Data Validation Report

Project:	Lockheed Martin - Tallevast	
Laboratory:	TestAmerica Laboratories, Tampa Florida	
SDG:	660-65317-1	
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Atomic Emission Spectrometry (ICP-AES)/SW6010B	
Validation Level:	Level II	
Prepared by:	Jim Refermat/AECOM	Completed on: March 9, 2015
Reviewed by:	Denise Oggeri/AECOM	File Name: DVR_660-65317-1_r0.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-65317-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on February 6, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
POTW Effluent	660-65371-1	Water	02/06/2015	X	X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS was reported for the SW8260B analytical fraction and an MS/MSD for the SW8260C fraction. The MS associated with the SW8260C analytical fraction and the MS/MSD associated with the SW8260C fraction were in control, and as a result no further action was required.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS/MSD results
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS/MSD was reported with the SW6010B analytical fraction; however, the "normal" parent sample was not from the Tallevast site and for that reason was not evaluated. No further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed with analysis batch 155502 in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✓	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) Equipment Blanks (EBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs, EBs and TBs were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Blank results were reviewed for conformance with the

QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB or field EB and TBs. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD for following analytical preparation batches were evaluated for the 8260C analytical fraction and are in-control: 155760, 155824 and 155854. No further action is required. The MS and/or MS/MSD for following analytical preparation batches were evaluated for the 8260B analytical fraction and are in-control: 155836 and 155853. No further action is required.

Analytical preparation batches 155728 and 155785 used "normal" parent samples that were not from the Tallevast site for spiking the MS/MSD associated with the SW8260C analytical fraction. Because the samples are not site related, the MS/MSD was not evaluated.

The recovery for several analytes from preparation batch 155882 and 155879 exceed recovery criteria bias low, as a result the parent samples were qualified "UJ" for non-detects and "J" for detections for the affected analytes as listed below.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-19	660-65450-3	o-Xylene	UJ	Bias Low
MW-42	660-65450-13	Trichloroethene	J	Bias Low

The RPD associated with preparation batch 155879 and 155820 exceeded criteria for several analytes, as a result the parent sample was qualified "UJ" for the affected analytes as listed below.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-42	660-65450-13	Carbon disulfide	UJ	Bias Low
MW-42	660-65450-13	Chloromethane	UJ	Bias Low
MW-42	660-65450-13	Ethylbenzene	UJ	Bias Low
MW-42	660-65450-13	1,1,1-Trichloroethane	UJ	Bias Low
MW-102	660-65390-14	Dichlorodifluoromethane	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. The field duplicates for samples MW-102, MW-41 and MW-42 met the acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: MW-27, MW-41, MW-41 (DUP), MW-253 and MW-254. Several samples from the 8260C analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration; however the affected samples were all reported with elevated 1,4-dioxane concentrations, and, as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted is the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Organic and Inorganic Level II Data Validation Report

Quarterly RO Performance Sample

Analysis Performed by: TestAmerica, Tampa, FL SDG # 660-66294-1

Prepared by Jim Refermat
Project Chemist/Data Validator

Data Validation Report

Project:	Lockheed Martin - Tallevast	
Laboratory:	TestAmerica Laboratories, Tampa Florida	
SDG:	660-66294-1	
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Mass Spectrometry (ICP-MS)/SW6020A • Anions by Ion Chromatography - EPA Method 300.0 • Total Dissolved Solids (TDS) by SM 2540C	
Validation Level:	Level II	
Prepared by:	Jim Refermat/AECOM	Completed on: May 5, 2015
Reviewed by:	Denise Oggeri/AECOM	File Name: DVR_660-66294-1_r0.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-66294-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on April 6, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
RO Permeate	660-66294-1	Water	04/06/15	X	X	X	X

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6020A Mass Spectrometry (MS). Anion analysis was performed using EPA Method 300.0 Ion Chromatography (IC), and Total Dissolved Solids (TDS) was performed using SW2540C gravimetric. Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS was reported for the SW8260B analytical fraction and an MS/MSD for the SW8260C fraction. All analytes were in control in the SW8260B and SW8260C analytical fractions, and no further action is required.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process

in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

Metals by EPA Method SW6020A Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✗ Laboratory blanks/equipment blanks
✓ MS/MSD results
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Sodium and lead were detected in the associated MB for SW6020A. As a result, any detections for the referenced analyte less than five times the amount detected in the associated blank are qualified as "U" or non-detect because of the method blank excursion. However, since the sodium results were significantly greater than five times the amount in the associated MB and lead was non-detect, no further action was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was reported in lieu of an MS/MSD. No further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6020B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An LCS/LCSD was run with the analytical fraction in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

General Wet Chemistry by EPA Method 300.0 and SM 2540C Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS results, EPA Method 300.0 only
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MB.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD associated with analytical preparation batch 378127 for the E300.0 analytical fraction met acceptance criteria, and no further action is required.

An MS/MSD is not performed on the SM2540C analytical fraction, no further action is required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix free media. For aqueous samples, laboratory-grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the E300.0 and an LCS for the SM2540C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory sample preparation and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs were reviewed for conformance with the QC criteria of <25% for aqueous matrices. A laboratory duplicate was not reported with the E300.0 or SM2540C analytical fractions; no further action is required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. No further action was required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-66690-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on May 5, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS was reported for the SW8260B analytical fraction; however, the "normal" parent sample was not from the Tallevast site and for that reason was not evaluated. The MS/MSD associated with the SW8260C analytical fraction were in control, and as a result no further action was required.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS/MSD results
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS/MSD was reported with the SW6010B analytical fraction; however, the "normal" parent sample was not from the Tallevast site and for that reason was not evaluated. No further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✗	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs and TB were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if

the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MBs or TB.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS and/or MS/MSD for following analytical preparation batches were evaluated for the 8260C analytical fraction and are in-control: 158004, 158113, 158141, 158204 and 158243. No further action is required. The MS and/or MS/MSD for following analytical preparation batches were evaluated for the 8260B analytical fraction and are in-control: 158160, 158178, 158181, 158218 and 158227. No further action is required.

Analytical preparation batch 158189 used a "normal" parent sample that was not from the Tallevast site for spiking the MS/MSD associated with the SW8260B analytical fraction. Because the sample is not site related, the MS was not evaluated. Similarly, analytical preparation batch 158073 associated with SW8260C analytical fraction used a "normal" parent sample that was not from the Tallevast site and was not evaluated for that reason.

Due to the high analyte concentration relative to the spike concentration, the MS for 1,1-Dichloroethene associated with preparation batch 158215 was not evaluated. For preparation batch 158232, the concentration of the parent sample for cis-1,2-Dichloroethene plus the spike concentration for the MS/MSD exceeds the evaluation criteria for the referenced analyte. In both cases the LSC/LCSD was in-control and no further action is required.

The MS results for Chloroethane from preparation batch 158001 exceeded criteria bias high, no further action is required. However, the RPD between the MS and MSD for the referenced preparation batch exceed acceptance criteria for Chloroethane and Chloromethane. As a result, the "normal" samples in the associated referenced preparation batch are qualified as estimated "J" for detections and non-detect estimated "UJ" for non-detects.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
EW-4009	660-66914-1	Chloroethane	UJ	Bias Low
EW-4009	660-66914-1	Chloromethane	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS or LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met with the exception of the RPD between the LCS and LCSD for preparation batch 158160 for Dichlorodifluoromethane and 2,2-Dichloropropane. As a result the “normal” samples in the referenced preparation batch are qualified as estimated “J” for detections and non-detect estimated “UJ” for non-detects. All samples were non-detect for Dichlorodifluoromethane and 2,2-Dichloropropane and qualified “UJ” as listed below. No further action was required.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
EW2001_INF	660-66883-1	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2002_INF	660-66883-2	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2003_INF	660-66883-3	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2004_INF	660-66883-4	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low

EW2006_INF	660-66883-6	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2007_INF	660-66883-7	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2008_INF	660-66883-8	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2009_INF	660-66883-9	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2010_INF	660-66883-10	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2011_INF	660-66883-11	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2012_INF	660-66883-12	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2013_INF	660-66883-13	Dichlorodifluoromethane	UJ	Bias Low

		2,2-Dichloropropane	UJ	
EW2014_INF	660-66883-14	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2015_INF	660-66883-15	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2016_INF	660-66883-16	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2017_INF	660-66883-17	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low
EW2018_INF	660-66883-18	Dichlorodifluoromethane 2,2-Dichloropropane	UJ UJ	Bias Low

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: EW3012_INF, EW3023_INF, EW3027_INF and EW4003_INF. Several samples from the 8260C analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration, however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, none of QC excursions encountered resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Organic and Inorganic Level II Data Validation Report

Quarterly RO Performance Sample

Analysis Performed by: TestAmerica, Tampa, FL SDG # 660-67787-1 and 660-67787-2

Prepared by Jim Refermat
Project Chemist/Data Validator

Data Validation Report

Project:	Lockheed Martin - Tallevast
Laboratory:	TestAmerica Laboratories, Tampa Florida
SDG:	660-67787-1 and 660-67787-2
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Mass Spectrometry (ICP-MS)/SW6020A • Anions by Ion Chromatography - EPA Method 300.0 • Total Dissolved Solids (TDS) by SM 2540C
Validation Level:	Level II
Prepared by:	Jim Refermat/AECOM — Completed on: August 10, 2015
Reviewed by:	Julie Cassetta/AECOM — File Name: DVR_660-67787-1_r1.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-67787-1 and 660-67787-2. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on July 6, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
RO permeate	660-67787-1	Water	07/06/15	X	X	X	X
RO feed	660-67787-2	Water	07/06/15		X		
RO concentrate	660-67787-3	Water	07/06/15		X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6020A Mass Spectrometry (MS). Anion analysis was performed using EPA Method 300.0 Ion Chromatography (IC), and Total Dissolved Solids (TDS) was performed using SW2540C gravimetric. Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. A MS was reported for the SW8260B analytical fraction and a MS/MSD for the SW8260C analytical fraction; however, the "normal" parent samples were not from the Tallevast site and for that reason they were not evaluated.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the

“normal” parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

Metals by EPA Method SW6020A Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✗ Laboratory blanks/equipment blanks
✓ MS/MSD results
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Sodium was detected in the associated MB for SW6020A. As a result, any detections for the referenced analyte less than five times the amount detected in the associated blank are qualified as "U" or non-detect because of the method blank excursion. However, since the sodium results were greater than five times the amount in the associated MB, no further action was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was reported in lieu of a MS/MSD. No further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the SW6020B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. A LCS/LCSD was run with the analytical fraction in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

General Wet Chemistry by EPA Method 300.0 and SM 2540C Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS results, EPA Method 300.0 only
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MB.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. A MS/MSD was prepaired for the E300.0 analytical fraction; however, the "normal" parent sample was not from the Tallevast site and for that reason they were not evaluated.

A MS/MSD is not performed on the SM2540C analytical fraction, no further action is required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix free media. For aqueous samples, laboratory-grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the E300.0 and a LCS for the SM2540C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory sample preparation and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs were reviewed for conformance with the QC criteria of <25% for aqueous matrices. Laboratory duplicate for samples collected at the Tallevast facility were not reported with the E300.0 or SM2540C analytical fractions; no further action is required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. No further action was required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

Reviewed by:	Julie Cassetta/AECOM	File Name: DVR_660-68372-1_r1.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-68372-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on August 4, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
POTW Effluent	660-68372-1	Water	08/04/2015	X	X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS was reported for the SW8260B analytical fraction and in control. The MS/MSD associated with the SW8260C analytical fraction was in control, and as a result no further action was required.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process

in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the Reporting Limit (RL).

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS/MSD results
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS/MSD was reported with the SW6010B analytical fraction and in control. No further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✗ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs and TB were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if

the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MBs or TB.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

MS/MSDs are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS and/or MS/MSD for following analytical preparation batches were evaluated for the 8260C analytical fraction and are in-control: 160451, 1560493 and 160513. No further action is required. The MS and/or MS/MSD for following analytical preparation batches were evaluated for the 8260B analytical fraction and are in-control: 160479, 160515, 160525 and 160588. No further action is required.

Analytical preparation batch 160527 and 160564 used a "normal" parent sample that was not from the Tallevast site for spiking the MS associated with the SW8260B analytical fraction. Because the sample is not site related, the MS was not evaluated. Similarly, analytical preparation batch 160356 and 160378 associated with SW8260C analytical fraction used a "normal" parent sample that was not from the Tallevast site and was not evaluated for that reason.

The MS results for Bromoform and Chlorodibromomethane from preparation batch 160511 exceeded criteria bias low, as a result, the "normal" parent sample in the associated preparation batch is qualified as estimated non-detect estimated "UJ" for the referenced analytes. Similarly, 1,1-Dichloroethene from preparation batch 160520 exceeded criteria bias low, as a result, the "normal" parent sample in the associated preparation batch is qualified as estimated non-detect estimated "UJ" fro the referenced analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
EW2031_INF	660-68469-31	Chloroethane	UJ	Bias Low
EW2031_INF	660-68469-31	Chlorodibromomethane	UJ	Bias Low
EW3014_INF	660-68469-54	1,1-Dichloroethene	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: EW3023_INF and EW4003_INF. Several samples from the 8260C analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration, however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, none of QC excursions encountered resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Organic and Inorganic Level II Data Validation Report

Monitoring Well Sampling

Analysis Performed by: TestAmerica, Tampa, FL SDG #660-68562-1

Prepared by Jim Refermat
Project Chemist/Data Validator

Data Validation Report

Project:	Lockheed Martin - Tallevast
Laboratory:	TestAmerica Laboratories, Tampa Florida
SDG:	660-68562-1
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Atomic Emission Spectrometry (ICP-AES)/SW6010B • Anions by Ion Chromatography - EPA Method 300.0 • Total Dissolved Solids (TDS) by SM 2540C
Validation Level:	Level II
Prepared by:	Jim Refermat/AECOM — Completed on: October 5, 2015
Reviewed by:	Denise Oggeri/AECOM — File Name: DVR_660-68562-1_r1.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-68562-1. SDG 660-68562 contains the following sub SDGs reported under a single cover: 660-68622, 660-68678, 660-68752, 660-68824, 660-68833 and 660-68889. Only the analytical data were reviewed for this validation, field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of-Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on August 10th through August 14th, 2015, August 17th through August 21st, 2015 and August 24th through August 28th, 2015. The referenced samples were picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C SIM Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Anion analysis was performed using EPA Method 300.0 Ion Chromatography (IC), and Total Dissolved Solids (TDS) was performed using SW2540C gravimetric. Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✓	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) Equipment Blanks (EBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs, EBs and TBs were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Blank results were reviewed for conformance with the

QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Acetone was detected in sample BLANK-23, however all associated samples were non-detect for Acetone, and as a result, no further action is required. No analytes were detected in any of the associated method, equipment or trip blanks with the exception of the above referenced sample. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS or MS/MSD for following analytical preparation batches were evaluated for the SW8260C SIM analytical fraction and are in-control: 160645, 160682, 160685, 160742, 160786, 160813, 160828, 160897, 160908, 160935, 160983 and 161035. The MSD associated with preparation batch 160682 was not reported due to instrument error, all other quality elements of the preparation batch were in control. No further action is required for the aforementioned preparation batches. The MS/MSD for following analytical preparation batches were evaluated for the SW8260B analytical fraction and are in-control: 160635,160708, 160879, 160891, 160975, 161098, 161112, 161153 and 161188. No further action is required.

The following analytical preparation batches associated with the SW8260C SIM analytical fraction used "normal" parent samples that were not from the Tallevast site for spiking the MS or the MS/MSD: 160589, 160716, 160748, and 160857. Because the samples are not site related, the MS or MS/MSD was not evaluated. Similarly, the following analytical preparation batches associated with the SW8260B analytical fraction used "normal" parent samples that were not from the Tallevast site for spiking the MS or the MS/MSD: 160664, 160807, 160876 and 161013. Because the samples are not site related, the MS or MS/MSD was not evaluated.

The recovery of one analyte from each of the following preparation batchs 160930 and 161089 exceed recovery criteria bias low, as a result the parent samples were qualified "UJ" for non-detects and "J" for detections for the affected analytes as listed below.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-82	660-68752-9	1,1-Dichloroethene	J	Bias Low
MW-80	660-68824-7	1,2,4-Trimethylbenzene	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C SIM analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. The field duplicates for samples MW-42, MW-51, MW-80, MW-82, MW-100, MW-102, MW-108, MW-128 and IWI-1 met the acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: MW-27, MW-41, MW-127, MW-253, MW-254, IWI-1, IWI-1 DUP, EW-UAFG-1, PZ-LSAS-2, PZ-LSAS-4, PZ-LSAS-5 AND PZ-LSAS-6. Several samples from the SW8260C SIM analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration; however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted is the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS/MSD results
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the associated equipment or method blanks. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. All QC acceptance criteria were met, and no further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. A LCS/LCSD was run with the analytical fraction in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. The field duplicates for samples MW-42, MW-80 and EW-108 met the acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No anomalies were encountered during the evaluation of the reporting convention for this analytical fraction, no further action was required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

General Wet Chemistry by EPA Method 300.0 and SM 2540C Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS results, EPA Method 300.0 only
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the associated equipment or method blanks.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs for the E300.0 fraction were reviewed for conformance with the QC acceptance criteria. All QC acceptance criteria were met, and no further action was required.

A MS/MSD is not performed on the SM2540C analytical fraction, no further action is required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix free media. For aqueous samples, laboratory-grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the E300.0 and a LCS for the SM2540C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory sample preparation and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs were reviewed for conformance with the QC criteria of <25% for aqueous matrices. Laboratory duplicate for samples collected at the Tallevast facility were not reported with the E300.0 or SM2540C analytical fractions; no further action is required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. The field duplicates for sample MW-80 met the acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. Sample MW-72 was reported at an elevated reporting limit due to suspect possible matrix effect. No anomalies were encountered during the evaluation of the reporting convention for this analytical fraction, no further action was required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

Subject: **Final Agency Action Transmittal Letter**
General Water Use Permit
Permit No.: 20 020198.000
Project Name: Lockheed Martin Corporation - Tallevast
County: Manatee

Dear Permittee(s):

Your Water Use Permit has been approved. Final approval is contingent upon no objection to the District's action being received by the District within the time frames described in the enclosed Notice of Rights.

The information received by the District will be kept on file to support the District's determination regarding your application. This information is available for viewing or downloading through the District's Application and Permit Search Tools located at www.WaterMatters.org/permits.

The Districts action in this matter only becomes closed to future legal challenges from members of the public if such persons have been properly notified of the District's action and no person objects to the District's action within the prescribed period of time following the notification. The District does not publish notices of agency action. If you wish to limit the time within which a person who does not receive actual written notice from the District may request an administrative hearing regarding this action, you are strongly encouraged to publish, at your own expense, a notice of agency action in the legal advertisement section of a newspaper of general circulation in the county or counties where the activity will occur. Publishing notice of agency action will close the window for filing a petition for hearing. Legal requirements and instructions for publishing notice of agency action, as well as a noticing form that can be used is available from the District's website at www.WaterMatters.org/permits/noticing. If you publish notice of agency action, a copy of the affidavit of publishing provided by the newspaper should be sent to the District Regulation Department that reviewed your permit or other agency action, for retention in the File of Record for this agency action.

Please be advised that the Governing Board has formulated a water shortage plan referenced in a Standard Water Use Permit Condition (Exhibit A) of your permit, and will implement such a plan during periods of water shortage. You will be notified during a declared water shortage of any change in the conditions of your Permit or any suspension of your Permit, or of any restriction on your use of water for the duration of any declared water shortage. Please further note that water conservation is a condition of your Permit and should be practiced at all times.

