Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received Trip Blank(s) not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 8/22/2016 1:50 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.8º C.

GC/MS VOA
Method(s) 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch <173103> recovered outside control limits for the following analyte: <bromomethane>.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: In analytical batch 660-173097, the following samples had TDS/conductivity ratio above 0.95.

TGE (660-75669-8) and (660-75669-A-8 DU), RO Perm (660-75669-9)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Process Sampling

TestAmerica Job ID: 660-75669-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Total Dissolved Solids	470		5.0	5.0	mg/L	1		SM 2540C	Total/NA

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Process Sampling

TestAmerica Job ID: 660-75669-1

Client Sample ID: RO Perm — Lab Sample ID: 660-75669-9

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
Total Dissolved Solids	12		5.0	5.0	mg/L	1		SM 2540C	Total/NA

Client Sample ID: Comb AOP Effluent — Lab Sample ID: 660-75669-10

No Detections.

This Detection Summary does not include radiochemical test results.

Client Sample ID: AOP Feed

Date Collected: 08/22/16 09:00

Analysis Requested

Preservation Codes:

A - HCL	M - Hexane
B - NaOH	N - None
C - Zn Acetate	O - AsNaO2
D - Nitric Acid	P - Na2O4S
E - NaHSO4	Q - Na2SO3
F - MeOH	R - Na2S2O3
G - Amchlor	S - H2SO4
H - Ascorbic Acid	T - TSP Dodecahydrate
I - Ice	U - Acetone
J - DI Water	V - MCAA
K - EDTA	W - pH 4-5
L - EDA	Z - other (specify)

Other:

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	SM5310_TOC_B	Total Number of containers	Special Instructions/Note:
			Preservation Code:						
AOP Feed (660-75669-1)	8/22/16	09:00 Eastern		Water			X	1	
Combined Inf (660-75669-7)	8/22/16	09:30 Eastern		Water			X	1	

Possible Hazard Identification Unconfirmed	**Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)** ☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months
Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2	Special Instructions/QC Requirements: T.A.

Login Sample Receipt Checklist

Client: AECOM Technical Services Inc.

Job Number: 660-75669-1

Login Number: 75669
List Number: 1
Creator: Southers, Kristin B

List Source: TestAmerica Tampa

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 8/24/2016 3:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) SM 2540C: In analytical batch 660-173227, the following samples had TDS/conductivity ratio above 0.95.

EW-108 (660-75739-2), MW-39 (660-75739-5), MW-42 (660-75739-6), MW-80 (660-75739-11), MW-80 (DUP) (660-75739-12), BLANK -40 (660-75739-14) and (660-75739-A-6 DU)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TestAmerica Job ID: 660-75739-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 8/24/2016 3:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.6º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True

APPENDIX H – DATA VALIDATION REPORTS/QUALITY CONTROL SUMMARY AND DATA REVIEW

November 5, 2015

Organic and Inorganic
Level II Data Validation Report

Quarterly RO Performance Sample

Analysis Performed by:
TestAmerica, Tampa, FL
SDG # 660-69706-1

Prepared by Jim Refermat
Project Chemist/Data Validator

Data Validation Report

Project:	Lockheed Martin - Tallevast
Laboratory:	TestAmerica Laboratories, Tampa Florida
SDG:	660-69706-1
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Mass Spectrometry (ICP-MS)/SW6020A • Anions by Ion Chromatography - EPA Method 300.0 • Total Dissolved Solids (TDS) by SM 2540C
Validation Level:	Level II
Prepared by:	Jim Refermat/AECOM — Completed on: November 5, 2015
Reviewed by:	Julie Cassetta/AECOM — File Name: DVR_660-69706-1_r1.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-69706-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on October 8, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry

RO feed	660-69706-2	Water	10/08/2015	X*	X		
RO concentrate	660-69706-3	Water	10/08/2015	X*	X		

*SW8260C SIM only

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6020A Mass Spectrometry (MS). Anion analysis was performed using EPA Method 300.0 Ion Chromatography (IC), and Total Dissolved Solids (TDS) was performed using SW2540C gravimetric. Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. A MS was reported for the SW8260B analytical fraction and a MS/MSD for the SW8260C analytical fraction; however, the "normal" parent samples were not from the Tallevast site and for that reason they were not evaluated.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the

“normal” parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

Metals by EPA Method SW6020A Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS/MSD results
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Sodium was detected in the associated MB for SW6020A. As a result, any detections for the referenced analyte less than five times the amount detected in the associated blank are qualified as "U" or non-detect because of the method blank excursion. However, since the sodium results were greater than five times the amount in the associated MB, no further action was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was reported in lieu of a MS/MSD. No further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the SW6020B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. A LCS/LCSD was run with the analytical fraction in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

General Wet Chemistry by EPA Method 300.0 and SM 2540C Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS results, EPA Method 300.0 only
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MB.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. A MS/MSD was prepaired for the E300.0 analytical fraction; however, the "normal" parent sample was not from the Tallevast site and for that reason they were not evaluated.

A MS/MSD is not performed on the SM2540C analytical fraction, no further action is required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix free media. For aqueous samples, laboratory-grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS/LCSD was provided for the E300.0 and a LCS for the SM2540C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory sample preparation and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs were reviewed for conformance with the QC criteria of <25% for aqueous matrices. Laboratory duplicate for the E300 and SM2540C analytical fractions were not from the Tallevast facility and for that reason were not reviewed, no further action is required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. No further action was required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-70293-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on November 6, 2015, and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
POTW Effluent	660-70293-1	Water	11/06/2015	X	X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS was reported for the SW8260C analytical fraction; however, the "normal" parent sample was not from the Tallevast site and for that reason was not evaluated. The MS associated with the SW8260B analytical fraction was in control, and as a result no further action was required.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS/MSD results
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. An MS/MSD was provided with the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✓	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✗	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs and TB were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB and TB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation

report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the associated MBs or TB.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

MS/MSDs are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD for the following analytical preparation batches were evaluated for the 8260C analytical fraction and are in-control: 163222, 163269, 163319 and 163371. No further action is required. The MS and/or MS/MSD for the following analytical preparation batches were evaluated for the 8260B analytical fraction and are in-control: 163250, 163303, 163306, 163352, 163358, 163362 and 163404. No further action is required.

Analytical preparation batch 163224 used a "normal" parent sample that was not from the Tallevast site for spiking the MS associated with the SW8260B analytical fraction. Because the sample is not site related, the MS was not evaluated. Similarly, analytical preparation batch 163412 associated with the SW8260C analytical fraction used a "normal" parent sample that was not from the Tallevast site and was not evaluated for that reason.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS or LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met with the exception of the RPD between the LCS and LCSD for preparation batch 163358 for Dichlorodifluoromethane and preparation batch 163404 for Dichlorodifluoromethane,

Trichlorofluoromethane, and Vinyl Chloride. However since the preparation batch 163404 was a dilution analysis for Trichloroethene only, no further action is required for this specific preparation batch. For preparation batch 163358, the referenced analyte is qualified as non-detect estimated "UJ" since all samples were non-detect. No further action was required.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability

EW4009_INF	660-70273-76	Dichlorodifluoromethane	UJ	Bias Low
EW4010_INF	660-70273-77	Dichlorodifluoromethane	UJ	Bias Low
EW4011_INF	660-70273-78	Dichlorodifluoromethane	UJ	Bias Low
EW5001_INF	660-70273-79	Dichlorodifluoromethane	UJ	Bias Low

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: EW3012_INF, EW3023_INF and EW4003_INF. Several samples from the 8260C analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration, however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, none of QC excursions encountered resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Project Chemist/Data Validator

Data Validation Report

Project:	Lockheed Martin - Tallevast	
Laboratory:	TestAmerica Laboratories, Tampa Florida	
SDG:	660-71844-1	
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Atomic Emission Spectrometry (ICP-AES)/SW6010B	
Validation Level:	Level II	
Prepared by:	Jim Refermat/AECOM	Completed on: February 9, 2016
Reviewed by:	Julie Cassetta/AECOM	File Name: DVR_660-71844-1_r1.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-71844-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The sample listed below was collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on February 2nd, 2016 and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
POTW Effluent	660-71844-1	Water	02/02/2016	X	X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

Analytical preparation batches 166143 and 166147 used a "normal" parent sample that was not from the Tallevast site for spiking the MS associated with the SW8260B and SW8260C analytical fractions respectively. Because the sample is not site related, the MS was not evaluated.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process

in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the Reporting Limit (RL).

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS/MSD results
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

Analytical preparation batch 166193 associated with the SW6010B analytical fraction used a "normal" parent sample that was not from the Tallevast site and was not evaluated for that reason.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

D The concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✓	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs and TB were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if

the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MBs or TB.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

MS/MSDs are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD for the following analytical preparation batches were evaluated for the SW8260C analytical fraction and are in-control: 166586, 166637, 166686, and 166790. No further action is required. The MS and/or MS/MSD for following analytical preparation batches were evaluated for the SW8260B analytical fraction and are in-control: 166823, 166832, 166851,166878, 166882,166885 and 166929. No further action is required.

Analytical preparation batch 166838 used a "normal" parent sample that was not from the Tallevast site for spiking the MS associated with the SW8260B analytical fraction. Because the sample is not site related, the MS was not evaluated. Similarly, analytical preparation batch 166729 and 166856 associated with SW8260C analytical fraction used a "normal" parent sample that was not from the Tallevast site and was not evaluated for that reason.

The MS results Chlorodibromomethane from preparation batch 166878 exceeded criteria bias low, as a result, the "normal" parent sample in the associated preparation batch is qualified as estimated non-detect estimated "UJ" for the referenced analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
EW3014_INF	660-72177-51	Chlorodibromomethane	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples

are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: EW3012_INF, EW-3023_INF, EW3027_INF and EW4003_INF. Several samples from the 8260C analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration, however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, none of QC excursions encountered resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-72250-1. SDG 660-72250-1 contains the following sub SDGs reported under a single cover: 660-72250, 660-72281 and 660-72417. Only the analytical data were reviewed for this validation, field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of-Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on February 22nd, 23rd, 24th, 25th and March 3rd, 2016. The referenced samples were picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C SIM Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✗	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) Equipment Blanks (EBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs, EBs and TBs were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Blank results were reviewed for conformance with the

QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Chloroform and Dichlorobromomethane were detected in samples BLANK-33 and BLANK-34, however all associated samples were non-detect for these analytes, and as a result, no further action is required. In addition, it should be noted both analytes are trihalomethanes commonly found in potable water sources and likely not site related. No analytes were detected in any of the associated method, equipment or trip blanks with the exception of the above referenced sample. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD for the following analytical preparation batches were evaluated for the SW8260C SIM analytical fraction and are in-control: 166856 and 166904 No further action is required for the aforementioned preparation batches. The MS or MS/MSD for the following analytical preparation batches were evaluated for the SW8260B analytical fraction and are in-control: 167069, 167075, 167081, and 167110. No further action is required.

The following analytical preparation batches associated with the SW8260C SIM analytical fraction used "normal" parent samples that were not from the Tallevast site for spiking the MS/MSD: 167126 and 166790. Because the samples are not site related, the MS/MSD was not evaluated. Similarly, the following analytical preparation batch associated with the SW8260B analytical fraction used "normal" parent sample that was not from the Tallevast site for spiking the MS: 167014. Because the sample is not site related, the MS was not evaluated.

The MS results for Chlorodibromomethane from preparation batch 167066 exceeded criteria bias low, as a result, the "normal" parent sample in the associated preparation batch is qualified as estimated non-detect estimated "UJ" for the referenced analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-102	660-72250-34	Chlorodibromomethane	UJ	Bias Low

The MSD results for 1,4-Dioxane from preparation batch 166949 exceeded criteria bias low, as a result, the "normal" parent sample in the associated preparation batch is qualified as estimated non-detect estimated "UJ" for the referenced analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
IWI-1	660-72281-1	1,4-Dioxane	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C SIM analytical fractions. All QC acceptance criteria were met, and no further action was required.

The RPDs of some analytes from the preparation batch 167066 exceed precision criteria; as a result the parent samples were qualified "UJ" for non-detects and "J" for detections for the affected analytes as listed below.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-98	660-72250-31	Vinyl Chloride	UJ	RPD
		Trichlorofluoromethane	UJ	RPD
		Dichlorodifluoromethane	UJ	RPD
MW-102	660-72250-34	Vinyl Chloride	UJ	RPD

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. The field duplicates for samples MW-72, MW-85, and MW-102 met the acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: MW-27, IDW-1, MW-41, MW-253 and MW-254.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted is the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Organic and Inorganic Level II Data Validation Report

Effluent Compliance Sampling

Analysis Performed by: TestAmerica, Tampa, FL SDG # 660-73581-1

Prepared by Jim Refermat
Project Chemist/Data Validator

Data Validation Report

Project:	Lockheed Martin - Tallevast	
Laboratory:	TestAmerica Laboratories, Tampa Florida	
SDG:	660-73581-1	
Analyses/Method:	• Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)/SW8260B and SW8260C SIM • Metals by Inductively Coupled Plasma – Atomic Emission Spectrometry (ICP-AES)/SW6010B	
Validation Level:	Level II	
Prepared by:	Jim Refermat/AECOM	Completed on: June 2, 2016
Reviewed by:	Julie Cassetta/AECOM	File Name: DVR_660-73581-1_r0.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-73581-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The sample listed below was collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on May 3, 2016 and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
POTW Effluent	660-73581-1	Water	05/03/2016	X	X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

Analytical preparation batches 169180 and 169192 used a "normal" parent sample that was not from the Tallevast site for spiking the MS associated with the SW8260B and SW8260C analytical fractions respectively. Because the sample is not site related, the MS was not evaluated.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process

in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the Reporting Limit (RL).

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS/MSD results
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD associated with preparation batch 169203 exhibited bias high results for the recovery of sodium; however the parent sample concentration was greater than four times the spike concentration. As a result, no further action is required for this excursion.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-75420-2. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of- Custody (COC). The sample listed below was collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on August 8, 2016 and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Sample ID	Lab ID	Matrix	Sample Collection Date	VOCs	Metals	Anions	Wet Chemistry
POTW Effluent	660-75420-2	Water	08/08/2016	X	X		

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Metals analysis was performed according to SW6010B Atomic Emission Spectrometry (AES). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

E The compound was quantitated above the calibration range.

D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/trip blanks/equipment blanks
- ✓ Surrogate spike recoveries
- ✓ Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
- ✓ Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action is required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated MB was evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Method blank results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data

validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

Analytical preparation batches 172600 and 172624 used "normal" parent samples that were not the POTW sample for spiking the MS and MS/MSD associated with the SW8260B and SW8260C analytical fractions respectively. Because the sample is not the POTW parent sample, the MS and MS/MSD were not evaluated.

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the

“normal” parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the Reporting Limit (RL).

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of these analytical fractions, no QC excursions were encountered or qualified. As a result, all data reported and evaluated for these analytical fractions are considered compliant and adequate for their intended use.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness COC/sample integrity
- ✓ Holding times and sample preservation
- ✓ Laboratory blanks/equipment blanks
- ✓ MS/MSD results
- ✓ Laboratory duplicate results
- ✓ LCS/LCSD results
- ✓ Field duplicates
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory MBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated MB was evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

No analytes were detected in the associated laboratory MB. Since the acceptance criteria were met, no qualification of data was required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the RPD between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD associated with preparation batch 172679 meets acceptance criteria, as a result, no further action is required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW6010B analytical fraction. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. An MS/MSD was digested and analyzed in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed: no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory. No samples required dilution in this data set.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C Selective Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*) as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

D The concentration is based on a diluted sample analysis.

- Validation Qualifiers

J The compound was positively identified; however, the associated numerical value is an estimated concentration.

UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✗	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs and TB were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Preparation batch 172545 exhibited a trace detection of Hexachlorobutadiene in the MB, however this analyte was not detected in any of the associated "normal" field samples, no action was required. No other target analytes were detected in any of the other MBs or TB associated with this SDG.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

MS/MSDs are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD for the following analytical preparation batches were evaluated for the SW8260C analytical fraction and are in-control: 172539, 172568, and 172658. No further action is required. The MS for following analytical preparation batches were evaluated for the SW8260B analytical fraction and are in-control: 172528 and 172654. No further action is required.

Analytical preparation batch 172624 and 172739 used a "normal" parent sample that was not from the Tallevast site for spiking the MS/MSD associated with the SW8260C analytical fraction. Because the sample is not site related, the MS/MSD was not evaluated. Similarly, analytical preparation batch 172547, 172600 and 172815 associated with SW8260B analytical fraction used a "normal" parent sample that was not from the Tallevast site and was not evaluated for that reason.

An MS or MS/MSD was not associated with SW8260B preparation batch 172594, however an LCS/LCSD was run in lieu of the batch MS/MSD, no further action is required.

The MS results associated with preparation batch 172545 exceeded criteria bias high for cis-1,2-Dichloroethene and Dichlorodifluoromethane bias high, however because this excursion was bias high, no further action is required.

The MS results for Carbon Disulfide from preparation batch 172526 exceeded criteria bias low; as a result, the "normal" parent sample in the associated preparation batch is qualified as non-detect estimated "UJ" for the referenced analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability

EW2002_INF	660-75400-2	Carbon Disulfide	UJ	Bias Low

The MSD results for 1,4-Dioxane from preparation batch 172530 exceeded recovery criteria bias low and the RPD criteria between the MS and MSD; as a result, the "normal" parent sample in the associated preparation batch is qualified as non-detect estimated "UJ" for the referenced analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
EW2001_INF	660-75400-1	1,4-Dioxane	UJ	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C analytical fractions. All QC acceptance criteria were met with the exception of the following quality excursions:

The LCS results associated with preparation batch 172528 exceeded criteria bias high for Dichlorodifluoromethane bias high, because the referenced analyte was non-detect, no further action is required.

The LCSD results for Carbon Disulfide and 1,1-Dichloroethene from preparation batch 172526 exceeded criteria bias low, as a result, all samples in the associated preparation batch are qualified as estimated non-detect "UJ" for non-detects. There were no detections for the referenced analytes associated with this preparation batch.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
EW2001_INF	660-75400-1	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2002_INF	660-75400-2	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2005_INF	660-75400-5	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2007_INF	660-75400-7	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2008_INF	660-75400-8	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2009_INF	660-75400-9	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2010_INF	660-75400-10	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2011_INF	660-75400-11	Carbon Disulfide	UJ	Bias Low

		1,1-Dichloroethene	UJ	Bias Low
EW2012_INF	660-75400-12	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2013_INF	660-75400-13	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2015_INF	660-75400-15	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2017_INF	660-75400-17	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2019_INF	660-75400-19	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low
EW2020_INF	660-75400-20	Carbon Disulfide 1,1-Dichloroethene	UJ UJ	Bias Low Bias Low

The RPD between the LCS and LCSD associated with Naphthalene from preparation batch 172594 exceeded criteria, as a result, all samples in the associated preparation batch are qualified as estimated non-detect “UJ” for non-detects. There were no detections for the referenced analyte associated with this preparation batch.

Trip Blank 2	660-75400-83	Naphthalene	UJ	Bias Low
Trip Blank 3	660-75400-84	Naphthalene	UJ	Bias Low

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the “normal” parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the “normal” parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates were not collected or analyzed; no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: EW3006_INF, EW-3012_INF, EW3023_INF, EW3027_INF and EW4003_INF. Several samples from the 8260C analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration, however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, none of QC excursions encountered resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Data Validation Report

Project:	Lockheed Martin - Tallevast	
Laboratory:	TestAmerica Laboratories, Tampa Florida	
SDG:	660-75739-1	
Analyses/Method:	Metals by Inductively Coupled Plasma – Atomic Emission Spectrometry (ICP-AES)/SW6010B Anions by Ion Chromatography - EPA Method 300.0 Total Dissolved Solids (TDS) by SM 2540C	
Validation Level:	Level II	
Prepared by:	Jim Refermat/AECOM	Completed on: September 21, 2016
Reviewed by:	Julie Cassetta/AECOM	File Name: DVR_660-75739-1_r0 UIC.doc

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-75739-1. Only the analytical data were reviewed for this validation; field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of-Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on August 23rd and 24th, 2016 and picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846. Specifically, Metals were performed according to SW6010B Atomic Emission Spectrometry (AES), Anion analysis was performed using EPA Method 300.0 Ion Chromatography (IC), and Total Dissolved Solids (TDS) was performed using SW2540C gravimetric. Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (February 1994)*, as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Metals by EPA Method SW6010B Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✗ MS/MSD results
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks

Laboratory Method Blanks (MBs) and Equipment Blanks (EBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample digestion and analysis process. The associated blanks were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. MB and EB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in the MBs or EBs for this analytical fraction.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for percent recovery (%R) of each spiked analyte and for the relative percent difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The recovery for Aluminm from preparation batch 173222 exceed criteria bias low. As a result, the parent sample was qualified "J", an estimated value for the reported analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-72	660-75739-8	Aluminum	J	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. A LCS was provided for each SW6010B analytical fraction preparation batch. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory digestion and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs are reviewed for conformance with the QC criteria of <25% for aqueous matrices. MS/MSDs were run with the SW6010B analytical fraction in lieu of a laboratory duplicate. No further action was required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. All field duplicates met acceptance criteria, with the exception of Aluminum in sample MW-72 and MW-72

(DUP), exceeded the field precision criteria (70.9%). The parent sample was qualified “J” an estimated quantitation, no further action was required.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-72	660-75739-8	Aluminum	J	Bias Low

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated (“I”). This "I" qualifier was retained during data validation. Any sample that was analyzed at a dilution due to high concentrations of targets or non-targets was checked to ensure that the results and/or sample-specific MDLs were adjusted accordingly by the laboratory.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of the analytical data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

General Wet Chemistry by EPA Method 300.0 and SM 2540C Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓ Data completeness COC/sample integrity
✓ Holding times and sample preservation
✓ Laboratory blanks/equipment blanks
✓ MS results, EPA Method 300.0 only
✓ Laboratory duplicate results
✓ LCS/LCSD results
✓ Field duplicates
✓ Sample results/reporting issues

The symbol (✓) indicates that no results were qualified based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met.

Laboratory Blanks/Equipment Blanks

Laboratory MBs and EBs are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation and analysis process. The associated blanks were evaluated at the MDL for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. The MB and EB results were reviewed for conformance with the QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required. No target analytes were detected in any of the blanks associated with this sample delivery group. No further action is required.

MS/MSD Results

MS/MSDs ware used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS/MSD associated with analytical preparation batch 448031 and 448164 for the E300.0 analytical fraction met acceptance criteria, and no further action is required.

An MS/MSD is not performed on the SM2540C analytical fraction, no further action is required.

LCS/LCSD Results

LCS/LCSDs are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix free media. For aqueous samples, laboratory-grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the E300.0 and an LCS for the SM2540C analytical fractions. All QC acceptance criteria were met, and no further action was required.

Laboratory Duplicate Results

Laboratory duplicates are used to access the precision of the laboratory sample preparation and analysis process. Laboratory duplicates are a sub-sample of the "normal" parent sample. They are then brought through the analytical digestion and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Laboratory duplicate RPDs were reviewed for conformance with the QC criteria of <25% for aqueous matrices. A laboratory duplicate was reported with the SM2540C analytical fraction for analytical batch 173227 and is in-control; no further action is required. Laboratory duplicates were reported with the E300.0 analytical fraction for analytical batches 448013 and 448164 and are in-control; no further action is required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL. Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. Field duplicates EW-108 (DUP), MW-72 (DUP) and MW-80 (DUP) met acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations less than the MDL but greater than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. No further action was required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted in the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use.

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) 660-75488-1. SDG 660-75448 contains the following sub SDGs reported under a single cover: 660-75524, 660-75655, 660-75655 660-75664, 660-75747, 660-75781 and 660-75814. Only the analytical data were reviewed for this validation, field documentation is not included in this review. Included with this assessment are the validation annotated sample results and Chain-of-Custody (COC). The samples listed below were collected by AECOM from the Lockheed Martin Tallevast facility located at 1600 Tallevast Road, Sarasota, Florida 34243, on August 9th through August 30th, 2016. The referenced samples were picked up at the site by TestAmerica Laboratories located in Tampa, Florida.

Analytical Data Package Documentation

The table below is an evaluation of data package completeness.

Items Reviewed	Reported	Performance Acceptable	Not Required
1. Chain-of-Custody integrity	yes	yes	
2. Sample preservation and hold times	yes	yes	
3. Sample condition upon receipt checklist	yes	yes	
4. Requested analysis on COC reported	yes	yes	
5. Sample reporting and detection limits	yes	yes	
6. Sample dilution factors	yes	yes	
7. Sample preparation/extraction/analysis dates	yes	yes	
8. Case narrative complete and accurate	yes	yes	
9. Laboratory qualifier definitions provided	yes	yes	
10. Method QA/QC reported as required	yes	yes	
11. Electronic Data Deliverable (EDD) reported	yes	yes	

Analytical Data Overview

The analysis of Volatile Organic Compounds (VOCs) was performed according to United States Environmental Protection Agency (USEPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW846, specifically SW8260B Total Ion Monitoring (TIM) and SW8260C SIM Selected Ion Monitoring (SIM). Quality Control (QC) criteria were derived from the compendium of methodologies presented in SW-846. Validation actions were derived primarily from the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (October 1999*), as they applied to the reported methodology. If additional guidance was required, *USEPA Region 4 Data Validation Standard Operating Procedure for Organic Analysis, Revision 3.1 (August 2008)* document was used, along with AECOM professional judgment.

The data review process is an evaluation of data on a technical basis rather than an assessment of contract compliance. As such, the standards against which the data are being evaluated may differ from those specified in the analytical method. It is assumed the analytical data package represents the best efforts of the laboratory and has been subjected to three tiers of quality review prior to release from the laboratory.

During the review process, laboratory qualified and unqualified data are verified and validated against supporting documentation. Based on the data evaluation, qualifier codes may be added, deleted, or modified by the validation chemist. Results are qualified with the following codes based on the USEPA National Functional Guidelines (NFGs):

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound was detected in the sample and its associated blank; its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported concentration is approximate and may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

VOCs by EPA Method SW8260B and SW8260C SIM Analytical Data Review Elements

The data were evaluated based on the following parameters (where applicable to the method):

✓	Data completeness COC/sample integrity
✓	Holding times and sample preservation
✓	Laboratory blanks/trip blanks/equipment blanks
✓	Surrogate spike recoveries
✗	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) results
✗	Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) results
✓	Field duplicates
✓	Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. The symbol (✗) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below. In addition, non-conformances or other issues that were noted during validation, but did not result in qualification of data, may be discussed for informational purposes only.

DATA VALIDATION REVIEW

Data Completeness

The data package was reviewed and found to meet acceptance criteria for completeness. The following items were checked:

- The COCs were reviewed for completeness of information relevant to the samples and requested analyses, and for signatures indicating transfer of sample custody.
- The laboratory sample login sheet(s) were reviewed for issues potentially affecting sample integrity, including the condition of sample containers upon receipt at the laboratory.
- Completeness of analyses was verified by comparing the reported results to the COC requests.

Holding Times/Sample Preservation

Sample preservation and preparation/analysis holding times were reviewed for conformance with the QC acceptance criteria. The QC acceptance criteria were met, and no further action was required.

Laboratory Blanks/Equipment Blanks/Trip Blanks

Laboratory Method Blanks (MBs) Equipment Blanks (EBs) and Trip Blanks (TBs) are prepared and processed in the same manner as “normal” field samples to identify any contamination that may have been introduced during the sample preparation, collection, transportation and analysis process. The associated MBs, EBs and TBs were evaluated at the Method Detection Limit (MDL) for all analytes of interest.

Data validation qualifications for individual samples are based on the maximum contaminant concentration detected in all associated blanks. Blank results were reviewed for conformance with the

QC acceptance criteria. Target analytes detected in blanks are not discussed in this data validation report if the associated results were non-detect or if qualification of sample results was not required.

Chlorodibromomethane, Dichlorobromomethane and Chloroform were detected in sample BLANK-35, Dichlorobromomethane and Chloroform in BLANK-36 and Dichlorobromomethane and Chloroform in BLANK-37, however all associated samples were non-detect for the referenced analytes, and as a result, no further action is required. No analytes were detected in any of the other associated method, equipment or trip blanks. Since none of the site samples were impacted by the blank excursions, no qualification of data was required.

Surrogate Spike Recoveries

Surrogates are structurally similar to analytes of interest; however, they are not found in the environment. All samples undergoing analysis for organic compounds are spiked with surrogate compounds prior to sample preparation and analysis. Surrogate Percent Recoveries (%R) are used to evaluate the performance of the analytical process and were reviewed for conformance with the QC acceptance criteria. The acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

No qualification of the data was required based on surrogate recoveries. All QC acceptance criteria were met, and no further action is required.

MS/MSD Results

Matrix Spike/Matrix Spike Duplicates (MS/MSDs) are used to evaluate the performance of the analytical process as it relates to the matrix of the media sampled. Field samples are spiked with known amounts of targeted analytes, processed, analyzed, and then evaluated for %R of each spiked analyte and for the Relative Percent Difference (RPD) between the recoveries for each analyte. The QC acceptance criteria are in-house, laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

Note: MS recovery control limits do not apply in instances where the "normal" parent samples concentration is greater than four times the MS spike concentration.

The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. The MS or MS/MSD for following analytical preparation batches were evaluated for the SW8260C SIM analytical fraction and are in-control: 172857, 173151, 173197, 173258, 173314, 173371, 173422 and 173468. No further action is required for the aforementioned preparation batches. The MS/MSD for following analytical preparation batches were evaluated for the SW8260B analytical fraction and are in-control: 172907 and 172942. No further action is required.

The following analytical preparation batches associated with the SW8260C SIM analytical fraction used "normal" parent samples that were not from the Tallevast site for spiking the MS or the MS/MSD: 172739, 172814 and 172897. Because the samples are not site related, the MS or MS/MSD was not evaluated. Similarly, the following analytical preparation batches associated with the SW8260B analytical fraction used "normal" parent samples that were not from the Tallevast site for spiking the MS or the MS/MSD: 173248, 173465 and 173554 Because the samples are not site related, the MS or MS/MSD was not evaluated.

The MS or MS/MSD for the following preparation batches exceeded criteria bias high for one or more analytes: 173251, 173308, 173367, 173417, 173466 and 173518, however because the excursions were bias high, no further action is required.

The recovery for Acetone, 2-Butanone, 2-Hexanone, 4-Methyl-2-pentanone and Trichlorofluoromethane from preparation batch 172941 exceed criteria bias low and the RDP criteria for Chloromethane. As a result, the parent sample was qualified "UJ" for non-detects and "J" for detections.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-155	660-75524-24	Acetone	UJ	Bias Low
MW-155	660-75524-24	2-Butanone	UJ	Bias Low
MW-155	660-75524-24	2-Hexanone	UJ	Bias Low
MW-155	660-75524-24	4-Methyl-2-pentanone	UJ	Bias Low
MW-155	660-75524-24	Trichlorofluoromethane	UJ	Bias Low
MW-155	660-75524-24	Chloromethane	UJ	Bias Low

The recovery for 1,2,3-Trichloropropane from preparation batch 173446 exceed criteria bias low. As a result, the parent sample was qualified "UJ", a non-detect estimated value for the reported analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-253	660-75747-21	1,2,3-Trichloropropane	UJ	Bias Low

The recovery for 1,4-Dioxane from preparation batch 173468 exceed criteria bias low. As a result, the parent sample was qualified "J", an estimated value for the reported analyte.

Sample ID	Laboratory Sample ID	Analyte	Validation Qualifier	Usability
MW-134	660-75781-21	1,4-Dioxane	J	Bias Low

LCS/LCSD Results

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSDs) are used to evaluate the analytical process as it relates to the recovery of targeted analytes in a matrix-free media. For aqueous samples, laboratory grade Type II Deionized Water (DI) is used as the spike media. DI water samples are spiked with known amounts of targeted analytes, extracted, analyzed, and then evaluated for both the %R of each spiked analyte and the RPD between the recoveries. The QC acceptance criteria are in-house laboratory-derived limits based on actual laboratory practice as prescribed by the analytical method.

The LCS/LCSD %Rs and/or RPDs were reviewed for conformance with the QC acceptance criteria. An LCS/LCSD was provided for the SW8260B and SW8260C SIM analytical fractions. All QC acceptance criteria were met with the following exceptions:

The LCSD associated with preparation batch 173251 exceeded criteria bias high for Methylene Chloride bias high, because the referenced analyte was non-detect, no further action is required.

The LCS associated with preparation batch 173308 exceeded criteria bias high for Chloroethane bias high, because the referenced analyte was non-detect, no further action is required.

The LCS and LCSD associated with preparation batch 173417 exceeded criteria bias high for 1,1,2-Trichloroethane bias high, because the referenced analyte was non-detect, no further action is required.

Field Duplicate Results

Field duplicates are used to access the precision of the sample collection process and laboratory analytical precision. Field duplicates are duplicate field samples collected in the same manner as the "normal" parent sample. They are then brought through the analytical preparation and analysis process in the same manner as the "normal" parent sample and evaluated for RPD between detected analytes greater than four times the RL.

Field duplicate RPDs are reviewed for conformance with the QC criteria of <30% for aqueous matrices. The field duplicates for samples MW-155, MW-48, MW-65, MW-102, MW-72, MW-80, MW-128, and MW-134 met the acceptance criteria, and no further action was required.

Sample Results/Reporting Issues

Non-detected results were reported at the MDL. All compounds detected at concentrations greater than the MDL but less than the RL were qualified by the laboratory as estimated ("I"). This "I" qualifier was retained during data validation.

Any sample that was analyzed at a dilution due to high concentrations of target or non-targets was checked to ensure that the results and/or sample specific MDLs were adjusted accordingly by the laboratory. The following samples from the 8260B analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration: IWI-1, EW-UAFG-1, PZ-LSAS-2 and PZ-LSAS-4. Several samples from the SW8260C SIM analytical fraction required dilution due to analyte concentrations in the parent sample above the linear range of calibration; however the affected samples were all reported with elevated 1,4-dioxane concentrations, and as a result, no further action is required.

QUALIFICATION ACTIONS

Based on a Level II evaluation of this analytical fraction, no QC excursions were encountered that resulted is the rejection of data. As a result, all data reported and evaluated for this analytical fraction are considered compliant and adequate for their intended use as qualified.

Sarasota, FL 34243

Subject: **Final Agency Action Transmittal Letter**
General Water Use Permit
Permit No.: 20 020198.000
Project Name: Lockheed Martin Corporation - Tallevast
County: Manatee

Dear Permittee(s):

Your Water Use Permit has been approved. Final approval is contingent upon no objection to the District's action being received by the District within the time frames described in the enclosed Notice of Rights.

The information received by the District will be kept on file to support the District's determination regarding your application. This information is available for viewing or downloading through the District's Application and Permit Search Tools located at www.WaterMatters.org/permits.

The Districts action in this matter only becomes closed to future legal challenges from members of the public if such persons have been properly notified of the District's action and no person objects to the District's action within the prescribed period of time following the notification. The District does not publish notices of agency action. If you wish to limit the time within which a person who does not receive actual written notice from the District may request an administrative hearing regarding this action, you are strongly encouraged to publish, at your own expense, a notice of agency action in the legal advertisement section of a newspaper of general circulation in the county or counties where the activity will occur. Publishing notice of agency action will close the window for filing a petition for hearing. Legal requirements and instructions for publishing notice of agency action, as well as a noticing form that can be used is available from the District's website at www.WaterMatters.org/permits/noticing. If you publish notice of agency action, a copy of the affidavit of publishing provided by the newspaper should be sent to the District Regulation Department that reviewed your permit or other agency action, for retention in the File of Record for this agency action.

Please be advised that the Governing Board has formulated a water shortage plan referenced in a Standard Water Use Permit Condition (Exhibit A) of your permit, and will implement such a plan during periods of water shortage. You will be notified during a declared water shortage of any change in the conditions of your Permit or any suspension of your Permit, or of any restriction on your use of water for the duration of any declared water shortage. Please further note that water conservation is a condition of your Permit and should be practiced at all times.

The ID tags for your withdrawals shall be installed by a District representative. This representative will attempt to contact you within 30 days to discuss placement of your tags. If you have any questions or concerns regarding your tags, please contact Cheryl Johnson at extension 6518, in the Sarasota Regulation Department. If you have any questions or concerns regarding your permit or any other information, please contact the Sarasota Regulation Department and ask to speak to someone in the Water Use Regulation Section.

Sincerely,

Claire E. Muirhead, P.G.
Sarasota Regulation Department

Enclosures: Approved Permit
Notice of Rights

SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT
WATER USE PERMIT
GENERAL
PERMIT NO. 20 020198.000

PERMIT ISSUE DATE: **November 18, 2011** **EXPIRATION DATE:** **November 18, 2021**

The Permittee is responsible for submitting an application to renew this permit no sooner than one year prior to the expiration date, and no later than the end of the last business day before the expiration date, whether or not the Permittee receives prior notification by mail. Failure to submit a renewal application prior to the expiration date and continuing to withdraw water after the expiration date is a violation of Chapter 373, Florida Statutes, and Chapter 40D-2, Florida Administrative Code, and may result in a monetary penalty and/or loss of the right to use the water. Issuance of a renewal of this permit is contingent upon District approval.

TYPE OF APPLICATION: New

GRANTED TO: Lockheed Martin Corporation
1600 Tallevast Road
Sarasota, FL 34243

PROJECT NAME: Lockheed Martin Corporation - Tallevast

WATER USE CAUTION AREA: MOST IMPACTED AREA, SOUTHERN WATER USE CAUTION AREA

COUNTY: Manatee

TOTAL QUANTITIES AUTHORIZED UNDER THIS PERMIT (in gallons per day)

ANNUAL AVERAGE	410,600 gpd
PEAK MONTH [1]	410,600 gpd

1 Peak Month: Average daily use during the highest water use month.

ABSTRACT:

This is a new water use permit for ground water remediation at an industrial waste cleanup site. Quantities are withdrawn from the surficial and intermediate aquifer for treatment and disposal. The annual average quantity is 410,600 gpd and the peak month daily quantity is 410,600 gpd.
Special Conditions include those that require the Permittee to record and report monthly meter readings for the influent to the treatment system, the discharge to the recharge trenches and the discharge to the sanitary sewer system, submit an annual report, implement monitoring described in the Florida Department of Environmental Protection approved Remedial Action Plan, notify the District if there is a modification to the remedial action plan and well construction specifications.

MANATEE COUNTY

N
W E
S

Southwest Florida Water Management District

STANDARD CONDITIONS:

The Permittee shall comply with the Standard Conditions attached hereto, incorporated herein by reference as Exhibit A and made a part hereof.

SPECIAL CONDITIONS:

1. All reports and data required by condition(s) of the permit shall be submitted to the District according to the due date(s) contained in the specific condition. If the condition specifies that a District-supplied form is to be used, the Permittee should use that form in order for their submission to be acknowledged in a timely manner. The only alternative to this requirement is to use the District Permit Information Center (www.swfwmd.state.fl.us/permits/epermitting/) to submit data, plans or reports online. There are instructions at the District website on how to register to set up an account to do so. If the report or data is received on or before the tenth day of the month following data collection, it shall be deemed as a timely submittal.

   All mailed reports and data are to be sent to:

   Southwest Florida Water Management District
   Sarasota Regulation Department, Water Use Regulation
   6750 Fruitville Road
   Sarasota, Florida 34240-9711

   Submission of plans and reports: Unless submitted online or otherwise indicated in the special condition, the original and two copies of each plan and report, such as conservation plans, environmental analyses, aquifer test results, per capita annual reports, etc. are required.

   Submission of data: Unless otherwise indicated in the special condition, an original (no copies) is required for data submittals such as crop report forms, meter readings and/or pumpage, rainfall, water level evapotranspiration, or water quality data.
   (499)

2. The average day and peak monthly quantities for the ground water withdrawal, shown in the withdrawal table are estimates based on the projected distribution of pumpage, and are for water use inventory and impact analysis purposes only. The quantities listed for these individual sources are not intended to dictate the distribution of pumpage from permitted sources. The Permittee may make adjustments in pumpage distribution as necessary so long as adverse environmental impacts do not result and the Permittee complies with all other conditions of this Permit. In all cases, the total average annual daily withdrawal and the total peak monthly daily withdrawal are limited to the quantities set forth above. (221)

3. The Permittee shall construct the proposed wells according to the surface diameter, casing depth, and total depth specifications listed in the Table 1 from the Water Use Permit application supplemental documentation received by the District on November 15, 2011. The casing shall be continuous from land surface to the minimum depth stated and is specified to prevent the unauthorized interchange of water between different water bearing zones. The surface diameter and total depth specified are those proposed by the Permittee in the application process. All depths given are in feet below land surface. (235)

4. The Permittee shall investigate alleged loss of reliable access to legal, existing withdrawal of ground water, damage to the ground water wells, or to pumps used to access legal, existing withdrawal of water within 700 feet of any withdrawal point listed in Table 1 of the November 15, 2011 submittal that may have been caused by the Permittee's ground water withdrawals. Instructions for the complaint handling and possible mitigation procedure are given in Exhibit B, Well Complaint Instructions, attached to and made part of this permit. (443)

5. The Permittee shall submit a copy of all well completion reports as filed with the Environmental Action Commission of Manatee County to the District Permit Data Section, Performance Management Office within 30 days of each well completion.(508)

6. Any wells not in use, and in which pumping equipment is not installed shall be capped or valved in a water tight manner in accordance with Chapter 62-532.500(3)(a)(4), F.A.C.(568)

7. The Permittee shall comply with allocated quantities. If the allocated quantities are exceeded, upon request by the District, the Permittee shall submit a report that includes reasons why the allocated quantities were exceeded, measures taken to attempt to meet the allocated quantities, and a plan to bring the permit into compliance. The District will evaluate information submitted by Permittees who exceed their allocated quantities to determine whether the lack of achievement is justifiable and a variance is warranted. The report is subject to approval by the District; however, justification for exceeding the allowed withdrawal quantity does not constitute a waiver of the District's authority to enforce the terms and conditions of the permit.(651)

8. This Permit is located within the Southern Water Use Caution Area (SWUCA). Pursuant to Section 373.0421, Florida Statutes, the SWUCA is subject to a minimum flows and levels recovery strategy, which became effective on January 1, 2007. The Governing Board may amend the recovery strategy, including amending applicable water use permitting rules based on an annual assessment of water resource criteria, cumulative water withdrawal impacts, and on a recurring five-year evaluation of the status of the recovery strategy up to the year 2025 as described in Chapter 40D-80, Florida Administrative Code. This Permit is subject to modification to comply with new rules.(652)

9. The following proposed facilities shall be metered within 30 days of completion of construction of the facilities: District ID No(s). 95 and 97, Permittee ID No(s). 95-Influent and 97-Sanitary Sewer. Meter reading and reporting, as well as meter accuracy checks every five years shall be in accordance with instructions in Exhibit B, Metering Instructions, attached to and made part of this permit.(718)

10. A determination as to whether the permittee is in compliance with the quantities allocated on this permit will be based on a review of monthly water use records submitted by the permittee to the District for District ID No. 95 (Permittee ID No. 95-Influent). (992)

11. Permittee shall notify District within 30 days of any modification to the Florida Department of Environmental Protection approved Remedial Action Plan Addendum (RAP) dated July 14, 2009 that was submitted in support of the application for this permit. Based on a determination by the District, a modification of the water use permit may then be required.(990)

12. The following proposed recharge well shall be metered within 30 days of completion of construction of the facilities: District ID No. 96, Permittee ID No. 96-Recharge Trench. Meter reading and reporting, as well as meter accuracy checks every five years shall be in accordance with instructions in Exhibit B, Metering Instructions, attached to and made part of this permit.(727)

13. The Permittee shall submit the annual monitoring report including the hydrobiological monitoring data described in the Remedial Action Plan Addendum dated July 14, 2009 that was submitted in support of the application for this permit.The report and required documentation shall be submitted to the Regulation Bureau Director by January 1 of each year.(673)

40D-2
Exhibit A

WATER USE PERMIT STANDARD CONDITIONS

1. The Permittee shall provide access to an authorized District representative to enter the property at any reasonable time to inspect the facility and make environmental or hydrologic assessments. The Permittee shall either accompany District staff onto the property or make provision for access onto the property.

2. When necessary to analyze impacts to the water resource or existing users, the District shall require the Permittee to install flow metering or other measuring devices to record withdrawal quantities and submit the data to the District.

3. The District shall collect water samples from any withdrawal point listed in the permit or shall require the permittee to submit water samples when the District determines there is a potential for adverse impacts to water quality.

4. A District identification tag shall be prominently displayed at each withdrawal point that is required by the District to be metered or for which withdrawal quantities are required to be reported to the District, by permanently affixing the tag to the withdrawal facility.

5. The Permittee shall mitigate to the satisfaction of the District any adverse impact to environmental features or off-site land uses as a result of withdrawals. When adverse impacts occur or are imminent, the District shall require the Permittee to mitigate the impacts. Adverse impacts include the following:

   A. Significant reduction in levels or flows in water bodies such as lakes, impoundments, wetlands, springs, streams or other watercourses; or
   B. Damage to crops and other vegetation causing financial harm to the owner; and
   C. Damage to the habitat of endangered or threatened species.

6. The Permittee shall mitigate, to the satisfaction of the District, any adverse impact to existing legal uses caused by withdrawals. When adverse impacts occur or are imminent, the District shall require the Permittee to mitigate the impacts. Adverse impacts include the following:

   A. A reduction in water levels which impairs the ability of a well to produce water;
   B. Significant reduction in levels or flows in water bodies such as lakes, impoundments, wetlands, springs, streams or other watercourses; or
   C. Significant inducement of natural or manmade contaminants into a water supply or into a usable portion of an aquifer or water body.

7. Notwithstanding the provisions of Rule 40D-1.6105, F.A.C., persons who wish to continue the water use permitted herein and who have acquired ownership or legal control of permitted water withdrawal facilities or the land on which the facilities are located must apply to transfer the permit to themselves within 45 days of acquiring ownership or legal control of the water withdrawal facilities or the land.

8. If any of the statements in the application and in the supporting data are found to be untrue and inaccurate, or if the Permittee fails to comply with all of the provisions of Chapter 373, Florida Statutes (F.S.), Chapter 40D, Florida Administrative Code (F.A.C.), or the conditions set forth herein, the Governing Board shall revoke this permit in accordance with Rule 40D-2.341, F.A.C., following notice and hearing.

9. Issuance of this permit does not exempt the Permittee from any other District permitting requirements.

10. The Permittee shall cease or reduce surface water withdrawal as directed by the District if water levels in lakes fall below the applicable minimum water level established in Chapter 40D-8, F.A.C., or rates of flow in streams fall below the minimum levels established in Chapter 40D-8, F.A.C.

11. The Permittee shall cease or reduce withdrawal as directed by the District if water levels in aquifers fall below the minimum levels established by the Governing Board.

12. The Permittee shall not deviate from any of the terms or conditions of this permit without written approval by the District.

13. The Permittee shall practice water conservation to increase the efficiency of transport, application, and use, as well as to decrease waste and to minimize runoff from the property. At such time as the Governing Board adopts specific conservation requirements for the Permittee's water use classification, this permit shall be subject to those requirements upon notice and after a reasonable period for compliance.

14. The District may establish special regulations for Water-Use Caution Areas. At such time as the Governing Board adopts such provisions, this permit shall be subject to them upon notice and after a reasonable period for compliance.

15. In the event the District declares that a Water Shortage exists pursuant to Chapter 40D-21, F.A.C., the District shall alter, modify, or declare inactive all or parts of this permit as necessary to address the water shortage.

16. This permit is issued based on information provided by the Permittee demonstrating that the use of water is reasonable and beneficial, consistent with the public interest, and will not interfere with any existing legal use of water. If, during the term of the permit, it is determined by the District that the use is not reasonable and beneficial, in the public interest, or does impact an existing legal use of water, the Governing Board shall modify this permit or shall revoke this permit following notice and hearing.

17. Within the SWUCA, if the District determines that significant water quantity or quality changes, impacts to existing legal uses, or adverse environmental impacts are occurring, the permittee shall be provided with a statement of facts upon which the District based its determination and an opportunity to address the change or impact prior to a reconsideration by the Board of the quantities permitted or other conditions of the permit.

18. All permits issued pursuant to these Rules are contingent upon continued ownership or legal control of all property on which pumps, wells, diversions or other water withdrawal facilities are located.

Exhibit B
Instructions

METERING INSTRUCTIONS

The Permittee shall meter withdrawals from surface waters and/or the ground water resources, and meter readings from each withdrawal facility shall be recorded on a monthly basis within the last week of the month. The meter reading(s) shall be reported to the Permit Data Section, Performance Management Office on or before the tenth day of the following month.The Permittee shall submit meter readings online using the Permit Information Center at www.swfwmd.state.fl.us/permits/epermitting/ or on District supplied scanning forms unless another arrangement for submission of this data has been approved by the District. Submission of such data by any other unauthorized form or mechanism may result in loss of data and subsequent delinquency notifications. Call the Performance Management Office in Brooksville (352-796-7211) if difficulty is encountered.

The meters shall adhere to the following descriptions and shall be installed or maintained as follows:

1. The meter(s) shall be non-resettable, totalizing flow meter(s) that have a totalizer of sufficient magnitude to retain total gallon data for a minimum of the three highest consecutive months permitted quantities. If other measuring device(s) are proposed, prior to installation, approval shall be obtained in writing from the Regulation Department Director.
2. The Permittee shall report non-use on all metered standby withdrawal facilities on the scanning form or approved alternative reporting method.
3. If a metered withdrawal facility is not used during any given month, the meter report shall be submitted to the District indicating the same meter reading as was submitted the previous month.
4. The flow meter(s) or other approved device(s) shall have and maintain an accuracy within five percent of the actual flow as installed.
5. Meter accuracy testing requirements:
   A. For newly metered withdrawal points, the flow meter installation shall be designed for inline field access for meter accuracy testing.
   B. The meter shall be tested for accuracy on-site, as installed according to the Flow Meter Accuracy Test Instructions in this Exhibit B, every five years in the assigned month for the county, beginning from the date of its installation for new meters or from the date of initial issuance of this permit containing the metering condition with an accuracy test requirement for existing meters.
   C. The testing frequency will be decreased if the Permittee demonstrates to the satisfaction of the District that a longer period of time for testing is warranted.
   D. The test will be accepted by the District only if performed by a person knowledgeable in the testing equipment used.
   E. If the actual flow is found to be greater than 5% different from the measured flow, within 30 days, the Permittee shall have the meter re-calibrated, repaired, or replaced, whichever is necessary. Documentation of the test and a certificate of re-calibration, if applicable, shall be submitted within 30 days of each test or re-calibration.
6. The meter shall be installed according to the manufacturer's instructions for achieving accurate flow to the specifications above, or it shall be installed in a straight length of pipe where there is at least an upstream length equal to ten (10) times the outside pipe diameter and a downstream length equal to two (2) times the outside pipe diameter. Where there is not at least a length of ten diameters upstream available, flow straightening vanes shall be used in the upstream line.
7. Broken or malfunctioning meter:
   A. If the meter or other flow measuring device malfunctions or breaks, the Permittee shall notify the District within 15 days of discovering the malfunction or breakage.
   B. The meter must be replaced with a repaired or new meter, subject to the same specifications given above, within 30 days of the discovery.
   C. If the meter is removed from the withdrawal point for any other reason, it shall be replaced with another meter having the same specifications given above, or the meter shall be reinstalled within 30 days of its removal from the withdrawal. In either event, a fully functioning meter shall not be off the withdrawal point for more than 60 consecutive days.

8. While the meter is not functioning correctly, the Permittee shall keep track of the total amount of time the withdrawal point was used for each month and multiply those minutes times the pump capacity (in gallons per minute) for total gallons. The estimate of the number of gallons used each month during that period shall be submitted on District scanning forms and noted as estimated per instructions on the form. If the data is submitted by another approved method, the fact that it is estimated must be indicated. The reason for the necessity to estimate pumpage shall be reported with the estimate.
9. In the event a new meter is installed to replace a broken meter, it and its installation shall meet the specifications of this condition. The permittee shall notify the District of the replacement with the first submittal of meter readings from the new meter.

FLOW METER ACCURACY TEST INSTRUCTIONS

1. **Accuracy Test Due Date** - The Permittee is to schedule their accuracy test according to the following schedule:

   A. For existing metered withdrawal points, add five years to the previous test year, and make the test in the month assigned to your county.
   B. For withdrawal points for which metering is added for the first time, the test is to be scheduled five years from the issue year in the month assigned to your county.
   C. For proposed withdrawal points, the test date is five years from the completion date of the withdrawal point in the month assigned to your county.
   D. For the Permittee's convenience, if there are multiple due-years for meter accuracy testing because of the timing of the installation and/or previous accuracy tests of meters, the Permittee can submit a request in writing to the Permitting Department Director for one specific year to be assigned as the due date year for meter testing. Permittees with many meters to test may also request the tests to be grouped into one year or spread out evenly over two to three years.
   E. The months for accuracy testing of meters are assigned by county. The Permittee is requested but not required to have their testing done in the month assigned to their county. This is to have sufficient District staff available for assistance.

January	Hillsborough
February	Manatee, Pasco
March	Polk (for odd numbered permits)*
April	Polk (for even numbered permits)*
May	Highlands
June	Hardee, Charlotte
July	None or Special Request
August	None or Special Request
September	Desoto, Sarasota
October	Citrus, Levy, Lake
November	Hernando, Sumter, Marion
December	Pinellas

   * The permittee may request their multiple permits be tested in the same month.

2. **Accuracy Test Requirements**: The Permittee shall test the accuracy of flow meters on permitted withdrawal points as follows:

   A. The equipment water temperature shall be set to 72 degrees Fahrenheit for ground water, and to the measured water temperature for other water sources.
   B. A minimum of two separate timed tests shall be performed for each meter. Each timed test shall consist of measuring flow using the test meter and the installed meter for a minimum of four minutes duration. If the two tests do not yield consistent results, additional tests shall be performed for a minimum of eight minutes or longer per test until consistent results are obtained.
   C. If the installed meter has a rate of flow, or large multiplier that does not allow for consistent results to be obtained with four- or eight-minute tests, the duration of the test shall be increased as necessary to obtain accurate and consistent results with respect to the type of flow meter installed.
   D. The results of two consistent tests shall be averaged, and the result will be considered the test result for the meter being tested. This result shall be expressed as a plus or minus percent (rounded to the nearest one-tenth percent) accuracy of the installed meter relative to the test meter. The percent accuracy indicates the deviation (if any), of the meter being tested from the test meter.

3. **Accuracy Test Report:** The Permittees shall demonstrate that the results of the meter test(s) are accurate by submitting the following information within 30 days of the test:
   - A. A completed Flow Meter Accuracy Verification Form, Form LEG-R.014.00 (07/08) for each flow meter tested. This form can be obtained from the District's website (www.watermatters.org) under "ePermitting and Rules" for Water Use Permits.
   - B. A printout of data that was input into the test equipment, if the test equipment is capable of creating such a printout;
   - C. A statement attesting that the manufacturer of the test equipment, or an entity approved or authorized by the manufacturer, has trained the operator to use the specific model test equipment used for testing;
   - D. The date of the test equipment's most recent calibration that demonstrates that it was calibrated within the previous twelve months, and the test lab's National Institute of Standards and Testing (N.I.S.T.) traceability reference number.
   - E. A diagram showing the precise location on the pipe where the testing equipment was mounted shall be supplied with the form. This diagram shall also show the pump, installed meter, the configuration (with all valves, tees, elbows, and any other possible flow disturbing devices) that exists between the pump and the test location clearly noted with measurements. If flow straightening vanes are utilized, their location(s) shall also be included in the diagram.
   - F. A picture of the test location, including the pump, installed flow meter, and the measuring device, or for sites where the picture does not include all of the items listed above, a picture of the test site with a notation of distances to these items. with a notation of distances to these items.

WELL COMPLAINT INSTRUCTIONS

The permittee shall adhere to the following process for handling water resource, surface or ground water withdrawal point impact, dewatering complaints, or discharge/seepage of water from their property:

1. Within 48 hours of a complaint received by the Permittee related to their withdrawal or use of water or dewatering activity, the Permittee shall notify the District, perform a preliminary investigation to determine whether the Permittee's pumpage, dewatering activity, or discharge/seepage from their property may have caused the problem.
2. If this preliminary assessment indicates that the Permittee may be responsible, the Permittee shall, within 72 hours of complaint receipt, supply the complainant with any water necessary for health and safety purposes, such as drinking water.
3. If the resulting investigation determines that the Permittee was not responsible for the well problem, the Permittee shall document the reasons for this determination.
4. If the detailed investigation confirms that the complainant's problem was caused by the Permittee's pumpage, dewatering, or discharge or water impoundment activities:
   - A. The complainant's problem shall be fully corrected within 15 days of complaint receipt.
   - B. Impacts to wells: Full correction shall be restoration of the complainant's well to pre-impact condition or better, including the aspects of pressure levels, discharge quantity, and water quality. This detailed investigation shall include, but not be limited to, an analysis of water levels and pumpage impacts at the time of the complainant's problem, well and pump characteristics including depths, capacity, pump curves, and irrigation system requirements.
5. The Permittee shall file a report of the complaint, the findings of facts, appropriate technical data, and any mitigating action taken or to be taken by the Permittee, to the Regulation Department Director, Resource Regulation, for review and approval within 20 days of the receipt of any complaint. The report shall include:
   - A. The name and address of each complainant;
   - B. The date and nature of the complaint;
   - C. A summary of the Permittee's investigation;
   - D. A summary of the Permittee's determination, including details of any mitigation activities; and
   - E. Cost of mitigation activity for each complaint.
6. A copy of the report shall be sent to the complainant within 20 days of complaint receipt.

WELL CONSTRUCTION INSTRUCTIONS

All wells proposed to be constructed shall be drilled and constructed as specified below:

1. All well casing (including liners and/or pipe) must be sealed to the depth specified in the permit condition.
2. The proposed well(s) shall be constructed of materials that are resistant to degradation of the casing/grout due to interaction with the water of lesser quality. A minimum grout thickness of two (2) inches is required on wells four (4) inches or more in diameter.
3. A minimum of twenty (20) feet overlap and two (2) centralizers is required for Public Supply wells and all wells six (6) inches or more in diameter.
4. Any variation from estimated, maximum or minimum total depths; maximum or minimum casing depths; well location or casing diameter specified in the condition requires advanced approval by the Regulation Department Director, Resource Regulation, or the Supervisor of the Well Construction Permitting Section in Brooksville.
5. The Permittee is notified that a proposal to significantly change any of these well construction specifications may require permit modification if the District determines that such a change would result in significantly greater withdrawal impacts than those considered for this Permit.
6. The finished well casing depth shall not vary from these specifications by greater than ten (10) percent unless advance approval is granted by the Regulation Department Director, Resource Regulation, or the Well Construction Regulation Manager in Brooksville.

Claire E. Muirhead, P.G.

Authorized Signature
SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT

This permit, issued under the provision of Chapter 373, Florida Statues and Florida Administrative Code 40D-2, authorizes the Permittee to withdraw the quantities outlined above, and may require various activities to be performed by the Permittee as described in the permit, including the Special Conditions. The permit does not convey to the Permittee any property rights or privileges other than those specified herein, nor relieve the Permittee from complying with any applicable local government, state, or federal law, rule, or ordinance.

Notice of Rights

ADMINISTRATIVE HEARING

1. You or any person whose substantial interests are or may be affected by the District's action may request an administrative hearing on that action by filing a written petition in accordance with Sections 120.569 and 120.57, Florida Statutes (F.S.), Uniform Rules of Procedure Chapter 28-106, Florida Administrative Code (F.A.C.) and District Rule 40D-1.1010, F.A.C. Unless otherwise provided by law, a petition for administrative hearing must be filed with (received by) the District within 21 days of receipt of written notice of agency action. "Written notice" means either actual written notice, or newspaper publication of notice, that the District has taken or intends to take agency action. "Receipt of written notice" is deemed to be the fifth day after the date on which actual notice is deposited in the United States mail, if notice is mailed to you, or the date that actual notice is issued, if sent to you by electronic mail or delivered to you, or the date that notice is published in a newspaper, for those persons to whom the District does not provide actual notice.

2. Pursuant to Subsection 373.427(2)(c), F.S., for notices of agency action on a consolidated application for an environmental resource permit and use of sovereignty submerged lands concurrently reviewed by the District, a petition for administrative hearing must be filed with (received by) the District within 14 days of receipt of written notice.

3. Pursuant to Rule 62-532.430, F.A.C., for notices of intent to deny a well construction permit, a petition for administrative hearing must be filed with (received by) the District within 30 days of receipt of written notice of intent to deny.

4. Any person who receives written notice of an agency decision and who fails to file a written request for a hearing within 21 days of receipt or other period as required by law waives the right to request a hearing on such matters.

5. Mediation pursuant to Section 120.573, F.S., to settle an administrative dispute regarding District action is not available prior to the filing of a petition for hearing.

6. A request or petition for administrative hearing must comply with the requirements set forth in Chapter 28.106, F.A.C. A request or petition for a hearing must: (1) explain how the substantial interests of each person requesting the hearing will be affected by the District's action or proposed action, (2) state all material facts disputed by the person requesting the hearing or state that there are no material facts in dispute, and (3) otherwise comply with Rules 28-106.201 and 28-106.301, F.A.C. Chapter 28-106, F.A.C. can be viewed at www.flrules.org or at the District's website at www.WaterMatters.org/permits/rules.

7. A petition for administrative hearing is deemed filed upon receipt of the complete petition by the District Agency Clerk at the District's Brooksville headquarters during normal business hours, which are 8:00 a.m. to 5:00 p.m., Monday through Friday, excluding District holidays. Filings with the District Agency Clerk may be made by mail, hand-delivery or facsimile transfer (fax). The District does not accept petitions for administrative hearing by electronic mail. Mailed filings must be addressed to, and hand-delivered filings must be delivered to, the Agency Clerk, Southwest Florida Water Management District, 2379 Broad Street, Brooksville, FL 34604-6899. Faxed filings must be transmitted to the District Agency Clerk at (352) 754-6874. Any petition not received during normal business hours shall be filed as of 8:00 a.m. on the next business day. The District's acceptance of faxed petitions for filing is subject to certain conditions set forth in the District's Statement of Agency Organization and Operation, available for viewing at www.WaterMatters.org/about.

JUDICIAL REVIEW

1. Pursuant to Sections 120.60(3) and 120.68, F.S., a party who is adversely affected by final District action may seek judicial review of the District's final action. Judicial review shall be sought in the Fifth District Court of Appeal or in the appellate district where a party resides or as otherwise provided by law .

2. All proceedings shall be instituted by filing an original notice of appeal with the District Agency Clerk within 30 days after the rendition of the order being appealed, and a copy of the notice of appeal, accompanied by any filing fees prescribed by law, with the clerk of the court, in accordance with Rules 9. 110 and 9.190 of the Florida Rules of Appellate Procedure (Fla. R. App. P.). Pursuant to Fla. R. App. P. 9.020(h), an order is rendered when a signed written order is filed with the clerk of the lower tribunal.

APPENDIX L – WASTE PROFILE AND ACCEPTANCE

FILTER PRESS SOLIDS AND CARBON WASTE PROFILE AND ACCEPTANCE

Disposal/Processing Facility

Waste Stream Approval Number: 8276-DC14

Clark Environmental, Inc.

755 Prairie Industrial Parkway

Mulberry, FL 33860

Permit Numbers:
38627-007-50/30
138634-004-50/27

I, James W. Clark III, an authorized representative of Clark Environmental, Inc. certify that Clark Environmental, Inc is licensed and permitted to accept the Lockheed Martin material: filter cake solids generated at 1600 Tallevast Road, Sarasota, FL 34243. Clark Environmental, Inc. will treat and/or dispose of the waste in accordance with all applicable local, state and federal laws and regulations.

Waste Facility Signature: James W. Clark III

Non-Hazardous WAM Approval

Requested Management Facility: Okeechobee Landfill

Profile Number: 405524FL Waste Approval Expiration Date: 01/28/2017

APPROVAL DETAILS

Approval Decision: ☑ Approved ☐ Not Approved Profile Renewal: ☐ Yes ☑ No

Management Method: Direct Landfill

Generator Name: LMC

Material Name: SPENT CARBON

Management Facility Precautions, Special Handling Procedures or Limitation on approval:

Generator Conditions

- Shall not contain free liquids.
- Waste manifest or applicable shipping document must accompany load.
- The waste profile number must appear on the shipping papers.

WM Authorization Name: John Fanning Title: Waste Approval Manager

WM Authorization Signature: Date: 01/28/2016

Agency Authorization (if Required): Date:

©2014 Waste Management

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
660-71124-1

Comments
No additional comments.

Receipt
The samples were received on 12/16/2015 4:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6º C.

GC/MS VOA
Method(s) 8260B: The laboratory control sample (LCS) for batch 164968 recovered outside control limits for the following analyte: hexachlorobutadiene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: Both low level analysis had internal standard failures; therefore, sample was taken from an alternate container and analyzed. Batch 164968.
Spent Carbon (660-71124-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 1311: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 415744 the temperature was outside of this range. As a result, the test was not fully compliant with the requirements of 40 CFR Part 261. MIN:23.6 MAX:25.6

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast

TestAmerica Job ID: 660-71124-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Detection Summary

Client: AECOM Technical Services Inc.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received Trip Blank not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

VAPOR PHASE CARBON WASTE PROFILE AND ACCEPTANCE

Non-Hazardous WAM Approval

Requested Management Facility: Okeechobee Landfill

Profile Number: 403722FL Waste Approval Expiration Date: 12/29/2016

APPROVAL DETAILS

Approval Decision: ☑ Approved ☐ Not Approved Profile Renewal: ☐ Yes ☑ No

Management Method: Direct Landfill

Generator Name: Darrin Johnson on behalf of LMC

Management Facility Precautions, Special Handling Procedures or Limitation on approval:

- Shall not contain free liquids.
- Waste manifest or applicable shipping document must accompany load.

Additional Conditions:

WM Authorization Name: John Fanning Title: Waste Approval Manager

WM Authorization Signature: _____ Date: 12/29/2014

Agency Authorization (if Required): _____ Date: _____

Last Revised May 2, 2014

Sample Summary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Vapor Phase Carbon

TestAmerica Job ID: 660-62930-1

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
660-62930-1	Vapor Phase Carbon	Solid	09/18/14 10:00	09/19/14 14:05

Job ID: 660-62930-1

Laboratory: TestAmerica Tampa

Narrative

Job Narrative
660-62930-1

Comments
No additional comments.

Receipt
The samples were received on 9/19/2014 2:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2º C.

GC/MS VOA
Method Total 8260B: Unable to run Vapor Phase Carbon (660-62930-1) low level because all internal standards were out of control when analysis was attempted due to matrix interference. Elevated reporting limits (RLs) are provided.

Method TCLP 8260B: The following sample was diluted due to the nature of the sample matrix: Vapor Phase Carbon (660-62930-1). Elevated reporting limits (RLs) are provided.

Method 8260B: Internal standard responses were outside of acceptance limits for the following sample: (660-62930-1 DU). The sample shows evidence of matrix interference. Batch 151774.

Method 8260B: The matrix spike and duplicate recoveries for batch 151774 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The sample is qualified with J3.

No additional analytical or quality issues were noted, other than those described

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
*	ISTD response or retention time outside acceptable limits

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Detection Summary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Vapor Phase Carbon

Certification Summary

Client: AECOM Technical Services Inc.
Project/Site: Tallevast Vapor Phase Carbon

TestAmerica Job ID: 660-62930-1

Laboratory: TestAmerica Tampa

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Florida	NELAP	4	E84282	06-30-15

The following analytes are included in this report, but are not certified under this certification:

Analysis Method	Prep Method	Matrix	Analyte
8260B	5030B	Solid	m-Xylene & p-Xylene
8260B	5030B	Solid	o-Xylene

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture

Laboratory: TestAmerica Tallahassee

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date

Comments
No additional comments.

Receipt
The samples were received on 7/31/2015 12:50 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.1° C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: AECOM Technical Services Inc.
Project/Site: Process Samples

TestAmerica Job ID: 660-68329-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

NOTE: (1)Where the rate is dependent on value, shippers are required to state specifically in writing the agreed or declared value of the property as follows: The agreed or declared value of the property is hereby specifically stated by the shipper to be not exceeding _____ per _____.

This is to certify that the above-named materials are properly classified, described, packaged, marked and labeled, and are in proper condition for transportation according to the applicable regulations of the department of Transportation.

FOR FREIGHT COLLECT SHIPMENTS: If this shipment is to be delivered to the consignee, without recourse on the consignor, the consignor shall sign the following statement. The carrier may decline to make delivery of this shipment without payment of freight and all other lawful charges.

_____
Signature Of Consignor

NOTE: (2)Liability limitation for loss or damage on this shipment may be applicable. See USC Section 14706(c)(1)(A) and (B).

NOTE: (3)Carrier liability shall be limited to a maximum of $5.00 per pound per article, subject to released values as provided in the NMFC 100 Series and AVRT 100 Series, the lower of which shall apply. Carrier's maximum totally liability per shipment shall not exceed $100,000. To receive valuation in excess of the maximum liability per pound up to $100,000, insert total dollar amount of valuation needed below. There will be a charge for excess valuation of $1.00 for each $100.00 value in excess of the initial maximum valuation subject to a minimum excess valuation charge of $30.00 per shipment. The party responsible for payment of the freight charges will be responsible for excess valuation. In no event shall such prepaid excess valuation exceed $50.00 per pound per package or 100,000.00 per conveyance, whichever is less. $ _____ excess valuation requested.

NOTE: (4)Commodities requiring special or additional care or attention in handling or storing must be so marked and packaged as to ensure safe transportation with ordinary care. See Sec 2(e) or NMFC Item 360.

Recharge and Injection Daily Report

October 27, 2015 12AM to October 28, 2015 12AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	0 GPM	0.0
RC-7003	FIT-665	2 GPM	22.7
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

October 27, 2015 12AM to October 28, 2015 12AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	34.1
Permeate Flow	FIT-642	0 GPM	24.6
Concentrate Flow	FIT-643	0 GPM	8.9

Inlet Conductivity	CIT-630	1,047.2 µS
Outlet Conductivity	CIT-642	122.7 µS
Hours Run		7.8 hrs
Recharge Tank pH	AIT-660A	5.5
Recharge Tank Temp	TIT-660C	97.0 ℉

Note to operator: Please print out manual daily log and populate fields.

EW Totals	**162.1**		**233,340**				

	Value	Total (KGal)	Peak Flow
FIT-100	161 GPM	232.2	168 GPM
FIT-500	200 GPM	217.9	271 GPM
Effluent Temp	98.1 °F		
Effluent pH	6.1		

Recharge and Injection Daily Report

November 6, 2015 12AM to November 7, 2015 12AM

Injection Point ID		Value	Total (KGal)
RC-7001	FIT-7001	0 GPM	0.0
RC-7002	FIT-7002	0 GPM	0.0
RC-7003	FIT-665	0 GPM	19.6
Injection Wells	FIT-510	0 GPM	0.0

RO System Daily Operation Report

November 6, 2015 12AM to November 7, 2015 12AM

		Value	Total (KGal)
Flow In	FIT-600	0 GPM	27.2
Permeate Flow	FIT-642	0 GPM	19.8
Concentrate Flow	FIT-643	0 GPM	7.0

Inlet Conductivity	CIT-630	1,036.5 µS
Outlet Conductivity	CIT-642	117.8 µS
Hours Run		4.6 hrs
Recharge Tank pH	AIT-660A	6.0
Recharge Tank Temp	TIT-660C	95.6 ℉

Note to operator: Please print out manual daily log and populate fields.
