Section 1

Introduction

Camp Dresser & McKee Inc. (CDM), serving as the environmental consultant for Lockheed Martin Corporation (Lockheed Martin), has prepared this Phase I Initial Site Investigation Report (Phase 1 Report) and Completion Statement for the former GE Facility (the Property) located at 50 Fordham Road, Wilmington, Massachusetts, as illustrated on **Figure 1-1**. Also included in this submittal is the Tier Classification and associated Numerical Ranking Scoresheet (NRS) presented as the Bureau of Waste Site Cleanup (BWSC) transmittal form BWSC107A.

In January 2009, the Massachusetts Department of Environmental Protection (MassDEP) was notified of a 120-day reporting condition regarding the detection of arsenic in groundwater above Reportable Concentrations (RCs). MassDEP issued a Notice of Responsibility (NOR) and Release Tracking Number (RTN) 3-0028282 in response to the reporting condition. For the purposes of this report, the portion of the Property associated with arsenic detections in groundwater, will be herein referred to as the "Site."

1.1 Purpose and Scope

The purpose of the Phase I initial Site Investigation is to evaluate the release at the Property in accordance with the requirements outlined in 310 CMR 40.0480 of the Massachusetts Contingency Plan (MCP) and to support the Tier Classification of the Site. This Phase I Report and Completion Statement address the presence of arsenic in groundwater at concentrations that exceed the applicable reportable concentrations. The Property is the subject of a separate RTN (3-00518) pertaining to groundwater and soil impacts associated with releases from underground storage tanks and potential other sources. Characterization and remediation under this RTN has been ongoing as a Tier IA site since 1986. The RTN 3-00518 is currently in Remedy Operation Status. This Phase I Report and Tier Classification is focused on and in general limited to the occurrence of arsenic in groundwater which, at this time, has not been linked to the other releases subject to the RTN 3-00518.

Section 1 of this report presents the purpose and scope of the Phase I Report. Section 2 includes general disposal site information, including a description of the Site and surrounding areas. The site history is provided in Section 3. A description of the field investigations conducted at the Site is included in Section 4. Section 5 includes the hydrogeological characteristics at the Site. A description of the nature and extent of impacted soil and groundwater is included in Section 6 of the report. Section 7 includes an evaluation of known and potential migration pathways and exposure potential. A description of the Tier Classification process is included in Section 8. A summary and the conclusions of the Phase I are presented as Section 9. The references used to support this report are listed in Section 10.

Site Information

In accordance with 310 CMR 40.0483(1)(a), this section presents information that defines and describes the disposal Site and surrounding area. This information has been obtained from previous reports prepared by TRC Environmental Corporation (TRC) under contract to Lockheed Martin; Massachusetts Geographic Information Systems (MassGIS); an environmental database search conducted in December 2009 by Environmental Data Resources, Inc. (EDR); and contact with the Town of Wilmington, Massachusetts department offices.

2.1 General Disposal Site Information

The following general disposal Site information is presented in accordance with the requirements of 310 CMR 40.0483(1)(a) and illustrated on **Figure 2-1**:

<u>Item</u>	<u>Description</u>	<u>Source</u>
Release Tracking Number	3-28282	MassDEP
Site Address	50 Fordham Road Wilmington, Massachusetts	TRC (Sept. 2001)
Latitude and Longitude (North and West)	42.5608722 - 42° 33' 39.14" 71.1360778 - 71° 8' 9.88"	MassGIS

2.2 Site Location and Description

General Description

The Property is a 13 acre parcel situated along Fordham Road in Wilmington, Massachusetts. Currently, the Property contains wetlands, a Sewage Treatment Plant and Waste Water Treatment Plant, paved parking areas, and a number of industrial buildings, as illustrated in **Figure 2-2**.

Disposal Site Boundary

Groundwater at the Site has been impacted by arsenic. The Site is comprised of a study area which includes portions of the industrial park and wetlands to the east.

The disposal Site is bounded by:

North: the northernmost portion of Building 2 to the basketball court;

South: the northern edge of Converse, Inc.;

East: the western edge of the wetlands boundary to the roadway express building;

West: the parking area east of Buildings 1 and 1A (Ametek Aerospace Products) and Building 2 (General Scanning);

The disposal Site boundary includes the extent of arsenic impacts at the Site, as illustrated in **Figure 2-3**.

Former USTs

Five underground storage tanks (Tanks D, G, H, I, and J), located within the Tank Farm area between Buildings 1 and 3, were in use from 1969 through 1987 by GE Aerospace Instruments. The tanks contained waste fuel and waste oil, thinners, solvents, Stoddard fuel (also referred to as Stoddard solvent), JP-4 jet fuel, and methanol. All five tanks, in addition to one small tank located near former Tank K, were removed in June 1987.

In addition, Converse, a former tenant, operated a gasoline tank (Tank K) located east of Building 2, a blowdown tank associated with the steam curing of rubber (Tank L), and a tank for the storage of laboratory wastes (Tank E). Converse removed Tank E in 1981, and subsequently removed both Tanks K and L before vacating the Property in 1986. (TRC, Sept. 2001) No information is available for the use and disposal of Tanks A, B, and C. (TRC, Sept. 2001)