The ID tags for your withdrawals shall be installed by a District representative. This representative will attempt to contact you within 30 days to discuss placement of your tags. If you have any questions or concerns regarding your tags, please contact Cheryl Johnson at extension 6518, in the Sarasota Regulation Department. If you have any questions or concerns regarding your permit or any other information, please contact the Sarasota Regulation Department and ask to speak to someone in the Water Use Regulation Section.

Sincerely,

Claire E. Muirhead, P.G.
Sarasota Regulation Department

Enclosures: Approved Permit
Notice of Rights

SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT
WATER USE PERMIT
GENERAL
PERMIT NO. 20 020198.000

PERMIT ISSUE DATE: **November 18, 2011** **EXPIRATION DATE:** **November 18, 2021**

The Permittee is responsible for submitting an application to renew this permit no sooner than one year prior to the expiration date, and no later than the end of the last business day before the expiration date, whether or not the Permittee receives prior notification by mail. Failure to submit a renewal application prior to the expiration date and continuing to withdraw water after the expiration date is a violation of Chapter 373, Florida Statutes, and Chapter 40D-2, Florida Administrative Code, and may result in a monetary penalty and/or loss of the right to use the water. Issuance of a renewal of this permit is contingent upon District approval.

TYPE OF APPLICATION: New

GRANTED TO: Lockheed Martin Corporation
1600 Tallevast Road
Sarasota, FL 34243

PROJECT NAME: Lockheed Martin Corporation - Tallevast

WATER USE CAUTION AREA: MOST IMPACTED AREA, SOUTHERN WATER USE CAUTION AREA

COUNTY: Manatee

TOTAL QUANTITIES AUTHORIZED UNDER THIS PERMIT (in gallons per day)

ANNUAL AVERAGE	410,600 gpd
PEAK MONTH [1]	410,600 gpd

1 Peak Month: Average daily use during the highest water use month.

ABSTRACT:

This is a new water use permit for ground water remediation at an industrial waste cleanup site. Quantities are withdrawn from the surficial and intermediate aquifer for treatment and disposal. The annual average quantity is 410,600 gpd and the peak month daily quantity is 410,600 gpd.
Special Conditions include those that require the Permittee to record and report monthly meter readings for the influent to the treatment system, the discharge to the recharge trenches and the discharge to the sanitary sewer system, submit an annual report, implement monitoring described in the Florida Department of Environmental Protection approved Remedial Action Plan, notify the District if there is a modification to the remedial action plan and well construction specifications.

WATER USE TABLE (in gpd)

USE	ANNUAL AVERAGE	PEAK MONTH
Industrial And Commercial	410,600	410,600

MANATEE COUNTY

N
W E
S

Southwest Florida Water Management District

STANDARD CONDITIONS:

The Permittee shall comply with the Standard Conditions attached hereto, incorporated herein by reference as Exhibit A and made a part hereof.

SPECIAL CONDITIONS:

1. All reports and data required by condition(s) of the permit shall be submitted to the District according to the due date(s) contained in the specific condition. If the condition specifies that a District-supplied form is to be used, the Permittee should use that form in order for their submission to be acknowledged in a timely manner. The only alternative to this requirement is to use the District Permit Information Center (www.swfwmd.state.fl.us/permits/epermitting/) to submit data, plans or reports online. There are instructions at the District website on how to register to set up an account to do so. If the report or data is received on or before the tenth day of the month following data collection, it shall be deemed as a timely submittal.

   All mailed reports and data are to be sent to:

   Southwest Florida Water Management District
   Sarasota Regulation Department, Water Use Regulation
   6750 Fruitville Road
   Sarasota, Florida 34240-9711

   Submission of plans and reports: Unless submitted online or otherwise indicated in the special condition, the original and two copies of each plan and report, such as conservation plans, environmental analyses, aquifer test results, per capita annual reports, etc. are required.

   Submission of data: Unless otherwise indicated in the special condition, an original (no copies) is required for data submittals such as crop report forms, meter readings and/or pumpage, rainfall, water level evapotranspiration, or water quality data.
   (499)

2. The average day and peak monthly quantities for the ground water withdrawal, shown in the withdrawal table are estimates based on the projected distribution of pumpage, and are for water use inventory and impact analysis purposes only. The quantities listed for these individual sources are not intended to dictate the distribution of pumpage from permitted sources. The Permittee may make adjustments in pumpage distribution as necessary so long as adverse environmental impacts do not result and the Permittee complies with all other conditions of this Permit. In all cases, the total average annual daily withdrawal and the total peak monthly daily withdrawal are limited to the quantities set forth above. (221)

3. The Permittee shall construct the proposed wells according to the surface diameter, casing depth, and total depth specifications listed in the Table 1 from the Water Use Permit application supplemental documentation received by the District on November 15, 2011. The casing shall be continuous from land surface to the minimum depth stated and is specified to prevent the unauthorized interchange of water between different water bearing zones. The surface diameter and total depth specified are those proposed by the Permittee in the application process. All depths given are in feet below land surface. (235)

4. The Permittee shall investigate alleged loss of reliable access to legal, existing withdrawal of ground water, damage to the ground water wells, or to pumps used to access legal, existing withdrawal of water within 700 feet of any withdrawal point listed in Table 1 of the November 15, 2011 submittal that may have been caused by the Permittee's ground water withdrawals. Instructions for the complaint handling and possible mitigation procedure are given in Exhibit B, Well Complaint Instructions, attached to and made part of this permit. (443)

5. The Permittee shall submit a copy of all well completion reports as filed with the Environmental Action Commission of Manatee County to the District Permit Data Section, Performance Management Office within 30 days of each well completion.(508)

6. Any wells not in use, and in which pumping equipment is not installed shall be capped or valved in a water tight manner in accordance with Chapter 62-532.500(3)(a)(4), F.A.C.(568)

7. The Permittee shall comply with allocated quantities. If the allocated quantities are exceeded, upon request by the District, the Permittee shall submit a report that includes reasons why the allocated quantities were exceeded, measures taken to attempt to meet the allocated quantities, and a plan to bring the permit into compliance. The District will evaluate information submitted by Permittees who exceed their allocated quantities to determine whether the lack of achievement is justifiable and a variance is warranted. The report is subject to approval by the District; however, justification for exceeding the allowed withdrawal quantity does not constitute a waiver of the District's authority to enforce the terms and conditions of the permit.(651)

8. This Permit is located within the Southern Water Use Caution Area (SWUCA). Pursuant to Section 373.0421, Florida Statutes, the SWUCA is subject to a minimum flows and levels recovery strategy, which became effective on January 1, 2007. The Governing Board may amend the recovery strategy, including amending applicable water use permitting rules based on an annual assessment of water resource criteria, cumulative water withdrawal impacts, and on a recurring five-year evaluation of the status of the recovery strategy up to the year 2025 as described in Chapter 40D-80, Florida Administrative Code. This Permit is subject to modification to comply with new rules.(652)

9. The following proposed facilities shall be metered within 30 days of completion of construction of the facilities: District ID No(s). 95 and 97, Permittee ID No(s). 95-Influent and 97-Sanitary Sewer. Meter reading and reporting, as well as meter accuracy checks every five years shall be in accordance with instructions in Exhibit B, Metering Instructions, attached to and made part of this permit.(718)

10. A determination as to whether the permittee is in compliance with the quantities allocated on this permit will be based on a review of monthly water use records submitted by the permittee to the District for District ID No. 95 (Permittee ID No. 95-Influent). (992)

11. Permittee shall notify District within 30 days of any modification to the Florida Department of Environmental Protection approved Remedial Action Plan Addendum (RAP) dated July 14, 2009 that was submitted in support of the application for this permit. Based on a determination by the District, a modification of the water use permit may then be required.(990)

12. The following proposed recharge well shall be metered within 30 days of completion of construction of the facilities: District ID No. 96, Permittee ID No. 96-Recharge Trench. Meter reading and reporting, as well as meter accuracy checks every five years shall be in accordance with instructions in Exhibit B, Metering Instructions, attached to and made part of this permit.(727)

13. The Permittee shall submit the annual monitoring report including the hydrobiological monitoring data described in the Remedial Action Plan Addendum dated July 14, 2009 that was submitted in support of the application for this permit.The report and required documentation shall be submitted to the Regulation Bureau Director by January 1 of each year.(673)

40D-2
Exhibit A

WATER USE PERMIT STANDARD CONDITIONS

1. The Permittee shall provide access to an authorized District representative to enter the property at any reasonable time to inspect the facility and make environmental or hydrologic assessments. The Permittee shall either accompany District staff onto the property or make provision for access onto the property.

2. When necessary to analyze impacts to the water resource or existing users, the District shall require the Permittee to install flow metering or other measuring devices to record withdrawal quantities and submit the data to the District.

3. The District shall collect water samples from any withdrawal point listed in the permit or shall require the permittee to submit water samples when the District determines there is a potential for adverse impacts to water quality.

4. A District identification tag shall be prominently displayed at each withdrawal point that is required by the District to be metered or for which withdrawal quantities are required to be reported to the District, by permanently affixing the tag to the withdrawal facility.

5. The Permittee shall mitigate to the satisfaction of the District any adverse impact to environmental features or off-site land uses as a result of withdrawals. When adverse impacts occur or are imminent, the District shall require the Permittee to mitigate the impacts. Adverse impacts include the following:

   A. Significant reduction in levels or flows in water bodies such as lakes, impoundments, wetlands, springs, streams or other watercourses; or
   B. Damage to crops and other vegetation causing financial harm to the owner; and
   C. Damage to the habitat of endangered or threatened species.

6. The Permittee shall mitigate, to the satisfaction of the District, any adverse impact to existing legal uses caused by withdrawals. When adverse impacts occur or are imminent, the District shall require the Permittee to mitigate the impacts. Adverse impacts include the following:

   A. A reduction in water levels which impairs the ability of a well to produce water;
   B. Significant reduction in levels or flows in water bodies such as lakes, impoundments, wetlands, springs, streams or other watercourses; or
   C. Significant inducement of natural or manmade contaminants into a water supply or into a usable portion of an aquifer or water body.

7. Notwithstanding the provisions of Rule 40D-1.6105, F.A.C., persons who wish to continue the water use permitted herein and who have acquired ownership or legal control of permitted water withdrawal facilities or the land on which the facilities are located must apply to transfer the permit to themselves within 45 days of acquiring ownership or legal control of the water withdrawal facilities or the land.

8. If any of the statements in the application and in the supporting data are found to be untrue and inaccurate, or if the Permittee fails to comply with all of the provisions of Chapter 373, Florida Statutes (F.S.), Chapter 40D, Florida Administrative Code (F.A.C.), or the conditions set forth herein, the Governing Board shall revoke this permit in accordance with Rule 40D-2.341, F.A.C., following notice and hearing.

9. Issuance of this permit does not exempt the Permittee from any other District permitting requirements.

10. The Permittee shall cease or reduce surface water withdrawal as directed by the District if water levels in lakes fall below the applicable minimum water level established in Chapter 40D-8, F.A.C., or rates of flow in streams fall below the minimum levels established in Chapter 40D-8, F.A.C.

11. The Permittee shall cease or reduce withdrawal as directed by the District if water levels in aquifers fall below the minimum levels established by the Governing Board.

12. The Permittee shall not deviate from any of the terms or conditions of this permit without written approval by the District.

13. The Permittee shall practice water conservation to increase the efficiency of transport, application, and use, as well as to decrease waste and to minimize runoff from the property. At such time as the Governing Board adopts specific conservation requirements for the Permittee's water use classification, this permit shall be subject to those requirements upon notice and after a reasonable period for compliance.

14. The District may establish special regulations for Water-Use Caution Areas. At such time as the Governing Board adopts such provisions, this permit shall be subject to them upon notice and after a reasonable period for compliance.

15. In the event the District declares that a Water Shortage exists pursuant to Chapter 40D-21, F.A.C., the District shall alter, modify, or declare inactive all or parts of this permit as necessary to address the water shortage.

16. This permit is issued based on information provided by the Permittee demonstrating that the use of water is reasonable and beneficial, consistent with the public interest, and will not interfere with any existing legal use of water. If, during the term of the permit, it is determined by the District that the use is not reasonable and beneficial, in the public interest, or does impact an existing legal use of water, the Governing Board shall modify this permit or shall revoke this permit following notice and hearing.

17. Within the SWUCA, if the District determines that significant water quantity or quality changes, impacts to existing legal uses, or adverse environmental impacts are occurring, the permittee shall be provided with a statement of facts upon which the District based its determination and an opportunity to address the change or impact prior to a reconsideration by the Board of the quantities permitted or other conditions of the permit.

18. All permits issued pursuant to these Rules are contingent upon continued ownership or legal control of all property on which pumps, wells, diversions or other water withdrawal facilities are located.

Exhibit B
Instructions

METERING INSTRUCTIONS

The Permittee shall meter withdrawals from surface waters and/or the ground water resources, and meter readings from each withdrawal facility shall be recorded on a monthly basis within the last week of the month. The meter reading(s) shall be reported to the Permit Data Section, Performance Management Office on or before the tenth day of the following month.The Permittee shall submit meter readings online using the Permit Information Center at www.swfwmd.state.fl.us/permits/epermitting/ or on District supplied scanning forms unless another arrangement for submission of this data has been approved by the District. Submission of such data by any other unauthorized form or mechanism may result in loss of data and subsequent delinquency notifications. Call the Performance Management Office in Brooksville (352-796-7211) if difficulty is encountered.

The meters shall adhere to the following descriptions and shall be installed or maintained as follows:

1. The meter(s) shall be non-resettable, totalizing flow meter(s) that have a totalizer of sufficient magnitude to retain total gallon data for a minimum of the three highest consecutive months permitted quantities. If other measuring device(s) are proposed, prior to installation, approval shall be obtained in writing from the Regulation Department Director.
2. The Permittee shall report non-use on all metered standby withdrawal facilities on the scanning form or approved alternative reporting method.
3. If a metered withdrawal facility is not used during any given month, the meter report shall be submitted to the District indicating the same meter reading as was submitted the previous month.
4. The flow meter(s) or other approved device(s) shall have and maintain an accuracy within five percent of the actual flow as installed.
5. Meter accuracy testing requirements:
    A. For newly metered withdrawal points, the flow meter installation shall be designed for inline field access for meter accuracy testing.
    B. The meter shall be tested for accuracy on-site, as installed according to the Flow Meter Accuracy Test Instructions in this Exhibit B, every five years in the assigned month for the county, beginning from the date of its installation for new meters or from the date of initial issuance of this permit containing the metering condition with an accuracy test requirement for existing meters.
    C. The testing frequency will be decreased if the Permittee demonstrates to the satisfaction of the District that a longer period of time for testing is warranted.
    D. The test will be accepted by the District only if performed by a person knowledgeable in the testing equipment used.
    E. If the actual flow is found to be greater than 5% different from the measured flow, within 30 days, the Permittee shall have the meter re-calibrated, repaired, or replaced, whichever is necessary. Documentation of the test and a certificate of re-calibration, if applicable, shall be submitted within 30 days of each test or re-calibration.
6. The meter shall be installed according to the manufacturer's instructions for achieving accurate flow to the specifications above, or it shall be installed in a straight length of pipe where there is at least an upstream length equal to ten (10) times the outside pipe diameter and a downstream length equal to two (2) times the outside pipe diameter. Where there is not at least a length of ten diameters upstream available, flow straightening vanes shall be used in the upstream line.
7. Broken or malfunctioning meter:
    A. If the meter or other flow measuring device malfunctions or breaks, the Permittee shall notify the District within 15 days of discovering the malfunction or breakage.
    B. The meter must be replaced with a repaired or new meter, subject to the same specifications given above, within 30 days of the discovery.
    C. If the meter is removed from the withdrawal point for any other reason, it shall be replaced with another meter having the same specifications given above, or the meter shall be reinstalled within 30 days of its removal from the withdrawal. In either event, a fully functioning meter shall not be off the withdrawal point for more than 60 consecutive days.

8. While the meter is not functioning correctly, the Permittee shall keep track of the total amount of time the withdrawal point was used for each month and multiply those minutes times the pump capacity (in gallons per minute) for total gallons. The estimate of the number of gallons used each month during that period shall be submitted on District scanning forms and noted as estimated per instructions on the form. If the data is submitted by another approved method, the fact that it is estimated must be indicated. The reason for the necessity to estimate pumpage shall be reported with the estimate.
9. In the event a new meter is installed to replace a broken meter, it and its installation shall meet the specifications of this condition. The permittee shall notify the District of the replacement with the first submittal of meter readings from the new meter.

FLOW METER ACCURACY TEST INSTRUCTIONS

1. **Accuracy Test Due Date** - The Permittee is to schedule their accuracy test according to the following schedule:

   A. For existing metered withdrawal points, add five years to the previous test year, and make the test in the month assigned to your county.
   B. For withdrawal points for which metering is added for the first time, the test is to be scheduled five years from the issue year in the month assigned to your county.
   C. For proposed withdrawal points, the test date is five years from the completion date of the withdrawal point in the month assigned to your county.
   D. For the Permittee's convenience, if there are multiple due-years for meter accuracy testing because of the timing of the installation and/or previous accuracy tests of meters, the Permittee can submit a request in writing to the Permitting Department Director for one specific year to be assigned as the due date year for meter testing. Permittees with many meters to test may also request the tests to be grouped into one year or spread out evenly over two to three years.
   E. The months for accuracy testing of meters are assigned by county. The Permittee is requested but not required to have their testing done in the month assigned to their county. This is to have sufficient District staff available for assistance.

January	Hillsborough
February	Manatee, Pasco
March	Polk (for odd numbered permits)*
April	Polk (for even numbered permits)*
May	Highlands
June	Hardee, Charlotte
July	None or Special Request
August	None or Special Request
September	Desoto, Sarasota
October	Citrus, Levy, Lake
November	Hernando, Sumter, Marion
December	Pinellas

   * The permittee may request their multiple permits be tested in the same month.

2. **Accuracy Test Requirements**: The Permittee shall test the accuracy of flow meters on permitted withdrawal points as follows:

   A. The equipment water temperature shall be set to 72 degrees Fahrenheit for ground water, and to the measured water temperature for other water sources.
   B. A minimum of two separate timed tests shall be performed for each meter. Each timed test shall consist of measuring flow using the test meter and the installed meter for a minimum of four minutes duration. If the two tests do not yield consistent results, additional tests shall be performed for a minimum of eight minutes or longer per test until consistent results are obtained.
   C. If the installed meter has a rate of flow, or large multiplier that does not allow for consistent results to be obtained with four- or eight-minute tests, the duration of the test shall be increased as necessary to obtain accurate and consistent results with respect to the type of flow meter installed.
   D. The results of two consistent tests shall be averaged, and the result will be considered the test result for the meter being tested. This result shall be expressed as a plus or minus percent (rounded to the nearest one-tenth percent) accuracy of the installed meter relative to the test meter. The percent accuracy indicates the deviation (if any), of the meter being tested from the test meter.

