1. Data Validation/ Quality Control Summary

This report summarizes the analytical data and quality assurance/quality control (QA/QC) evaluation associated with the March/April 2009 annual sampling event at the Lockheed Martin Tallevast Site. A summary of the groundwater data with any applicable data qualification and data verification reports are provided in the Sample Delivery Group (SDG) Data Reviews included in Attachments 1-19 of this attachment.

The samples were analyzed by TestAmerica Laboratories, of Tampa, Florida for volatile organic compounds (VOCs) and 1,4-dioxane. Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8260B Total Ion Monitoring (TIM) and 8260C selective ion monitoring (SIM) by isotope dilution (ID). Data review and verification were performed in accordance with *Organic USEPA National Functional Guidelines* (October 1999 and January 2005) and *USEPA Region II SOP HW-24, revision 2 (October 2006) Validating Volatile Organic Compounds by SW-846 Method 8260B* was also used to supplement the data review process.

Below is an overall summary of the sample analyses conducted during monitoring activities.

Field Sample Collection

Parameter	Samples	Field Duplicate	Equipment Blanks	Trip Blanks	Total
VOCs	295	16	10	8	329
Total	**295**	**16**	**10**	**8**	**329**

Note: Equipment blanks total includes equipment blanks and field blanks.

Laboratory QC samples prepared and analyzed with the field samples included method blanks, site-specific matrix spike (MS) pairs, and laboratory control samples (LCSs). Field QC samples included field blanks, trip blanks and field duplicates.

The sections below present a summary of the results of the data quality review completed by ARCADIS. The following subsections describe the various types of QA/QC parameter deviations identified during the data validation process. The complete sets of detailed data validation reports are included in the SDG Data Reviews included in Attachments 1-19 of this attachment.

1.1 Sample Preservation and Holding Time

Samples were preserved correctly with hydrochloric acid at the time of collection. All sample analyses were completed within holding time limits.

1.2 Gas Chromatograph Instrument Performance

Mass spectrometer tuning performance was acceptable. System performance and column resolution were acceptable.

1.3 Blank Contamination

Blank samples were utilized to evaluate the potential introduction of contaminants into the field samples. Method blanks, equipment blanks and trip blanks were prepared and analyzed in conjunction with the field samples to monitor potential contamination impacts during collection, shipment and analysis. Method blanks were included in each analytical batch to ensure that potential interferences associated with the analytical system, reagents, and/or laboratory glassware were identified. Trip blanks were prepared by the laboratory and shipped with sample bottles to the site, then returned to the laboratory in each cooler to evaluate potential impacts to samples during transport and storage. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Target compounds were not detected above the MDL in the associated QA blanks; therefore, detected sample results were not associated with blank contamination.

1.4 Analytical Instrument Calibrations

USEPA SW-846 Method 8260B and 8260C specify percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

Initial Calibration Criteria

All target compounds analyzed by USEPA SW-846 Method 8260B associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99. The compounds analyzed by USEPA SW-846 Method 8260B TIM must exhibit a RRF value greater than the control limit (0.05). The analysis of the target compound 1,4-Dioxane performed by USEPA SW-846 Method 8260C SIM by isotope dilution must exhibit a RRF value greater than the control limit (0.005).

Continuing Calibration Criteria

All target compounds analyzed by USEPA SW-846 Method 8260B associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) with the exception of 1,4-Dioxane must exhibit a %D less than the control limit of (50%). The compounds analyzed by USEPA SW-846 Method 8260B TIM must exhibit a RRF value greater than the control limit (0.05). The analysis of the target compound 1,4-Dioxane performed by USEPA SW-846 Method 8260C SIM by isotope dilution must exhibit a RRF value greater than the control limit (0.005).

Calibration Assessment

Many Target Compound List (TCL) compounds associated with the continuing calibrations exhibited percent deviations (%D) that were greater than the 20% criteria resulting in the qualification of the associated sample results as estimated using a "J" or "UJ" qualifier, as appropriate. A detailed description of the individual qualification of the data can be found in the SDG Data Reviews included in Attachments 1-19 of this attachment. Below is a summary of the continuing calibrations that exhibited %D greater than the 90% criteria resulting in the qualification of associated sample results as rejected ("R" qualifier). All samples were non-detect prior to rejection.

Sample Locations	Initial/Continuing	Compound	Criteria
MW-13D MW-13S MW-198 MW-199 MW-200 MW-201 MW-202 MW-14D	CCV %D	Chloroethane	92.6%

Sample Locations	Initial/Continuing	Compound	Criteria
MW-19 Trip Blank (3/24/09)			

1.5 System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

All surrogates exhibited recoveries within the control limits.

1.6 Internal Standard Performance

Internal standard performance criteria insure that the Gas Chromatography/Mass Spectrometry (GC/MS) sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard. All internal standard areas and retention times were within established limits. Details of internal standard performance are provided in the SDG Data Reviews included in Attachments 1-19 of this attachment.

1.7 Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) Analysis

Laboratory Control Samples (LCSs)/Laboratory Control Sample Duplicates (LCSDs) were prepared and analyzed by the laboratory to evaluate method performance and analytical accuracy utilizing chemical standards prepared from a source different than the calibration standards in a clean matrix similar to the field samples included in an analytical batch. The LCSs/LCSDs establish control of the method within the laboratory environment from sample preparation through instrument performance without potential bias from field matrices. Percent recoveries were utilized to evaluate and qualify associated field samples based on laboratory established control limits. All LCSs/LCSDs recoveries were within laboratory control limits and acceptable relative percent difference (RPD) between the LCS/LCSD recoveries. Details of LCSs/LCSDs are provided in the SDG Data Reviews included in Attachments 1-19 of this attachment.

1.8 Matrix Spike Samples

Laboratory matrix spike (MS) and matrix spike duplicate (MSD) analyses were performed to determine precision and accuracy of the analytical method on site-specific matrix and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Accuracy was evaluated based on the percent recoveries of the spiked compounds. Precision was based on the RPD between the MS and MSD recoveries. The MS/MSD results alone were not used to evaluate the precision and accuracy of data due to a variety of sampling and analytical conditions including heterogeneity of site samples, variability in constituent concentrations, various matrix effects, analytical batching and sample collection conditions. MS/MSD data were used in conjunction with other available QC information to formulate professional judgments and to apply qualification relative to the validity and usability of the analytical results. Laboratory established control limits, as defined in the method protocols, were utilized to evaluate MS/MSD performance. Data qualification was based on professional judgment and overall compliance with control limits.

Sample locations associated with the MS/MSD exhibiting recoveries outside of the control limits are presented in the following table.

Sample Locations	Compound	MS Recovery	MSD Recovery
DW-1 (Annual)	1,1-Dichloroethene	AC	>UL
MW-123 (Annual)	1,1-Dichloroethene	>UL	>UL
	Benzene	>UL	>UL
	Toluene	AC	>UL
	Trichloroethene	>UL	>UL
MW-22 (Annual)	1,4-Dioxane (SIM)	>UL	AC
MW-90 (Annual)	Toluene	>UL	AC
8005 15th St E (PW-102) (Annual)	1,1-Dichloroethene	<LL but >10%	AC
MW-110 (Annual)	1,4-Dioxane (SIM)	AC	>UL
MW-154 (Annual)	Chlorobenzene	<LL but >10%	-
	Toluene		

AC – Acceptable

UL – Upper control limit

UL – Lower control limit

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Parent sample concentration > four times the MS/MSD spiking solution concentration (D).	Detect	No action
	Non-detect	

Sample locations associated with MS/MSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

Sample Locations	Compound
8005 15th St E (PW-102) (Annual)	Trichloroethene
MW-53 (Annual)	Chlorobenzene

The criteria used to evaluate the RPD between the MS/MSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	J
	Detect	J

Detailed discussion of the matrix spike evaluation is provided in the data validation reports in the SDG Data Reviews included in Attachments 1-19 of this attachment.

1.9 Field Duplicates

Site-specific precision was also monitored through the collection of field duplicates at the rate of approximately 1 per 20 field samples. Duplicate samples are defined as samples collected simultaneously from the location under identical conditions. Duplicate aqueous samples were collected by splitting aliquots of sample between sample bottles. Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 50% for water matrices is applied to the RPD between the parent sample and the field duplicate.

Field Duplicate Samples			
Sample ID	**Parent Sample**	**Sample Collection Date**	**Sample Delivery Group**
Dup-01	EW-109	3/20/2009	660-28307
Dup-02	MW-80	3/23/2009	660-28361-1
Dup-03	MW-134	3/24/2009	660-28391
Dup-04	MW-8D	3/25/2009	660-28429
Dup-05	MW-70	3/26/2009	660-28463
Dup-06	MW-52	3/27/2009	660-28462
Dup-07	MW-86	3/30/2009	660-28503
Dup-08	MW-190	3/31/2009	660-28537
Dup-09	MW-155	3/31/2009	660-28537
Dup-10	MW-16D	4/1/2009	660-28569
Dup-11	MW-55	4/1/2009	660-28569
Dup-12	MW-60	4/1/2009	660-28569
Dup-13	PZ-LSAS-2	4/2/2009	660-28587
Dup-14	PZ-LSAS-6	4/2/2009	660-28587
Dup-15	PZ-LSAS-7	4/2/2009	660-28587
Dup-16	MW-249	4/13/2009	660-28745

All field duplicate RPDs for values above the quantitative reporting limits were within the 50% control limit for this sampling event with the exception of the compound acetone for associated sample locations MW-55 and Dup-11. The reported results for these associated sample locations were qualified as estimated using a "J" qualifier.

1.10 System Performance

Manual integration was performed for TCL compound 1,4-dioxane analysis on the internal standard 1,4-dioxane-d8 for associated sample locations MW-252, MW-29, MW-76, MW-142, MW-245, MW-146, EW-UFAG-1, MW-17S, MW-4, PZ-LSAS-1, Dup-14 and PZ-LSAS-6. All manual integrations performed by the laboratory were

consistent from baseline to baseline of the primary quantitation ion; therefore detected sample results were not qualified. Additionally, non-detect sample results were reviewed and there was no evidence of a detectable peak of the primary quantitation ion within the retention time window of 1,4-dioxane; therefore all non-detect results were confirmed and are usable as reported.

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

1.11 Data Quality Assessment Conclusion

All contaminants of concern (COC) data associated with the March/April 2009 sampling event are usable for the intended purpose. Overall, the quality control data, as defined in the USEPA SW-846 Method 8260B/8260C and laboratory performance criteria were within the guidelines specified in the method with the exception of those deviations specifically mentioned in this review. Specifically, several non-detected concentrations of chloroethane were qualified as rejected using an "R" qualifier as described in Section 1.4.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28259 Logged in TALS By : Amanda Harrison

Cooler Received on (date) 3-19-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: lab

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 4.2°C cw-07 Degrees Celsius

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH.< 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 1

All containers pH < 2 ? yes If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: 2

All containers pH between 6 and 8? yes If not please comment below:

_____

_____

9. Was chlorine present in any of the unpreserved containers? No

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.2 C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

300.0
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76981(job 660-28287) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

The batch matrix spike(MS) recovery for batch 660-77112(job 660-28307) was outside of control limits. The associated laboratory control sample (LCS) and matrix spike duplicate (MSD)met acceptance criteria. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28289-1
Sdg Number: 660-28289

Lab Section	Qualifier	Description
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28289 Logged in TALS By: Amanda Hanson

Cooler Received on (date) 3/20/09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking #_____

3. Temperature of rep. sample or temp blank when opened: 2.4 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH.< 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 4

All containers pH < 2 ? y/n If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: 4

All containers pH between 6 and 8? y/n If not please comment below:

_____

_____

9. Was chlorine present in any of the unpreserved containers? NO

If yes, which samples? _____

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/02/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

The matrix spike/matrix spike duplicate (MS/MSD) recoveries for batch 660-77112 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28308-1
Sdg Number: 660-28308

Lab Section	Qualifier	Description
Metals		
	U	Indicates that the compound was analyzed for but not detected.
General Chemistry		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28308 Logged in TALS By: Amanda Harrison

Cooler Received on (date) 3-20-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.5°C au-07 *Degrees Celsius*

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH.< 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 8

All containers pH < 2 ? Y If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: 12

All containers pH between 6 and 8? Y If not please comment below:

_____

_____

9. Was chlorine present in any of the unpreserved containers? NO

If yes, which samples? _____

Login Sample Receipt Check List

Client: ARCADIS

Job Number: 660-28308-1
SDG Number: 660-28308

Login Number: 28308
List Source: TestAmerica Tampa
Creator: Volz, Charles
List Number: 1

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.5 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

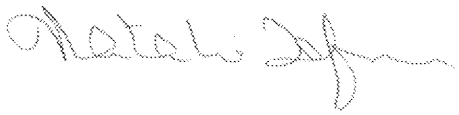
Job Number: 660-28355-1

SDG Number: 660-28355

Job Description: Tallevast - UIC

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
4/3/2009 3:31 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/03/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

300.0
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-77112(job 660-28308) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-77166(job 660-28361) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

6010B
The matrix spike duplicate (MSD) recoveries for batch 660-76826 were outside control limits for Fe and Na. The associated laboratory control sample (LCS) and matrix spike (MS) met acceptance criteria. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28355-1
Sdg Number: 660-28355

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28355 Logged in TALS By: Amanda Hamm

Cooler Received on (date) 3/24/09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.6°, 2.9°, 3.4°, & 3.1 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 12

All containers pH < 2 ? Yes If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: 21

All containers pH between 6 and 8? Yes If not please comment below:

EQB ph = 5 (AFDI water)

_____

9. Was chlorine present in any of the unpreserved containers? NO

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.6, 2.9, 3.4, and 3.1 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	rec'd an extra metal for EW-104 and an extra un-p for MW-32
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/13/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28397 Logged in TALS By: Amanda Hanison

Cooler Received on (date) 3/25/09 And Opened By (~~full name~~): Robyn & Pinky

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.3 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 3

   All containers pH < 2 ? Y/N/NA If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: _____

   All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: 6

   All containers pH between 6 and 8? Y/N/NA If not please comment below:

9. Was chlorine present in any of the unpreserved containers? N/A

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.3 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

6010B
The batch matrix spike/matrix spike duplicate (MS/MSD) for batch 660-76874(660-28402) are outside of control limits for aluminum and sodium. The laboratory control sample (LCS) is within control limits. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28428-1
Sdg Number: 660-28428

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28428 Logged in TALS By : Amanda Harrison

Cooler Received on (date) 3-26-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.5°C Cw-07 Degrees Celsius

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH.< 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 2

All containers pH < 2 ? YES If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: 4

All containers pH between 6 and 8? YES If not please comment below:

9. Was chlorine present in any of the unpreserved containers? NO

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.5 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/14/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28460-1
Sdg Number: 660-28460

Lab Section	Qualifier	Description
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28460 Logged in TALS By: Amanda Haines

Cooler Received on (date) 3/27/09 And Opened By (full name): Amanda Haines

1. Shipper (circle one) FEDEX UPS DHL (WALK-IN) COURIER OTHER: _____

2. Tracking #_____

3. Temperature of rep. sample or temp blank when opened: 1.7 Degrees Celsius CU 07

4. Number of H2SO4 (sulfuric acid) preserved containers:_____

   All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers:_____

   All containers pH < 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 2

   All containers pH < 2 ? Yes If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: _____

   All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: 4

   All containers pH between 6 and 8? Yes If not please comment below:

9. Was chlorine present in any of the unpreserved containers? NO

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.7 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28504-1
Sdg Number: 660-28504

Lab Section	Qualifier	Description
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 28504 Logged in TALS By : Carol McMullen

Cooler Received on (date) 3/31/09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.3 *Degrees Celsius*

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 2

   All containers pH < 2 ? Yes If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: _____

   All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: 6

   All containers pH between 6 and 8? Yes If not please comment below:

9. Was chlorine present in any of the unpreserved containers? No

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	2.3 degrees C CU-07
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

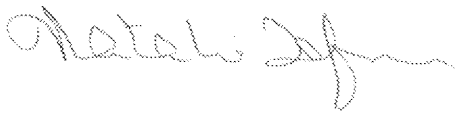
Job Number: 660-28592-1

SDG Number: 660-28592

Job Description: Tallevast UIC

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
4/16/2009 2:21 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/16/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

6010B
The method blank for preparation batch 660-77455 contained As and Zn at the method detection limit (MDL) but well below the routine reporting limit (RL). Re-extraction and/or re-analysis of samples were not performed. The data are flagged with V qualifiers.

The matrix spike duplicate (MSD) recovery for batch 660-77455 was outside of control limits for Fe. The associated laboratory control sample (LCS) and matrix spike (MS) met acceptance criteria. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28592-1
Sdg Number: 660-28592

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	V	Indicates the analyte was detected in both the sample and the associated method blank.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 28592 Logged in TALS By : Carol McNulty

Cooler Received on (date) 4-2-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL (WALK-IN) COURIER OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.4 °C CU-07 *Degrees Celsius*

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 7

All containers pH < 2 ? YES If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: 14

All containers pH between 6 and 8? YES If not please comment below:

_____

_____

9. Was chlorine present in any of the unpreserved containers? NO

If yes, which samples? _____

Login Sample Receipt Check List

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	2.4 degrees C CU-07
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Narrative Report

Sample Handling
Sample handling and holding time criteria were met for all samples. Samples collected by submitter. No unusual events occurred during analysis. Results are reported on a wet weight basis for aqueous matrices and on a dry weight basis for sludge and soil matrices unless otherwise noted. Sample results reported as dissolved were field filtered.

Quality Control
Enclosed analyses met method or FCL criteria, unless otherwise denoted on the sample results. Applied data qualifiers are defined below.

Attachments
Chain of Custody

Qualifier	Meaning
U	Compound was analyzed for but not detected.
J	One or more QC samples associated with this data value exceeded QC limits.
J1	Surrogate recovery limits have been exceeded.
J2	No known quality control criteria exist for the component.
J3	Reported value failed to meet established quality control criteria for either precision or accuracy.
J4	Sample matrix interfered with the ability to make an accurate determination on the spiked sample.
Q	Sample held beyond the accepted holding time.
L	Off-scale high; reported concentration exceeds the highest standard.
V	Analyte was detected in both the sample and the associated method blank.
ZTNTC	Too numerous to count. Numeric value represents filtration volume.
A	Absent
P	Present
T	Value reported is less than the statistical method detection limit. Reported for informational purposes only.
M	Value reported is greater than the statistical method detection limit, but less than the reported MDL.
G	The greatest of the dilutions performed did not yield sufficient oxygen depletion for valid data.
S	The least of the dilutions performed did not yield sufficient oxygen residual for valid data.
O	Result is greater than (over) the specified value.
I	Reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
B	Results based upon colony plate count outside ideal range.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

Certificate of Results

Sample integrity was certified prior to analysis. Test results meet all requirements of the NELAC Standards except as noted in the Quality Control Report. Uncertainties for these data are available on request. This report may not be reproduced in part; results relate only to items tested.

Narrative Report

Sample Handling
Sample handling and holding time criteria were met for all samples. Samples collected by submitter. No unusual events occurred during analysis. Results are reported on a wet weight basis for aqueous matrices and on a dry weight basis for sludge and soil matrices unless otherwise noted. Sample results reported as dissolved were field filtered.

Quality Control
Enclosed analyses met method or FCL criteria, unless otherwise denoted on the sample results. Applied data qualifiers are defined below.

Attachments
Chain of Custody

Qualifier	Meaning
U	Compound was analyzed for but not detected.
J	One or more QC samples associated with this data value exceeded QC limits.
J1	Surrogate recovery limits have been exceeded.
J2	No known quality control criteria exist for the component.
J3	Reported value failed to meet established quality control criteria for either precision or accuracy.
J4	Sample matrix interfered with the ability to make an accurate determination on the spiked sample.
Q	Sample held beyond the accepted holding time.
L	Off-scale high; reported concentration exceeds the highest standard.
V	Analyte was detected in both the sample and the associated method blank.
ZTNTC	Too numerous to count. Numeric value represents filtration volume.
A	Absent
P	Present
T	Value reported is less than the statistical method detection limit. Reported for informational purposes only.
M	Value reported is greater than the statistical method detection limit, but less than the reported MDL.
G	The greatest of the dilutions performed did not yield sufficient oxygen depletion for valid data.
S	The least of the dilutions performed did not yield sufficient oxygen residual for valid data.
O	Result is greater than (over) the specified value.
I	Reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
B	Results based upon colony plate count outside ideal range.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

Narrative Report

Sample Handling
Sample handling and holding time criteria were met for all samples. Samples collected by submitter. No unusual events occurred during analysis. Results are reported on a wet weight basis for aqueous matrices and on a dry weight basis for sludge and soil matrices unless otherwise noted. Sample results reported as dissolved were field filtered.

Quality Control
Enclosed analyses met method or FCL criteria, unless otherwise denoted on the sample results. Applied data qualifiers are defined below.

Attachments
Chain of Custody

Qualifier	Meaning
U	Compound was analyzed for but not detected.
J	One or more QC samples associated with this data value exceeded QC limits.
J1	Surrogate recovery limits have been exceeded.
J2	No known quality control criteria exist for the component.
J3	Reported value failed to meet established quality control criteria for either precision or accuracy.
J4	Sample matrix interfered with the ability to make an accurate determination on the spiked sample.
Q	Sample held beyond the accepted holding time.
L	Off-scale high; reported concentration exceeds the highest standard.
V	Analyte was detected in both the sample and the associated method blank.
ZTNTC	Too numerous to count. Numeric value represents filtration volume.
A	Absent
P	Present
T	Value reported is less than the statistical method detection limit. Reported for informational purposes only.
M	Value reported is greater than the statistical method detection limit, but less than the reported MDL.
G	The greatest of the dilutions performed did not yield sufficient oxygen depletion for valid data.
S	The least of the dilutions performed did not yield sufficient oxygen residual for valid data.
O	Result is greater than (over) the specified value.
I	Reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
B	Results based upon colony plate count outside ideal range.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

Certificate of Results
Sample integrity was certified prior to analysis. Test results meet all requirements of the NELAC Standards except as noted in the Quality Control Report. Uncertainties for these data are available on request. This report may not be reproduced in part; results relate only to items tested.

Narrative Report

Sample Handling
Sample handling and holding time criteria were met for all samples. Samples collected by submitter. No unusual events occurred during analysis. Results are reported on a wet weight basis for aqueous matrices and on a dry weight basis for sludge and soil matrices unless otherwise noted. Sample results reported as dissolved were field filtered.

Quality Control
Enclosed analyses met method or FCL criteria, unless otherwise denoted on the sample results. Applied data qualifiers are defined below.

Attachments
Chain of Custody

Qualifier	Meaning
U	Compound was analyzed for but not detected.
J	One or more QC samples associated with this data value exceeded QC limits.
J1	Surrogate recovery limits have been exceeded.
J2	No known quality control criteria exist for the component.
J3	Reported value failed to meet established quality control criteria for either precision or accuracy.
J4	Sample matrix interfered with the ability to make an accurate determination on the spiked sample.
Q	Sample held beyond the accepted holding time.
L	Off-scale high; reported concentration exceeds the highest standard.
V	Analyte was detected in both the sample and the associated method blank.
ZTNTC	Too numerous to count. Numeric value represents filtration volume.
A	Absent
P	Present
T	Value reported is less than the statistical method detection limit. Reported for informational purposes only.
M	Value reported is greater than the statistical method detection limit, but less than the reported MDL.
G	The greatest of the dilutions performed did not yield sufficient oxygen depletion for valid data.
S	The least of the dilutions performed did not yield sufficient oxygen residual for valid data.
O	Result is greater than (over) the specified value.
I	Reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
B	Results based upon colony plate count outside ideal range.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

ANALYTICAL REPORT

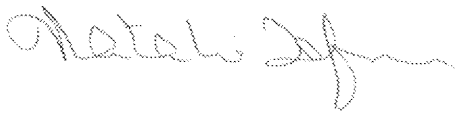
Job Number: 660-28254-1

SDG Number: 660-28254

Job Description: Tallevast-RAP Design

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.

Job Narrative
660-J28254-1

Comments
No additional comments. See below for revised report narrative.

Receipt
All samples were received in good condition within temperature requirements.

Samples MW-108 and MW-111 were received at pH 10 for sulfide. The samples were pH corrected in the lab to>12.

The unpreserved containers for sample MW-128 were received at pH 9.

8141A
The matrix spike / matrix spike duplicate (MS/MSD) precision for batch 640-54931 was outside of control limits for diazinon. The associated laboratory control sample (LCS) met acceptance criteria. Sample 660-28254-A1 was used for the MS/MSD. The data are flagged with J3 qualifiers.

SM 5310C
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries (68%/69%) for 660-28228-1 in batch 640-54971 were outside of control limits (80-120%). The associated laboratory control sample and laboratory control sample duplicate (LCS/LCSD) met acceptance criteria. The data are flagged with J3 qualifiers.

335.4
The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76776 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

350.1
The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76549 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 3500 CR B
The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76488 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

353.2
The matrix spike duplicate (MSD) recovery for batch 660-76460 was outside of control limits. The associated laboratory control sample (LCS) and matrix spike (MS) met acceptance criteria. The data are flagged with J3 qualifiers.

8151A
Insufficient sample volume was provided to perform matrix spike/matrix spike duplicate (MS/MSD) for batch 660-76768.

8082
The recovery for DCB decachlorobiphenyl surrogate is outside of control limits for samples 660-28254-2 and 660-28254-7. The recovery for TCMX tetrachloro-m-xylene is within control limits. The data are flagged with J1 qualifiers.

8081A/8082
The sample duplicate %RPD for batch 660-76594 has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

8270C
The batch sample duplicate %RPD for batch 660-76565(job 660-28276) has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

The batch sample duplicate %RPD for batch 660-76752(job 660-28324) has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

200.7
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 680-133567(job 660-28233) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

6020
The batch matrix spike (MS) recovery for batch 680-133353(job 680-45623) was outside of control limits for Mn. The associated laboratory control sample (LCS) and matrix spike duplicate (MSD) met acceptance criteria. The data are flagged with J3 qualifiers.

1664A
The sample duplicate %RPD for batch 660-76519 has a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

300.0
The matrix spike duplicate (MSD) recovery for batch 660-76791 was outside of control limits for F. The associated laboratory control sample (LCS) and matrix spike (MS) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 2320B
The sample duplicate %RPD for batch 660-76653 has a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

SM 4500 H+B
The samples were received outside of holding time for pH. The data are flagged with Q qualifiers.

This report was revised on 4-23-09: Per client request, hardness, nickel and zinc were added to the report.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28254-1
Sdg Number: 660-28254

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Indicates that the compound was analyzed for but not detected.
GC/MS Semi VOA		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC Semi VOA		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28254 Logged in TALS By: Amanda Harrison

Cooler Received on (date) 3-19-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER (Lab) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: Cw-07 3.1°C, 4.3°C, 9.6°C, 3.2°C, 2.6°C, 4.0°C, 3.9°C, 4.5°C, 4.3°C, 3.7°C, 2.8°C Degrees Celsius

4. Number of H2SO4 (sulfuric acid) preserved containers: 16

All containers pH < 2 ? YES If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: 16

All containers pH < 2 ? YES If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 26

All containers pH < 2 ? YES If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: 16

All containers pH >12 ? CG 3-19-09 16 of 19 yes If not please comment below:

3-19-09 2) MW 108 PH=10 sulfide

1) MW-114 PH=10 ↓

8. Number of Unpreserved containers: 136

All containers pH between 6 and 8? 119 yes If not please comment below:

17) MW-128 PH=9

9. Was chlorine present in any of the unpreserved containers? ND

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	listed on info page
COC is present.	True	received all samples except for the hex chroms lt's on 03/19/09 @ 1115
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

04/23/2009
Revision: 1

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Savannah E87052
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Job Narrative
660-J28285-1

Comments
No additional comments. See below for revised report narrative.

Receipt
All samples were received in good condition within temperature requirements.

8270C
The sample duplicate %RPD for batch 660-76618 was outside of the control limits for fluoranthene. The data are flagged with J3 qualifiers. The sample duplicate %RPD for batch 660-76618 has a result of NC for most compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

The sample duplicate %RPD for batch 660-76626 was outside of the control limits for bis(2-ethyl hexyl) phthalate. The data are flagged with J3 qualifiers. The sample duplicate %RPD for batch 660-76626 has a result of NC for most compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

8081A/8082
The batch sample duplicate %RPD for batch 660-76594(job 660-28254) has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

The sample duplicate %RPD for batch 660-76627 has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

The recovery for TCMX tetrachloro-m-xylene surrogate is outside of control limits for the MB and LCS for batch 660-76627. The recovery for DCB decachlorobiphenyl surrogate is within control limits. The data are flagged with J1 qualifiers.

8141A
The batch matrix spike / matrix spike duplicate (MS/MSD) precision for batch 640-54931 was outside of control limits for diazinon. The associated laboratory control sample (LCS) met acceptance criteria. Sample 660-28254-A1 was used for the MS/MSD. The data are flagged with J3 qualifiers.

SM 3500 CR B
The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76488 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 5210B
The seed correction factor was above the method range of 0.6 to 1.0. SCF =1.01. Results may be biased low.

The sample duplicate %RPD for batch 660-76554 has a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

1664A
The batch matrix spike (MS) recovery for batch 660-76663(job 660-28188) was outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

8151A
Insufficient sample volume was provided to perform matrix spike/matrix spike duplicate (MS/MSD) for batch 660-76768.

The sample duplicate %RPD for batch 660-76598 has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

200.7
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 680-133567(job 660-28233) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

6020
The Method Blank for batch 680-134092 contains i values for As, Cr, Sb. The data are flagged with V qualifiers.

The Method Blank for batch 680-134094 contains i values for Ca, Cr, Sb. The data are flagged with V qualifiers.

The batch matrix spike recovery for batch 680-134094(job 680-45917) was outside of control limits for Mn. The associated laboratory control sample (LCS) and matrix spike duplicate (MSD) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 4500 H+B
The samples were received outside of holding time for pH. The data are flagged with Q qualifiers.

1664A
The batch sample duplicate %RPD for batch 660-76612(job 660-28187) and batch 660-76746(job 660-28123) have a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

300.0
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76981(job 660-28287) were outside of control limits for sulfate. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 2320B
The batch sample duplicate %RPD for batch 660-76653(job 660-28254) has a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

This report was revised on 4-23-09: Per client request, hardness, nickel and zinc were added to the report.

6020
The Method Blank for batch 680-134092 contains an i value for Ni. The data are flagged with V qualifiers.

The Method Blank for batch 680-134094 contains an i value for Ni. The data are flagged with V qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28285-1
Sdg Number: 660-28285

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC/MS Semi VOA		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC Semi VOA		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	V	Indicates the analyte was detected in both the sample and the associated method blank.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28285 Logged in TALS By: Amanda Hanson

Cooler Received on (date) 3/20/09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: see COC Degrees Celsius

4. Number of H2SO4 (sulfuric acid) preserved containers: 10

   All containers pH < 2 ? Yes If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: 10

   All containers pH < 2 ? Yes If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 24

   All containers pH < 2 ? Yes If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: 10

   All containers pH >12 ? Yes If not please comment below:

8. Number of Unpreserved containers: 95

   All containers pH between 6 and 8? Yes If not please comment below:

9. Was chlorine present in any of the unpreserved containers? NO

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	see receipt info page
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	Hex Chrom/pH samples were received on 03/19/09 @ 1856
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	

ANALYTICAL REPORT

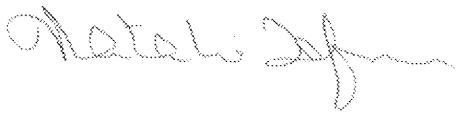
Job Number: 660-28303-1

SDG Number: 660-28303

Job Description: Tallevast-RAP Design

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
4/23/2009 2:19 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/23/2009
Revision: 1

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Savannah E87052
TestAmerica Tallahassee E81005

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

TestAmerica Laboratories, Inc.

Job Narrative
660-J28303-1

Comments
No additional comments. See below for revised report narrative.

Receipt
All samples were received in good condition within temperature requirements.

8270C
The batch sample duplicate %RPD for batch 660-76626(job 660-28285) was outside of the control limits for bis(2-ethyl hexyl) phthalate. The data are flagged with J3 qualifiers. The batch sample duplicate %RPD for batch 660-76626 has a result of NC for most compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

The batch sample duplicate %RPD for batch 660-76618(job 660-28285) was outside of the control limits for fluoranthene. The data are flagged with J3 qualifiers. The batch sample duplicate %RPD for batch 660-76618 has a result of NC for most compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

8081A/8082
The batch sample duplicate %RPD for batch 660-76627(job 660-28285) has a result of NC for all compounds. The sample result and the sample duplicate result are both Non-detect for these compounds. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

The recovery for TCMX tetrachloro-m-xylene surrogate is outside of control limits for the MB and LCS for batch 660-76627. The recovery for DCB decachlorobiphenyl surrogate is within control limits. The data are flagged with J1 qualifiers.

The recovery for DCB decachlorobiphenyl surrogate is outside of control limits for sample 660-28303-1. The recovery for TCMX tetrachloro-m-xylene surrogate is within control limits. The data are flagged with J1 qualifiers.

SM 4500 H+B
The samples were received outside of holding time for pH. The data are flagged with Q qualifiers.

1664A
The batch matrix spike (MS) recovery for batch 660-76663(job 660-28188) was outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

The batch sample duplicate %RPD for batch 660-76612(job 660-28187) and batch 660-76746(job 660-28123) have a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

6020
The Method Blank for batch 680-133647 contained i values for Fe and SB. The data are flagged with V qualifiers.

The Method Blank for batch 680-133650 contained i values for Fe and SB. The data are flagged with V qualifiers.

The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 680-133650(job 680-45772) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

8151A
The surrogate recoveries for the lcs/lcsd for batch 660-76935 failed high, due to the surrogate being spiked at 1/10 the normal concentration. The surrogate recoveries for the samples and the blank were within control limits. The added surrogate was .2ppm instead of 2ppm due to an error in making the surrogate. The final volume was brought down to 1 ml in order to attempt to correct for the surrogate on the analysis end.

Insufficient sample volume was provided to perform matrix spike/matrix spike duplicate (MS/MSD) for batch 660-76935.

300.0
The batch matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-77112(job 660-28307) were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

335.4
The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76954 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 3500 CRB

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 660-76640 were outside of control limits. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

SM 5210B
The sample duplicate %RPD for batch 660-76669 has a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

2320B
The sample duplicate %RPD for batch 660-76653 has a result of NC. The sample result and the sample duplicate result are both Non-detect for this compound. The Laboratory LIMs system flags the %RPD in this scenario as NC, or "not calculated".

This report was revised on 4-23-09: Per client request, hardness, nickel and zinc were added to the report.

6020
The Method Blank for batch 680-133647 contains an i value for Ni. The data are flagged with V qualifiers.

The Method Blank for batch 680-133650 contains an i value for Ni. The data are flagged with V qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28303-1
Sdg Number: 660-28303

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Indicates that the compound was analyzed for but not detected.
GC/MS Semi VOA		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC Semi VOA		
	J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	V	Indicates the analyte was detected in both the sample and the associated method blank.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28503 Logged in TALS By : Amanda Harrison

Cooler Received on (date) 3-20-09 And Opened By (full name): Charles VOLE

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.1°C, 2.4°C, 2.7°C, 2.9°C Degrees Celsius

4. Number of H2SO4 (sulfuric acid) preserved containers: 4

All containers pH < 2 ? YES If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: 4

All containers pH < 2 ? YES If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 4

All containers pH < 2 ? YES If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: 4

All containers pH >12 ? 2 YES If not please comment below:

MW -35 2/ PH=10

8. Number of Unpreserved containers: 33

All containers pH between 6 and 8? YES If not please comment below:

4 / 33

9. Was chlorine present in any of the unpreserved containers? NO

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.1, 2.4, 2.7, and 2.9 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

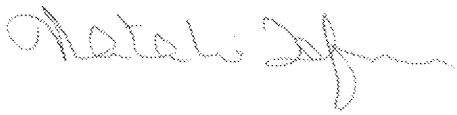
Job Number: 660-28368-1

SDG Number: 660-28368

Job Description: Tallevast-RAP Design

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
3/30/2009 4:28 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
03/30/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

6010B
The batch matrix spike duplicate(MSD) for batch 660-76826 was outside of control limits for Fe. The laboratory control sample(LCS) and matrix spike(MS) are within control limits. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28368-1
Sdg Number: 660-28368

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: CdeO-28368 Logged in TALS By : Amanda Hanson

Cooler Received on (date) 3-24-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: Lab

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 3.4 2.6 °C CW-07 Degrees Celsius

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 32

All containers pH < 2 ? Y/G If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: _____

All containers pH between 6 and 8? _____ If not please comment below:

_____

_____

9. Was chlorine present in any of the unpreserved containers? _____

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.4 and 2.6 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

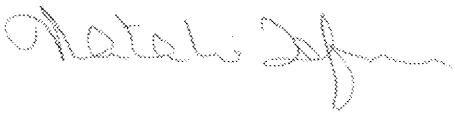
Job Number: 660-28393-1

SDG Number: 660-28393

Job Description: Tallevast- Rap Design

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
3/31/2009 5:24 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
03/31/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

Sample MW-204 was received at pH 7 for metals. The sample was pH corrected in the lab to<2.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28393 Logged in TALS By : Amanda Hanson

Cooler Received on (date) 3/25/09 And Opened By (full name): Robyn Carlson & Pinky Matthews

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 4.0 & 3.1 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 28

All containers pH < 2 ? NO If not please comment below:

MW-204 (Total) ph=7

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: _____

All containers pH between 6 and 8? _____ If not please comment below:

9. Was chlorine present in any of the unpreserved containers? _____

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.0 and 3.1 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28430 Logged in TALS By : Amanda Harrison

Cooler Received on (date) 3-26-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER (lab) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 3.4° C cw-07 *Degrees Celsius*

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

   All containers pH.< 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 16

   All containers pH < 2 ? Y/N/A If not please comment below:

7. Number of NaOH (sodium hydroxide) preserved containers: _____

   All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: _____

   All containers pH between 6 and 8? _____ If not please comment below:

9. Was chlorine present in any of the unpreserved containers? _____

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.4 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

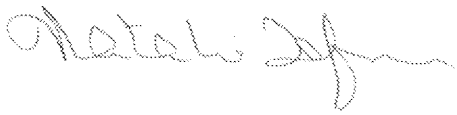
Job Number: 660-28461-1

SDG Number: 660-28461

Job Description: Tallevast-Rap Design

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
4/14/2009 2:27 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/14/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

6010B
The matrix spike/ matrix spike duplicate(MS/MSD) for batch 660-77108 are outside of control limits for Fe. The laboratory control sample (LCS) is within control limits. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28461-1
Sdg Number: 660-28461

