Overview

This sample set for the Martin State Airport, SDG C7K020216, consists of 15 environmental water samples and 2 trip blanks. The samples were analyzed for Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), and Polychlorinated Biphenyls(PCBs). No field duplicates were included in this data set.

The samples were collected by Tetra Tech NUS, Inc. on October 30, 31, and November 1, 2007 and analyzed by TestAmerica Laboratories, Inc. The samples were analyzed by SW-846 Methods 8260B, 8270C, and 8082.

Summary

The findings in this report are based upon a general review of all available data including: data completeness, system performance, holding times, GC/MS tuning, initial/continuing calibrations, laboratory method blank contamination, surrogate spike, matrix spike/matrix spike duplicate (MS/MSD) results, Laboratory Control Sample (LCS) results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below; documentation supporting these findings is presented in Appendix C. Qualified analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Major Problems

- None.

Minor Problems

- The following compounds were detected in trip blanks at the following maximum concentrations.

Compound	Level	Action Level
Acetone	11 µg/L	110 µg/L
Toluene	0.39 µg/L	1.95 µg/L
Chloromethane	0.15 µg/L	0.75 µg/L

  An action level of 10X the maximum blank concentration was used for acetone, a common laboratory contaminant. An action level of 5X the maximum contaminant concentration was used for toluene and chloromethane to evaluate laboratory or field contamination. Dilution factors and sample aliquots were taken into consideration in the application of all action levels, if applicable.

  Positive results for acetone, chloromethane, and toluene below the action level were qualified as false positives, "B".

- The LCS associated with batch 7312657 analyzed on 11/08/07 @22:03 on instrument HP6 had high recoveries for acetone (394%) and 1,2-dibromoethane (124%). Positive results for acetone were qualified as biased high (K) in samples associated with this LCS. No results for 1,2-dibromoethane were because this analyte was not positively detected in any samples. Note that most results for acetone were qualified (B) due to blank contamination, as discussed above.

- Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated (J).

Notes

The continuing calibration had the %D > 25% quality control limit but < 50% quality control limit for 4-nitrophenol on 11/21/07 @01:55 on instrument 733. No validation actions were required because 4-nitrophenol was not positively detected in samples associated with this calibration.

The continuing calibration had the %D > 25% quality control limit but < 50% quality control limit for 4-nitrophenol on 11/22/07 @05:04 on instrument 733. No validation actions were required because 4-nitrophenol was not positively detected in samples associated with this calibration.

The continuing calibration had the %D > 25% quality control limit but < 50% quality control limit for hexachlorocyclopentadiene on 11/26/07 @02:03 on instrument 733. No validation actions were required because hexachlorocyclopentadiene was not positively detected in samples associated with this calibration.

The SVOC matrix spike/matrix spike duplicate recoveries for a number of analytes in the laboratory MS/MSD for batch 7311333 were low. No validation actions were taken because the associated LCS results were acceptable and because the unspiked sample was not one of the environmental samples included in this SDG.

Executive Summary

Laboratory Performance: LCS recoveries for several VOCs were high resulting in the qualification of data. Continuing calibration %Ds for several VOCs exceeded QC limits.

Other Factors Affecting Data Quality: Three VOCs were detected in the trip blanks resulting in the qualification of data.

The data for these analyses were reviewed with reference to the "Region III Modifications to the National Functional Guidelines for Organic Data Review" (9/94). The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
J	-	Positive result is considered estimated, "J", as a result of technical noncompliances.
K	-	Positive result is considered as biased high, a result of technical noncompliances. Quantitation limit is probably higher.
U	-	Nondetected result.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
Martin State Airport

Lot #: C7K020216

The following report contains the analytical results for samples submitted to TestAmerica Pittsburgh by Tetra Tech NUS, INC. The samples were received November 2, 2007 according to documented sample acceptance procedures.

TestAmerica Pittsburgh utilizes only USEPA approved methods and instrumentation in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Sample Receiving:
The lot closed on November 2, 2007.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The LCS associated with batch 7312657 had acetone and 1,2-dibromoethane recover high and outside of criteria. All control compounds recovered within limits.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in the calibration verification standard N11210CC; but were within expected performance range for these compounds: 4-Nitrophenol 40.4% and N-Nitrosodimethylamine 32.1%.

The following compound had the %D > 25% in the calibration verification standard N11220CC; but was within expected performance range for this compound: 4-Nitrophenol 27.4%.

CASE NARRATIVE
TETRA TECH NUS, INC.
Martin State Airport

Lot #: C7K020216

GC/MS Semivolatiles cont.:
The following compound had the %D > 25% in the calibration verification standard V11270CC; but was within expected performance range for this compound: 2,4-Nitrophenol 25.7%.

PCBs:
There were no problems associated with the analysis.

Metals:
The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

Chain of Custody Record

STL-4124 (0901)

STL
Severn Trent Laboratories, Inc.

Client: Tetra Tech WDS	Project Manager: Mike Martin	Date: 10/30/07	Chain of Custody Number: 322458
Address: 20251 Century Blvd Ste 200	Telephone Number (Area Code)/Fax Number: 301 528 3022	Lab Number:	Page 5 of 6
City: Germantown / State: MD / Zip Code: 20874	Site Contact: T Hanagriff	Lab Contact: B Hall	
Project Name and Location (State): Martin St Detroit MD Fourmile Run	Carrier/Waybill Number:		
Contract/Purchase Order/Quote No.: 18001572-1			

Sample I.D. No. and Description (Containers for each sample may be combined on one line)	Date	Time	Matrix: Air	Aqueous	Sed.	Soil	Containers & Preservatives: Unpres.	H2SO4	HNO3	HCl	NaOH	ZnAcl/NaOH	Analysis: PCBs	LL SVOCs	LL VOCs	Total Metals	Dissolved Metals	Special Instructions/ Conditions of Receipt

FMC 12									X							X		
FMC 12									X								X	

Possible Hazard Identification
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal
☐ Return To Client ☒ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☒ 14 Days ☐ 21 Days ☐ Other _____

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
BROMOFLUOROBENZENE (BFB)

Lab Name: TA PITTSBURGH Contract:

Lab Code: TA PGH Case No.: SAS No.: SDG No.: C7K020216

Lab File ID: BF61108N BFB Injection Date: 11/08/07

Instrument ID: HP6 BFB Injection Time: 1819

GC Column: DB624 20M ID: 0.20 (mm) Heated Purge: (Y/N) N

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	22.1
75	30.0 - 60.0% of mass 95	48.6
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	7.5
173	Less than 2.0% of mass 174	0.0 (0.0)1
174	50.0 - 100.0% of mass 95	57.9
175	5.0 - 9.0% of mass 174	4.7 (8.1)1
176	95.0 - 101.0% of mass 174	55.8 (96.5)1
177	5.0 - 9.0% of mass 176	3.3 (5.9)2

1-Value is % mass 174 2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

TRIP BLANK #1

SW846 8260B METHOD BLANK SUMMARY

BLANK WORKORDER NO.: KAVP51AA

Lab Name: TestAmerica Laboratories, Inc.

