EW Totals	**164.1**		**234,383**				

	Value	Total (KGal)	Peak Flow
FIT-100	169 GPM	241.8	187 GPM
FIT-500	255 GPM	236.1	271 GPM
Effluent Temp	96.5 °F		
Effluent pH	6.3		

Recharge and Injection Daily Report

September 1, 2014 6AM to September 2, 2014 6AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	0 GPM	0.0
RC-7003	FIT-665	4 GPM	5.2
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

September 1, 2014 6AM to September 2, 2014 6AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	10.1
Permeate Flow	FIT-642	0 GPM	7.4
Concentrate Flow	FIT-643	0 GPM	2.4

Inlet Conductivity	CIT-630	1,053.0 µS
Outlet Conductivity	CIT-642	24.9 µS
Hours Run		1.2 hrs
Recharge Tank pH	AIT-660A	5.6
Recharge Tank Temp	TIT-660C	95.7 ℉

Note to operator: Please print out manual daily log and populate fields.

RO System Daily Operation Report

November 7, 2014 6AM to November 8, 2014 6AM

		Value	Total (KGal)
Flow In	FIT-600	94 GPM	18.0
Permeate Flow	FIT-642	73 GPM	13.4
Concentrate Flow	FIT-643	19 GPM	4.2

Inlet Conductivity	CIT-630	1,060.2 µS
Outlet Conductivity	CIT-642	23.2 µS
Hours Run		3.0 hrs
Recharge Tank pH	AIT-660A	5.9
Recharge Tank Temp	TIT-660C	95.3 ℉

Note to operator: Please print out manual daily log and populate fields.

Recharge and Injection Daily Report

February 8, 2015 6AM to February 9, 2015 6AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	0 GPM	0.0
RC-7003	FIT-665	0 GPM	0.0
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

February 8, 2015 6AM to February 9, 2015 6AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	0.0
Permeate Flow	FIT-642	0 GPM	0.0
Concentrate Flow	FIT-643	0 GPM	0.0

Inlet Conductivity	CIT-630	1,107.4 µS
Outlet Conductivity	CIT-642	370.4 µS
Hours Run		0.0 hrs
Recharge Tank pH	AIT-660A	6.1
Recharge Tank Temp	TIT-660C	83.5 ℉

Note to operator: Please print out manual daily log and populate fields.

Recharge and Injection Daily Report

March 5, 2015 6AM to March 6, 2015 6AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	0 GPM	0.0
RC-7003	FIT-665	19 GPM	16.3
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

March 5, 2015 6AM to March 6, 2015 6AM

		Value	Total (KGal)
Flow In	FIT-600	98 GPM	24.0
Permeate Flow	FIT-642	71 GPM	17.3
Concentrate Flow	FIT-643	25 GPM	6.1

Inlet Conductivity	CIT-630	1,007.5 µS
Outlet Conductivity	CIT-642	31.3 µS
Hours Run		4.0 hrs
Recharge Tank pH	AIT-660A	5.5
Recharge Tank Temp	TIT-660C	94.9 ℉

Note to operator: Please print out manual daily log and populate fields.

Recharge and Injection Daily Report

April 15, 2015 6AM to April 16, 2015 6AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	29 GPM	0.0
RC-7003	FIT-665	30 GPM	26.5
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

April 15, 2015 6AM to April 16, 2015 6AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	40.8
Permeate Flow	FIT-642	0 GPM	29.4
Concentrate Flow	FIT-643	0 GPM	10.4

Inlet Conductivity	CIT-630	1,025.5 µS
Outlet Conductivity	CIT-642	36.2 µS
Hours Run		6.5 hrs
Recharge Tank pH	AIT-660A	5.4
Recharge Tank Temp	TIT-660C	95.3 ℉

Note to operator: Please print out manual daily log and populate fields.

EW Totals	**155.1**		**211,254**				

	Value	Total (KGal)	Peak Flow
FIT-100	155 GPM	211.4	159 GPM
FIT-500	208 GPM	184.6	274 GPM
Effluent Temp	97.2 °F		
Effluent pH	6.3		

Recharge and Injection Daily Report

June 17, 2015 6AM to June 18, 2015 6AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	0 GPM	0.0
RC-7003	FIT-665	0 GPM	24.3
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

June 17, 2015 6AM to June 18, 2015 6AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	34.2
Permeate Flow	FIT-642	0 GPM	24.5
Concentrate Flow	FIT-643	0 GPM	9.0

Inlet Conductivity	CIT-630	1,021.7 µS
Outlet Conductivity	CIT-642	244.8 µS
Hours Run		7.2 hrs
Recharge Tank pH	AIT-660A	5.8
Recharge Tank Temp	TIT-660C	96.6 ℉

Recharge and Injection Daily Report

August 26, 2015 6AM to August 27, 2015 6AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	39 GPM	0.0
RC-7003	FIT-665	40 GPM	28.8
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

August 26, 2015 6AM to August 27, 2015 6AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	40.7
Permeate Flow	FIT-642	0 GPM	29.5
Concentrate Flow	FIT-643	0 GPM	10.5

Inlet Conductivity	CIT-630	981.8 µS
Outlet Conductivity	CIT-642	221.7 µS
Hours Run		6.9 hrs
Recharge Tank pH	AIT-660A	5.3
Recharge Tank Temp	TIT-660C	97.0 ℉

Note to operator: Please print out manual daily log and populate fields.

APPENDIX B – MANATEE COUNTY DISCHARGE PERMIT #IW-0025S

MANATEE COUNTY INDUSTRIAL PRETREAMENT PROGRAM

CERTIFICATION STATEMENT

This statement **MUST** be attached to each and every periodic compliance report and must be signed by an authorized responsible person for the discharging company.

Industrial User Name: Lockheed Martin Corporation

Address: Lockheed Martin Corporation 1600 Tallevast Road
Sarasota, FL 34243

Discharge Permit No: IW-0025S

Date: October 13, 2015

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is to the best knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violation."

Signed: Paul E. Calf

Title: Project Lead, Environmental Remediation

RECEIVED
DEC 03 2012
ON THIS DATE

MANATEE COUNTY
FLORIDA

MANATEE COUNTY UTILITIES DEPARTMENT
OFFICE OF INDUSTRIAL COMPLIANCE

PERMIT: IW 0025S

In accordance with the provisions of the Manatee County Sewer Use Ordinance:

Lockheed Martin Corporation
1600 Tallevast Road
Sarasota, FL 34243

Is hereby authorized to discharge pretreated groundwater from the **former American Beryllium Company site located at the above address** into the Manatee County Utilities Department sanitary sewer system in accordance with the conditions set forth in this permit. Compliance with this permit does not relieve the permitee of its obligation to comply with any or all applicable pretreatment regulations, standards or requirements under local, State or Federal laws, including any such regulations, standards, requirements or laws that may become effective during the term of this permit

Non-compliance with any term or condition of this permit shall constitute a clear and direct violation of the Manatee County Utilities Department's Sewer Use Ordinance.

This permit shall become effective on: **November 9, 2012** and shall expire at midnight on: **November 8, 2015.**

If the permitee wishes to continue to discharge after the expiration date of this permit, an application must be filed for a renewal permit in accordance with the requirements of the Manatee County Sewer Use Ordinance, a minimum of **60 days** prior to the expiration date.

Jeff Goodwin, Wastewater Division Manager

Revised this 26th day of November 2012

MANATEE COUNTY UTILITIES OFFICE OF INDUSTRIAL COMPLIANCE

PART 1 – DESCRIPTION AND REGULATION OF OPERATION

A. **Lockheed Martin Corporation, owner of the former American Beryllium Company site located at 1600 Tallevast Road, Sarasota, FL 34243** is identified for the purposes of this wastewater discharge permit as a **Significant Industrial User.** The facility will treat impacted groundwater. The discharge will be directed to the Southwest Water Reclamation Facility.

B. **Lockheed Martin Corporation** is identified as a **Significant Industrial User** under the definitions contained in **40 CFR 403.3, F.A.C. 62-625.200** and the **Manatee County Sewer Use Ordinance.**

C. All relevant process wastewater must pass through all pretreatment processes as submitted in the wastewater discharge permit application dated **June 4, 2012.** No pretreatment process (es) may be bypassed without the prior written permission of the Director.

D. Wastestreams from the facility consist of the following:

1. **Pretreated groundwater.**
2. **Facility sanitary waste.**

E. This permit is issued for a specific operation(s) as submitted in the wastewater discharge permit application dated **June 4, 2012.** If the permitee wishes to discharge any other types of wastewater, a written request must be submitted to the County's Office of Industrial Compliance in advance. Failure to notify the County may result in enforcement actions up to and including termination of this wastewater discharge permit.

PART 2 – EFFLUENT LIMITATIONS

A. During the period of **November 9, 2012** to **November 8, 2015** the permitee is authorized to discharge treated wastewater into the Manatee County's Sanitary Sewer System from the discharge location listed below.

Description of outfall:

001 – Sample port on the effluent discharge line downstream from the effluent flow meter as identified in the schematic DI-009 provided with the discharge permit application dated June 4, 2012.

B. During the period of **November 9, 2012** to **November 8, 2015** the discharge from **outfall 001** shall not exceed the following effluent limitations applied to end of pipe.

Effluent Limits

Parameter	Units	Daily Minimum	Daily Maximum	Monthly Average	Applicable Standard
pH	SU	5.0	11.5	N/A	Local limit
[1]flow	gpd	N/A	432,000	N/A	N/A
1,4-Dioxane	mg/L	N/A	Report	N/A	N/A

Trichloroethene	mg/L	N/A	0.003	N/A	Primary Drinking Water Standard
Tetrachloroethene	mg/L	N/A	0.003	N/A	Primary Drinking Water Standard
1,1-Dichloroethene	mg/L	N/A	0.007	N/A	Primary Drinking Water Standard
1,1-Dichloroethane	mg/L	N/A	0.070	N/A	Groundwater Clean Up Target Level (62-777 F.A.C.)
cis 1,2-Dichloroethene	mg/L	N/A	0.070	N/A	Primary Drinking Water Standard
Vinyl chloride	mg/L	N/A	0.001	N/A	Primary Drinking Water Standard
Aluminum (total)	mg/L	N/A	Report	N/A	N/A
Arsenic (total)	mg/L	N/A	2.51	N/A	Local limit
Beryllium (total)	mg/L	N/A	0.004	N/A	Primary Drinking Water Standard
Cadmium (total)	mg/L	N/A	0.73	N/A	Local limit
Chromium (total)	mg/L	N/A	9.90	N/A	Local limit
Copper (total)	mg/L	N/A	28.48	N/A	Local limit
Lead (total)	mg/L	N/A	1.87	N/A	Local limit
Nickel (total)	mg/L	N/A	11.08	N/A	Local limit
Zinc (total)	mg/L	N/A	4.78	N/A	Local limit
Molybdenum (total)	mg/L	N/A	1.26	N/A	Local limit

[1]Flow may not exceed 300 gallons per minute (gpm)

C. All discharges shall comply with all other applicable laws, regulations, standards and requirements contained in the most recent version of the Manatee County Sewer Use Ordinance and any applicable State and Federal pretreatment laws, regulations, standards and requirements, including any such laws, regulations, standards or requirements that may become effective during the term of this permit.

PART 3 – MONITORING REQUIREMENTS

A. From the period beginning on the effective date of the permit until **November 8, 2015** the permitee shall monitor **outfall 001** for the following parameters at the indicated frequency.

B.