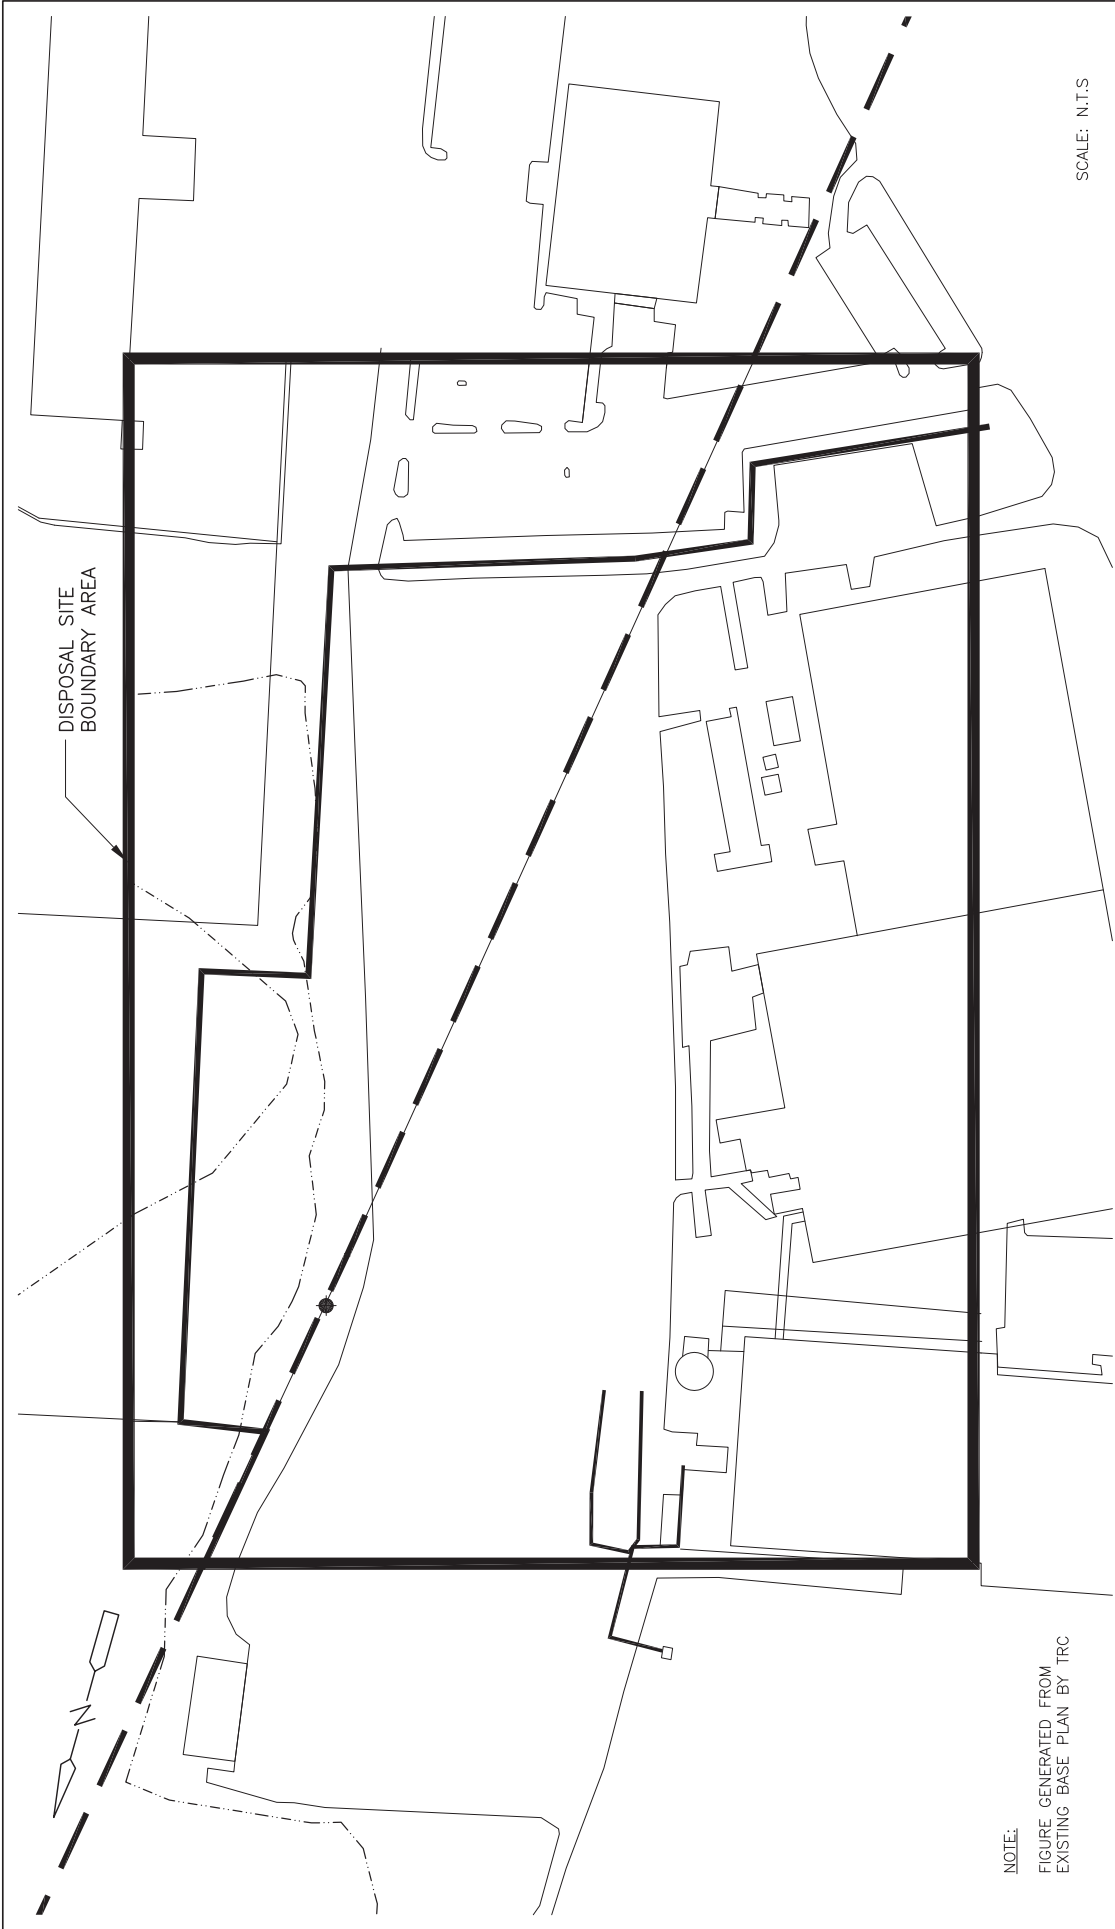

Existing USTs

According to public record, there are no USTs currently onsite.

Utilities

Drinking water supplied to the Property is provided by both Town of Wilmington Water Department and the Massachusetts Water Resources Authority. According to the Water Department, approximately 85% of local water service is provided by local wells within the town. The remaining 15% is supplied by MWRA service, which originates at the Quabbin Reservoir, 80 miles west to southwest of the Property.

Storm and sanitary sewers are serviced at the Property Sewage Treatment Plant and Waste Water Treatment Plant. Associated outfalls are located within the Site, along the western boundary of the wetlands and tree line area. According to the Town of Wilmington Water and Sewer Division, sanitary waste for this Property is not treated through municipal services. (Town of Wilmington Water Department, Dec. 2009).

LOCKHEED MARTIN CORPORATION (FORMER GE FACILITY)
50 FORDHAM ROAD
WILMINGTON, MASSACHUSETTS

DISPOSAL SITE BOUNDARY

FIGURE 2-3

Surrounding Land Use

The Site is located in an area zoned for industrial use. East of the Site are wetlands and open water, and areas north, west, and south are comprised of industrial buildings, roads, and associated features. Residential properties are located approximately ½ mile from the Site.

Surrounding Receptors

- There is one unnamed stream, a tributary to the Ipswich River, and associated MassDEP-recognized wetlands areas located on the northeast and eastern portions of the Site. This stream flows from Furbish Pond, located 750 feet northeast of the Site, and continues southeast to the Ipswich River.
- An inactive former public drinking water well, the Stickney Well, formerly operated by the Town of North Reading, is located to the northeast, within a half mile of the Site. MassDEP approved Zone II or US Environmental Protection Agency (EPA) Sole Source Aquifer zones are located within the Site and throughout the half-mile radius, concentrated in the north and east.
- There are no Areas of Critical Environmental Concern on the Site or in the surrounding area within a one mile radius.

2.3 MCP Soil and Groundwater Classification

The MCP establishes categories of soil and groundwater that are utilized in characterizing risk. In accordance with MassDEP guidance, soil and groundwater categories were determined to identify applicable Method 1 standards as described in 310 CMR 40.0974(1).

The three soil categories (S-1, S-2, and S-3) were derived based on the potential for exposure. Factors such as the type of receptor, frequency of use, intensity of use, and the accessibility of the soil are considered in soil classification. Category S-1 is associated with the highest potential for exposure, and Category S-3 is associated with the lowest potential for exposure.

With the exception of landscaped and grassy areas along the perimeter of the Property, the majority of the Site is paved or covered by industrial buildings. Soil in the landscaped and grassy areas is classified as S-2 since it is accessible to adults at a low frequency and potentially high intensity use and is accessible to children at a low frequency and low intensity use. The soil beneath paving and buildings is considered inaccessible, with adults being the only potential receptors. Therefore, the soil in this area is classified as S-3.

The MCP recognizes three categories of groundwater as identified in 310 CMR 40.0932: GW-1, GW-2, and GW-3. The groundwater categories are associated with three distinct types of exposures including: (1) potential or current use of groundwater as a drinking water source (GW-1), (2) groundwater as a source of

indoor air impacts (GW-2), and (3) groundwater as a source of surface water impacts (GW-3).

Groundwater at the Site is identified as category GW-1. Category GW-1 applies to all groundwater, as all water eventually discharges to a surface water body.

2.4 Summary of Environmental Database Search

A search of available environmental regulatory agency databases was conducted for the Site and surrounding area. The database search was conducted by EDR to determine whether documentation exists related to environmental incidents at the Site or at properties in the vicinity of the Site. Search distances are per American Society for Testing and Materials Practice (ASTM) E 1527-05 guidance.

The target Property was identified on the following databases: Facility Index System/Facility Registration System, Comprehensive Environmental Response, Compensation and Liability Information System, Federal ERNS Database, Resource Conservation and Recovery Act -Large Quantity Generator Database, State Oil and Hazardous Waste Database, MA Historical Spill List, MA Reportable Releases Database, Manifest, Groundwater Discharge Permits, and LUST Database. Information pertaining to surrounding properties identified on the various databases within the specified search distances is supplied in the complete EDR report, provided as **Appendix A**.

Section 3

Site History

This section presents the history of the site, including the previous and current owners, operations history, release and regulatory history, oil and/or hazardous material (OHM) use and storage history, waste management history, and environmental permits and compliance history.

3.1 Owner, Operator, and Operations History

Prior to 1968, the property was used for gravel mining. From 1968 through 1970, the property was developed with the establishment of three large buildings, one small building, a paved parking area, and a waste water treatment facility. General Electric (GE) Aerospace Instruments began to occupy the property buildings in 1970 and operated manufacturing and supported research and development departments until 1989. Portions of the Site were subsequently subleased to Converse, Inc. (Converse) from 1973 to 1986 and to Hamilton Standard from 1983 to 1985. In August 1989, GE's operations were sold to Ametek, Inc. (TRC, Sept. 2001)

Based on historical Topographic Maps, the property was developed after 1965 and before 1979. Prior to 1965, the property appears to have been undeveloped marsh land. No Sanborn Fire Insurance maps were available for this property. (EDR, 2009)

3.2 Release and Regulatory History

3.2.1 Subject Release

According to the MassDEP Waste Site/Reportable Releases Look Up, RTN 3-0028282 was assigned to the site on January 8, 2009. The release was reported after groundwater monitoring data indicated reportable concentrations of arsenic in four wells. Concentrations ranged from 3.3 ug/L to a maximum of 84.4 ug/L.

3.2.2 Historical Releases

RTN 3-0000518 was assigned on January 15, 1987. This response action was categorized as a "potential release or threat of release." While original documentation is limited, information was compiled from historical reports. The release history includes:

- Chlorinated solvents (primarily tetrachloroethylene) - PCE, and trichloroethylene-TCE) - Discovered in 1986. The release most likely occurred in the Tank Farm area sometime before 1975 when the facility stopped using these solvents in their operations.
- Gasoline - Discovered in 1986 when Tank K was removed.
- Stoddard fuel - Discovered in August 1989, it appeared that this release occurred in the Tank Farm area and possibly the Eastern Parking Lot (EPL).

