloride was detected in sample DR-DPT-43-35 at a high concentration but this concentration is attributed to the sample dilution (the sample was diluted 20,000 times). In the opinion of the data reviewer, the high concentration is not accurate and the concentration is qualified as estimated (J) despite the absence of methylene chloride in the associated method blank.

Notes

All samples were analyzed at dilutions except for samples DR-DPT-70-10 and TB-082113. Elevated nondetected results are reported in all samples that were diluted.

The continuing calibration percent differences (%Ds) for dichlorodifluoromethane, tert-butyl alcohol, bromoform and 1,2-dibromo-3-chloropropane were greater than 20% and less than 50% on August 26, 2013 @ 12:26 on instrument A3UX11. No action was taken on the nondetected dichlorodifluoromethane, tert-butyl alcohol, bromoform and 1,2-dibromo-3-chloropropane results in the affected samples.

The continuing calibration %Ds for trichlorofluoromethane, n-propylbenzene and ethyl acetate were greater than 20% and less than 50% on August 25, 2013 @ 7:49 and 8:14 on instrument A3UX15. No action was taken on the nondetected trichlorofluoromethane, n-propylbenzene and ethyl acetate results in the affected samples.

The matrix spike/ matrix spike duplicate (MS/MSD) %Rs of several compounds were outside quality control limits in samples 240-27932-10 and 240-28018-7. These samples are not included in this SDG. No action was taken.

As noted in the case narrative, samples DR-DPT-43-30 and DR-DPT-43-35 were not properly preserved to a pH of 2 or below. The samples were analyzed within seven days. No action was taken on the sample results.

Nondetected results were reported to the MDL.

Executive Summary

Laboratory Performance: The VOC RRFs for tert-butyl alcohol and vinyl acetate were less than the quality control limit resulting in the rejection of nondetected results. Toluene was detected in a laboratory method blank.

Other Factors Affecting Data Quality: TICs were detected in several samples. Field duplicate imprecision was noted in the field duplicate pair DR-DPT-DUP06 and DR-DPT-70-15. Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated, (J).

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-28193-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/22/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.3 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-43-25 (240-28193-1), DR-DPT-43-30 (240-28193-2), DR-DPT-43-35 (240-28193-3), DR-DPT-43-40 (240-28193-4), DR-DPT-70-10 (240-28193-5), DR-DPT-70-15 (240-28193-6), DR-DPT-DUP06 (240-28193-7)and TB-082113 (240-28193-8) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/25/2013 and 08/26/2013.

Toluene was detected in method blank MB 240-98906/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples DR-DPT-43-25 (240-28193-1)[100X], DR-DPT-43-30 (240-28193-2)[250X], DR-DPT-43-35 (240-28193-3)[20000X], DR-DPT-43-40 (240-28193-4)[2500X], DR-DPT-70-15 (240-28193-6)[5X] and DR-DPT-DUP06 (240-28193-7)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) submitted for volatiles analysis was received with insufficient preservation (pH >2): DR-DPT-43-30 (240-28193-2) and DR-DPT-43-35 (240-28193-3).

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SUBJECT: **ORGANIC DATA VALIDATION – VOC**
LOCKHEED MARTIN – MARTIN STATE AIRPORT (MSA) – DUMP ROAD SOURCE AREAS
SDG 240-28270-1

SAMPLES: 2/Aqueous/VOC

DR-DPT-70-20 TB-082213

Overview

The sample set for Lockheed Martin – MSA Dump Road Source Areas, SDG 240-28270-1 consists of one (1) aqueous environmental sample and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOCs).

The samples were collected by Tetra Tech on August 22, 2013 and analyzed by Test America (North Canton). All analyses were conducted in accordance with SW-846 Method 8260B analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

Major

- The VOC initial calibration and associated continuing calibration relative response factors (RRFs) were less than the 0.05 quality control limit for tert-butyl alcohol and vinyl acetate on instrument A3UX11. The non-detected results reported for tert-butyl alcohol and vinyl acetate were rejected (UR).

- Tentatively identified compounds (TICs) which are attributed to column bleed (silanol compounds), were qualified as rejected (UR).

Minor

- Positive results less than the reporting limit (RL) were qualified as estimated, (J), due to uncertainty near the detection limit.