Sample Parameter	Frequency	Sample Type
[1]flow	continuous	metered
[2]pH	continuous	metered
[3]1,4-Dioxane	Quarterly	Grab
Trichloroethene	Quarterly	Grab
Tetrachloroethene	Quarterly	Grab
1,1-Dichloroethene	Quarterly	Grab
1,1-Dichloroethane	Quarterly	Grab
cis 1,2-Dichloroethene	Quarterly	Grab
Vinyl chloride	Quarterly	Grab
Aluminum	Quarterly	Composite
Arsenic	Quarterly	Composite
Beryllium	Quarterly	Composite
Cadmium	Quarterly	Composite
Chromium	Quarterly	Composite
Copper	Quarterly	Composite
Molybdenum	Quarterly	Composite
Nickel	Quarterly	Composite
Lead	Quarterly	Composite

Zinc	Quarterly	Composite

[1]Flow meters must be calibrated according to manufacturer's instructions but in no case less than once per year.
[2]pH meters must be calibrated according manufacturer's instructions but in no case less than once per month.
[3]1, 4-Dioxane must be analyzed using either EPA Method 1624 or EPA Method 8260C with heated purge, isotope dilution and selective ion monitoring (SIM).

C. All handling and preservation of collected samples and laboratory analysis of samples shall be performed in accordance with Florida Administrative Code chapter 62-160 and amendments thereto, unless specified otherwise in the monitoring conditions of this permit.

D. Monitoring results shall be coincidental with permittee's requirements to report to the FDEP as provided in Table 12-1, Summary of Monitoring Schedule in the FDEP approved RAPA dated 6/18/2009 as submitted in the discharge permit application June 4, 2012. Report(s) must include the average daily flow and minimum and maximum pH readings for each month of the reporting period. If applicable, report(s) must include a Total Toxic Organic certification statement.

E. If the permitee monitors any pollutant more frequently than required by this permit using test procedures prescribed in Florida Administrative Code chapter 62-160 or amendments thereto, or otherwise approved by the Florida Department of Environmental Protection or as specified in this permit, the results of such monitoring shall be included in any calculations of actual daily maximum or monthly average pollutant discharge and results shall be reported in the semi-annual report(s) submitted to the MCUD Office of Industrial Compliance.

F. The County will monitor the discharge from the Permittee's facility at a minimum of once per year. Monitoring will include the collection and analysis of wastewater samples in order to determine pollutant concentrations and compliance with effluent limits. The County may also provide sampling and analysis services to the Permittee in order to comply with self-monitoring requirements. The Permittee will be charged according to the rate schedules identified in the current Manatee County Rate Resolution. Should the Permittee request a test for which the County laboratory is not equipped, an independent private laboratory will be utilized at the Permittee's expense.

G. The permitee shall notify the County immediately upon the occurrence of an accidental discharge of substances prohibited by the most recent version of the Manatee County Sewer Use Ordinance or any slug loads or spills that may enter the sanitary sewer. During normal business hours, the County shall be notified by telephone at **795-3436**. At all other times, the Director shall be notified by telephone at **704-0878** (after 5 p.m. Monday – Friday, weekends and holidays). The notification shall include location of the discharge, date and time thereof, type of waste including concentration and volume, and corrective actions taken. The permitee's notification of accidental releases in accordance with this section does not relieve it of other reporting requirements that arise under local, State or Federal laws.

H. Within five (5) days following an accidental discharge, the permitee shall submit to the Director a detailed written report. The report shall specify:

1. Description and cause of the upset, slug load or accidental discharge, the cause thereof, and the impact on the permitee's compliance status. The description shall also include the location of the discharge as well as the type, concentration, and volume of waste.

2. Duration of noncompliance, including exact dates and times, if the noncompliance is continuing, and the time by which compliance is reasonably expected to occur.

3. All steps taken or to be taken to reduce, eliminate, and/or prevent recurrence of such an upset, slug load, accidental discharge, or other conditions of noncompliance.

4. All reports required by this permit shall be submitted to:

Manatee County Utilities
Att: Office of Industrial Compliance
4751 66th Street West
Bradenton, FL 34210

PART 4 – SPECIAL CONDITIONS

A. REOPENER CLAUSE

1. This permit may be reopened and modified to incorporate any new or revised requirements contained in the Florida Administrative Code (F.A.C) Chapter 62-625.

2. This permit may be reopened and modified to incorporate any new or revised requirements resulting from the Manatee County Utilities Department's reevaluation of local discharge limits.

3. This permit may be reopened and modified to incorporate any new or revised requirements developed by Manatee County Utilities Department as are necessary to ensure POTW compliance with applicable biosolid management requirements promulgated by F.A.C. Chapter 62-625.

B. ACCIDENTAL SPILL/SLUG CONTROL PLAN

The Permittee shall implement a Spill/Slug Discharge Plan for the control of accidental spills and or slug discharges for the duration of this permit and shall meet the following requirements:

1. Provide a description of discharge practices, including nonroutine batch discharges;
2. Provide a description of all stored chemicals;
3. Describe procedures for immediately notifying the County of any accidental spill or slug discharge;
4. Describe procedures to prevent adverse impact from any accidental spill or slug discharge;
5. Be approved by the County.

The Plan shall be valid for a maximum of two years upon which time a new Plan shall be submitted. If changes occur to the facility before the two years has expired that may affect the Permittee's accidental spill or slug discharge procedures, a new plan shall be submitted to the County for approval. The Permittee must notify Manatee County immediately if there is a change that affects the potential for a slug discharge.

C. COMPLIANCE SCHEDULE

The permitee shall accomplish the following tasks in the designated time period:

1. **N/A**

PART 5 – SPECIFIC PROHIBITIONS

A. Any commercial or industrial waste that may cause pass through of pollutants or interference with the wastewater treatment plant operations or that violates Federal, State, or local restrictions shall not be discharged to the wastewater treatment facility.

B. The permitee is prohibited from discharging wastes with the following characteristics:
   1. Having a pH lower than 5.0 or greater than 11.5.
   2. Pollutants which create a fire or explosive hazard in the sanitary sewer collection system, including, but not limited to, wastestreams with a closed cup flashpoint of less than 140°F (60°C) using the test methods specified in Chapter 62-160, Florida Administrative Code (F.A.C.).

3. Solid or viscous substances in amounts which will cause obstruction of the flow in the POTW resulting in interference.
4. Pollutants, including oxygen-demanding pollutants (BOD, etc.), released at a pollutant concentration and/or flow rate which, either singly or by interaction with other pollutants, will cause interference with Manatee County's receiving wastewater treatment facilities.
5. Wastewater having a temperature greater than [104° F (40° C)], or which will inhibit biological activity in a wastewater treatment plant resulting in interference.
6. Petroleum oil, nonbiodegradable cutting oil, or products of mineral oil origin, in amounts that will cause interference or pass through.
7. Pollutants which result in the presence of toxic gases, vapors, or fumes within the POTW in a quantity that may cause acute worker health and safety problems.
8. Noxious or malodorous liquids, gases, solids, or other wastewater which, either singly or by interaction with other wastes, are sufficient to create a public nuisance or a safety hazard, or to prevent entry into the sewers for maintenance or repair.
9. Wastewater which imparts color which cannot be removed by the treatment process.
10. Wastewater containing any radioactive wastes or isotopes, except in compliance with applicable State or Federal regulations.
11. Storm water, surface water, ground water, artesian well water, roof runoff, subsurface drainage, swimming pool drainage, condensate, deionized water, noncontact cooling water, and unpolluted wastewater, unless specifically authorized by the Director.
12. Sludges, screenings, or other residues from the pretreatment of industrial wastes.
13. Medical wastes, except as specifically authorized by the Director in an industrial user discharge permit.
14. Wastewater causing, alone or in conjunction with other sources, a treatment plant's effluent to fail a toxicity test.
15. Detergents, surface-active agents, or other substances which may cause excessive foaming in the POTW.
16. Wastewater causing two readings on an explosion hazard meter at the point of discharge into the POTW, or at any point in the POTW, of more than [5%], or any single reading over [10%] of the Lower Explosive Limit of the meter.
17. The permitee is prohibited from discharging wastes which exceed the Local Limits found in the most recent version of the Manatee County Sewer Use Ordinance.

PART 6 – STANDARD CONDITIONS

A. GENERAL CONDITIONS AND DEFINITIONS:

1. DEFINITIONS:

a. Best management practices or BMPs: Schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to implement the prohibitions listed in this ordinance. BMPs include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials or storage.

b. Bi-Weekly: Once every other week.

c. Bi-Monthly: Once every other month.

d. Bypass: The diversion of wastes from any portion of a treatment facility.

e. Collection System: The combined pipes, conduits, manholes and other structures, usually underground, which convey wastewater to the Manatee County Wastewater Treatment Facilities.

f. Composite Sample: A sample that is collected over time, formed either by continuous sampling or by mixing discrete samples. The sample may be composited either as a time composite sample: composed of discrete sample aliquots collected in one container at constant time intervals providing representative samples irrespective of stream flow; or as a flow proportional composite sample: collected either as a constant sample volume at time intervals proportional to a stream flow, or collected by increasing the volume of each aliquot as the flow increases while maintaining a constant time interval between the aliquots.

g. Cooling Water:

i. Uncontaminated: Water used for cooling purposes only which has no direct contact with any raw material, intermediate or final product and which does not contain a level of contaminants detectably higher than that of the intake water.

ii. Contaminated: Water used for cooling purposes only which may become contaminated either through the use of water treatment chemicals used for corrosion inhibitors or biocides, or by direct contact with process materials and/or wastewater.

h. Daily Maximum: The maximum allowable discharge of pollutant during a calendar day. Where daily maximum limitations are expressed in units of mass, the daily discharge is the total mass discharged over the course of the day. Where daily maximum limitations are expressed in terms of a concentration, the daily discharge is the arithmetic average measurement of the pollutant concentration derived from all measurements taken that day.

i. Director: The Director of the Manatee County Utilities Department, or his/her duly appointed and authorized deputies, agents, or representatives.

j. Domestic Wastewater: The liquid and solid waterborne wastes derived from the ordinary living processes of humans of such character as to permit satisfactory disposal, without special pretreatment, into the public sewer or by means of private disposal system.

k. Grab Sample: An individual sample collected in less than 15 minutes, without regard for flow or time.

l. Instantaneous Maximum Concentration: The maximum concentration allowed in any single grab sample.

m. Interference: A discharge which, alone or in conjunction with a discharge or discharges from other sources, inhibits or disrupts Manatee County's treatment system, processes or operations or its sludge processes or disposal; and therefore, is a cause of a violation of the County's NPDES Permit, FDEP Permit, or of the prevention of sewage sludge use or disposal in compliance with any of the following statutory/regulatory provisions or permits issued hereunder, or any more stringent state or local regulations: Section 405 of the Clean Water Act; The Solid Waste Disposal Act, including Title II commonly referred to as the Resource Conservation and Recovery Act (RCRA); any State regulations contained in any State Sludge Management Plan prepared pursuant to Subtitle D of the Solid Waste Disposal Act, the Clean Air Act; the Toxic Substances Control Act; and the Marine Protection and Sanctuaries Act.

n. Local Discharge Limits: Those limitations developed by Manatee County to implement any general or specific prohibitions set forth in 62-625 F.A.C. or to satisfy any other discharge requirement imposed upon the County by the EPA, FDEP, or Local Agency.

o. Medical Wastes: isolation wastes, infectious agents, human blood and blood products, pathological wastes, sharps, body parts, contaminated bedding, surgical wastes, potentially contaminated laboratory wastes, and dialysis wastes.

