CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source Area

Report Number: 240-28322-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/26/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.8 C.

The following sample(s) was preserved by freezing outside the 48 hour timeframe required for samples collected in water preserved TerraCores: . All Terra Core Kits(Samples #1,2,4,5) were collected on 08/23/13 at 11:10,14:00,11:20,14:10 and placed in the freezer on 08/26/13 at 11:45AM. Per email with Tony Apanavage on 8/26/13 the VOCs will be run out of the undisturbed 4oz soil jar.

Overview

The sample set for Lockheed MSA, SDG 240-28627-1, consists of six (6) soil environmental samples.

All samples were analyzed for select metals. Sample DR-SB-196-02-04 was also analyzed for cation exchange capacity (CEC), nitrate-N, pH, phosphate, total inorganic carbon (TIC), total kjeldahl nitrogen, and total organic carbon (TOC). The samples were collected by Tetra Tech September 3rd, 2013 and analyzed by TestAmerica. Metals analyses were conducted using method 6010C. Mercury analyses were conducted using method 7471B. CEC analyses were conducted using method 9081. Nitrate-N analyses were conducted using EPA method 300.0. pH analyses were conducted using method 9045C. Phosphate analyses were conducted using EPA method 365.1. TIC analyses were conducted using method 9060A. Total nitrogen analyses were conducted using standard method 4500. TOC analyses were conducted using method 9060A.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, laboratory control sample recoveries, matrix spike recoveries, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- None.

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Barium (1)	0.12 mg/kg	0.60 mg/kg
Barium (2)	0.12 mg/kg	0.60 mg/kg
Zinc (2)	2.14 mg/kg	10.7 mg/kg

Antimony [3]	1.91 ug/L	0.95 mg/kg
Molybdenum [3]	8.02 ug/L	4.0 mg/kg
Kjeldahl nitrogen [4]	55.6 mg/kg	278 mg/kg

[1] Maximum concentration found in preparation blank affecting samples in preparation batch 240-100393.
[2] Maximum concentration found in preparation blank affecting samples in preparation batch 240-100670.
[3] Maximum concentration found in a calibration blank affecting all soil samples.
[4] Maximum concentration found in a calibration blank affecting sample DR-SB-196-02-04.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Detected antimony, molybdenum, and zinc results less than the blank action level were qualified (B) for blank contamination.

- The matrix spike for preparation batch 100393 had a percent recovery <75% for antimony and percent recoveries > 125% for chromium and vanadium. Samples DR-SB-196-02-04 and DR-SB-196-26-28 were affected. Detected chromium and vanadium results were qualified as biased high (K). No validation action was warranted for antimony as sample results were qualified for blank contamination.

- The laboratory duplicate for preparation batch 100393 had a relative percent difference > 30% for cobalt, lead, and zinc. Samples DR-SB-196-02-04 and DR-SB-196-26-28 were affected. Detected results were qualified as estimated (J) and non-detected result was qualified as estimated (UJ).

- The matrix spike for preparation batch 100670 had a percent recovery <75% for antimony. Samples DR-SB-194-13-15, DR-SB-194-26-28, DR-SB-195-04-06, and DR-SB-195-14-16 were affected. The non-detected results were qualified as bias low (UL).

- The laboratory duplicate for preparation batch 100670 had a relative percent difference > 30% for cadmium. Samples DR-SB-194-13-15, DR-SB-194-26-28, DR-SB-195-04-06, and DR-SB-195-14-16 were affected. Detected results were qualified as estimated (J) and non-detected results were qualified as estimated (UJ).

- The serial dilution for preparation batch 100670 had a percent difference > 10% for chromium, lead, nickel, and zinc. Samples DR-SB-194-13-15, DR-SB-194-26-28, DR-SB-195-04-06, and DR-SB-195-14-16 were affected. Detected results were qualified as estimated (J).

- The CRDL standard analyzed on 9/6/13 had a percent recovery >120% for mercury. Samples DR-SB-196-02-04 and DR-SB-196-26-28 were affected. The detected result for sample DR-SB-196-02-04 was qualified as estimated (J) due to conflicting directional bias.

- The CRDL standard analyzed on 9/16/13 had a percent recovery <80% for beryllium and a percent recovery > 120% for molybdenum. All samples were affected. Detected beryllium results were qualified as either biased low (L) or estimated (J) due to conflicting directional bias. Non-detected beryllium results were qualified as biased low (UL). No validation action was warranted for molybdenum as sample results were previously qualified for blank contamination.

Notes

Non-detected results were reported at the MDL.

Positive results less than the reporting limit (RL) but greater than the method detection limit (MDL) were qualified as estimated (J).

Executive Summary

Laboratory Performance: Preparation and calibration blank contamination resulted in the qualification of antimony, molybdenum, and zinc results. Laboratory duplicate non-compliances for cadmium, cobalt, lead, and zinc resulted in the qualification of sample results. CRDL standard non-compliances resulted in the qualification of mercury and beryllium results.

