COMPREHENSIVE RESPONSE ACTION TRANSMITTAL FORM & PHASE I COMPLETION STATEMENT

Pursuant to 310 CMR 40.0484 (Subpart D) and 40.0800 (Subpart H)

A. SITE LOCATION:

1. Site Name: GENERAL ELECTRIC CO FMR

2. Street Address: 50 FORDHAM RD

3. City/Town: WILMINGTON 4. ZIP Code: 018870000

☐ 5. Check here if the disposal site that is the source of the release is Tier Classified. Check the current Tier Classification Category:

☐ a. Tier I ☐ b. Tier ID ☐ c. Tier II

B. THIS FORM IS BEING USED TO: (check all that apply)

☐ 1. Submit a **Phase I Completion Statement,** pursuant to 310 CMR 40.0484.

☐ 2. Submit a **Revised Phase I Completion Statement,** pursuant to 310 CMR 40.0484.

☐ 3. Submit a **Phase II Scope of Work,** pursuant to 310 CMR 40.0834.

☐ 4. Submit an **interim Phase II Report.** This report does not satisfy the response action deadline requirements in 310 CMR 40.0500.

☐ 5. Submit a **final Phase II Report and Completion Statement,** pursuant to 310 CMR 40.0836.

☐ 6. Submit a **Revised Phase II Report and Completion Statement,** pursuant to 310 CMR 40.0836.

☐ 7. Submit a **Phase III Remedial Action Plan and Completion Statement,** pursuant to 310 CMR 40.0862.

☐ 8. Submit a **Revised Phase III Remedial Action Plan and Completion Statement,** pursuant to 310 CMR 40.0862.

☐ 9. Submit a **Phase IV Remedy Implementation Plan,** pursuant to 310 CMR 40.0874.

☐ 10. Submit a **Modified Phase IV Remedy Implementation Plan,** pursuant to 310 CMR 40.0874.

☐ 11. Submit an **As-Built Construction Report,** pursuant to 310 CMR 40.0875.

☐ 12. Submit a **Phase IV Status Report,** pursuant to 310 CMR 40.0877.

☐ 13. Submit a **Phase IV Completion Statement,** pursuant to 310 CMR 40.0878 and 40.0879.

Specify the outcome of Phase IV activities: (check one)

☐ a. Phase V Operation, Maintenance or Monitoring of the Comprehensive Remedial Action is necessary to achieve a Permanent or Temporary Solution.

☐ b. The requirements of a Permanent Solution have been met. A completed Permanent Solution Statement and Report (BWSC104) will be submitted to DEP.

☐ c. The requirements of a Temporary Solution have been met. A completed Temporary Solution Statement and Report (BWSC104) will be submitted to DEP.

B. THIS FORM IS BEING USED TO (cont.): (check all that apply)

☐ 14. Submit a **Revised Phase IV Completion Statement,** pursuant to 310 CMR 40.0878 and 40.0879.

☐ 15. Submit a **Phase V Status Report,** pursuant to 310 CMR 40.0892.

☑ 16. Submit a **Remedial Monitoring Report.** (This report can only be submitted through eDEP.)

a. Type of Report: (check one) ☐ i. Initial Report ☑ ii. Interim Report ☐ iii. Final Report

b. Frequency of Submittal: (check all that apply)

☐ i. A Remedial Monitoring Report(s) submitted monthly to address an Imminent Hazard.

☐ ii. A Remedial Monitoring Report(s) submitted monthly to address a Condition of Substantial Release Migration.

☑ iii. A Remedial Monitoring Report(s) submitted every six months, concurrent with a Status Report.

☐ iv. A Remedial Monitoring Report(s) submitted annually, concurrent with a Status Report.

c. Status of Site: (check one) ☐ i. Phase IV ☐ ii. Phase V ☐ iii. Remedy Operation Status ☑ iv. Temporary Solution

d. Number of Remedial Systems and/or Monitoring Programs: 3

A separate BWSC108A, CRA Remedial Monitoring Report, must be filled out for each Remedial System and/or Monitoring Program addressed by this transmittal form.

☐ 17. Submit a **Remedy Operation Status,** pursuant to 310 CMR 40.0893.

☐ 18. Submit a **Status Report to maintain a Remedy Operation Status,** pursuant to 310 CMR 40.0893(2).

☐ 19. Submit a **Transfer and/or a Modification of Persons Maintaining a Remedy Operation Status (ROS),** pursuant to 310 CMR 40.0893(5) (check one, or both, if applicable).

☐ a. Submit a Transfer of Persons Maintaining an ROS (the transferee should be the person listed in Section D, "Person Undertaking Response Actions").

☐ b. Submit a Modification of Persons Maintaining an ROS (the primary representative should be the person listed in Section D, "Person Undertaking Response Actions").

c. Number of Persons Maintaining an ROS not including the primary representative: _____

☐ 20. Submit a **Termination of a Remedy Operation Status,** pursuant to 310 CMR 40.0893(6).(check one)

☐ a. Submit a notice indicating ROS performance standards have not been met. A plan and timetable pursuant to 310 CMR 40.0893(6)(b) for resuming the ROS are attached.

☐ b. Submit a notice of Termination of ROS.

☐ 21. Submit a **Phase V Completion Statement,** pursuant to 310 CMR 40.0894.

Specify the outcome of Phase V activities: (check one)

☐ a. The requirements of a Permanent Solution have been met. A completed Permanent Solution Statement and Report (BWSC104) will be submitted to DEP.

☐ b. The requirements for a Temporary Solution have been met. A completed Temporary Solution Statement and Report (BWSC104) will be submitted to DEP.

☐ 22. Submit a **Revised Phase V Completion Statement,** pursuant to 310 CMR 40.0894.

☑ 23. Submit a **Temporary Solution Status Report,** pursuant to 310 CMR 40.0898.

☐ 24. Submit a **Plan for the Application of Remedial Additives** near a sensitive receptor, pursuant to 310 CMR 40.0046(3).

a. Status of Site: (check one)

☐ i. Phase IV ☐ ii. Phase V ☐ iii. Remedy Operation Status ☐ iv. Temporary Solution

COMPREHENSIVE RESPONSE ACTION TRANSMITTAL FORM & PHASE I COMPLETION STATEMENT
Pursuant to 310 CMR 40.0484 (Subpart D) and 40.0800 (Subpart H)

C. LSP SIGNATURE AND STAMP:

I attest under the pains and penalties of perjury that I have personally examined and am familiar with this transmittal form, including any and all documents accompanying this submittal. In my professional opinion and judgment based upon application of (i) the standard of care in 309 CMR 4.02(1), (ii) the applicable provisions of 309 CMR 4.02(2) and (3), and 309 CMR 4.03(2), and (iii) the provisions of 309 CMR 4.03(3), to the best of my knowledge, information and belief,

> *if Section B indicates that a* ***Phase I, Phase II, Phase III, Phase IV or Phase V Completion Statement*** *and/or a* ***Termination of a Remedy Operation Status*** *is being submitted*, the response action(s) that is (are) the subject of this submittal (i) has (have) been developed and implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal;

> *if Section B indicates that a* ***Phase II Scope of Work*** *or a* ***Phase IV Remedy Implementation Plan*** *is being submitted,* the response action(s) that is (are) the subject of this submittal (i) has (have) been developed in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal;

> *if Section B indicates that an* ***As-Built Construction Report,*** *a* ***Remedy Operation Status,*** *a* ***Phase IV, Phase V or Temporary Solution Status Report,*** *a* ***Status Report to Maintain a Remedy Operation Status,*** *a* ***Transfer or Modification of Persons Maintaining a Remedy Operation Status*** *and/or a* ***Remedial Monitoring Report*** *is being submitted,* the response action(s) that is (are) the subject of this submittal (i) is (are) being implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal.

I am aware that significant penalties may result, including, but not limited to, possible fines and imprisonment, if I submit information which I know to be false, inaccurate or materially incomplete.

1. LSP#: 2062

2. First Name: DAVID G 3. Last Name: AUSTIN

4. Telephone: 9789052114 5. Ext.: 6. Email:

7. Signature: DAVID G AUSTIN

8. Date: 5/8/2023
(mm/dd/yyyy)

9. LSP Stamp:

COMPREHENSIVE RESPONSE ACTION TRANSMITTAL FORM & PHASE I COMPLETION STATEMENT

Pursuant to 310 CMR 40.0484 (Subpart D) and 40.0800 (Subpart H)

D. PERSON UNDERTAKING RESPONSE ACTIONS:

1. Check all that apply: ☐ a. change in contact name ☐ b. change of address ☐ c. change in the person undertaking response actions

2. Name of Organization: LOCKHEED MARTIN CORP

3. Contact First Name: PAUL E 4. Last Name: CALLIGAN

5. Street: 6801 ROCKLEDGE DR MP CCT 246 6. Title: PROJECT MANAGER

7. City/Town: BETHESDA 8. State: MD 9. ZIP Code: 208171877

10. Telephone: 8188470166 11. Ext: 12. Email: paul.calligan@lmco.com

E. RELATIONSHIP TO SITE OF PERSON UNDERTAKING RESPONSE ACTIONS: ☐ Check here to change relationship

☑ 1. RP or PRP ☐ a. Owner ☐ b. Operator ☐ c. Generator ☐ d. Transporter

☑ e. Other RP or PRP Specify: NON-SPECIFIED PRP

☐ 2. Fiduciary, Secured Lender or Municipality with Exempt Status (as defined by M.G.L. c. 21E, s. 2)

☐ 3. Agency or Public Utility on a Right of Way (as defined by M.G.L. c. 21E, s. 5(j))

☐ 4. Any Other Person Undertaking Response Actions Specify Relationship:

F. REQUIRED ATTACHMENT AND SUBMITTALS:

☐ 1. Check here if the Response Action(s) on which this opinion is based, if any, are (were) subject to any order(s), permit(s) and/or approval(s) issued by DEP or EPA. If the box is checked, you MUST attach a statement identifying the applicable provisions thereof.

☐ 2. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the submittal of any Phase Reports to DEP.

☐ 3. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the availability of a Phase III Remedial Action Plan.

☐ 4. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the availability of a Phase IV Remedy Implementation Plan.

☐ 5. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of any field work involving the implementation of a Phase IV Remedial Action.

☐ 6. If submitting a Transfer of a Remedy Operation Status (as per 310 CMR 40.0893(5)), check here to certify that a statement detailing the compliance history for the person making this submittal (transferee) is attached.

☐ 7. If submitting a Modification of a Remedy Operation Status (as per 310 CMR 40.0893(5)), check here to certify that a statement detailing the compliance history for each new person making this submittal is attached.

☐ 8. Check here if any non-updatable information provided on this form is incorrect, e.g. Release Address/Location Aid. Send corrections to: BWSC.eDEP@state.ma.us.

☑ 9. Check here to certify that the LSP Opinion containing the material facts, data, and other information is attached.

G. CERTIFICATION OF PERSON UNDERTAKING RESPONSE ACTIONS:

1. I, PAUL E CALLIGAN, attest under the pains and penalties of perjury (i) that I have personally examined and am familiar with the information contained in this submittal, including any and all documents accompanying this transmittal form, (ii) that, based on my inquiry of those individuals immediately responsible for obtaining the information, the material information contained in this submittal is, to the best of my knowledge and belief, true, accurate and complete, and (iii) that I am fully authorized to make this attestation on behalf of the entity legally responsible for this submittal. I/the person or entity on whose behalf this submittal is made am/is aware that there are significant penalties, including, but not limited to, possible fines and imprisonment, for willfully submitting false, inaccurate, or incomplete information.

>*if Section B indicates that this is a* **Modification of a Remedy Operation Status (ROS),** I attest under the pains and penalties of perjury that I am fully authorized to act on behalf of all persons performing response actions under the ROS as stated in 310 CMR 40.0893(5)(d) to receive oral and written correspondence from MassDEP with respect to performance of response actions under the ROS, and to receive a statement of fee amount as per 4.03(3).

I understand that any material received by the Primary Representative from MassDEP shall be deemed received by all the persons performing response actions under the ROS, and I am aware that there are significant penalties, including, but not limited to, possible fines and imprisonment, for willfully submitting false, inaccurate or incomplete information.

2. By: PAUL E CALLIGAN (Signature) 3. Title: PROJECT MANAGER

4. For: LOCKHEED MARTIN CORP (Name of person or entity recorded in Section D) 5. Date: 5/5/2023 (mm/dd/yyyy)

☐ 6. Check here if the address of the person providing certification is different from address recorded in Section D.

7. Street:

8. City/Town: 9. State: 10. ZIP Code:

11. Telephone: 12. Ext.: 13. Email:

YOU ARE SUBJECT TO AN ANNUAL COMPLIANCE ASSURANCE FEE OF UP TO $10,000 PER BILLABLE YEAR FOR THIS DISPOSAL SITE. YOU MUST LEGIBLY COMPLETE ALL RELEVANT SECTIONS OF THIS FORM OR DEP MAY RETURN THE DOCUMENT AS INCOMPLETE. IF YOU SUBMIT AN INCOMPLETE FORM, YOU MAY BE PENALIZED FOR MISSING A REQUIRED DEADLINE.

CRA REMEDIAL MONITORING REPORT
Pursuant to 310 CMR 40.0800 (SUBPART H)
Remedial System or Monitoring Program: 1 of: 3

BWSC108 -A

Release Tracking Number
3 - 518

A. DESCRIPTION OF ACTIVE OPERATION AND MAINTENANCE ACTIVITY:

1. Type of Active Operation and Maintenance Activity: (check all that apply)

☐ a. Active Remedial System: (check all that apply)
- ☐ i. NAPL Recovery
- ☐ ii. Soil Vapor Extraction/Bioventing
- ☐ iii. Vapor-phase Carbon Adsorption
- ☐ iv. Groundwater Recovery
- ☐ v. Dual/Multi-phase Extraction
- ☐ vi. Aqueous-phase Carbon Adsorption
- ☐ vii. Air Stripping
- ☐ viii. Sparging/Biosparging
- ☐ ix. Cat/Thermal Oxidation
- ☐ x. Other Describe:

☐ b. Active Exposure Pathway Elimination Measure
Active Exposure Pathway Mitigation System to address (check one): ☐ i. Indoor Air ☐ ii. Drinking Water

☐ c. Application of Remedial Additives: (check all that apply)
- ☐ i. To the Subsurface
- ☐ ii. To Groundwater (Injection)
- ☐ iii. To the Surface

☑ d. Active Remedial Monitoring Program Without the Application of Remedial Additives: (check all that apply; Sections C, D and E are not required; attach supporting information, data, maps and/or sketches needed by checking Section G5)
- ☐ i. Reactive Wall
- ☑ ii. Natural Attenuation
- ☑ iii. Other Describe: PASSIVE LNAPL RECOVERY

2. Mode of Operation: (check one)
☐ a. Continuous ☐ b. Intermittent ☐ c. Pulsed ☐ d. One-time Event Only ☑ e. Other: SOCKS DEPLOYED AS NEEDI

3. System Effluent/Discharge: (check all that apply)
- ☐ a. Sanitary Sewer/POTW
- ☐ b. Groundwater Re-infiltration/Re-injection: (check one) ☐ i. Downgradient ☐ ii. Upgradient
- ☐ c. Vapor-phase Discharge to Ambient Air: (check one) ☐ i. Off-gas Controls ☐ ii. No Off-gas Controls
- ☐ d. Drinking Water Supply
- ☐ e. Surface Water (including Storm Drains)
- ☐ f. Other Describe:

B. MONITORING FREQUENCY:

1. Reporting period that is the subject of this submittal: From: 11/2/2022 (mm/dd/yyyy) To: 5/1/2023 (mm/dd/yyyy)

2. Number of monitoring events during the reporting period: (check one)

☐ a. System Startup: (if applicable)
- ☐ i. Days 1, 3, 6, and then weekly thereafter, for the first month.
- ☐ ii. Other Describe:

☑ b. Post-system Startup (after first month) or Monitoring Program:
- ☐ i. Monthly
- ☑ ii. Quarterly
- ☐ iii. Annually
- ☐ iv. Other Describe:

☐ 3. Check here to certify that the number of required monitoring events were conducted during the reporting period.

C. EFFLUENT/DISCHARGE REGULATION: (check one to indicate how the effluent/discharge limits were established)

☐ 1. NPDES: (check one) ☐ a. Remediation General Permit ☐ b. Individual Permit ☐ c. Emergency Exclusion Effective Date of Permit: (mm/dd/yyyy)

☐ 2. MCP Performance Standard MCP Citations(s):

☐ 3. DEP Approval Letter Date of Letter: (mm/dd/yyyy)

☐ 4. Other Describe:

D. WASTEWATER TREATMENT PLANT OPERATOR: (check one)

☐ 1. Required due to Remedial Wastewater Treatment Plant in place for more than 30 days.

a. Name: _____ b. Grade: _____

c. License No: _____ d. License Exp. Date: _____ (mm/dd/yyyy)

☐ 2. Not Required

☐ 3. Not Applicable

E. STATUS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM DURING REPORTING PERIOD: (check all that apply)

☐ 1. The Active Remedial System was functional one or more days during the Reporting Period.

a. Days System was Fully Functional: _____ b. GW Recovered (gals): _____

c. NAPL Recovered (gals): _____ d. GW Discharged (gals): _____

e. Avg. Soil Gas Recovery Rate (scfm): _____ f. Avg. Sparging Rate (scfm): _____

☐ 2. Remedial Additives: (check all that apply)

☐ a. No Remedial Additives applied during the Reporting Period.