Chlorinated Solvents

The chlorinated solvent release most likely occurred within the former Tank Farm area, and impacted the overburden and fractured rock aquifers. In February 1992, a groundwater pump and treat system was installed as an Interim Measure within the former Tank Farm area and continues to operate under a Phase V Operations, Maintenance, and Monitoring Program. As reported in the most recent "Tank Farm Area Remediation System Semi-Annual Operations and Monitoring Report" (TRC, August 2001), the treatment system has recovered over 31 lbs. of chlorinated volatile organic compounds (CVOCs) and other VOCs since 1992, operating at less than 1 gpm withdrawal rate for most of the operating history. Approximately 96.5% of the total cumulative mass was recovered by 1998 (the sixth year of operation). Since then, only about one pound of total VOC mass has been recovered over a 3-year period.

Overall, the Regional Groundwater AOC for RTN 3-0000518 is defined by the area of impact due to the chlorinated solvent release into bedrock at the Tank Farm area, and the associated plume that extends downgradient from the source area through the overburden and fractured rock portions of the aquifer.

Gasoline

The pre-1986 gasoline release impacted soil and shallow overburden groundwater in the Tank K area. To date, only gasoline-related VOCs have been observed in the soil and groundwater. In December 2000, a Phase IV remedy implementation was completed by TRC, with the installation of a biosparging/soil vapor extraction (SVE) system. Currently, the Tank K area is undergoing a Phase V Operations, Maintenance and Monitoring Program to maintain proper performance of the remediation system, and to monitor the levels of VOCs in the nearby monitoring wells over time.

Stoddard Fuel

The release of Stoddard fuel, a light non-aqueous phase liquid (i.e., LNAPL, less dense than water), impacted soil and shallow overburden groundwater in the area of the EPL. Product recovery operations from March to October 1992 recovered approximately 415 gallons of LNAPL in the EPL. In addition, approximately 196 gallons of Stoddard fuel were recovered in the Tank Farm area. Subsequently, in November 2000, a Phase IV source area removal action was completed by TRC in the EPL in which 4,397 tons of contaminated soil were removed, 644,936 gallons of groundwater associated with excavation dewatering (impacted by fuel-related VOCs) were treated and discharged to the storm drain system, and 1,023 gallons of groundwater were removed from well PZ-2S and the culvert wells. Currently, the EPL area is undergoing a Phase V Groundwater Monitoring Program to evaluate the potential recurrence of LNAPL and the possible migration of residual fuel-related VOCs in groundwater. (TRC, Sept. 2001)

3.3 Oil and/or Hazardous Material Use and Storage History

Five underground storage tanks (Tanks D, G, H, I, and J), located within the Tank Farm area between Buildings 1 and 3, were in use from 1969 through 1987. The tanks contained waste fuel and waste oil, thinners, solvents, Stoddard fuel (also referred to as Stoddard solvent), JP-4 jet fuel, and methanol.

In addition, Converse operated a gasoline tank (Tank K) located east of Building 2, a blowdown tank associated with the steam curing of rubber (Tank L), and a tank for the storage of laboratory wastes (Tank E). (TRC, Sept. 2001)

3.4 Waste Management History

3.4.1 Sanitary Waste Management

According to the Town of Wilmington Water and Sewer Division, no municipal sanitary services are available for this property. A private waste water and sewage treatment plant is located on the northern portion of the Property.

3.4.2 Stormwater Management

There are two stormwater outfalls located in the northeastern portion of the Site. These outfalls discharge along the western boundary of the wetlands area, located on the eastern portion of the Site.

3.4.3 Solid Waste Management

The Property is currently unoccupied. Solid waste management practices for the Site could not be confirmed due to limited site operation information.

3.4.4 Hazardous Waste Management

The property was identified as a Large Quantity Generator on the RCRA-LQG database. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Large quantity generators generate: 1,000 kilograms or more of hazardous waste; or generate more than 1kg of acutely hazardous waste; or generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill of acutely hazardous waste, during any calendar month.

Specific waste generation information for this Property was not reported through records obtained by the EDR Report in December 2009.

3.4.5 Management of Waste Generated During Historical Site Activities

According to the EDR Report (Dec. 2009), Clean Harbors, Inc. frequently shipped waste from the site between 2001 and 2004. From 1991 through 1993, Franklin Environmental Services also made frequent shipments of waste. Also at that time, in 1992, Suffolk Services removed one shipment of waste. All waste removals are listed

under Ametek for the property located at 50 Fordham Street, Wilmington. As the Property is currently unoccupied, additional information on waste management is expectedly limited.

3.5 Environmental Permits and Compliance History

The property does not currently have any USTs listed, according to the EDR Report. No records of additional environmental permits were discovered in association with the property.

This property has been involved in remedial investigations and cleanup since 1986. That year, a Phase I Study was completed. In 1987-1990 six tanks which contained solvents and waste oil were removed from the tank farm storage area. In 1990 and 1991, Phase II Investigation and Supplemental Investigation reports were completed. An Interim Measure Remediation System was installed at the former Tank Farm and Eastern Parking Lot areas by February 1992. The following year, a Phase III Remedial Action Plan was completed.

After several years of remedial activity, a Long-Term Groundwater Monitoring Plan was completed in 1997. This identified the Tank K area in a separate Supplemental Investigation Report. A Phase IV Remedy Implementation Plan for the Eastern Parking Lot and Tank K areas was completed in 1998, followed by a Groundwater Sampling and Evaluation of Natural Attenuation Report in 1999. Subsequent remedial status reports for the Tank K area were completed through Phase IV before TRC began the Supplemental Groundwater Investigation, which was reported in September 2001.

Since 2001, TRC has submitted documents through Phase IV for RTN 3-0518, a continuation of previous work from the 1990s. A Partial Response Action Outcome (Class A-2) for the Wetlands Area of the Site was submitted in December 2004. The remedial action for the wetlands included excavation and off-site reuse of soil and sediments impacted by metals that resulted in a potential significant impact to ecological receptors. The targeted remediation areas were identified based on the conclusions of the Stage II Environmental Risk Characterization, dated January 2004. Remediation activities were conducted in August and September 2004 and wetland restoration activities were completed in October 2004. A summary of these activities is presented in the Phase IV As-Built Construction and Final Inspection Report and Partial Response Action Outcome Statement, dated January 2004.

In accordance with the MassDEP Water Quality Certification, the Wetland Area is in a five-year post-restoration monitoring program running through the fall of 2009. The most recent report was submitted in September 2009, and included monitoring and system performance data from January through June of the year. (TRC, Sept. 2001)

Section 4

Field Activities

This section describes field activities conducted at the Property, from initial work in 1986 through the “emerging chemicals” investigation conducted in November 2007. The laboratory analytical results of the field investigations are discussed in Section 6.

4.1 Previous Field Investigations and Remediation

Site investigations and remediation for portions of the Property began in the mid-1980s and are associated with RTN 3-0000518. The initial Phase I study was completed in September 1986, followed by Phase II Investigation and Supplemental Investigation Reports in April 1990 and November 1991.

TRC began work on the Property starting in January 2000. TRC conducted a Supplemental Groundwater Investigation through 2001. Since that time, several areas on the Property have been remediated to address previous known releases. In 2001 TRC conducted the Supplemental Groundwater Investigation for RTN 3-0000518 to increase understanding of the fractured bedrock aquifer characteristics.

Tank K Area

The Tank K System began startup operations in February 2001 to address RTN 3-0000518. The Tank K Area Operations, Maintenance and Monitoring (OM&M) program was performed in accordance with the Tank K Area Phase IV As-Built Construction and Completion Report. The OM&M program included systems maintenance monitoring, system performance monitoring and groundwater monitoring. The results of those actions have been presented in previous Status Reports.

On June 30, 2008, the system was placed in shutdown mode to assess sustainable conditions in accordance with the MCP under 310 CMR 40.0893(6)(d). Following the November 2008 groundwater sampling event, it was determined that the Tank K system has achieved its goal and performance monitoring will cease at this time. Environmental sampling is now being conducted to document post-remedy site conditions.

Tank Farm Area

The Tank Farm Area OM&M program was performed in accordance with the *Phase IV Remedy Implementation Plan - Groundwater*, dated November 12, 2002 (as revised December 2002), and, the *Phase III Remedial Action Plan (RAP) Addendum II and the Modified Phase IV Remedy Implementation Plan (RIP) and Phase IV As-Built Construction and Final Inspection Report*, dated September 2007.

As of September 2009, source removal and groundwater treatment has been undertaken with the following actions:

- Original solvent used at the Tank Farm ceased in 1975.

- The tanks were removed in 1987.
- Pumping and treating of groundwater at the Tank Farm Area was completed from 1993 to February 2002.
- Pumping and treating of groundwater downgradient of the Tank Farm Area was completed from August 2003 – June 2008.
- Emulsified Zero Valent Iron (EZVI) was added to the fractured bedrock at the Tank Farm Area in the fall of 2006.

The Tank Farm Area Interim Measure (a groundwater pump and treat system) was operated from 1993 to 2002. The recovery well (TF-1) was located within the Tank Farm. During this remedial measure, a significant decrease in influent contaminant concentrations was observed with 30 pounds of VOCs removed between years 1993-1998 and one pound removed during years 1999-2002. Approximately 1.9 million gallons of water was treated, resulting in the removal of 31 pounds of VOCs.