3. **Accuracy Test Report:** The Permittees shall demonstrate that the results of the meter test(s) are accurate by submitting the following information within 30 days of the test:

   A. A completed Flow Meter Accuracy Verification Form, Form LEG-R.014.00 (07/08) for each flow meter tested. This form can be obtained from the District's website (www.watermatters.org) under "ePermitting and Rules" for Water Use Permits.
   B. A printout of data that was input into the test equipment, if the test equipment is capable of creating such a printout;
   C. A statement attesting that the manufacturer of the test equipment, or an entity approved or authorized by the manufacturer, has trained the operator to use the specific model test equipment used for testing;
   D. The date of the test equipment's most recent calibration that demonstrates that it was calibrated within the previous twelve months, and the test lab's National Institute of Standards and Testing (N.I.S.T.) traceability reference number.
   E. A diagram showing the precise location on the pipe where the testing equipment was mounted shall be supplied with the form. This diagram shall also show the pump, installed meter, the configuration (with all valves, tees, elbows, and any other possible flow disturbing devices) that exists between the pump and the test location clearly noted with measurements. If flow straightening vanes are utilized, their location(s) shall also be included in the diagram.
   F. A picture of the test location, including the pump, installed flow meter, and the measuring device, or for sites where the picture does not include all of the items listed above, a picture of the test site with a notation of distances to these items. with a notation of distances to these items.

WELL COMPLAINT INSTRUCTIONS

The permittee shall adhere to the following process for handling water resource, surface or ground water withdrawal point impact, dewatering complaints, or discharge/seepage of water from their property:

1. Within 48 hours of a complaint received by the Permittee related to their withdrawal or use of water or dewatering activity, the Permittee shall notify the District, perform a preliminary investigation to determine whether the Permittee's pumpage, dewatering activity, or discharge/seepage from their property may have caused the problem.
2. If this preliminary assessment indicates that the Permittee may be responsible, the Permittee shall, within 72 hours of complaint receipt, supply the complainant with any water necessary for health and safety purposes, such as drinking water.
3. If the resulting investigation determines that the Permittee was not responsible for the well problem, the Permittee shall document the reasons for this determination.
4. If the detailed investigation confirms that the complainant's problem was caused by the Permittee's pumpage, dewatering, or discharge or water impoundment activities:
   A. The complainant's problem shall be fully corrected within 15 days of complaint receipt.
   B. Impacts to wells: Full correction shall be restoration of the complainant's well to pre-impact condition or better, including the aspects of pressure levels, discharge quantity, and water quality. This detailed investigation shall include, but not be limited to, an analysis of water levels and pumpage impacts at the time of the complainant's problem, well and pump characteristics including depths, capacity, pump curves, and irrigation system requirements.
5. The Permittee shall file a report of the complaint, the findings of facts, appropriate technical data, and any mitigating action taken or to be taken by the Permittee, to the Regulation Department Director, Resource Regulation, for review and approval within 20 days of the receipt of any complaint. The report shall include:
   A. The name and address of each complainant;
   B. The date and nature of the complaint;
   C. A summary of the Permittee's investigation;
   D. A summary of the Permittee's determination, including details of any mitigation activities; and
   E. Cost of mitigation activity for each complaint.
6. A copy of the report shall be sent to the complainant within 20 days of complaint receipt.

WELL CONSTRUCTION INSTRUCTIONS

All wells proposed to be constructed shall be drilled and constructed as specified below:

1. All well casing (including liners and/or pipe) must be sealed to the depth specified in the permit condition.
2. The proposed well(s) shall be constructed of materials that are resistant to degradation of the casing/grout due to interaction with the water of lesser quality. A minimum grout thickness of two (2) inches is required on wells four (4) inches or more in diameter.
3. A minimum of twenty (20) feet overlap and two (2) centralizers is required for Public Supply wells and all wells six (6) inches or more in diameter.
4. Any variation from estimated, maximum or minimum total depths; maximum or minimum casing depths; well location or casing diameter specified in the condition requires advanced approval by the Regulation Department Director, Resource Regulation, or the Supervisor of the Well Construction Permitting Section in Brooksville.
5. The Permittee is notified that a proposal to significantly change any of these well construction specifications may require permit modification if the District determines that such a change would result in significantly greater withdrawal impacts than those considered for this Permit.
6. The finished well casing depth shall not vary from these specifications by greater than ten (10) percent unless advance approval is granted by the Regulation Department Director, Resource Regulation, or the Well Construction Regulation Manager in Brooksville.

Claire E. Muirhead, P.G.

Authorized Signature
SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT

This permit, issued under the provision of Chapter 373, Florida Statues and Florida Administrative Code 40D-2, authorizes the Permittee to withdraw the quantities outlined above, and may require various activities to be performed by the Permittee as described in the permit, including the Special Conditions. The permit does not convey to the Permittee any property rights or privileges other than those specified herein, nor relieve the Permittee from complying with any applicable local government, state, or federal law, rule, or ordinance.

Notice of Rights

ADMINISTRATIVE HEARING

1. You or any person whose substantial interests are or may be affected by the District's action may request an administrative hearing on that action by filing a written petition in accordance with Sections 120.569 and 120.57, Florida Statutes (F.S.), Uniform Rules of Procedure Chapter 28-106, Florida Administrative Code (F.A.C.) and District Rule 40D-1.1010, F.A.C. Unless otherwise provided by law, a petition for administrative hearing must be filed with (received by) the District within 21 days of receipt of written notice of agency action. "Written notice" means either actual written notice, or newspaper publication of notice, that the District has taken or intends to take agency action. "Receipt of written notice" is deemed to be the fifth day after the date on which actual notice is deposited in the United States mail, if notice is mailed to you, or the date that actual notice is issued, if sent to you by electronic mail or delivered to you, or the date that notice is published in a newspaper, for those persons to whom the District does not provide actual notice.

2. Pursuant to Subsection 373.427(2)(c), F.S., for notices of agency action on a consolidated application for an environmental resource permit and use of sovereignty submerged lands concurrently reviewed by the District, a petition for administrative hearing must be filed with (received by) the District within 14 days of receipt of written notice.

3. Pursuant to Rule 62-532.430, F.A.C., for notices of intent to deny a well construction permit, a petition for administrative hearing must be filed with (received by) the District within 30 days of receipt of written notice of intent to deny.

4. Any person who receives written notice of an agency decision and who fails to file a written request for a hearing within 21 days of receipt or other period as required by law waives the right to request a hearing on such matters.

5. Mediation pursuant to Section 120.573, F.S., to settle an administrative dispute regarding District action is not available prior to the filing of a petition for hearing.

6. A request or petition for administrative hearing must comply with the requirements set forth in Chapter 28.106, F.A.C. A request or petition for a hearing must: (1) explain how the substantial interests of each person requesting the hearing will be affected by the District's action or proposed action, (2) state all material facts disputed by the person requesting the hearing or state that there are no material facts in dispute, and (3) otherwise comply with Rules 28-106.201 and 28-106.301, F.A.C. Chapter 28-106, F.A.C. can be viewed at www.flrules.org or at the District's website at www.WaterMatters.org/permits/rules.

7. A petition for administrative hearing is deemed filed upon receipt of the complete petition by the District Agency Clerk at the District's Brooksville headquarters during normal business hours, which are 8:00 a.m. to 5:00 p.m., Monday through Friday, excluding District holidays. Filings with the District Agency Clerk may be made by mail, hand-delivery or facsimile transfer (fax). The District does not accept petitions for administrative hearing by electronic mail. Mailed filings must be addressed to, and hand-delivered filings must be delivered to, the Agency Clerk, Southwest Florida Water Management District, 2379 Broad Street, Brooksville, FL 34604-6899. Faxed filings must be transmitted to the District Agency Clerk at (352) 754-6874. Any petition not received during normal business hours shall be filed as of 8:00 a.m. on the next business day. The District's acceptance of faxed petitions for filing is subject to certain conditions set forth in the District's Statement of Agency Organization and Operation, available for viewing at www.WaterMatters.org/about.

JUDICIAL REVIEW

1. Pursuant to Sections 120.60(3) and 120.68, F.S., a party who is adversely affected by final District action may seek judicial review of the District's final action. Judicial review shall be sought in the Fifth District Court of Appeal or in the appellate district where a party resides or as otherwise provided by law .

2. All proceedings shall be instituted by filing an original notice of appeal with the District Agency Clerk within 30 days after the rendition of the order being appealed, and a copy of the notice of appeal, accompanied by any filing fees prescribed by law, with the clerk of the court, in accordance with Rules 9. 110 and 9.190 of the Florida Rules of Appellate Procedure (Fla. R. App. P.). Pursuant to Fla. R. App. P. 9.020(h), an order is rendered when a signed written order is filed with the clerk of the lower tribunal.

Section 1
Introduction

This Wetlands Monitoring Report – June 2014 through June 2015 report documents the 6th overall monitoring event and the second wetland monitoring event since the start of active groundwater remedial system operations which began on November 18, 2013 (See Section 8.1). Baseline monitoring assessments have been conducted and reports were submitted for four years (through May 2013) prior to groundwater extraction associated with start-up of the remedial system operations. Wetlands were monitored pursuant to the July 2009 Wetlands Monitoring Plan (WMP), which was included as Appendix G of the July 2009 Remedial Action Plan Addendum (RAPA). Background resources used in the development of the WMP include the 1994 United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle, Bradenton, Florida (USGS, 1994), 2003-2009 aerial ortho-photography from the Manatee County Geographic Information System, and Ecosystems of Florida (Myers and Ewel, 1990). The Florida Department of Environmental Protection (FDEP) approved the RAPA in a November 11, 2010 letter.

The WMP provides for the establishment, evaluation, and assessment of wetlands pursuant to agency requirements, including establishment of baseline conditions. The purpose of the WMP is to assist in determining if the RAPA remedy is impacting the wetlands. A summary of annual wetland monitoring activities performed to date and their associated submittals is provided in Table 1-1.

TABLE 1-1
Summary of Wetland Monitoring Activities and Submittals

Event	Monitoring Period	Submittal
Wetlands Monitoring Plan	**July 2009**	July 2009 as Appendix G of the RAPA (Approved November 11, 2010)
Baseline - Year 1	**June 2009 to June 2010**	April 2011 (ARCADIS, 2011a)
Baseline - Year 2	**July 2010 to June 2011**	December 2011 (ARCADIS, 2011b)
Baseline - Year 3	**July 2011 to June 2012**	September 2012 (ARCADIS, 2012)
Baseline - Year 4	**July 2012 to June 2013**	August 2013 (ARCADIS, 2013)
Operational Monitoring Report – Year 1	**July 2013 to June 2014**	August 2014 (AECOM, 2014)

The fifth report was the first operational monitoring report documenting wetland conditions while RAPA operations are under way.

The subject wetlands were selected prior to the start of monitoring. Each wetland is and will continue to be evaluated using the 2005 Southwest Florida Water Management District (SWFWMD) Wetlands Assessment Procedure (WAP), as amended (SWFWMD, 2005), and in conjunction with the FDEP as part of a June 26, 2008 reconnaissance of the wetland areas (see Section 2.1 of the WMP and Figure 1-1). The first four wetland monitoring events were used to establish baseline characteristics against which subsequent annual monitoring is and will continue to be compared. Annual wetland monitoring data is currently being collected to assess whether ongoing RAPA operation has the potential to impact wetland hydrology in the vicinity of the former American Beryllium Company (ABC) Facility, now known as the Lockheed Martin Tallevast Treatment Facility (Site). The Site consists of two parts. The first is the Tallevast Treatment Facility (referred to as the "Facility" or "on-facility" portion of the Site) located at 1600 Tallevast Road in Tallevast, Manatee County, Florida. The second is the groundwater and surface water resources in the surrounding area as defined by the extent of

groundwater impacted by contaminants of concern (COC), which is referred to as the "off-facility" portion of the Site.

A site location map is presented as Figure 1-1. Tallevast, Florida is a small, unincorporated community situated between Sarasota and Bradenton, immediately northeast of the Sarasota-Bradenton International Airport (SRQ), in southwestern Manatee County. Additional detail regarding the project and site history is provided in Section 2 of this report.

The locations for monitoring well and staff gauge installation were determined during preliminary visits to wetland areas and during field assessments conducted in June 2008 and June 2009. Following establishment of access agreements with appropriate landowners in the Tallevast area, wetland monitoring transects were formally established, and water level monitoring instruments were installed from November 2009 through February 2010. As stipulated by the FDEP, the activities detailed in the WMP will be conducted over five years after RAPA system startup, following establishment of a baseline composed of a minimum of two years, resulting in a minimum program length of seven years. The actual program length will be longer than seven years because the baseline data collection spanned an approximately four-year period from November 2009 to June 2013. As described in the RAPA, after five years of system operation and wetland assessments, the monitoring plan will be re-evaluated with the FDEP and SWFWMD to determine whether it needs to continue or be modified. If monitoring demonstrates that wetland impacts are occurring due to groundwater withdrawals, then a mitigation plan will be developed and submitted to FDEP. The observations presented in this report include the following:

- Field observations of vegetative growth, recruitment, and mortality, as well as evidence of changes in land use, disturbance, and indicators of surface hydrology along the established wetland monitoring transects;
- Evidence of changes in land use, abandonment, disturbance, or other activities within areas adjacent to the WMP wetlands that may potentially affect surface hydrology;
- Water level data gathered using staff gauges and transducers in WMP monitoring wells, and annual and monthly rainfall data gathered from a monitoring station located at the SRQ.

Section 2
Project History

Lockheed Martin acquired ownership of the former ABC Facility through its 1996 acquisition of Loral Corporation, the parent company of ABC. Plant operations ended in late 1996. Between 1997 and 2000, Lockheed Martin prepared the property for sale and began site investigations. In early 2000, Lockheed Martin sold the property and its improvements to BECSD, LLC (BECSD), which in turn leased the Facility to WPI Sarasota Division, Inc. (WPI), a privately owned manufacturer. In March 2007, WPI was sold to Cooper Industries, Inc., which assumed the Facility lease and continued the same manufacturing processes until ceasing operations in June 2007. Beginning in July 2007, Lockheed Martin leased the Facility from BECSD, ultimately purchasing it back from BECSD in June 2009.

From 1962 until 1996, the Facility was owned by Loral Corporation and operated by ABC as an ultra-precision machine parts manufacturing plant where metals were milled, lathed, and drilled into various components. Some components were finished by electroplating, anodizing, and ultrasonic cleaning. Chemicals used and wastes generated at the Facility included oils, fuels, solvents, acids, and metals. Facility operations are described in the Phase I Environmental Assessment Report (Tetra Tech, Inc. [Tetra Tech], 1997). Additional information is provided in the Site Assessment Report Addendum (SARA; Tetra Tech, 2005). The RAPA was submitted to FDEP by ARCADIS in 2009, and subsequently approved by FDEP in a November 11, 2010 letter. Wetlands were monitored pursuant to the July 2009 WMP, which was included as Appendix G of the RAPA. RAPA system construction began in February 2011 and was completed in July 2013. Startup and testing occurred in October and November 2013. The Tallevast Treatment Facility began operation on November 18, 2013. The purpose of the RAPA treatment facility is to address COC concentrations in groundwater at the Site.

Section 3
Monitoring Objectives

The RAPA was prepared to satisfy the requirement of a March 16, 2009 FDEP request for submission of a final revised RAP that would incorporate Lockheed Martin's February 11, 2009 responses to third-party comments on the September 2008 RAP. As part of the selected remedy, the July 2009 RAPA scope incorporates removal of contaminated groundwater through a series of extraction wells/trenches, treatment of the extracted groundwater, and discharge of the treated groundwater using a combination of different disposal options. These options include the following:

- Recharging on the on-facility portion of the Site through a series of injection wells operating in tandem with on-facility extraction wells in the surficial aquifer;
- Discharging to the county wastewater collection and treatment system; and
- Recharging the local surficial aquifer in infiltration systems designed to maintain water levels within designated wetland areas, as explained below.

The RAPA remedy includes the likelihood that multiple treated-groundwater discharge methods will occur simultaneously. Implementation of the proposed RAPA groundwater extraction system was expected to cause drawdown in the local surficial aquifer to achieve capture. Because depression of the water level was predicted to occur in the surficial aquifer at nearby wetlands, the FDEP prescribed the use of the WAP (SWFWMD, 2005). The WAP specifies the process and technical methods for monitoring groundwater extraction effects on Target Wetlands (TWs) and for identifying whether mitigation is needed to offset the effects (if any) of such extraction, via comparison to Reference Wetlands (RWs).

Implementation of the WMP was based on this WAP-defined process. Field visits and consultation with the FDEP led to identification of four TWs within the area of anticipated hydrologic influence of the RAPA system, as defined by being within or in close proximity to the predicted extent of drawdown in the upper surficial aquifer system (USAS) from the

implemented RAPA system (Figure 3-1). Initially, four nearby RWs were identified for monitoring because they represent similar wetland resources that are outside the area of anticipated hydrologic influence of the RAPA system. As described in Section 7.1 of this report, one RW (RW-5) was later permitted for development and was subsequently removed from the monitoring program. In selecting the TWs and RWs for this evaluation, proximity and similarity of classification under the Florida Land Use, Cover, and Forms Classification System (FLUCFCS) (FDOT 1999) codes for wetlands were considered. These codes were developed to classify land use, cover, and forms to provide a uniform standard for description of natural and urban land cover types, including the characteristic vegetative cover types associated with the wetlands at the focus of this assessment.

Section 4

Southwest Florida Water Management District Wetland Assessment Procedure

The WAP is generally required as a condition for the issuance of consumptive groundwater well authorization, which is required due to water extraction and disposal incorporated within the RAPA. The objective of the WAP (SWFWMD, 2005) is to collect information on vegetation, hydrology, soils, and other pertinent variables in isolated wetlands to accurately characterize the biological condition and health of each monitored wetland at the time of investigation. This information may be used for a variety of water management purposes, including well field management, development of minimum flows and levels in the wetlands, and assessment of recovery in areas that have experienced historical hydrologic and biologic impacts due to groundwater withdrawals.

As presented in the WAP, the following steps are taken to establish the monitoring points and their characteristics and then to initiate the baseline monitoring process. The first step consists of a 10-meter-wide monitoring transect established in each wetland. Transects are positioned to provide a representative cross-section from the outermost identified historical wetland edge (HWE) to the innermost portion of the wetland interior (deep zone). Upon establishment of the monitoring transect, estimated benchmark elevations are also field-identified. They include the historic normal pool (HNP), as well as elevations 6 inches (NP-6) and 12 inches (NP-12) below the HNP.

Outside the HWE is an area generally referred to as the uplands (UPL). The area between the HWE and NP-6 elevation are referred to as the Transitional Zone (T). The area between the NP-6 and NP-12 is referred to as the Outer Deep Zone (OD), and the zone below the NP-12 elevation, to the lowest point within the wetland, is simply referred to as the Deep Zone (D). A general representation of some of these locations is illustrated on Figure 4-1 below.