☐ b. Enhanced Bioremediation Additives applied: (total quantity applied at the site for the current reporting period)

☐ i. Nitrogen/Phosphorus:

Name of Additive	Date	Quantity	Units

☐ ii. Peroxides:

Name of Additive	Date	Quantity	Units

☐ iii. Microorganisms:

Name of Additive	Date	Quantity	Units

☐ iv. Other:

Name of Additive	Date	Quantity	Units

☐ c. Chemical oxidation/reduction additives applied: (total quantity applied at the site for the current reporting period)

☐ i. Permanganates:

Name of Additive	Date	Quantity	Units

☐ ii. Peroxides:

Name of Additive	Date	Quantity	Units

☐ iii. Persulfates:

Name of Additive	Date	Quantity	Units

☐ iv. Other:

Name of Additive	Date	Quantity	Units

E. STATUS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM DURING REPORTING PERIOD: (cont.)

☐ d. Other additives applied: (total quantity applied at the site for the current reporting period)

Name of Additive	Date	Quantity	Units

Name of Additive	Date	Quantity	Units

☐ e. Check here if any additional Remedial Additives were applied. Attach list of additional additives and include Name of Additive, Date Applied, Quantity Applied and Units (in gals. or lbs.)

F. SHUTDOWNS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM: (check all that apply)

☐ 1. The Active Remedial System had unscheduled shutdowns on one or more occasions during the Reporting Period.

a. Number of Unscheduled Shutdowns: _____ b. Total Number of Days of Unscheduled Shutdowns: _____

c. Reason(s) for Unscheduled Shutdowns: _____

☐ 2. The Active Remedial System had scheduled shutdowns on one or more occasions during the Reporting Period.

a. Number of Scheduled Shutdowns: _____ b. Total Number of Days of Scheduled Shutdowns: _____

c. Reason(s) for Scheduled Shutdowns: _____

☐ 3. The Active Remedial System or Active Remedial Monitoring Program was permanently shutdown/discontinued during the Reporting Period.

a. Date of Final System or Monitoring Program Shutdown: _____
(mm/dd/yyyy)

☐ b. No Further Effluent Discharges.

☐ c. No Further Application of Remedial Additives planned; sufficient monitoring completed to demonstrate compliance with 310 CMR 40.0046.

☐ d. No Further Submittals Planned.

☐ e. Other: Describe: _____

G. SUMMARY STATEMENTS: (check all that apply for the current reporting period)

☐ 1. All Active Remedial System checks and effluent analyses required by the approved plan and/or permit were performed when applicable.

☐ 2. There were no significant problems or prolonged (>25% of reporting period) unscheduled shutdowns of the Active Remedial System.

☑ 3. The Active Remedial System or Active Remedial Monitoring Program operated in conformance with the MCP, and all applicable approval conditions and/or permits.

4. Indicate any Operational Problems or Notes:

QUARTERLY LNAPL GAUGING AND PASSIVE REMOVAL AS NEEDED

☐ 5. Check here if additional/supporting Information, data, maps, and/or sketches are attached to the form.

2. Mode of Operation: (check one)
☐ a. Continuous ☐ b. Intermittent ☐ c. Pulsed ☐ d. One-time Event Only ☐ e. Other:

3. System Effluent/Discharge: (check all that apply)
- ☐ a. Sanitary Sewer/POTW
- ☐ b. Groundwater Re-infiltration/Re-injection: (check one) ☐ i. Downgradient ☐ ii. Upgradient
- ☐ c. Vapor-phase Discharge to Ambient Air: (check one) ☐ i. Off-gas Controls ☐ ii. No Off-gas Controls
- ☐ d. Drinking Water Supply
- ☐ e. Surface Water (including Storm Drains)
- ☐ f. Other Describe:

B. MONITORING FREQUENCY:

1. Reporting period that is the subject of this submittal: From: 11/2/2022 (mm/dd/yyyy) To: 5/1/2023 (mm/dd/yyyy)

2. Number of monitoring events during the reporting period: (check one)

☐ a. System Startup: (if applicable)
- ☐ i. Days 1, 3, 6, and then weekly thereafter, for the first month.
- ☐ ii. Other Describe:

☑ b. Post-system Startup (after first month) or Monitoring Program:
- ☐ i. Monthly
- ☐ ii. Quarterly
- ☑ iii. Annually
- ☐ iv. Other Describe:

☐ 3. Check here to certify that the number of required monitoring events were conducted during the reporting period.

C. EFFLUENT/DISCHARGE REGULATION: (check one to indicate how the effluent/discharge limits were established)

☐ 1. NPDES: (check one) ☐ a. Remediation General Permit ☐ b. Individual Permit ☐ c. Emergency Exclusion Effective Date of Permit: (mm/dd/yyyy)

☐ 2. MCP Performance Standard MCP Citations(s):

☐ 3. DEP Approval Letter Date of Letter: (mm/dd/yyyy)

☐ 4. Other Describe:

D. WASTEWATER TREATMENT PLANT OPERATOR: (check one)

☐ 1. Required due to Remedial Wastewater Treatment Plant in place for more than 30 days.

a. Name: _____ b. Grade: _____

c. License No: _____ d. License Exp. Date: _____ (mm/dd/yyyy)

☐ 2. Not Required

☐ 3. Not Applicable

E. STATUS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM DURING REPORTING PERIOD: (check all that apply)

☐ 1. The Active Remedial System was functional one or more days during the Reporting Period.

a. Days System was Fully Functional: _____ b. GW Recovered (gals): _____

c. NAPL Recovered (gals): _____ d. GW Discharged (gals): _____

e. Avg. Soil Gas Recovery Rate (scfm): _____ f. Avg. Sparging Rate (scfm): _____

☐ 2. Remedial Additives: (check all that apply)

☐ a. No Remedial Additives applied during the Reporting Period.

☐ b. Enhanced Bioremediation Additives applied: (total quantity applied at the site for the current reporting period)

☐ i. Nitrogen/Phosphorus:

Name of Additive	Date	Quantity	Units

☐ ii. Peroxides:

Name of Additive	Date	Quantity	Units

☐ iii. Microorganisms:

Name of Additive	Date	Quantity	Units

☐ iv. Other:

Name of Additive	Date	Quantity	Units

☐ c. Chemical oxidation/reduction additives applied: (total quantity applied at the site for the current reporting period)

☐ i. Permanganates:

Name of Additive	Date	Quantity	Units

☐ ii. Peroxides:

Name of Additive	Date	Quantity	Units

☐ iii. Persulfates:

Name of Additive	Date	Quantity	Units

☐ iv. Other:

Name of Additive	Date	Quantity	Units

E. STATUS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM DURING REPORTING PERIOD: (cont.)

☐ d. Other additives applied: (total quantity applied at the site for the current reporting period)

Name of Additive	Date	Quantity	Units

Name of Additive	Date	Quantity	Units

☐ e. Check here if any additional Remedial Additives were applied. Attach list of additional additives and include Name of Additive, Date Applied, Quantity Applied and Units (in gals. or lbs.)

F. SHUTDOWNS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM: (check all that apply)

☐ 1. The Active Remedial System had unscheduled shutdowns on one or more occasions during the Reporting Period.

a. Number of Unscheduled Shutdowns: _____ b. Total Number of Days of Unscheduled Shutdowns: _____

c. Reason(s) for Unscheduled Shutdowns: _____

☐ 2. The Active Remedial System had scheduled shutdowns on one or more occasions during the Reporting Period.

a. Number of Scheduled Shutdowns: _____ b. Total Number of Days of Scheduled Shutdowns: _____

c. Reason(s) for Scheduled Shutdowns: _____

☐ 3. The Active Remedial System or Active Remedial Monitoring Program was permanently shutdown/discontinued during the Reporting Period.

a. Date of Final System or Monitoring Program Shutdown: _____
(mm/dd/yyyy)

☐ b. No Further Effluent Discharges.

☐ c. No Further Application of Remedial Additives planned; sufficient monitoring completed to demonstrate compliance with 310 CMR 40.0046.

☐ d. No Further Submittals Planned.

☐ e. Other: Describe: _____

G. SUMMARY STATEMENTS: (check all that apply for the current reporting period)

☐ 1. All Active Remedial System checks and effluent analyses required by the approved plan and/or permit were performed when applicable.

☐ 2. There were no significant problems or prolonged (>25% of reporting period) unscheduled shutdowns of the Active Remedial System.

☑ 3. The Active Remedial System or Active Remedial Monitoring Program operated in conformance with the MCP, and all applicable approval conditions and/or permits.

4. Indicate any Operational Problems or Notes:

VOLUNTARY INDOOR AIR SAMPLING AS NEEDED.

☐ 5. Check here if additional/supporting Information, data, maps, and/or sketches are attached to the form.

SECTION 1
INTRODUCTION

AECOM Technical Services, Inc. has prepared this Post-temporary Solution Status Report Number 12 on behalf of Lockheed Martin Corporation in fulfillment of the requirements of Post-temporary Solution Operation, Maintenance, and/or Monitoring, under the Massachusetts Contingency Plan, 310 Code of Massachusetts Regulations 40.0897. This report also was prepared in accordance with the Temporary Solution Statement (AECOM Technical Services, Inc., 2017a) submitted in May 2017 for Release Tracking Number 3-0518, which is located at the former General Electric Company Facility, 50 Fordham Road, Wilmington, Massachusetts (site). The site location is depicted on Figure 1-1.

This report is being submitted electronically via eDEP, the electronic filing site for the Massachusetts Department of Environmental Protection, along with the Comprehensive Response Action Transmittal and Phase 1 Completion Statement (Bureau of Waste Site Cleanup BWSC-108) and the Remedial Monitoring Report form, which provide additional responsible party and Licensed Site Professional certifications.

1.1 BACKGROUND

Contamination of the Stickney Well, a currently inactive public supply well for the Town of North Reading, was discovered in the late 1970s. Subsequent investigations of multiple surrounding properties, including the former General Electric property, began in the early 1980s. On October 9, 1987, prior to the adoption of the Massachusetts Contingency Plan in 1988, the Massachusetts Department of Environmental Quality Engineering (subsequently Massachusetts Department of Environmental Protection) classified the former General Electric facility as a Priority Disposal Site. Under the Massachusetts Contingency Plan (Massachusetts Department of Environmental Protection, 2014), the site is a Tier 1 Classified site, under Release Tracking Number 3-0518, with four original operable units, as listed below and further defined in previous reports submitted to the Massachusetts Department of Environmental Protection.

- Operable Unit-1—Former Tank Farm source area (includes Pump House/Vault and Oil House) and adjacent Eastern Parking Lot
- Operable Unit-2—Former Tank Farm source area and downgradient groundwater plume both on- and off-property
- Operable Unit-3—Storm water/Wastewater Outfalls 001 and 002
- Operable Unit-4—Former Tank K Source Area and immediately downgradient groundwater plume

Areas relating to sediment at storm water/wastewater Outfalls 001 and 002 within Operable Unit-3 have been resolved and closed via a partial Response Action Outcome (Class A-2) submitted in December 2004 (TRC Companies, Inc., 2004). The former Tank K area that comprised Operable Unit-4 has been resolved and closed via a partial Response Action Outcome (Class A-2) dated November 9, 2010 (TRC Companies, Inc., 2010). The remaining two areas, Operable Unit-1 (petroleum contamination in former Tank Farm and Eastern Parking Lot areas) and Operable Unit-2 (chlorinated volatile organic compounds in former Tank Farm and downgradient groundwater plume), make up Release Tracking Number 3-0518. Figure 1-2 depicts an overview of the disposal site, including relevant site features, and Figure 1-3 depicts all monitoring wells located within the site boundary and in the general vicinity of the site.

A Tier 1A Permit was in place from 1999 until a Remedy Operation Status Opinion was filed on April 20, 2006 (TRC Companies, Inc., 2006). Lockheed Martin Corporation and AECOM Technical Services, Inc., determined on February 28, 2013, that the requirements to maintain Remedy Operation Status were no longer being met, and therefore submitted the required Remedy Operation Status Termination Notice and a Tier 1 Permit Extension Application on March 27, 2013, returning the site to Phase II/Phase III status under the Massachusetts Contingency Plan (AECOM Technical Services, Inc., 2013). On October 10, 2014, Lockheed Martin Corporation submitted a Tier Classification Extension (AECOM Technical Services, Inc., 2014) that was approved by the Massachusetts Department of Environmental Protection, extending the Tier Classification deadline to May 3, 2017. On May 2, 2017, Lockheed Martin Corporation electronically submitted to the Massachusetts Department of Environmental Protection the required reports including a Phase II Comprehensive Site Assessment with a Method 3 Risk Characterization (AECOM Technical Services, Inc., 2017b), a Phase III Remedial Action Plan (AECOM Technical Services, Inc., 2017c), and a Temporary Solution Statement (AECOM Technical Services, Inc., 2017a). The Massachusetts

Department of Environmental Protection acknowledged receipt of the reports on May 2, 2017, via electronic stamp on the transmittal form. Currently, the site is in Temporary Solution status and, therefore, Post-temporary Solution Status and Remedial Monitoring Reports are required to be submitted to the Massachusetts Department of Environmental Protection every six months, by May 2 and November 2 of each year, with evaluations of the Temporary Solution conducted every five years.

Additional details related to Release Tracking Number 3-0518 (comprehensive release history, site assessment, and remedial activities completed) can be found in reports previously submitted to the Massachusetts Department of Environmental Protection, specifically the Phase II Comprehensive Site Assessment (AECOM Technical Services, Inc., 2017b), Phase III Remedial Action Plan (AECOM Technical Services, Inc., 2017c), and Temporary Solution Statement (AECOM Technical Services, Inc., 2017a).

1.2 OBJECTIVE

The objective of this Post-temporary Solution Status Report Number 12 is to document the monitoring activities conducted at the site during the six-month reporting period of November 2022 through May 2023, in accordance with the operations, maintenance, and/or monitoring plan detailed in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection in May 2017 and the updated post-temporary solution operation, maintenance, and/or monitoring groundwater monitoring plan in Post-temporary Solution Status Report Number 10 and Periodic Review of the Temporary Solution dated May 4, 2022.

1.3 LIST OF CONTACTS

This section identifies the potentially responsible party, the Licensed Site Professional-of-record, and the owner of the site.

Potentially Responsible Party:

Lockheed Martin Corporation
6801 Rockledge Drive
MP CCT246
Bethesda, MD 20817
Contact: Mr. Paul E. Calligan
Phone: (240) 687-1813

LSP-of-Record:

AECOM Technical Services, Inc.
250 Apollo Drive, Chelmsford, MA 01824
Contact: Mr. David Austin (licensed site professional license number 2062)
Phone: (978) 905-2114

Current Property Owner:

Hilco Redevelopment Partners (HRP)
99 Summer Street, Suite 1110
Boston, MA 02110
www.hilcoredev.com
Contacts: Ms. Julianna Connolly (617) 240-8695 and Mr. Eric Darci (617) 308-3659

1.4 REPORT ORGANIZATION

This Post-temporary Solution Status Report is organized as follows:

- **Section 2**—provides a description of the type and frequency of monitoring/field activities conducted during this reporting period, plus a statement of compliance with the conditions of the activity and use limitation in place at the site.
- **Section 3**—presents a description of the comprehensive monitoring well gauging program as well as the resulting measurements and updated groundwater contours based on these measurements.
- **Section 4**—presents the groundwater laboratory analytical results and data validation and includes an evaluation of the field and analytical data presented. An evaluation of the performance of the remedial monitoring program is also presented.
- **Section 5**—provides a description of the effective institutional controls in place at the site.
- **Section 6**—provides a description of conditions identified during the monitoring period, which may be affecting the performance of the remedial action.
- **Section 7**—provides a description of modifications made to the monitoring program.
- **Section 8**—provides a description of the schedule for future monitoring activities.
- **Section 9**—provides the conclusions and Licensed Site Professional Opinion regarding this report.
- **Section 10**—provides a discussion of the public notification requirements for the site and copies of any required notifications.
- **Section 11**—provides a list of references.

SECTION 2
MONITORING AND FIELD ACTIVITIES

The Post-temporary Solution Operations, Maintenance, and/or Monitoring (OMM) Program continued during this reporting period in accordance with the monitoring plan presented in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection (MassDEP) on May 2, 2017, and the updated Post-temporary Solution OMM annual groundwater monitoring plan as Table 10-2 in Post-Temporary Solution Status Report Number 10 and Periodic Review of the Temporary Solution dated May 4, 2022. The activities completed as part of the OMM Program during this reporting period of November 2022 to May 2023 are discussed below.