p. Monthly Average: The arithmetic mean of the values for effluent samples collected during a calendar month or specified 30 day period (as opposed to a rolling 30 day window).

q. Pass Through: A discharge which exits any of Manatee County's wastewater treatment plants into waters of the United States or effluent reuse system in quantities or concentrations which, alone or in conjunction with a discharge or discharges from other sources, is a cause of a violation of any requirement of Manatee County's FDEP permits, including and increase in the magnitude or duration of a violation.

r. Permitee: A person who has a discharge permit.

s. Person: Any individual, partnership, co-partnership, firm, company, corporation, association, joint stock company, trust, estate, governmental entity, or any other legal entity; or their legal representatives, agents or assigns. This definition includes all Federal, State, and Local Governmental entities.

t. Publicly Owned Treatment Works (POTW): A treatment works which is owned by a state, municipality, city, town, special sewer district or other publicly owned and financed entity as opposed to a privately (industrial) owned treatment facility. This definition includes any devices and systems used in the storage, treatment, recycling and reclamation of a municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes and other conveyances only if they convey wastewater to a POTW treatment plant. The term also means the municipality (public entity) which has jurisdiction over the

indirect discharges to and the discharges from such a treatment works.

u. Septic Tank Waste (Septage): Any sewage from holding tanks such as vessels, chemical toilets, campers, trailers, and septic tanks.

v. Sewage: Human excrement and gray water (household showers, dish washing operations, etc.)

w. Storm Water: Any flow occurring during or following any form of natural precipitation, and resulting from such precipitation, including snowmelt.

x. Upset: An exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond the reasonable control of the permitee, excluding such factors as operational error, improperly designed or inadequate treatment facilities, or improper operation and maintenance and lack thereof.

y. Weekly Average: The arithmetic mean of the values for effluent samples collected over a period of seven (7) consecutive days.

2. SEVERABILITY:

The provisions of this permit are severable, and if any provision of this permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this permit shall not be affected thereby.

3. DUTY TO COMPLY:

The permitee shall comply with all conditions of this permit. Failure to comply with the requirements of this permit may be grounds for administrative action, or enforcement proceedings including civil or criminal penalties, injunctive relief and summary abatements.

4. DUTY TO MITIGATE:

The permitee shall take all reasonable steps to minimize or correct any adverse impact to the public treatment plant or the environment resulting from noncompliance with this permit, including such accelerated or additional monitoring as necessary to determine the nature and impact of the noncomplying discharge.

5. PERMIT MODIFICATION:

This permit may be modified for good causes including, but not limited to, the following:

a. To incorporate any new or revised Federal, State, or local pretreatment standards or requirements.
b. Material or substantial alterations or additions to the discharger's operation processes, or discharge volume or character which were not considered in drafting the effective permit.
c. A change in any condition in either the industrial user or the POTW that requires either a temporary or permanent reduction or elimination of the authorized discharge.
d. Information indicating that the permitted discharge poses a threat to Manatee County's treatment systems, POTW personnel or the receiving waters.
e. Violation of any terms or conditions of the permit.
f. Misrepresentation or failure to disclose fully all relevant facts in the permit application or in any required report.
g. Revision of or a grant of variance from such categorical standards pursuant to Chapter 62-625 (F.A.C.).
h. To correct typographical or other errors in the permit.
i. To reflect transfer of the facility ownership and/or operation to a new owner/operator.
j. Upon request of the permitee, provided such request does not create a violation of any applicable requirements, standards, laws or rules and regulations.

The filing of a request by the permitee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

6. PERMIT TERMINATION:

This permit may be terminated for the following reasons:

a. Falsifying self-monitoring reports.
b. Tampering with County monitoring equipment.

c. Refusing to allow timely access to the facility premises and records.
d. Failure to meet effluent limits.
e. Failure to pay fines.
f. Failure to pay sewer charges.
g. Failure to meet compliance schedules.

7. PERMIT APPEALS:
The permitee may petition to appeal the terms of this permit within thirty (30) days of the notice.

This petition must be in writing; failure to submit a petition for review shall be deemed to be a waiver of the appeal. In its petition, the permitee must indicate the permit provisions objected to, the reasons for this objection, and the alternative condition, if any, it seeks to be placed in the permit.

The effectiveness of this permit shall not be stayed pending reconsideration by the Board. If, after considering the petition and any arguments put forth by the Director, the Board determines that reconsideration is proper, it shall remand the permit back to the Director for reissuance. Those permit provisions being reconsidered by the Director shall be stayed pending reissuance.

A Board of Director's decision not to reconsider a final permit shall be considered final administrative action for purposes of judicial review.

8. PROPERTY RIGHTS:
The issuance of this permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any violation of Federal, State or local laws or regulations.

9. LIMITATION ON PERMIT TRANSFER:
Permits may be reassigned or transferred to a new owner and/or operator with prior approval of the Director.

a. The permitee must give at least thirty (30) days advance notice to the Director.
b. The notice must include a written certification by the new owner which:
    i. States that the new owner has no immediate intent to change the operations and processes.
    ii. Identifies the specific date on which the transfer is to occur.
    iii. Acknowledges full responsibility for complying with the existing permit.

10. DUTY TO REAPPLY:
If the permitee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permitee must submit an application for a new permit at least 60 days before the expiration date of this permit.

11. CONTINUATION OF EXPIRED PERMITS:
An expired permit will continue to be effective and enforceable until the permit is reissued if:
a. The permitee has submitted a complete permit application at least sixty (60) days prior to the expiration date of the user's existing permit.
b. The failure to reissue the permit, prior to expiration of the previous permit, is not due to any act or failure to act on the part of the permitee.

12. DILUTION
The permitee shall not increase the use of potable or process water or in any way attempt to dilute an effluent as a partial or complete substitute for adequate treatment to achieve compliance with the limitations contained in this permit.

13. COMPLIANCE WITH APPLICABLE PRETREATMENT STANDARDS AND REQUIREMENTS:

Compliance with this permit does not relieve the permitee from its obligations regarding compliance with any and all applicable local, State and Federal standards and requirements, including any such standards or requirements that may become effective during the term of this permit.

14. OPERATION AND MAINTENANCE OF POLLUTION CONTROLS:
The permitee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permitee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes but is not limited to: effective performance, adequate funding, adequate operator staffing and training and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of this permit.

15. DUTY TO HALT OR REDUCE ACTIVITY
Upon reduction of efficiency of operation or loss or failure of all or part of the treatment facility, the permitee shall, to the extent necessary to maintain compliance with its permit, control its production or discharges (or both) until operation of the treatment facility is restored or an alternative method of treatment is provided. This requirement applies for example, when the primary source of power of the treatment facility fails or is reduced. It shall not be a defense for a permitee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

16. BYPASS OF TREATMENT FACILITIES
    a. Bypass is prohibited unless it is unavoidable to prevent loss of life, personal injury, or severe property damage or no feasible alternatives exist.
    b. The permitee may allow bypass to occur which does not cause effluent limitations to be exceeded but only if it is also for essential maintenance to assure efficient operation.
    c. Notification of bypass:
        i. Anticipated bypass: If the permitee knows in advance of the need for a bypass, it shall submit prior written notice at least ten (10) days before the date of the bypass to the Director.
        ii. Unanticipated bypass: The permitee shall immediately notify the Director and submit within five (5) days a written notice. The report shall include at a minimum (1) a description of the bypass and its cause including its duration; (2) whether the bypass has been corrected; and (3) the steps being taken or to be taken to reduce, eliminate, and prevent a reoccurrence of the bypass.
17. REMOVED SUBSTANCES
Solids, sludges, filter backwash or other pollutants removed in the course of treatment or control of wastewaters shall be disposed of in accordance with Section 405 of the Clean Water Act, Subtitles C and D of the Resource Conservation and Recovery Act and Florida Administrative Code Chapter 62-625.

B. MONITORING AND RECORDS

1. ANALYTICAL METHODS TO DEMONSTRATE CONTINUED COMPLIANCE:
All sampling and analysis required by this permit shall be performed in accordance with the techniques prescribed in Florida Administrative Code Chapter 62-160 (F.A.C.) and amendments thereto.

2. REPRESENTATIVE SAMPLING
Samples and measurement take, as required herein, shall be representative of the volume and nature of the monitored discharge. All samples shall be taken at the monitoring points specified in this permit and, unless otherwise specified, before the effluent joins or is diluted by any other wastestream, body of water or substance. All equipment use for sampling and analysis must be routinely calibrated, inspected and maintained to ensure their accuracy. Monitoring points shall be changed without notification to and the approval of the Director.

3. FLOW MEASUREMENTS
If flow measurements are required by this permit, the appropriate flow measurement devices and method consistent with approved scientific practices shall be selected and used to ensure the accuracy and reliability of measurements of the volume of monitored discharges. The devices shall be installed, calibrated and maintained to ensure that the accuracy of the measurements is consistent with the accepted capability of that type of device. Devices selected shall be capable of measuring flows with a maximum deviation of less than 10 % from true discharge rates throughout the range of expected discharge volumes.

4. ADDITIONAL MONITORING BY THE PERMITEE:
If the permitee monitors any pollutant more frequently than required by this permit, using test procedures identified in Section B.1, the results of this monitoring shall be included in the permitee's self-monitoring reports.

5. INSPECTION AND ENTRY:
The permitee shall allow the Manatee County Utilities Department, or the State of Florida, or an authorized representative, upon the presentation of credentials and other documents as may be required by law to:
   a. Enter upon the permitee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;
   b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
   c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit;
   d. Sample or monitor, for the purposes of assuring permit compliance, any substances or parameters at any location; and
   e. Inspect any production, manufacturing, fabricating, or storage area where pollutants, regulated under the permit, could originate, be stored or be discharged to the sewer system.

6. RETENTION OF RECORDS
   a. The permitee shall retain records of all monitoring information including all calibration and maintenance records, all original strip chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit for a period of at least three (3) years from the date of the sample, measurement, report or application. This period may be extended by request of the Director at any time.
   b. All records that pertain to matters that are the subject of special orders or any other enforcement or litigation activities brought by Manatee County Government shall be retained and preserved by the permitee until all enforcement activities have concluded and all periods of limitation with respect to any and all appeals, have expired.

7. RECORD CONTENTS
Records of sampling and analysis shall include:
   a. The date, exact place, time and methods of sampling or measurements and sample preservation techniques or procedures;
   b. Who performed the sampling or measurements;
   c. The date(s) analysis was performed;
   d. Who performed the analysis;
   e. The analytical techniques;
   f. The results of such analysis;
   g. The laboratory certification number.

8. FALSIFYING INFORMATION
Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate is a crime and may result in the imposition of criminal sanctions and/or civil penalties.

C. ADDITIONAL REPORTING REQUIREMENTS :

1. PLANNED CHANGES
The permitee shall give notice to the Director ninety (90) days prior to any facility expansion, production increase, or process modifications which results in new or substantially increased discharges or a change in the nature of the discharge.
2. ANTICIPATED NONCOMPLIANCE:
The permitee shall give advance notice to the Director of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

3. OPERATING UPSETS
   a. Any permitee that experiences an upset in operations that places the permitee in a temporary state of noncompliance with the provisions of either this permit or with the most recent version of the Manatee County Sewer Use Ordinance shall inform the Director within twenty four (24) hours of becoming aware of the upset. During normal business hours (Monday – Friday 08:00 a.m. – 05:00 p.m.) at **795-3436** or after 05:00 p.m. M-F, weekends and holidays at **704-0878**.
   b. A written follow-up report of the upset shall be submitted by the permitee with the Director within five (5) days. The report shall include:
      i. A detailed description of the upset, the cause(s) thereof and the upset's impact on the permitee's compliance status;
      ii. The duration of the noncompliance including exact dates and times of noncompliance and if not corrected, the anticipated time the noncompliance is expected to continue; and
      iii. All steps taken or to be taken to reduce, eliminate and prevent recurrence of such an upset.
   c. The report must also demonstrate that the treatment facility was being operated in a prudent and workmanlike manner.
   d. A documented and verified operating upset shall be an affirmative defense to any enforcement action brought against the permitee for violations attributable to the upset event.