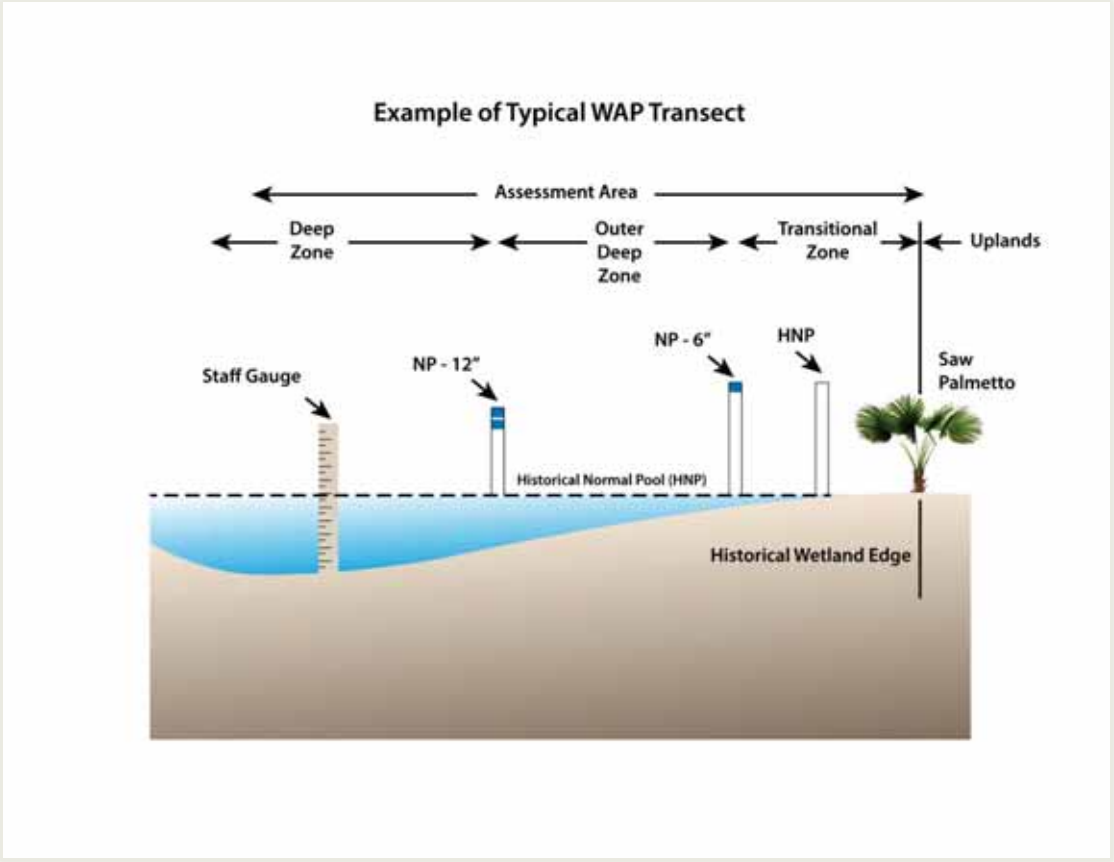

FIGURE 4-1
Example of Typical WAP Transect

Source: SWFWMD, 2009

The location of each transect is based on factors such as minimal disturbance to existing vegetation, clear line of sight, ability to assess characteristics that are representative of the T zone along a straight line, as well as wetland accessibility. Each transect is established with the placement of a monument at the HNP, NP-6, and NP-12 elevations. The innermost transect point within the deepest portion of the wetland pool is identified by the placement of a staff gauge and

surficial aquifer monitoring well, installed to a depth of approximately 8 feet (ft) below ground surface (bgs) per the SWFWMD WAP.

Vegetative, hydrologic, and soil data are collected from each transect and photographs are taken at each monument in all four cardinal directions north (N), east (E), south (S), and west (W). Each monitoring well has been located and surveyed for horizontal and vertical coordinates by a professional surveyor and mapper registered in Florida. During initial and subsequent monitoring events, the provisions of the WAP prescribe that those individuals evaluating the resource should conduct annual assessments by remaining within the established transect as much as possible, while avoiding unnecessary damage to characteristic vegetation. However, the WAP also incorporates provisions to potentially walk throughout the wetland when critical for accurate evaluation of the assessed area.

Section 5
Basis for Wetlands Assessment Procedure Deployment

The results of the WMP will be used to compare changes from baseline conditions to those that may develop during the initial RAP implementation. These comparisons will assess changes in water elevation (surface water or groundwater), periodic inundation, and vegetation, if any, in each wetland zone. As discussed below, changes in wetland conditions due to regional climatic conditions, including persistent drought, will also be considered in the analysis to determine actual impacts of the groundwater remediation on wetland areas, if any. The WAP contains provisions to document and monitor biologic indicators of hydrologic change (more specifically, groundwater withdrawals). SWFWMD established the WAP to provide data that supplements hydrologic data for water use permitting, minimum flows and levels development and assessment, and recovery assessment.

This assessment also includes documenting and evaluating other factors that may affect the TWs and RWs included in this assessment. These factors include encroachment on wetlands by land development and/or areas where land management and drainage activities are occurring, historical and current cattle/livestock operations, disease, introduction of exotic plant species, and other anthropogenic variables that may affect the biological indicators of hydrologic change that occur in the TWs and RWs.

The extent to which historical and current land use and vegetative cover variables affect baseline conditions may not be entirely discernible given the localized nature of this assessment. However, wherever feasible, regional climate and land use variables (including floods, drought, and irrigation use) are reflected in the establishment of baseline conditions in each wetland. New information collected during ongoing assessments will consider any apparent individual or

locally occurring changes as well as the regional conditions that may be affecting (and are subsequently observed in) TW and RW resources.

As determined during consultation with the FDEP, monitoring results will be evaluated for the assessment of effects from the operational RAPA system. The RAPA includes recharging the water table aquifer to mitigate drawdown in wetland areas predicted to be within or in close proximity to USAS drawdown resultant from proposed RAPA extraction pumping. Therefore, it is anticipated that there will be no loss of functions or acreage within the identified TWs. Other variables that could affect wetland hydrology include land-use changes resulting in increased impervious surfaces, which preclude the infiltration of stormwater runoff; the excavation of borrow pits and ponds; the establishment or maintenance of drainage canals; and extreme climatic events such as heightened tropical weather activity or prolonged drought.

Section 6
Project Area Setting and Site Conditions

This section describes the physical environment, ecology, and water resources influencing the wetlands that were assessed from June 8 through 10, 2015 in the Tallevast area.

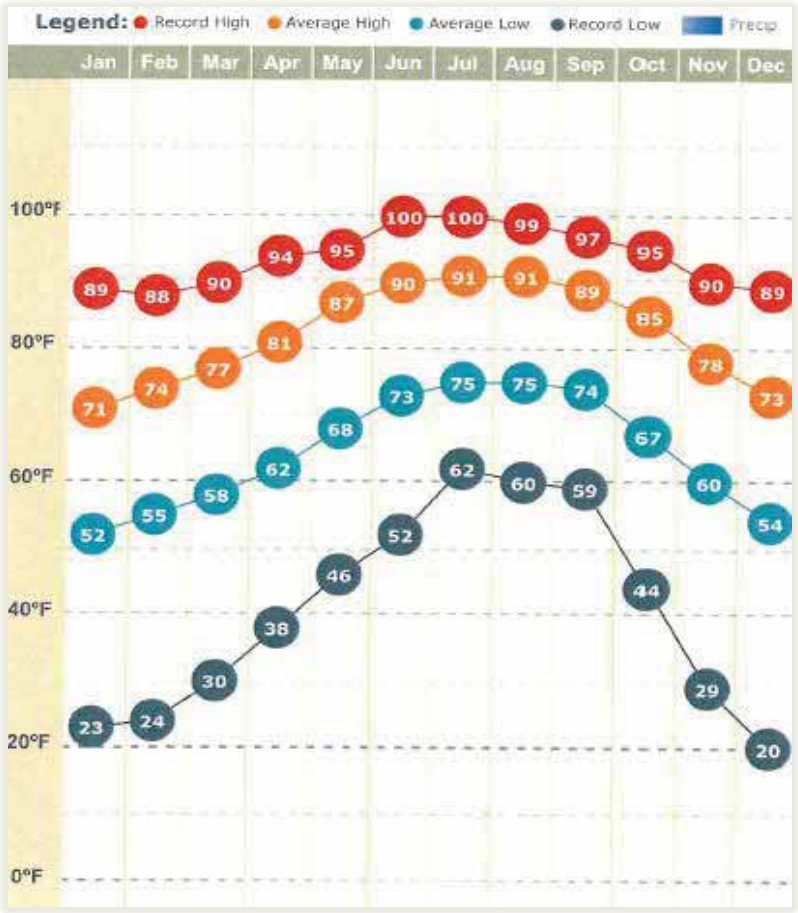
6.1 SITE LOCATION

The facility is located in the northwest quarter of Section 31, Township 35 South, Range 18 East, as shown on the Bradenton, Florida USGS 7.5-minute quadrangle (USGS, 1994) shown in Figure 6-1.

6.2 CLIMATE

The Tallevast area is located within the subtropical zone in southwest Florida. Average daytime high temperatures in June and July are 91 degrees Fahrenheit (°F; 32 degrees Celsius [°C]). The average daytime temperatures during the winter months are in the low to mid-70s °F (22 °C). As shown on Historical Temperature Trends Figure 6-2 (below), extreme temperature records in the area range from 100 °F (38 °C) in July (1998) to 20 °F (-6 °C) in December (1983).

FIGURE 6-2
Historical Temperature Trends in the Tallevast Area



Source: The Weather Channel, 2015, Sarasota, Fl

Annual rainfall totals average 54 inches (1.37 meters). The rainy season generally occurs in the summer in the Tallevast area, with frequent afternoon thunderstorms of short duration. As shown on Figure 6-3 (below), August is usually the wettest month of the year, with an average of 9.81 inches of rain (approximately 24 centimeters). April is generally the driest month of the year, with an average of 1.83 inches of rain (approximately 4.5 centimeters). Hurricane season in Florida occurs from June through the end of November. Figure 6-4 (below) shows the cumulative monthly precipitation occurring from July 2014 to June 2015 compared to the historical monthly precipitation trend for each month.

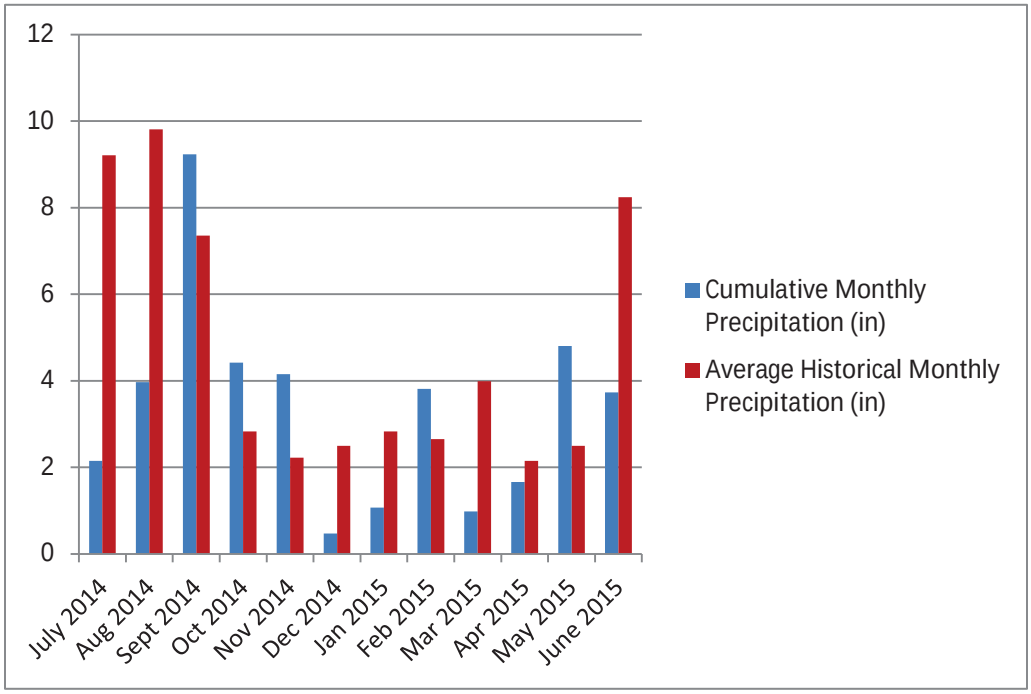
FIGURE 6-4
Cumulative Monthly Precipitation 2014 - 2015 vs Historical Monthly Average
Sarasota-Bradenton International Airport (SRQ)



Source: North Carolina State University, 2015

The following local weather details are pertinent to the wetlands assessments performed to date.

- Initial Assessments – A period of drought preceded the 2008 and 2009 initial assessments of wetlands in the Tallevast area, including a relative lull in tropical weather events. A measure of drought conditions known as the Palmer Drought Severity Index (PDSI) is published by the National Oceanic and Atmospheric Administration (NOAA). Published PDSI values (see Appendix A) for a 2- to 3-year period prior to the initial assessment also indicate an extended period of drought.

- 2010 WMP Assessment – A more typical precipitation cycle, still without tropical weather, appeared to have resumed during the months preceding the 2010 WMP transect assessment.

- 2011 WMP Assessment – Precipitation in the six months preceding the 2011 WMP assessment was less than 2010, except for the month of March.

- 2012 WMP Assessment – Precipitation in the three months preceding the 2012 WMP assessment (March, April, and May) was higher than the same 3-month period prior to the 2011 assessment, except for March. In the two weeks prior to the 2012 assessment, more than seven inches of total precipitation were recorded at the SRQ.

- 2013 Assessment – Precipitation in the quarter preceding the 2013 WMP transect assessment was comparable to the 2012 event; however, there was no significant rainfall immediately prior to the assessment as there was in 2012.

- 2014 Assessment – Precipitation in the quarter preceding the 2014 WMP transect assessment was comparable to the 2013 event. Precipitation in the year preceding the 2014 monitoring event was approximately 61 inches (approximately 155 centimeters) which is slightly above average.

- 2015 Assessment – Precipitation in the quarter preceding the 2015 WMP transect assessment was slightly less compared to the 2014 event. Precipitation in the year preceding the 2015 monitoring event was approximately 41 inches (approximately 104 centimeters) which is below average. Average annual rainfalls at the SRQ from 2003 through 2014 are presented in Table 6-1 (below).

TABLE 6-1

6.3 PHYSICAL ENVIRONMENT

The Tallevast community is located on the Gulf Coastal Lowlands, a gently sloping plain ranging from approximate elevations as high as 32 ft above mean sea level (msl) to 15 ft msl. The area is approximately 1.5 to 2 miles east (inland) of Sarasota Bay and approximately six miles from the Gulf of Mexico. The land surface of the Tallevast Site has very little relief and slopes gently toward the south and east.

The Gulf Coastal Lowlands are situated in the Southwestern Flatwoods physiographic region and consist of rock and sediment ranging from the Miocene to Pleistocene eras (23.8 million to 11,000 years ago). Landforms are characterized by low plateaus and ridges, flatwoods, prairies, rockland/marl plains, and various relict coastal features. Surface materials are dominated by sand with clayey substrata, limestone, and sumps of accumulated organic deposits.

The Gulf Coastal Lowlands region and flatwoods soils are moderately to poorly drained, fine-grained, acidic sands with low reserves of available nutrients; low organic matter; and low clay content (often less than 2 percent). These soils may contain a spodic (organic) horizon when organic matter is translocated downward by water percolation. Clay hardpans may also result from transport and accumulation of clays. Many of the soils supporting flatwoods are spodosols, but some variation exists. Soil types in upland areas of the Tallevast Site are largely composed of Eau Gallie fine-grained sand, while soil types in mapped wetlands include complexes of Canova, Anclote, and Okeelanta soils, as well as fine-grained sands of the Floridana-Immokalee-Okeelanta association.

6.4 AQUIFER SYSTEMS

The three aquifer systems, which vary in depth, that underlie the Tallevast site are as follows: Surficial Aquifer System (SAS), Intermediate Aquifer System (IAS), and Floridan Aquifer (Floridan). These aquifer systems are described in detail in the RAPA report, and in the investigative reports that preceded the RAPA. The SAS is recharged locally, and the water table contained in this formation fluctuates due to seasonal and climatic variations in rainfall. In addition, artificial factors have produced impacts on groundwater levels in each of the three aquifer systems, including the water table in the SAS. Artificial factors include:

- Pumping of wells in aquifers beneath the SAS for the irrigation of fields, lawns, and golf course turf or maintenance of pond levels for aesthetic purposes; and
- The presence of drainage canals that, in most cases, lead to lowered surficial groundwater elevations in their immediate vicinity, but can sometimes have the opposite effect in backing up positive drainage during periods of excessive runoff.

6.5 SURFACE WATER RESOURCES/WATERSHED

The United States is divided and sub-divided into successively smaller hydrologic units which are classified by the USGS into four levels: regions, sub-regions, accounting units, and cataloging units. These hydrologic units are nested within each other, from the smallest (cataloging units) to the largest (regions). Each hydrologic unit is identified with a unique hydrologic unit code (HUC) consisting of two to eight digits based on the four levels of classification in the hydrologic unit system. The Tallevast Site is located along the drainage divide between two stream/canal systems, Bowlees Creek and Pearce Canal, within the eight-digit Sarasota Bay watershed, HUC 03100201. Bowlees Creek, a major tributary of Sarasota Bay, is located approximately 1.25 miles northwest of Tallevast. The Pearce Canal trends at an angle to the Tallevast Site and is located southeast (0.75 mile) and east (1 mile) of Tallevast. A ridge (topographical high ground) runs approximately north-south through the Facility. Surface water on the western portion of the Facility flows west toward Bowlees Creek and the improved drainage features around the SRQ, both of which drain to Sarasota Bay. Surface water on the easternmost portion of the Facility flows toward Pearce Canal, which drains both south into the Sarasota Bay watershed and north into the Manatee River watershed (HUC 03100202). The

drainage divide along Pearce Canal is located approximately 1 mile north of the Manatee/Sarasota County line, where the canal crosses U.S. Highway 301, and 1 mile southeast of the Facility.

In addition to drainage facilities (such as Pearce Canal) and consumptive use, groundwater depletion due to other impacts remains an ongoing concern throughout much of west-central Florida, according to the USGS. To the north of the Tallevast area, saltwater intrusion and subsidence in the form of sinkhole development, land subsidence, and surface water depletion from lakes are issues of concern. However, Florida Geological Survey (FGS) poster number 11 (Rupert and Spencer, 2004) indicates that Sarasota and Manatee Counties lie in a region where sinkholes are uncommon. Throughout Florida, broad concerns exist for the reduction of surface water flows, deterioration of wetland water quality, and increased costs to pump needed water resources. Several small surface water bodies (e.g., decorative ponds, stormwater ponds) are located within a 0.5-mile radius of the Facility. Shallow ditches and swales throughout the Tallevast area also convey stormwater runoff to roadside and regional drainage channels.

6.6 ECOLOGY

The dominant historical habitat of the project area is pine (*Pinus spp.*) flatwoods. According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (formerly the Soil Conservation Service), such habitats in southwest Florida are characterized by savannas, an ecotone spanning grasslands to forests. The ecosystem in the vicinity of the assessed wetlands is now used extensively as rangeland for cattle grazing.

Once the most extensive terrestrial ecosystem in Florida, these historical pine flatwoods evolved under frequent lightning and human-induced fire, seasonal drought, and flooded conditions. Flatwoods are characterized by low, flat topography, relatively poorly drained, acidic, sandy soil, and pine woodlands. This ecosystem historically had open, park-like understories managed by frequent fires.

The dominant tree species of flatwoods in the Tallevast area are limited to South Florida slash pine (*P. elliottii* var. *densa*) and longleaf pine (*P. palustris*). Other infrequently occurring trees

include cabbage palm (*Sabal palmetto*) and hardwoods including live oak (*Quercus virginiana*), water oak (*Q. nigra*), laurel oak (*Q. laurifolia*), sweet gum (*Liquidambar styraciflua*), red maple (*Acer rubrum*), and ash (*Fraxinus* spp.). Commonly occurring understory shrub species include saw palmetto (*Serenoa repens*), wax myrtle (*Myrica cerifera*), blueberries (*Vaccinium* spp.), and American beautyberry (*Callicarpa americana*).