Lab Code: TALPIT

SDG Number:

Lab File ID: 61108N01.

Lot Number: C7K020216

Date Analyzed: 11/08/07

Time Analyzed: 20:17

Matrix: WATER

Date Extracted: 11/08/07

GC Column: RTX-624 ID: .18

Extraction Method: 5030B/8260B

Instrument ID: HP6

Level: (low/med) LOW

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, LCS, LCSD, MS , MSD:

	CLIENT ID.	SAMPLE WORK ORDER #	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

CALCULATION WORKSHEET

CLIENT: MARTIN STATE AIRPORT	**SDG No.** C7K020216
SUBJECT: EXAMPLE CALCULATION - VOCS - WATER	
BY: T. JACKMAN	**DATE:** 02/20/08

Sample FMC 12 **Concentration = 1.3 ug/L**	**Trichloroethene**

EQUATION:

$$C_w = \frac{A_x \times Is \times Df}{Ais \times RRF \times V_o}$$

Where:

C_w	=	analyte concentration in water		ug/L
A_x	=	analyte response	=	15919
Is	=	amount of internal standard	=	50 ng
Df	=	dilution factor	=	1
Ais	=	response of internal standard	=	484847
RRF	=	response factor of compound	=	0.25353
Vo	=	volume of water purged	=	5 mL

Therefore: the concentration of trichloroethene in water =

$$\frac{15919 \times 50ng \times 1}{484847 \times 0.25353 \times 5mL}$$

C_w = 1.3 ug/L

CALCULATION WORKSHEET

CLIENT: MARTIN STATE AIRPORT	**SDG No.** C7K020216
SUBJECT: EXAMPLE CALCULATION - PHENANTHRENE IN WATER	
BY: T. JACKMAN	**DATE:** 02/20/08

Sample ID = FMC 11
Concentration = 0.26 ug/L

EQUATION:

$$C_w = \frac{A_x \times Is \times V_t \times Df}{A_{is} \times RRF \times V_o \times V_i}$$

Where:

C_w	=	analyte concentration in water		ug/l
A_x	=	analyte response	=	29587
Is	=	amount of internal standard	=	8 ng
V_t	=	volume of final extract	=	0.001 L
Df	=	dilution factor	=	1
A_{is}	=	response of internal standard	=	455985
RRF	=	response factor of analyte	=	1.079
V_o	=	sample volume	=	0.91 L
V_i	=	volume injected	=	2 uL

Therefore: phenanthrene concentration in water =

$$\frac{29587 \times 8ng \times 0.001L \times 1}{455985 \times 1.079 \times 0.91L \times 2uL}$$

C_w = 0.0003 ng/ul

C_w = **0.26** **ug/L**

Overview

The sample set for Martin State Airport, SDG C7K020180, consists of twenty-four (24) soil environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for select metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium and zinc, hexavalent chromium, perchlorate and percent solids. The samples were collected by Tetra Tech NUS on October 30 and 31, 2007 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7471A. Hexavalent chromium analyses were conducted using SW-846 method 7196A. Perchlorate analyses were conducted using EPA-DW1 314.0. Percent solids analyses were conducted using MCAWW 160.3 MOD.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike / matrix spike duplicate recoveries, laboratory duplicate results, ICP serial dilution results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems

- The contract required detection limit (CRDL) percent recoveries for beryllium and cadmium were > 110% quality control limit affecting all samples. The positive results < 2X CRDL reported for beryllium and cadmium were qualified as biased high, "K".

- The CRDL percent recovery for selenium was < 90% quality control limit affecting all samples. The positive results < 2X CRDL reported for selenium were qualified as estimated, "J", as a result of conflicting noncompliances.

- The CRDL percent recovery for silver was > 110% quality control limit affecting all samples. The positive results < 2X CRDL reported for silver were qualified as estimated, "J", as a result of conflicting noncompliances.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony	0.00036 mg/L	0.18 mg/kg
Arsenic[2]	0.018 mg/kg	0.09 mg/kg
Chromium[1]	0.023 mg/kg	0.115 mg/kg
Chromium[2]	0.014 mg/kg	0.07 mg/kg
Nickel[2]	0.016 mg/kg	0.08 mg/kg
Selenium[2]	0.14 mg/kg	0.7 mg/kg
Thallium	0.00004 mg/L	0.02 mg/kg
Thallium[1]	0.0025 mg/kg	0.0125 mg/kg
Zinc	0.00395 mg/L	1.975 mg/kg

[1] Maximum concentration present in a soil preparation blank affecting samples FMC-24, FMC-9, FMC-10, FMC-11, FMC-12, FMC-13, FMC-14, FMC-15, FMC-16, FMC-17, FMC-18 and FMC-19.

[2] Maximum concentration present in a soil preparation blank affecting samples FMC-20, FMC-21, FMC-22, FMC-23, FMC-3, FMC-4, FMC-5, FMC-6, FMC-7, FMC-8, FMC-25 and FMC-26.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for antimony, selenium and thallium were qualified "B" as a result of laboratory blank contamination.

- The matrix spike and / or matrix spike duplicate percent recoveries for selenium and zinc were < 75% quality control limit affecting samples FMC-20, FMC-21, FMC-22, FMC-23, FMC-3, FMC-4, FMC-5, FMC-6, FMC-7, FMC-8, FMC-25 and FMC-26. The positive results reported for selenium and zinc were qualified as estimated, "J", due to conflicting noncompliances.

- The ICP serial dilution percent differences for zinc were > 10% quality control limit affecting all samples. The positive results reported for zinc were qualified as estimated, "J".

- The percent solids for samples FMC-11, FMC-14, FMC-20, FMC-24, FMC-25, FMC-5, FMC-7, FMC-8 and FMC-9 were < 30%. The positive results reported for all analytes in the affected samples were qualified as estimated, "J".

Notes

The CRDL percent recovery for lead was < 90% quality control limit and the percent recovery for zinc was > 110% quality control limit affecting all samples. No validation actions were required as all results for lead and zinc were > 2X CRDL.