Other Factors Affecting Data Quality: MS/MSD non-compliances for antimony, chromium and vanadium resulted in the qualification of sample results. Serial dilution non-compliances for chromium, lead, nickel, and zinc resulted in the qualification of sample results.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source

Report Number: 240-28627-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9060A TOC, 9060 TIC and 9081 CEC analysis were performed at the TestAmerica Nashville Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 09/04/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 1.8 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-SB-196-02-04 (240-28627-2), DR-SB-196-26-28 (240-28627-3), DR-SB-195-04-06 (240-28627-4), DR-SB-195-14-16 (240-28627-5), DR-SB-194-13-15 (240-28627-6) and DR-SB-194-26-28 (240-28627-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 09/04/2013 and analyzed on 09/10/2013.

1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and Naphthalene were detected in method blank MB 240-100739/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Insufficient sample volume was available to meet method-mandated requirements for matrix spike/matrix spike duplicate (MS/MSD) analyses for batch 100739.

A MS/MSD was prepared for batch 100109, but was analyzed in a different analytical batch.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Sample TB-090313 (240-28627-1) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/09/2013.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-SB-196-02-04 (240-28627-2), DR-SB-196-26-28 (240-28627-3), DR-SB-195-04-06 (240-28627-4), DR-SB-195-14-16 (240-28627-5), DR-SB-194-13-15 (240-28627-6) and DR-SB-194-26-28 (240-28627-7) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 09/11/2013 and analyzed on

09/14/2013.

Di-n-butyl phthalate was detected in method blank MB 240-100978/4-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)

Samples DR-SB-196-02-04 (240-28627-2), DR-SB-196-26-28 (240-28627-3), DR-SB-195-04-06 (240-28627-4), DR-SB-195-14-16 (240-28627-5), DR-SB-194-13-15 (240-28627-6) and DR-SB-194-26-28 (240-28627-7) were analyzed for gasoline range organics (GRO) in accordance with EPA-SW-846 Method 8015C - GRO. TOTAL ORGANIC CARBON
Sample DR-SB-196-02-04 (240-28627-2) was analyzed for total organic carbon in accordance with SW-846 Method 9060A. The samples were analyzed on 09/13/2013.

Quality Control (QC) results are not provided for Total Inorganic Carbon (TIC) as this result is taken from a calculation incorporating the Total Carbon (TC) and Total Organic Carbon (TOC) results. The QC results associated with these component parameters are found in their respective section of the final report.

As required by the reference method, soil samples for Total Organic Carbon (TOC) are dried prior to analysis. Since determination of TOC is performed using a pre-dried sample, the final TOC result obtained is not converted to a dry weight basis using results of a % Solids (or % Moisture) determination, as is typically performed for other types of soil analyses. For this reason, this report indicates the TOC results are not dry weight corrected.

Batch 110032 was analyzed without the required sample duplicate (DU) per every 10 samples. The associated laboratory control sample (LCS) precision met acceptance criteria.

No other difficulties were encountered during the TOC analysis. All quality control parameters were within the acceptance limits.

Overview

The sample set for Lockheed MSA Dump Road Source Areas, SDG 240-28680-1, consisted of one (1) aqueous trip blank sample and five (5) soil samples. All samples were analyzed for volatile organic compounds (VOCs). The five (5) soil samples were also analyzed for semi-volatile organic compounds (SVOCs), the total petroleum hydrocarbons (TPH) TPH C06-C10 & TPH C10-C32, polychlorinated biphenyls (PCBs), and total metals, as listed above. Two (2) soil samples were also analyzed for the miscellaneous parameters of pH, phosphate, cation exchange capacity (CEC), nitrate as nitrogen, total organic carbon (TOC), total inorganic carbon (TIC), and total Kjeldahl nitrogen (TKN), as listed above. No field duplicate sample pairs were included in the sample delivery group (SDG).

The samples were collected by Tetra Tech on September 4, 2013 and analyzed by TestAmerica Laboratories, Inc., North Canton and Nashville for all analyses. All analyses were conducted in accordance with EPA SW-846 Methods 8260B for VOCs, 8270D for SVOCs, 8082A for PCBs, and 8015C for TPH C06-C10 & TPH C10-C32, 6010C for metals, 7471B for mercury, 9060A for TOC (TIC calculated using TOC), 9081 for CEC, 9045C for pH, EPA Method 365.1 for total phosphorus, MCAWWW 300.0 for anions, and Standard Method SM4500_NH3_E for total Kjeldahl nitrogen, analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, matrix spike/matrix spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The VOC initial calibration average relative response factors (RRF) were less than the 0.05 criteria for tert-butyl alcohol and vinyl acetate on instrument A3UX11 on 09/05/13, instrument A3UX14 on 09/12/13, and instrument A3UX8 on 09/04/13. The continuing calibration verification (CCV) RRFs for tert-butyl alcohol and vinyl acetate were also all less than the 0.05 criteria for the instruments.
  Affected Sample: All samples
  Action: The affected sample detected and non-detected results for tert-butyl alcohol and vinyl acetate were qualified estimated, (J), and rejected, (UR), respectively.