4.1.1 Historical Underground Storage Tank Removal

According to the 2001 TRC Comprehensive Review of Groundwater Data Report, approximately eleven USTs were present on the Property prior to 1986. Within four years, from 1986 to 1990, seven tanks were removed from the Property: Tank K, which contained gasoline, was removed in 1986; tanks D, G, H, I, and J contained solvents and waste oils and were removed in June 1987; and Tank F was removed in February 1990. Tanks A, B, C, and E were not mentioned in the available records. (TRC, Sept. 2001)

4.1.2 Well Installation

According to available records, approximately 184 monitoring wells were installed before 2000. Since that time, TRC has installed approximately 15 additional monitoring wells as part of the ongoing investigation of the Tank K and East Parking Lot areas. According to available records, there are 139 overburden wells and 46 bedrock wells. The well screens were installed to span the water table at each location. Screen length was generally between 5- to 10-feet in length; however total screened interval ranged from 1.5- to 108-feet in length. (TRC, Sept. 2001)

As part of the TRC emerging contaminants investigation, which resulted in RTN 3-0028282, six wells were sampled. These wells included: EMW-11R2, GZA-10, GZA-103R1, MW-07, WE-09, and TRC-102. Wells EMW-11R2 (0.75" diameter), MW-7 (1.5"), WE-9 (2"), and TRC-102 (1.25") were constructed with 10' screens to depths of 114 feet, 27 feet, 12 feet, and 12.25 feet, respectively. Well GZA-10 (1.5") was constructed with a 25 foot screen to a depth of 40 feet. Well GZA-103R1 was constructed with a 1 foot screen to a depth of 19 feet. (TRC, May 2001)

4.2 Phase I Field Activities

Lockheed Martin, a successor to GE Aerospace, the former tenant of the 50 Fordham Road property, requested that TRC conduct limited groundwater sampling for a select list of "emerging chemicals" and tentatively identified compounds (TICs) in groundwater at the Property. Six monitoring wells were sampled in this study. As requested, TRC submitted a letter report in September 2009 to summarize the findings and to present recommendations for additional sampling. Based on the results of the November 2007 sampling event, additional follow-up sampling was completed for perchlorate and 1,4-dioxane in October 2008. In December 2008 TRC submitted a summary report of the findings.

4.2.1 Groundwater Sampling

Given the complexity of the Property (multiple areas of concern, multiple potential source areas, etc.), TRC developed a phased approach to the groundwater sampling program to best meet the program goals (i.e., confirming the presence or absence of emerging chemicals and/or TICs within the Property). The sample locations for this sampling event are depicted on **Figure 4-1**.