2.1 GROUNDWATER SAMPLING

The annual groundwater-gauging and subsequent groundwater sampling event concluded in September-October 2022 are summarized below. These activities are reported in this status report as opposed to the November 2022 status report based on receipt of the laboratory analytical results in October 2022 with data validation completed in November 2022.

2.1.1 Site-Wide Water Level Measurements – September 27, 2022

On September 27, 2022, prior to commencing the groundwater sampling event, AECOM Technical Services, Inc. (AECOM) measured depth to water in all on-site and off-site monitoring wells to be sampled, along with a number of additional monitoring wells to generate representative groundwater elevation contour maps. AECOM also obtained measurements of surface water at 9 well locations where standing water was present. In addition, AECOM obtained surface water elevations from the pond on Concord Street east of the site and northeast of the STM-3 wells, and from two stream gauges, SG-1 in the wetlands north of the Eastern Parking Lot (EPL) and SG-2 adjacent to the Ipswich River on the Wilmington Masonry property. Table 2-1 presents a summary of water levels measured along with the resulting groundwater and surface water elevations. AECOM purged the standard Water FLUTes™ on September 26, 2022 to equilibrate the water levels prior to the site-wide measurements on September 27, 2022. AECOM measured the water levels within the

Shallow Water FLUTes™ using the procedure provided by FLUTe™. The field records from the site-wide water level measurement event are included in Appendix A. An evaluation of the measurements collected is included in Section 3 of this report.

2.1.2 Groundwater-Sampling Event – September-October 2022

From September 28 to October 6, 2022, AECOM collected groundwater samples from a comprehensive list of the site-wide monitoring wells in accordance with the Post-temporary Solution OMM Plan. Table 2-2 details the September-October 2022 updated annual groundwater monitoring plan. This scope was executed without deviation. Figure 1-3 shows all monitoring well locations sampled in September-October 2022.

All conventional monitoring wells along with shallow Water FLUTes^{TM} (AE-26R, AE-28R, and AE-29R) and continuous multi-channel tubing (AE-101R and TRC-301R) intervals were purged and sampled with either a peristaltic pump or a bladder pump using low-flow techniques. All standard Water FLUTe^{TM} intervals were purged and sampled using compressed gas. Purging and sampling was conducted in accordance with United States Environmental Protection Agency (USEPA) Region 1 *Low Stress (low flow) Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells* (USEPA, January 2010, revised September 2017).

Groundwater quality parameters (temperature, pH, specific conductance, dissolved oxygen, and oxidation-reduction potential) were measured during purging at all wells using a YSI water quality meter with flow through cell and a separate Geotech turbidity meter. These September-October 2022 groundwater quality parameter data are summarized in Table 2-3. Field records (water level forms, calibration logs, groundwater-sampling forms, and field logbook notes) from the sampling event are provided in Appendix A.

All samples were collected into laboratory-supplied glassware and either picked up by the lab courier or shipped to each laboratory in accordance with standard chain-of-custody procedures. Samples were analyzed for volatile organic compounds with select samples analyzed by area for additional site chemical(s) of concern (COC), including 1,4-dioxane, total and dissolved arsenic, and extractable and volatile petroleum hydrocarbons. A focused group of samples was analyzed to evaluate monitored natural attenuation processes that may be affecting the COC at the site. These select samples were analyzed for some or all the following: chloride, the terminal electron acceptor

processes (e.g., dissolved iron, manganese, nitrate, nitrite, sulfate, sulfide), total organic carbon, and dissolved gases including hydrogen, ethane, ethene, methane, propane, and acetylene, as well as compound-specific isotope analyses, and microbial analyses. Groundwater samples were submitted to Phoenix Environmental Laboratories, Pace Analytical Gulf Coast, and Microbial Insights. Groundwater analyses are detailed in Table 2-2. The analytical results are discussed in Section 5 of this report.

2.2 MONITORING WELL REPAIRS

During water level measurements on September 27, 2022, AECOM identified damage to the flush mount roadbox at monitoring well AE-111R on the YRC Freight property. AECOM barricaded the immediate area around AE-111R to prevent further damage to the roadbox, and to reduce potential hazard for trucks at the YRC property. AECOM is working to hire a subcontractor to replace the flush mount roadbox and concrete pad at AE-111R. This activity will be summarized in a future status report once the work has been completed.

2.3 INVESTIGATION-DERIVED WASTE MANAGEMENT

During the groundwater-sampling event completed in October 2022, four 55-gallon drums of purge water and decontamination rinse water were generated. This investigation-derived waste (IDW) was properly containerized and stored at a central staging area on-site, pending characterization and off-site disposal in accordance with Lockheed Martin Corporation procedures. Similar to past years, this IDW was characterized as hazardous waste based on the elevated trichloroethene and tetrachloroethene concentrations. Clean Harbors Environmental Services (CHES) removed the drums under a uniform hazardous waste manifest on March 27, 2023. A copy of the manifest documenting receipt at the CHES Braintree, MA facility on March 27, 2023, is included in Appendix B.

SECTION 3
GROUNDWATER FLOW EVALUATION

AECOM Technical Services, Inc. (AECOM) conducted a site-wide round of water level measurements on September 27, 2022, prior to commencing the groundwater-sampling event. Table 2-1 presents a summary of all water levels measured along with the resulting groundwater and surface water elevations.

Groundwater contours were developed for the overburden (approximately 0 to 60 feet (ft) below ground surface (bgs)), and bedrock (approximately 61 to 250 ft bgs) intervals. Although the 0 to 60 ft bgs interval includes both overburden and shallow bedrock groundwater elevations, this is consistent with the conceptual site model of bedrock groundwater in the Eastern Parking Lot (EPL) discharging to the deep overburden beneath the wetlands. The bedrock interval contour consists of only bedrock groundwater elevations (except for well AE-105D, which is screened in deep overburden from 73 to 78 ft bgs). Groundwater piezometric contours generated from the groundwater elevations summarized in Table 2-1 are depicted on Figures 3-1 and 3-2.

The groundwater contours are consistent with previous depictions that show shallow (0 to 60 ft bgs) groundwater generally flowing to the east-northeast on the subject property, then trending more eastward beneath the wetlands, and finally southeast at Concord Street towards the Ipswich River. The deep (61 to 250 ft bgs) interval shows groundwater flowing generally to the east-northeast from the EPL and to the east-southeast beneath the wetlands.

The groundwater contour maps (Figures 3-1 and 3-2) include elevations from 15 wells (AE-106-S-M-D, AE-106-R1-R5, and AE-111-R1-R7) on the YRC Freight (YRC) property measured on September 27, 2022. The contours generated during the September 2022 event are based on a smaller data set compared to the groundwater contours from 2018 and 2019, when YRC had concurrently conducted water level measurements of wells on its property in addition to the 15 measured in 2022.

Because the YRC property is located on a bedrock knob that is higher in elevation than surrounding areas, natural radial groundwater flow from the YRC property is typically observed. The groundwater contours derived from the September 27, 2022 site-wide measurements are similar to previous years and indicate radial flow from the YRC property. As shown in Figures 3-1 and 3-2, this radial flow from YRC causes diversion of flow from the eastern portion of the Hilco Redevelopment Partners property around the YRC property. A review of the January 2023 *Remedy Operation Status/Remedial Monitoring Report* for the YRC site (Release Tracking Number 3-2363) indicates that the groundwater recirculation system was not operational at YRC during the September 27, 2022 gauging event. Groundwater recirculation was re-started in November 2022 at the YRC property. The current remedial activities involve groundwater recirculation and groundwater monitoring (CCC Environmental Services, 2023). A groundwater contour map provided in the January 2023 *YRC Remedy Operation Status/Remedial Monitoring and RAM Status Report* indicates bedrock groundwater flow on October 1, 2022, within the YRC treatment area, was to the southeast consistent with previous observations during non-pumping conditions (CCC Environmental Services, 2023).

SECTION 4
EVALUATION OF GROUNDWATER QUALITY CONCENTRATION TRENDS

This section provides an evaluation of the concentration trends and distribution of the chemicals of concern (COC) in site groundwater: arsenic, 1,4-dioxane (1,4-D), petroleum hydrocarbons, and chlorinated volatile organic compounds (CVOCs).

The Massachusetts Department of Environmental Protection (MassDEP) has established three categories for groundwater within the Massachusetts Contingency Plan (MCP, 310 Code of Massachusetts Regulations 40.0932) that relate to the following types of groundwater exposures:

- GW-1 applies to groundwater assumed to be a current or potential source of drinking water.
- GW-2 applies to groundwater considered to be a potential source of vapors that could migrate into building air.
- GW-3 applies to all groundwaters in the Commonwealth since it is assumed that all groundwaters eventually discharge to surface water.

The site is located within an Interim Wellhead Protection Area for the inactive North Reading Stickney public water supply (PWS) well and a Zone II for nine emergency backup PWS wells in Reading (Revay Well #1, Well #2, Well #3, B Line Well, Town Forest, Well #82-20, Well #66-8, Well #13, and Well #15). Therefore, site groundwater is categorized as GW-1.

A portion of site groundwater, which has an average depth less than 15 feet (ft) below ground surface (bgs) and is within 30 ft of Building 1/1A at 50 Fordham Road, is categorized as GW-2. Additionally, site groundwater within 30 ft of occupied buildings along Concord Street, where the average depth to groundwater is less than 15 ft bgs, is categorized as GW-2.

All site groundwater is categorized as GW-3.

4.1 QUALITY ASSURANCE AND QUALITY CONTROL

In September 2022, AECOM Technical Services, Inc. collected groundwater samples from 106 monitoring wells/screens. Of the 106 locations, 95 were analyzed for volatile organic compounds (VOCs) with select samples analyzed for additional parameters, as detailed in Table 2-2. Upon receipt of the laboratory analytical reports, the data contained in each report was validated and reviewed for compliance with the MassDEP Compendium of Analytical Methods (CAM) performance standards, as detailed in Policy WSC-02-3209 (MassDEP, 2010). Results of the validation are discussed in detail in the data validation memoranda prepared with each laboratory data package included in Appendix C.

The results of the validation of the chemical data indicate that the data are valid as reported and may be used for decision-making purposes. All of the data were accepted, with qualifiers added where required. Most of the VOC data were qualified as estimated (J or UJ) due to laboratory quality control acceptance criteria for initial/continuing calibrations, response factors, percent differences, matrix spike/matrix spike duplicates, and/or duplicate samples being out of range.

The analytical results met the requirements for "presumptive certainty" status for all compounds for which there is a CAM protocol under the MCP. See Appendix C for further details.

4.2 ANALYTICAL RESULTS – ARSENIC

A summary of the 2016-2022 arsenic analytical results is presented in Table 4-1. The arsenic concentrations are consistent from 2016 through 2022. The total and dissolved arsenic results are similar in all wells analyzed indicating that the arsenic present is predominantly dissolved arsenic. One exception is the total arsenic concentration of 522 micrograms per liter (µg/L) versus dissolved concentration of 172 µg/L in well AE103S. The dissolved concentration is similar to past results while the total concentration is more than double the historical results suggesting the result may be anomalous. This will be monitored in future sampling events. Seven of the 22 wells sampled had dissolved and total arsenic concentrations above the GW-1 standard of 10 (µg/L) in 2022. The 2017-2022 dissolved arsenic plumes in groundwater in overburden are presented in Figure 4-1. The extent of the 2022 plume is the same with concentrations on the same order of magnitude as from 2017 to 2021, with insignificant differences. The 2022 arsenic plume in overburden extends to well MW-4A where the arsenic concentration has reached the GW-1 standard but is similar to historical

concentrations in this well (increase of 1 µg/L from 2021). The arsenic plume in bedrock is not presented as the arsenic concentrations in bedrock have been mostly non-detect or below the GW-1 standard of 10 µg/L. Two wells in bedrock (TRC-301R-4 and STM-8R-1) have concentrations above GW-1 standard. The 2022 concentrations in these wells are similar to historical results as shown in Table 4-1.

Concentration trend graphs of the dissolved arsenic results from all 22 wells sampled in September-October 2022 are presented in Appendix D. The graphs include all available historical dissolved arsenic results for these wells. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 4-2. Thirteen monitoring wells have enough data from which to generate statistical trends. A downward trend (at 80% and 90% confidence levels) is noted in five monitoring wells. These include three overburden wells: AE-03 and GZA-10 at the Eastern Parking Lot (EPL), and AE-105S in the wetland, plus two bedrock wells: TRC-301R-4 in the wetland, and STM-8R-1 at Transect C. An upward trend (at 80% and 90% confidence levels) is noted in three monitoring wells: AE-26R-1 and GZA-101R in the Building 1 Tank F area, and MW-4A in the wetland. In each of these wells the concentrations remain at the same order of magnitude and below the GW-1 standard in each well except MW-4A where the concentration is equal to the GW-1 standard. The remaining five monitoring wells (AE-102M, AE-103S, GZA-6, GZA-105S, and TRC-102) show no trend or non-significant trends.

Based on these results, dissolved arsenic concentrations are similar to past results. No significant upward trends are evident. The 2022 plume geometry is like the 2016-2021 plumes and is stable in the overburden and bedrock intervals.

4.3 ANALYTICAL RESULTS – 1,4-DIOXANE

A summary of the 2016-2022 1,4-D analytical results is presented in Table 4-3. The 1,4-D concentrations are of the same order of magnitude from 2016 to 2022 in all wells sampled in 2022. A total of 26 of the 35 wells show 1,4-D concentrations above the GW-1 standard of 0.3 µg/L in 2022. The 2017-2022 1,4-D plumes in overburden groundwater are presented in Figure 4-2. The extent of the overburden plume is the same with concentrations fluctuating within the same order of magnitude from 2017 to 2022. The 2022 1,4-D plume in bedrock groundwater (upper, middle, and lower bedrock combined) is presented in Figure 4-3. For reference, the 2016-2021 1,4-D plumes in

upper, middle, and lower bedrock are included in Appendix E. The extent of the bedrock plume is the same with concentrations fluctuating within the same order of magnitude from 2016-2022.

Concentration trend graphs of the 1,4-D results from all wells sampled in September-October 2022 are included on the CVOC trend graphs presented in Appendix D. The graphs include all available historical 1,4-D results for the wells that were analyzed via United States Environmental Protection Agency SW-846 Method 8270 or 8270 selective ion monitoring. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 4-7. Thirty-two monitoring wells sampled have enough data from which to generate statistical trends. Nine wells, mostly in overburden in the EPL, Transect A, wetland/Transect B, and Transect C, show a downward trend (at 80% or at both 80% and 90% confidence levels). Six wells, mostly in Transect A with one well at Building 1, show an upward trend (at 80% or at both 80% and 90% confidence levels). In each of the six wells with upward trends, the concentrations remain at the same order of magnitude. The remaining 17 of 32 wells show no trend or non-significant trends.

Based on these results, 1,4-D concentrations are of the same order of magnitude as past results. The 2022 plume geometry is like the 2016-2021 plumes and is stable in the overburden and bedrock intervals.

4.4 ANALYTICAL RESULTS – PETROLEUM HYDROCARBONS

A summary of the 2016-2022 extractable petroleum hydrocarbon (EPH) and volatile petroleum hydrocarbon (VPH) analytical results is presented in Table 4-4. The EPH and VPH concentrations are similar from 2016 to 2022 in all wells with changes discussed herein. Petroleum light non-aqueous phase liquid (LNAPL) has been identified near the former Tank Farm and EPL. Since 2010, the periodic presence of LNAPL has been limited to wells CW-1 and CW-2 where the bedrock dips to the east beneath the EPL. Sampling for EPH and VPH is being conducted to monitor the levels of petroleum hydrocarbons present in a focused group of 10 wells (AE-03, AE-04, GZA-105S, GZA-105D, TRC-102, AE-100R-1, GZA-102S, PZ-2S, TRC-101, and TRC-103) immediately surrounding CW-1 and CW-2. Historically, several EPH and VPH compounds including various polycyclic aromatic hydrocarbons (PAHs), benzene, toluene, ethylbenzene, xylenes (BTEX), naphthalene, and hydrocarbons have been detected at concentrations below the GW-1 standard. Detected concentrations above GW-1 standards from 2016 to 2021 include various PAHs and hydrocarbon ranges, and toluene in select wells. In 2022, the only exceedance of a GW-1

standard was C5-C8 hydrocarbons (700 µg/L) in well AE-100R-1. This concentration is double the highest historical concentration at AE-100R-1; however, isolated spikes such as these have been detected in wells AE-100R-1, GZA-105D, and TRC-101 in past years. In each instance, the hydrocarbon concentrations reduced below the GW-1 standard or were non-detect during the next sampling event. As such, it is anticipated that the elevated detection in AE-100R-1 in 2022 will also be lower in future sampling rounds.