The matrix spike / matrix spike duplicate percent recoveries for antimony were < 75% quality control limit affecting all samples. No validation actions were warranted as all sample results reported for antimony were qualified as a result of blank contamination.

The matrix spike percent recoveries for hexavalent chromium for batches 7317191 and 7317305 were < 75% quality control limit. However, no validation actions were warranted as the original samples were not included within this SDG.

The nondetected results for hexavalent chromium were reported to the reporting limit.

Executive Summary

Laboratory Performance: Several CRDL percent recoveries were outside the 90-110% quality control limits. Several analytes were present in the laboratory method / preparation blanks.

Other Factors Affecting Data Quality: The matrix spike and / or matrix spike duplicate percent recoveries for selenium and zinc were < 75% quality control limit. The ICP serial dilution percent differences for zinc were > 10% quality control limit. The percent solids for samples FMC-11, FMC-14, FMC-20, FMC-24, FMC-25, FMC-5, FMC-7, FMC-8 and FMC-9 were < 30%.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O - Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DOT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

CASE NARRATIVE
TETRA TECH NUS, INC.
Martin State Airport

Lot #: C7K020180

The following report contains the analytical results for samples submitted to TestAmerica Pittsburgh by Tetra Tech NUS, INC. The samples were received November 2, 2007 according to documented sample acceptance procedures.

TestAmerica Pittsburgh utilizes only USEPA approved methods and instrumentation in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Sample Receiving:
The lot closed on November 2, 2007.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in the calibration verification standardCC6111007; but were within the expected performance range for these compounds: 2-Butanone 28.1% and Acetone 37.3%.

The method blank for batch 7314148 had methylene chloride detected below the reporting limit but above the MDL. The result was flagged with a "J" qualifier. Any sample associated with this blank that had methylene chloride detected had the result flagged with a "B" qualifier.

The LCS associated with batch 7314148 had acetone and acetone recover high and outside of criteria. All control compounds recovered within limits.

GC/MS Semivolatiles:
The following compounds associated with ICAL S111307LL827071used a quadratic curve which had a correlation coefficient of R^2 = .990 or R = .995 or were accepted with the client and/or QA approval: 2,4,5-Trichlorophenol, 2,4,6-Tribromophenol, 2,4-Dinitrophenol, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, 2-Nitroaniline, 2-Nitrophenol, 3,3-Dichlorobenzidine, 3-Nitroaniline, 4,6-Dinitro-2-methylphenol, 4-Nitroaniline, 4-Nitrophenol, Benzaldehyde, bis(2-Ethylhexyl) phthalate, Butyl benzyl phthalate, Caprolactam, Di-n-octyl phthalate and Pentachlorophenol.

GC/MS Semivolatiles(cont.):
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in the calibration verification standard F11280C2; but were within the expected performance range for these compounds: Hexachlorocyclopentadiene 25.2%, 2,4-Dinitrophenol 31.9%, 4-Nitroaniline 25.4% and 4,6-Dinitro-2-methylphenol 27.8%.

The following compound had the %D > 25% in the calibration verification standard S112307CCC; but was within the expected performance range for this compound: 2,4-Dinitrophenol 32.7%.

The following compound had the %D > 25% in the calibration verification standard S112707CCC; but was within the expected performance range for this compound: 2,4-Dinitrophenol 31.7%.

Due to the concentration of target compounds detected and/or matrix effect, several samples were analyzed at a dilution. Matrix effect was evident in the chromatogram.

The method blank for batch 7313027 had diethyl phthalate detected below the reporting limit but above the MDL. The result was flagged with a "J" qualifier. Any sample associated with this blank that had diethyl phthalate detected had the result flagged with a "B" qualifier.

The MS and/or MSD associated with sample FMC-15 had hexachlorocyclopentadiene and hexachloroethane recover low and outside of criteria. Acceptable LCS data demonstrates that the analytical system was operating in control; this condition is most likely due to a matrix effect.

PCBs:
There were no problems associated with the analysis.

Metals:
The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

Metals cont.
For FMC-24 matrix spike and matrix spike duplicate, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

For FMC-24 matrix spike and matrix spike duplicate, antimony recoveries were below the control limits.

For FMC-20 matrix spike and matrix spike duplicate, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

For FMC-20 matrix spike and matrix spike duplicate, antimony and selenium recoveries were below the control limits.

For FMC-20 matrix spike duplicate, zinc recovery was below the control limits.

General Chemistry:
TestAmerica, Knoxville, TN analyzed the perchlorate.

Organotins:
TestAmerica, Tacoma, WA analyzed the organotins.

METHODS SUMMARY

FMC 26	" "			X			X		X	X							X	X	X	X		

Possible Hazard Identification

☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☑ Unknown

Sample Disposal

☐ Return To Client ☑ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required

☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☒ 14 Days ☐ 21 Days ☐ Other _____

QC Requirements (Specify)

1. Relinquished By: Keith Samuels	Date: 11-01-07	Time: 1550	1. Received By: [signature] Date: 11-1-07 Time: 1600
2. Relinquished By: [signature]	Date: 11-1-07	Time: 19:30	2. Received By: [signature] Date: 11/2/07 Time: 920
3. Relinquished By:	Date:	Time:	3. Received By: Date: Time:

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Overview

The sample set for Martin State Ariport, SDG C7K020180 consists of two (2) trip blanks and twenty-four (24) solid samples. All samples were analyzed for target compound list (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCBs), and organo tin compounds (dibutyltin, monobutyltin, tetra-n-butyltin, and tributyltin).

The samples were collected by Tetra Tech NUS on October 30 and 31, 2007 and analyzed by Test America Corporation. All analyses were conducted in accordance with SW-846 Method 8260B, 8270C, and 8082 analytical and reporting protocols.

The data contained in this SDG were validated with regard to the following parameters: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike results, matrix spike / matrix spike duplicate results, chromatographic resolution, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major

- The matrix spike / matrix spike duplicate (MS/MSD) performed on sample FMC-15 had recoveries less than 10 percent for hexachlorocyclopentadiene. In addition, the relative percent difference (RPD) for hexachlorocyclopentadiene exceeded the quality control limit. The nondetected hexachlorocyclopentadiene result for sample FMC-15 has been rejected (UR).

Minor

- The following contaminants were detected in the trip or method blanks at the maximum concentration indicated below:

Compound	Concentration	Action Level
Acetone[1]	16 ug/L	160 ug/kg
Methylene chloride[2]	0.92 ug/L	9.2 ug/L
Toluene[1]	0.37 ug/L	3.7 ug/kg
Diethylphthalate[3]	3.3 ug/kg	33 ug/kg

[1] – Maximum contamination present in the trip blanks.
[2] – Maximum contamination present in the aqueous method blank.
[3] – Maximum contamination present in the soil method blank.

An action level of 10X the maximum contaminant concentration was established to evaluate laboratory contamination for acetone. Dilution factors, percent solids, and sample aliquots were taken into consideration during the application of all action levels. The acetone detections for samples FMC-11, FMC-25, FMC-26, FMC-7, and FMC-8 were qualified (B) as a result of blank contamination. The diethylphthalate detections for samples FMC-15, FMC-16, FMC-21, FMC-22, and FMC-24 were qualified (B) as a result of blank contamination. No action was taken on the field QC samples.

- Methylene chloride was not detected in the soil method blank. However, methylene chloride is considered a common laboratory contaminant. The methylene chloride results for samples FMC-25, FMC-26, FMC-7, FMC-8, and FMC-9 have been qualified as estimated (J).

- A SVOA initial calibration verification %RSD exceeded the 30% (and was >50%) quality control limit for hexachlorocyclopentadiene on instrument "722", on 11/23/07. The nondetected hexachlorocyclopentadiene results for samples FMC-7, FMC-8, FMC-25, and FMC-26 have been qualified as estimated (UJ).

- The laboratory control sample (LCS) associated with the aqueous samples had a percent recovery greater than the quality control limit for acetone. The positive acetone results for the Trip Blank#3 and Trip Blank#4 have been qualified as estimated (J).

- The VOC continuing calibration performed on 11/10/07 @ 12:26 exceeded the 25% difference (but and was <50%) quality control limit for acetone. Positive results for acetone were qualified as estimated (J) for samples Trip Blank#3 and Trip Blank#4.

- The percent solids were less than 30% for the following samples analyzed for the organotin fraction: FMC-10, FMC-11, FMC-13, FMC-18, FMC-19, FMC-20, FMC-24, FMC-25, FMC-5, FMC-7, and FMC-9. The positive and nondetected results for the aforementioned samples have been qualified as estimated (J) and (UJ), respectively.

- The percent solids were less than 30% for the following samples analyzed for the VOC, SVOC, and PCB fractions: FMC-11, FMC-14, FMC-20, FMC-24, FMC-25, FMC-5, FMC-7, FMC-8, and FMC-9. The positive and nondetected results for the aforementioned samples have been qualified as estimated (J) and (UJ), respectively.

Notes

The VOC continuing calibration performed on 11/10/07 @ 12:26 exceeded the 25% difference (but was <50%) quality control limit for 2-butanone. No action was taken on this basis because 2-butanone was not

detected in any associated samples.

The MS/MSD performed on sample FMC-15 had a percent recovery less than the quality control limit for hexachloroethane in the MSD. No action was taken on this basis because the MS had an acceptable recovery.

The MS/MSD performed on sample FMC-25 had a percent recovery less than the quality control limit for tetra-n-butyltin in the MSD. No action was taken on this basis because the MS had an acceptable recovery.

A SVOA initial calibration verification %RSD exceeded the 30% (but was <50%) quality control limit for 2,4-dinitrophenol on instrument "722", on 11/23/07. No action was taken on this basis.

The SVOC continuing calibration performed on instrument "722" on 11/28/07 @ 09:25 exceeded the 25% difference (but was <50%) quality control limit for hexachlorocyclopentadiene, 2,4-dinitrophenol, 4-nitroaniline, and 4,6-dinitro-2-methylphenol. No action was taken on this basis because aforementioned compounds were not detected in any associated samples.

The SVOC continuing calibration performed on instrument "71" on 11/23/07 @ 12:28 exceeded the 25% difference (but was <50%) quality control limit for hexachlorocyclopentadiene and 2,4-dinitrophenol. No action was taken on this basis because hexachlorocyclopentadiene and 2,4-dinitrophenol were not detected in the associated sample.

The SVOC continuing calibration performed on instrument "71" on 11/27/07 @ 12:38 exceeded the 25% difference (but was <50%) quality control limit for 2,4-dinitrophenol. No action was taken on this basis because 2,4-dinitrophenol was not detected in any associated samples.

Executive Summary

Laboratory Performance: Blank contamination in the VOC and SVOC fractions resulted in qualification of the data for several samples. Initial and continuing calibration %RSD or %D noncompliances in the VOC and SVOC fractions resulted in qualification of the data for several samples. Methylene chloride is a common laboratory contaminant and was qualified in several samples. A VOC LCS noncompliance for acetone resulted in qualification of two samples.

Other Factors Affecting Data Quality: A MS/MSD recovery noncompliance for one compound resulted in qualification of one SVOC compound in one sample. Percent solids less than 30% resulted in the qualification of data for several samples.

The data for these analyses were reviewed with reference to Region III modifications to U.S. EPA National Functional Guidelines for Organic Data Validation (Sept. 1994). The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

Organotins Organotins by GC/MS (PSEP) Protocol

Method: Organotins Analysis Batch: 580-25682 Instrument ID: SEA008
Preparation: Organotin Prep Prep Batch: 580-25378 Lab File ID: L25779.D
Dilution: 1.0 Initial Weight/Volume: 15.4490 g
Date Analyzed: 11/08/2007 0508 Final Weight/Volume: 20 mL
Date Prepared: 11/05/2007 1145 Injection Volume:

Analyte	DryWt Corrected: Y Result (ug/Kg)	Qualifier	MDL	RL
Dibutyltin	ND		1.3	4.9
Monobutyltin	ND		0.78	4.9
Tetra-n-butyltin	ND		4.5	13
Tributyltin	ND		1.3	4.9

Surrogate	%Rec	Acceptance Limits
Tripentyltin	54	42 - 192

Project Manager

December 6, 2007

NELAC REPORTING:

The format and content of the attached report meets NELAC standards and guidelines except as noted in the narrative. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
NFESC	NA	NAVY	X
USACE	NA	Corps of Engineers	X

West Virginia	(#142)	WW	X
		HW	X
Wisconsin	998027800	WW	X
		HW	X

The codes utilized for program types are described below:

HW Hazardous Waste certification
WW Non-potable Water and/or Wastewater certification
X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

Updated: 10/10/07

CASE NARRATIVE
TETRA TECH NUS, INC.
Martin State Airport

Lot #: C7K020180

The following report contains the analytical results for samples submitted to TestAmerica Pittsburgh by Tetra Tech NUS, INC. The samples were received November 2, 2007 according to documented sample acceptance procedures.