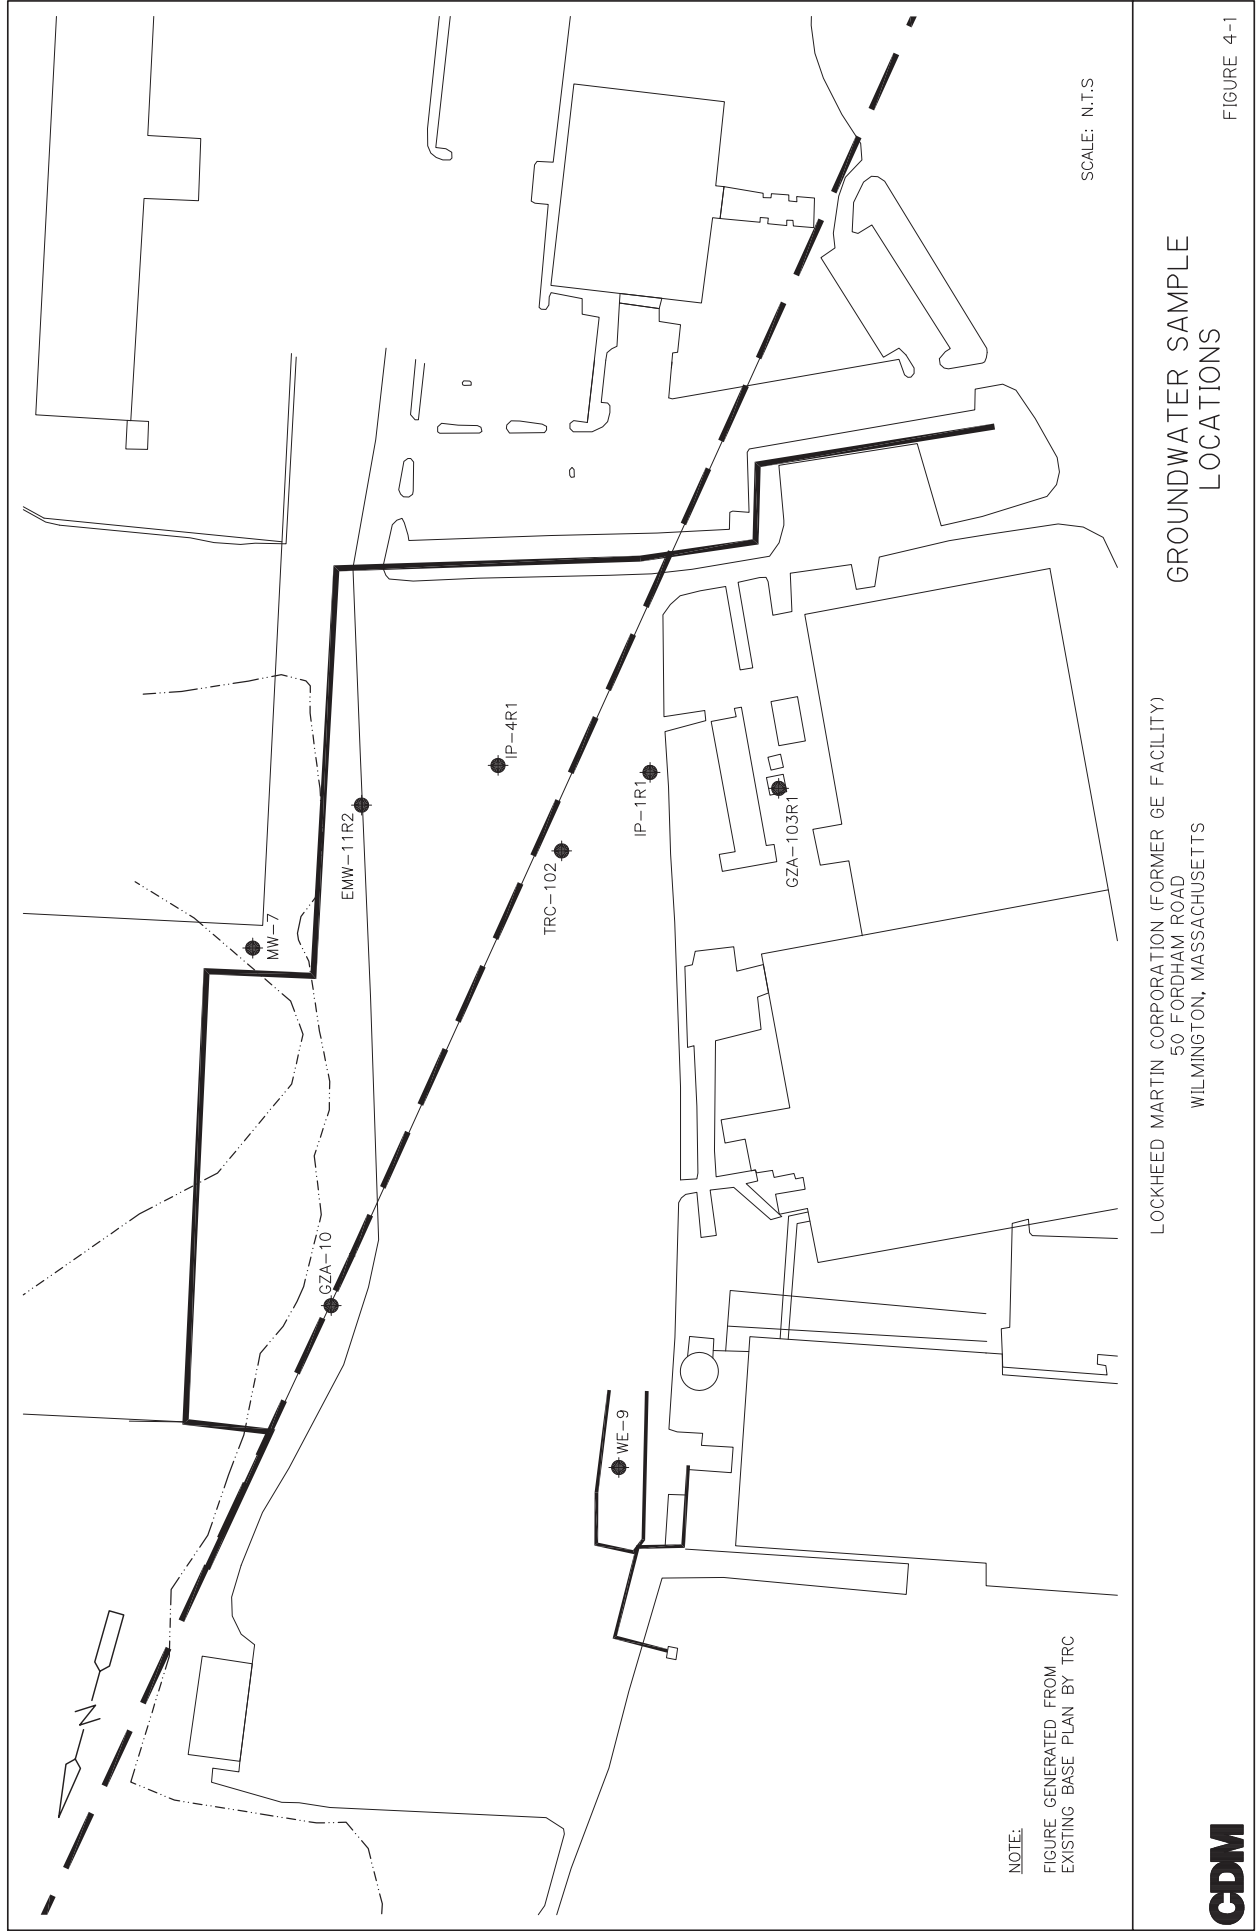

November 2007

Groundwater samples were collected from wells EMW-11R2, GZA-10, GZA-103R1, MW-7, WE-9, and TRC-102 in November 2007. These wells are located in the known source areas of four Areas of Concern (AOCs). The intent of this sampling event was to provide an assessment of the possible presence of target analytes. The original pumping well at the Tank Farm, TF-1, was not included in this assessment because of concern of possible interferences from previous emulsified zero valent iron (EZVI) injected into bedrock at the tank grave in 2006. EZVI and separated vegetable oil has been observed in TF-1 since that time.

All groundwater sampling was conducted in accordance with the approved *Work Plan for Evaluation of Emerging Chemicals and Tentatively Identified Compounds in Groundwater*, dated October 2007. The samples were collected on November 27, 28, and 29, 2007 and submitted to Alpha Woods Hole Labs (Alpha) in Westborough, Massachusetts for analysis.

The samples were analyzed for the following parameters:

- Select volatile organic compounds (VOCs: chlorodifluoromethane, carbon disulfide, methyl ethyl ketone, methyl isobutyl ketone) and tentatively identified compounds (TICs) using SW-846 method 8260B (WSC-CAM-IIA);
- 1,4-Dioxane using SW-846 method 8270C with selective ion monitoring (SIM);
- TICs using SW-846 method 8270C;

- N-nitrosodimethylamine (NDMA) using EPA method 1625;
- Cyclonite (RDX) using SW-846 method 8330 (WSC-CAM-VIIIA);
- Tributyl tin using a proprietary gas chromatography/flame photometric detection (GC/FPD) method;
- Hexavalent chromium using SW-846 method 7196A (WSC-CAM-VIB);
- Perchlorate using EPA method 314.1 (also includes specific conductance using Standard Methods 251OB);
- Specific Conductance using EPA method 251OB; and,
- Select metals (arsenic, beryllium, cadmium, copper, and lead) using SW-846 method 6020 (WSC-CAM-IIID).

Alpha subcontracted analyses as follows:

- Analysis of n-nitrosodimethylamine was performed by Southwest Research Institute (SWRI) of San Antonio, Texas.
- Analysis of tributyl tin was performed by Bodycote Testing Group (West Coast Analytical Service, Inc) of Santa Fe Springs, California.
- Analyses of VOCs and 1,4-dioxane were performed by Alpha Woods Hole Labs of Mansfield, Massachusetts.

October 2008

Based on the results of the November 2007 sampling event, additional follow-up sampling was completed for perchlorate and 1,4-dioxane in October 2008. The sampling was completed in accordance with the approved *Work Plan for Evaluation of Emerging Chemicals and Tentatively Identified Compounds in Groundwater*, dated 2007, dated September 2008.

The samples collected on October 14, 15, and 16, 2008 were submitted to Alpha Woods Hole Labs (Alpha) in Westborough, Massachusetts for analysis. As with the previous investigation, the analysis of 1,4-dioxane was done through EPA Method 8270C with isotope dilution. The perchlorate method, however, changed from EPA method 314.1 to EPA 332 IC/MS/MS. Sampling methodology and quality control remained the same, as specified in the Work Plan. All data underwent limited validation as specified in the Work Plan.

Section 5

Property Geology

This section summarizes the current understanding of the physical setting of the Property, as supplemented by the most recent investigation findings. The geologic and hydrogeologic descriptions are based on approximately 185 soil borings monitoring wells (139 overburden, 46 bedrock) completed to date at and in the vicinity of the Property, as well as published studies of the area and other investigations of nearby sites. (TRC, Sept. 2001)

5.1 Topographic Description

Local topography of the Property, at an approximate elevation of 80 feet above mean sea level, gently rises to the west. Wetlands directly border the north and eastern property boundaries, and naturally occur throughout the surrounding region. A tributary to the Ipswich River also follows the northeastern property boundary, running from a small unnamed pond approximately 750 feet to the northeast, to within 500 feet east of the Property, then moving southeast to the river basin. (EDR, Dec. 2009)

5.2 Geology

5.2.1 Overburden Geology

The surficial geology in the vicinity of the Property includes Pleistocene glacial deposits (i.e., formed in the Pleistocene period, 1.8 million years ago [mya] to 11,000 years ago) and recent swamp deposits. The Property is situated in an upland terrain comprised primarily of glacial till and ice contact deposits (Sammel, et al, 1964). Recent swamp deposits consisting of peat are located in low-lying areas to the east-northeast of the Property and to the south along the Ipswich River.

According to past geological studies (Sammel et al., 1964, Kick, 1990), the Wilmington and Reading areas of Massachusetts are characterized by glacial deposits in buried valleys that represent the pre-glacial Ipswich River and its tributaries. The main river channel is coincident with the current Ipswich River, with a depth to bedrock of as much as 90 ft bgs (elevation: -20 feet National Geodetic Vertical Datum [NGVD]) directly south of the Property. A northwest trending buried valley that appears to be a tributary of the pre-glacial Ipswich River is located to the northeast of the Property (Sammel. et al, 1964). This buried tributary valley extends along the axis of the wetland area approximately 1,500 feet east of the Property, and is expected to represent a preferential flow pathway for groundwater in the overburden aquifer east of the Property.

Based on observations from on-site investigation activities during the 2001 TRC Groundwater Investigation, the Property is underlain by soils including fill, very fine to coarse sand and gravel, boulders, glacial till and organic deposits (peat). The overburden deposits range in thickness from 3 feet (in the Drum Storage area), to over

45 feet in the eastern portion of the Property. The wetland area east of the Property is also underlain by peat, stratified glacial deposits (fine sands and gravel), and till. These deposits are approximately 70 feet in thickness in the central portion of the wetland area. (TRC, Sept. 2001)

5.2.2 Bedrock Geology

The bedrock in the vicinity of the Property is comprised of Ordovician (i.e., bedrock formed in the Ordovician period, 505 to 440 mya) and Silurian (i.e., bedrock formed in the Silurian period, 440 to 410 mya) plutonic rocks of the Nashoba Zone. This Zone is a fault-bounded block of steeply dipping, high-grade metasedimentary and metavolcanic rocks intruded by younger felsic plutonic rocks (Zen et al., 1983). It is generally accepted that the porosity of these types of igneous rocks is very low (Pankow & Cherry, 1996). Furthermore, given the nature of these igneous rocks, and the complex regional history of deformation, intrusions, and faulting, any localized fractures and jointing in the rock will be highly variable. High angle joints/faults at various orientations have been observed in rock cores collected from the Property, borehole geophysical logging, and pump test results.

According to the TRC 2001 Groundwater Data Report, bedrock at the Property is more highly fractured in the upper zones and becomes more competent with depth. Based on observations made during the groundwater investigation drilling activities, geophysical logging and earlier drilling programs, the upper 10 to 20 feet of bedrock is more highly fractured and water-bearing. Bedrock becomes more competent with depth, thereby reducing its capacity to transmit water.

5.3 Groundwater Conditions

Groundwater at the Property flows through the overburden (ranging in thickness from 3 ft at the former Tank Farm area to 45 ft in the eastern portion of the Property) and fractured bedrock. The degree of interconnection between these units is discussed below.

All on-site and off-site monitoring wells gauged since December 1999 were evaluated to determine the direction of groundwater flow presented herein.

5.3.1 Overburden Aquifer

Shallow Overburden

Shallow overburden groundwater flows to the east. As the shallow groundwater flows into the wetlands, it is influenced by groundwater from the north, resulting in a southeast groundwater flow pathway through the wetlands. The horizontal gradient for groundwater in the shallow overburden is approximately 0.006 ft/ft on-site and 0.004 ft/ft in the wetlands (TRC March 2000).

Deep Overburden

Water level measurements from the deep overburden groundwater indicate that groundwater flows to the east, both on-site and through the wetlands. The horizontal gradient for groundwater in the deep overburden is approximately 0.004 ft/ft on-site and 0.002 ft/ft in the wetlands (TRC March 2000).

