Comments
The samples affected by the QC failures will be re-analyzed under a new calibration.

Receipt
The samples were received on 5/31/2016 3:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.6º C.

GC/MS VOA
Method(s) 8260B: The initial calibration verification (ICV) result for batch 170053 was above the upper control limit for bromomethane. Sample results were non-detects, and have been reported as qualified data.

Method(s) 8260B: The laboratory control sample (LCS) and the laboratory control sample duplicate (LCSD) for 170053 recovered outside control limits for the following analytes: bromomethane and tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 170053 recovered outside control limits for the following analyte: tetrachloroethene.

Method(s) 8260B: Both samples are being reported as per client request, even though both samples had tetrachloroethene detections and the LCSD was outside limits for this analyte. Also the second sample was outside the 12hr window. Both samples will be rerun to verify results. Batch 170053.

AOP Feed (660-74081-1) and Combined Influent (660-74081-7)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 7/25/2016 1:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.6º C.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 660-172042 recovered above the upper control limit for Chloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: COMBINED INF (660-75153-7) and (CCVIS 660-172042/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 8/5/2016 5:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 1.0º C, 1.6º C and 2.2º C.

GC/MS VOA
Method(s) 8260B: The initial calibration verification (ICV) result for batch 172510 was above the upper control limit for bromomethane and dichlorodifluoromethane. Sample results were non-detects, and have been reported as qualified data.

Method(s) 8260B: The laboratory control sample (LCS) for batch 172528 recovered outside control limits for the following analyte: Dichlorodifluoromethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: EW3012_INF (660-75400-53), EW4003_INF (660-75400-71) and EW3023_INF (660-75400-64) and EW3027_INF (660-75400-68). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The laboratory control sample duplicate (LCSD) for batch 172526 recovered below control limits for the following analytes: carbon disulfide and 1,1 dichloroethene. These analytes were biased low in the LCSD and were not detected in the associated samples; therefore, the data have been reported. The RL std did have detections for both analytes.

Method(s) 8260B: The initial calibration verification (ICV) result for batch 172510 was above the upper control limit for dichlorodifluoromethane and bromomethane. Sample results were non-detects, and have been reported as qualified data.

Method(s) 8260B: The method blank for batch 172545 contained hexachlorobutadiene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8260B: Spike compounds were inadvertently omitted during the preparation process for the matrix spike (MS); therefore, matrix spike recoveries are unavailable for 172594. The associated laboratory control sample (LCS) met acceptance criteria.

Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 172594 recovered outside control limits for the following analyte: naphthalene.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 172815 recovered outside acceptance criteria, low biased, for Carbon disulfide. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The undiluted run did not have comparable results to the diluted run; therefore, the diluted run is being reported. Batch 172815.

EW3006_INF (660-75400-47)

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: EW3006_INF (660-75400-47). Elevated reporting limits (RLs) are provided. Batch 172815.

Method(s) 8260C SIM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for 172530 were outside control limits. The laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The temperatures of the 7 coolers at receipt time were 1.2º C, 1.8º C, 2.0º C, 2.3º C, 2.9º C, 3.8º C and 4.5º C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): MW-255 (660-75655-25). The container labels list MW-249 with no time sampled, while the COC lists MW-255 sampled at 1350. There is a sample with the ID MW-249 sampled at 1302, but 4 vials that match that information were received. Through process of elimintaion these vials were logged per COC with the only missing sample ID. The client was notifed.

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC).

The container labels for the following samples did not match the information listed on the Chain-of-Custody (COC): MW-24 (660-75664-2), (660-75664-7), MW-63 (660-75664-8),MW-106 (660-75664-21), MW-168 (660-75664-30), and MW-169 (660-75664-31).
The container labels for sample 660-75664-2 list MW-124 sampled on 8/18/16 @ 1005, while the COC lists MW-24 sampled on 8/18/16 @ 1005.
The container labels for sample 660-75664-7 list MW-55 sampled on 8/17/16 @ 0840, while the COC lists MW-55 sampled on 8/18/16 @ 0840.
The container labels for sample 660-75664-21 list MW-106 sampled on 8/17/16 @ 0743, while the COC lists MW-106 sampled on 8/18/16 @ 0740.
The container labels for sample 660-75664-30 list MW-168 sampled on 8/18/16 @ 1257, while the COC lists MW-168 sampled on 8/18/16 @ 0654.
The container labels for sample 660-75664-31 list MW-169 sampled on 8/19/16 @ 0654, while the COC lists MW-169 sampled on 8/19/16 @ 0000.
All samples received were logged per the COC.The client was contacted, and the lab was instructed to correct the incorrect dates/times.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 660-172941 recovered outside acceptance criteria, low biased, for Bromomethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) precision for 172941 was outside control limits.

Method(s) 8260B: The detections for the BLANK were not found in any of the regular samples for this project; therefore, blank was not reanalyzed. Batch 172941.

BLANK -35 75524 (660-75524-35)

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 173248 and 173251 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch recovered outside acceptance criteria, low biased, for Bromomethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: Surrogate recovery for the following sample was outside the upper control limit: MW-16D (660-75655-4). This sample did not contain any target analytes; therefore, re-analysis was not performed.

Job ID: 660-75488-1 (Continued)

Laboratory: TestAmerica Tampa (Continued)

Method(s) 8260B: The laboratory control sample duplicate (LCSD) for 173251 recovered outside control limits for the following analyte: methylene chloride. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 660-173328 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 660-173308 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane and Bromomethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 660-173308 recovered outside control limits for the following analytes: Chloroethane. This analytes was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: A deviation from the Standard Operating Procedure (SOP) occurred. Details are as follows: A third set of QC was run in the batch that was outside the 12 hr window, however, the parent sample was run in the 12 hr window. MS/D are being reported. Batch 173308.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 660-173372 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane and Bromomethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

Method(s) 8260B: Detections for both blanks were not detected in any of the regular samples in this project; therefore, both blank samples were not reanalyzed. Batch 173372.

BLANK -36 (660-75664-40) and BLANK -37 (660-75664-41)

Method(s) 8260B: The initial calibration verification (ICV) result for batch 660-173311 was above the upper control limit for dichlorodifluoromethane. Sample results were non-detects, and have been reported as qualified data.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 660-173417 recovered outside control limits for the following analytes: 1,1,2-Trichloroethane. This analytes was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: IWI-1 (660-75747-1). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: EW-UAFG-1 (660-75781-1). Elevated reporting limits (RLs) are provided. Batch 173465.

Method(s) 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: PZ-LSAS-2 (660-75781-25) and PZ-LSAS-4 (660-75781-26). Elevated reporting limits (RLs) are provided. Batch 173516.

Method(s) 8260B: LCSD was not run in sequence, only reporting diluted analyte. All other QC is provided. Batch 173554.