TestAmerica Pittsburgh utilizes only USEPA approved methods and instrumentation in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Sample Receiving:
The lot closed on November 2, 2007.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in the calibration verification standardCC6111007; but were within the expected performance range for these compounds: 2-Butanone 28.1% and Acetone 37.3%.

The method blank for batch 7314148 had methylene chloride detected below the reporting limit but above the MDL. The result was flagged with a "J" qualifier. Any sample associated with this blank that had methylene chloride detected had the result flagged with a "B" qualifier.

The LCS associated with batch 7314148 had acetone and acetone recover high and outside of criteria. All control compounds recovered within limits.

GC/MS Semivolatiles:
The following compounds associated with ICAL S111307LL827071used a quadratic curve which had a correlation coefficient of R^2 = .990 or R = .995 or were accepted with the client and/or QA approval: 2,4,5-Trichlorophenol, 2,4,6-Tribromophenol, 2,4-Dinitrophenol, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, 2-Nitroaniline, 2-Nitrophenol, 3,3-Dichlorobenzidine, 3-Nitroaniline, 4,6-Dinitro-2-methylphenol, 4-Nitroaniline, 4-Nitrophenol, Benzaldehyde, bis(2-Ethylhexyl) phthalate, Butyl benzyl phthalate, Caprolactam, Di-n-octyl phthalate and Pentachlorophenol.

GC/MS Semivolatiles(cont.):
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in the calibration verification standard F11280C2; but were within the expected performance range for these compounds: Hexachlorocyclopentadiene 25.2%, 2,4-Dinitrophenol 31.9%, 4-Nitroaniline 25.4% and 4,6-Dinitro-2-methylphenol 27.8%.

The following compound had the %D > 25% in the calibration verification standard S112307CCC; but was within the expected performance range for this compound: 2,4-Dinitrophenol 32.7%.

The following compound had the %D > 25% in the calibration verification standard S112707CCC; but was within the expected performance range for this compound: 2,4-Dinitrophenol 31.7%.

Due to the concentration of target compounds detected and/or matrix effect, several samples were analyzed at a dilution. Matrix effect was evident in the chromatogram.

The method blank for batch 7313027 had diethyl phthalate detected below the reporting limit but above the MDL. The result was flagged with a "J" qualifier. Any sample associated with this blank that had diethyl phthalate detected had the result flagged with a "B" qualifier.

The MS and/or MSD associated with sample FMC-15 had hexachlorocyclopentadiene and hexachloroethane recover low and outside of criteria. Acceptable LCS data demonstrates that the analytical system was operating in control; this condition is most likely due to a matrix effect.

PCBs:
There were no problems associated with the analysis.

Metals:
The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

Metals cont.
For FMC-24 matrix spike and matrix spike duplicate, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

For FMC-24 matrix spike and matrix spike duplicate, antimony recoveries were below the control limits.

For FMC-20 matrix spike and matrix spike duplicate, lead recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

For FMC-20 matrix spike and matrix spike duplicate, antimony and selenium recoveries were below the control limits.

For FMC-20 matrix spike duplicate, zinc recovery was below the control limits.

General Chemistry:
TestAmerica, Knoxville, TN analyzed the perchlorate.

Organotins:
TestAmerica, Tacoma, WA analyzed the organotins.

METHODS SUMMARY

C7K020180

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
Hexavalent Chromium	SW846 7196A	SW846 3060A
ICP-MS (6020)	SW846 6020	SW846 3050B

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Cooler Receipt Form

STL Pittsburgh

Client: TTNUS Project: Martin St Airport Quote: 77040

Cooler Rec'd & Opened for Temp. Check on: 11/2/07

Coolers Opened and Unpacked on: 11/2/07 By: _____ (Signature)

STL Pittsburgh Lot Number: C7K020180

		Yes	No
1.	Were custody seals on the outside of the cooler?	✓	
	If YES, how many and where? Quantity 2 Location Front		
	Were signatures and date correct?	✓	
2.	Were custody papers included inside the cooler? not all coolers	✓	
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓	
4.	Did you sign the custody papers in the appropriate place?	✓	
5.	Was shippers packing slip attached to this form?		✓
6.	Were packing materials used?	✓	
	If YES, what type? Bubble Bags		
7.	Were the samples chilled? (Record temperatures on reverse side.)	✓	
8.	Were the samples appropriately preserved?	NA	
9.	Were all bottles sealed in separate plastic bags?	✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓	
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓	
12.	Did all bottle labels and/or tags agree with custody papers?	✓	
13.	Were correct bottles used for tests indicated?	✓	
14.	Were all VOA vials checked for the presence of air bubbles? T.B	✓	
15.	Was a sufficient amount of sample sent in each bottle?	✓	

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

Cooler Receipt Form

STL Pittsburgh

P: Preserved

UP: Unpreserved

INITIAL CALIBRATION DATA

Start Cal Date : 14-NOV-2007 01:06
End Cal Date : 14-NOV-2007 03:00
Quant Method : ISTD
Origin : Included
Target Version : 4.14
Integrator : HP RTE
Method file : \\PITSVR06\D\chem\71.i\s111307a.b\11b.m
Last Edit : 29-Nov-2007 14:28 bachas

Curve	Formula	Units
Averaged	Amt = Rsp/m1	Response
Quad	Amt = b + m1*Rsp + m2*Rsp^2	Response

FORM 5
SEMIVOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
DECAFLUOROTRIPHENYLPHOSPHINE (DFTPP)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.: C7K020180

Lab File ID: B1123DF1 DFTPP Injection Date: 11/23/07

Instrument ID: 71 DFTPP Injection Time: 1216

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
51	30.0 - 60.0% of mass 198	41.0
68	Less than 2.0% of mass 69	0.6 (1.4)1
69	Mass 69 relative abundance	41.3
70	Less than 2.0% of mass 69	0.3 (0.8)1
127	40.0 - 60.0% of mass 198	56.3
197	Less than 1.0% of mass 198	0.0
198	Base Peak, 100% relative abundance	100.0
199	5.0 to 9.0% of mass 198	7.0
275	10.0 - 30.0% of mass 198	21.9
365	Greater than 1.0% of mass 198	3.42
441	Present, but less than mass 443	13.9
442	40.0 - 100.0% of mass 198	83.8
443	17.0 - 23.0% of mass 442	16.2 (19.3)2

1-Value is % mass 69 2-Value is % mass 442

Project: Martin State Airport

Report Number: 580-8004-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

The samples were originally shipped to TestAmerica Burlington, and forwarded to TestAmerica Tacoma, where they were received on 11/03/2007. The samples arrived in good condition, except for FMC 23, which was broken prior to receipt by TestAmerica Burlington. The samples were properly preserved and on ice. The temperatures of the coolers at receipt were 3.1 °C and –1.4 °C. Additional sample volume for sample FMC 23 was received from TestAmerica Pittsburgh on 11/07/2007, cooler temperatire was 3.3 °C.