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Area, Martin State Airport, MD

Report Number: 240-28680-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9060A TOC, 9060 TIC, and 9081 CEC analysis were performed at the TestAmerica Nashville Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/05/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 4.1 and 4.2 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples DR-SB-48D-19-21 (240-28680-1), DR-SB-48D-24-26 (240-28680-2), DR-SB-48D-28-31 (240-28680-3), DR-SB-48D-34-36 (240-28680-4) and DR-SB-48D-40-42 (240-28680-5) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 09/05/2013 and 09/06/2013 and analyzed on 09/11/2013 and 09/13/2013.

1,2,4-Trichlorobenzene, Acetone, Methylene Chloride and Naphthalene were detected in method blank MB 240-100925/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for batch 100523 recovered outside control limits for the following analyte(s): 2-methyl-2-propanol, and vinyl acetate. These analytes have been identified as a poor performing analytes when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

As required by the reference method, soil samples for Total Organic Carbon (TOC) are dried prior to analysis. Since determination of TOC is performed using a pre-dried sample, the final TOC result obtained is not converted to a dry weight basis using results of a % Solids (or % Moisture) determination, as is typically performed for other types of soil analyses. For this reason, this report indicates the TOC results are not dry weight corrected.

Overview

The sample set for Lockheed MSA, SDG 240-28947-1, consists of five (5) soil environmental samples.

All samples were analyzed for select metals. Sample DR-SB-50D-18-20 and DR-SB-50D-52-54 was also analyzed for cation exchange capacity (CEC), nitrate-N, pH, phosphate, total inorganic carbon (TIC), total kjeldahl nitrogen, and total organic carbon (TOC). The samples were collected by Tetra Tech September 9th, 2013 and analyzed by TestAmerica. Metals analyses were conducted using method 6010C. Mercury analyses were conducted using method 7471B. CEC analyses were conducted using method 9081. Nitrate-N analyses were conducted using EPA method 300.0. pH analyses were conducted using method 9045C. Phosphate analyses were conducted using EPA method 365.1. TIC analyses were conducted using method 9060A. Total nitrogen analyses were conducted using standard method 4500. TOC analyses were conducted using method 9060A.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, laboratory control sample recoveries, matrix spike recoveries, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- None.

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Barium [1]	0.14 mg/kg	0.7 mg/kg
Mercury [2]	0.13 ug/L	0.11 mg/kg
Molybdenum [3]	3.7 ug/L	1.8 mg/kg

Vanadium [3]	2.5 ug/L	1.25 mg/kg
Zinc [3]	28.1 ug/L	14.1 mg/kg
Total kjeldahl nitrogen [4]	55.6 mg/kg	278 mg/kg

[1] Maximum concentration found in preparation blank affecting samples in preparation batch 102878.
[2] Maximum concentration found in a calibration blank affecting all samples.
[3] Maximum concentration found in a calibration blank affecting all samples.
[4] Maximum concentration found in preparation blank affecting samples DR-SB-50D-18-20 and DR-SB-50D-52-54.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Detected molybdenum, zinc, and total kjeldahl nitrogen results less than the blank action level were qualified (B) for blank contamination.

- The CRDL standard analyzed on 9/26/13 had a percent recovery < 90% for selenium and percent recoveries > 110% for arsenic and copper. All samples were affected. Non-detected selenium results were qualified as biased low (UL). Detected arsenic and copper results were qualified as either biased high (K) or estimated (J).

- The matrix spike for sample DR-SB-50D-18-20 had a percent recovery <75% for antimony. The post digestion spike and LCS were with QC limits. Non-detected results were qualified as biased low (UL).

Notes

Non-detected results were reported at the MDL.

Positive results less than the reporting limit (RL) and greater than the method detection limit (MDL) were qualified as estimated (J).

Executive Summary

Laboratory Performance: Preparation and calibration blank contamination results in the qualification of molybdenum, zinc, and total kjeldahl nitrogen results as non-detected (B). CRDL standard non-compliances for selenium, arsenic, and copper resulted in the qualification of sample results.

Other Factors Affecting Data Quality: Matrix spike non-compliances for antimony resulted in the qualification of sample results.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: LM Dump Road, Martin State Airport

Report Number: 240-28947-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The 9060A TOC, 9060 TIC, and 9081 CEC analysis were performed at the TestAmerica Nashville Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

Quality Control (QC) results are not provided for Total Inorganic Carbon (TIC) as this result is taken from a calculation incorporating the Total Carbon (TC) and Total Organic Carbon (TOC) results. The QC results associated with these component parameters are found in their respective section of the final report.

As required by the reference method, soil samples for Total Organic Carbon (TOC) are dried prior to analysis. Since determination of TOC is performed using a pre-dried sample, the final TOC result obtained is not converted to a dry weight basis using results of a % Solids (or % Moisture) determination, as is typically performed for other types of soil analyses. For this reason, this report indicates the TOC results are not dry weight corrected.

Overview

The sample set for Lockheed MSA, SDG 240-28498-1, consists of two (2) soil environmental samples and one trip blank.

All samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOC), total petroleum hydrocarbons (TPH), polychlorinated biphenyl ether (PCB), and select metals. The samples were collected by Tetra Tech August 28th, 2013 and analyzed by TestAmerica. VOC analyses were conducted using method 8260B. SVOC analyses were conducted using method 8270D. TPH analyses were conducted using method 8015C. PCB analyses were conducted using method 8082A. Metals analyses were conducted using method 6020A. Mercury analyses were conducted using method 7471B.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, ICP internal standard recoveries, ICP serial dilution, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on 9/5/13 on instrument A3UX11 had a relative response factor < 0.05 for tert-butyl alcohol and vinyl acetate. Sample TRIP BLANK_20130828 was affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 9/6/13 on instrument A3UX11 had a relative response factor < 0.05 for tert-butyl alcohol and vinyl acetate. Sample TRIP BLANK_20130828 was affected. Non-detected results were qualified as rejected (UR).

- The initial calibration analyzed on 9/4/13 on instrument A3UX8 had a relative response factor < 0.05 for tert-butyl alcohol and vinyl acetate. Samples DR-SB-46I-39-40 and DR-SB-46S-19-20

were affected. Non-detected results were qualified as rejected (UR).

- The continuing calibration analyzed on 9/6/13 on instrument A3UX8 had a relative response factor < 0.05 for tert-butyl alcohol and vinyl acetate. Samples DR-SB-46I-39-40 and DR-SB-46S-19-20 were affected. Non-detected results were qualified as rejected (UR).

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Acetone [1]	12.2 ug/kg	122 ug/kg
Methylene chloride [1]	3.62 ug/kg	36.2 ug/kg
Toluene [1]	0.43 ug/kg	2.15 ug/kg
Bis(2-ethylhexyl)phthalate [2]	25.4 ug/kg	127 ug/kg
Di-n-butyl phthalate [2]	59 ug/kg	295 ug/kg
Diethyl phthalate [2]	43.8 ug/kg	219 ug/kg
Barium [3]	0.084 mg/kg	0.42 mg/kg
Zinc [3]	1.27 mg/kg	6.3 mg/kg
Antimony [4]	4.24 ug/L	2.12 mg/kg
Molybdenum [4]	1.36 ug/L	0.68 mg/kg

[1] Maximum concentration found in preparation blank affecting samples in preparation batch 240-99825.
[2] Maximum concentration found in preparation blank affecting samples in preparation batch 240-100631.
[3] Maximum concentration found in preparation blank affecting samples in preparation batch 240-99736.
[4] Maximum concentration found in a calibration blank affecting all soil samples.

An action level of 5X or 10X (acetone and methylene chloride) the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive antimony, molybdenum, zinc, bis(2-ethylhexyl)phthalate, di-n-butyl phthalate, diethyl phthalate, and acetone results less than the blank action level were qualified (B) for blank contamination.

- The laboratory control spike for preparation batch 240-100631 had a percent recovery less than the lower control limit for benzaldehyde. Both soil samples were affected. Non-detected benzaldehyde results were qualified as biased low (UL).

- The CRDL standard analyzed on 9/4/13 had a percent recovery < 80% for mercury. Sample MRC-MW-96D-050613 was affected. The positive result was qualified as estimated (J) due to conflicting directional bias. The non-detected result was qualified as bias low (UL).

Notes

Non-detected results were reported at the MDL.

The continuing calibration analyzed on 9/6/13 on instrument A3UX11 had a percent difference >25% but < 50% for carbon disulfide and methylene chloride. Sample TRIP BLANK_20130828 was affected. No

validation action was warranted as sample results were non-detect.

The continuing calibration analyzed on 9/6/13 on instrument A3UX8 had a percent difference >25% but < 50% for 1,1,2-trichlorotrifluoromethane, carbon tetrachloride, and sec-butylbenzene. Samples DR-SB-46I-39-40 and DR-SB-46S-19-20 were affected. No validation action was warranted as sample results were non-detect.

The CRDL standard analyzed on 9/4/13 had a percent recovery < 90% for antimony. Sample MRC-MW-96D-050613 was affected. Samples DR-SB-46I-39-40 and DR-SB-46S-19-20 were affected. No validation action was warranted as sample results were previously qualified for blank contamination.

The laboratory control spike for preparation batch 99825 had a percent recovery greater than the upper control limit for 1,1-dichloropropene and tetrachloroethene. Samples DR-SB-46I-39-40 and DR-SB-46S-19-20 were affected. No validation action was warranted as sample results were non-detect.

Executive Summary

Laboratory Performance: Preparation and calibration blank contamination for antimony, molybdenum, zinc, bis(2-ethylhexyl)phthalate, di-n-butyl phthalate, diethyl phthalate, and acetone resulted in the qualification of sample results. CRDL standard non-compliances for mercury resulted in the qualification of sample results. LCS non-compliances for benzaldehyde resulted in the qualification of sample results.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993) and U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

CASE NARRATIVE

Client: Tetra Tech, Inc

Project: Dump Road Source

Report Number: 240-28498-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 08/29/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.4 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 08/29/2013 and analyzed on 09/06/2013.

Acetone, Methylene Chloride and Toluene were detected in method blank MB 240-99825/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for batch 100346 recovered outside control limits for the following analytes: 1,1-Dichloropropene and Tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Insufficient sample volume was available to meet method-mandated requirements for matrix spike/matrix spike duplicate (MS/MSD) analyses for batch 100346.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Sample TRIP BLANK (240-28498-3) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/06/2013.

No difficulties were encountered during the VOCs analysis. All quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 09/09/2013 and analyzed on 09/12/2013.

Bis(2-ethylhexyl) phthalate, Diethyl phthalate and Di-n-butyl phthalate were detected in method blank MB 240-100631/23-B at levels that

were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for batch 100631 associated with sample(s) DR-SB-46I-39-40 (240-28498-1), DR-SB-46S-19-20 (240-28498-2) recovered outside control limits for the following analyte: Benzaldehyde. However, since Benzaldehyde is a non-controlling compound no corrective action was required.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for gasoline range organics (GRO) in accordance with EPA-SW-846 Method 8015C - GRO. The samples were analyzed on 09/03/2013.

No difficulties were encountered during the GRO analysis. All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015C - DRO. The samples were prepared on 09/04/2013 and analyzed on 09/06/2013.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

No difficulties were encountered during the DRO analysis. All quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 09/09/2013 and analyzed on 09/11/2013.

No difficulties were encountered during the PCBs analysis. All quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 08/30/2013 and analyzed on 09/04/2013.

Barium and Zinc were detected in method blank MB 240-99736/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Antimony, Barium, Cobalt, Molybdenum, Nickel and Zinc exceeded the RPD limit for the duplicate of sample DR-SB-46I-39-40DU (240-28498-1).

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

MERCURY
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared on 08/30/2013 and analyzed on 09/04/2013.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

PERCENT SOLIDS
Samples DR-SB-46I-39-40 (240-28498-1) and DR-SB-46S-19-20 (240-28498-2) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 08/30/2013.

Overview

The sample set for Lockheed MSA, SDG 240-30485-1, consists of six (6) aqueous environmental samples and one trip blank. This SDG contained one field duplicate pair: MSA-DUP01-102113/ MSA-MW44S-102113.

All samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOC), total petroleum hydrocarbons (TPH), and select metals. TB-102113 was only analyzed for VOC. Samples MSA-MW51D-102113, MSA-MW51I-102113, and MSA-MW51S-102113 were analyzed for alkalinity, ammonia-N, chloride, dissolved organic carbon (DOC), nitrate-N, nitrite-N, orthophosphate-P, sulfate, and total dissolved solids (TDS), methane, and ethane. The samples were collected by Tetra Tech October 21st, 2013 and analyzed by TestAmerica and Microseeps. VOC analyses were conducted using method 8260B. SVOC analyses were conducted using method 8270D. TPH analyses were conducted using method 8015C. TPH analyses were conducted using method 8015C. Metals analyses were conducted using method 6010C. Mercury analyses were conducted using method 7470. Alkalinity analyses were conducted using method 310.1. Ammonia-N analyses were conducted using method 350.3. Chloride, nitrate-N, nitrite-N, orthophosphate-P, and sulfate were conducted using method 300.0. DOC analyses were conducted using method 9060. TDS analyses were conducted using method 160.1. Methane and ethane analyses were conducted using Microseeps method AM20GAX.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, ICP internal standard recoveries, ICP serial dilution, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on10/29/13 on instrument A3UX16 had a relative response factor

< 0.05 for tert-butyl alcohol. All samples were affected. All tert-butyl alcohol results were qualified as rejected (UR).

- The continuing calibration analyzed on 10/31/13 on instrument A3UX16 had a relative response factor < 0.05 for tert-butyl alcohol. All samples were affected. All tert-butyl alcohol results were qualified as rejected (UR).

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

[1] Maximum concentration found in preparation blank affecting all VOC analyses.
[2] Maximum concentration found in a trip blank affecting all samples.
[3] Maximum concentration found in preparation blank affecting all SVOC analyses.
[4] Maximum concentration found in preparation blank affecting samples MSA-DUP01-102113, MSA-MW44S-102113, MSA-MW50D-102113, and MSA-MW51D-102113.
[5] Maximum concentration found in preparation blank affecting samples in preparation batch 106927.
[6] Maximum concentration found in preparation blank affecting samples in preparation batch 107845.
[7] Maximum concentration found in a calibration blank affecting samples MSA-DUP01-102113 and MSA-MW44S-102113.
[8] Maximum concentration found in a calibration blank affecting samples MSA-MW50D-102113, MSA-MW51D-102113, MSA-MW51I-102113, and MSA-MW51S-102113.