4. AUTOMATIC RESAMPLING:
If the results of the permitee's wastewater analysis indicate a violation has occurred, the permitee must notify the Director within twenty four (24) hours of becoming aware of the violation and repeat the sampling and pollutant analysis and submit in writing the results of the repeat analysis within thirty (30) days after becoming aware of the violation.

5. DUTY TO PROVIDE INFORMATION:
The permitee shall furnish to the Director, within 30 days, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permitee shall also, upon request, furnish to the Director, within 30 days, copies of any records required to be kept by this permit.

6. SIGNATORY REQUIREMENTS:
All applications, reports, or information submitted to the Director must contain the following certification statement and be signed as required in Sections (a), (b), (c) or (d) below:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of

my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

a. If the user is a corporation:
   i. The president, secretary, treasurer, or a vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decisions making functions for the corporation; or;
   ii. The manager of one or more manufacturing, production, or operation facilities, provided the manager is authorized to make management decisions that govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for individual wastewater discharge permit or general permit requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

b. If the user is a partnership or sole proprietorship, a general partner or proprietor, respectively.

c. If the user is a federal, state, or local governmental facility, a Director or highest official appointed or designated to oversee the operation and performance of the activities of the government facility, or his/her designee.

d. The individuals described in subparagraphs (1) through (3) above, may designate another authorized representative if the authorization is in writing, the authorization specifies the individual or position responsible for the overall operation of the facility from which the discharge originates or having overall responsibility for environmental matters for the user, and the written authorization is submitted to the County of Manatee.

D. PENALTIES AND ENFORCEMENT ACTIVITIES

1. ANNUAL PUBLICATION:
   A list of all industrial users which were subject to enforcement proceedings during the twelve (12) previous months shall be annually published by the Director in the largest daily newspaper within its service area. Accordingly, the permitee is apprised that noncompliance with this permit may lead to an enforcement action and may result in publication of its name in an appropriate newspaper in accordance with this section.

2. CIVIL AND CRIMINAL LIABILITY:
   Nothing in this permit shall be construed to relieve the permitee from civil and/or criminal penalties for noncompliance under the most recent version of the Manatee County Sewer Use Ordinance.

3. PENALTIES FOR VIOLATIONS OF PERMIT CONDITIONS:
   The most recent version of the Manatee County Sewer Use Ordinance provides that any person who violates a permit condition is subject to a civil penalty of at least $2,000 per day of such violation. Any person who willfully or negligently violates permit conditions is subject to criminal penalties of a fine of up to $2,000 per day of violation, or by imprisonment for 60 days or both. The permitee may also be subject to sanctions under State and/or Federal law.

4. RECOVERY OF COSTS INCURRED:
   In addition to civil and criminal liability, the permitee violating any of the provisions of this permit or the most recent version of the Manatee County Sewer Use Ordinance or causing damage to or otherwise inhibiting the Manatee County Utilities Department wastewater disposal system shall be liable to the Manatee County Utilities

Department for any expense, loss or damage caused by such violation or discharge. The Director shall bill the permitee for the costs incurred by the Manatee County Utilities Department for any cleaning, repair or replacement work caused by the violation or discharge. Refusal to pay the assessed costs shall constitute a separate violation of the most recent version of the Manatee County Sewer Use Ordinance.

5. NOTIFICATION OF VIOLATION:
Whenever the Director finds that the permitee has violated or is violating any provision of this permit, the Director may serve upon said permitee written notice of the violation. Within ten (10) days of the receipt of this notice, an explanation of the violation and a written plan for the satisfactory correction and prevention thereof, to include specific required actions, shall be submitted by the permitee to the Director. Submission of this plan in no way relieves the permitee of liability for any violations occurring before or after receipt of the notice of violation.

6. CONSENT ORDERS:
The Director is hereby empowered to enter into consent orders, assurances of voluntary compliance, or other similar documents establishing an agreement with an industrial user responsible for the noncompliance. Such orders will include compliance schedules, surcharges or remedial actions, and signatures of the authorized representative of the user and the Director.

7. SHOW CAUSE ORDER:
The Director may order any industrial user which causes or contributes to a violation of this Ordinance to show cause why a proposed enforcement action should not be taken. The notice of the meeting shall be served by certified mail at least ten (10) days prior to the hearing.

8. COMPLIANCE ORDER:
When the Director finds that the permitee has violated or continues to violate this permit, he may issue an order to the permitee directing that, following a specified time period, discharge privileges shall be discontinued until compliance is achieved.

9. CEASE AND DESIST ORDERS:
When the Director finds that the permitee has violated or continues to violate this permit, he may issue an order to cease and desist all illegal discharges immediately. In an emergency, the order to cease and desist may be given by telephone; in non-emergency situations, the cease and desist order may be used to suspend or permanently revoke the Industrial User Discharge Permit. The cease and desist order may order the permitee to take such appropriate remedial or preventive action as may be needed to properly address a continuing or threatened violation, including halting operations and terminating the discharge.

10. ADMINISTRATION FINES:
Notwithstanding any other section of this permit, if the permitee is found to have violated any provision of this permit, or the Sewer Use Ordinance or of orders issued hereunder shall be charged an amount not to exceed two hundred fifty dollars ($250.00) per day for a first violation and shall not exceed five hundred dollars ($500.00) per day for a repeat violation. However, if the code enforcement board or special magistrate finds the violation to be irreparable or irreversible in nature, it may impose a fine not to exceed five thousand dollars ($5,000.00) per violation. Such assessments shall be added to the permitee's next scheduled sewer service charge.

11. EMERGENCY SUSPENSION:
The Director may suspend an Industrial User Discharge Permit if such suspension is necessary in order to stop an actual or threatened discharge presenting or causing an imminent or substantial endangerment to the health or welfare of County workers, any treatment plant, or the environment. Any industrial user notified of a suspension

shall immediately stop or eliminate its contribution. In the event of an industrial user's failure to immediately comply with the suspension order, the Director shall take steps as deemed necessary, including immediate severance of the sewer connection. The Director shall allow the user to recommence its discharge when the endangerment has passed. An industrial user who is responsible, in whole or in part, for imminent endangerment shall submit a written statement describing the cause of the harmful contribution and the measures taken to prevent any future occurrence, to the Director.

12. SURCHARGES TO BE ADDED TO UTILITY BILLING:
Any surcharges provided for in this permit may, at the discretion of the Director, be added to the permitee's monthly utility billing.

13. ENFORCEMENT - JUDICIAL REMEDIES:
If the permitee discharges sewage or industrial waste into Manatee County's Sanitary Sewer Collection System contrary to the provisions of this permit or of the most recent version of the Manatee County Sewer Use Ordinance, or any order or permit issued hereunder, the Director, through the County Attorney, may commence an action for appropriate legal and/or equitable relief in the Courts of Manatee County.

14. INJUNCTIVE RELIEF:
Whenever the permitee has violated or continues to violate the provisions of this permit or of the most recent version of the Manatee County Sewer Use Ordinance, or of any permit, or of orders issued hereunder, the Director, through the County Attorney may petition the court for the issuance of a preliminary or permanent injunction, or both, which restrains or compels the activities of the permitee.

15. CIVIL PENALTIES:
Any industrial user who has violated or continues to violate this Ordinance or any order or permit issued hereunder, shall be subject to a civil penalty of not more than two thousand dollars ($2,000.00) plus actual damages incurred by Manatee County, per violation, per day, as long as the violation continues. In addition to the above-described penalty and damages, Manatee County may recover reasonable attorney's fees, court costs, and other expenses associated with the enforcement activities, including sampling, monitoring and analysis expenses. The Director shall petition the court to impose, assess, and recover such sums. In determining amounts of liability, the court shall take into account all relevant circumstances, including, but not limited to, the extent of harm caused by the violation, the magnitude and duration, any economic benefit gained through the industrial user's violation, corrective actions by the industrial user, the compliance history of the industrial user, and any other factor that justice requires.

16. CRIMINAL PROSECUTION:
Any industrial user who willfully violates any provision of this permit or of the most recent version of the Manatee County Sewer Use Ordinance, or any orders or permits issued hereunder, shall, upon conviction, be guilty of a misdemeanor, punishable by a fine not to exceed two thousand dollars ($2,000.00) and/or imprisonment in the County jail of up to sixty (60) days. Each day of a continuing violation shall be deemed a separate and distinct violation.

17. ADMINISTRATIVE HEARINGS:
Any administrative surcharges provided for in this permit or in the most recent version of the Manatee County Sewer Use Ordinance shall be imposed only after the following hearing procedure has been complied with:
    a. The Director shall provide the alleged violating user with written notification of the specific violation(s) and the applicable section(s) of this permit and or the most recent version of the Manatee County Sewer Use Ordinance.
    b. The notification provided in subsection (a) above shall inform the alleged violating user of a date and

time for an administrative hearing, which hearing shall occur no earlier than ten (10) days after the violator's receipt of the notification.

c. The Director or his designated representative shall preside over the administrative hearing and shall entertain testimony and evidence.
d. The alleged violating user shall have the opportunity to be represented by counsel and to examine and cross examine witnesses.
e. If the alleged violating user is represented at the hearing by counsel, the Director shall likewise be represented by the Office of the County Attorney.
f. The Director shall issue written findings as soon after the hearing as is practical.
g. The decision of the Director, if adverse to the alleged violating user, may be appealed to the Board of County Commissioners, in open session, for a final and binding decision. If an appeal is to be taken, written notice of the appeal shall be delivered to MCUD no later than ten (10) days after the violator's receipt of the Director's written findings.

APPENDIX D –BORING LOGS AND WELL CONSTRUCTION AND DEVELOPMENT LOGS

Lockheed Martin - Tallevast Site

BORING LOG

Boring/Well Number:	Site Name:	Property Description/Address:	AECOM
MW-11R	LMC Tallevast Facility	ON FACILITY	

Northing: NA	Borehole Start Date & Time:	Borehole End Date & Time:
Easting: NA	01/30/15 @ 08:45	01/30/15 @ 11:20

Environmental Contractor:	Geologist's Name:	Environmental Technician's Name:
AECOM	Chad Lee	N/A

Drilling Company:	Surface Thickness (inches):	Borehole Diameter (inches):	Borehole Depth (feet):
Groundwater Protection, Inc.	~~Grass~~ (S) Concrete	~~3.25~~ (CSL) 8	29.5

Drilling Method(s):	Apparent Borehole DTW (in feet using soil moisture content):	Measured Well DTW (in feet after water recharges in well):
PH/DP	8	10.10

Disposition of Drill Cuttings: Placed in 55-gallon Steel Drums and Stored on-site for disposal.