ORGANOTINS BY GC/MS

Samples 580-8004-1 through 580-8004-24 were analyzed for organotins by GC/MS in accordance with the Krone Method. The samples were prepared on 11/05/2007 and 11/07/2007 and analyzed on 11/07/2007 and 11/08/2007.

Tetra-n-butyltin failed the MS/MSD recovery criteria low for the matrix spike duplicate of sample 580-8004-1. Tetra-n-butyltin exceeded the MS/MSD RPD limit, due to the low recovery of this analyte in the MSD. No corrective action was taken, as the recoveries and RPD for the LCS/LCSD were acceptable.

No other difficulties were encountered during the organotin analyses.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples 580-8004-1 through 580-8004-24 were analyzed for percent solids in accordance with EPA Method 160.3 Modified. The samples were analyzed on 11/07/2007 and 11/08/2007.

No difficulties were encountered during the percent solids analyses.

All quality control parameters were within the acceptance limits.

This case narrative is available in Word format upon request.

Kris,

We do not have anyone here at the lab on Saturdays, so would appreciate you sending the samples according to the attached. I will be coming into the lab about midday, and can stop and pick any coolers up on my way in.

Subject: RE: TestAmerica Pittsburgh - Quote #18001572 - Tetra Tech NUS Inc - Martin State Airport Add-on Proposal

Veronica,

We need a 4 oz glass jar for the tributyltins. By the way, now that we're TestAmerica, we're called 'Tacoma' instead of 'Seattle' (although the quote module still calls us Seattle).

We aren't sure about TtNUS version 7 EDD. We haven't done any work for TtNUS out here - we looked at the EDD specs that Barb had sent us and they look relatively easy, but we don't see this option in TALS. We will forward the specifications to the TALS helpdesk to see what they can do, but this is not usually a quick fix. Otherwise, we might be able to take our STL Standard EDD out of TALS and tweak it a little.

The bottom line is we can get the analysis done in 7 days, but not sure on the EDD.

Kathy

John/ Kathy,

what type of bottles do you need for the parameters that are coming your way? (perchlorates KNOX; tributyltins SEA) Kathy, can Seattle provide the client with the TTNUS version 7 EDD?

Overview

The sample set for Martin State Airport, SDG C7K020216, consists of fifteen (15) aqueous environmental samples. No field duplicate pairs were included within this SDG.

All samples were analyzed for select total and dissolved metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium and zinc. The samples were collected by Tetra Tech NUS on October 30, 31 and November 1, 2007 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6020. Mercury analyses were conducted using SW-846 method 7470A.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample recoveries, matrix spike / matrix spike duplicate recoveries, ICP serial dilution results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems – None.

Minor Problems

- The contract required detection limit (CRDL) percent recoveries for arsenic and nickel were > 110% quality control limit affecting all samples. Positive results < 2X CRDL reported for the aforementioned analytes were qualified as biased high, "K".

- The CRDL percent recovery for lead was < 90% quality control limit affecting all samples. Positive results < 2X CRDL and nondetects reported for lead were qualified as biased low, "L" and "UL", respectively.

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony	0.28 ug/L	1.4 ug/L
Arsenic	0.26 ug/L	1.3 ug/L
Chromium	0.36 ug/L	1.8 ug/L
Chromium[(2)]	0.40 ug/L	2.0 ug/L
Copper	0.16 ug/L	0.8 ug/L
Lead	0.04 ug/L	0.2 ug/L
Mercury[(1)]	0.059 ug/L	0.295 ug/L
Selenium	1.08 ug/L	5.4 ug/L
Thallium	0.05 ug/L	0.25 ug/L
Zinc[(1)]	1.6 ug/L	8.0 ug/L

(1) Maximum concentration present in a total metals preparation blank.
(2) Maximum concentration present in a dissolved metals preparation blank.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for antimony, lead, mercury, thallium and zinc were qualified "B" as a result of laboratory blank contamination.

- The matrix spike / matrix spike duplicate percent recoveries for mercury were < 75% quality control limit affecting the total metals analyses. The nondetected results reported for mercury in the affected samples were qualified as biased low, "UL".

Notes

The nondetected results on the EDD were reported to the reporting limit. The nondetected results should be reported to the method detection limit (MDL). The results reported on the EDD were amended to the MDL.

Executive Summary

Laboratory Performance: The CRDL percent recoveries for arsenic, lead and nickel were outside the 90-110% quality control limits. Several analytes were present in the laboratory method / preparation blanks.

Other Factors Affecting Data Quality: The matrix spike / matrix spike duplicate percent recoveries for mercury were < 75% quality control limit affecting the total metals analyses.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993.

The text of this report has been formulated to address only those problem areas affecting data quality.

Quality Assurance Officer

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O - Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DOT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

CASE NARRATIVE
TETRA TECH NUS, INC.
Martin State Airport

Lot #: C7K020216

The following report contains the analytical results for samples submitted to TestAmerica Pittsburgh by Tetra Tech NUS, INC. The samples were received November 2, 2007 according to documented sample acceptance procedures.

TestAmerica Pittsburgh utilizes only USEPA approved methods and instrumentation in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

Sample Receiving:
The lot closed on November 2, 2007.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The LCS associated with batch 7312657 had acetone and 1,2-dibromoethane recover high and outside of criteria. All control compounds recovered within limits.

GC/MS Semivolatiles:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compounds had the %D > 25% in the calibration verification standard N11210CC; but were within expected performance range for these compounds: 4-Nitrophenol 40.4% and N-Nitrosodimethylamine 32.1%.

The following compound had the %D > 25% in the calibration verification standard N11220CC; but was within expected performance range for this compound: 4-Nitrophenol 27.4%.

GC/MS Semivolatiles cont.:
The following compound had the %D > 25% in the calibration verification standard V11270CC; but was within expected performance range for this compound: 2,4-Nitrophenol 25.7%.

PCBs:
There were no problems associated with the analysis.

Metals:
The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

METHODS SUMMARY

C7K020216

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
ICP-MS (6020)	SW846 6020	SW846 3005A
ICP-MS (6020)	SW846 6020	SW846 3010
Mercury in Liquid Waste (Manual Cold-Vapor)	SW846 7470A	SW846 7470A
PCBs by SW-846 8082	SW846 8082	SW846 3510C
Semivolatile Organics GCMS BNA 8270C	SW846 8270C	
Volatile Organics by GC/MS	SW846 8260B	SW846 5030B/826

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Overview

The sample set for Frog Mortar Point, SDG C8H010190, consists of twenty-three (23) sediment environmental samples, four (4) aqueous environmental samples and one trip blank (TB-073108). No field duplicate pairs were included within this SDG.