At the eastern end of the off-site wetland area, the groundwater flow direction has been observed to deflect to the south. This diversion in flow direction coincides with a bend in the axis of the buried valley described by Sammel, et al. (1964). Therefore, it appears that groundwater flow in the overburden follows the axis of the buried valley at some distance from the Property.

Hydraulic Conductivity

In 1997, EMCON conducted a groundwater pump test on two wells located along the eastern property boundary. One well is constructed in the overburden portion of the aquifer (ORW-1), with a screened interval from 14 to 29 ft bgs. The second (BRW-1) is constructed in bedrock, with a screened interval from just below the bedrock-overburden interface at 30 feet below ground surface (ft bgs) to 169 ft bgs.

The pump test was conducted by pumping simultaneously from both the overburden and bedrock wells for a 6-hour period. Analysis of the pump test data revealed an average hydraulic conductivity value of 78 feet per day for the overburden portion of the aquifer. MassDEP questioned the accuracy of these data (as presented in the February 10, 2000 correspondence). However, this value is within the expected range of hydraulic conductivity values for the observed unconsolidated deposits (sands and gravel) in the area.

5.3.2 Bedrock Aquifer

The majority of bedrock wells on and near the Property are located within the upper 50 feet of the bedrock aquifer. In general, groundwater has the potential to flow to the east toward and under the wetlands area (see Long Term Groundwater Monitoring Report, TRC March 2000).

Hydraulic Conductivity

TRC conducted groundwater pumping tests in June 2001 in borehole TRC-202R in order to determine the maximum sustainable yield, transmissivity, and hydraulic conductivity of targeted bedrock intervals (TRC July 2001).

The most conductive zone, based on a sustainable flow rate of approximately 3 gpm was the 95-115 ft bgs interval. The least conductive zone was the 300-320 ft bgs interval. The 140-170 ft bgs interval was less conductive than the 95-115 ft bgs interval and more conductive than the 300-320 ft bgs interval.

Section 6

Nature and Extent of Impacts

This section presents the soil and groundwater analytical results for samples collected during the field activities discussed in Section 4 and illustrated in **Figure 6-1**. This section presents the nature and extent of impacts at the disposal Site.

Groundwater samples were collected in November 2007 by TRC as part of the emerging chemicals study conducted on the Site. Out of the six monitoring wells that were sampled, results from all samples showed detections of arsenic.

6.1 Soil Conditions

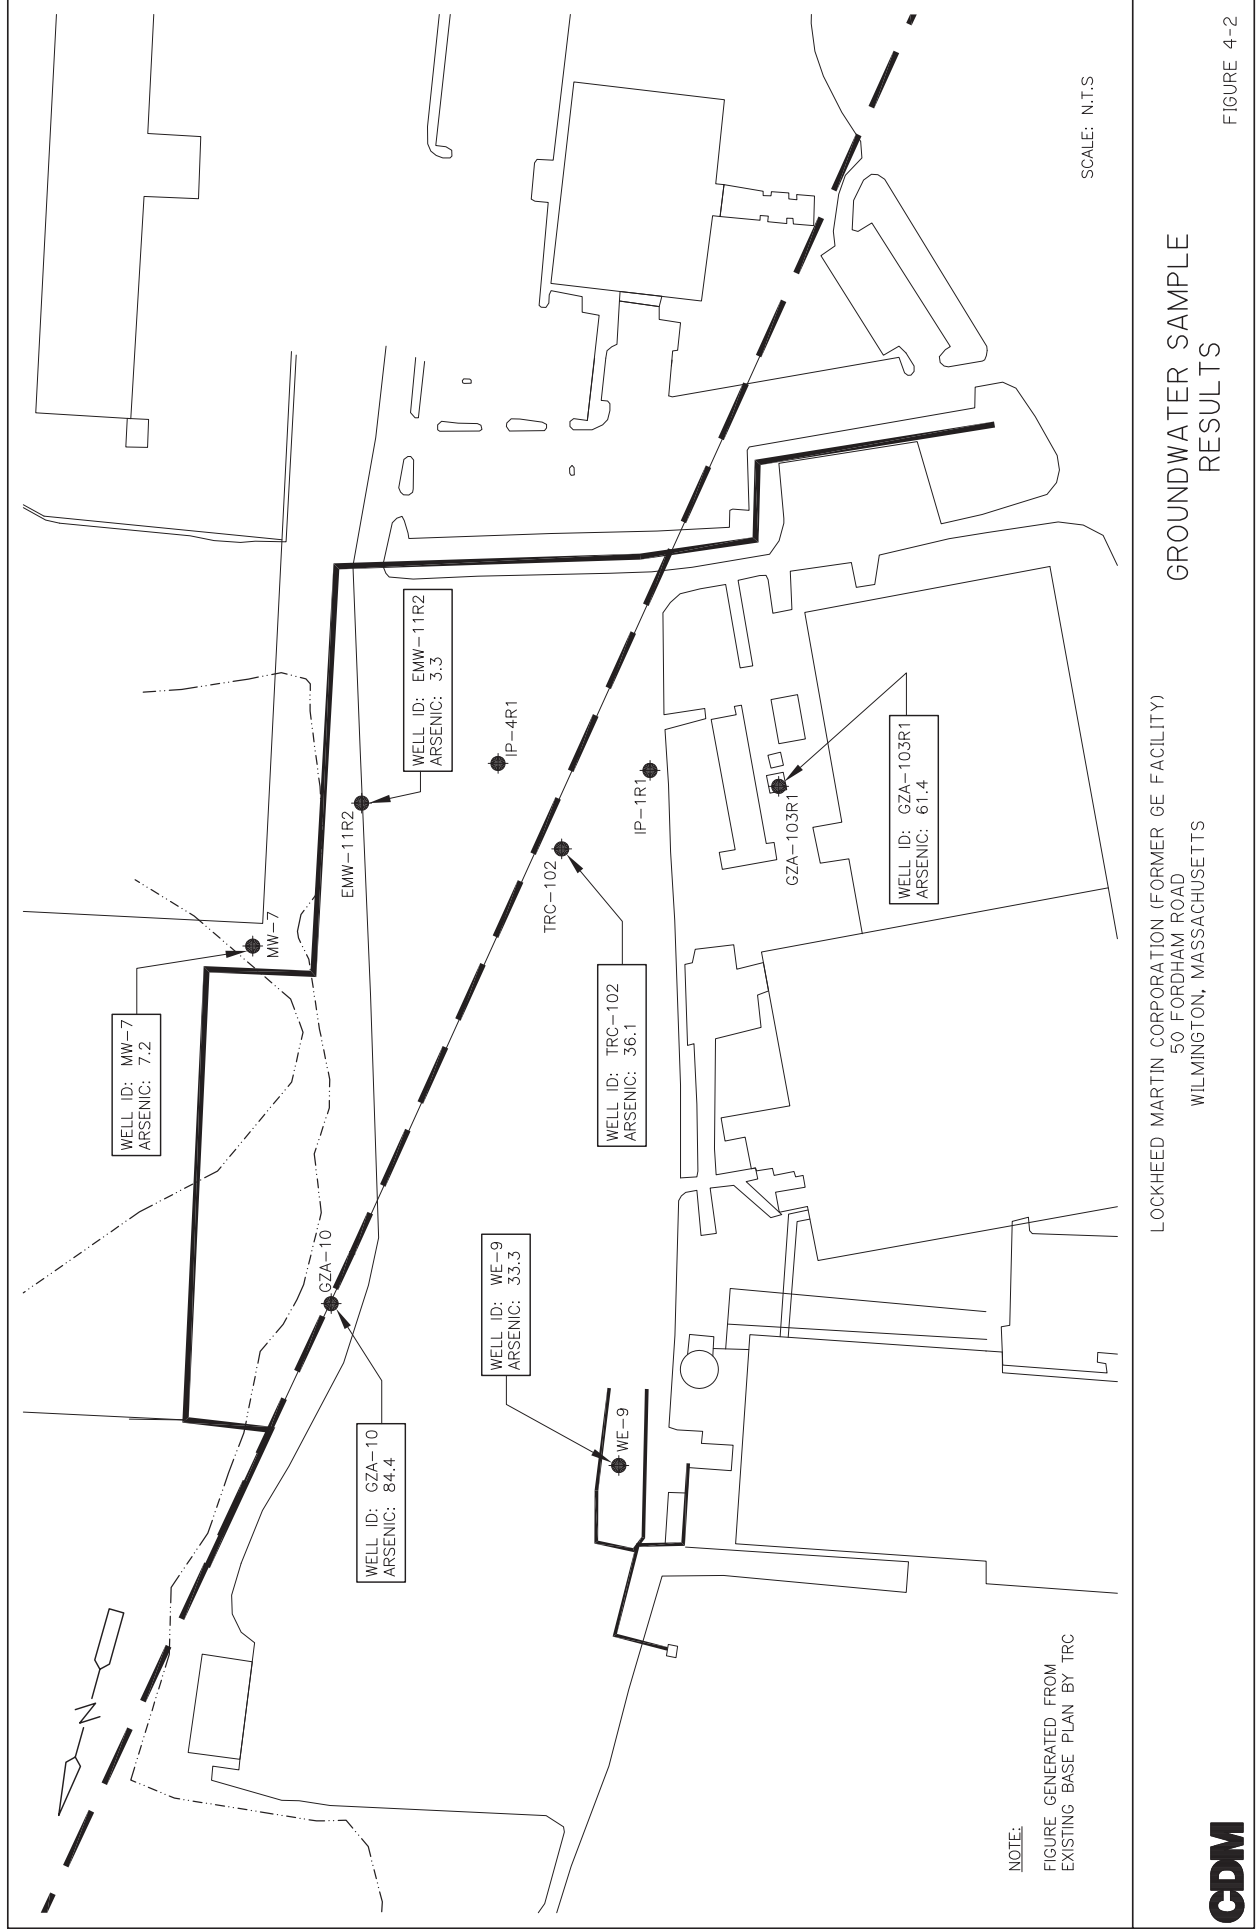

Soil conditions for the Site were not surveyed as part of the emerging contaminants study, thus the nature and extent of impact to soil is unknown at this time. Analysis of soil conditions will be recommended as part of the Phase II investigation.

