Section 1 Introduction **1-1**

1.1 Background 1-1

1.2 Objective 1-3

1.3 List of Contacts 1-3

1.4 Report Organization 1-4

Section 2 Monitoring and Field Activities **2-1**

2.1 Groundwater Sampling 2-1

2.1.1 Site-Wide Water Level Measurements – September 8, 2020 2-1

2.1.2 Groundwater-Sampling Event – September 2020 2-2

2.2 Light Non-Aqueous Phase Liquid Monitoring and Product Recovery 2-3

2.2.1 December 2020 Gauging Event 2-3

2.2.2 February 2021 Gauging Event 2-3

2.3 Investigation-Derived Waste Management 2-4

2.4 Indoor Air Sampling 2-4

2.5 Activity And Use Limitation 2-6

Section 3 Groundwater Flow Evaluation **3-1**

Section 4 Light Non-Aqueous Phase Liquid Monitoring and Product Recovery **4-1**

4.1 Light Non-Aqueous Phase Liquid Free Product Recovery 4-1

4.2 Light Non-Aqueous Phase Liquid Monitored Natural Attenuation Performance 4-1

4.2.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Light Non-Aqueous Phase Liquid 4-1

4.2.2 Change in Conditions Affecting Light Non-Aqueous Phase Liquid Monitored Natural Attenuation 4-2

4.2.3 Verification that the Light Non-Aqueous Phase Liquid Plume is not Expanding 4-2
4.2.4 Verification of the Absence of Non-Stable Light Non-Aqueous Phase Liquid 4-3
4.2.5 Verification of Attainment of Remedial Objectives for Light Non-Aqueous Phase Liquid 4-3
Section 5 Evaluation of Groundwater Quality Concentration Trends 5-1
5.1 Quality Assurance and Quality Control 5-2
5.2 Analytical Results – Arsenic 5-2
5.3 Analytical Results – 1,4-Dioxane 5-3
5.4 Analytical Results – Petroleum Hydrocarbons 5-4
5.5 Interference of Chlorinated Volatile Organic Compounds with Volatile Petroleum Hydrocarbon Analyses 5-6
5.6 Analytical Results – Volatile Organic Compounds 5-9
5.7 Monitored Natural Attenuation 5-11
5.7.1 Arsenic Monitored Natural Attenuation Performance 5-11
5.7.2 1,4-Dioxane Monitored Natural Attenuation Performance 5-13
5.7.3 Petroleum Hydrocarbons Monitored Natural Attenuation Performance 5-14
5.7.4 Chlorinated Volatile Organic Compounds Monitored Natural Attenuation Performance 5-16
Section 6 Indoor Air Sampling Results 6-1
6.1 Quality Assurance and Quality Control 6-1
6.2 Indoor Air Analytical Results 6-1
Section 7 Demonstration of Effective Institutional Controls 7-1
Section 8 Conditions or Problems Affecting the Remedial Action 8-1
Section 9 Modifications to the Monitoring Program 9-1
Section 10 Future Monitoring 10-1
Section 11 Licensed Site Professional Opinion and Conclusions 11-1
Section 12 Public Notification 12-1
Section 13 References 13-1

SECTION 1
INTRODUCTION

AECOM Technical Services, Inc. has prepared this Post-temporary Solution Status Report Number 8 on behalf of Lockheed Martin Corporation in fulfillment of the requirements of Post-temporary Solution Operation, Maintenance, and/or Monitoring under the Massachusetts Contingency Plan, 310 Code of Massachusetts Regulations 40.0897. This report also has been prepared in accordance with the Temporary Solution Statement submitted in May 2017 for Release Tracking Number 3-0518 (AECOM Technical Services, Inc., 2017a), which pertains to the former General Electric Company Facility at 50 Fordham Road, Wilmington, Massachusetts (site). The site location is depicted on Figure 1-1.