In 2022, the detected concentration of C9-C10 hydrocarbons were equal to or below the GW-1 standard for the first time since 2016 at wells AE-03 (200 µg/L) and TRC-101 (190 µg/L).

There were no exceedances of GW-2 or GW-3 standards for EPH/VPH compounds in 2022.

Concentration trend graphs of the petroleum results from the 10 wells sampled in September-October 2022 are presented in Appendix D. The graphs depict BTEX, methyl-tertiary-butyl ether (MTBE), naphthalene, and calculated VPH fractions of all available historical results for these wells. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 4-5. The BTEX, MTBE, and naphthalene, where detected, are observed at low concentrations below GW-1, GW-2, and GW-3 standards and have been for the past decade 2012 through 2022. Therefore, this text summarizes only the trend graph results for the calculated VPH fraction data. For the nine wells with enough VPH fraction data to run statistics, an upward trend at both 80% and 90% confidence levels is noted in two wells, PZ-2S and TRC-101. In both of these wells, the 2016-2022 hydrocarbon concentrations are of the same order of magnitude and are less than the GW-1 standard. Downward trends (at 80% or at both 80% and 90% confidence levels) are noted in five wells (AE-03, AE-04, GZA-105D, GZA-105S, and TRC-102) in the EPL area. The remaining two wells show non-significant trends for calculated VPH fractions.

Given that the area being monitored for EPH/VPH is limited to a small number of wells in the western edge of the EPL, plume figures are no longer included in these reports.

Based on these results, petroleum concentrations are like past results with fluctuations in concentrations of select compounds and some downward trends at this time.

4.5 ANALYTICAL RESULTS – VOLATILE ORGANIC COMPOUNDS

A summary of the annual 2016 through 2022 VOC analytical results is presented in Table 4-6. The detected VOC concentrations are consistent from 2016 to 2022. Nine different CVOCs were detected in groundwater in 2022 at concentrations above MCP groundwater standards. These compounds include: 1,1,1-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), tetrachloroethene (PCE), trichloroethene (TCE), toluene, and vinyl chloride (VC). One or more of these nine constituents were detected above GW-1 standards at 78 different well screen/port locations. One or more of these CVOCs (1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, and VC) were detected at concentrations greater than MCP GW-2 standards (within 30 feet of a building with depth to groundwater less than 15 ft) in the following 13 wells sampled within 30 ft of or beneath Building 1 in 2022: AE-23R, AE-23S, AE-24, AE-26R1, AE26R4, AE-26R5, AE-26S, AE-27R, AE-28R1, AE-28R2, AE-28R3, AE-28R4, and GZA-101R. Only PCE and TCE were detected at concentrations greater than GW-3 standards – TCE at nine well screen/port locations under Building 1, in the EPL, and Transect A, and PCE at one well screen/port location (AE-23R) beneath Building 1.

Consistent with observations from 2016-2021, the highest total CVOC concentration (184,960 µg/L) observed at the site in 2022 is in upper bedrock well AE-23R located beneath Building 1. The concentration of TCE (140,000 µg/L) detected in 2022 exceeds the upper concentration limit (UCL) of 50,000 µg/L. Concentrations of TCE have historically exceeded the UCL in this well. This was the only UCL exceedance for any constituent at any monitoring well location in 2022. In 2022, the highest PCE concentration (39,000 µg/L) was also detected in AE-23R, which is above the GW-3 standard but below the UCL for PCE. The current and historical PCE and TCE concentrations at AE-23R suggest the potential for dense non-aqueous phase liquid (DNAPL), however, DNAPL has never been detected in AE-23R when gauged.

Figures 4-4 and 4-6 present the 2017-2022 PCE and TCE plumes in overburden groundwater. The 2022 PCE and TCE overburden groundwater plumes are similar in size to the plumes from 2017 to 2021 with the following order of magnitude differences in overburden concentrations detected from 2021 to 2022:

- One order of magnitude decrease of PCE in:
  - AE23S from 260 to 94 µg/L,
  - MW-7 from 10 µg/L to non-detect, and
  - EMW-10 from 130 to 99 µg/L
- One order of magnitude decrease of TCE in:
  - MW-7 from 49 to 9.3 µg/L
- One order of magnitude increase in TCE in:
  - PS-1D from 6.3 to 16 µg/L, and
  - AE-105D from non-detect to 21 µg/L

Figures 4-5 and 4-7 present the 2022 PCE and TCE plumes in bedrock groundwater. For reference, the 2016-2021 PCE and TCE plumes in upper, middle, and lower bedrock are included in Appendix E. The 2022 PCE and TCE bedrock groundwater plumes are similar in size to the plumes from 2016 to 2021 with the following order of magnitude differences in bedrock concentrations detected from 2021 to 2022:

- One order of magnitude decrease of PCE in:
  - AE-100R-2 from 1300 to 590 µg/L, and
  - AE-100R-5 from 1100 to 980 µg/L.
- One order of magnitude increase of PCE in:
  - AE-27R from non-detect to 130 µg/L, and
  - AE-26R-3 from 3.4 to 4400 µg/L.
- One order of magnitude decrease of TCE in:
  - AE-29R-6 from 120 to 70 µg/L.
- One order of magnitude increase in TCE in:
  - STM-8R from 8.9 to 12 µg/L,
  - AE28R from 6600 to 18000 µg/L, and

– AE-101R-6 from 920 to 3200 µg/L.

Each of the above-mentioned wells with significant concentration increases in overburden and bedrock are located in Building 1 and Transect A where fluctuations in concentrations are not unexpected.

Concentration trend graphs of the CVOC results from all wells sampled in 2022 are presented in Appendix D. The graphs depict all available historical PCE, TCE, cis-1,2-DCE, toluene, VC, and 1,4-D results for wells sampled in September 2022. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 4-7.

In September-October 2022, 95 monitoring well screen/port locations were sampled for VOCs. Of those 95, 86 have enough data from which to generate statistical trends at this time. Twenty-nine percent of the 2022 CVOC (PCE, TCE, cis-1,2-DCE, toluene and VC) data (87 of 300 records) show no trend or non-significant trends. Downward trends at (80% or at both 80% and 90% confidence levels) for parent compounds (i.e., PCE and TCE) are noted in 61 of the 145 well screens sampled across the site in 2022 in the overburden and bedrock at Building 1 Tank F area, Transects A, B, and C, and in the overburden in the EPL. Upward trends (80% or at both 80% and 90% confidence levels) of daughter products (e.g., cis-1,2-DCE, and VC) are noted in 57 of the 110 well screens sampled in 2022 mainly in bedrock in the former Tank Farm, Building 1, EPL, and Transects A and B, and to a lesser extent in overburden in Transects A, B, C, and the wetlands.

The Mann Kendall results indicate that 31 well screen/port locations have upward trends (80% or at both 80% and 90% confidence levels) for parent compounds (i.e., PCE and/or TCE). These include 21 wells in areas of elevated CVOC concentrations in the Building 1 and former Tank Farm source areas, the EPL, and Transect A, where fluctuations in concentrations are not unexpected. The remaining 10 wells are upgradient, or in the wetland and Transect B and the observed concentration increases are minor.

The STM-8 well cluster is a key monitoring point because it is located at the furthest extent of the plume. The results from this well cluster are indicative of ongoing attenuation of parent compounds to daughter products at the tail end of the plume. In STM-8D, the concentration of cis-1,2-DCE over the last eight sampling rounds in 2014-2022 has consistently been one order of magnitude higher than PCE and TCE. The maximum PCE and TCE concentrations were 2 µg/L from 2015 through

2019, and non-detect in 2020 to 2022, whereas cis-1,2-DCE concentrations have ranged from 17.9 µg/L in 2016 to 6.9 µg/L in 2022. The concentration ratio of parent compounds to cis-1,2-DCE is consistently low, indicative of degradation.

4.6 MONITORED NATURAL ATTENUATION

This Post-temporary Solution monitoring period consists of active performance of a comprehensive monitored natural attenuation (MNA) groundwater sampling program for site management. Details for each COC are provided below.

4.6.1 Arsenic Monitored Natural Attenuation Performance

This section presents an evaluation of arsenic MNA performance.

4.6.1.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Arsenic

The presence of dissolved arsenic is considered to be a temporary deviation from the state of naturally-occurring conditions typical in this region. The presence of organic COC such as petroleum hydrocarbons and VOCs in site groundwater has temporarily altered the natural redox conditions from aerobic to anaerobic, causing dissolution of naturally-occurring insoluble forms of arsenic in site soils/weathered rock to the dissolved state. Plume figures suggest that dissolved arsenic concentrations are related to localized conditions immediately downgradient from the former Tank Farm and former Tank K source areas and are not expansive in nature. It is anticipated that as the concentrations of organic COC decrease over time and the aquifer returns to its normal aerobic redox conditions, dissolved arsenic levels will decrease naturally. This appears to be the case based on the depictions of the limited arsenic plume, particularly downgradient where contaminant concentrations are lowest.

4.6.1.2 Changed Conditions Affecting Arsenic Monitored Natural Attenuation

There are no new data during this monitoring period that would indicate new environmental conditions or new releases of contaminants have occurred, which could reduce MNA efficiency for arsenic in groundwater.

4.6.1.3 Absence of Toxic Transformation Products of Arsenic

There are no toxic transformation products from natural attenuation of arsenic.

4.6.1.4 Verification that Arsenic Plume is not Expanding

As shown in Figure 4-1, the extent of the arsenic plume in overburden is the same with concentrations on the same order of magnitude 2017 to 2022. Minor concentration increases and decreases are noted year-to-year but do not affect the plume geometry. The dissolved arsenic concentration in GZA-10 continues to decrease since 2019.

4.6.1.5 Demonstration of Effective Institutional Controls

The institutional controls under the activity and use limitation (AUL) at the site remain effective in limiting potential exposure to arsenic in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the municipal wells near the site remain inactive and no drinking water wells exist within 0.5 miles of the site.

4.6.1.6 Verification of Attainment of Remedial Objective for Arsenic

The remedial objective for arsenic is reduction of arsenic concentrations in overburden and bedrock groundwater over time through MNA. Given the elevated concentrations of organic COC (petroleum hydrocarbons and VOCs) contributing to dissolved arsenic concentrations, the time frame for a general decrease in arsenic concentrations or a decrease to below applicable standards is on the order of decades. Based on groundwater data collected during this reporting period, the existing groundwater plume for dissolved arsenic is stable and not expanding. Therefore, the remedial objective for arsenic in groundwater is being met.

4.6.2 1,4-Dioxane Monitored Natural Attenuation Performance

This section presents an evaluation of 1,4-D MNA performance.

4.6.2.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for 1,4-Dioxane

It is understood that the presence of 1,4-D is related to the CVOC contamination as it was most likely a co-contaminant. The 1,4-D distribution appears consistent with the trends observed for the CVOCs during this sampling event (see Section 4.6.4). While the literature has identified the possibility of both metabolic (energy source) and co-metabolic (co-oxidation) degradation pathways of 1,4-D under certain conditions, these biological processes are unlikely to significantly affect the levels on-site in reaching the low-level regulatory criteria in the near term. A combination of these and physical attenuation processes would contribute to the long-term natural attenuation of 1,4-D.

4.6.2.2 Changed Conditions Affecting 1,4-Dioxane Monitored Natural Attenuation

There are no new data during this monitoring period that would indicate that new environmental conditions or new releases of contaminants have occurred which could reduce MNA efficiency for 1,4-D in groundwater.

4.6.2.3 Absence of Toxic Transformation Products of 1,4-Dioxane

Although not considered a significant attenuation mechanism for 1,4-D at the site, current literature indicates that 1,4-D may biodegrade to various compounds such as ethylene glycol, glycolic acid, or oxalic acid (Rodriguez, 2016). These compounds are non-toxic and expected to biodegrade rapidly in the environment, and therefore, are not included in this monitoring program.

4.6.2.4 Verification that 1,4-Dioxane Plume is not Expanding

As shown in Figures 4-2 and 4-3, and the figures included in Appendix E, the extent of the 1,4-D plume in overburden and bedrock are the same with concentrations on the same order of magnitude from 2017 to 2022. Slight increases and decreases in concentrations are noted in some wells. Slight concentration increases are primarily detected in wells within source areas and Transect A where elevated CVOCs are present. Therefore, the 1,4-D plumes are considered stable and not expanding.

4.6.2.5 Demonstration of Effective Institutional Controls

The institutional controls under the AUL at the site remain effective in limiting potential exposure to 1,4-D in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the municipal wells near the site remain inactive and no drinking water wells exist within 0.5 miles of the site.

4.6.2.6 Verification of Attainment of Remedial Objective for 1,4-Dioxane

Evaluation of 1,4-D is being addressed with continued sampling and analysis under the Post-temporary Solution operation, maintenance, and/or monitoring program. Recent monitoring data indicate minor increases and decreases in concentrations in overburden and bedrock. This is likely related to fluctuations in CVOC concentrations, which along with 1,4-D concentrations are expected to fluctuate over time given the anticipated timeframe (decades or more) for MNA to reduce overall concentrations of CVOCs and 1,4-D. The groundwater remedial objective for 1,4-D will be attained through MNA as shown by long-term trend analysis. Based on groundwater data

collected during this reporting period, there is evidence that the existing groundwater plume for 1,4-D is not expanding. Therefore, the remedial objective for 1,4-D in groundwater is being met.

4.6.3 Petroleum Hydrocarbons Monitored Natural Attenuation Performance

This section presents an evaluation of petroleum hydrocarbon MNA performance.

4.6.3.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Petroleum Hydrocarbons

The area impacted with petroleum hydrocarbons is limited to the former Tank Farm area and the western portion of the EPL. Relative to the LNAPL presence and distribution described in Section 4.4 above, the petroleum hydrocarbon plume has not changed significantly. While the LNAPL thickness has varied over the past decade and is only observed as a sheen in wells CW-1 and CW-2, certain wells in the former Tank Farm/EPL area (AE-03, AE-04, GZA-105D, PZ-2S, and TRC-101) have shown fluctuations, mainly in VPH fraction concentrations. This observation may be due to fluctuations in groundwater elevations flushing the smear zone and the continued dissolution of LNAPL constituents into the aqueous phase, which would further decrease the residual LNAPL and make the dissolved constituents more available to natural attenuation processes over time, as documented by the 2020-2021 natural source zone depletion (NSZD) assessment summarized in Post-temporary Solution Status Report Number 10 and Periodic Review of the Temporary Solution dated May 4, 2022.

4.6.3.2 Changed Conditions Affecting Petroleum Hydrocarbons

There are no new data during this monitoring period that would indicate that new environmental conditions or new releases of contaminants have occurred, which could reduce MNA efficiency for petroleum hydrocarbons in groundwater.

4.6.3.3 Absence of Toxic Transformation Products of Petroleum Hydrocarbons

Petroleum hydrocarbons typically degrade to less toxic forms as they undergo biological degradation in the environment. The most toxic petroleum hydrocarbons include PAHs and smaller aromatic compounds such as BTEX. Based on the 2016-2022 analytical results, there have been some noted fluctuations in petroleum hydrocarbon concentrations but no significant increases in the amounts of PAHs or BTEX compounds.

4.6.3.4 Verification that Petroleum Hydrocarbons Plume is not Expanding

The extent of the dissolved-phase petroleum hydrocarbons in overburden and shallow bedrock is limited to a small area in the former Tank Farm and western portion of the EPL. Detected concentrations in this area from 2016 to 2022 are stable and/or decreasing as shown in Table 4-4. The dissolved petroleum hydrocarbon plume is therefore considered stable and not expanding.

4.6.3.5 Demonstration of Effective Institutional Controls

The institutional controls under the AUL at the site remain effective in limiting potential exposure to petroleum hydrocarbons in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the nearby municipal wells remain inactive, and no drinking water wells exist within 0.5 miles of the site.

4.6.3.6 Verification of Attainment of Remedial Objective for Petroleum Hydrocarbons

The remedial objective for petroleum hydrocarbons is reduction of the concentrations in overburden and bedrock groundwater over time through MNA. Based on groundwater data collected during this reporting period, there is evidence of some biodegradation of petroleum hydrocarbons and the existing groundwater plume for petroleum hydrocarbons is stable and not expanding. Additionally, the results of the 2020-2021 NSZD assessment confirm LNAPL reduction through natural processes, which in turn will reduce dissolved-phase petroleum hydrocarbon concentrations over time. Therefore, the remedial objective for petroleum hydrocarbons in groundwater is being met.

4.6.4 Chlorinated Volatile Organic Compounds Monitored Natural Attenuation Performance

This section presents an evaluation of CVOC MNA performance. Site CVOCs have been monitored in the same fashion from 2016 through 2022. The data have been relatively consistent, with natural fluctuations observed due to seasonal variability, changes in water levels year-to-year, and fluctuations in concentrations where CVOCs are elevated in the former onsite source areas. This section focuses on discussion of the most recent 2022 data.