6.2 Groundwater Conditions

Groundwater samples were collected from wells EMW-11R2, GZA-10, GZA-103R1, MW-7, WE-9, and TRC-102 from November 27-29, 2007, and submitted to Woods Hole Labs (Alpha).

The samples were analyzed for the following parameters:

- Select volatile organic compounds (VOCs: chlorodifluoromethane, carbon disulfide, methyl ethyl ketone, methyl isobutyl ketone) and tentatively identified compounds (TICs) using SW-846 method 8260B (WSC-CAM-IIA);
- 1,4-Dioxane using SW-846 method 8270C with selective ion monitoring (SIM);
- TICs using SW-846 method 8270C;
- N-nitrosodimethylamine (NDMA) using EPA method 1625;
- Cyclonite (RDX) using SW-846 method 8330 (WSC-CAM-VIIIA);
- Tributyl tin using a proprietary gas chromatography/flame photometric detection (GC/FPD) method;
- Hexavalent chromium using SW-846 method 7196A (WSC-CAM-VIB);
- Perchlorate using EPA method 314.1 (also includes specific conductance using Standard Methods 2510B);
- Specific Conductance using EPA method 2510B; and,

- Select metals (arsenic, beryllium, cadmium, copper, and lead) using SW-846 method 6020 (WSC-CAM-IIID).

Alpha subcontracted analyses as follows:

- Analysis of n-nitrosodimethylamine was performed by Southwest Research Institute (SWRI) of San Antonio, Texas.
- Analysis of tributyl tin was performed by Bodycote Testing Group (West Coast Analytical Service, Inc) of Santa Fe Springs, California.
- Analyses of VOCs and 1,4-dioxane were performed by Alpha Woods Hole Labs of Mansfield, Massachusetts.

The laboratory analytical results for the groundwater samples collected from the Site are included in **Table 6-1**. (TRC, Sept. 2008)

Data validation of the November 2007 groundwater sampling results indicated low perchlorate spike recoveries. In addition, interferences were noted in the chromatography. As a result, the October 2008 re-sampling of groundwater for perchlorate was completed using a method less susceptible to interferences (EPA method 332.0 IC/MS/MS).

The samples were collected on October 14, 15, and 16, 2008 and submitted to Alpha Woods Hole Labs (Alpha) in Westborough, Massachusetts for analysis. Wells IP-1R2 and IP-4R3 were sampled for 1,4-dioxane via method 8270C. Wells GZA-103R, GZA-10, MW-7, TRC-102, and WE-9 were sampled for perchlorate via EPA 322 IC/MS/MS. Well EMW-11R2 was sampled for both analytes. (TRC, Dec. 2008)

6.2.1 Nature of Impacts

Detected concentrations were compared to establish maximum contaminant levels (MCLs) if available, or guidance values designated by either the State of Massachusetts or the U.S. Environmental Protection Agency (U.S. EPA). In Table 6-1, all detections are shown in bold type.

Arsenic was detected at each of the six locations sampled, ranging from 3.3 ug/L to 84.4 ug/L. Four of the locations, wells GZA-10 (84.4 ug/L), GZA-103R1 (61.4 ug/L), WE-09 (33.3 ug/L), and TRC-102 (36.1 ug/L) exceeded the MCP GW-1 standard of 10 ug/L.

A trace level of NDMA, at 0.054 ug/L, was detected above the action level of 0.04 ug/L. This observation was from a well located east of the Site along the wetland boundary closest to the on-site waste water treatment plant. NDMA is a chemical associated with the production of rocket fuel and commonly associated with wastewater chlorination.

Table 2. Summary of Emerging Contaminant Sampling in Groundwater - November 2007

Notes:

All units in ug/L unless otherwise specified.
ug/L - micrograms per liter.
unhos/cm - Micro-mhos per centimeter
J - Estimated value.
NA - Sample not analyzed for the listed analyte.
N/A - Not applicable.
R - Rejected data point during validation.
U - Compound was not detected at specified quantitation limit.
UJ - Estimated nondetect.
Values in **Bold** indicate the compound was detected.
Values shown in **Bold and shaded type** exceed the listed PAL.
(a) - Mass DEP Method 1 GW-1 Standard.
(b) - EPA Region IX Preliminary Remediation Goals, Tap Water, October 2004.
(c) - Massachusetts Drinking Water Standards, Office of Research and Standards Guidance Value (ORSG).
(d) - Massachusetts Maximum Contaminant Level (MCL).
PAL - Project Action Level

Chlorodifluoromethane (Freon 22) was detected at wells EMW-11R2, GZA-10, MW-7, and TRC-102 at concentrations below the action level. Detections of lead (all wells) and copper (3 wells) were detected below action levels. (TRC, Sept. 2008)

In November 2007, 1,4-dioxane was detected in two wells (EMW-11R2 and MW-7). The detection in well EMW-11R2 (a deep bedrock well), was 4.0 ug/L, above the MCP GW-1 standard of 3.0 ug/L. Well MW-7 (a downgradient overburden well east of the Site), was below the action level at an estimated 0.49 ug/L. Sampling for 1,4-dioxane and perchlorate was repeated at selected wells because the earlier detection levels were elevated above applicable criteria or guidance values.

In October 2008, all three wells sampled for 1,4-dioxane exceeded the MassDEP standard of 3 ug/L. Well EMW-11R2 was detected at 21.8 ug/L, well IP-1R2 was detected at a concentration of 32.1 ug/L, and well IP-4R3 was detected at a concentration of 32.7 ug/L. Perchlorate was not detected in any wells. (TRC, Dec. 2008)

Tentatively identified compounds were detected for volatile and semi-volatile compounds at each well sampled, except for wells GZA-10 and MW -07 where only volatile compounds were detected.

6.2.2 Extent of Impacts

Detections of arsenic were observed in all sampled monitoring wells. Analytical results for remaining contaminants of concern for site groundwater were below the applicable criteria except for 1,4-dioxane which was detected above 3 ug/L in all three of the wells sampled. Additional groundwater sampling and analysis is planned to evaluate the extent and potential source and/or cause of elevated arsenic and 1,4-dioxane.

Section 7

Migration Pathways and Exposure Potential

In accordance with 310 CMR 40.0483(f), this section summarizes known and potential migration pathways and exposure potential at and surrounding the Site.

Migration pathways and exposure potential have been identified based on data obtained during the field investigations pertaining to emerging chemicals in groundwater and previous characterization work on the Property. The necessary elements for a migration pathway to exist include an OHM source, a release mechanism, and a medium allowing movement of the OHM. Based on the current site conditions, potential migration pathways identified at the Site include, soil, surface water and groundwater. As arsenic in groundwater is not considered volatile, therefore, soil vapor and air are not considered potential migration or exposure pathways. Each potential pathway is discussed below.

7.1 Migration Pathways

Soil

Based on the site history and distribution of arsenic in groundwater, elevated soil concentrations are not expected. In addition, the majority of the Site is paved or covered by buildings. The remainder of the Site is landscaped. Therefore soil is not expected to be a significant migration or exposure pathway. If groundwater analyses identify an area indicative of an anthropogenic source additional sampling may be performed.

Surface Water

Migration of compounds detected in groundwater via surface water is considered a potential exposure pathway. A tributary to the Ipswich River is located northeast of the Property, within 500 feet of the Site. Water travels from an unnamed open water source (pond), approximately 250 feet farther northeast, past the Property, and continues southeast to the Ipswich River Basin. Additionally, the Property is bounded north and east by wetlands, which comprise the majority of the regional geography.

Arsenic in groundwater is mobile in its reduced state. It would be expected to precipitate in oxygenated groundwater and surface water. Therefore, surface water is not expected to be a significant migration or exposure pathway.

Groundwater

Groundwater serves as a potential migration pathway for dissolved constituents identified at the Site. Groundwater flow is dictated by factors including hydraulic conductivity of the aquifer and hydraulic gradient across the Site. Groundwater flow was determined to be in a locally eastern direction.

