Receipt
The samples were received on 11/6/2014 2:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.0º C, 1.2º C, 1.8º C, 2.6º C and 2.8º C.

GC/MS VOA
Method 8260B: The continuing calibration verification (CCV) associated with batch 153347 recovered above the upper control limit for Dichlorodifluoromethane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data has been reported.

Method 8260B: A laboratory control sample duplicate (LCSD) was not run in batch 153391 due to analyst error. A batch duplicate was reported.

Method 8260B: The matrix spike (MS) recoveries for batch 153306 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

Method 8260B: The matrix spike (MS) recoveries for batch 153308 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

Method 8260B: The matrix spike (MS) recoveries for batch 153347 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Receipt
The samples were received on 11/12/2014 2:55 PM and 11/14/2014 2:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.2º C, 2.8º C and 3.6º C.

Recieved QC samples for sample ID # MW-82. The MS and MSD are listed on the COC with different collection times than the parent sample.

GC/MS VOA
Method 8260B: Surrogate recovery for the following samples was outside control limits: MW-103 (660-63917-19), MW-65 (660-63917-7), MW-82 (660-63917-11 MSD). Evidence of matrix interferences is not obvious. Re-analysis was not performed as the holding time had expired. Batch 153464.

Method 8260B: The continuing calibration verification (CCV) associated with batch 153501 recovered above the upper control limit for Chlorodibromomethane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data has been reported.

Method 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for batch 153501 recovered outside control limits for the following analyte: Bromomethane.

Method 8260B: The continuing calibration verification (CCV) associated with batch 153489 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data has been reported.

Method 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for batch 153489 recovered outside control limits for the following analyte: Naphthalene.

Method 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-254 (660-63969-31), MW-27 (660-63969-6). Elevated reporting limits (RLs) are provided. Batch: 153489.

Method 8260B: The continuing calibration verification (CCV) associated with batch 153569 recovered above the upper control limit for Chlorodibromomethane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data has been reported.

Method 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: IWI-1 (660-63969-2), MW-41 (660-63969-13). Elevated reporting limits (RLs) are provided. Batch: 153569.

Method 8260B: One analyte for sample MW-253 (660-63969-30) was reported over range due to the sample being out of hold for reanalysis. The sample was re-run as secondary data. Batch: 153569.

Method 8260B: The method blank for batch 153572 contained Hexachlorobutadiene above the method detection limit (MDL). None of the samples associated with this method blank contained the target compound; therefore, re-analysis of samples were not performed.

Method 8260B: The laboratory control sample duplicate (LCSD) for batch 153572 recovered outside control limits for the following analyte: Bromomethane. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data has been reported. The batch laboratory control sample (LCS) recovered within limits.

Method 8260B: The continuing calibration verification (CCV) associated with batch 153595 recovered above the upper control limit for The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 660-153595/3).

Method 8260B: Reanalysis of the following sample was performed outside of the analytical holding time due to a required dilution: MW-253 (660-63969-30). The data was reported as secondary. Batch: 153595.

Job ID: 660-63917-1 (Continued)

Laboratory: TestAmerica Tampa (Continued)

Method 8260C SIM: A deviation from the 8260 Standard Operating Procedure (SOP) occurred. Details are as follows: Sample IWI-1 (660-63969-2) was re-run straight as the 21st sample in a batch due to the hold time expiring. The original run was diluted at 10X due to history and the detection was low; therefore, the re-run data was reported. Batch: 153580.

Method 8260C SIM: The following samples were analyzed outside of analytical holding time due to analyst error: MW-129 (660-63969-26), MW-129 (660-63969-26 MS), MW-129 (660-63969-26 MSD). Batch: 153604.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 12/19/2014 3:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

GC/MS VOA
Method 8260B: The laboratory control sample duplicate (LCSD) for batch 154208 recovered outside control limits for the following analyte, biased high: Benzene. This analyte was within recovery limits for the laboratory control sample (LCS) ; therefore, the data has been reported and qualified with J3.

Method 8260B: The matrix spike (MS) recoveries for batch 154208 were outside control limits. Sample matrix interference are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Narrative

Receipt
The samples were received on 1/27/2015 4:05 PM; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.8ºC.

GC/MS VOA
Method 8260B: The laboratory control sample (LCS) for batch 155263 recovered outside control limits for the following analytes: trans-1,3-Dichloropropene and 1,2,3-Trichloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260B: Surrogate recovery for the following matrix spike was outside control limits: (680-109239-4 MS). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed. Batch 155263.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 2/6/2015 10:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice.

GC/MS VOA
Method 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: EW3012_INF (660-65316-53), EW3023_INF (660-65316-64), EW3027_INF (660-65316-68). EW4003_INF (660-65316-71). Elevated reporting limits (RLs) are provided.

Method 8260B: The laboratory control sample duplicate (LCSD) for batch 155590 recovered outside control limits for the following analyte: bromomethane. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported and qualified with J3.

Method 8260B: The initial calibration verification (ICV) result for batch 155552 was above the upper control limit for bromomethane. The samples associated with this ICV were non-detect for the affected analyte; therefore, the data have been reported.

Method 8260B: The continuing calibration verification (CCV) associated with batch 155626 recovered above the upper control limit for bromomethane. The samples associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported.

Method 8260B: The matrix spike (MS) recovery for batch 155678 was outside control limits. Sample matrix interference are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

Method 8260B: The matrix spike (MS) recovery for batch 155590 was outside control limits. Sample matrix interference are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers