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	Received @ 1.8,2.2,1.5,2.2 Degrees C. CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

TestAmerica Laboratories, Inc.
TestAmerica Tampa 6712 Benjamin Road, Suite 100, Tampa, FL 33634
Tel (813) 885-7427 Fax (813) 885-7049 www.testamericainc.com

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

The total metals bottle for sample IWI-1 was received at pH 6. The sample was lab preserved to pH <2.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28506-1
Sdg Number: 660-28506

Lab Section	Qualifier	Description
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28506 Logged in TALS By Amanda Harrison

Cooler Received on (date) 3/31/09 And Opened By (full name): Charles Veliz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.3 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 4/6

   All containers pH < 2 ? NC If not please comment below:

   IWI-1 (total) ph=6

7. Number of NaOH (sodium hydroxide) preserved containers: _____

   All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: _____

   All containers pH between 6 and 8? _____ If not please comment below:

9. Was chlorine present in any of the unpreserved containers? _____

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.3 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

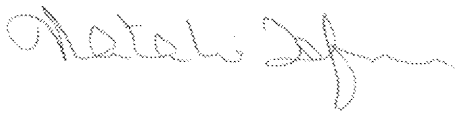
Job Number: 660-28539-1

SDG Number: 660-28539

Job Description: Tallevast - RAP Design

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
4/15/2009 9:38 AM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/15/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

6010B
The batch matrix spike(MS) for batch 660-77377(job 660-28611) is outside of control limits for Fe. The laboratory control sample (LCS) and matrix spike duplicate (MSD) are within control limits. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28539-1
Sdg Number: 660-28539

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28539 Logged in TALS By : Amanda Hannon

Cooler Received on (date) 4-1-09 And Opened By (full name): Charles Volz

1. Shipper (circle one) FEDEX UPS DHL WALK-IN COURIER OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 2.1, 2.3, & 2.0 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

5. Number of HCL (hydrochloric acid) preserved containers: _____

All containers pH < 2 ? _____ If not please comment below:

_____

_____

6. Number of HNO3 (nitric acid) preserved containers: 38

All containers pH < 2 ? Yes If not please comment below:

_____

_____

7. Number of NaOH (sodium hydroxide) preserved containers: _____

All containers pH >12 ? _____ If not please comment below:

_____

_____

8. Number of Unpreserved containers: _____

All containers pH between 6 and 8? _____ If not please comment below:

_____

_____

9. Was chlorine present in any of the unpreserved containers? _____

If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.1, 2.3, and 2.0 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	rec'd 2 samples not on COC MW-15D and MW-115
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

Sample MW-101 dissolved was received at pH 7. The sample was lab preserved to pH <2.

6010B
The matrix spike duplicate (MSD) recovery for batch 660-77383 was outside of the control limit for Fe. The associated laboratory control sample (LCS) met acceptance criteria. The data are flagged with J3 qualifiers.

DATA REPORTING QUALIFIERS

Client: ARCADIS

Job Number: 660-28573-1
Sdg Number: 660-28573

Lab Section	Qualifier	Description
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

PRESERVATION CONFIRMATION FORM

Tampa, FL

JOB NUMBER: 660-28573 Logged in TALS By Amanda Harrison

Cooler Received on (date) 4-2-09 And Opened By (full name): Neal Suban

1. Shipper (circle one) FEDEX UPS DHL WALK-IN (COURIER) OTHER: _____

2. Tracking # _____

3. Temperature of rep. sample or temp blank when opened: 5.0, 3.0, & 5.5 Degrees Celsius CU-07

4. Number of H2SO4 (sulfuric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

5. Number of HCL (hydrochloric acid) preserved containers: _____

   All containers pH < 2 ? _____ If not please comment below:

6. Number of HNO3 (nitric acid) preserved containers: 44

   All containers pH < 2 ? N/O If not please comment below:

   MW-101 (dissolved) ph=7

7. Number of NaOH (sodium hydroxide) preserved containers: _____

   All containers pH >12 ? _____ If not please comment below:

8. Number of Unpreserved containers: _____

   All containers pH between 6 and 8? _____ If not please comment below:

9. Was chlorine present in any of the unpreserved containers? _____

   If yes, which samples? _____

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.0, 3.0, and 5.5 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	Received @ 2.7 Degrees C. CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	

ANALYTICAL REPORT

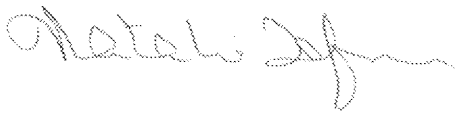
Job Number: 660-28260-1

SDG Number: 660-28260

Job Description: Tallevast Soil Gas Parameters

For:
ARCADIS
6723 Towpath Road
PO BOX 66
Syracuse, NY 13214

Attention: Donald Sauda



Approved for release.
Natalie Tafuni
Project Manager I
4/9/2009 4:53 PM

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/09/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Savannah E87052
TestAmerica Denver E87667

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

April 3, 2009

Case Narrative
Lot D9C200298

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt

Six samples were received under chain of custody on March 21, 2009. The samples were received in good condition at a temperature of 1.8°C.

GC/MS Volatiles – Method 8260B

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high concentrations of target analytes, samples MW-42A (660-28260-1) and MW-128A (660-28260-2) had to be analyzed at a dilution. The reporting limits have been adjusted relative to the dilutions required.

Methylene chloride, a common laboratory contaminant, is present in the method blank associated with QC batch 9085232. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The MS/MSD associated with QC batch 9085232 exhibited spike compound recoveries outside the QC control limits for 2-Chloroethyl vinyl ether, cis-1,3-Dichloropropene, and Vinyl acetate. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	2.6 C CU-07
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Methods: FDEP, DOH Certification #: TestAmerica Savannah E87052
TestAmerica Denver E87667

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
The following sample submitted for volatiles analysis was received with insufficient preservation (pH >2): MW-254A (660-28283-6).

All other samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

April 3, 2009

Case Narrative
Lot D9C210149

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt
Six samples were received under chain of custody on March 21, 2009. The samples were received in good condition at a temperature of 0.2°C.

GC/MS Volatiles – Method 8260B
Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high concentrations of target analytes, samples MW-36A (660-28283-1), MW-127A (660-28283-2), MW-37A (660-28283-3), MW-40A (660-28283-4), EW-105A (660-28283-5), and MW-254A (660-28283-6) had to be analyzed at a dilution. The reporting limits have been adjusted relative to the dilutions required.

Methylene chloride, a common laboratory contaminant, is present in the method blank associated with QC batch 9085232. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with QC batch 9086157 exhibited the percent recovery outside the QC control limits, biased high, for Hexachlorobutadiene. This is an indicator that data may be biased high. As no detectable concentrations of Hexachlorobutadiene are present in the associated samples, corrective action is deemed unnecessary.

The MS/MSD associated with QC batch 9085232 exhibited spike compound recoveries outside the QC control limits for 2-Chloroethyl vinyl ether, cis-1,3-Dichloropropene, and Vinyl acetate. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The MS/MSD associated with QC batch 9086157 exhibited spike compound recoveries and RPD data outside the QC control limits for various compounds. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The (ICAL) Initial Calibration Verification standard associated with QC batch 9086157 exhibited the %Difference (%D) value greater than the allowed criteria, biased high and low, as noted below. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

Ethanol – low Ethyl acetate – high Carbon disulfide - low

A Continuing Calibration Verification (CCV) standard associated with samples in QC batch 9086157 exhibited the %Difference (%D) value >20%, biased high, for Ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.4 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Savannah E87052
TestAmerica Denver E87667

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

TestAmerica Laboratories, Inc.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

Case Narrative
Lot D9C240203

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt
Five samples were received under chain of custody on March 24, 2009. The samples were received in good condition at a temperature of 3.2°C.

GC/MS Volatiles – Method 8260B
Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high concentrations of target analytes, sample EW-108A (660-28305-2) had to be performed at a dilution. The reporting limits have been adjusted relative to the dilution required.