- Non-target compounds, reported by the laboratory as TICs, were qualified as presumptively present, (NJ).

Notes

The VOC continuing calibration percent differences (%Ds) were greater than the quality control limit of 20%

and less than 50% for chloromethane, 1,1,2-trichlorotrifluoroethane, bromoform, and 1,2-dibromo-3-chloropropane, for instrument A3UX11 on 08/28/13 @ 11:16. No action was taken on the nondetected results for the aforementioned compounds in the affected samples.

The laboratory control sample (LCS) associated with batch 99295/4 had percent recoveries greater than the quality control limit for bromoform and chlorodibromomethane. No action was taken on this basis because the affected sample results were nondetected for the aforementioned compounds.

Executive Summary

Laboratory Performance: Two VOC compounds had RRF noncompliances resulting in the rejection of data.
Other Factors Affecting Data Quality: Positive results less than the reporting limit (RL) were qualified due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = RPD between columns/detectors >40% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate

TestAmerica

THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 240-28270-1

Job Description: Dump Road Source Area

For:
Tetra Tech, Inc
20251 Century Blvd
Suite 200
Germantown, MD 20874

Attention: Tony Apanavage

Approved for release.
John McFadden
Project Manager I
8/30/2013 1:40 PM

John McFadden, Project Manager I
4101 Shuffel Street NW, North Canton, OH, 44720

Tobrena Sedlmyer

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-28270-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available Any exceptions to NELAP requirements are noted in this report Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client

RECEIPT

The samples were received on 08/23/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.3 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-DPT-70-20 (240-28270-1) and TB-082213 (240-28270-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/28/2013.

The laboratory control sample (LCS) for batch 99295 recovered outside control limits for the following analytes: Chlorodibromomethane, Bromoform. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The MSD for batch 99295 is out of the 12 hour tune time limit by 8 minutes but is still being reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SAMPLE SUMMARY

Client: Tetra Tech, Inc

Job Number: 240-28270-1

Lab Sample ID	Client Sample ID	Client Matrix	Date/Time Sampled	Date/Time Received
240-28270-1	DR-DPT-70-20	Water	08/22/2013 0920	08/23/2013 0905
240-28270-2TB	TB-082213	Water	08/22/2013 0000	08/23/2013 0905

TOTAL XYLENES	0.28 U	0.28 U	NA	0.28 U	0.28 U	1 J

B - Result considered to be from laboratory blank contamination based on USEPA 5 times or 10 times rule.
J - Positive result is considered estimated as a result of technical noncompliance.
K - Positive result is considered to be biased high as a result of technical noncompliance. Result may be lower.
L - Positive result is considered to be biased low as a result of technical noncompliance. Result may be higher.
UG/L - micrograms per liter (i.e., parts per billion).
MG/L - milligrams per liter (i.e., parts per million).
NA - Not analyzed.
NJ - The analyte has been tentatively identified. This qualifier indicates presumptive evidence of a compound. Special methods may be required to confirm its presence or absence.
PCI/L - picoCurries per liter.
R - Result is rejected as a result of technical noncompliance.
U - Not detected at the listed detection limit.
UJ -The analyte was not detected. However, the quantitation or detection limit may be inaccurate or imprecise.
UL - The analyte was not detected. However, the quantitation or detection limit is likely greater than the reported value.
UR - The result is considered qualitatively or quantitatively unreliable.
USEPA - United States Environmental Protection Agency.

TABLE C-1

CHEMICAL RESULTS FOR DUMP ROAD AREA GROUNDWATER SAMPLES, 2013
LOCKHEED MARTIN, MARTIN STATE AIRPORT, MIDDLE RIVER, MARYLAND

B - Laboratory blank contamination.
J - Positive result is considered estimated as a result of technical noncompliance.
K - Positive result is considered to be biased high as a result of technical noncompliance.
L - Positive result is considered to be biased low as a result of technical noncompliance.
NA - Not analyzed
MG/L - milligrams per liter.
R - Result rejected as a result of technical noncompliance.
U - Not detected at listed detection limit.
UG/L - micrograms per liter.
UJ - Nondetected value considered to be estimated as a result of technical noncompliance.
UL - Nondetected value considered to be biased low as a result of technical noncompliance.
UR - Nondetected value rejected as a result of technical noncompliance.