The invasive Brazilian pepper (*Schinus terebinthofolia*) is identified as locally dominant in both the forest understory and open rangeland scrub strata. Distribution of Brazilian pepper occurs throughout the Tallevast Site. It is an aggressive invader of disturbed habitats, a characteristic that has led to its placement on the Florida Exotic Pest Plant Council list of invasive species as a Category I species. Other nonnative and escaped plant species identified in the Tallevast WMP area include camphor tree (*Cinnamomum camphora*), punk tree (*Melaleuca quinquenervia*), primrose willow (*Ludwigia peruviana*), tropical soda apple (*Solanum viarum*), and Caesar's weed (*Urena lobata*).

Section 7
Wetlands Assessment Procedure Implementation

7.1 TRANSECT AND MONITORING LOCATION SELECTION

Four RWs (RW-1, RW-2, RW-3, and RW-5) and four TWs (TW-1, TW-2, TW-6, and TW-18) were originally identified and selected for monitoring based on initial June 26, 2008 Site visits with representatives from the FDEP, CDM, ARCADIS, and Lockheed Martin. The TWs were selected based on their locations within or in close proximity to the area of the SAS predicted to have drawdown due to implementation of the RAP groundwater extraction system. The RWs were also selected based on proximity to the Site, as well as the similarity of FLUCFCS characteristics to those associated with the TWs. However, RWs are anticipated to be beyond the area of groundwater elevation influence from the operational RAPA system.

Following the June 2009 field assessment to establish WMP monitoring transects locations, RW-5 was eliminated as a reference wetland from the RAPA system performance monitoring. The SWFWMD permitted RW-5 for development after adequate mitigation in the form of wetland credits were provided. The removal of RW-5 from monitoring was documented in the first baseline monitoring report.

Pursuant to the WAP, one transect was established in each of the remaining RWs (RW-1, RW-2, and RW-3), as well as in each of the four TWs. Transects were positioned within a representative 10-meter-wide area in each wetland, from the HWE to the wetland interior. Estimated HNP elevations were also field-identified during transect establishment. The location of each transect was based on factors including minimizing disturbance to existing vegetation, clear line of sight, ability to assess all aspects representative of each zone along a straight line, and access to the assessment area.

Permanent monuments were placed in the field to identify these transects during baseline monitoring of wetland conditions. Monuments composed of steel rebar fitted with a sleeve of polyvinyl chloride (PVC) pipe were installed at the HNP and at elevations of 6 and 12 inches below the HNP and were labeled HNP, NP-6, and NP-12, respectively. Monuments marking the HWE have not been installed to date, however, the WAP recommends installing it if possible. During a June 2008 Site visit with the FDEP, vegetative, hydrologic, and soil indicators were used to establish the HNP elevation within the TWs. These same factors were used during transect placement in both TWs and RWs during the subsequent 2009 field season. Subsequent to monument placement and monitoring well installation, the HNP, NP-6, NP-12, staff gauge, and monitoring well locations were professionally surveyed (March 2010). Transect access locations are shown in Figure 7-1.

Pursuant to the WAP, the area to be assessed along each transect will subsequently be referred to as the assessment area. The assessment area is approximately 10 meters wide and extends 10 meters beyond the wetland interior. Subsequent monitoring will be conducted on the established transect as much as possible to avoid unnecessary damage to vegetation, but may be conducted throughout the wetland if critical for an accurate evaluation of the assessment area.

7.2 STAFF GAUGES AND MONITORING WELL INSTALLATION

Groundwater monitoring wells and staff gauges were installed in the TWs and RWs during the 2009 and 2010 field efforts. One monitoring well and one staff gauge were installed in the D zone of each wetland and placed along the WAP transect, or within the assessment area. While an upland monitoring well is traditionally recommended under WAP procedures, it is not required. Under direction from the FDEP, because of the relatively small size of the wetlands, an upland monitoring well was not installed at the HWE in any of the wetlands. The ground elevation was surveyed at the wells and staff gauge locations by a professional surveyor and mapper registered in Florida. An initial water level reading was obtained manually, and interim water elevation data were obtained from data logger downloads.

One well (Stilling Well-3) and one staff gauge (Staff Gauge-8) were found to already exist in TW-2. Per WAP guidelines (3.2 WAP Transect Selection and Setup; SWFWMD, 2005), these

locations were considered in the initial selection process for the monitoring transect and assessment area at TW-2. These devices are located in the outer T zone or HWE. Therefore, while included in the assessment area of the monitoring transect, per SWFWMD guidance, the stilling well and staff gauge are not being monitored under WAP protocols and are not expected to provide valuable data in monitoring the long-term wetland response to RAP system implementation. Similar existing wells and staff gauges were not found at the other wetlands.

7.3 GROUNDWATER MONITORING WELL INSTALLATION

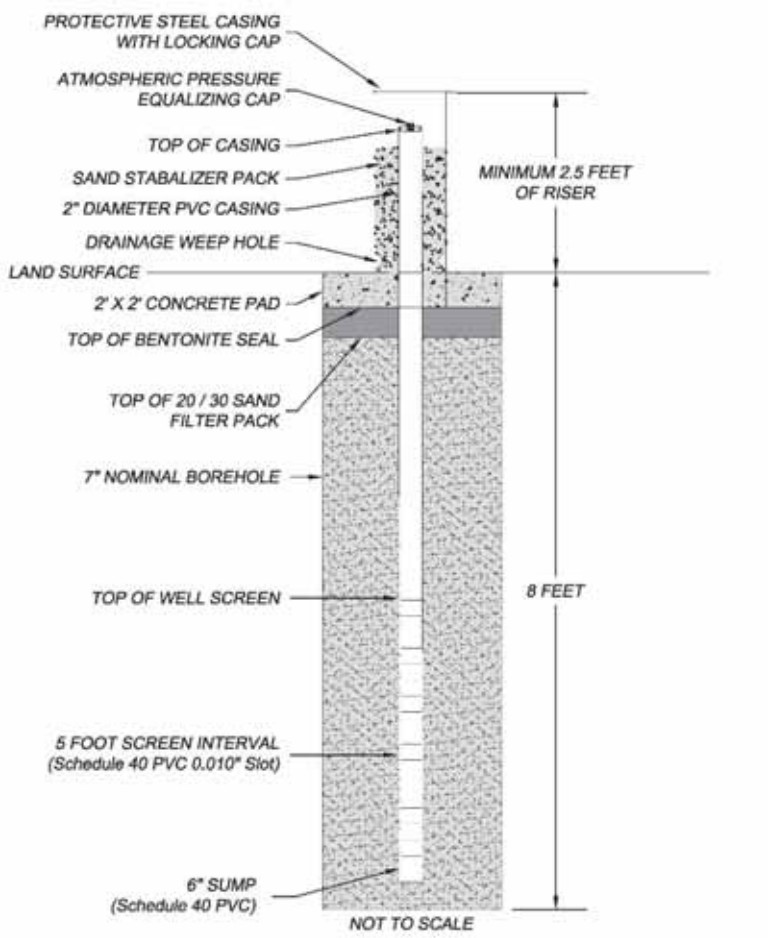
The SWFWMD well construction standards, promulgated in Florida Administrative Code (F.A.C.) Chapter 40D-3, were followed for all monitoring well installations in 2009 and 2010. All monitoring wells are constructed using 2-inch Schedule 40 PVC and installed to a depth of 8 ft bgs using the mud rotary method (ASTM International Method D-5092), except for the monitoring well in TW-1, which was installed to approximately 10 ft bgs. Monitoring well installation in TW-1, TW-2, TW-6, TW-18, RW-1, RW-2, and RW-3 was managed by a qualified wetland scientist and geotechnical well development specialist. Monitoring well installation at TW-2, TW-6, RW-1, RW-2, and RW-3 was accomplished in November 2009 using a skid-mounted mud rotary auger. Due to landowner access restrictions, monitoring well MW-TW-18 was installed in February 2010 using a track-mounted mud rotary auger. Monitoring well installation at TW-1 was accomplished in February 2010 with a tripod-mounted manual mud rotary auger due to shallow water conditions.

The screened interval in the monitoring wells is 5 ft long and placed at 3 to 8 ft bgs (5 to 10 ft bgs in MW-TW-1) and consists of 0.010-slot, 2-inch PVC screen. A 20/30 sand filter pack was placed in the annular space from the bottom of the well to the surface (MW-TW-1) or from the bottom of the well to approximately 1-foot below the surface (all other wells) where a bentonite seal was installed. After well construction was complete, the land surface and top of casing elevations were surveyed by a professional surveyor, using horizontal and vertical control. Survey data are shown in Table 7-1.

As shown on Figure 7-2 (below), wellhead completion consisted of a 2-ft by 2-ft, 4-inch-thick concrete pad with a 2.5-ft-high riser with a lockable well cover. All development water from the

monitoring wells was contained and disposed of via the former on-facility interim remedial action treatment plant. All wells were developed according to United States Environmental Protection Agency (USEPA) guidance to meet the following standards: pH ±0.1 standard units (S.U.), specific conductivity ±3 percent, oxidation-reduction potential (ORP) ±10 millivolt (mV), turbidity <10 nephelometric turbidity units (NTUs), and dissolved oxygen (DO) ±0.3 milligrams per liter (mg/L), for three consecutive readings conducted no less than one minute apart. If a well became dry during purging, development continued after the well recharged. Development was considered complete when the turbidity was less than 10 NTUs and the above criteria were met. Lithologic logs, permits, and well completion reports were prepared for each monitoring well (well development logs were included as Appendix A of the Wetlands Monitoring Report – July 2010 Through June 2011; borehole logs and well completion diagrams were included as Appendix C of the Wetlands Monitoring Report for July 2011 Through June 2012 [ARCADIS, 2012]).

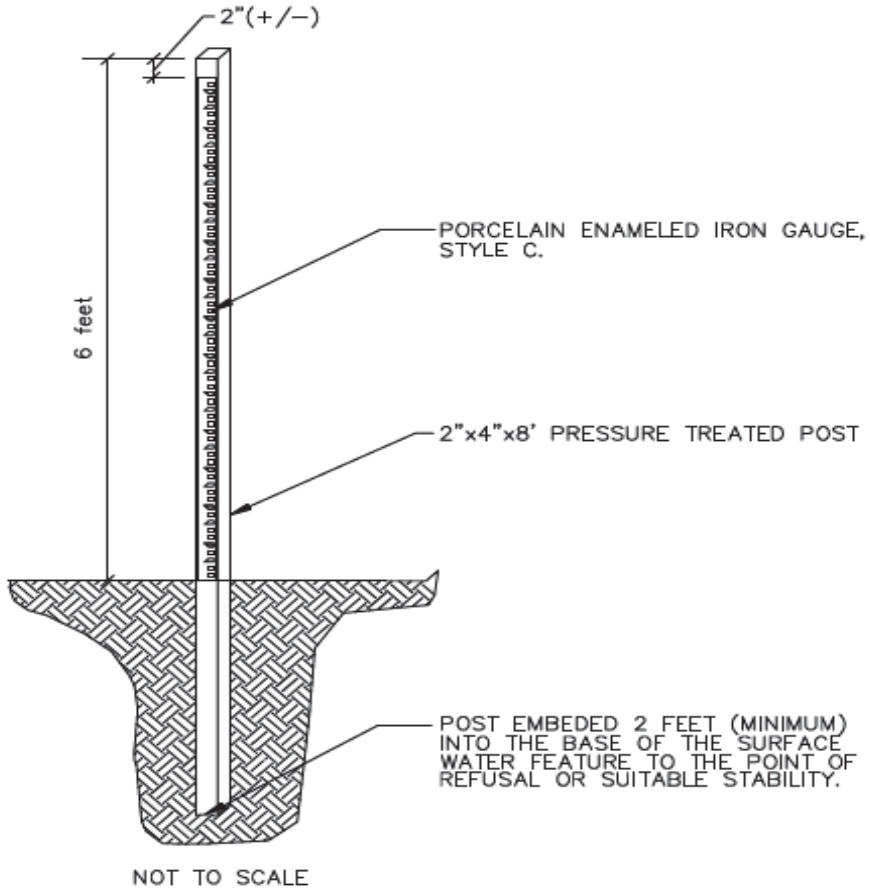
FIGURE 7-2
Typical Well Installation Cross-Section



7.4 STAFF GAUGE INSTALLATION

Staff gauges were installed adjacent to each monitoring well during 2009 and 2010 field efforts. As shown on Figure 7-2, at each staff gauge location, a porcelain-enameled iron Style C staff gauge was attached to a 2- by 4-inch by 8-ft long pressure-treated post. The staff gauges enable measuring stage heights in feet and tenths of feet. A hand level was used to ensure that the post and gauge were plumb. The pressure-treated post was driven into the mud line to the point of refusal or suitable stability. Each post was embedded at least two ft below the base of the surface water feature. After the monitoring well and staff gauge were installed, they were located by a professional surveyor and mapper registered in Florida. Survey data are included in Table 7-1.

FIGURE 7-3
Typical Staff Gauge Installation Cross-Section



7.5 DATA LOGGER DEPLOYMENT

To facilitate monitoring frequency and accuracy, automatic water level measurement devices (Solinst® brand pressure transducers) with data loggers were installed to collect real-time water level data in each of the TW and RW monitoring wells. Data loggers were programmed to collect hourly water level readings. Transducers were installed in five of the seven locations (MW-RW-1, MW-RW-2, MW-RW-3, MW-TW-2, and MW-TW-6) on November 6, 2009. Transducers were installed in the remaining two locations (MW-TW-1 and MW-TW-18) on February 23, 2010. Approximately seven days after installation, the data loggers were checked and data downloaded to verify that they were working correctly. Replacement transducers have since been installed in MW-TW-1 (March 8, 2010), MW-RW-1 (November 19, 2009), MW-RW-3 (January 15, 2014), MW-TW-6 (June 8, 2015), and MW-TW-18 (June 8, 2015). Data

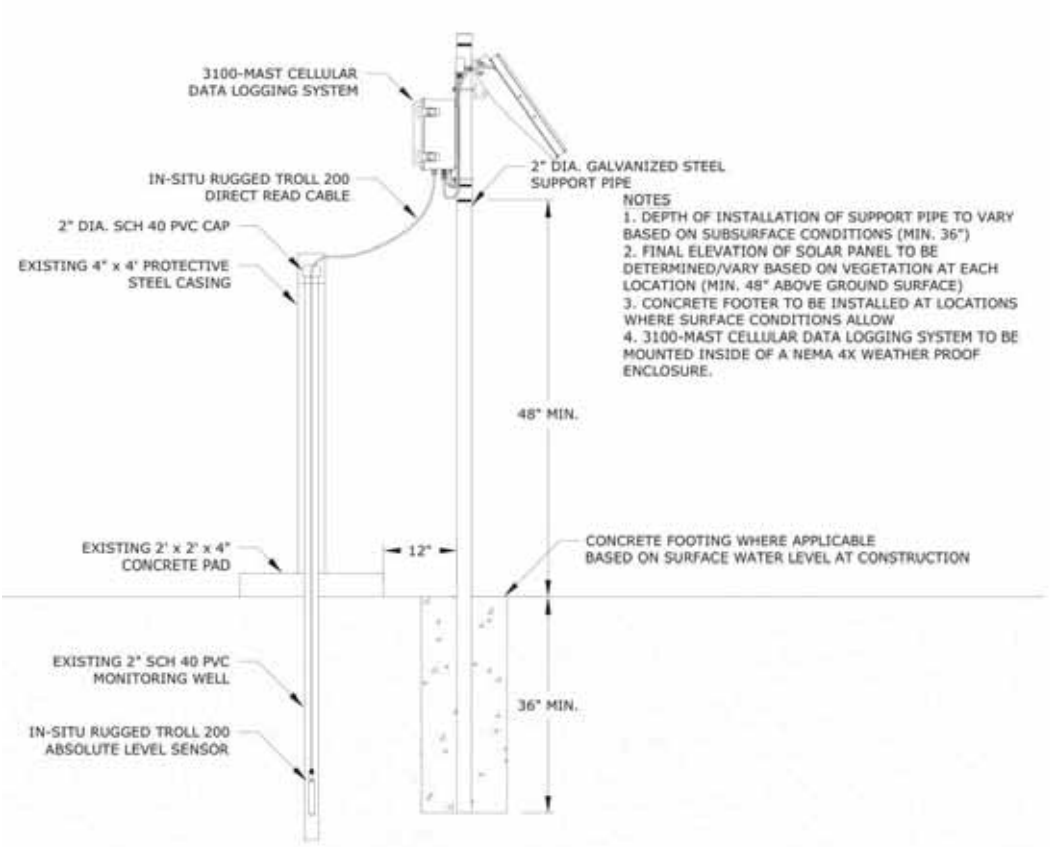
from the data loggers were then downloaded after approximately 90 days and continued to be downloaded on a quarterly schedule until December 2014, after which the schedule changed to a semi-annual frequency with download events in March and September. Battery life and data storage space are routinely confirmed before redeploying the equipment each event. While data are downloaded, groundwater levels are measured manually to confirm the accuracy of the data collected by the automatic water level recorders.

Data are transferred to an Excel spreadsheet as soon as possible after quality assurance/quality control (QA/QC) and validation with day-of-download measurements. In addition, precipitation data are obtained from the NOAA climate history and transferred to the Excel spreadsheet. During any replacement of the transducer, the manual water level data are used to calibrate continuous recording. Manual water level results are compared with calculations to identify and investigate discrepancies and resolve issues with transducer performance prior to redeployment.

7.6 WETLAND TELEMETRY SYSTEM

Wetland telemetry monitoring systems were installed adjacent to each monitoring well during the 2014 Annual Wetland Assessment event. The telemetry systems enable real-time collection of water levels at each of the reference and target wetlands. Water level data is transmitted via cellular signal to a centralized server housed at the main facility. As shown in Figure 7-4, each telemetry system consists of an In-Situ® brand pressure transducer, solar panel, power box, and cellular modem mounted on a steel 2" galvanized steel post installed approximately 3 feet bgs. Data will continue to be collected from the original (non-telemetered) instruments until it is shown that the new instruments are adequately replicating the data collected by the original instruments. The original instruments will be taken out of operation once the telemetry system data accuracy and reliability have been confirmed. The telemetry system is beneficial because it allows quick access to water level instrumentation to determine status and functionality and allows for the use of real time data for continuous optimization and modification of the RAPA treatment system and discharge.

FIGURE 7-4
Wetlands Telemetry System

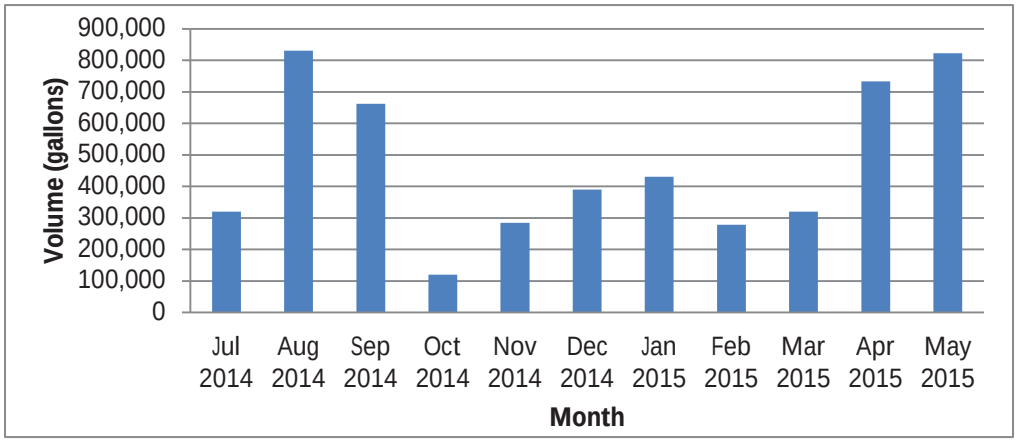


Section 8
Description of System Startup and Operations

8.1 REMEDIAL SYSTEM STARTUP AND OPERATION

Remedial actions as described in the RAPA (Arcadis, 2009) began on November 18, 2013. The remedial system consists of 77 vertical extraction wells, 4 extraction trenches, 5 onsite injection wells, and 3 infiltration galleries. A general layout of the remedial system is provided in Figure 3-1. The 77 vertical extraction wells and 4 extraction trenches have operated at a combined extraction rate of approximately 180 gallons per minute (gpm) since startup. The 5 onsite injection wells and 2 of the 3 infiltration galleries were not in operation during the current monitoring period. One infiltration gallery (RC-7002) has been operational since July 2014 to provide additional water in the vicinity of TW-6 and help offset any potential drawdown affects that may be caused by the nearby horizontal extraction wells (EW-2103 and EW-2104). Figure 8-1 shows the total volume of treated water discharged to RC-7002 per month from July 2014 to May 2015. A total of 5,194,500 gallons of treated effluent water have been discharged through RC-7002.