Borehole Completion: Lower USAS Monitor Well Installation

Sample Type	Sample Depth Interval (feet)	Sample Recovery (inches)	Depth (feet)	Sample Description (include grain size based on USCS, odors, staining, and other remarks)	USCS Symbol	Moisture Content	Lab Soil and Groundwater Samples (list sample number and depth or temporary screen interval)
PH	0-5	60	0-1.5	Concrete & Roadbase Material	NA	D-M	
DP	5-10	36	1.5-5	Dark Gray (2.5Y 4/1) pg, fine sand, dense	SP	M	
↓	10-15	45	5-9	SAA but very pale brown (10YR 7/3)	SP	M-S	
	15-20	42	9-12.5	SAA but brown (10YR 5/3)	SP	S	
	20-25	55	12.5-17.5	SAA but black (2.5Y 2.5/1) & ~~very few~~ (S) traces of clay/silt	SP	S	
	25-28	36	17.5-20.5	Brown (10YR 4/3) ~~silty sand w/clay~~ (CSL) Sandy Clay, Non-plastic, very dense	CL	M	
	28-29.5	0	20.5-24.5	Yellowish Brown (10YR 5/6) silty sand w/clay, pg, mod. dense to dense, speckled w/black fines	SP/SC	S	
			24.5-28	SAA but grayish brown (2.5Y 5/2) & more dense (very dense)	SP/SC	S	
			28-29.5	No Recovery	NA	NA	
				Refusal @ 29.5' BGS.			

Sample Type Codes: **HA** = Hand Auger; **PH** = Post Hole; **DP** = Direct Push; **SC** = Sonic Core; **HSA** = Hollow Stem Auger; **SSA**; Solid Stem Auger

Sample Desciption Codes: **NS** = No Sample Collected

Moisture Content Codes: **D** = Dry; **M** = Moist; **W** = Wet; **S** = Saturated

PZ-USAS- 19	LMC Tallevast Facility	Schmid Farm	01/29/15

Well Location and Type (check appropriate boxes):
- ☐ On-Site ☐ Right-of-Way
- ☒ Off-Site Private Property
- ☐ Above Grade (AG) ☒ Flush-to-Grade

If AG, list feet of riser above land surface: NA

Well Purpose:
- ☐ Perched Monitoring
- ☐ Shallow (Water-Table) Monitoring
- ☐ Intermediate or Deep Monitoring
- ☒ Remediation or (Other) (describe): USAS Piezometer

Well Install Method: Direct Push

Surface Casing Install Method: NA

Borehole Depth (feet):	Well Depth (feet):	Borehole Diameter (inches):	Manhole Diameter (inches):
37.5	35	3.25	8

Well Pad Size: 2 feet by 2 feet

Riser Diameter and Material: 1-inch SCH 40 PVC

Riser/Screen Connections: ☒ Flush-Threaded ☐ Other

Riser Length: 25 feet — from 0 feet to 25 feet

Screen Diameter and Material: 1-inch SCH 40 PVC Prepacked

Screen Slot Size: 0.010

Screen Length: 10 feet — from 25 feet to 35 feet

1st Surface Casing Material: also check: ☐ Permanent ☐ Temporary

1st Surface Casing I.D. (inches):

1st Surface Casing Length: ____ feet — from 0 feet to ____ feet

2nd Surface Casing Material: also check: ☐ Permanent ☐ Temporary

2nd Surface Casing I.D. (inches):

2nd Surface Casing Length: ____ feet — from 0 feet to ____ feet

3rd Surface Casing Material: also check: ☐ Permanent ☐ Temporary

3rd Surface Casing I.D. (inches):

3rd Surface Casing Length: ____ feet — from 0 feet to ____ feet

Filter Pack Material and Size: 20/30 SAND

Prepacked Filter Around Screen (check one): ☒ Yes ☐ No

Filter Pack Length: 10 feet — from 25 feet to 35 feet

Filter Pack Seal Material and Size: Formation

Filter Pack Seal Length: 25 feet — from 0 feet to 25 feet

Surface Seal Material: NA

Surface Seal Length: NA feet — from NA feet to NA feet

RE: LMC Tallevast Survey Data

Mr. McCoy,

On Wednesday, November 12th, 2014 seven piezometers and one staff gauge were surveyed at the above mentioned site. The data was when reviewed and the following final survey information resulted.

The State Plan Coordinates shown hereon are in feet and were established using a Carlson BRX5 G.P.S. Receiver. Control Station used to establish the Datum was Sarasota Tower, NAD 83/90, Florida West Zone. The accuracy of 0.02'.

The vertical elevation shown hereon are in feet and were established using a Carlson BRX5 G.P.S. Receiver. The elevations are based on NGS benchmark No. Wakulla, published elevation is 21.65 NAVD 1988. The accuracy of 0.03'.

The elevations are the top of casing with a black ink mark on North side.

Northing (Y)	Easting (X)	Elevation (Z)	Description
1115336.05	479315.96	30.14	PZ-02
1116873.57	478428.52	23.39	PZ-04

SECTION 1
Introduction

In the summer of 2008 Lockheed Martin Corporation (Lockheed Martin) began a program of continuous long-term water level monitoring (LTWLM) at its Tallevast, Florida site. The Lockheed Martin facility (Facility), previously known as the American Beryllium Company property is located at 1600 Tallevast Road in Sarasota, Florida. The Facility and the surrounding area of groundwater impacted by contaminants of concern (COCs) are collectively referred to as the Site. The LTWLM program includes instrumented wells both within and surrounding the Site. A map of the Site and surrounding area is provided as **Figure 1-1.** This report is presented as an appendix to the annual Remedial Action Status Report (RASR).

1.1 GOALS AND OBJECTIVES

The goals of the LTWLM program are:

1. Assist in assessing relationships and gradients between water-bearing zones on-Facility and off-Facility;
2. Display and help evaluate local groundwater elevation trends within water-bearing zones;
3. Identify and monitor nearby groundwater extraction influences;
4. Assist in identifying regional groundwater flow patterns and water level trends not due to the effects of local groundwater extraction;
5. Supplement the manually-measured water levels used in the main text of the RASR to evaluate the effectiveness and capture extent of the Remedial Action Plan Addendum (RAPA) system; and,
6. Provide data for numerical model calibration and updating.

The objective of this report is to present a review of data gathered from LTWLM that was conducted at the Site and in the surrounding area between June 2014 and June 2015. Changes to the monitoring network during this time period are noted in the conclusions and recommendations section of this report. This represents the second installment of

annual LTWLM reports that will be submitted as described in the Remedial Action Plan Addendum (RAPA) submitted to the Florida Department of Environmental Protection (FDEP) on July 14, 2009, and approved by FDEP in a letter dated November 11, 2010.

SECTION 2

Monitoring Network

There are currently 307 monitoring and stilling wells at the Site that are available for monitoring. Of these, seven wells are located in wetlands and instrumented as part of the Wetlands Monitoring Program described in the RAPA (ARCADIS, 2009) and documented in the annual Wetlands Monitoring Report (AECOM, 2015). The RAPA also specified that LTWLM would be performed at selected locations as part of effectiveness monitoring for the remedy (ARCADIS, 2009). The LTWLM network currently consists of 47 monitoring and stilling wells equipped with pressure transducers and located both on the Facility and in the surrounding area (see **Figure 1-1**). The furthest monitored well location is just over 2000 feet from the Facility boundary. The monitoring wells are grouped into well nests consisting of closely spaced wells that are each screened in a different water-bearing zone. The transducers are installed in selected surface water bodies as shown on **Figure 1-1** and in the following water-bearing zones, which are described in more detail in the main text of the 2014 Remedial Action Status Report (AECOM, 2014).

- Upper Surficial Aquifer System (USAS) – the uppermost, unconsolidated water-bearing zone, generally consisting of silica sand with variable clay content.
- Lower Shallow Aquifer System (LSAS) – the uppermost portion of the Intermediate Aquifer System (IAS) and of the Hawthorn Group, consisting of interbedded limestone, clay, and carbonate mudstone layers, located approximately 30 feet below ground surface (ft bgs) in the vicinity of the Site.
- Arcadia Formation (AF) Gravels – a laterally correlated, fractured carbonate unit located at about 100 ft bgs in the vicinity of the Site.
- Salt and Pepper (S&P) Sands – a laterally correlated quartz-rich sand unit that has moderate to high phosphatic content, located at approximately 145 ft bgs in the vicinity of the Site.
- Lower Arcadia Formation (AF) Sands – a laterally continuous, quartz-rich sand unit that is located below the zone of groundwater impacted by COCs. This is the

deepest transmissive zone of the IAS, located approximately 280 ft bgs in the vicinity of the Site.

- Upper Floridan Aquifer System (Floridan) – the uppermost portion of a series of heterogeneous limestone and dolomite units with highly developed secondary porosity due to dissolution. The Floridan aquifer is first encountered approximately 350-400 ft bgs in the vicinity of the Site. The Hawthorn Group ends with the uppermost portion of the Upper Floridan Aquifer

Two barometric pressure transducers are also used to record barometric pressure data. Because barometric pressure adjustment is crucial to analyzing the water levels, two barometric pressure units are used to reduce the likelihood of missing data. In addition, if necessary, data from a barometric transducer installed as part of the wetlands monitoring program may be re-formatted for use with the LTWLM transducer data.

The monitoring program consists of a quarterly data download and maintenance schedule, along with periodic review of the data. The following sections describe the selection of the LTWLM network wells, the monitoring equipment used, the maintenance of the transducers, and the efforts associated with data collection, management, validation, and assessment.

2.1 MONITORING EQUIPMENT

The LTWLM network utilizes Solinst® and In Situ® brand pressure transducers. The initial set of transducers selected for deployment in 2008 was comprised of both non-vented units (Solinst®) and vented units (In Situ®). A detailed discussion of the original transducer types is provided in the 2014 RASR Appendix F (AECOM, 2014). Currently, all transducers in the LTWLM network are non-vented and are suspended in the well below the water surface using monofilament line. The transducers must be removed from the wells for programming or data download. They are suspended far enough below the water surface that they will remain submerged under the groundwater conditions normally observed at that well but will not exceed their sensor pressure limit.

In addition to downhole pressure transducers, two other types of monitoring equipment are used. A hand-held water level meter accurate to 0.01 ft is used to measure the water level in the well just prior to downloading the transducers. Also, two barometric pressure

transducers are located at the Facility. These transducers provide the barometric pressure data used to compensate the pressure measured by non-vented transducers for atmospheric pressure changes. The BaroTroll® (produced by In Situ®) is currently used for barometric compensation of LTWLM data due to its more conventional data format; the Barologger (produced by Solinst®) is used as backup. The Barologger was repaired and the BaroTroll® replaced during the reporting period.

2.2 SELECTION OF MONITORING LOCATIONS

Monitoring locations were selected based on known groundwater flow directions and proximity to known or suspected groundwater withdrawal from the IAS. Transducers were initially placed in seven clusters of monitoring wells. Later, two more clusters were added. The locations of the wells in the LTWLM network are shown on **Figure 1-1,** and well completion details are described in **Table 2-1**. Monitoring wells were selected from six different water-bearing zones for LTWLM to assess changing vertical gradients, horizontal gradients, on-facility and off-facility hydraulic influences, and localized groundwater/surface water interactions. Accessibility and spatial distribution were also considered when selecting locations for LTWLM. The rationale for monitoring well selection is discussed in detail in the 2014 RASR Appendix F (AECOM, 2014).

When necessary, the LTWLM program allows for modifications that are needed based on such factors as loss of accessibility and identification of enhanced capability for monitoring targeted aquifer units and/or locations. Such modifications are intended to preserve the layout of the LTWLM network, while also being able to enhance its capabilities strategically, as needed during RAPA implementation and operations.

The RAPA LTWLM monitoring program as originally implemented at the time of RAPA submittal in 2009 now includes some modifications. Modifications up to June 2014 are described in the 2014 RASR Appendix F (AECOM, 2014). The following modification has been implemented during the June 2014 to June 2015 monitoring period:

- *Addition of Highway 301 monitoring well cluster*. The cluster consisting of wells MW-183 to MW-187 was monitored between 2011 and 2014. However, highway improvements resulted in abandonment of these wells in November

2014, so the transducers were moved to the cluster consisting of wells MW-188 to MW-192 in June 2014.

2.3 DATA COLLECTION

The data collection procedures include those associated with accessing the well, gauging the well, stopping the data collection, downloading the instrument, and setting up the transducer to record new data. A general summary of these procedures is provided below.

Prior to accessing the well, the appropriate notifications are sent to the Tallevast community and/or property owner, as required. Upon arrival at the well the technician gauges the water level in the well and records it. The technician then removes the transducer from the well, downloads the data at the surface, and then replaces the transducer in the well. Any problems that are noted during download (i.e., transducer damage or malfunction) are documented.

Downloaded data are stored on a laptop computer or handheld download device until the field technician reaches the office. Once in the office, the field technician transfers the data files and field notes to the Tallevast team for evaluation.

2.4 MONITORING NETWORK OPERATIONS AND MAINTENANCE

A total of 47 down-hole pressure transducers and two barometric pressure transducers are currently installed in long-term monitoring locations at the Site. The pressure transducers were programmed to record data on an hourly basis. Data from the transducers have been downloaded quarterly since that time.

Quarterly maintenance is performed on the transducers as needed and generally occurs at the same time as data download. Typically, the maintenance includes checking calibration if there appears to be a problem, raising or lowering the instrument in the well as needed based on changes in water levels, and replacing faulty transducers or cables. Over the course of the seven years of monitoring, from the end of May 2008 to June 2015, 48 instruments have required either repair or replacement with comparable instruments. Most instrument failures were due to reaching the end of battery life, since

the instruments do not have replaceable batteries. The instrument batteries were designed to last five to ten years, depending on data collection interval, so replacements were made as the instruments reached the end of their battery life. Information regarding transducer maintenance is generally transferred to the Tallevast team at the same time as downloaded data and field notes.

SECTION 3

Data Management and Processing

This section describes the data management, quality control, and analytical procedures applied to the LTWLM transducer data.

3.1 DATA MANAGEMENT

The purpose of the LTWLM data management procedures is to ensure that data gathered in the field is stored securely and accurately for future use.

Data collected in the field are assembled in transferable files and transmitted to selected team members for barometric pressure adjustment, graphing, and analysis. Once the data have been transferred from the field technician to other team members, the data are evaluated for quality control (QC). Initial QC consists of checking to make sure all transducers have been downloaded, that the data sets are complete, and that any problems with transducers that could not be downloaded are being resolved. In addition, the field notes are scanned and sent, along with the raw transducer data files, to other team members for analysis. This ensures that the team members have the complete set of data and observations collected by the field personnel during the transducer download event.

A database containing the raw transducer data, serial numbers, and major maintenance history has been established and is updated quarterly. Additionally, the raw binary data and exported text files are stored in two separate locations for data preservation purposes. The groundwater elevations are calculated from the raw water level data, and additional QC is performed on the calculations prior to importing the calculated groundwater elevation data into the database.

The water levels measured by hand in the field at the time of transducer download are entered into the database. The data are subjected to QC to ensure that they were correctly

entered and then imported to the database for distribution and technical analysis. The water level data collected for the LTWLM clusters from June 2014 to June 2015 are provided in **Table 3-1**. In a few cases manual water level data collected from LTWLM wells as part of other programs were used to supplement transducer data analysis. These manual water level measurements are also included in **Table 3-1** for completeness.

3.2 INITIAL DATA PROCESSING

The initial database analysis consists of formatting data, importing the raw data into the database, performing barometric compensation on the data, and exporting the data with a unique database identification number for further analysis.

The data must be formatted prior to import into the database. There are three types of data currently used on a quarterly basis: non-vented transducer data, barometric pressure data, and manual water level data. These data types are all treated differently.

Manual water level data are entered into Microsoft Excel from the scanned field notebook pages. These data are checked for accuracy against the field notes and then are appended to the database table containing manual water level data. The top-of-casing elevation that was current at the time of data collection is associated with each manual measurement to ensure that any well casing modifications are explicitly represented. A query is used to calculate groundwater elevation from the manual water level data. These data are exported to Microsoft Excel to use in calculating groundwater elevation for the transducer data.

All the transducer data are downloaded as binary files. Each transducer manufacturer provides software that is used to export the data in text file format. The text files are then formatted for import into the Microsoft Access database. The raw pressure and barometric transducer data are imported to different tables based on differences in the type and format of data collected. The different data formats are tied to the two brands of transducer used and to changes in data collection format within brands as transducer models are upgraded. The different types of data are currently barometric pressure data and non-vented pressure transducer data.

Barometric pressure data initially are in units of millimeters of mercury (mm Hg). Because the downhole pressure transducer data use feet of water (feet H_2O), the barometric pressure data are converted to feet H_2O and stored in a new table.

Non-vented transducers record a single pressure value at each recording time. In other words, the pressure recorded by a non-vented transducer actually consists of the barometric pressure added to the pressure of the water above the transducer. Therefore, non-vented transducer data must be corrected for barometric pressure before the data can be converted to a groundwater elevation. The data are imported, assigned a unique key, and subjected to barometric pressure correction to produce a corrected level. The corrected level data from the non-vented transducers are exported to Microsoft Excel for further analysis.

3.3 CALCULATING GROUNDWATER ELEVATION

The transducer data are converted to groundwater elevations using Microsoft Excel. The groundwater elevation in each well is calculated to produce agreement between the transducer data and the manually-collected groundwater elevation data. For every manual measurement, the nearest transducer measurement in time is subtracted from the groundwater elevation measured manually. The resulting value, called the individual transducer datum, is the elevation of the transducer above mean sea level. The elevation of the transducer is then directly added to the transducer measurements to convert them to groundwater elevation above mean sea level.

Individual transducer datum adjustments based on manual water level measurements are completed quarterly as a QC measure for several reasons. Often the transducer is not placed in the well at exactly the same depth after download, and manual measurement is used to calculate the datum adjustment for the new position in the well. Sometimes transducers experience data drift over time or may cease to record accurate data. Quarterly manual measurements ensure that these problems are identified in a timely manner so that transducer can be repaired or replaced. On occasion a manual measurement may be inaccurate or anomalous. Regular measurements allow anomalous

measurements to be identified so that they do not affect the final calculated groundwater elevations.

The calculated groundwater elevation data are plotted on graphs and visually checked for anomalies. Any anomalies noted are investigated to determine whether they are related to groundwater extraction, rainwater infiltration, irrigation, transducer problems, sampling, or other causes. Once the cause is identified, appropriate action is taken, such as including a note on the graphs and in the database or asking the field technicians to check the well seal.

The adjustments made to calculate groundwater elevation are described in a table, subjected to QC by a hydrogeologist not involved in the original calculations, and imported into the database for storage. The Excel calculations and graphs are subjected to QC, both during the quarter in which they are completed and again during the following quarter, by comparing to the next manual measurement. After these checks have been completed, the groundwater elevations are imported to the database and associated with the original data using the unique key assigned to each measurement.

SECTION 4

LTWLM Results and Discussion

Seven years of long-term water-level monitoring have been completed to date. Of these, the first five years documented water levels during background conditions, Interim Remedial Action (IRA) system operation, and installation of the RAPA system. The sixth year of data documents water levels during testing and initial operation of the RAPA system. The most recent year of data documents water levels during the development of the capture zones associated with the RAPA system. The groundwater elevation data for each cluster are presented as **Figures 4-1 to 4-9**.

4.1 GROUNDWATER EXTRACTION EFFECTS

The following sections describe groundwater extraction effects observed during the most recent year of monitoring, June 2014 to June 2015.

4.1.1 RAPA SYSTEM

The RAPA system was installed between March 2011 and August 2013 and 24-hour operation began in September 2013. Since that date, the RAPA system has operated continuously, except for brief shutdowns such as those related to maintenance of the system, specific capacity testing, or electrical outages. The RAPA system has the following components, all of which are shown on **Figure 1-1**:

- Extraction wells – There are a total 77 extraction wells. These consist of 37 USAS, 27 LSAS, 11 AF Gravels, and two S&P Sands wells.
- Extraction trenches – There are four extraction trenches, all completed in the USAS.
- Injection wells – There are five USAS wells designed to allow reinjection of treated groundwater for enhanced flushing on-Facility.

- Infiltration galleries – There are three infiltration galleries located around wetlands to allow localized groundwater recharge.

Because RAPA pumping has been ongoing during the entire period from June 2014 to June 2015, the full effects of RAPA operation on water levels are difficult to discern from the associated graphs. However, a comparison of the current **Figure 4-1** with the prior years of data (2014 RASR, Appendix F, AECOM, 2014) indicates the following approximate maximum drawdown has occurred On-Facility due to RAPA operation:

- USAS – 9 ft;
- LSAS – 20 ft;
- AF Gravels – 25 ft; and
- S&P Sands – 15 to 25 ft, depending on pumping rate.

Effects of RAPA pumping are clearly evident from the response of wells to shutdowns of the RAPA system. On **Figure 4-1**, shutdowns are evident in vertical lines showing the amount of water level recovery measured by the transducer during the shutdown. Only partial recovery of water levels occurs during these brief shutdowns.

4.1.2 PRIVATE WELLS

A number of private commercial irrigation wells operate in the vicinity of the site. The private commercial irrigation wells are used to maintain landscaping around local businesses. Several of these wells have been abandoned during the course of the LTWLM program. This section provides a brief summary of the primary wells observed to operate between June 2014 and July 2015.

4.1.2.1 7921 15TH ST E WELL

This well was used to maintain a decorative pond on the property located at 7921 15th St E. The well had an open-hole completion from 45 to 143.7 feet bgs and operated on and off until it was abandoned and replaced with a Floridan well in October 2011. The locations of the original well and the replacement well are shown on **Figure 1-1**. The

replacement well was the only active well at 7921 15th St E between June 2014 and July 2015.

4.1.2.2 THE 8005 15TH ST E WELL

An irrigation well was identified on the 8005 15th St E parcel during previous well searches, but the well was not in use. The well was returned to operation in September 2009 to provide irrigation water for landscaping. The well had open-hole completion from 55 to 161.2 feet bgs and was abandoned and replaced with a Floridan well in September 2011. The locations of the original and replacement wells are shown on **Figure 1-1**. The replacement well was the only open well at 8005 15th St E between June 2014 and July 2015; the well is currently not in use.

4.1.2.3 7741 AND 7851 15TH ST E WELLS

Two wells were located on a property with the addresses above. The 7741 15th St E well was screened from 220 to 360 feet bgs and was installed in 2000, but was not in use. The 7851 15th St E well was screened from 237 to 480 feet bgs, was installed in 1999, and was used for irrigation. Both wells were abandoned in September 2011 and replaced with a single Floridan well. The locations of the original and replacement wells are shown on **Figure 1-1**. The replacement well was the only active well at this location between June 2014 and July 2015.

The minor pumping signature of the replacement well can be seen as a distinctive irregular drawdown and recovery pattern in On-Facility Floridan well MW-123, as shown on **Figure 4-1**. The new well is pumped on an irregular schedule to fill a pond that is used for irrigation. When the pond level declines below a float switch's lower elevation boundary, the pump turns on to fill the pond. When the float switch reaches its upper elevation boundary, the pond is full and the pump shuts off. Testing performed in July 2012 confirmed that the irregular drawdown and recovery pattern observed in Floridan well MW-123 was attributable to the pumping of this well.