The LCS and MS/MSD associated with QC batch 9089295 exhibited percent recoveries outside the QC control limits, biased high, for 2-Pentanone. As 2-Pentanone is not a target compound of interest, corrective action is deemed unnecessary.

The LCS associated with QC batch 9086157 exhibited a percent recovery outside the QC control limits, biased high, for Hexachlorobutadiene. This is an indicator that data may be biased high. As no detectable concentrations of Hexachlorobutadiene are present in the associated samples, corrective action is deemed unnecessary.

The MS/MSD associated with QC batch 9089295 exhibited percent recoveries outside the QC control limits for various analytes. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The MS/MSD associated with QC batch 9086157 exhibited spike compound recoveries and RPD data outside the QC control limits for various compounds. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The Initial Calibration Verification (ICV) standard associated with QC batch 9089295 exhibited a %Relative Standard Deviation (%RSD) greater than the allowed criteria for Ethanol. The overall mean %RSD is within control limits; therefore, method criteria have been met and corrective action is deemed unnecessary.

The Initial Calibration Verification (ICV) standard associated with QC batch 9086157 exhibited the %Difference (%D) values greater than the allowed criteria, biased high and low, as noted below. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

Ethanol – low Ethyl acetate – high Carbon disulfide – low

A Continuing Calibration Verification (CCV) standard associated with the sample in QC batch 9089295 exhibited a %Difference (%D) value, biased low, for Ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

A Continuing Calibration Verification (CCV) standard associated with samples in QC batch 9086157 exhibited a %Difference (%D) value, biased high, for Ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.9 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Methods: FDEP, DOH Certification #: TestAmerica Savannah E87052
TestAmerica Denver E87667

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

Project Manager

April 6, 2009

Case Narrative
Lot D9C260153

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt
Three samples were received under chain of custody on March 26, 2009. The samples were received in good condition at a temperature of 3.8°C.

GC/MS Volatiles – Method 8260B
Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to analytes present above the linear calibration curve, several samples were analyzed at a dilution. The reporting limits have been adjusted relative to the dilution required.

The compound 2-pentanone was detected above reporting limits in the LCS associated with prep batch 9089295. This is not a compound of interest. Therefore, data was not affected. No further action was required.

The MS/MSD associated with QC batch 9089295 exhibited spike compound recoveries outside the QC control limits for various compounds. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The MS/MSD associated with QC batch 9090161 exhibited spike compound recoveries and RPD data outside the QC control limits for various compounds. In addition, a duplicate MS/MSD pair was analyzed for this same batch and exhibited spike compound recoveries outside the QC control limits for acetone. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The Initial Calibration Verification (ICV) standard associated with QC batch 9090161 exhibited a %Relative Standard Deviation (%RSD) greater than the allowed criteria for ethanol. The overall mean %RSD is within control limits; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect for ethanol.

The Initial Calibration Verification (ICV) standard associated with QC batch 9090161 exhibited the %Difference (%D) values greater than the allowed criteria, biased high and low, as noted below. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

carbon disulfide – low ethyl acetate – high

A Continuing Calibration Verification (CCV) standard associated with the samples in QC batch 9090161 exhibited a %Difference (%D) value, biased low, for chloromethane and biased high for ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and

corrective action is deemed unnecessary. Associated samples were non-detect for these compounds.

A Continuing Calibration Verification (CCV) standard associated with the samples in QC batch 9089295 exhibited a %Difference (%D) value, biased low, for ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	2.6 degrees C CU-07
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ACCREDITED IN ACCORDANCE WITH nelac

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

Case Narrative
Lot D9C270215

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt

Three samples were received under chain of custody on March 27, 2009. The samples were received in good condition at a temperature of 2.5°C.

The laboratory received two containers for sample EW-101A (660-28395-6). The Chain of Custody indicated three containers were submitted. Sufficient volume was available to perform the 8260B analysis requested.

GC/MS Volatiles – Method 8260B

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to analytes present above the linear calibration curve, several samples were analyzed at a dilution. The reporting limits have been adjusted relative to the dilution required.

The MS/MSD associated with QC batch 9090161 exhibited spike compound recoveries and RPD data outside the QC control limits for various compounds. In addition, a duplicate MSMSD pair was run on sample MW-19A (660-28395-1) for this same batch and exhibited spike compound recoveries outside the QC control limits for acetone. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The Initial Calibration Verification (ICV) standard associated with QC batch 9090161 exhibited a %Relative Standard Deviation (%RSD) greater than the allowed criteria for ethanol. The overall mean %RSD is within control limits; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect for ethanol.

The Initial Calibration Verification (ICV) standard associated with QC batch 9090161 exhibited the %Difference (%D) values greater than the allowed criteria, biased high and low, as noted below. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

carbon disulfide – low ethyl acetate – high

A Continuing Calibration Verification (CCV) standard associated with the sample in QC batch 9090161 exhibited a %Difference (%D) value, biased low, for chloromethane and biased high for Ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.1 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	False	one of the unpreserved vials for EW-101A was received empty
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Savannah E87052
TestAmerica Denver E87667

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

Case Narrative
Lot D9C280184

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt
Three samples were received under chain of custody on March 28, 2009. The samples were received in good condition at a temperature of 1.2°C.

GC/MS Volatiles – Method 8260B
The MS/MSD associated with QC batch 9090161 exhibited spike compound recoveries and RPD data outside the QC control limits for various compounds. In addition, a duplicate MSMSD pair was run for this same batch and exhibited spike compound recoveries outside the QC control limits for acetone. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The Initial Calibration Verification (ICV) standard associated with QC batch 9090161 exhibited a %Relative Standard Deviation (%RSD) greater than the allowed criteria for ethanol. The overall mean %RSD is within control limits; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect for ethanol.

The Initial Calibration Verification (ICV) standard associated with QC batch 9090161 exhibited the %Difference (%D) values greater than the allowed criteria, biased high and low, as noted below. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

carbon disulfide – low ethyl acetate – high

A Continuing Calibration Verification (CCV) standard associated with the sample in QC batch 9090161 exhibited a %Difference (%D) value, biased low, for chloromethane. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect for chloromethane.

A Continuing Calibration Verification (CCV) standard associated with samples in QC batch 9090161 exhibited a %Difference (%D) value, biased high, for ethanol. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary. Associated samples were non-detect for ethanol.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.5 degrees C CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

Case Narrative
Lot D9C310151

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt
Two samples were received under chain of custody on March 31, 2009. The samples were received in good condition at a temperature of 4.4°C.

GC/MS Volatiles – Method 8260B
The internal standard, 1,4-Dichlorobenzene, was recovered outside the QC control limits in sample MW-129A (660-28464-2). This anomaly is not matrix related. The sample was reanalyzed outside of hold time to verify the results analyzed within hold time. Both sets of data are reported.

The MS/MSD associated with QC batch 9093244 exhibited spike compound recoveries outside the QC control limits for various compounds. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The MS/MSD analyses associated with QC batch 9096192 exhibited spike compound recoveries outside the QC control limits for various compounds. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The Initial Calibration Verification (ICV) standards associated with QC batches 9093244 and 9096192 exhibited the %Difference (%D) values greater than the allowed criteria, biased high, for Ethyl Acetate. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were observed.

EXECUTIVE SUMMARY - Detection Highlights

D9C310151

PARAMETER	RESULT	REPORTING LIMIT	UNITS	ANALYTICAL METHOD
MW-58A (660-28464-1) 03/26/09 13:32 001				
Acetone	3.4 J	10	ug/L	SW846 8260B

SAMPLE SUMMARY

D9C310151

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
K9C1M	001	MW-58A (660-28464-1)	03/26/09	13:32
K9C1Q	002	MW-129A (660-28464-2)	03/26/09	12:20

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	Received @ 1.5 Degrees C. CU-07
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ACCREDITED IN ACCORDANCE WITH nelac

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

8260B
There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

April 15, 2009

Case Narrative
Lot D9D020286

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt

Seven samples were received under chain of custody on April 2, 2009. The samples were received in good condition at a temperature of 1.9°C.

GC/MS Volatiles – Method 8260B

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high concentrations of target analytes, samples MW-39A (660-28502-1), MW-38A (660-28502-2), IWI-1A (660-28502-4), and EW-UFAG-1A (660-28502-7) had to be performed at dilutions. The reporting limits have been adjusted relative to the dilution required.

No other anomalies were observed.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	2.3 degrees C CU-07
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Natalie Tafuni
Project Manager I
natalie.tafuni@testamericainc.com
04/21/2009

cc: Mr. Joe Houser
Sarah Medearis
Mr. Don Reed
Kathy Thalman
Gary Wroblewski

Methods: FDEP, DOH Certification #: TestAmerica Savannah E87052
TestAmerica Denver E87667

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

Job Narrative
660-J28585-1

Comments
No additional comments.

Receipt
The following sample submitted for volatiles analysis was received with insufficient preservation (pH >2): RW-2A (660-28585-5).

All other samples were received in good condition within temperature requirements.

8260B
The following samples were diluted due to the abundance of non-target analytes: PZ-LSAS-2A, PZ-LSAS-3A, PZ-LSAS-4A, PZ-LSAS-5A, PZ-LSAS-6A. Elevated reporting limits (RLs) are provided.

There are certain compounds which have GCTLs(Groundwater Clean-up Target Levels) which are so low that FDEP acknowledges that the technology is not available to meet those levels. Among those compounds are Acrylonitrile and Benzyl Chloride by method 8260B. As long as the lab is able to meet the FDEP PQL guidance levels in the " Guidance to Selection of Analytical Methods and Evaluation of Practical Quantitation Limits" document, the data will be accepted by FDEP. The GCTL for Acrylonitrile is 0.20 ug/l, and the FDEP PQL guidance level for Acrylonitrile is 20 ug/l.
The GCTL for Benzyl Chloride is 0.060 ug/l, and the FDEP PQL guidance level for Benzyl Chloride is 1.0 ug/l.

ANALYTICAL REPORT

Project Number: 660-28585

TestAmerica Denver Lot #: D9D040124

Natalie Tafuni

TestAmerica Tampa
6712 Benjamin Road, Suite 100
Tampa, FL 33634

TestAmerica Laboratories, Inc

DiLea Griego
Project Manager

April 20, 2009

Case Narrative
Lot D9D040124

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. The test results relate only to the samples in this report.

The test results presented in this report meet all requirements of NELAC, and any exceptions are noted. This report shall not be reproduced, except in full, without written permission from the laboratory.

Sample Arrival and Receipt
Seventeen samples were received under chain of custody on April 4, 2009. The samples were received in good condition at a temperature of 2.4°C.

GC/MS Volatiles – Method 8260B
Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high concentrations of target analytes, several samples had to be performed at dilutions. The reporting limits have been adjusted relative to the dilution required.

MS/MSD analyses were performed on sample MW-7SA (660-28585-2). The MSD exhibited spike compound recoveries outside the QC control limits for chloroethane, dichlorodifluoromethane and vinyl chloride. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Carbon disulfide, ethyl acetate and ethanol were recovered outside the QC control limits, biased high or low, in the Initial Calibration Verification (ICV) standard. This is an indicator that data may be biased high. As no detectable concentrations of these compounds are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were observed.

Quality Control Definitions of Terms

Term	Definition
Batch	A set of up to 20 field samples plus associated laboratory QC samples that are similar in composition (matrix) and that are processed within the same time period with the same reagent and standard lots.
Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD)	A volume of reagent water for aqueous samples or a contaminant-free solid matrix (Ottawa sand) for soil and sediment samples which is spiked with known amounts of representative target analytes and required surrogates. A LCS is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. An LCSD is a second Laboratory Control Sample.
Matrix Spike and Matrix Spike Duplicate (MS/MSD)	A field sample fortified with known quantities of target analytes that are also added to the LCS. Matrix spike duplicate is a second matrix spike sample. MS/MSDs are carried throughout the entire analytical process and are used to determine sample matrix effect on accuracy of the measurement system. The accuracy and precision estimated using MS/MSD is only representative of the precision of the sample that was spiked.
Method Blank	A sample composed of all the reagents (in the same quantities) in reagent water carried through the entire analytical process. The method blank is used to monitor the level of contamination introduced during sample preparation steps.
Surrogate	Organic constituents not expected to be detected in environmental media and are added to every sample and QC at a known concentration. Surrogates are used to determine the efficiency of the sample preparation and the analytical process.
Sample Duplicate	A second aliquot of an environmental sample, taken from the same sample container when possible, that is processed independently with the first sample aliquot. The results are used to assess the effect of the sample matrix on the precision of the analytical process. The precision estimated using this sample is not necessarily representative of the precision for other samples in the batch.
Method Detection Limit "MDL"	The method detection limit is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from replicate analyses of low level standards in a typical representative matrix.
Reporting Limit "RL"	The TestAmerica reporting limit is normally the lowest level at which measurements become quantitatively meaningful, ie., the quantitation limit, which is approximately three times the MDL. Some projects require RLs that are less than the quantitation limit to achieve particular maximum contaminant levels (MCLs) or relevant and appropriate requirements (ARARs), but RLs cannot be less than the statistically determined MDL.

Quality Control Definitions of Qualifiers

Qualifier	Definition
*	Surrogate or Relative Percent Difference (RPD) is outside control limits.
a	Spiked analyte recovery is outside control limits.
B	Organics: Method blank contamination. The associated method blank contains the target analyte at a reportable level. Inorganics: Estimated result. Result is less than the RL
COL	More than 40% difference between the primary and confirmation detector results. The lower of the two results is reported.
DIL	The concentration is estimated or not reported due to dilution.
E	Estimated result. Result concentration exceeds the calibration range.
G	Inorganics: Elevated reporting limit. The reporting limit is elevated due to matrix interference.
J	Organics: Estimated result. Result is less than RL Inorganics: Method blank contamination. The associated method blank contains the target analyte at a reportable level.
L	Serial dilution of a digestate in the analytical batch indicates that physical and chemical interferences are present
N	Spiked analyte recovery is outside stated control limits.
NC	The recovery and/or RPD were not calculated.
ND	The analyte was not detected at the MDL concentration and with a measurable degree of confidence can be said not to be present at or above the RL concentration.
p	Relative percent difference (RPD) is outside stated control limits.
Q	Elevated reporting limit. The reporting limit is elevated due to high analyte levels.
V	General Chemistry: Elevated reporting limit due to limited sample volume.
Wa	Post digestion spike recovery fell between 40-85% due to matrix interference.
Wb	Post digestion spike recovery fell between 115-150% due to matrix interference.
I	Percent recovery is estimated since the results exceeded the calibration range.
T1	A tentatively identified compound that did not generate a spectral match of 80% or greater. Typically called "unknown"
T2	A tentatively identified compound with a spectral match of 80% or better
T3	A tentatively identified compound that was calibrated for by the lab, but not on the client target analyte list.
IC	Diluted due to high inorganic chloride.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Analysis Data Sheet

Lab Name:	TESTAMERICA DENVER	**Client Sample ID:**	MW-7SA(660-28585-2)
Lot/SDG Number:	D9D040124	**MSD Lab Sample ID:**	D9D040124-002D
Matrix:	WATER	**MSD Lab WorkOrder:**	K9LKL1AD
% Moisture:	N/A	**Date/Time Collected:**	04/02/09 16:55
Basis:	Wet	**Date/Time Received:**	04/04/09 08:15
Analysis Method:	8260B	**Date Leached:**	
Unit:	ug/L	**Date/Time Extracted:**	04/07/09 08:26
QC Batch ID:	9097245	**Date/Time Analyzed:**	04/07/09 14:51
MSD Sample Aliquot:	20 mL	**Instrument ID:**	R1
MSD Dilution Factor:	1