FIGURE 8-1
Total Volume of Treated Water Discharged to RC-7002 (monthly)



Section 9
Description of Monitored Wetlands and Evaluation of Operational Conditions

9.1 METHODOLOGY FOR DATA COLLECTION AND ASSESSMENT

Findings and observations for the monitored wetlands are presented below. Specific details of each project wetland, such as observations of habitat conditions along the selected transects, are presented on the completed field data sheets in Appendix B. Other characteristics of these wetlands are provided in Table 9-1 below. The WAP requires a thorough assessment of soil conditions every five years. Soil conditions were previously evaluated for all wetlands during the 2014 monitoring event and will be evaluated again in 2019. Observations are described for each wetland in the following sections. Photographic documentation of conditions at each wetland for the 2015 assessment is provided in Appendix C. Graphic display of transducer data is provided in Appendix D. Manual water level elevations and staff gauge measurements collected during wetland transducer downloads between July 2014 and June 2015 are summarized in Table 9-2. Included in the analysis of wetland conditions is a rationale for assignment of WAP zonation scoring for the vegetative stratum. Zonation scoring for conditions in each transect are based on a prescribed range from 1 to 5 points that are detailed in SWFWMD's WAP protocol and the revised ranking scale provided by SWFWMD (SWFWMD, 2008). A score of "1" represents a vegetation community that lacks constituent species considered appropriate for survival in a functioning wetland ecosystem. A score of "5" represents a fully functioning wetland vegetation assemblage. A score of "0" represents conditions or species composition that does not lend itself to a wetland habitat assessment consistent with the definitions under the WAP.

TABLE 9-1
Summary of Project Wetland Characteristics

Wetland ID	TW-1	TW-2	TW-6	TW-18	RW-1	RW-2	RW-3
Wetland Type	Emergent	Emergent/ Forested	Emergent/ Forested	Forested	Emergent/ Forested	Forested	Emergent
Estimated * Historical Acreage	15.15	1.87	3.04	4.08	8.22	8.20	10.45
June 2009 Field Verified Acreage**	11.4***	1.66	1.1	0.39	3.42	4.9	6.3
Historically Inundated	Yes	Yes	Partially	Unknown	Yes	Partially	Yes
Inundated (week of June 8, 2015)	Yes	Yes	Partially	No	Yes	Yes	Yes
Degree of Upland Transition (week of June 8, 2015)	Low	Moderate	Moderate	High	Moderate	Moderate	Low
Evidence of Groundwater at the Surface Comparing Transducer Data To Ground Surface Elevation	Yes	Yes	Yes	Yes, of short duration in heavy rain events only	Yes	Yes	Yes

Notes: * Photo-interpreted using 2003 aerial photographs

** Photo-interpreted during 2009 agency site visit. Shown on wetland monitoring transect maps.

*** Difference between the estimated historical acreage (2003 aerial interpretation) and the June 2009 Field Verified Acreage appears to demonstrate a pre-baseline trend of wetland diminishment and may be a result of long term surficial aquifer drawdown that resulted from residential water wells, agricultural consumptive use, and excavation of regional canals and local ditches.

TABLE 9-2
Summary of Manual Water Level Elevations and Staff Gauge Measurements

TABLE 9-3
Summary of Wetland Zonation Scoring – Baseline to Current Assessment Period

Vegetation Type	Event Period	Year	TW-1	TW-2	TW-6	TW-18*	RW-1	RW-2	RW-3
Ground Cover	B	2009	3	4	4	NA	2	3	2
		2010	5	3	4	NA	4	3	3
		2011	3	4	4	NA	4	3	4
		2012	3	4	4	NA	4	3	4
		2013	3	4	4	NA	4	3	3
	O	2014	3	4	3	2	3	3	5
		2015	3	5	3	2	4	3	5
Shrubs	B	2009	4	3	4	NA	2	3	NA
		2010	5	3	4	NA	2	3	NA
		2011	3	3	4	NA	2	3	3
		2012	4	3	4	NA	2	3	3
		2013	4	4	4	NA	2	3	3
	O	2014	4	4	4	3	2	3	5
		2015	4	4	4	3	2	3	5
Trees	B	2009	NA	3	NA	2	4	4	NA
		2010	2	3	NA	2	4	3	NA
		2011	4	4	NA	2	4	3	NA
		2012	3	4	4	2	4	3	NA
		2013	4	4	4	2	4	3	NA
	O	2014	4	4	4	3	4	3	NA
		2015	4	4	4	3	4	3	NA

Note: Assessment scoring is based on a qualitative assessment of vegetation coverage; Qualitative assessments may vary based on the individual assessor.

NA = No score assigned due to lack of vegetation meeting strata requirements.
B = Baseline Period; O = Operational Period

*TW-18 scoring strategy changed for the Groundcover and Shrub strata (see text).

Ranking Scale

1. Species with an **upland** classification have moved into the **deep zone** in high numbers and distribution.

2. Species have moved in two **zones** in high numbers and distribution, and/or some species with an **upland** classification have moved into the deep zone.

3. Species have moved in one **zone** in high numbers and distribution, and/or some plants have moved in two **zones**.

4. Species have moved in one **zone** in enough numbers and distribution to be of concern, and/or species with an **adaptive** classification are extensive in numbers and distribution in the **transition zone**.

5. Normal **zonation**. Some species may have migrated inward one **zone**, but they are small in number and/or right along the **zone** edge.

9.2 GENERAL HABITAT CONDITIONS

The freshwater wetlands on Site are similar to those that occur throughout the southwest Florida landscape in concert with pine flatwoods. These shallow marshes (less than 1 meter deep) occur as slight depressions ranging from 10 to a few hundred meters in diameter in the otherwise flat landscape. The most studied and best-preserved example of these wetlands occurs in the Myakka River State Park in eastern Sarasota County. Flatwood marshes provide an important function as groundwater recharge areas (Myers and Ewel, 1990). The flat topography, soils, and seasonal precipitation of the pine flatwoods strongly influence hydrology in these wetland systems.

During the rainy season, minimal water runoff results in waterlogged and poorly aerated soils and standing water may be present for varying periods of time. During the dry season, high evapotranspiration draws water from upper soil horizons. Water often cannot move upward from lower horizons where there is a natural impermeable hardpan, frequently resulting in drought conditions. While occurring in various stages of succession and land use disturbance, all TWs and RWs subject to monitoring under the WMP are relict flatwood marshes.

A colder-than-normal winter in early 2010 decreased the observed prevalence of some previously reported dominant herbaceous vegetation in the assessment areas. These effects were most pronounced in non-native species including primrose willow, Caesar's weed, and tropical soda apple. This observation of decreased prevalence appeared to be reversing as of the June 2012 assessment and recovery of these species continued to be observed during the May 2013, June 2014, and June 2015 assessments. Other species continuing to exhibit rebound from the winter 2010 freezing temperatures include Elliott's aster (*Symphiotrichum elliottii*). Findings for 2015 discussed below indicate precipitation totals that have resulted in reduced seasonal soil saturation and inundation. The reduced seasonal soil saturation and inundation has allowed for seasonal reestablishment of dominant 2009-2010 species associated with dryer conditions, including Caesar's weed (*Urena lobata*) and dogfennel (*Eupatorium capillifolium*).

Observed evidence of wildlife during the June 2015 assessment was consistent with observations made during the baseline monitoring events and was limited to animals typically found in flatwoods such as armadillo (*Dasypus novemcinctus*), white-tailed deer (*Odecoileus virginianus*),

wild hog (*Sus scrofa)*, and raccoon (*Procyon lotor*). Avian species observed during the June 2015 assessment included Northern cardinal (*Cardinalis cardinalis*), mockingbird (*Mimus polyglottos*), Carolina wren (*Thryothorus ludovicianuss*), snowy egret (*Egretta thula*), White ibis (*Eudocimus albus*), Great blue heron (*Ardea Herodias*), Florida mottled duck (*Anas fulvigula*) and red-winged blackbird (*Agelaius phoeniceus*). Amphibians observed included green anole (*Anolis carolinensis),* brown anole (*Anolis sagrei*), green tree frog (*Hyla cinerea*), and southern leopard frog **(***Lithobates sphenocephalus*).

9.3 TARGET WETLAND 1

9.3.1 Transect Location

Beginning at the collocated monitoring well/staff gauge (installed February 22, 2010) and extending to the HWE, the monitoring transect at TW-1 is oriented from east to west in the northern section of the three contiguous depressional areas in the wetland (Figure 9-1).

9.3.2 Habitat Description

The northernmost depressional area was selected for WMP transect deployment due to favorable accessibility and representative landscape position within an emergent habitat that exhibits minimal encroachment by non-native invasive vegetation. Until timbering activities occurred between the 2011 and 2012 annual assessments, dominant vegetation surrounding TW-1 consisted of planted slash and longleaf pine trees, with a hardwood forest along the southern border. During the June 2015 assessment, the majority of uplands surrounding TW-1 consisted of native shrub and brushland.

9.3.3 Monitoring well TW-1 Data Assessment

The transducer for well MW-TW-1 was installed on February 23, 2010 and was subsequently replaced on March 8, 2010 due to a sensor malfunction. Elevations at MW-TW-1 indicate that groundwater levels ranged from about 3.5 ft bgs to about 2.5 ft above ground surface (ags) since monitoring began. During the current monitoring period (June 2014 to June 2015), groundwater elevations fluctuated between 2.0 ft. ags and 0.6 ft ags from June through August 2014, followed by a steady increase to 2.5 ft ags in September 2014 due to heavy rainfall. Water levels then

dropped to the normal pool elevation where it remained until April 2015, when it fell to approximately 0.5 ft bgs. Moderate rainfall throughout May 2015 increased groundwater elevation to approximately 1.6 ft ags observed at the time of the June 2015 assessment. Staff gauge measurements collected during wetland transducer downloads in September 2014, March 2015 and June 2015 indicated standing surface water at this location (see Table 9-2). Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.3.4 June 2015 Field Observations

In June 2015, the northern interior sector of the TW-1 transect continued to be dominated by rice cutgrass (*Leersia hexandra*), Carolina willow (*Salix caroliniana*), field paspalum (*Paspalum laeve*) and maidencane (*Panicum hemitomon*). As discussed above, previously dominant planted pines and upland hardwood and shrub vegetation surrounding the west, south, and east sides of TW-1 was reduced to a native shrub habitat with some minor slash (i.e., woody debris generated by timber harvesting); see Attachment C field data sheets.

As during all previous monitoring events for TW-1, the herbaceous/groundcover zonation score of 3 for the 2015 assessment continues to apply due the diversity of T zone groundcover species present in the D zone. This meets the WAP qualification where "species have moved in one zone in high numbers and distribution, and/or some plants have moved in two zones." The previous year's shrub/sapling zonation score of 4 also continues to apply due to species having moved in one zone in enough numbers (i.e., ≥5 percent) and distribution to be of concern for the long-term viability of the wetland habitat. The tree zonation score for the 2015 assessment of 4 was assigned due to the persistent occurrence of vigorous OD Carolina willow species having moved in one zone in enough numbers (i.e., ≥5 percent) and distribution in the D zone to be of concern for the long-term viability of the wetland habitat.

During the June 2015 assessment, the majority of the wetland was inundated. Except for the alteration of the adjacent timber-forested wetland and upland edge noted in the May 2013 assessment, no conspicuous hydrologic alterations were observed along the surface area in or near the TW-1 transect during the June 2015 assessment. The previously reported 5.25-acre

stormwater retention pond, associated with an industrial facility adjacent to the northern boundary of TW-1, continues to exhibit surface-water elevation changes similar to TW-1.

9.4 TARGET WETLAND 2

9.4.1 Transect Location

Initial field investigations identified one well (Stilling Well-3) and one staff gauge (Staff Gauge-8), which were incorporated into the original proposed transect as prescribed by the WAP manual. However, since these devices are located in the outer transition zone, rather than the wetlands deep zone, they are not included in the monitoring transect. AS a result, a new collocated monitoring well and staff gauge (MW-TW-2 and SG-TW-2) were installed in the deep zone to the north of the monitoring transect in November 2009. The TW-2 monitoring transect is oriented from west to northeast, beginning at the wetland interior and extending to the HWE (Figure 9-2). Although MW-TW-2 and SG-TW-2 are not considered part of the monitoring transect, photographs are taken in all four cardinal directions at this location and water level data is collected and used for assessment purposes.

9.4.2 Habitat Description

A review of 2003 aerial photography indicated that TW-2 once contained a conveyance that appeared to drain stormwater from Tallevast Road and from a commercial/industrial facility located immediately southwest of the wetland. Vegetation in TW-2 consisted of shrub vegetation in the interior of the wetland and herbaceous wetland vegetation in and near the periphery of the wetland. A parcel of disturbed upland and a commercial/industrial facility bordered TW-2 to the west, with upland pasture surrounding the remaining areas of TW-2 with the exception of the area east of the access road. The pasture east of the access road is currently being developed and a master stormwater system is being installed. Historical hydrological indicators of TW-2 suggest that this wetland was hydrated both by surficial stormwater sheet flow and groundwater.

9.4.3 Monitoring well TW-2 Data Assessment

The transducer for the new well MW-TW-2 was installed on November 6, 2009. During the current monitoring period (June 2014 through June 2015), groundwater elevations were at about

3 ft ags in June 2014. Due to failure of the manual transducer and improper deployment of the telemetric transducer, no data was collected from June 27, 2014 to September 30, 2014, when the telemetric transducer was properly deployed. Groundwater elevations fluctuated between approximately 3 ft ags and 2 ft ags from October 2014 through March 2015, followed by a steady decrease to approximately 0.5 ft ags between March and May 2015. By the time of the June 2015 assessment, groundwater elevation had increased to just above the normal pool elevation (1 ft ags). Staff gauge measurements collected during wetland transducer downloads in September 2014, March 2015 and June 2015 indicated standing surface water at this location (see Table 9-2). Standing surface water was observed in TW-2 (Appendix B) during the annual wetland assessment conducted on June 10, 2015. Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.4.4 June 2015 Field Observations

No major alteration or conversion of previously reported land use or vegetative cover types in TW-2 was observed between the June 2009 preliminary investigation and the subsequent June 2010, 2011, 2012, May 2013, June 2014, and June 2015 transect assessments. TW-2 was historically an herbaceous wetland but continues to display signs of ongoing transition to forest and prairie habitats. A dense stand of Carolina willow trees and shrubs occurs in the area presumed to have been the deepest portion of the wetland based on interpolated aerial photography. This wooded wetland area was dominated by OD zone species. Both the D and OD zones were inundated with *Salvinia minima* observed floating on the surface throughout. Adventitious roots were observed approximately 18-24 inches above the observed water level, indicating wet season water level is at least 18-24 inches higher than the current water level.

TW-2 was assigned an herbaceous/groundcover zonation score of 5 for the 2015 assessment, due to normal zonation observed within the transition zone. OD and D zones were NA for scoring due to lack of WAP species observed. This represents a slight improvement from previous years' assessments and reflects seasonally high standing water levels that persisted for long enough to reverse the trend of colonization by species with AD, T, and UPL indicator classifications. The shrub/sapling zonation score remained a 4 for the 2015 assessment due to OD species having moved in one zone in enough numbers and distribution to be of concern. The tree zonation score

of 4 continued to be assigned in the 2015 assessment due to OD species having moved in one zone in enough numbers and distribution to be of concern.

9.5 TARGET WETLAND 6

9.5.1 Transect Location

The TW-6 monitoring transect is oriented from southeast to northwest, beginning at the collocated monitoring well/staff gauge (installed November 2, 2009) and extending to the HWE, in the north-central portion of the wetland (Figure 9-3). The monitoring well/staff gauge was installed in a portion of TW-6 that was confirmed to have been historically excavated. The elevation of the ground surface outside of the excavated area (north along the transect) is approximately three feet higher than at the location of the monitoring well/staff gauge. Due to historical disturbance within the wetland, definitive surface hydrology and vegetative evidence of an HNP elevation was not observed outside of the excavated pond within TW-6, during the initial 2009 field review.

9.5.2 Habitat Description

A review of available 1970, 1980, and 2003 aerial photography indicated that TW-6 contained an inundated area in its southern sector. This inundated portion of TW-6 was field-verified and confirmed with the long-term landowner to be an excavated cattle pond. Historical aerial photographs show that the excavation of this cattle pond occurred between 1951 and 1962. During the June 2009 site visit to select an appropriate transect location for the assessment area the wetland was dry, including the excavated portion. During the 2009 site visit, vegetation types in TW-6 consisted of emergent/shrub species in the excavated area and a thick stand of trees/shrubs north of the excavated area. Historical hydrological indicators of TW-6 suggest that this wetland is hydrated by stormwater sheet flow as well as by a groundwater interface within the excavated area. This wetland appears to receive stormwater drainage from Tallevast Road to the north, the residential property to the west, and from the pastureland to the east and south. Additionally, treated effluent water from the RAPA system has been discharged through an injection gallery (RC-7002) located along the south and east sides of the wetland since July 2014. A total of 5,194,500 gallons of treated effluent water have been discharged through RC-

7002. This wetland discharges to the east through a drainage ditch along the south side of Tallevast road. A high point in this roadside ditch, approximately 0.25 miles east of TW-6 appears to control high water levels in this wetland. The four baseline reports indicate that the section of TW-6 north of the historically excavated cattle pond displays evidence of conversion to an upland forested/shrub habitat type and that soils in this area are composed of sand and loamy sand, with marginal hydric soil indicators.

9.5.3 Monitoring well TW-6 Data Assessment

The transducer for well MW-TW-6 was installed on November 6, 2009. Groundwater elevations at MW-TW-6 were generally above ground surface for all monitoring periods except for short periods from November to December 2009 and March 2012 through June 2012. Groundwater elevations were at about 3 ft ags within the excavated pond portion of TW-6 during July 2012 and stayed at these levels until starting to fall in late October 2012 to the ground surface until June 2013. During the current monitoring period (July 2014 through June 2015), water elevations fluctuated between 1 ft ags and 1 ft bgs from June 2014 to September 2014. Water elevations quickly increased to approximately 3 ft ags in September 2014 due to heavy rainfall, followed by a gradual decrease to the normal pool elevation from October 2014 through January 2015, where it remained until the June 2015 assessment event. Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.5.4 June 2015 Field Observations

As during all previous monitoring events, no major alteration or conversion of previously reported land use or vegetative cover types in TW-6 was observed between the June 2009 preliminary investigation and the June 2010, June 2011, June 2012, May 2013, and June 2014 transect monitoring assessments. Conditions during the November 2009 monitoring well and staff gauge installation, as well as during the June 2010, 2011, 2012, and May 2013 baseline monitoring assessments, included normal inundation that was sufficient to submerge most of the excavated pond. This area was holding up to a 2-foot water column at the time of the June 2010, 2011, 2012, and May 2013 observations. The previous annual report noted observations indicating dry conditions with no evidence of recent inundation other than the inundation in the deepest portion of the wetland. Observed hydrology during previous monitoring events suggest

that groundwater is a partial source to the pond, but it is also fed by stormwater runoff from nearby Tallevast Road. Rust, stains, and residues on the staff gauge continue to indicate persistent water volumes in the excavated pond. It was noted in the June 2014 assessment event that water levels in this wetland appeared to have been reduced as a result of the initiation of the RAPA extraction wells and trenches. Installation of injection gallery (RC-7002) to the south and east sides of the wetland was completed mid-2013. RC-7002 was designed and installed to augment groundwater in the area and to buffer TW-6 from drawdown associated with the RAPA system.

Conditions observed during the June 2015 assessment event were similar to those observed during the 2014 event, indicating that the wetland was experiencing dry conditions, with no evidence of recent inundation other than the inundation in the deepest portion of the wetland. Rainfall data indicates seasonal events that occurred prior to the 2015 assessment yielded less rainfall than those observed prior to the 2014 assessment event. Recharge to RC-7002 began on July 9, 2014, subsequent to the First Operational Monitoring event. A total of 5,194,500 gallons of treated effluent water have been discharged through RC-7002 since infiltration began. Water level data indicates that groundwater elevations have not dropped bgs since August of 2014. Conditions in TW-6 during the June 2015 monitoring event are similar to conditions that would be expected during an average spring dry season, as noted in the previous assessment. Based on water level data collected during this monitoring period, RC-7002 appears to be effectively augmenting groundwater recharge and buffering TW-6 from drawdown associated with the RAPA system. The effect of the groundwater extraction and recharge on TW-6 groundwater and surface water elevations will continue to be evaluated. Based on this, the water flow from the extraction wells and to the RC-7002 infiltration gallery will be adjusted as needed during the 2015-2016 monitoring period.

During the June 2015 assessment, the vegetation in the excavated portion of TW-6 continued to consist of predominantly OD and D zone species. Vegetation of the wetland area north of the pond continued to be dominated by OD zone and T zone species. AD and T species have historically been noted in the D zone and were noted during the 2015 event. Additionally, Caesar weed (*Urena lobata*), an upland species, was observed in small numbers within the D zone

during this monitoring event. Caesar weed is an opportunistic vegetative species, with seeds that cling to wildlife, thereby easily spreading the seed source. Caesar weed does not persist in areas of saturated or inundated soils and areas shaded by canopy. Therefore, it is anticipated that the Caesar weed observed during the 2015 monitoring event will not persist due to seasonal inundation. Despite the observation of Caesar weed, the herbaceous/groundcover zonation score for the 2015 monitoring event has remained a 3, since the upland species was not observed in enough numbers (>5%) to be of concern as described in the revised scoring guidance provided by the SWFWMD (SWFWMD, 2008). The shrub/small tree and tree zonation scores for the 2015 event continued to be a 4 compared to the last monitoring report, due to species having moved in one zone in enough numbers and distribution to be of concern, and species with an AD classification (i.e., Brazilian pepper) are extensive in numbers and distribution in the T zone.

9.6 TARGET WETLAND 18

9.6.1 Transect Location

The TW-18 monitoring transect is oriented from south to north, beginning at the collocated monitoring well/staff gauge (installed February 22, 2010) and extending to the HWE in the northern portion of the historical wetland (Figure 9-4).

9.6.2 Habitat Description

Review of 2003 aerial photography during the 2009 site review indicated that the TW-18 area appeared to have been consistently dry. Vegetation shown on the 2003 aerial photograph of TW-18 consisted of a chiefly hardwood forested hammock, bounded on the west side by a railroad, on the south side by a single family residence, on the east side by the unimproved extension of 19th Street, and on the north side by upland pine silviculture. The baseline monitoring reports indicated that the historical hydrological indicators of TW-18 suggest that this habitat was likely once a persistent wetland that was fed both by surficial stormwater sheet flow as well as a groundwater interface that is no longer conspicuous. The baseline reports indicated that up to 12 inches of wetland soil subsidence caused by oxidation and gasification of carbon that result from drought and drying conditions continued to be observed within TW-18 and relict wetland vegetation remained restricted to hummocks that protrude above the historical wetland floor.

Baseline reports for TW-18 indicate soils consist of a loamy sand matrix typical of upland forested habitats in this region of Florida, and that TW-18 no longer contains hydrological indicators consistent with a functional wetland. The baseline reports determined that based on the maturity of transitional and upland trees present, the wetland habitat at TW-18 likely began transitioning to upland more than 20 years ago and is now devoid of all but relict wetland characteristics. During the June 2015 monitoring event, soil core profiles collected within the D, OD, and T zones indicated that hydric soil indicators were present. A stripped matrix (Munsell color 10YR (4/1 dark gray to 5/1 gray)) starting within the top 6 inches of soil was observed during the 2015 monitoring event. Vegetation and above ground hydrologic indicators generally transition more rapidly than soils. We will continue to assess the soils in all three zones to document changes during the requisite monitoring period.

9.6.3 Monitoring well TW-18 Data Assessment

The transducer for well MW-TW-18 was installed on February 23, 2010. Groundwater elevations at MW-TW-18 were approximately 2 ft or more bgs since monitoring began in February 2010, except for a brief period in late August/early September 2010 and a more extended period of time in late August/early September 2012, where groundwater elevations were at or slightly above ground surface after heavy precipitation events. Groundwater elevations during the first operational monitoring period (June 2013 to June 2014) were consistent with historical trends, influenced primarily by seasonal rainfall. During the current monitoring period (June 2014 through June 2015), groundwater elevations decreased from 1 ft bgs to 4.5 bgs from June 2014 to August 2014, followed by a rapid increase to the normal pool elevation a few inches above ground surface. Between September 2014 and February 2015, groundwater elevations fluctuated between ground surface and approximately 2.5 ft bgs, and then fell gradually to 4 ft bgs through May 2015. Between May and June 2015, groundwater elevations increased steadily to approximately 2 ft bgs. Staff gauge measurements during wetland transducer downloads in September 2014, March 2015, and June 2015 as well as observations made during the annual assessment conducted in June 2015, indicated no standing surface water at this location (see Table 9-2 and Appendix B). Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.6.4 June 2015 Field Observations

No major alteration or conversion of previously reported land use or vegetative cover types in TW-18 was observed between the June 2009 preliminary investigation and the June 2010, 2011, 2012, May 2013, June 2014, and June 2015 transect monitoring assessments. The interior of TW-18 continues to consist of a mix of primarily adaptive and transitional oaks/hardwoods and introduced mature punk trees. Relict obligate-wetland ferns, including royal fern (*Osmunda regalis*) and Virginia chain fern (*Woodwardia virginica*); continue to occur on hummocks within the historical wetland interior. A dense saw palmetto fringe continues to encroach along the northern, western, and southern borders of the HWE.

The herbaceous/groundcover zonation score assigned to TW-18 for the 2015 assessment continues to be a 2, due to species having moved in two zones in high numbers and distribution, and/or some species with an upland classification having moved into the deep zone. The ground surface throughout TW-18 continues to be blanketed by laurel and live oak leaf litter. Both the shrub/small tree and tree zonation score for the 2015 assessment remains at 3, due to species having moved in one zone in high numbers and distribution, and/or some plants have moved in two zones. However, while the WAP prescribes that AD zone species should be regarded as T zone species when occurring in the D or OD zones, it is a prevalence of T zone species (name them) that continues to dominate the historic D or OD zones.

9.7 REFERENCE WETLAND 1

9.7.1 Transect Location

The RW-1 monitoring transect is oriented from west to east beginning at the collocated monitoring well/staff gauge (installed November 3, 2009) and extending to the HWE in the eastern portion of the wetland (Figure 9-5).

9.7.2 Habitat Description

A review of 2003 aerial photography indicated that RW-1 consisted of a historically inundated area, with a shrub and emergent wetland D zone. During the May 13, 2013 assessment, the northern upland edge of the area was actively undergoing clearing, grubbing, and windrowing to

maintain the adjacent pasture and prevent livestock from accessing the wetland. As of the June 2015 monitoring assessment, upland pasture habitat continues to border the historical wetland boundary. Dense thickets of invasive Brazilian pepper tree are ubiquitous throughout the historical T, OD, and D zones of RW-1.

This wetland historically received surface flow from a relatively small drainage basin in the surrounding pine flatwoods. The surrounding uplands were converted to agricultural land uses prior to 1941 and RW-1 continues to receive stormwater runoff from adjacent agricultural lands. The USGS 7.5-minute topographic quadrangle mapping (USGS, 1994) and historical aerial photographs depict the presence of a surface conveyance draining southeast to the Pearce Canal.

9.7.3 Monitoring well RW-1 Data Assessment

The transducer for well MW-RW-1 was installed on November 6, 2009 and was subsequently replaced on November 19, 2009 due to a malfunction. Groundwater elevations at MW-RW-1 varied from about 4 ft bgs to about 1-ft ags since monitoring began in November 2009. Wetland transducer data collected since the start of the monitoring program indicates a drainage feature controlling maximum water elevations in this wetland. In general, this wetland appears to experience shallow inundation in response to rainfall events during the wet season.

During the current monitoring period (July 2014 through June 2015), groundwater elevations decreased from a few inches ags to approximately 2 ft bgs from July 2014 through August 2014, followed by an increase from 2 ft bgs back up to the normal pool elevation, where it remained until April 2015. Groundwater elevations between April and June 2015 fluctuated rapidly with precipitation events between the normal pool elevation and approximately 2 ft bgs. Observation during the annual assessment conducted on June 9, 2015 also indicated shallow inundation at this location (see Appendix B). Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.7.4 June 2015 Field Observations

No major alteration or conversion of previously reported land use or vegetative cover types in RW-1 was observed between the June 2009 preliminary investigation and the June 2010, 2011, 2012, May 2013, June 2014, and June 2015 transect monitoring assessments (except clearing of

Brazilian pepper around the wetland as reported in the last baseline monitoring report). Vegetation of RW-1 is dominated by dense stands of Brazilian pepper (AD species) shrubs and small trees. Within the historical wetland interior, only relict OD zone species occur, which are limited to a few mature Carolina willow and red maple trees.

All previous monitoring events for RW-1 indicated an herbaceous/groundcover zonation score of 3 due to species having moved in one zone in high numbers and distribution, and/or some plants having moved in two zones. However, observations made during the 2015 monitoring event indicate that the score increased from 3 to 4 due to species having moved in one zone in enough numbers and distribution to be of concern and/or species with an adaptive classification are extensive in numbers and distribution in the transition zone. The shrub/sapling zonation score for the 2015 assessment continued to be 3 due to species having moved in one zone in high numbers and distribution, and/or some plants having moved in two zones. The tree zonation score for the 2015 assessment continued to be 4 due to species having moved in one zone in enough numbers and distribution to be of concern for the long-term viability of the wetland habitat.

Relict herbaceous wetland vegetation (i.e., Virginia chain fern) continues to grow on hummocks that protrude above the historical wetland floor possibly indicating soil subsidence. Much of the original wetland habitat has been invaded by dense Brazilian pepper and the perimeter of the wetland appears to be transitioning to a dryer habitat due to drainage and surrounding agricultural activities.

9.8 REFERENCE WETLAND 2

9.8.1 Transect Location

The RW-2 monitoring transect is generally oriented from east to west beginning at the collocated monitoring well/staff gauge (installed November 3, 2009) and extending to the HWE on the western portion of the wetland (Figure 9-6).

9.8.2 Habitat Description

A review of 2003 aerial photography indicated that RW-2 consisted of a thick canopy of trees, with small areas of shrubby and emergent vegetation scattered inside of the eastern and southern boundaries. Active pastureland surrounds the historical wetland boundaries.

Historical aerial photographs of RW-2 suggest that this wetland receives stormwater runoff from two linear drainage features to the north and northwest of the wetland and surface water flow from the surrounding pastures. The historical aerial photographs indicate that between 1951 and 1962 a rim ditch was excavated around the east side, a cattle pond was excavated in the southern lobe, and a ditch was excavated through the natural outfall marsh to the south. This ditch connected RW-2 to the Pearce Canal. A notched cement control weir at the south end of the wetland historically controlled water elevations in RW-2. This cement control structure was collapsed during the baseline assessments.

9.8.3 Monitoring well RW-2 Data Assessment

The transducer for well MW-RW-2 was installed on November 6, 2009. Groundwater elevations ranged from about 4 ft bgs to about 2 ft ags since monitoring began in November 2009. During the current monitoring period (July 2014 to June 2015), groundwater elevations ranged from the normal pool elevation (1 ft ags) to approximately 1 to 1.5 ft bgs from July 2014 through September 2014. Between September 2014 and March 2015, groundwater elevations remained at the normal pool elevation, followed by a gradual decrease to ground surface between March and May 2015. Water levels fluctuated between at grade ground elevations and 0.5 ft ags until June 2015. Observations during the June 2015 assessment indicated standing surface water in RW-2 (Appendix C). Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.8.4 June 2015 Field Observations

No major alteration or conversion of previously reported land use or vegetative cover types in RW-2 was observed between the June 2009 preliminary investigation and the June 2010, 2011, 2012, May 2013, and June 2014 monitoring assessments. Evidence of prior transition of RW-2 to drier conditions, observed during the initial June 2009 field investigation, continued to be

observed during the baseline monitoring events, as well as the 2014 and 2015 monitoring events. This wetland appears to be a moderately functional wetland which has been impacted by historical drainage and surrounding agricultural land uses. The perimeter of the wetland shows signs of reduced hydroperiods resulting from the drainage feature to the south. Evidence of trampling by cattle was observed throughout the drier portions of the wetland (T and OD zones) during the June 2015 assessment. Hydrologic indictors observed during the 2015 monitoring event include vegetation growing on hummocks, along with moss and lichen lines that appear to correspond with normal pool elevations.

Several D zone and aquatic floral species continued to occur in the interior of RW-2, but vegetation within the monitoring transect of this wetland is increasingly dominated by OD zone and T zone species. As during all previous monitoring events for RW-2, the herbaceous/groundcover zonation score for the 2015 assessment is a 3 due to species having moved in one zone in high numbers and distribution, and/or some plants having moved in two zones. The shrub/sapling and tree zonation score for the 2015 assessment also continued to be 3 due to species having moved in one zone in high numbers and distribution, and/or some plants having moved in two zones.

9.9 REFERENCE WETLAND 3

9.9.1 Transect Location

The RW-3 monitoring transect is generally oriented from east to west beginning at the collocated monitoring well/staff gauge (installed November 2, 2009) and extending to the HWE in the northwestern portion of the wetland (Figure 9-7).

9.9.2 Habitat Description

A review of 2003 aerial photography indicated that RW-3 primarily consisted of an emergent wetland that was frequently inundated. Upland pasture and shrub habitat bordered the wetland boundary of RW-3. The outer perimeter of the southern half of RW-3 was bordered by thick shrub and tree vegetation. Hydrological indicators from the 2003 aerial photograph of RW-3 suggested that the water source for this wetland was primarily groundwater and surface flow from the surrounding drainage basin. The 2003 aerial photograph showed that three quarters of

the wetland area was inundated, and the interior of the northern boundary displayed obvious hydrology and vegetative patterns of a shrub wetland. Floating vegetation was prevalent within the upper portion of RW-3 in the 2003 aerial photograph, and rooted vegetation appeared to be depressed or absent within the lower sections, indicating that this wetland was historically inundated throughout much of the growing season. The historical aerial photographs indicate that no significant drainage features exist around this wetland. The northern portion of this wetland was excavated for a cattle pond prior to 1995 as indicated in aerial photography.

9.9.3 Monitoring well RW-3 Data Assessment

The transducer for well MW-RW-3 was installed on November 6, 2009. Groundwater elevations varied between 4 ft bgs to 3 ft ags since monitoring began in November 2009. No data was collected by the transducer between May 2013 and January 2014 due to a low transducer battery. In addition, staff gauge data was not collected between May 2013 and December 2014 due to the staff gauge being damaged. A new transducer was installed on January 15, 2014 and a new staff gauge was installed and surveyed in October 2014. During the current monitoring period (June 2014 through June 2015), groundwater elevations decreased from 1 ft ags to approximately 1.5 ft bgs in June 2014, followed by several rapid fluctuations between ground surface and 1.5 ft bgs in August and September 2014. In late September, groundwater elevations rapidly increased to the normal pool elevation (approximately 2 ft ags), followed by a slow decrease to ground surface between October 2014 and April 2015. Between April and June 2015, groundwater elevations fluctuated rapidly from 0.5 ft ags to approximately 1.5 - 2.0 ft bgs. Observations made during the semi-annual transducer download events in September 2014 and March 2015, as well as during annual wetland assessment conducted in June 2015, indicated standing surface water at this location (see Appendix B). Groundwater and surface water responses to precipitation events are evident throughout the data collected to date (Appendix D).

9.9.4 June 2015 Field Observations

No major alteration or conversion of previously reported land use or vegetative cover types in RW-3 was observed between the June 2009 preliminary investigation and the June 2010, 2011, 2012, May 2013, June 2014, and June 2015 transect monitoring assessments. Evidence of prior conversion of RW-3 to upland prairie, as previously reported in the baseline reports, was not

observed. The 2013 baseline report indicated that the lower half of RW-3 was rapidly transitioning to upland. This conclusion may have been due to hydrologic and vegetative evidence resulting from drought conditions preceding the monitoring event. Similar to the 2014 monitoring event, water levels were at or above normal pool elevations for several months prior to the 2015 monitoring event resulting in a diverse assemblage of hydrophytic vegetation in each zone especially in the southern herbaceous fringe. As during the previous monitoring event for RW-3, the herbaceous/groundcover zonation score for RW-3 remains a 5 indicating a normal zonation pattern. While there was an absence of woody vegetation in the OD and D zones, the shrub/sapling zonation score for the 2015 assessment was 5, indicating a normal zonation pattern. The tree zonation score for the 2015 assessment was NA due to the absence of trees in the T, OD, and D zones.

During the 2015 assessment, the monitoring transect established in the northwestern quadrant of RW-3 was dominated by OD and D zone floral species, but two adaptive upland ruderal species (*Phyla nodiflora and Ptillimnium capillifolium*) were observed in the T zone of the wetland. The high water levels prior to the 2015 monitoring event appear to have eliminated most of the opportunistic ruderal (adaptive) upland species which had dominated the prairie vegetation observed during previous baseline monitoring events.

Section 10
Conclusions

Implementation of the July 2009 WMP is conducted in accordance with an FDEP requirement for wetlands monitoring associated with the anticipated installation and activation of the RAPA (groundwater remediation system) for the site. Staff gauges and monitoring wells were installed between November 2009 and February 2010. Annual baseline assessments were conducted for four years (through May 2013) prior to groundwater extraction associated with the RAPA implementation. Data collected from 2009 to May 2013 was used to establish a baseline of groundwater and surficial wetland hydrology information to document local fluctuations in groundwater elevations and the corresponding effect on wetland function. These data were used to establish thresholds that determine whether TWs will require hydraulic maintenance or compensatory mitigation as a result of RAPA system operation. The RAPA system startup occurred on November 18, 2013. The June 2014 annual assessment marked the first monitoring event conducted during RAPA operations. This 2015 operational monitoring event was conducted in each of the WMP wetlands (TWs nearer the Facility and RWs in the greater Tallevast area). Data collected during the current monitoring was evaluated against the established baseline conditions.