4.1.2.4 7660 MATOAKA RD WELL

Evidence from the Northeast Area, Rt. 301, and 26th Ct. E well clusters resulted in identification of a well at 7660 Matoaka Rd (west of the facility) that is pumped approximately twice a week for irrigation purposes as needed. In other words, it appears that under sufficiently wet conditions the well is shut off, but otherwise it operates on a twice weekly schedule. **Figure 1-1** identifies the location of this well, which was installed in January 2000 and has open-hole completion between 31 and 142.5 feet bgs. LTWLM will continue in the vicinity of this well to evaluate the potential impact of pumping at the irrigation well on operation of the RAPA system. The operation of this well is most evident as regular drawdown and recovery signatures in the LSAS and AF Gravels on **Figure 4-9**.

4.1.2.5 1201 TALLEVAST RD WELL

Figure 1-1 identifies the location of an irrigation well at 1201 Tallevast Rd. This well is cased from the ground surface to 44 ft bgs and has open-hole completion below that depth. A video camera log indicated that the hole collapsed at 138 ft bgs; the pump installation contractor indicated the total depth of the well is to approximately 280-320 ft bgs. Based on hydrograph data, the well is used on an intermittent or as-needed basis for irrigation. The irrigation schedule for the well was originally quite distinctive: the well was pumped all night (12 hours/night) at 95 gpm for four consecutive days, and then was completely off for the remaining three days of the week. This pumping was observable in the Tallevast Road Ditch and Golf Course well clusters. Currently, this well is still open but is not actively used for irrigation.

4.1.2.6 NORTHWEST AREA WELLS

Prior to installation of the LTWLM transducers, the FDEP and Lockheed Martin suspected that groundwater supply wells were being operated at the industrial park located to the northwest of the Site. Based on hydrographs presented in **Figures 4-5A** through **4-5F** it is apparent that at least one extraction well is operating in the Northwest Area. A door-to-door survey, combined with an intensive records search, was completed

in 2011 and 2012. The results indicated that there are multiple wells in the area potentially extracting water from the AF Gravels, S&P Sands, and vertically adjacent lithologic units for irrigation purposes. These wells, along with their expected primary groundwater extraction zone, are shown on **Figure 1-1**.

The following wells were identified as likely pumping influences due to their use in irrigating the properties on which they are located and their proximity to the Northwest Area well cluster:

- 7300 15th St E – This well is screened from 46-153 ft bgs and is used for irrigation approximately twice a week.
- 7230 15th St E – The well depth is greater than 150 ft but could not be confirmed, although it was reportedly originally used for orange grove irrigation. The well is used for irrigation about once a week.
- 7260 15th St E – The well is screened from 46-165 ft bgs and is used for irrigation, although the frequency of irrigation is not known.
- 7455 16th St E – This well is screened from 36-235 ft bgs and used for irrigation at least 4 times a week, but possibly daily.

The drawdown observed in the Northwest Area monitoring cluster in response to the combined pumping effects of these wells is generally less than one foot in the LSAS, one to three feet in the AF Gravels, and a few inches in the S&P Sands. The Tallevast Road Ditch area monitoring well cluster may also be responding to this pumping, but the response in the AF Gravels is very small (about 2 inches). Long-term monitoring of the interaction of the RAPA system and the drawdown caused by the Northwest Area extraction wells is ongoing.

4.2 GROUNDWATER LEVEL MONITORING

Transducers were installed in well clusters at nine different locations. Assessment of the water levels over time revealed that, in general, variability in the water levels was due to nearby groundwater extraction, precipitation, and regional influences. Regional influences often are a combination of environmental effects (droughts and wet years) and the human response to those effects. For example, in droughts or dry seasons, irrigation

requirements increased, resulting in increased pumping of both public and private wells across the region. This was noticeable as a generalized decline in water levels in the pumped aquifers, although the effects of individual pumping wells were often not distinguishable from one another. Thus, a pattern of higher groundwater elevations was often observed in all units when the rainfall was high, even though the precipitation was not directly recharging the deeper units.

In the following sections each cluster of instrumented wells is described and the insights gained from monitoring that cluster of wells during the June 2014 to June 2015 monitoring period are summarized. Often, the data gathered were used for multiple purposes that are not called out individually in the summary. For example, data from the Golf Course and On-Facility wells were used to help assess well efficiency in nearby extraction wells and trenches. The data collected have also been used to supplement manual water level measurements and aid in their interpretation.

4.2.1 ON-FACILITY

The On-Facility cluster wells were equipped with transducers to monitor the hydraulic effects in the area of highest COC concentrations, which were also the focus of the remedial systems in place at the Facility. Thus, this cluster has been a primary tool in monitoring the effects of the RAPA system. Variation in the water levels within and between groundwater zones is generally due to operation of nearby remedial system extraction wells and precipitation. The large influence of the RAPA system tended to mask the effects of any regional trends. Some items of interest on **Figure 4-1** are discussed below.

The effects of RAPA operation are clearly evident at the Facility. The yearly average water levels for the USAS, LSAS, AF Gravels, and S&P Sands units at the Facility would be approximately 26, 22, 15, and 12 ft amsl, respectively, in the absence of the RAPA pumping. From **Figure 4-1** it is evident that the effects of groundwater extraction have significantly decreased the average water levels in each of these units. In addition, the water level in the unlined, on-Facility storm-water retention pond has continued to decline since RAPA operations commenced. This decline is likely to be due in part to

RAPA pumping from the USAS, which results in water level declines under the unlined pond.

4.2.2 SOUTHWEST AREA

The Southwest Area cluster wells were equipped with transducers to monitor for off-site pumping near the edges of the Site that might influence transport of COCs. No new pumping influences were identified during the June 2014 to June 2015 monitoring period (**Figure 4-2)**. When nearby RAPA system wells are shut down for a few hours, the response is evident as a few inches of recovery in the LSAS, AF Gravel, and S&P Sands well hydrographs. Such minor changes in water levels are generally not evident in the USAS well at this location.

4.2.3 CONVENTION CENTER

The Convention Center cluster wells were equipped with transducers to monitor for off-site pumping near the edges of the Site that might influence COC transport. No new pumping influences were identified during the June 2014 to June 2015 monitoring period (**Figure 4-3)**. When nearby RAPA AF Gravels wells are temporarily shut off for a few hours, the response is between 1.0 and 1.5 feet of recovery in the AF Gravels well. No response to temporary RAPA well shutdowns is evident at the wells completed in the other aquifer zones, although several feet of drawdown due to RAPA operation has been observed at these wells since startup.

4.2.4 NORTHEAST AREA

The Northeast Area cluster wells were equipped with transducers to monitor the potential effects of the nearby pond (TW-2) on groundwater and to investigate the possible presence of pumping wells in their vicinity. The hydrographs for the June 2014 to June 2015 monitoring period are presented as **Figure 4-4**. Groundwater elevations in **Figure 4-4** for the USAS and LSAS are nearly identical in this area; this is likely because TW-2 is recharging both units. As in previous years, the drawdown pattern in the AF Gravels associated with regular pumping of the irrigation well at 7660 Matoaka Rd (see Section 4.1.3.4) can be identified on **Figure 4-4**, although the drawdown is only about four inches

because these monitoring wells are approximately 3000 feet away from the irrigation well. Superimposed on that small regular drawdown are irregular, one to five-foot recovery curves associated with brief shutdowns of nearby AF Gravels RAPA system extraction wells.

4.2.5 NORTHWEST AREA

The Northwest Area cluster wells were equipped with transducers primarily to monitor for possible irrigation well influences in the nearby industrial area. As shown in **Figure 4-5**, there is consistent daily drawdown in the LSAS, AF Gravels, and S&P Sands associated with the combined effects of pumping from multiple irrigation wells in the industrial area. Because the irrigation wells all operate at night and screen similar intervals, identifying which well(s) are responsible for each drawdown effect is difficult.

The water removed from the LSAS, AF Gravels, and S&P Sands by the irrigation wells in the industrial area is applied to the USAS as irrigation water. In addition, a number of residences located northwest of the industrial area also utilize privately owned irrigation wells, though on a smaller scale; these wells may also influence groundwater levels. The process of applying water from deeper zones to the USAS during irrigation has likely been both ongoing and consistent for many years. As a result, the groundwater levels in the LSAS, AF Gravels, and S&P Sands are much lower than those in the USAS. The difference is generally around ten feet. Because the pumping is consistent over time, the average water level trends in the three affected units tend to track with regional trends. The effects of the RAPA system, if present, are masked by the effects of local irrigation pumping. Inspection of potentiometric maps (Figures 3-1 through 3-6 of the RASR main text) suggests that the effects of the RAPA system pumping in this area are likely to be small.

4.2.6 GOLF COURSE POND

Transducers are currently installed in three groundwater wells near the Golf Course pond to monitor the effects of RAPA operations. **Figure 4-6** presents the hydrographs from June 2014 to June 2015 for this well cluster. The effects of temporary shutdowns of

nearby RAPA system extraction wells are evident as small recovery curves or as vertical lines (in the case of very brief shutdowns) in the USAS, LSAS, and AF Gravels. Any potential drawdown due to operation of more distant irrigation wells was masked by the effects of the nearby RAPA extraction system wells.

4.2.7 TALLEVAST ROAD DITCH

The Tallevast Road Ditch area cluster wells were equipped with transducers, in part, to monitor the interaction of the ditch with the USAS and LSAS over time. The water in the ditch typically has an elevation of between 12 to 12.5 ft amsl, which is typically lower than the elevation of the groundwater in the USAS and LSAS at this location, as illustrated in **Figure 4-7**. Thus, groundwater would be expected to discharge to the ditch from both the USAS and LSAS most of the time. During periods of high storm flow, water in the ditch briefly serves as a source of recharge to these units. Good examples of this situation are evident in hydrographs in June and September 2014 time frame (**Figure 4-7)**. At these times, multiple rainfall events raised the ditch water level above the groundwater elevation in the adjacent USAS and LSAS wells.

Several private wells have influenced water levels in the AF Gravels and S&P Sands at the Tallevast Road Ditch well cluster; the USAS and LSAS were not visibly affected by these wells. The 1201 Tallevast Rd irrigation well is located only 700 feet from the Tallevast Road Ditch cluster; this well likely did not operate during the monitoring period. The numerous small ups and downs evident in water levels in the AF Gravels well indicates that there are likely other wells operating in the area. This is to be expected, since the industrial complex immediately north of Tallevast Road Ditch has multiple operating irrigation wells.

Drawdown in the AF Gravels and S&P Sands due to RAPA system operation was evident at the Tallevast Road Ditch cluster based upon observations during RAPA startup as described in the 2014 RASR, Appendix F (AECOM, 2014). However, individual recovery curves resulting from temporary well shutdowns were not evident. There was no visually discernable evidence of drawdown due to RAPA system operation in the USAS or LSAS at this location.

4.2.8 HIGHWAY 301

The Highway 301 cluster wells were originally equipped with transducers to identify pumping influences on the eastern edge of the Site. The pumping signature was ultimately identified as the 7660 Matoaka Rd well. The original Highway 301 well cluster (MW-183 to MW-187) was located on the on-ramp for Highway 301. However, proposed highway modifications resulted in abandonment of these wells. Since the East Area transducers are closer to the 7660 Matoaka Rd well and monitor its operation more effectively, the decision was made to move the Highway 301 transducers to wells MW-188 to MW-192. These wells are further south along Highway 301, and they provide monitoring of a different set of groundwater influences. In addition, they provide data to evaluate the effect of the RAPA system on groundwater levels in that area.