4.6.4.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Chlorinated Volatile Organic Compounds

This section documents the review of the 2022 CVOC and associated MNA data which indicate that the subsurface conditions at the site are complex and continue to yield differing interpretations of

where natural attenuation (NA) is observed and other areas where NA appears limited. Based on statistical trends used to evaluate the effectiveness of the remedial components in achieving cleanup levels (i.e., migration of site COC, and changes in COC concentrations in both time and distance from source area) some monitoring well locations show clear indications of ongoing NA (both biological and abiotic), while other monitoring wells have limited indications of NA (i.e., some, but not all monitored parameters suggest ongoing NA). However, taking the entire set of data and site considerations into account, the main conclusion from the ongoing MNA evaluation is that the observed COC plume configuration and size has not increased or exhibited further migration, thus demonstrating the natural attenuation mechanisms remain functional at the site. A summary of the MNA parameters analyzed in groundwater 2016 – 2022 is provided in Table 4-8.

The majority of the monitoring wells located underneath Building 1 and within Transects A, B, and C indicate reducing conditions in the groundwater (dissolved oxygen [DO] levels less than 1 milligram per liter and oxidation-reduction potential as low as -193 millivolts). The presence of reducing conditions is conducive to the ongoing NA of CVOCs via reductive dechlorination (biotic process) and/or other abiotic processes if other factors are also favorable. A summary of the 2022 geochemical parameters is provided in Table 2-3.

Based on data collected to date, evidence of reductive dechlorination of CVOCs is observed at the site (at varying degrees), in both the overburden and bedrock. Complete mineralization of CVOCs is also observed in a few wells, based on the presence of ethene and ethane (e.g., AE-103R-5). The detection of these biodegradation end products is attributable to biotic, abiotic, or a combination thereof, ongoing attenuation processes. Methane is also present at increased levels in a few wells (e.g., AE-105R-2), indicating that redox conditions have progressed sufficiently to support ongoing reductive dechlorination. Elevated sulfide levels were present in select wells indicating evidence of some sulfate reduction observed from the 2022 analytical data. The presence of degradation daughter products such as cis-1,2-DCE or VC, relative to their parent PCE and TCE concentrations, further supports ongoing NA processes.

Similar to recent reporting events, there are a number of wells that contain concentrations of CVOCs below 100 µg/l. These not only include wells further downgradient in the plume, but also select wells in Transect A and the EPL. At these low concentrations, it is well known that reductive dechlorination processes may be inhibited, or exhibit cis-1,2-DCE “stall”, without added electron

donor (natural organic carbon, petroleum hydrocarbons, or remedial amendments) as the levels of the CVOCs are not significant enough to act as sufficient electron acceptors for the process. Based on the 2022 data, the relative stability of CVOC concentrations in overburden and bedrock continues to support the general stability and/or decrease of source concentration areas along with observed areal extents of the CVOC impacts in the respective zones.

For the 2022 sampling event, groundwater samples from select monitoring locations and intervals were submitted for microbial population and reductase gene analyses using quantitative polymerase chain reaction (qPCR) using the Microbial Insights QuantArray™ method. Previous microbial analyses were completed in 2016, 2017, and 2021. A summary of the QuantArray™ results is presented in Table 4-10. Samples were collected from locations in former source areas and extended downgradient through Transects A and B. Overall interpretation of the qPCR microbial data suggests that the overburden and bedrock portions of the aquifer have the necessary microbial communities to support microbial degradation. The microbe responsible for the complete reductive dechlorination of PCE/TCE to ethene, *Dehalococcoides* (DHC), has been detected in a number of monitoring well locations along the length of the observed plume, albeit at less than optimal populations (cells per milliliter [cells/mL]). The general rule of thumb is that DHC populationss should be $1x10^{+4}$ cells/mL or higher to support robust reductive dechlorination. Within the sampled monitoring well locations, the DHC populations generally range from $1x10^{+1}$ to greater than $1x10^{+4}$ cells/mL. Addditonally, specific functional reductase genes (tceA, bvcA, and VCR reductase) also need to be present to facilitate the complete reductive dechlorination from cis-1,2-DCE through VC to ethene. As with DHC, the functional reductase genes are also found to be present but again with varying population values. While some of the functional reductase gene populations are low, the fact that they are detectable indicates that microbial activity is likely ongoing. The observed microbial results are also supported by the detection of dissolved gases (methane, ethane, and ethene) which are the end products of reductive dechlorination. The low microbial populations are likely being impacted by lower values of total organic carbon and the presence of higher concentrations of nitrate and sulfate in portions of the site. That said, the presence of the specific microorganisms combined with other lines of evidence (i.e., parent-daughter transformation, dissolved gases, etc.) continues to suggest that biological attenuation is contributing to the ongoing NA of CVOCs at the site (at least in specific areas of the site).

For the 2022 sampling event, compound specific isotope analysis (CSIA) continuse to be utilized to provide an additional line of evidence (LOE) to support the demonstration of biological transformation and attenuation of CVOCs in groundwater. CSIA sampling was completed at a select number of monitoring well locations in 2016, 2017, 2021 and 2022 with a similar distribution to the qPCR microbial analysis outlined above. The cummulative CSIA data is presented in Table 4-9.

The enrichment of the C^{13}/C^{12} ($\delta^{13}C$) ratio (i.e., reported values become less negative) indicates the biological transformation of a contaminant as it moves along a given flowpath (e.g., plume centerline) as compared to observed source area δ13C values that have undergone little to no biological degradation. With regard to the 2022 sampling event, the overall CSIA results further support the results observed in the qPCR and other NA data. In general, the $\delta^{13}C$ values for the parent and degradation products show enrichment in monitoring wells located downgradient of the source area. This observation is consistent over both time (i.e., 2016 – 2022) and distance downgradient (i.e., source area to Transect C). It is noted that the enrichment is variable with respect to the overburden or bedrock and this is likely associated with the previously noted varying degrees of ongoing natural attenuation. If the $\delta^{13}C$ value of a contaminant increases by more than 2 ‰ over time or downgradient of the source, it is strong evidence that the compound has degraded. When the original $\delta^{13}C$ value of a contaminant is unknown, published literature values of manufactured, undegraded parent compound can be used as an approximation for the undegraded $\delta^{13}C$ value of a contaminant. Any time that a contaminants $\delta^{13}C$ value is greater than 2‰ above the manufactured range, it is conclusive evidence of degradation. The manufactured ranges for the $\delta^{13}C$ values are provided within the Microbial Insights (MI) CSIA Database. More information on the MI CSIA Database can be found at https://microbe.com/compound-specific-isotope-analysis-csia/.

As presented in Table 4-9, the enrichment of the $\delta^{13}C$ values is observed at several monitoring well locations within the existing network and this provides an LOE supporting the ongoing reductive dechlorination of the CVOCs in groundwater. The available data provides further evidence related to ongoing degradation processes (both abiotic and biotic) in the subsurface and continues to support that NA mechanisms are active in site groundwater. The continued use of CSIA analysis as part of future sampling events will provide additional data to continue to evaluate this LOE.

Abiotic degradation by reactive iron minerals may also play a role in the natural transformation of certain CVOCs. This is also supported by the CSIA data discussed above. Iron sulfides such as

pyrite have been documented to react with PCE, TCE, and cis-1,2-DCE to cause a complete dechlorination transformation to acetylene and ethene without daughter products. Groundwater hydrogen levels indicate that sulfate reducing conditions could occur, and sulfate is observed at 7-60 milligrams per liter in the aquifer. Although hydrogen sulfide is only present in elevated levels in a few wells, sulfide may be sequestered by iron minerals in the soil and rock during the reduction process, generating the reactive minerals needed for abiotic transformation of CVOCs.

Acetylene is a signature product from the abiotic transformation process. Although acetylene is not always observed in groundwater where abiotic degradation is occurring, its presence suggests that abiotic reductive dechlorination may play at least some role in transformation of CVOCs in specific areas of the site. There continue to be limited detections of propane, which is another of the dissolved gases that is indicative of the abiotic pathway. The detection of both acetylene and propane, although limited, indicates that abiotic transformation of CVOCs cannot be excluded and therefore can be contributing to the overall attenuation mechanisms in the subsurface.

Based on the collective evaluation of the data from 2016 through 2022, there continues to be evidence of ongoing NA to varying extents, in select areas of the site, to provide for the ongoing attenuation and control of the observed dissolved phase groundwater CVOC impacts. While the exact processes and their proportional contributions to the overall apparent ongoing attenuation are not specifically quantifiable, there are a number of lines of evidence that support the continued application of MNA at the site.

4.6.4.2 Changed Conditions Affecting Chlorinated Volatile Organic Compounds Monitored Natural Attenuation

There are no new data during this monitoring period that would indicate new environmental conditions or new releases of contaminants have occurred which could reduce MNA efficiency for CVOCs in groundwater.

4.6.4.3 Absence of Toxic Transformation Products of Chlorinated Volatile Organic Compounds

Although elevated VC concentrations are detectable in a few monitoring wells, the presence of VC is not unexpected and is likely attributable to ongoing microbial degradation and is considered an indicator of reductive dechlorination where it aligns with elevated parent concentrations. The groundwater at the site is not used for drinking water purposes.

Analytical data from many wells exhibit mixed behavior (upward and downward trends) and the fluctuations are likely the result of different influences, such as reductive dechlorination (transformation of cis-1,2-DCE to VC and VC to ethene at differing rates), changes in water levels, changes in subsurface geochemical conditions, and high concentrations near source areas. Elevated concentrations of VC were observed in wells located in Building 1-Tank F area and in Transect A for the 2022 sampling event. VC is the final CVOC to be degraded through reductive dechlorination because it is the least oxidized of these compounds. Therefore, the rate of reductive dechlorination decreases as the degree of chlorination decreases. The reductive dechlorination of VC to ethene is a slow reaction under anaerobic conditions, which favors the persistence of VC in PCE and TCE plumes that are undergoing reductive dechlorination. However, as the VC moves out of the anaerobic zone with ambient groundwater flow into more aerobic zones, the concentrations of VC are expected to continue to decrease because VC is known to quickly biodegrade under aerobic conditions.

4.6.4.4 Verification that Chlorinated Volatile Organic Compounds Plume is not Expanding

Groundwater contamination has been documented at the site since the 1980s. Although groundwater monitoring wells have been sampled at this site for over 30 years, the number of monitoring wells over the entire MCP site has increased significantly over time, particularly between 2012 and 2016. For this reason, the volume of data available for any point in time in the past is not consistent with the volume of data available currently, though the number of wells has not changed since 2016. This situation makes an analysis of changes over time difficult to interpret relative to historical data.

For the 2022 analytical data, observed PCE, TCE and cis-1,2-DCE concentrations have increased in a few wells. However, PCE and TCE have also generally decreased in a large number of wells. Localized increases in concentrations noted in 2022 are primarily in wells at the source area underneath Building 1, where potential residual DNAPL may be present, and in wells at Transect A. As detailed in Section 4.5 above, there are 61 cases in which wells (or well screens/ports) across the site in both overburden and bedrock show decreasing concentration trends of PCE and TCE. This is an indication of improving conditions from the source area to the downgradient edge of the plume. There are another 57 cases, largely in bedrock, in which cis-1,2-DCE and VC trends appear to be increasing, mostly at wells in the former Tank Farm, Building 1, EPL, and Transects A and B. It is believed that these well ports are exhibiting increased daughter product generation based on

downward trends and reduction of parent PCE and TCE concentrations. A number of additional well port cases evaluated also exhibited stable trends.

Most of the trend graphs presented in Appendix D show that the visual trend of the groundwater CVOC concentrations are either stable or decreasing over time. This is believed to be the result of ongoing natural attenuation of the plume described above.

Although increased PCE and TCE concentrations have been observed in suspected source areas, this could be due to seasonal and localized changes in groundwater levels. This phenomenon is not unexpected within source areas that have shown historical fluctuations over time. The primary evidence for demonstration of MNA occurring at the site includes a continuing shift of parent to daughter product contaminant concentrations over time (Mann Kendall statistics) in conjunction with a stable groundwater plume. The data presented in this report show that, over time, the extent of the CVOC plume emanating from the former GE facility is stable and the mass of the plume is slowly shrinking.

4.6.4.5 Demonstration of Effective Institutional Controls

The institutional controls under the AUL at the site remain effective in limiting potential exposure to CVOCs in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the Stickney Well remains inactive and no drinking water wells exist within 0.5 miles of the site.

4.6.4.6 Verification of Attainment of Remedial Objective for Chlorinated Volatile Organic Compounds

The remedial objective for CVOCs at the site is the reduction of dissolved phase groundwater concentrations within the overburden and bedrock zones over time, and MNA has been implemented and is being demonstrated through the ongoing monitoring of MNA parameters. It is noted that given the elevated concentrations of CVOCs at the site, including mass within bedrock fractures and micro-fractures, the time frame for reduction in overall CVOC concentrations is estimated to be on the order of decades. Based on groundwater data collected during this reporting period, the existing groundwater plumes for dissolved CVOC are stable and not expanding. Therefore, the remedial objective for CVOCs in groundwater is being met.

SECTION 5
DEMONSTRATION OF EFFECTIVE INSTITUTIONAL CONTROLS

The Temporary Solution for the site includes the implementation of an activity and use limitation (AUL) to eliminate potential human health risks. A copy of the AUL is included in Appendix F.

On July 13, 2015, Wilmington Realty Trust (WRT) placed an AUL on the portion of the site owned by WRT, encompassing Buildings 1, 1A, and 2 and the Eastern Parking Lot. This AUL was established to prevent uses of the property that would be inconsistent with maintaining a condition of No Substantial Hazard under the Massachusetts Contingency Plan (MCP). These prohibited uses include the following:

- Residential, school, playground, park, or daycare use, and
- Any activities that would result in exposure to or the disturbance of potentially contaminated soils, bedrock, groundwater, and indoor air, unless appropriate precautions to prevent human exposure are taken, as described in the AUL

In addition, the AUL imposes certain obligations and conditions to maintain a condition of No Substantial Hazard, including maintenance of concrete floors, management of any excavated soil and/or bedrock under Soil Management Procedures set forth in 310 Code of Massachusetts Regulation (CMR) 40.0030, and appropriate management of any groundwater removed during dewatering activities. Lastly, any activities which could result in exposure to, or disturbance of soil, bedrock, or groundwater must be conducted in accordance with some or all of the following, as determined by a Licensed Site Professional:

- the performance standards for Release Abatement Measures set forth by the MCP at 310 CMR 40.0440 (Massachusetts Department of Environmental Protection [MassDEP], 2014)
- the soil management procedures pursuant to 310 CMR 40.0030, the Similar Soils Provisions Guidance (WSC# 13-500; MassDEP, 2014)
- Construction of Buildings in Contaminated Areas (Policy WSC# 00 425; MassDEP, 2000a)

- applicable health and safety procedures outlined in 310 CMR 40.0018

The AUL does not restrict the use of groundwater for drinking water purposes. However, the Stickney Well in North Reading and the Reading municipal wells south of the Ipswich River remain inactive, and no drinking water wells exist within 0.5 miles of the site. AECOM has checked the Massachusetts online drinking water well data portal (https://eeaonline.eea.state.ma.us/portal#!/search/drinking-water) annually to confirm that no new drinking water wells have been installed within 0.5 miles of the site in the towns of Wilmington, Reading, or North Reading between January 21, 2016 and March 1, 2023.

The current owner is aware of the AUL and the AUL conditions required for maintaining the property. The objectives of the AUL are being met and the institutional controls in place at the site are effectively maintaining a condition of No Substantial Hazard.

SECTION 6
CONDITIONS/PROBLEMS AFFECTING THE REMEDIAL ACTION

No conditions or problems were identified during this reporting period that may have the potential to affect the remedial action.

SECTION 7
MODIFICATIONS TO THE MONITORING PROGRAM

During this monitoring period, no modifications were made to the monitoring program as presented in the May 2017 Temporary Solution Statement, and the updated post-temporary solution operation, maintenance, and monitoring groundwater monitoring plan in Post-temporary Solution Status Report Number 10 and Periodic Review of the Temporary Solution dated May 4, 2022.

SECTION 8
FUTURE MONITORING

The Post-temporary Solution Operation, Maintenance, and/or Monitoring Plan will continue to be implemented according to the schedule presented in Table 8-1, which includes activities described below to be completed up to submittal of the second five-year review of the temporary solution due in May 2027.

- Annual light non-aqueous phase liquid (LNAPL) gauging of seven monitoring wells (i.e., AE-03, AE-04, CW-1, CW-2, GZA-102S, PZ-2S, and TRC-101) located in the western portion of the Eastern Parking Lot to monitor the presence/absence of LNAPL in this area. If LNAPL thickness of greater than 0.1 feet is detected in a well, an absorbent sock will be deployed to absorb the LNAPL for subsequent disposal. Gauging events will be conducted in the fall each year with a target date of September, with the results presented in November. The next annual LNAPL gauging event is scheduled to take place in September 2023. The remedial alternative selected for LNAPL is monitored natural attenuation (MNA). To monitor the progress of LNAPL behavior more specifically, the dissolved phase petroleum hydrocarbon "halo" surrounding the LNAPL area will be evaluated over time. This will provide a leading indicator of the potential dissolution of LNAPL and subsequent natural degradation of the associated dissolved phase plume.

- Biennial groundwater sampling of select monitoring wells for analysis of site chemicals of concern (i.e., chlorinated volatile organic compounds, 1,4-dioxane, petroleum hydrocarbons, and arsenic) and relevant MNA parameters in the overburden and bedrock groundwater. Each groundwater sampling event will include a site-wide water level measurement round. The next biennial groundwater sampling event will be conducted in September 2024.

- Submittal of semiannual Post-temporary Solution Status and Remedial Monitoring Reports. The next semiannual report is due to the Massachusetts Department of Environmental Protection (MassDEP) in November 2023.

- Submittal of a periodic review of site conditions every five years to evaluate new technologies and their potential to achieve a permanent solution. The next five-year review of the temporary solution is due to the MassDEP in May 2027.

- Per the requirements for Public Involvement Activities under 310 Code of Massachusetts Regulations 40.1403, Lockheed Martin Corporation will send written notices of availability of the May 2023 post-temporary solution status report to the Chief Municipal Officer and Board of Health for the towns of Wilmington and North Reading. In addition, per the November 2000 Public Involvement Plan (PIP) for the Wilmington site, written notices of availability of the May 2023 post-temporary solution status report will be sent to the PIP

mailing list. These written notices will be sent within seven days of the filing of the submittal to the MassDEP. A hard copy of the document will be placed in the repository located in the Town of North Reading Library and electronic copies will be uploaded to the Lockheed Martin and MassDEP web sites. Please see Section 10 for additional PIP details.

SECTION 9
LICENSED SITE PROFESSIONAL OPINION AND CONCLUSIONS

Comprehensive response actions at the site are limited to active remedial monitoring that includes monitored natural attenuation under post-temporary solution status. It is AECOM Technical Services Inc.'s opinion that the performance standards outlined in 310 Code of Massachusetts Regulations 40.0897, and as presented in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection by AECOM Technical Services, Inc. in May 2017, are being accomplished. Based upon groundwater monitoring data presented during this reporting period, the existing groundwater plumes for chlorinated volatile organic compounds, petroleum, and dissolved arsenic are stable and not expanding.

The seal and signature of the licensed site professional who prepared this Post-temporary Solution Status Report Number 12 are set forth on the applicable Massachusetts Department of Environmental Protection Bureau of Waste Site Cleanup transmittal forms (BWSC-108) submitted via eDEP.

SECTION 10
PUBLIC NOTIFICATION

The former General Electric facility is part of a joint Public Involvement Plan (PIP) with other Potentially Responsible Parties that was prepared in 2000 by the Massachusetts Department of Environmental Protection (MassDEP). As a PIP site, the former General Electric facility must meet additional regulatory requirements above the minimum requirements of the Massachusetts Contingency Plan.

During the Post-temporary Solution period, Post-temporary Solution Status Reports are required by the Massachusetts Contingency Plan (MCP) to be submitted every six months to the MassDEP. In accordance with the November 17, 2000 PIP (MassDEP, 2000b), these Status Reports are also required to be provided to the designated information repository at the Flint Memorial Library in the Town of North Reading. Members of the PIP mailing list, including the Chief Municipal Officer and Board of Health agents for the towns of Reading, North Reading, and Wilmington, have been notified of the availability of this report by mail. A copy of the letter sent to the PIP mailing list and listed municipal officers concerning the availability of documents in the repository including this status report, as required under the PIP (MassDEP, 2000b), is included in Appendix G.

Prior to groundwater sampling activities completed during this reporting period and after receipt of associated laboratory analytical results, AECOM Technical Services, Inc. (AECOM) submitted notifications using MassDEP Form BWSC-123 to the property owners listed below:

- Hilco Redevelopment Partners – 40-50 Fordham Road in Wilmington and North Reading
- Howland Development – 87 Concord Street in North Reading
- International Family Church – 99 Concord Street in Wilmington and North Reading
- Town of North Reading – 0 Furbish Pond Lane in North Reading
- North Reading Town Water – Wells along Concord Street in North Reading
- Wilmington Masonry – 62 Concord Street in North Reading

- YRC Freight – 95 Concord Street in North Reading

In addition, AECOM obtained verbal permission from the resident at 3 Furbish Pond Lane in North Reading to measure the depth to water in their private irrigation well, and subsequently provided the resident the groundwater elevation information.

Appendix G includes copies of the Bureau of Waste Site Cleanup forms and related notifications sent to property owners documenting the prior notification of the sampling event and the presentation of the analytical results resulting from that sampling event, as required by the MCP.

- MCP GW-1 Standard = 0.3 µg/l

Notes:

Where multiple ports exist in the designated interval, values are presented in descending order. The shallowest port on top and the deepest port on the bottom.

Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from September - October 2022.

Notes:

Published in Post-Temporary Solution Status Report No. 10 and first Periodic Review of the Temporary Solution dated May 4, 2022

(1) Water levels measured from all wells/ports sampled plus select additional wells to generate representative groundwater contours

(2) 1 per 20 for wells with non-dedicated sampling equipment

(3) Field parameters (temperature, pH, specific conductivity, dissolved oxygen, oxidation reduction potential, turbidity) measured at each well/port sampled.

EPL - Eastern Parking Lot

ft bgs - feet below ground surface

HRP - HILCO Redevelopment Partners

Notes:
Summary presents the final stabilized reading at each well just prior to sampling.
C - Celsius
uS/cm - microsiemens per centimeter
mg/l - milligrams per liter
mV - millivolts
NTU - nephelometric turbidity units
NM - not measured - well purged dry with only sufficient recharge to fill sample bottles.

Table 4-1
Summary of 2016 - 2022 Groundwater Analytical Results for Arsenic

Location Group	Location	Sample ID	Sample Type	Sample Date	Depth Interval	Dissolved Arsenic (ug/l)	Total Arsenic (ug/l)

Notes:
U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R = rejected
ft = feet
ug/l = micrograms per liter
NE = not established
Detects are bolded
Criteria exceedances are highlighted

Table 4-2
Groundwater Mann Kendall Trend Tests for Arsenic
Former GE Facility
Wilmington, MA

Well	Parameter	Sample Size	Number Detects	S-Statistics	Test Statistic*	80% Confidence		90% Confidence	
						Critical Value	Conclusion	Critical Value	Conclusion
AE03	Arsenic (Diss)	10	10	-26	-26	11	Downward Trend	17	Downward Trend
AE102M	Arsenic (Diss)	8	8	-4	-4	8	Not Significant	12	Not Significant
AE103S	Arsenic (Diss)	8	8	5	5	8	Not Significant	12	Not Significant
AE105S	Arsenic (Diss)	8	8	-14	-14	8	Downward Trend	12	Downward Trend
AE26R-1	Arsenic (Diss)	7	3	12	12	7	Upward Trend	11	Upward Trend
GZA-06	Arsenic (Diss)	7	7	6	6	7	Not Significant	11	Not Significant
GZA-10	Arsenic (Diss)	8	8	-14	-14	8	Downward Trend	12	Downward Trend
GZA-101R	Arsenic (Diss)	11	5	21	2.003	0.8416	Upward Trend	1.282	Upward Trend
GZA-105S	Arsenic (Diss)	9	9	9	9	10	Not Significant	14	Not Significant
MW-4A	Arsenic (Diss)	8	7	18	18	8	Upward Trend	12	Upward Trend
STM-8R1	Arsenic (Diss)	7	7	-12	-12	7	Downward Trend	11	Downward Trend
TRC-102	Arsenic (Diss)	10	10	7	7	11	Not Significant	17	Not Significant
TRC-301R-4	Arsenic (Diss)	8	8	-18	-18	8	Downward Trend	12	Downward Trend

Notes:
Datasets presented for wells that were included in the sampling program in September 2022.
Field duplicates assigned the maximum value for the purposes of the trend test.
The detection limit was used for non-detect concentrations for the purposes of the trend test.
Trend test results were interpreted using a confidence level of 80% and 90%. If the absolute value of the statistic is equal to or greater than the critical value, a significant trend is concluded. The direction of the trend is determined by the sign of the statistic with positive statistics indicating an upward trend and negative statistics indicating a downward trend.
* When sample size > 10, the normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners, EPA QA/G-9S.
When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made.
NA = The Mann-Kendall trend test was not performed because there were less than 4 samples.
ND = The Mann-Kendall trend test was not performed because there were less than 3 detected concentrations.
- Analyte results not available for location.

Notes:
U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R = rejected
ft = feet
ug/l = micrograms per liter
NE = not established
Detects are bolded
Criteria exceedances are highlighted

Notes:
Datasets presented for wells that were included in the sampling program in September 2022.
Field duplicates assigned the maximum value for the purposes of the trend test.
The detection limit was used for non-detect concentrations for the purposes of the trend test
Trend test results were interpreted using a confidence level of 80% and 90%. If the absolute value of the statistic is equal to or greater than the critical value, a significant trend is concluded. The direction of the trend is determined by the sign of the statistic with positive statistics indicating an upward trend and negative statistics indicating a downward trend
* When sample size > 10, the normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners, EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made
NA = The Mann-Kendall trend test was not performed because there were less than 4 samples
ND = The Mann-Kendall trend test was not performed because there were less than 3 detected concentrations
- Analyte results not available for location.

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R = rejected
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Notes:
ft = feet
ug/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R =
Detects are bolded
Criteria exceedances are highlighted

Table 4-6
Summary of 2016 - 2022 Groundwater Analytical Results for Volatile Organic Compounds

				Location Group	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C	Transect C

Notes:
Datasets presented for wells that were included in the sampling program in September 2022.
Field duplicates assigned the maximum value for the purposes of the trend test.
The detection limit was used for non-detect concentrations for the purposes of the trend test.
Trend test results were interpreted using a confidence level of 80% and 90%. If the absolute value of the statistic is equal to or greater than the critical value, a significant trend is concluded. The direction of the trend is determined by the sign of the statistic with positive statistics indicating an upward trend and negative statistics indicating a downward trend
* When sample size > 10, the normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners, EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made.
NA = The Mann-Kendall trend test was not performed because there were less than 4 samples.
ND = The Mann-Kendall trend test was not performed because there were less than 3 detected concentrations
- Analyte results not available for location.

AECOM

Former GE Facility - Wilmington, MA

Building 3 - EPL LNAPL Gauging Record

Date: 4/27/22

Weather: Sunny, 72°F Recorder: A. Grossman / K. Jones

Gauging Information

Well	Time	Depth to LNAPL (ft btoc)	Depth to Water (ft btoc)	Depth to DNAPL (ft btoc)	Depth to Bottom (ft btoc)	Confirm Product w/ Bailer (Y/N/NA)	Product Removed (Y/N/NA)	Comments
AE-3	1703	~~ND~~ ~~6.07~~	6.07	ND	12.46			PID: 135.1 ppm
AE-4	1708	~~ND~~	5.82	ND	12.13			PID: 1.1 ppm
CW-1		~~ND~~ ~~4.81~~	4.82	~~ND~~				PID: 774.1 ppm
CW-2		ND	4.57	~~6.65~~	6.65			PID: 1.7 ppm
GZA-102S	1716	ND	6.22	ND	10.41			PID: 0.4 ppm
PZ-2S	1720	ND	6.02	ND	7.98			PID = 370.6
TRC-101		ND	6.02	~~4.45~~ ND	9.45			PID = 218.1 PPM

Gauging device (Mnfr./Model No.):

Note: If LNAPL is detected at thickness > 0.1 feet, insert absorbant sock and wire basket into well and secure tightly.

(Place spent socks, if used, in 5-gallon bucket within treatment building.)

Notes:

NA = Not Applicable

ND = Not Detected

NR = Not Recorded

ft btoc = feet below top of casing

Concord Street Pond			~~0.63~~	75.91		Ref Elev is top of 2nd outfall pipe into Pond, west of Fordham Rd
			0.93			

For each of the MWs above, if there is standing water present at the well, measure depth to surface water from the TOC reference elevation. This may require two measurements from TOC to Rim of stickup then rim of stickup down to surface water
At gauges SG-1 and SG-2, if no standing water, dig down up to 12 inches to see water is present, if yes, allow water to fill hole/stabilize and take measurement of depth to water below ground

Daily Tailgate Meeting

S3AM-209-FM5

Instructions: Conduct meeting prior to sending crews to individual tasks. Require attendance of all AECOM employees and subcontractors. Invite personnel from simultaneous operations for coordination purposes. Review scope of work and briefly discuss required and applicable topics. **This meeting is a daily refresher, not a full orientation.** Task-specific discussions associated with Task Hazard Assessment (THA) follow this meeting at the task location immediately before individual task is started.

AECOM Supervisor Name: Dylan Potter
Phone Number:
AECOM SH&E Rep. Name:
Phone Number:
Meeting Leader: Sean Haggett

Date: 9/27/22	Project Name/Location: 40 Fordham Rd	Project Number:

Today's Scope of Work:

Gauging

Muster Point Location:	First Aid Kit Location:	Fire Extinguisher Location:	Spill Kit Location:

1. Required Topics

- [x] Fitness for Duty requirements, all sign in / sign out
- [x] Required training (incl. task specific) completed and current
- [x] SH&E Plan onsite - understood, reviewed, signed by all (incl. scope, preplanning hazard assessments / risk registers, controls, procedures, requirements, etc.)
- [x] Task Hazard Assessments (THAs) are to be reviewed and completed for each task immediately prior to conducting
- [x] STOP WORK Right & Responsibility- all task changes/changed conditions re-assess with THA
- [x] Requirement to report to supervisor any injury, illness, damage, near miss, unsafe act / condition
- [x] Emergency Response Plan – including muster point, first aid kit, fire extinguisher, clinic/hospital location
- [x] Personal Protective Equipment (PPE) - Required items per hazard assessments in good condition / in use by all
- [x] Equipment/machinery inspected (documented as required) and in good condition - operators properly trained/certified
- [x] Work area set up and demarcation/ barricades in place to protect workers, site staff, and the public
- [ ] Required checklists/records available, understood (describe):
- [ ] Lessons Learned / SH&E improvements (describe):

2. Discuss if Applicable to Today's Work

Check ☑ as reviewed or mark ■ as not applicable

☑	Biological/ Chemical / Electrical Hazards
☑	Ergonomics - Lifting, Body Position
☑	Lock Out/ Tag Out
	Short Service Employees - visual identifier and mentor/ oversight assignment
☑	Simultaneous/ Neighbouring Operations
☑	Slip/ Trip/ Fall Hazards
☑	Specialized PPE Needs
☑	Traffic Control
☑	Waste Management/ Decontamination
☑	Weather Hazards / Heat Stress / Cold Stress
☑	Subcontractor Requirements (e.g., JHAs, THAs, procedures, reporting, etc.)
☑	Work Permits / Plans required (e.g., Fall Protection, Confined Space, Hot Work, Critical Lifts, etc.); in place, understood (identify/attach):
☐	Other Topics (describe/attach):
☐	Client specific requirements (describe):

3. Daily Check Out by Site Supervisor

Describe incidents, near misses, observations or Stop Work interventions from today:	Describe Lessons Learned/ Improvement Areas from today:
Traffic from UPS	

The site is being left in a safe condition and work crew checked out as fit unless otherwise specified as above.

Site Supervisor Name	Signature	Date / Time (at end of day / shift)
Dylan Potter		9/27/22 1800

Worker Acknowledgement / Sign In Sign Out sheets applicable to this meeting are on reverse and, if applicable, attached.

All employees:

- **STOP WORK if concerned / uncertain about safety / hazard or additional precaution is not recorded on the THA.**
- **Be alert and communicate any changes in personnel or conditions at the worksite to the supervisor.**
- **Reassess task, hazards, & mitigations on an ongoing basis; amend the THA if needed.**

SITE WORKERS (including AECOM Contractors and Subcontractors): Your signature below means that you understand:

* The requirement to participate in creating, reviewing, & updating hazard assessments (THA) applicable to your task(s).
* The hazards & control measures associated with each task you are about to perform.
* The permit to work requirements applicable to the work you are about to perform (if it includes permitted activities).
* That no tasks or work is to be performed without a hazard assessment.
* Your authority & obligation to "Stop Work" intervene, speak up/ listen up.

Your initials (right columns) certify that you arrived & departed fit for duty, & have reported all incidents/near misses; meaning:

* You are physically and mentally fit for duty and have inspected your required PPE to ensure satisfactory condition.
* You are not under the influence of any type of medication, drugs, or alcohol that could affect your ability to work safely.
* You are aware of your responsibility to immediately report any illness, injury (regardless of where or when it occurred), or impairment/fatigue issue to the AECOM Supervisor.
* You signed out as fit / uninjured unless you have otherwise informed the AECOM Supervisor.