An action level of 5X or 10X (acetone and methylene chloride) the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Detected carbon disulfide, chloroform, nickel, toluene, TPH(C06-C10), vanadium, and zinc results

less than the blank action level were qualified (B) for blank contamination.

- The CRDL standard analyzed in 10/30/13 had percent recoveries > 110% for vanadium, arsenic, chromium, and iron and percent recoveries < 90% for lead and vanadium. Samples MSA-DUP01-102113 and MSA-MW44S-102113 were affected. Detected arsenic, vanadium, and chromium results <2X CRDL were qualified as either biased low (L) or estimated (J) due to conflicting directional bias. Non-detected lead results were qualified as biased low (UL). No action was warranted for iron results.

- The CRDL standard analyzed in 11/5/13 had a percent recovery < 90% for vanadium. Samples MSA-MW50D-102113, MSA-MW51D-102113, MSA-MW51I-102113, and MSA-MW51S-102113 were affected. The non-detected vanadium results were qualified as biased low (UL).

- The matrix spike and matrix spike duplicate for preparation batch 106647 had a percent recovery < 80% for orthophosphate-P. Corrective action was taken by re-analyzing the samples. The re-analysis also had poor recoveries for the MS and was out of holding time. The original analysis was selected to be validated. The detected result was qualified as estimated and the non-detected results were qualified as biased low (UL).

- For the methane and ethane analyses samples MSA-MW51D-102113, MSA-MW51I-102113, and MSA-MW51S-102113 were analyzed for preserved with hydrochloric acid. The method required sulfuric acid preservation. The project manager was made aware and the lab was instructed to proceed with the analyses. Positive methane and ethane results were qualified as estimated (J).

- The TPH (C6-C10) result in sample MSA-MW51S-102113 is qualified as biased high, (K), because the reviewer suspects that chlorinated VOCs are contributing toward the high concentration.

- TICs were qualified as presumptively present "NJ"

Notes

Non-detected results were reported at the MDL.

The VOC LCS had a percent recovery >120% for 1,1-dichloropropene and trans-1,3-dichloropropene. No validation action was warranted as sample results were non-detect.

The following samples were analyzed at dilutions for VOC analyses MSA-DUP01-102113 (10X), MSA-MW44S-102113 (7.14X), MSA-MW51I-102113 (1.25X), and MSA-MW51S-102113 (200X).

Samples MSA-MW51D-102113, MSA-MW51I-102113, and MSA-MW51S-102113 were analyzed for methane and ethane by Microseeps. Ethene was not reported by the lab.

For samples MSA-MW51D-102113, MSA-MW51I-102113, and MSA-MW51S-102113 the lab reported 7 additional metals.

Executive Summary

Laboratory Performance: Calibration non-compliances for tert-butyl alcohol resulted in the rejection of sample results. Preparation and calibration blank contamination resulted in the qualification of sample

results as non-detected. CRDL standard non-compliances for arsenic vandaim and chromium resulted in the qualification of sample results.

Other Factors Affecting Data Quality: Matrix spike and matrix spike duplicate non-compliances resulted in the qualification of orthophosphate-P results. Deviation from the preservation methodology resulted in the qualification of methane and ethane results.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993) and U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: MSA Surface Water Sampling

Report Number: 240-30485-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The Methane and Ethane by AM 20GAX analysis was performed at Microseeps.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 10/22/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 1.0, 1.2, 1.7 and 2.3 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW51S-102113 (240-30485-1), MSA-MW51I-102113 (240-30485-2), MSA-MW51D-102113 (240-30485-3), MSA-MW50D-102113 (240-30485-4), MSA-MW44S-102113 (240-30485-5), TB-102113 (240-30485-6) and MSA-DUP01-102113 (240-30485-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 10/31/2013.

2-Hexanone, 4-Methyl-2-pentanone, Naphthalene and Toluene were detected in method blank MB 240-107835/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

1,1-Dichloropropene and trans-1,3-Dichloropropene failed the recovery criteria high for LCS 240-107835/4.

Samples MSA-MW51S-102113 (240-30485-1)[200X], MSA-MW51I-102113 (240-30485-2)[1.25X], MSA-MW44S-102113 (240-30485-5) [7.14X] and MSA-DUP01-102113 (240-30485-7)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample (LCS) for batch 107835 recovered outside control limits for multiple analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples MSA-MW51S-102113 (240-30485-1), MSA-MW51I-102113 (240-30485-2), MSA-MW51D-102113 (240-30485-3), MSA-MW50D-102113 (240-30485-4), MSA-MW44S-102113 (240-30485-5) and MSA-DUP01-102113 (240-30485-7) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 10/23/2013 and analyzed on 10/28/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-106706/21-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Samples MSA-MW44S-102113 (240-30485-5)[4X] and MSA-DUP01-102113 (240-30485-7)[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Overview

The sample set for Lockheed MSA, SDG 240-30533-1, consists of two (2) aqueous environmental samples and one trip blank.

All samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOC), total petroleum hydrocarbons (TPH), and select metals. The samples were collected by Tetra Tech October 22nd and 24th, 2013 and analyzed by TestAmerica. VOC analyses were conducted using method 8260B. SVOC analyses were conducted using method 8270D. TPH analyses were conducted using method 8015C. TPH analyses were conducted using method 8015C. Metals analyses were conducted using method 6010C. Mercury analyses were conducted using method 7470.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, MS tuning, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, ICP internal standard recoveries, ICP serial dilution, surrogate standard recoveries, laboratory control sample recoveries, matrix spike recoveries, chromatographic resolution, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- The initial calibration analyzed on 10/6/13 on instrument A3UX11 had a relative response factor < 0.05 for tert-butyl alcohol and vinyl acetate. Samples MSA-MW43S-102213 and TB-102213 were affected. All tert-butyl alcohol and vinyl acetate results were qualified as rejected (UR).

- The continuing calibration analyzed on 10/31/13 on instrument A3UX11 had a relative response factor < 0.05 for tert-butyl alcohol, vinyl acetate, bromomethane, and chloroethane. Samples MSA-MW43S-102213 and TB-102213 were affected. All tert-butyl alcohol, vinyl acetate, bromomethane, and chloroethane results were qualified as rejected (UR).

Minor Problems-

- The following contaminants were detected in preparation and calibration blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Chloroform [1]	0.65 ug/L	3.2 ug/L
TPH (C6-C10) [2]	61.4 ug/L	307 ug/L
Zinc [3]	6.6 ug/L	33 ug/L
Vanadium [3]	3.0 ug/L	15 ug/L
Antimony [4]	3.7 ug/L	18.5 ug/L
Lead [4]	2.0 ug/L	10 ug/L

[1] Maximum concentration found in the trip blank affecting sample MSA-MW43S-102213.
[2] Maximum concentration found in preparation blank affecting sample MSA-MW43S-102213.
[3] Maximum concentration found in preparation blank affecting sample MSA-MW43S-102213.
[4] Maximum concentration found in calibration blank affecting sample MSA-MW43S-102213.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Detected TPH (C6-C10), antimony, vanadium and zinc results less than the blank action level were qualified (B) for blank contamination.

- TICs were qualified as presumptively present "NJ".

Notes

Non-detected results were reported at the MDL.

The LCS had a percent recovery less than the lower control limit for chloroethane. Samples MSA-MW43S-102213 and TB-102213 were affected. No validation action was warranted as sample results were rejected for calibration RRF non-compliances.

The continuing calibration analyzed on 10/31/13 had a percent difference > 20% for carbon disulfide, dichlorofluoromethane, and vinyl acetate and had percent recoveries > 50% for bromomethane and chloroethane. Samples MSA-MW43S-102213 and TB-102213 were affected. No validation action was warranted as sample results were either rejected or non-detect.

The CRDL standard analyzed in 11/7/13 had a percent recovery >110% for antimony, vanadium, arsenic and lead. Sample MSA-MW43S-102213 was affected. No validation action was warranted as sample results were either non-detected or qualified for blank contamination.

Sample MSA-MW43S-102413 was collected 2 days after the initial sampling because the well went dry during collection.

Executive Summary

Laboratory Performance: Calibration RRF non-compliances resulted in the rejection of tert-butyl alcohol, vinyl acetate, bromomethane, and chloroethane results. Preparation and calibration blank contamination resulted in the qualification of antimony, vanadium and zinc as non-detected.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993) and U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994).

CASE NARRATIVE

Client: Tetra Tech, Inc.

Project: Dump Road GW 2013

Report Number: 240-30533-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 10/23/2013 and 10/25/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 2.9 and 4.7 C.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples MSA-MW43S-102213 (240-30533-1) and TB-102213 (240-30533-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 10/31/2013.

The laboratory control sample (LCS) for batch 107886 recovered outside control limits for the following analyte(s): Chloroethane. Chloroethane has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No MS/MSD in batch 107886 due to an incorrect sample dilution.

No other difficulties were encountered during the VOCs analysis. All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Sample MSA-MW43S-102413 (240-30652-1) was analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 10/29/2013 and analyzed on 10/31/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 107492.

No other difficulties were encountered during the SVOCs analysis. All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS (GRO)
Sample MSA-MW43S-102213 (240-30533-1) was analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015C - GRO. The samples were analyzed on 10/31/2013.

Total Petroleum Hydrocarbons (C6-C10) was detected in method blank MB 240-107778/7 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

An MS/MSD was analyzed with batch 107778, but could not be reported becuase it exceeded the calibration range of the instrument.

No other difficulties were encountered during the gasoline analysis. All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS (DRO)
Sample MSA-MW43S-102413 (240-30652-1) was analyzed for diesel range organics (DRO) in accordance with EPA-SW-846 Method 8015C - DRO. The samples were prepared on 10/30/2013 and analyzed on 11/02/2013.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 107680, 8015.

No other difficulties were encountered during the DRO analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICP)
Sample MSA-MW43S-102213 (240-30533-1) was analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 11/06/2013 and analyzed on 11/07/2013.