The Property is located within one quarter-mile southwest of a currently inactive public water supply well (the Stickney Well) and approximately one half mile northwest of the Town of North Reading's Forrest Well (on the opposite side of the Ipswich River). Additionally, two private wells are located within one quarter-mile of the Property. No irrigation wells are evidenced in the area. (EDR, Dec. 2009)

7.2 Exposure Potential

The potential for human exposure to Site contamination is considered low due to the following reasons:

- The majority of the Site is paved or occupied by the onsite buildings, therefore, the exposure potential to soils is low;
- Groundwater at the Site and surrounding areas is monitored and a separated from the closest active water supply well (the Forrest Well) by hydraulic and hydrogeologic divides (the Ipswich River and a bedrock high, respectively).
- Arsenic in groundwater is not considered volatile; therefore, soil vapor and air are not considered potential migration or exposure pathways.

7.3 Impacts to Environmental Receptors

The MassGIS database indicates surface water, DEP Wetlands, to be located within 500 feet of the Site. However, arsenic in groundwater is only mobile in its reduced state. It would be expected to precipitate in oxygenated groundwater and surface water. Therefore, surface water is not expected to be a significant migration or exposure pathway.

Section 8

Tier Classification

8.1 Tier Classification Process Summary

This section presents the results of the tier classification performed by CDM for the disposal site (RTN 3-0028282) located within the former GE Facility located at 50 Fordham Road, Wilmington, Massachusetts. In accordance with 310 CMR 40.0510, the tier classification process consists of the following:

- Completion of a Phase I Report;
- Completion of a Numerical Ranking System (NRS) Scoresheet;
- Comparison of site conditions with Tier I Inclusionary Criteria set forth in 310 CMR 40.0520(2); and
- A completed BWSC-107A tier classification transmittal form.

8.2 Comparison of Site Conditions to Tier I Inclusionary Criteria

In accordance with 310 CMR 40.0520(2), “any disposal site which meets any of the following criteria shall be classified as Tier I, regardless of the score such site receives using the Numerical Ranking System.”

1. Any disposal site at which:
 - There is evidence of groundwater contamination with OHM at concentrations equal to or exceeding the applicable RCGW-1 RCs set forth in 310 CMR 40.0360 at the time of tier classification; and
 - Such groundwater is located within an Interim Wellhead Protection Area or Zone II.

OR

2. Any disposal site at which an Imminent Hazard is present at the time of tier classification.

According to the MassGIS, the site is not within an Interim Wellhead Protection Area but is within a Zone II. The concentration of arsenic present in four of the six wells sampled for arsenic exceeds the RCGW-1 RC of 10 µg/L set forth in 310 CMR 40.0360.

The site does not present an Imminent Hazard for the following reasons:

- There is no evidence that a release to the environment has occurred, which could pose a significant risk to human health when present even for a short time;
- There is no evidence that a release to the environment has occurred, which could produce immediate or adverse impacts to environmental receptors; and
- There is no evidence that a release to the environment of reactive or explosive hazardous material, as described in 310 CMR 40.0347 has occurred, which could threaten human health or safety.

8.3 Numerical Ranking System Score and Tier Classification

CDM has completed an NRS Scoresheet for the site in accordance with 310 CMR 40.1500. An NRS score of 297 was computed for the site. The Scoresheet (BWSC-107A) is included in **Appendix E**. Based on the computed score and a comparison to the Tier I Inclusionary Criteria, the site is classified as Tier 1C.

Section 9

Summary and Conclusions

Based on the results of recent field investigations conducted at the site, it is the opinion of the LSP that:

- Groundwater at the site exceeds the MCL and *MassDEP* reportable concentration in four of the six wells from which arsenic was sampled.
- The site is located adjacent to wetlands and within the Zone II of one or more public water supply wells.
- Additional constituents at concentration of potential concern are present in soil and groundwater on the Property and are being addressed under a separate RTN (3-00518).
- As it has not been conclusively determined that the presence of elevated concentrations of arsenic in groundwater are naturally occurring or are directly related to releases being addressed under the existing RTN (3-00518) it is appropriate to address and investigate the reportable concentrations of arsenic under and separate RTN (3-28282) and Tier Classification.
- The NRS score for the arsenic and other constituents sampled as part of the emerging chemicals groundwater sampling effort is 297.

Therefore, at this time, the Site identified by RTN 3-28282 is a Tier 1C disposal site under the MCP. This classification is based on an NRS score of 297 and the fact that arsenic concentrations are present above the RCGW-1 RCs and the site is located within a Zone II of one or more public water supply wells. Additional data will be collected as part of Comprehensive Response Actions to assess the source, fully delineate the extent of impacts and determine what remedial actions, if any, are necessary to establish a condition of No Significant Risk.

2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

City Directory Report. Three important enhancements have been made to the EDR City Directory Abstract:

1. *Executive Summary.* The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.
2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.
3. *Findings Listed by Location.* Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

Options for Selecting Adjoining Properties. Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

1. *You Select Addresses and EDR Selects Addresses.* Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.
2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.
3. *You Select Addresses.* Use this method for research based solely on the addresses you select or enter into the system.
4. *Hold City Directory Research Option.* If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

Questions? Contact your EDR representative at 800-352-0050. For more information about all of EDR's 2009 report and service enhancements, visit www.edrnet.com/2009enhancements

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
DYNAMICS RESEARCH CORP	50-60 CONCORD STREET	SSW 1/8 - 1/4 (0.198 mi.)	29	182

DUPONT E I DENEMOURS & CO INC	1 CORNELL PL	NNW 1/4 - 1/2 (0.341 mi.)	G38	243

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/15/2009 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
DYNAMICS RESEARCH CORP	50-60 CONCORD STREET	SSW 1/8 - 1/4 (0.198 mi.)	29	182

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
DYNAMICS RESEARCH CORP	50-60 CONCORD STREET	SSW 1/8 - 1/4 (0.198 mi.)	29	182

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Protection's Summary Listing of all the Tanks Registered in the State of Massachusetts.

A review of the UST list, as provided by EDR, and dated 12/04/2009 has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there are 4 RCRA-NonGen sites within approximately 0.25 miles of the target property.

Facility name: LOCKHEED MARTIN CORP FORMER GE FACILITY
Site name: MARTIN MARIETTA CORP.
Classification: Large Quantity Generator

Date form received by agency: 09/09/1993

Facility name: LOCKHEED MARTIN CORP FORMER GE FACILITY
Site name: LOCKHEED MARTIN CORP
Classification: Not a generator, verified

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D040
Waste name: TRICHLOROETHYLENE

Waste code: U210
Waste name: ETHENE, TETRACHLORO-

Waste code: U228
Waste name: ETHENE, TRICHLORO-

Waste code: MA01
Waste name: WASTE OIL

Violation Status: No violations found

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Universal Waste Summary:

Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Pesticides
Accumulated waste on-site: No

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

1000212231

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MA-EPICS - Massachusetts Environmental Protection Integrated Computer System

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D005
Waste name: BARIUM

Waste code: D006

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 08/12/1980
Facility name: COMPUGRAPHIC CORP
Classification: Not a generator, verified

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: U211
Waste name: CARBON TETRACHLORIDE

Waste code: U213
Waste name: FURAN, TETRAHYDRO-(I)

Waste code: U218
Waste name: ETHANETHIOAMIDE

Waste code: U219
Waste name: THIOUREA

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: MA01
Waste name: WASTE OIL

Waste code: MA95
Waste name: UNIVERSAL WASTE

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: U226
Waste name: ETHANE, 1,1,1-TRICHLORO-

Waste code: U228
Waste name: ETHENE, TRICHLORO-

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/01/2009	Source: EPA
Date Data Arrived at EDR: 10/14/2009	Telephone: N/A
Date Made Active in Reports: 11/09/2009	Last EDR Contact: 11/13/2009
Number of Days to Update: 26	Next Scheduled EDR Contact: 01/25/2010
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/01/2009	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009	Source: EPA
Date Data Arrived at EDR: 08/11/2009	Telephone: 703-412-9810
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 11/23/2009
Number of Days to Update: 41	Next Scheduled EDR Contact: 01/11/2010
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009	Source: EPA
Date Data Arrived at EDR: 09/02/2009	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	FEMA Flood

	2502110001B

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic
WILMINGTON	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
6	1/4 - 1/2 Mile SE	S

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Lower Paleozoic granitic rocks
Code: Pzg1 (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Plutonic and Intrusive Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: WINDSOR

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively. Soils have very high and high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	2 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 6.00 Min: 4.50
2	2 inches	20 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 6.00 Min: 4.50
3	20 inches	65 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 6.50 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sandy loam
muck
gravelly - sandy loam
loamy fine sand
extremely gravelly - sand
silt loam
mucky - loamy sand

Surficial Soil Types: fine sandy loam
muck
gravelly - sandy loam
loamy fine sand
extremely gravelly - sand
silt loam
mucky - loamy sand

Shallow Soil Types: loamy coarse sand
loamy sand
silt loam

Deeper Soil Types: stratified
sapric material

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

extremely gravelly - sand
silt loam
coarse sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers

Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America
- ☒ EDR Private Collection

Limited Permission To Make Copies

Camp, Dresser & McKee, Inc. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Highlighted wells are those wells proposed for sampling in each option.
 *Monitoring wells also used by the facility for WWTP monitoring.