Daily Tailgate Meeting

S3AM-209-FM5

Instructions: Conduct meeting prior to sending crews to individual tasks. Require attendance of all AECOM employees and subcontractors. Invite personnel from simultaneous operations for coordination purposes. Review scope of work and briefly discuss required and applicable topics. **This meeting is a daily refresher, not a full orientation.** Task-specific discussions associated with Task Hazard Assessment (THA) follow this meeting at the task location immediately before individual task is started.

AECOM Supervisor Name:
Phone Number:
AECOM SH&E Rep. Name:
Phone Number:
Meeting Leader:

Date: 9/21/22	Project Name/Location:	Project Number: 60688023

Today's Scope of Work:

wetland wells - gw sampling

Muster Point Location:	First Aid Kit Location:	Fire Extinguisher Location:	Spill Kit Location:

1. Required Topics

- [x] Fitness for Duty requirements, all sign in / sign out
- [x] Required training (incl. task specific) completed and current
- [x] SH&E Plan onsite - understood, reviewed, signed by all (incl. scope, preplanning hazard assessments / risk registers, controls, procedures, requirements, etc.)
- [x] Task Hazard Assessments (THAs) are to be reviewed and completed for each task immediately prior to conducting
- [x] STOP WORK Right & Responsibility- all task changes/changed conditions re-assess with THA
- [x] Requirement to report to supervisor any injury, illness, damage, near miss, unsafe act / condition
- [x] Emergency Response Plan – including muster point, first aid kit, fire extinguisher, clinic/hospital location
- [x] Personal Protective Equipment (PPE) - Required items per hazard assessments in good condition / in use by all
- [x] Equipment/machinery inspected (documented as required) and in good condition - operators properly trained/certified
- [x] Work area set up and demarcation/ barricades in place to protect workers, site staff, and the public
- [ ] Required checklists/records available, understood (describe)
- [ ] Lessons Learned / SH&E improvements (describe)

2. Discuss if Applicable to Today's Work

Check ☑ as reviewed or mark ■ as not applicable

- [x] [ ] Biological/ Chemical / Electrical Hazards
- [x] [ ] Ergonomics - Lifting, Body Position
- [ ] [x] Lock Out/ Tag Out
- [x] Short Service Employees - visual identifier and mentor/ oversight assignment
- [x] [ ] Simultaneous/ Neighbouring Operations
- [x] [ ] Slip/ Trip/ Fall Hazards
- [x] [ ] Specialized PPE Needs – waders
- [x] [ ] Traffic Control
- [x] [ ] Waste Management/ Decontamination
- [x] [ ] Weather Hazards / Heat Stress / Cold Stress
- [ ] [x] Subcontractor Requirements (e.g., JHAs, THAs, procedures, reporting, etc.)
- [ ] [x] Work Permits / Plans required (e.g., Fall Protection, Confined Space, Hot Work, Critical Lifts, etc.); in place, understood (identify/attach):
- [ ] [ ] Other Topics (describe/attach):
- [ ] [ ] Client specific requirements (describe):

3. Daily Check Out by Site Supervisor

Describe incidents, near misses, observations or Stop Work interventions from today:	Describe Lessons Learned/ Improvement Areas from today:
observation: use tailgate to assist putting on heavy backpacks	

The site is being left in a safe condition and work crew checked out as fit unless otherwise specified as above.

- [ ] [ ] Other Topics (describe/attach):

- [ ] [ ] Client specific requirements (describe):

3. Daily Check Out by Site Supervisor

Describe incidents, near misses, observations or Stop Work interventions from today:	Describe Lessons Learned/ Improvement Areas from today:

The site is being left in a safe condition and work crew checked out as fit unless otherwise specified as above.

Site Supervisor Name	Signature	Date / Time (at end of day / shift)
Dylan Potter		10/6/22 1700

Worker Acknowledgement / Sign In Sign Out sheets applicable to this meeting are on reverse and, if applicable, attached.

10/6/22

AECOM

All employees:

- **STOP WORK if concerned / uncertain about safety / hazard or additional precaution is not recorded on the THA.**
- **Be alert and communicate any changes in personnel or conditions at the worksite to the supervisor.**
- **Reassess task, hazards, & mitigations on an ongoing basis; amend the THA if needed.**

SITE WORKERS (including AECOM Contractors and Subcontractors): Your signature below means that you understand:

* The requirement to participate in creating, reviewing, & updating hazard assessments (THA) applicable to your task(s).
* The hazards & control measures associated with each task you are about to perform.
* The permit to work requirements applicable to the work you are about to perform (if it includes permitted activities)
* That no tasks or work is to be performed without a hazard assessment.
* Your authority & obligation to "Stop Work" intervene, speak up/ listen up

Your initials (right columns) certify that you arrived & departed fit for duty, & have reported all incidents/near misses; meaning:

* You are physically and mentally fit for duty and have inspected your required PPE to ensure satisfactory condition
* You are not under the influence of any type of medication, drugs, or alcohol that could affect your ability to work safely
* You are aware of your responsibility to immediately report any illness, injury (regardless of where or when it occurred), or impairment/fatigue issue to the AECOM Supervisor
* You signed out as fit / uninjured unless you have otherwise informed the AECOM Supervisor

Print Name & Company	Signature	~~Initials & Sign In~~ Time	Initials & Sign Out Time

This document certifies that US Environmental Rental Corporation has provided this rental equipment and all accessories in good working order. It is the renter's responsibility to: a) review all included items upon receipt, b) verify that all items are in acceptable condition and function properly, and c) contact a US Environmental associate immediately if any item is missing, damaged, and/or not functioning properly. Any delay in notifying US Environmental will be considered as the Renter taking responsibility for such missing, damaged, and/or malfunctioning item.

Missing, damaged, and/or malfunctioning equipment and accessories will result in additional fees.

This document certifies that US Environmental Rental Corporation has provided this rental equipment and all accessories in good working order. It is the renter's responsibility to: a) review all included items upon receipt; b) verify that all items are in acceptable condition and function properly; and c) contact a US Environmental associate immediately if any item is missing, damaged, and/or not functioning properly. Any delay in notifying US Environmental will be considered as the Renter taking responsibility for such missing, damaged, and/or malfunctioning item.

Missing, damaged, and/or malfunctioning equipment and accessories will result in additional fees.

Low Flow Ground Water Sample Collection Record

Client: Lockheed Martin Corp Date: 10/9/12 Time: Start 1015 am/pm
Project No: 60688023 Finish 1050 am/pm
Site Location: 50 Fordham Rd. Wilmington, MA
Weather Conds: 60°F Cloudy Collector(s): K. Jones

1. WELL & WATER LEVEL DATA: (measured in feet from Top of Casing unless noted)

a. Total Well Length 40.5' c Screen Length 5 (35' - 40') 2" PVC Casing
b. Water Table Depth 3.78 d. Pump Intake 37.5'
c. Water Column (a-b) 36.72 e. Calculated System Purge Volume 1.99 L (calculation on page 2)

2. WELL PURGE DATA

a. Purge Method: peristaltic pump

b. Acceptance Criteria defined (see workplan)

- Temperature	3%	- D.O.	< 0.5 mg/L	-Drawdown	<0.3 ft
- pH	±1.0 unit		>0.5 mg/L within 10%	-Turbidity	<10 NTU
- Sp. Cond.	3%	- ORP	± 10mV		>10NTU within 10%

c. Field Testing Equipment used: Make YSI Model 30 (Handheld) Serial Number 21K103644

Time (24hr)	Volume Removed (Liters)	Temp. (°C)	pH	Spec. Cond. (µS/cm)	DO (mg/L)	ORP (mV)	Turbidity (NTU)	Flow Rate (ml/min)	Drawdown (feet)	Color/Odor
1020	1	15.0	5.71	3225	0.32	176.6	10.9	200	0.14	Clear/none
1025	1	14.9	5.64	3230	0.23	195.5	7.7	200	0.14	clear/none
1030	1	14.9	5.68	3230	0.16	203.1	7.0	200	0.13	Clear/none

TRICHLOROETHYLENE	Y	N	N
VINYL CHLORIDE	Y	N	N

Certification	Applies to Manifest Line Items
Pursuant to 40 CFR 268.7(a), I hereby notify that this shipment contains waste restricted under 40 CFR Part 268.	1.

Waste analysis data, where available, is attached.

APPENDIX C
LABORATORY ANALYTICAL AND DATA VALIDATION REPORTS

PHOENIX
Environmental Laboratories, Inc.

Wednesday, October 12, 2022

Attn: Mr Scott Olson
AECOM
250 Apollo Drive
Chelmsford, MA 01824

Project ID: **LOCKHEED-WILMINGTON MA 60688023.02.2**
SDG ID: **GCM44228**
Sample ID#s: CM44228 - CM44238

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Comment:

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED-WILMINGTON MA 6068802 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]
CM44228, CM44229, CM44230, CM44231, CM44232, CM44233, CM44234, CM44235, CM44236, CM44237, CM44238

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

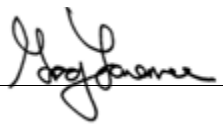
CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
8270 SVOC CAM II B ☑	7010 Metals CAM III C ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐
6010 Metals CAM III A ☑	6020 Metals CAM III D ☐	8082 PCB CAM V A ☐	9012 Total Cyanide/PAC CAM V1 A ☐	6860 Perchlorate CAM VIII B ☐	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 12, 2022

SDG I.D.: GCM44228

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

Not all requested reporting levels were achieved due to the presence of target and non target compounds. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 09/29/22-1 Keith Aloisa, Chemist 09/29/22

CM44229 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/0930_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

CHEM34 10/03/22-1 Adam Werner, Chemist 10/03/22

CM44234 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/1003_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 644571 (CM44051)

CM44229

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045
Tel. (860) 645-1102 Fax (860) 645-0823

ACCREDITED IN ACCORDANCE WITH nelac NY # 11301

MCP Certification Report

October 12, 2022

SDG I.D.: GCM44228

522 - DIOXANE

All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

Batch 644959 (CM46914)

CM44234

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Wet Chemistry Analysis

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

BECKMAN DU720 09/29/22-1 Greg Danielewski, Chemist 09/29/22

CM44228 , CM44232 , CM44234 , CM44235

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 644448 (CM43877)

CM44228, CM44232, CM44234, CM44235

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 90-110% MS acceptance range 75-125%.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 644963 (CM44374)

CM44228, CM44232, CM44234, CM44235

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

IC

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

IC 09/28/22-2 Catherine Lundigan, Greg Danielewski, Chemist 09/28/22

CM44228 , CM44232 , CM44234 , CM44235

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045

VOA Narration

CM44238 (1X)

Chem 17 is a 25ml purge instrument. The laboratory minimum response factor is set at 0.01 instead of 0.05 for the 25ml purge instruments.
EPA method 8260D Table 4 supports this approach.

Initial Calibration Evaluation (CHEM17/VT-100822):
93% of target compounds met criteria.
The following compounds had %RSDs >20%: Dibromochloromethane 22% (20%), 1,2-Dibromo-3-chloropropane 23% (20%), Bromoform 24% (20%), Tetrahydrofuran (THF) 29% (20%), trans-1,3-Dichloropropene 21% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: 1,2-Dibromo-3-chloropropane 0.031 (0.05), 2-Hexanone 0.063 (0.1), 4-Methyl-2-pentanone 0.086 (0.1), Acetone 0.035 (0.1), Bromoform 0.066 (0.1), Methyl ethyl ketone 0.060 (0.1), Tetrahydrofuran (THF) 0.043 (0.05)
The following compounds did not meet the minimum response factor of 0.05: 1,2-Dibromo-3-chloropropane 0.031 (0.05), Acetone 0.035 (0.05), Tetrahydrofuran (THF) 0.043 (0.05)

Continuing Calibration Verification (CHEM17/1009_02-VT-100822) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
95% of target compounds met criteria.
The following compounds did not meet % deviation criteria: Hexachlorobutadiene 29%H (20%), 2,2-Dichloropropane 22%H (20%), n-Butylbenzene 23%H (20%)
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: 1,1,2,2-Tetrachloroethane 0.272 (0.3), 1,2-Dibromo-3-chloropropane 0.035 (0.05), 2-Hexanone 0.063 (0.1), 4-Methyl-2-pentanone 0.083 (0.1), Acetone 0.032 (0.1), Bromoform 0.075 (0.1), Methyl ethyl ketone 0.062 (0.1), Tetrahydrofuran (THF) 0.036 (0.05)
The following compounds did not meet the minimum MCP response factor of 0.05: 1,2-Dibromo-3-chloropropane 0.031 (0.05), Acetone 0.035 (0.05), Tetrahydrofuran (THF) 0.043 (0.05)

CHEM17 10/11/22-1 Michael Hahn, Chemist 10/11/22

SDG Comments

November 07, 2022

SDG I.D.: GCM45643

Phoenix reporting levels may exceed those referenced in the CAM protocol. Please refer to criteria sheet for comparisons to requested MCP standards.

Version 2 - Added comment for the cause of the interference of the 1,4-Dioxane surrogate. Phoenix Lab ID CM45646.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Dioxane:
Due to matrix interference from non target compounds in the sample, surrogate could not be reported.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Comment:

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED-WILMINGTON MA 6068802 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]
CM45643, CM45644, CM45645, CM45646, CM45647, CM45648, CM45649, CM45650, CM45651, CM45652, CM45653, CM45654, CM45655

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐

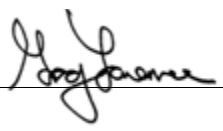
Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

November 07, 2022

SDG I.D.: GCM45643

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

Volatile 8260 analysis:
1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 10/03/22-1 Adam Werner, Chemist 10/03/22

CM45648 (1X), CM45649 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/1003_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

CHEM34 10/05/22-1 Adam Werner, Chemist 10/05/22

CM45650 (1X), CM45651 (1X), CM45655 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/1005_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

IC

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Instrument:

ARCOS 10/05/22 09:03 Tina Hall, Chemist 10/05/22

CM45655

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

ARCOS 10/06/22 08:36 Tina Hall, Chemist 10/06/22

CM45650, CM45651, CM45652, CM45653, CM45654

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

ARCOS-2 10/08/22 08:30 Tina Hall, Chemist 10/08/22

CM45650, CM45651, CM45652, CM45653, CM45654, CM45655

The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

BLUE 10/11/22 08:00 Tina Hall, Chemist 10/11/22

CM45651

The initial calibration met criteria.
The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration range.
The continuing calibration blanks were less than the reporting level for the elements reported.
The ICSA and ICSAB were analyzed at the beginning and end of the run and were within criteria.The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

BLUE 10/12/22 09:40 Tina Hall, Chemist 10/12/22

CM45651

The initial calibration met criteria.
The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration

MCP Certification Report

November 07, 2022

SDG I.D.: GCM45643

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 646504 (Samples: CM45644, CM45645, CM45646, CM45647, CM45648, CM45652, CM45653, CM45654): -----

The MS and/or the MSD recovery is above the upper range for one or more analytes that were not reported in the sample(s), therefore no significant bias is suspected. (1,2,3-Trichlorobenzene, Hexachlorobutadiene, Naphthalene, p-Isopropyltoluene, sec-Butylbenzene)

The MS/MSD RPD exceeds the method criteria for one analyte, therefore there may be variability in the reported result. (Bromomethane)

The QC recovery for one analyte are above the upper range but was not reported in the sample(s), therefore no significant bias is suspected. (n-Butylbenzene)

QC Batch 646742 (Samples: CM45648, CM45649, CM45650, CM45652, CM45654, CM45655): -----

The LCS/LCSD recovery is above the upper range for one or more analytes that were not reported in the sample(s), therefore no significant bias is suspected. (1,2,3-Trichlorobenzene, Naphthalene)

The MS/MSD RPD exceeds the method criteria for one or more analytes, therefore there may be variability in the reported result. (Bromomethane, Tetrahydrofuran (THF))

The QC recovery for one analyte is above the upper range but was not reported in the sample(s), therefore no significant bias is suspected. (n-Butylbenzene)

Instrument:

CHEM17 10/09/22-1 Michael Hahn, Chemist 10/09/22

CM45643 (1X), CM45644 (100X), CM45645 (100X), CM45648 (20X), CM45649 (100X), CM45650 (100X), CM45651 (1X)

Chem 17 is a 25ml purge instrument. The laboratory minimum response factor is set at 0.01 instead of 0.05 for the 25ml purge instruments.
EPA method 8260D Table 4 supports this approach.