All samples, with the exception of TB-073108 were analyzed for volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs) and polychlorinated biphenyls (PCBs). Sample TB-073108 was analyzed for VOCs. The samples were collected by Tetra Tech NUS on July 30 and 31, 2008 and analyzed by Test America. VOC analyses were conducted using SW-846 method 8260B. PAH analyses were conducted using SW-846 method 8270C. PCB analyses were conducted using SW-846 method 8082.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, GC/MS tuning, initial and continuing calibration verification results, laboratory method / trip blank results, laboratory control sample recoveries, matrix spike / matrix spike duplicate recoveries, surrogate recoveries, internal standard recoveries, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The following contaminants were detected in the laboratory method / trip blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level (aqueous)	Action Level (soil)
1,2-dichloroethane[(1)]	0.57 ug/L	2.85 ug/L	2.85 mg/kg
Acetone[(1)]	3.4 ug/L	34 ug/L	34 mg/kg
Methylene chloride[(1)]	3.6 ug/L	36 ug/L	36 mg/kg
Trichloroethene[(1)]	0.51 ug/L	2.55 ug/L	2.55 mg/kg
Phenanthrene[(2)]	0.038 ug/L	0.415 ug/L	
Benzo(b)fluoranthene[(2)]	0.031 ug/L	0.155 ug/L	

(1) Maximum concentration present in a trip blank.
(2) Maximum concentration affecting samples FMC-III-SW-27, FMC-III-SW-28, FMC-III-SW-30 and FMC-III-SW-32.

An action level of 5X the maximum contaminant level (10X for common laboratory contaminants) has been used to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for acetone, methylene chloride, trichloroethene and phenanthrene were qualified "B" as a result of laboratory blank contamination.

- The matrix spike duplicate percent recovery for pyrene was < 10% quality control limit for sample FMC-III-SED-28B. The positive result reported for pyrene in the affected sample was qualified as biased low, "L".

Notes

The continuing calibration %D on 08-07-08 @ 05:43 on instrument HP3 for carbon disulfide was > 25% quality control limit affecting samples FMC-III-SED-32C, FMC-III-SED-35A, FMC-III-SED-35B and FMC-III-SED-35C. No validation actions were warranted as all sample results were nondetects.

The continuing calibration %D on 8-12-08 @ 4:44 on instrument GC10 column MR-1 for Aroclor-1016 was > 15% quality control limit affecting samples FMC-III-SED-30B, FMC-III-SED-30C, FMC-III-SED-32A, FMC-III-SED-32B, FMC-III-SED-32C, FMC-III-SW-27, FMC-III-SW-28, FMC-III-SW-30 and FMC-III-SW-32. No validation actions were warranted as all results in the affected samples were nondetects.

Positive results reported below the reporting limit (RL) but above the method detection limit (MDL) for the organic analyses were qualified as estimated, "J".

Several PAH and pesticide samples were analyzed at dilutions.

For the PAH analyses the surrogates were diluted out of the following samples: FMC-III-SED-27A, FMC-III-SED-27B, FMC-III-SED-27C and FMC-III-SED-28A. No validation actions were warranted.

Nondetected results were reported to the reporting limit.

Executive Summary

Laboratory Performance: Several contaminants were present in the method / trip blanks.

Other Factors Affecting Data Quality: The matrix spike duplicate percent recovery for pyrene was < 10% quality control limit for sample FMC-III-SED-28B.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional guidelines for Organic Data Review", September 1994.

The text of this report has been formulated to address only those problem areas affecting data quality.

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O - Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DOT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
FROG MORTOR CREEK

Lot #: C8H010190

The following report contains the analytical results for samples submitted to TestAmerica-Pittsburgh by Tetra Tech NUS, Inc. The samples were received August 1, 2008 according to documented sample acceptance procedures.

TestAmerica-Pittsburgh utilizes only USEPA approved methods and instrumentation in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

SAMPLE RECEIVING:
The lot closed on August 1, 2008.

GC/MS VOLATILES:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compound had the %D >25% in continuing calibration standard CC30807; but was within the expected performance range for this compound: carbon disulfide 29.4%.

GC/MS SEMIVOLATILES:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution.

Several samples had the surrogates diluted out.

The matrix spike duplicate of sample FMC-III-SED-28B recovered outside of the control limits for pyrene.

The method blank for batch 8217238 had phenanthrene and benzo(b)fluoranthene detected between the MDL and the reporting limit. The results were flagged with a "J" qualifier. Any sample in this batch that had these compounds detected had the results flagged with a "B" qualifier.

GC/MS SEMIVOLATILES (cont):
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

PCBS:
Ending continuing calibration standard S0880250 had AR1016 with a %D of 17.4% and tetrachloro-m-xylene with a %D of 20.1%. These did not meet the 15%D criteria. The samples were analyzed twice with the continuing calibration standard not meeting criteria. Only one set of data is reported.

METALS:
The serial dilution of sample FMC-III-SW-27 (total and dissolved) was outside of the percent difference control limits for chromium. The result was flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

GENERAL CHEMISTRY:
There were no problems associated with the analysis.

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
BROMOFLUOROBENZENE (BFB)

Lab Name: TESTAMERICA PITTSBURGH Contract:

Lab Code: TA Case No.: SAS No.: SDG No.: METHODS

Lab File ID: BF30628 BFB Injection Date: 06/28/08

Instrument ID: HP3 BFB Injection Time: 0933

GC Column: DB624 20M ID: 0.18 (mm) Heated Purge: (Y/N) Y

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	18.0
75	30.0 - 60.0% of mass 95	46.4
95	Base Peak, 100% relative abundance	100.0
96	5.0 - 9.0% of mass 95	6.8
173	Less than 2.0% of mass 174	0.0 (0.0)1
174	50.0 - 100.0% of mass 95	73.4
175	5.0 - 9.0% of mass 174	5.4 (7.4)1
176	95.0 - 101.0% of mass 174	71.2 (97.0)1
177	5.0 - 9.0% of mass 176	4.9 (7.0)2

1-Value is % mass 174 2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD, BLANKS, AND STANDARDS:

Calculations are performed before rounding to avoid round-off errors in calculated results.