In the current Highway 301 well cluster, only the AF Gravels well showed any response to pumping. The AF Gravels well responded to twice-weekly (when needed) pumping of the 7660 Matoaka Rd irrigation well, characterized by a few inches of drawdown and recovery. Water levels at that monitoring well also responded to RAPA system extraction with up to a one-foot recovery response when temporary shutdowns of the nearest AF Gravels wells (approximately 1600 feet away) occurred.

4.2.9 EAST AREA

The East Area cluster wells were equipped with transducers at the same time as the original Highway 301 cluster wells to improve the monitoring of potential pumping influences in the adjacent industrial complex. As is evident on **Figure 4-9**, twice weekly (when needed) pumping of the 7660 Matoaka Rd irrigation well, located less than 500 feet from the well cluster, regularly causes drawdown in groundwater levels in both the LSAS and the AF Gravels.

The drawdown in the LSAS, AF Gravels, and S&P Sands in response to RAPA system pumping continues to be observed. In the AF Gravels, temporary shutdowns of the nearest AF Gravels extraction wells (located about 1700 ft away) result in up to 1.5 ft of recovery. Interestingly, the LSAS also shows a few inches of response to the same AF

Gravels well shutdowns, indicating that communication between the LSAS and AF Gravels may be better than is noted elsewhere.

4.3 COMPARISON OF WATER LEVELS BETWEEN WATER-BEARING ZONES

One goal of the LTWLM program is to provide data to facilitate a comparison of groundwater elevations, and evaluate the potential interaction, between water-bearing zones on a relatively detailed and continuous time scale. Measurements of groundwater elevation, such as those obtained during annual or quarterly monitoring events, provide a snapshot picture of groundwater interactions. However, large-scale monitoring events typically don't coincide with extreme weather events. Installation of continuous monitoring devices in selected well nests can significantly add to the understanding of groundwater variations on a yearly basis and during extreme weather.

The focus of the following sections is on the direction of vertical gradients and degree of separation between hydraulic units during the June 2014 to June 2015 period of monitoring. More specific calculations of vertical gradient are provided in the main text of the RASR, and a detailed discussion of the data collected prior to June 2014 is provided in the 2014 RASR Appendix F (AECOM, 2014).

4.3.1 USAS AND LSAS

Groundwater levels in the USAS wells are generally moderately to significantly higher than those in the corresponding LSAS wells, with the difference ranging from about one foot to over five feet. The difference in groundwater elevation between the USAS and LSAS varies between well nests. In the Northeast Area and near Tallevast Road Ditch, the groundwater elevation in the USAS is generally less than a foot higher than that in the LSAS. This is likely due to the proximity of these clusters to surface water features that affect both units. Water levels at the golf course used to fall into the same category. However, the RAPA system operation creates greater drawdown in the LSAS than in the USAS, resulting in a greater separation of the heads (**Figure 4-6**). In other locations, the difference in groundwater elevation between the units is typically more than one foot.

The exact vertical position of the LSAS well screen has a bearing on the magnitude of the difference in groundwater elevation between the USAS and LSAS. For example, the On-Facility well cluster has one well (PZ-LSAS-7) screened very near the top of the LSAS, and another well (MW-37) screened near the bottom. These two LSAS wells have very different groundwater elevations, as shown in **Figure 4-1**. The upper LSAS well is closer in groundwater elevation to the nearby USAS well (MW-36), due to its screened interval. Previous reports have identified the finely laminated nature of the LSAS that results in a sharp head drop across the unit.

Local pumping also has an influence on heads in the LSAS in some locations. Some production wells in the industrial and commercial areas surrounding the Site are cased down to the top of the LSAS or deeper, followed by open-hole completion through portions of the Hawthorn Group and Arcadia Formations. This can result in portions of the LSAS (which is the uppermost portion of the Hawthorn Group) being open to or influenced by pumping. Water levels in the LSAS at the Northwest Area, Southwest Area, Convention Center, and East Area well clusters are affected by operation of local industrial or commercial wells. Pumping of these wells increases the difference in groundwater elevation between the USAS and LSAS because the USAS is generally not subject to pumping and often is irrigated using the water removed from lower units.

4.3.2 LSAS AND AF GRAVEL

Groundwater levels in the LSAS are typically higher than those in the corresponding AF Gravels well in most locations. However, the operation of nearby remediation or irrigation system extraction wells can result in groundwater levels in the LSAS being the same or lower than those in the AF Gravels. For example, as shown on **Figure 4-1**, the groundwater level in the AF Gravels well at this location is occasionally higher than that in the LSAS well when the AF Gravels extraction wells are off but the LSAS ones are still operating.

In addition, in the Northwest Area and the East Area (**Figures 4-5** and **4-9**), irrigation wells affect the heads in both the AF Gravels and the LSAS. In both areas, even when the irrigation wells are not operating, the groundwater elevation in the LSAS is only

marginally higher than that in the AF Gravels. The response of the LSAS to AF Gravels remedial pumping near the East Area (discussed in Section 4.2.9) implies that, in the East Area, there may be a better connection between the two units. In the Northwest Area, the frequency of pumping is so high that the units likely never recover to static levels; it's also possible that there is enhanced connection between the two units.

4.3.3 AF GRAVELS AND S&P SANDS

The difference between groundwater levels in the AF Gravels and the S&P Sands varies by location and with time. Again, this section considers only the June 2014 to June 2015 monitoring period.

At the On-Facility cluster, the RAPA system operation currently governs the gradient between the AF Gravels and S&P Sands. The direction of the gradient varies with extraction rates from nearby wells in each unit.

In the Convention Center, Northeast Area, Highway 301, and East Area clusters, groundwater levels in the AF Gravels were consistently lower than those in the S&P Sands during the period from June 2014 to June 2015. This pattern is likely due to consistent RAPA and/or irrigation pumping in the AF Gravels during that time period. For all but the Highway 301 cluster, the pre-RAPA groundwater elevations are known and showed that the heads in the S&P Sands tended to be lower than those in the AF Gravels when irrigation pumping was low. After RAPA system startup, the AF Gravels experienced enough drawdown to keep the groundwater elevation below that of the S&P Sands. The current Highway 301 cluster likely had a similar pattern, but those wells were not instrumented prior to RAPA startup.

In the Northwest Area, the groundwater levels in the S&P Sands are typically two to four feet lower than those in the AF Gravels when nearby wells are not actively pumping. The water levels in the two units tend to follow similar trends.

In the Southwest Area and near Tallevast Road Ditch, the water levels in the AF Gravels and S&P Sands are very similar during times of minimal pumping, although the heads in

the AF Gravels were lower during the June 2014 to June 2015 time period. Water level changes over time in both units follow approximately the same trends. However, this does not necessarily mean that these two units are in direct hydraulic communication; instead, it is more likely a coincidence.

4.3.4 S&P SANDS AND LOWER AF SANDS

In general, the groundwater levels in the Lower AF Sands are higher than those in the S&P Sands. Groundwater from the Lower AF Sands does not appear to be extracted for water supply purposes in the vicinity of the LTWLM monitoring well clusters. The LTWLM monitoring well clusters that have wells completed in the Lower AF Sands are in the On-Facility, Convention Center, Northeast, Northwest, Tallevast Road Ditch, Highway 301, and East areas.

The hydraulic head trends in the Lower AF Sands and S&P Sands are typically quite different. The variability in the relationship between hydraulic heads in the Lower AF Sands and the S&P Sands supports the concept that the two units are in essence hydraulically disconnected. The Lower AF Sands usually has higher heads than the S&P Sands, even during non-pumping conditions, indicating that the S&P Sands is not recharging the Lower AF Sands, or perhaps that the Lower AF Sands may serve as a very minor recharge source for the S&P Sands.

4.3.5 LOWER AF SANDS AND UPPER FLORIDAN AQUIFER

MW-123 is a Floridan monitoring well located on the Facility that is instrumented with a transducer to record water levels within that aquifer. MW-123 is the sole Floridan well in the LTWLM monitoring well network. This is because the regional significance of the Floridan Aquifer as a water supply source means that it is monitored extensively by other entities. In addition, the LTWLM program demonstrated early in its history that the Lower AF Sands and Upper Floridan units are hydraulically distinct from the overlying aquifer units; this same conclusion was reached based on extraction well performance testing at the Facility as the RAPA system was being implemented.

The MW-123 hydrograph for June 2014 to June 2015 is included in **Figure 4-1**. The Upper Floridan Aquifer is subject to significant water supply and irrigation well pumping, the effect of which is evident in the hydrograph. The groundwater elevation variations over time are much greater at MW-123 (Upper Floridan Aquifer) than at nearby MW-19 (Lower AF Sands); the effects of pumping from the nearby Golf Course well are evident in the MW-123 hydrograph as small drawdown and recovery curves. Thus, while the overall pattern of increase and decrease in groundwater elevation is comparable between the two wells, the Floridan well experiences greater extremes, and the direction of the gradient between the two aquifers changes over time as a result.

4.4 WATER LEVELS WITHIN AQUIFER ZONES

The main text of the RASR provides a discussion of horizontal gradients within each zone based on contour maps created from the most recent synoptic water level gauging event. The LTWLM data collection has provided supplemental information for helping guide the analyses and interpretations presented in the RASR and in prior groundwater monitoring reports.

SECTION 5
Conclusions

The LTWLM program, begun in 2008, has generated data of great value for purposes of characterizing the hydrogeologic system at the Tallevast site, identifying off-site pumping stresses of potential concern, and monitoring the initial effects of the RAPA system. For example, between June 2014 and June 2015, the current monitoring network facilitated tracking of surface-groundwater interactions at three locations and has played a key role in tracking the development of RAPA system capture and RAPA-related drawdown effects. Data collected as part of the LTWLM program have allowed the hydraulic interaction between water-bearing zones over time to be closely tracked and provided information on how that interaction is affected by known pumping influences. The LTWLM program will be continued as RAPA operations proceed and modifications for maintaining LTWLM effectiveness will be made, when appropriate.

GROUNDWATER SAMPLING LOG

SITE NAME: LMC TALLEVAST	SITE LOCATION: Sarasota, FL		
WELL NO: EW-108	SAMPLE ID: EW-108	DATE: 11/13/14	

PURGING DATA

WELL DIAMETER (inches): 2	TUBING DIAMETER (inches): 3/8	WELL SCREEN INTERVAL DEPTH: 35.5 feet to 40.5 feet	STATIC DEPTH TO WATER (feet): 28.72	PURGE PUMP TYPE OR BAILER: ESP

WELL VOLUME PURGE: 1 WELL VOLUME = (TOTAL WELL DEPTH – STATIC DEPTH TO WATER) X WELL CAPACITY
(only fill out if applicable)
= (feet – feet) X gallons/foot = gallons

EQUIPMENT VOLUME PURGE: 1 EQUIPMENT VOL. = PUMP VOLUME + (TUBING CAPACITY X TUBING LENGTH) + FLOW CELL VOLUME
(only fill out if applicable)
= 0.05 gallons + (0.0026 gallons/foot X 60 feet) + 0.10 gallons = 0.31 gallons

INITIAL PUMP OR TUBING DEPTH IN WELL (feet): 38'	FINAL PUMP OR TUBING DEPTH IN WELL (feet): 38'	PURGING INITIATED AT: 1448	PURGING ENDED AT: 1616	TOTAL VOLUME PURGED (gallons): 8.0