Initial Calibration Evaluation (CHEM17/VT-100822):
93% of target compounds met criteria.
The following compounds had %RSDs >20%: 1,2-Dibromo-3-chloropropane 23% (20%), Bromoform 24% (20%), Dibromochloromethane 22% (20%), Tetrahydrofuran (THF) 29% (20%), trans-1,3-Dichloropropene 21% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: 1,2-Dibromo-3-chloropropane 0.031 (0.05), 2-Hexanone 0.063 (0.1), 4-Methyl-2-pentanone 0.086 (0.1), Acetone 0.035 (0.1), Bromoform 0.066 (0.1), Methyl ethyl ketone 0.060 (0.1), Tetrahydrofuran (THF) 0.043 (0.05)
The following compounds did not meet the minimum response factor of 0.05: 1,2-Dibromo-3-chloropropane 0.031 (0.05), Acetone 0.035 (0.05), Tetrahydrofuran (THF) 0.043 (0.05)

Continuing Calibration Verification (CHEM17/1009_02-VT-100822) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
95% of target compounds met criteria.
The following compounds did not meet % deviation criteria: 2,2-Dichloropropane 22%H (20%), Hexachlorobutadiene 29%H (20%), n-Butylbenzene 23%H (20%)
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: 1,1,2,2-Tetrachloroethane 0.272 (0.3),

Continuing Calibration Verification (CHEM17/1012_01-VT-100822) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
94% of target compounds met criteria.
The following compounds did not meet % deviation criteria: 1,2,3-Trichlorobenzene 22%H (20%), 1,2,4-Trichlorobenzene 23%H (20%), Hexachlorobutadiene 25%H (20%), n-Butylbenzene 24%H (20%), Naphthalene 24%H (20%)
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: 1,2-Dibromo-3-chloropropane 0.036 (0.05), 2-Hexanone 0.067 (0.1), 4-Methyl-2-pentanone 0.086 (0.1), Acetone 0.034 (0.1), Bromoform 0.074 (0.1), Methyl ethyl ketone 0.068 (0.1), Tetrahydrofuran (THF) 0.036 (0.05)
The following compounds did not meet the minimum MCP response factor of 0.05: 1,2-Dibromo-3-chloropropane 0.031 (0.05), Acetone 0.035 (0.05), Tetrahydrofuran (THF) 0.043 (0.05)

QC (Batch Specific):

Batch 646250 (CM44238) CHEM17 10/9/2022-1

CM45643(1X), CM45644(100X), CM45645(100X), CM45648(20X), CM45649(100X), CM45650(100X), CM45651(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

Batch 646742 (CM46914) CHEM17 10/12/2022-1

CM45648(2X), CM45649(20X), CM45650(20X, 500X), CM45652(5X), CM45654(5X), CM45655(40X, 500X)

All LCS recoveries were within 70 - 130 with the following exceptions: 1,2,3-Trichlorobenzene(131%), Naphthalene(134%)
All LCSD recoveries were within 70 - 130 with the following exceptions: 1,2,3-Trichlorobenzene(133%), Naphthalene(134%), n-Butylbenzene(132%)
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

QC (Site Specific):

Batch 646504 (CM45646) CHEM17 10/11/2022-1

CM45644(20X), CM45645(20X), CM45646(100X, 500X), CM45647(40X, 500X), CM45648(50X), CM45652(1X), CM45653(1X), CM45654(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: n-Butylbenzene(132%)
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
All MS recoveries were within 70 - 130 with the following exceptions: Hexachlorobutadiene(134%), n-Butylbenzene(135%), sec-Butylbenzene(131%)
All MSD recoveries were within 70 - 130 with the following exceptions: 1,2,3-Trichlorobenzene(133%), Hexachlorobutadiene(134%), Naphthalene(132%), n-Butylbenzene(137%), p-Isopropyltoluene(131%), sec-Butylbenzene(133%)
All MS/MSD RPDs were less than 20% with the following exceptions: Bromomethane(30.3%)
A matrix effect is suspected when a MS/MSD recovery is outside of criteria. No further action is required if LCS/LCSD compounds are within criteria.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,

Hi Tessa,

We've updated the ID for CM45654. We have corrected the 1,4-Dioxane login and currently the following are being analyzed:

22A-AE103R4-092822-1 (CM45646)
22A-AE104R1-092822-1 (CM45648)
22A-AE104R3-092822-1 (CM45649+)
22A-AE104R5-092822-1 (CM45650)
22A-AE105D-092922-1 (CM45651)
22A-AE102RR6-092822-1 (CM45655)

Please correct me if I have this wrong **J**

Thank you,

Rebecca Merz

Subject: RE: Phoenix Labs - GCM45643, LOCKHEED-WILMINGTON MA 60688023.02.2 - COC Acknowledgement

Hi Rebecca,

Please see the attached PDF for corrections.

- Sample ID CM45654 should have the client ID corrected to say 22A-AE106M-092922-2.
- To clarify your message below, was the 1,4-Dioxane fix for these samples? They should not be analyzed for 1,4-Dioxane per the COC.
  22A-AE106M-092922-1
  22A-TRC301R4-092922-1
  22A-AE106M-092922-2 (corrected ID)

Thanks!

Subject: FW: Phoenix Labs - GCM45643, LOCKHEED-WILMINGTON MA 60688023.02.2 - COC Acknowledgement

We have fixed the 1,4-Dioxane. We had missed one sample and had it logged in on a few that it should have been. All set **J**

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED-WILMINGTON MA 6068802 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]
CM46662, CM46663, CM46664, CM46665, CM46666, CM46667, CM46668, CM46669, CM46670, CM46671, CM46672

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☑	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐

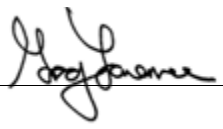
Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Sections: EPH, ICP, SVOASIM, VOA Narrations .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 13, 2022

SDG I.D.: GCM46662

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

Volatile 8260 analysis:
1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 10/05/22-1 Adam Werner, Chemist 10/05/22

CM46663 (1X), CM46664 (1X), CM46665 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/1005_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 645140 (CM45650)

CM46663, CM46664, CM46665

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 645375 (Samples: CM46668): -----

Several QC recoveries are below the lower range. A low bias is possible. (C9 - Nonane)

QC Batch 645596 (Samples: CM46669, CM46670, CM46671): -----

The LCSD recovery is below the lower range. All of the other QC is acceptable, therefore no significant bias is suspected. (C9 - Nonane)

Instrument:

AU-FID3 10/07/22-1 Adam Werner, Chemist 10/07/22

CM46668 (1X)

No significant modifications were made to the EPH method, as specified in Section 11.3 of the method.

The initial calibration (AR0906BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

AU-FID4 10/06/22-1 Adam Werner, Chemist 10/06/22

CM46668 (1X), CM46669 (1X), CM46670 (1X), CM46671 (1X)

The initial calibration (AL0805BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 645596 (CM49088)

CM46669, CM46670, CM46671

All LCS recoveries were within 40 - 140 with the following exceptions: None.
All LCSD recoveries were within 40 - 140 with the following exceptions: C9 - Nonane(39%)
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

QC (Site Specific):

Batch 645375 (CM46668)

CM46668

All LCS recoveries were within 40 - 140 with the following exceptions: C9 - Nonane(27%)
All LCSD recoveries were within 40 - 140 with the following exceptions: C9 - Nonane(30%)
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
All MS recoveries were within 40 - 140 with the following exceptions: C9 - Nonane(37%)
All MSD recoveries were within 40 - 140 with the following exceptions: None.
All MS/MSD RPDs were less than 25% with the following exceptions: None.
A matrix effect is suspected when a MS/MSD recovery is outside of criteria. No further action is required if LCS/LCSD compounds are within criteria.
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED-WILMINGTON MA 6068802 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]
CM46673, CM46674, CM46675, CM46676, CM46677, CM46678, CM46679, CM46680, CM46681, CM46682, CM46683, CM46684

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

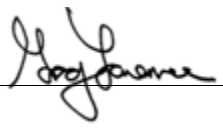
Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 28, 2022

SDG I.D.: GCM46673

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

Volatile 8260 analysis:
1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 10/05/22-1 Adam Werner, Chemist 10/05/22

CM46674 (1X), CM46676 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/1005_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 645140 (CM45650)

CM46674, CM46676

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Wet Chemistry Analysis

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045
Tel. (860) 645-1102 Fax (860) 645-0823

SDG I.D.: GCM46673

Wet Chemistry Analysis

BECKMAN DU720 10/05/22-1 Greg Danielewski, Chemist 10/05/22

CM46674

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 645186 (CM45601)

CM46674

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 645407 (CM49151)

CM46674

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 90-110% MS acceptance range 75-125%.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

IC

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

IC 09/30/22-2 Catherine Lundigan, Greg Danielewski, Chemist 09/30/22

CM46674

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 645633 (CM46519)

CM46674

All LCS recoveries were within 90 - 110 with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

ICP Metals Narration

ARCOS 10/05/22 09:03 Tina Hall, Chemist 10/05/22

CM46673, CM46674, CM46683

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

ARCOS-2 10/08/22 08:30 Tina Hall, Chemist 10/08/22

CM46673, CM46674, CM46683

The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

QC (Batch Specific):

Batch 644779 (CM46506)

CM46673, CM46674, CM46683

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

Batch 645089 (CM46668)

CM46673, CM46674, CM46683

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 646395 (Samples: CM46674, CM46675, CM46676, CM46677, CM46678, CM46679, CM46680, CM46681, CM46683, CM46684): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (Chloroethane)

The LCS/LCSD RPD exceeds the method criteria for one or more analytes, but these analytes were not reported in the sample(s) so no variability is suspected. (1,1,1-Trichloroethane, 1,3,5-Trimethylbenzene, 2,2-Dichloropropane, Carbon Disulfide, Carbon tetrachloride, Chloroethane, Dichlorodifluoromethane, Hexachlorobutadiene, Isopropylbenzene, n-Butylbenzene, p-Isopropyltoluene, sec-Butylbenzene, tert-Butylbenzene, Trichlorofluoromethane, Trichlorotrifluoroethane)

The LCS/LCSD RPD exceeds the method criteria for one or more analytes, therefore there may be variability in the reported result. (1,1-Dichloroethene, Vinyl chloride)

VOA Narration

Instrument:

CHEM02 10/11/22-2 Michael Hahn, Chemist 10/11/22

CM46674 (1X), CM46675 (1X), CM46676 (1X), CM46677 (1X), CM46678 (1X), CM46679 (1X), CM46680 (1X)

Chem02 is a 25ml purge instrument. The laboratory minimum response factor is set at 0.01 instead of 0.05 for the 25ml purge instruments.
EPA method 8260D Table 4 supports this approach.

Initial Calibration Evaluation (CHEM02/VT-P100922):
98% of target compounds met criteria.
The following compounds had %RSDs >20%: Bromomethane 23% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: 1,2-Dibromo-3-chloropropane 0.046 (0.05), 2-Hexanone 0.094 (0.1), Acetone 0.048 (0.1), Methyl ethyl ketone 0.089 (0.1)
The following compounds did not meet the minimum response factor of 0.05: 1,2-Dibromo-3-chloropropane 0.046 (0.05), Acetone 0.048 (0.05)

Continuing Calibration Verification (CHEM02/1011_30-VT-P100922) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
99% of target compounds met criteria.
The following compounds did not meet % deviation criteria: Acetone 29%H (20%)
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: Acetone 0.062 (0.1), Methyl ethyl ketone 0.093 (0.1)
The following compounds did not meet the minimum MCP response factor of 0.05: None.

CHEM15 10/12/22-1 Harry Mullin, Chemist 10/12/22

CM46682 (1X)

Initial Calibration Evaluation (CHEM15/VOA15-101122):
98% of target compounds met criteria.
The following compounds had %RSDs >20%: Bromomethane 27% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum response factor of 0.05: None.

Continuing Calibration Verification (CHEM15/1012_01-VOA15-101122) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum MCP response factor of 0.05: None.

CHEM23 10/09/22-1 Michael Hahn, Chemist 10/09/22

CM46674 (20X), CM46675 (20X), CM46676 (20X), CM46677 (20X), CM46678 (10X), CM46679 (10X), CM46680 (10X), CM46681 (1X), CM46683 (1X), CM46684 (1X)

Initial Calibration Evaluation (CHEM23/VOA23_100822):
94% of target compounds met criteria.
The following compounds had %RSDs >20%: Bromoform 23% (20%), Chloroethane 35% (20%), Naphthalene 24% (20%), Trichloroethene 26% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: Acetone 0.077 (0.1), Methyl ethyl ketone 0.091 (0.1), Tetrachloroethene 0.178 (0.2)

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

% 2,5-Dibromotoluene (PID)	109		%	1	10/06/22	V	70 - 130 %

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED-WILMINGTON MA 6068802 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]
CM47533, CM47534, CM47535, CM47536, CM47537, CM47538, CM47539, CM47540, CM47541, CM47542, CM47543, CM47544

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☑	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
8270 SVOC CAM II B ☑	7010 Metals CAM III C ☐	MassDEP EPH CAM IV B ☑	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐

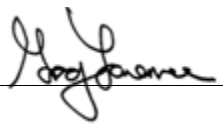
Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: EPH Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 20, 2022

SDG I.D.: GCM47533

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

Volatile 8260 analysis:
1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 10/06/22-1 Adam Werner, Chemist 10/06/22

CM47534 (1X), CM47536 (1X), CM47537 (1X), CM47538 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0830):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/1006_04-DIOX_0830) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 645601 (CM49151)

CM47534, CM47536, CM47537, CM47538

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 20, 2022

SDG I.D.: GCM47533

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 645596 (Samples: CM47540, CM47541, CM47542): -----

The LCSD recovery is below the method criteria. All of the other QC is acceptable, therefore no significant bias is suspected. (C9 - Nonane)

Instrument:

AU-FID4 10/06/22-1 Adam Werner, Chemist 10/06/22

CM47540 (1X), CM47541 (1X), CM47542 (1X)

The initial calibration (AL0805BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 645596 (CM49088)

CM47540, CM47541, CM47542

All LCS recoveries were within 40 - 140 with the following exceptions: None.
All LCSD recoveries were within 40 - 140 with the following exceptions: C9 - Nonane(39%)
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Wet Chemistry Analysis

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

BECKMAN DU720 10/05/22-1 Greg Danielewski, Chemist 10/05/22

CM47535 , CM47536 , CM47537 , CM47538 , CM47540 , CM47541

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 645395 (CM47523)

CM47535, CM47536, CM47537, CM47538, CM47540, CM47541

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 645407 (CM49151)

CM47535, CM47536, CM47537, CM47538, CM47540, CM47541

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 90-110% MS acceptance range 75-125%.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

SDG I.D.: GCM47533

Wet Chemistry Analysis

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

IC

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

IC 10/03/22-2 Brian Sheriden, Greg Danielewski, Chemist 10/03/22

CM47535 , CM47536 , CM47537 , CM47538 , CM47540 , CM47541

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 645228 (CM47435)

CM47535, CM47536, CM47537, CM47538, CM47540, CM47541

All LCS recoveries were within 90 - 110 with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Instrument:

ARCOS 10/06/22 08:36 Tina Hall, Chemist 10/06/22

CM47535, CM47536, CM47537, CM47538, CM47539, CM47540, CM47541

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

BLUE 10/12/22 09:40 Tina Hall, Chemist 10/12/22

CM47535, CM47536, CM47537, CM47538, CM47539, CM47540, CM47541

The initial calibration met criteria.
The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration range.
The continuing calibration blanks were less than the reporting level for the elements reported.
The ICSA and ICSAB were analyzed at the beginning and end of the run and were within criteria.The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.

SVOASIM Narration

For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

Initial Calibration Evaluation (CHEM27/27_BNSIM18_0808):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM27/1007_03-27_BNSIM18_0808) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 645694 (CM47333)

CM47540, CM47541, CM47542

All LCS recoveries were within 40 - 140 with the following exceptions: None.
All LCSD recoveries were within 40 - 140 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional 8270 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum MCP response factor of 0.05: None.

CHEM17 10/13/22-1 Michael Hahn, Chemist 10/13/22

CM47536 (500X)

Chem 17 is a 25ml purge instrument. The laboratory minimum response factor is set at 0.01 instead of 0.05 for the 25ml purge instruments.
EPA method 8260D Table 4 supports this approach.

Initial Calibration Evaluation (CHEM17/VT-100822):
93% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum response factor of 0.05: None.

Continuing Calibration Verification (CHEM17/1013_02-VT-100822) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
88% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum MCP response factor of 0.05: None.

QC (Batch Specific):

Batch 646485 (CM47543) CHEM15 10/11/2022-4

CM47533(1X), CM47534(10X), CM47535(20X), CM47537(10X), CM47538(10X), CM47543(1X), CM47544(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller

SDG Comments

January 10, 2023

SDG I.D.: GCM49146

Phoenix reporting levels may exceed those referenced in the CAM protocol. Please refer to criteria sheet for comparisons to requested MCP standards.

Ver.2:
This report has been revised to correct Question A on the MCP certification form.

Ver 3:
This report has been revised per client reqeust. 1,4-Dioxane results for sample 22A-AE100R5-100422-1 were changed to sample 22A-AE100R3-100422-1.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Semi-Volatile Comment:
Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