SW846 8260B METHOD BLANK SUMMARY

BLANK WORKORDER NO.: KT0CE1AA

Lab Name: TestAmerica Laboratories, Inc.

Lab Code: TALPIT

SDG Number:

Lab File ID: 6081104.D

Lot Number: C8H010190

Date Analyzed: 08/11/08

Time Analyzed: 13:46

Matrix: WATER

Date Extracted: 08/11/08

GC Column: RTX-624 ID: .18

Extraction Method: 5030B/8260B

Instrument ID: HP6

Level: (low/med) LOW

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, LCS, LCSD, MS , MSD:

	CLIENT ID.	SAMPLE WORK ORDER #	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

SW846 8270C METHOD BLANK SUMMARY

BLANK WORKORDER NO.: KTKJ61AA

Lab Name: TestAmerica Laboratories, Inc.

Lab Code: TALPIT

SDG Number:

Lab File ID: D0806011.

Lot Number: C8H010190

Date Analyzed: 08/06/08

Time Analyzed: 11:28

Matrix: WATER

Date Extracted:08/04/08

GC Column: DB5 ID: .32

Extraction Method:

Instrument ID: 732

Level:(low/med) LOW

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, LCS, LCSD, MS , MSD:

	CLIENT ID.	SAMPLE WORK ORDER #	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

Overview

The sample set for Frog Mortar Point, SDG C8H01090, consists of twenty-three (23) sediment environmental samples and four (4) aqueous samples. No field duplicate pairs were included within this SDG.

All soil samples were analyzed for percent solids. All aqueous samples were analyzed for select total and dissolved metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium and zinc. The samples were collected by Tetra Tech NUS on July 30 and 31, 2008 and analyzed by Test America. Metals analyses were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 method 7471A. Percent solids analyses were conducted using Standard Method 20 2540G.

The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, initial and continuing calibration verification results, laboratory method / preparation blank results, ICP interference results, laboratory control sample laboratory control sample duplicate recoveries, matrix spike / matrix spike duplicate recoveries, laboratory duplicate results, ICP serial dilution results, detection limits and analyte quantitation.

Areas of concern with respect to data quality are listed below.

Major Problems

None.

Minor Problems

- The contract required detection limit (CRDL) percent recovery for nickel was < 90% quality control limit. The positive results < 2X CRDL reported for nickel were qualified as biased low, "L".

- The CRDL percent recovery for dissolved mercury was < 80% quality control limit. The nondetected results reported for mercury were qualified as biased low, "UL".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony	0.10 ug/L	0.50 ug/L
Cadmium	0.11 ug/L	0.55 ug/L
Chromium[(1)]	1.2 ug/L	5.0 ug/L
Chromium[(2)]	1.1 ug/L	5.5 ug/L
Selenium	0.42 ug/L	2.1 ug/L
Selenium[(1)]	0.57 ug/L	3.42 ug/L
Thallium	0.08 ug/L	0.4 ug/L

[(1)] Maximum concentration present in a total metals preparation blank.
[(2)] Maximum concentration present in a dissolved metals preparation blank.

An action level of 5X the maximum contaminant level has been used to evaluate sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the blank action level reported for antimony, cadmium and thallium were qualified "B" as a result of laboratory blank contamination.

- The ICP serial dilution percent differences were > 10% and the sample results were > 50X the method detection limit for the total and dissolved chromium analyses. The positive results reported for chromium were qualified as estimated, "J".

Notes

For the metals analyses, the nondetected results reported on the EDD were reported to the CRDL. The EDD was amended to report MDLs.

The CRDL percent recovery for chromium was < 90% quality control limit. No validation actions were warranted as all sample results were > 2X CRDL.

The CRDL percent recovery for arsenic was > 110% quality control limit. No validation actions were warranted as all sample results were > 2X CRDL.

Executive Summary

Laboratory Performance: Several CRDL percent recoveries were outside the quality control limits. Several contaminants were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: The ICP serial dilution percent differences were > 10% and the sample results were > 50X the method detection limit for the total and dissolved chromium analyses.

The data for these analyses were reviewed with reference to Region III modifications to the "National Functional Guidelines for Inorganic Data Validation", April 1993 and the "National Functional guidelines for Organic Data Review", September 1994.

The text of this report has been formulated to address only those problem areas affecting data quality.

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Data Validation Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS-GFAA MSA's r < 0.995 / ICP PDS Recovery Noncompliance
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O - Poor Instrument Performance (e.g. base-line drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DOT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient r < 0.995
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is greater than sample activity

APPENDIX C
SUPPORT DOCUMENTATION

CASE NARRATIVE
TETRA TECH NUS, INC.
FROG MORTOR CREEK

Lot #: C8H010190

The following report contains the analytical results for samples submitted to TestAmerica-Pittsburgh by Tetra Tech NUS, Inc. The samples were received August 1, 2008 according to documented sample acceptance procedures.

TestAmerica-Pittsburgh utilizes only USEPA approved methods and instrumentation in all analytical work. The samples presented in this report were analyzed for the parameters listed on the method reference page in accordance with the methods indicated.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

SAMPLE RECEIVING:
The lot closed on August 1, 2008.

GC/MS VOLATILES:
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

The following compound had the %D >25% in continuing calibration standard CC30807; but was within the expected performance range for this compound: carbon disulfide 29.4%.

GC/MS SEMIVOLATILES:
Due to the concentration of target compounds detected and/or matrix, several samples were analyzed at a dilution.

Several samples had the surrogates diluted out.

The matrix spike duplicate of sample FMC-III-SED-28B recovered outside of the control limits for pyrene.

The method blank for batch 8217238 had phenanthrene and benzo(b)fluoranthene detected between the MDL and the reporting limit. The results were flagged with a "J" qualifier. Any sample in this batch that had these compounds detected had the results flagged with a "B" qualifier.

GC/MS SEMIVOLATILES (cont):
All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use an average response factor curve if no visible improvement is accomplished using a quadratic curve. A quadratic curve will be used for a compound where it is determined to be the "best-fit" evaluation.

PCBS:
Ending continuing calibration standard S0880250 had AR1016 with a %D of 17.4% and tetrachloro-m-xylene with a %D of 20.1%. These did not meet the 15%D criteria. The samples were analyzed twice with the continuing calibration standard not meeting criteria. Only one set of data is reported.

METALS:
The serial dilution of sample FMC-III-SW-27 (total and dissolved) was outside of the percent difference control limits for chromium. The result was flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

GENERAL CHEMISTRY:
There were no problems associated with the analysis.

METHODS SUMMARY

C8H010190

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
ICP-MS (6020)	SW846 6020	SW846 3005A

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.