No difficulties were encountered during the metals analysis. All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)
Sample MSA-MW43S-102213 (240-30533-1) was analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 11/06/2013 and analyzed on 11/07/2013.

Antimony, Vanadium and Zinc were detected in method blank MB 240-108583/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the metals analysis. All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY (CVAA)
Sample MSA-MW43S-102213 (240-30533-1) was analyzed for dissolved mercury (CVAA) in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 11/06/2013 and analyzed on 11/07/2013.

No difficulties were encountered during the mercury analysis. All quality control parameters were within the acceptance limits.

TOTAL MERCURY
Sample MSA-MW43S-102213 (240-30533-1) was analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 11/06/2013 and analyzed on 11/07/2013.

No other difficulties were encountered during the mercury analysis. All other quality control parameters were within the acceptance limits.

Overview

The sample sets for Lockheed MSA, SDGs R1307835 and R1307863 consists of six (6) aqueous environmental sample and SDG R1307863 consists of four (6) aqueous environmental sample. These SDGs contained no field duplicate pairs.

All samples were analyzed for hexavalent chromium. The samples were collected by Tetra Tech on October 17th and 18th, 2013 and analyzed by ALS Environmental. Hexavalent chromium analyses were conducted using EPA method 218.6.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, laboratory control sample recoveries, matrix spike recoveries, and detection limits.

Areas of concern with respect to data quality are listed below.

Major Problems-

- Samples MSA-MW48D-101813, MSA-MW48S-101813, MSA-MW50I-101813, and MSA-MW50S-101813 were analyzed 3 days beyond the 24 hour holding time. The non-detected results were qualified as rejected (UR).

Minor Problems-

- The following contaminant was detected a calibration blank (affecting sample MSA-MW48I-101713) at the following maximum concentration:

Analyte	Maximum Concentration	Action Level
Hexavalent Chromium	0.044 ug/L	0.22 ug/L

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. The positive hexavalent chromium result was qualified as non-detect (B).

- Samples MSA-MW47D-101713, MSA-MW47I-101713, MSA-MW49I-101614, and MSA-MW49S-101713 were analyzed a few hours beyond the 24 hour holding time. Positive results were qualified as estimated (J).

Notes

The continuing calibration analyzed on 10/18/13 at 14:25 had a percent recovery > 110% for hexavalent chromium. Sample MSA-MW48I-101713 was affected. No validation action was warranted as the sample result was previously qualified for blank contamination.

The lab filtered the samples upon receipt and preserved them to a pH between 9.3 and 9.7.

Non-detected results were reported to the method detection limit (MDL).

Executive Summary

Laboratory Performance: Holding time non-compliances resulted in the rejection and qualification of sample results. The continuing calibration blank resulted in the qualification of sample results.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the Region III modifications to the National Functional Guidelines for Inorganic Data Validation (April 1993).

CASE NARRATIVE

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1307835
Project:	MSA Dump Road Ground Water	**Project Number:**	112IC04882
Sample Matrix:	Water	**Date Received:**	10/17/13

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 10/16/13 and received at ALS in good condition at a cooler temperature of 2.7 °C as noted on the cooler receipt and preservation check form. The samples were immediately preserved to a pH of 9.3 – 9.7 and stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CLP Batching sheets for a cross-reference between Client ID and ALS Job # and analyses requested. All samples were lab filtered.

Hexavalent Chromium Analysis – 218.6

Four water samples were analyzed for Dissolved CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Note: All samples were analyzed several hours outside of the client requested 24 hours holding time from sampling time due to a laboratory error. Samples were analyzed the same day as sample receipt and within the method specified holding time.

All the initial and continuing calibration criteria of 95 – 105 % were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination except CCB2 and CCB3. Sample MSA-MW49I was re-analyzed due to a positive hit above the MRL. Both results were reported.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

CASE NARRATIVE

Client:	Tetra Tech NUS, Inc.	**Service Request No.:**	R1307863
Project:	MSA Dump Road Ground Water	**Project Number:**	112IC04882
Sample Matrix:	Water	**Date Received:**	10/19/13

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

Sample Receipt

Water samples were collected on 10/18/13 and received at ALS in good condition at a cooler temperature of 1.9 °C as noted on the cooler receipt and preservation check form. The samples were immediately preserved to a pH of 9.3 – 9.7 and stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CLP Batching sheets for a cross-reference between Client ID and ALS Job # and analyses requested. All samples were lab filtered.

Hexavalent Chromium Analysis – 218.6

Four water samples were analyzed for Dissolved CR+6 by EPA method 218.6, low level. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Note: All samples were unable to be analyzed within the client requested 24 hours holding time from sampling time due to arrival on Saturday and there was no prior communication. Samples were analyzed as soon as possible after a properly trained analytst was notified.

All the initial and continuing calibration criteria of 95 – 105 % were met.

The Blank Spike (LCS) recovery was within QC limits.

The Laboratory Blank associated with these samples was free of contamination.