This report is being submitted electronically via eDEP, the electronic filing site for the Massachusetts Department of Environmental Protection, along with the Comprehensive Response Action Transmittal Form and Phase 1 Completion Statement (Bureau of Waste Site Cleanup form BWSC-108) and the Remedial Monitoring Report Form, which provide additional responsible party and Licensed Site Professional certifications.

1.1 BACKGROUND

Contamination of the Stickney Well, a currently inactive public supply well for the Town of North Reading, was discovered in the late 1970s. Subsequent investigations of multiple surrounding properties, including the former General Electric property, began in the early 1980s. On October 9, 1987, prior to the adoption of the Massachusetts Contingency Plan in 1988, the Massachusetts Department of Environment classified the former General Electric facility as a Priority Disposal Site. Under the Massachusetts Contingency Plan (Massachusetts Department of Environmental Protection, 2014), the site is a Tier 1 Classified site, under Release Tracking Number 3-0518, with four original operable units, as listed below and further defined in previous reports submitted to the Massachusetts Department of Environment.

- Operable Unit-1—Former Tank Farm source area (includes Pump House/Vault and Oil House) and adjacent Eastern Parking Lot

- Operable Unit-2—Former Tank Farm source area and downgradient groundwater plume both on- and off-property
- Operable Unit-3—Storm water/Wastewater Outfalls 001 and 002
- Operable Unit-4—Former Tank K Source Area and immediately downgradient groundwater plume

Areas relating to sediment at storm water/wastewater Outfalls 001 and 002 within Operable Unit-3 have been resolved and closed via a partial Response Action Outcome (Class A-2) submitted in December 2004 (TRC Companies, Inc., 2004). The former Tank K area that comprised Operable Unit-4 has been resolved and closed via a partial Response Action Outcome (Class A-2) dated November 9, 2010 (TRC Companies, Inc., 2010). The remaining two areas, Operable Unit-1 (petroleum contamination in former Tank Farm and Eastern Parking Lot areas) and Operable Unit-2 (chlorinated volatile organic compounds in former Tank Farm and downgradient groundwater plume), make up Release Tracking Number 3-0518. Figure 1-2 depicts an overview of the disposal site, including relevant site features, and Figure 1-3 depicts all monitoring wells located within the site boundary and in the general vicinity of the site.

A Tier 1A Permit was in place from 1999 until a Remedy Operation Status Opinion was filed on April 20, 2006 (TRC Companies, Inc., 2006). Lockheed Martin Corporation and AECOM Technical Services, Inc., determined on February 28, 2013 that the requirements to maintain Remedy Operation Status were no longer being met, and therefore submitted the required Remedy Operation Status Termination Notice and a Tier 1 Permit Extension Application on March 27, 2013, returning the site to Phase II/Phase III status of the Massachusetts Contingency Plan (AECOM Technical Services, Inc., 2013). On October 10, 2014, Lockheed Martin Corporation submitted a Tier Classification Extension (AECOM Technical Services, Inc., 2014) that was approved by the Massachusetts Department of Environmental Protection, extending the Tier Classification deadline to May 3, 2017. On May 2, 2017, Lockheed Martin Corporation electronically submitted to the Massachusetts Department of Environmental Protection the required reports including a Phase II Comprehensive Site Assessment with a Method 3 Risk Characterization (AECOM Technical Services, Inc., 2017b), a Phase III Remedial Action Plan (AECOM Technical Services, Inc., 2017c), and a Temporary Solution Statement (AECOM Technical Services, Inc., 2017a). The Massachusetts Department of Environmental Protection acknowledged receipt of the reports on May 2, 2017 via electronic stamp on the transmittal form. Currently, the site is in Temporary Solution status and,

therefore, Post-temporary Solution Status and Remedial Monitoring Reports are required to be submitted to the Massachusetts Department of Environmental Protection every six months, by May 2 and November 2 of each year, with evaluations of the Temporary Solution conducted every five years.