Precipitation in the quarter preceding the 2015 WMP transect assessment was slightly less compared to the 2014 event. Precipitation in the year preceding the 2015 monitoring event was approximately 41 inches, which is below average. All of the TWs and RWs showed evidence of normal water level fluctuation given the average rainfall for the region.

As noted in the June 2014 assessment event, water levels in TW-6 appeared to have been reduced as a result of the initiation of the RAPA extraction wells and trenches. In response to this observation, the infiltration gallery (RC-7002) located south and southeast of TW-6 was placed into operation in July 2014 and has remained operational to date. A total of 5,194,500 gallons of treated effluent water have been discharged through RC-7002 since it was started. Water level

data indicates that groundwater elevations have not dropped bgs since August of 2014. Groundwater elevations observed at TW-6 during the 2015 monitoring event appear to have been maintained at a higher elevation when compared to the previous monitoring event, indicating that RC-7002 is augmenting groundwater recharge and effectively buffering TW-6 from drawdown associated with the RAPA system. The effect of the groundwater extraction and recharge on TW-6 groundwater and surface water elevations will continue to be evaluated. Groundwater levels and water flow to EW-2103, EW-2104, and RC-7002 will be monitored and adjusted as needed during the 2015-2016 monitoring period. The vegetation in TW-6 continues to be similar to that recorded in the baseline monitoring reports and has not been affected by the drawdown noted in the 2014 monitoring report.

The WAP vegetative score in TW-6 remained the same in all categories. One upland species (Caesar weed) was observed at 5% coverage within the D zone. However, this upland species is not present in enough numbers to be of concern and it is anticipated that the presence and subsequent absence of this species is commensurate with seasonal rainfall. The vegetative scores for TW-2 and RW-1 were increased in groundcover, from 4 to 5 and 3 to 4, respectively. The WAP scores of the rest of the TWs and RWs have not changed from those assigned for the previous monitoring period.

The telemetry system installed in June 2014 continues to operate normally, allowing quick access to water level instrumentation to determine status and functionality. Data provided by the telemetry system continues to be used for continuous RAPA system optimization, specifically for monitoring and adjusting groundwater extraction and recharge in the vicinity of TW-6. Groundwater elevation data in wetlands will continue to be manually verified to confirm telemetry system operation and manual transducers will be downloaded on a semi-annual basis. Groundwater elevation data will continue to be collected hourly and will be transmitted on a weekly basis. Manual transducers will remain deployed in the monitoring wells until the accuracy and reliability of the telemetry system has been verified. Annual WMP investigations will continue to occur in May/June of each successive year of the active monitoring 5 year period. A subsequent Wetlands Monitoring Report and comparative analysis with local climate

and previously collected data will be submitted to the SWFWMD by September 1 annually until year 2018.

APPENDIX B

FIELD DATA SHEETS

WETLAND ASSESSMENT PROCEDURE

Wellfield / Property	Wetland Name	Wetland Type

Wetland ID	Data Owner	Data Source	Personnel	Date	Start/End

PHOTO-DOCUMENTATION

Frame	Description	Photo Pt.	Direction

WATER LEVEL INFORMATION

Dry?	Elevation (ft)	Device	Well/Gage ID

Description

Please enter Yes (Y), No (N), or Not Sure (NS) for the following questions and provide comments/explanations.

WETLAND IMPACTS

Wetland edges filled or disturbed?	
Excessive dumping or trash in wetland?	
Hog disturbance?	
Signficant impact from cattle (trampling)?	
Vehicles through wetland (includes bicycles)?	
Insect damage?	
Disease?	

Explanation(s)

WETLAND DRAINAGE

Augmentation equipment in place?	
Augmentation occurring at time of WAP?	
Clear evidence of direct stormwater inflow?	
Clear evidence of direct drainage from wetland?	
Other drainage activities in area?	
Borrow pit/retention pond in wetland vicinity?	

Explanation(s)

Fire

Signs of Fire? ☐

Explanation (year, expanse, intensity)

Lakes / Docks

Docks completely out of water
Docks touching water or with <50% of dock over water
Docks >50% out of water
(Not Applicable)

Is the littoral zone stranded? ☐

Comments

Soil Subsidence

New signs of oxidation/subsidence? ☐

Explanation

General Comments/Observations

Future users of this data may not want to analyze / compare this data with other wetlands due to the extensive level of:

- ☐ non-groundwater withdrawal-related disturbance
- ☐ soil subsidence

WILDLIFE

Description

Please enter Yes (Y), No (N), or Not Sure (NS) for the following questions and provide comments/explanations.

WETLAND IMPACTS

Wetland edges filled or disturbed?	
Excessive dumping or trash in wetland?	
Hog disturbance?	
Signficant impact from cattle (trampling)?	
Vehicles through wetland (includes bicycles)?	
Insect damage?	
Disease?	

Explanation(s)

WETLAND DRAINAGE

Augmentation equipment in place?	
Augmentation occurring at time of WAP?	
Clear evidence of direct stormwater inflow?	
Clear evidence of direct drainage from wetland?	
Other drainage activities in area?	
Borrow pit/retention pond in wetland vicinity?	

Explanation(s)

Fire

Signs of Fire?

Explanation (year, expanse, intensity)

Lakes / Docks

Docks completely out of water
Docks touching water or with <50% of dock over water
Docks >50% out of water
(Not Applicable)

Is the littoral zone stranded?

Comments

Soil Subsidence

New signs of oxidation/subsidence?

Explanation

General Comments/Observations

Future users of this data may not want to analyze / compare this data with other wetlands due to the extensive level of:

- ☐ non-groundwater withdrawal-related disturbance
- ☐ soil subsidence

APPENDIX L – WASTE PROFILE AND ACCEPTANCE

FILTER PRESS SOLIDS WASTE PROFILE AND ACCEPTANCE

Disposal/Processing Facility

Waste Stream Approval Number: 8276-DC03

Clark Environmental, Inc.

755 Prairie Industrial Parkway

Mulberry, FL 33860

Permit Numbers:
38627-007-50/30
138634-004-50/27

I, James W. Clark III, an authorized representative of Clark Environmental, Inc. certify that Clark Environmental, Inc is licensed and permitted to accept the Lockeed Martin material: filter press solids generated at 1600 Tallevast Road in Sarasota, FL 34243. Clark Environmental, Inc. will treat and/or dispose of the waste in accordance with all applicable local, state and federal laws and regulations.

Waste Facility Signature: James W. Clark III 12-9-14

James W. Clark III, Vice President Date

Clark Environmental, Inc.
4117 Bandy Boulevard
Ft. Pierce, Florida 34981
PHONE 772-464-4884
FAX 772-464-5566

SPENT CARBON WASTE PROFILE AND ACCEPTANCE

Non-Hazardous WAM Approval

Requested Management Facility: Okeechobee Landfill

Profile Number: 403722FL

Waste Approval Expiration Date: 12/29/2016

APPROVAL DETAILS

Approval Decision: ☑ Approved ☐ Not Approved

Profile Renewal: ☐ Yes ☑ No

Management Method: Direct Landfill

Generator Name: Darrin Johnson on behalf of LMC

Management Facility Precautions, Special Handling Procedures or Limitation on approval:

- Shall not contain free liquids.
- Waste manifest or applicable shipping document must accompany load.

Additional Conditions:

WM Authorization Name: John Fanning

Title: Waste Approval Manager

WM Authorization Signature: _____

Date: 12/29/2014

Agency Authorization (if Required): _____

Date: _____

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Sample Summary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Annual Waste Profiling

TestAmerica Job ID: 660-63855-1

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
660-63855-1	Spent Carbon	Solid	11/03/14 15:00	11/07/14 13:55
660-63855-2	Filter Press Solids	Solid	11/03/14 15:10	11/07/14 13:55

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 9/19/2014 2:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2º C.

GC/MS VOA
Method Total 8260B: Unable to run Vapor Phase Carbon (660-62930-1) low level because all internal standards were out of control when analysis was attempted due to matrix interference. Elevated reporting limits (RLs) are provided.

Method TCLP 8260B: The following sample was diluted due to the nature of the sample matrix: Vapor Phase Carbon (660-62930-1). Elevated reporting limits (RLs) are provided.

Method 8260B: Internal standard responses were outside of acceptance limits for the following sample: (660-62930-1 DU). The sample shows evidence of matrix interference. Batch 151774.

Method 8260B: The matrix spike and duplicate recoveries for batch 151774 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

No additional analytical or quality issues were noted, other than those described

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
*	ISTD response or retention time outside acceptable limits

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Vapor Phase Carbon

TestAmerica Job ID: 660-62930-1

Laboratory: TestAmerica Tampa

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Florida	NELAP	4	E84282	06-30-15

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8260B	5030B	Solid	m-Xylene & p-Xylene
8260B	5030B	Solid	o-Xylene

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Laboratory: TestAmerica Tallahassee

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
Florida	NELAP	4	E81005	06-30-15

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

PROCESS WATER WASTE PROFILE AND ACCEPTANCE

Disposal/Processing Facility

Waste Stream Approval Number: 8276-DW12

Clark Environmental, Inc.

755 Prairie Industrial Parkway

Mulberry, FL 33860

Permit Numbers:
38627-007-50/30
138634-004-50/27

I, James W. Clark III, an authorized representative of Clark Environmental, Inc. certify that Clark Environmental, Inc is licensed and permitted to accept the LMC material: Process Water (combined influent) generated at 1600 Tallevast Road in Sarasota, FL 34243. Clark Environmental, Inc. will treat and/or dispose of the waste in accordance with all applicable local, state and federal laws and regulations and said material will be thermally treated at Clark Environmental, Inc. in Mulberry, FL.

Waste Facility Signature: James W. Clark III 8-26-14

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 3/28/2014 3:36 PM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 0.5º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Number: 1

Creator: Redding, Charles S

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

DRILLING MUD/SOIL WASTE PROFILE AND ACCEPTANCE

Comments
No additional comments.

Receipt
The sample was received on 10/16/2014 2:40 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270C: The following analyte recovered outside control limits for the LCS associated with batch 354492: 2-Methylphenol. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Client: AECOM Technical Services Inc.
Project/Site: Tallevast

TestAmerica Job ID: 660-63458-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

B. WASTE DESCRIPTION

WASTE DESCRIPTION: *UV LAMPS*

PROCESS GENERATING WASTE: Maintenance

IS THIS WASTE CONTAINED IN SMALL PACKAGING CONTAINED WITHIN A LARGER SHIPPING CONTAINER ? No

C. PHYSICAL PROPERTIES (at 25C or 77F)

PHYSICAL STATE
- [x] SOLID WITHOUT FREE LIQUID
- [ ] POWDER
- [ ] MONOLITHIC SOLID
- [ ] LIQUID WITH NO SOLIDS
- [ ] LIQUID/SOLID MIXTURE
  - % FREE LIQUID
  - % SETTLED SOLID
  - % TOTAL SUSPENDED SOLID
- [ ] SLUDGE
- [ ] GAS/AEROSOL

NUMBER OF PHASES/LAYERS: 1 2 3

% BY VOLUME (Approx.) TOP *0.00* MIDDLE *0.00* BOTTOM *0.00*

VISCOSITY (If liquid present)
- [ ] 1 - 100 (e.g. Water)
- [ ] 101 - 500 (e.g. Motor Oil)
- [ ] 501 - 10,000 (e.g. Molasses)
- [ ] > 10,000

COLOR: *VARIED*

ODOR
- [x] NONE
- [ ] MILD
- [ ] STRONG

Describe:

BOILING POINT °F (°C)
- [ ] <= 95 (<=35)
- [ ] 95 - 100 (35-38)
- [ ] 101 - 129 (38-54)
- [ ] >= 130 (>54)

MELTING POINT °F (°C)
- [ ] < 140 (<60)
- [ ] 140-200 (60-93)
- [x] > 200 (>93)

TOTAL ORGANIC CARBON
- [x] <= 1%
- [ ] 1-9%
- [ ] >= 10%

FLASH POINT °F (°C)
- [ ] < 73 (<23)
- [ ] 73 - 100 (23-38)
- [ ] 101 -140 (38-60)
- [ ] 141 -200 (60-93)
- [ ] > 200 (>93)

pH
- [ ] <= 2
- [ ] 2.1 - 6.9
- [x] 7 (Neutral)
- [ ] 7.1 - 12.4
- [ ] >= 12.5

SPECIFIC GRAVITY
- [ ] < 0.8 (e.g. Gasoline)
- [ ] 0.8-1.0 (e.g. Ethanol)
- [ ] 1.0 (e.g. Water)
- [ ] 1.0-1.2 (e.g. Antifreeze)
- [x] > 1.2 (e.g. Methylene Chloride)

ASH
- [ ] < 0.1
- [ ] 0.1 - 1.0
- [ ] 1.1 - 5.0
- [ ] 5.1 - 20.0
- [ ] > 20
- [x] Unknown

BTU/LB (MJ/kg)
- [x] < 2,000 (<4.6)
- [ ] 2,000-5,000 (4.6-11.6)
- [ ] 5,000-10,000 (11.6-23.2)
- [ ] > 10,000 (>23.2)

Actual:

D. COMPOSITION (List the complete composition of the waste, include any inert components and/or debris. Ranges for individual components are acceptable. If a trade name is used, please supply an MSDS. Please do not use abbreviations.)

CHEMICAL	MIN	--	MAX	UOM
MERCURY	0.0000000	--	259.0000000	PPM
UV LAMPS	0.0000000	--	100.0000000	%

DOES THIS WASTE CONTAIN ANY HEAVY GAUGE METAL DEBRIS OR OTHER LARGE OBJECTS (EX., METAL PLATE OR PIPING >1/4" THICK OR >12" LONG, METAL REINFORCED HOSE >12" LONG, METAL WIRE >12" LONG, METAL VALVES, PIPE FITTINGS, CONCRETE REINFORCING BAR OR PIECES OF CONCRETE >3")? YES [ ] NO [x]

If yes, describe, including dimensions:

DOES THIS WASTE CONTAIN ANY METALS IN POWDERED OR OTHER FINELY DIVIDED FORM? YES [ ] NO [x]

DOES THIS WASTE CONTAIN OR HAS IT CONTACTED ANY OF THE FOLLOWING; ANIMAL WASTES, HUMAN BLOOD, BLOOD PRODUCTS, BODY FLUIDS, MICROBIOLOGICAL WASTE, PATHOLOGICAL WASTE, HUMAN OR ANIMAL DERIVED SERUMS OR PROTEINS OR ANY OTHER POTENTIALLY INFECTIOUS MATERIAL? YES [ ] NO [x]

I acknowledge that this waste material is neither infectious nor does it contain any organism known to be a threat to human health. This certification is based on my knowledge of the material. Select the answer below that applies:

The waste was never exposed to potentially infectious material. YES NO

Chemical disinfection or some other form of sterilization has been applied to the waste. YES NO

I ACKNOWLEDGE THAT THIS PROFILE MEETS THE CLEAN HARBORS BATTERY PACKAGING REQUIREMENTS. YES NO

I ACKNOWLEDGE THAT MY FRIABLE ASBESTOS WASTE IS DOUBLE BAGGED AND WETTED. YES NO

SPECIFY THE SOURCE CODE ASSOCIATED WITH THE WASTE. *G15* SPECIFY THE FORM CODE ASSOCIATED WITH THE WASTE. *W319*

E. CONSTITUENTS

Are these values based on testing or knowledge? ☑ Knowledge ☐ Testing

If based on knowledge, please describe in detail, the rationale applied to identify and characterize the waste material. Please include reference to Material Safety Data Sheets (MSDS) when applicable. Include the chemical or trade-name represented by the MSDS, and or detailed process or operating procedures which generate the waste.

Known Consumer Product

Please indicate which constituents below apply. Concentrations must be entered when applicable to assist in accurate review and expedited approval of your waste profile. Please note that the total regulated metals and other constituents sections require answers.

RCRA	REGULATED METALS	REGULATORY LEVEL (mg/l)	TCLP mg/l	TOTAL	UOM	NOT APPLICABLE

F. REGULATORY STATUS

YES ☑ NO USEPA HAZARDOUS WASTE?

☑ YES NO DO ANY STATE WASTE CODES APPLY?

MA95

Texas Waste Code

YES ☑ NO DO ANY CANADIAN PROVINCIAL WASTE CODES APPLY?

☑ YES NO IS THIS WASTE PROHIBITED FROM LAND DISPOSAL WITHOUT FURTHER TREATMENT PER 40 CFR PART 268?

LDR CATEGORY: *Not subject to LDR*

VARIANCE INFO:

☑ YES NO IS THIS A UNIVERSAL WASTE?

YES ☑ NO IS THE GENERATOR OF THE WASTE CLASSIFIED AS CONDITIONALLY EXEMPT SMALL QUANTITY GENERATOR (CESQG)?

YES NO IS THIS MATERIAL GOING TO BE MANAGED AS A RCRA EXEMPT COMMERCIAL PRODUCT, WHICH IS FUEL (40 CFR 261.2 (C)(2)(II))?

YES ☑ NO DOES TREATMENT OF THIS WASTE GENERATE A F006 OR F019 SLUDGE?

YES NO IS THIS WASTE STREAM SUBJECT TO THE INORGANIC METAL BEARING WASTE PROHIBITION FOUND AT 40 CFR 268.3(C)?

YES ☑ NO DOES THIS WASTE CONTAIN VOC'S IN CONCENTRATIONS >=500 PPM?

YES NO DOES THE WASTE CONTAIN GREATER THAN 20% OF ORGANIC CONSTITUENTS WITH A VAPOR PRESSURE >= .3KPA (.044 PSIA)?

YES ☑ NO DOES THIS WASTE CONTAIN AN ORGANIC CONSTITUENT WHICH IN ITS PURE FORM HAS A VAPOR PRESSURE > 77 KPA (11.2 PSIA)?

YES ☑ NO IS THIS CERCLA REGULATED (SUPERFUND) WASTE ?

YES ☑ NO IS THE WASTE SUBJECT TO ONE OF THE FOLLOWING NESHAP RULES?

Hazardous Organic NESHAP (HON) rule (subpart G) Pharmaceuticals production (subpart GGG)

YES NO IF THIS IS A US EPA HAZARDOUS WASTE, DOES THIS WASTE STREAM CONTAIN BENZENE?

YES NO Does the waste stream come from a facility with one of the SIC codes listed under benzene NESHAP or is this waste regulated under the benzene NESHAP rules because the original source of the waste is from a chemical manufacturing, coke by-product recovery, or petroleum refinery process?

YES NO Is the generating source of this waste stream a facility with Total Annual Benzene (TAB) >10 Mg/year?

What is the TAB quantity for your facility? Megagram/year (1 Mg = 2,200 lbs)

The basis for this determination is: Knowledge of the Waste Or Test Data Knowledge Testing

Describe the knowledge :

I. SPECIAL REQUEST

COMMENTS OR REQUESTS:

GENERATOR'S CERTIFICATION

I certify that I am authorized to execute this document as an authorized agent. I hereby certify that all information submitted in this and attached documents is correct to the best of my knowledge. I also certify that any samples submitted are representative of the actual waste. If Clean Harbors discovers a discrepancy during the approval process, Generator grants Clean Harbors the authority to amend the profile, as Clean Harbors deems necessary, to reflect the discrepancy.