Additional details related to Release Tracking Number 3-0518 (comprehensive release history, site assessment, and remedial activities completed) can be found in reports previously submitted to the Massachusetts Department of Environmental Protection, specifically the Phase II Comprehensive Site Assessment (AECOM Technical Services, Inc., 2017b), Phase III Remedial Action Plan (AECOM Technical Services, Inc., 2017c), and Temporary Solution Statement (AECOM Technical Services, Inc., 2017a).

1.2 OBJECTIVE

The objective of this Post-temporary Solution Status Report Number 8 is to document the monitoring activities conducted at the site during the six-month reporting period of November 2, 2020 through May 1, 2021, in accordance with the Operations, Maintenance, and/or Monitoring Plan detailed in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection in May 2017.

1.3 LIST OF CONTACTS

This section identifies the potentially responsible party, the Licensed Site Professional-of-record, and the owner of the site.

Potentially Responsible Party:

Lockheed Martin Corporation
6801 Rockledge Drive
MP CCT246
Bethesda, MD 20817
Contact: Mr. Paul E. Calligan
Phone: (240) 687-1813

LSP-of-Record:

Dr. Daniel Folan (License No. 1736)
AECOM Technical Services, Inc.
250 Apollo Drive
Chelmsford, MA 01824
Phone: (978) 905-2205

Current Property Owner:

Wilmington Realty Trust
424 Broadway
Somerville, MA 02145
Contact: Mr. Gary Stanieich
Phone: (603) 860-5508

1.4 REPORT ORGANIZATION

This Post-temporary Solution Status Report is organized as follows:

- **Section 2**—provides a description of the type and frequency of monitoring/field activities conducted during this reporting period, plus a statement of compliance with the conditions of the activity and use limitation in place at the site.

- **Section 3**—presents a description of the comprehensive monitoring well gauging program as well as the resulting measurements and updated groundwater contours based on these measurements.

- **Section 4**—presents a description and the results of the light non-aqueous phase liquid monitoring and subsequent product recovery, a discussion of the performance of the monitored natural attenuation relating to the light non-aqueous phase liquid, and a discussion of the remedial objectives related to the light non-aqueous phase liquid and the progress toward meeting these objectives.

- **Section 5**—presents the groundwater laboratory analytical results and data validation and includes an evaluation of the field and analytical data presented. An evaluation of the performance of the remedial monitoring program is also presented.

- **Section 6**—presents a description of the indoor air sampling activities as well as laboratory analytical results and data validation activities completed during the reporting period.

- **Section 7**—provides a description of the effective institutional controls in place at the site.

- **Section 8**—provides a description of conditions identified during the monitoring period, which may be affecting the performance of the remedial action.

- **Section 9**—provides a description of modifications made to the monitoring program.

- **Section 10**—provides a description of the schedule for future monitoring activities.

- **Section 11**—provides the conclusions and Licensed Site Professional Opinion regarding this report.

- **Section 12**—provides a discussion of the public notification requirements for the site and copies of any required notifications.

- **Section 13**—provides a list of references.

SECTION 2
MONITORING AND FIELD ACTIVITIES

The Post-temporary Solution Operations, Maintenance, and/or Monitoring (OMM) Program continued during this reporting period in accordance with the monitoring plan presented in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection (MassDEP) on May 2, 2017, and the updated Post-temporary Solution OMM annual groundwater monitoring plan submitted to MassDEP on September 6, 2018. The activities completed as part of the OMM Program during this reporting period (November 2, 2020 through May 1, 2021) are discussed below.

2.1 GROUNDWATER SAMPLING

The annual groundwater-gauging and subsequent groundwater sampling event conducted in September 2020 are summarized below.

2.1.1 Site-Wide Water Level Measurements – September 8, 2020

On September 8, 2020, prior to commencing the groundwater sampling event, AECOM Technical Services, Inc. (AECOM) collected site-wide water level measurements. Depth to water was measured in all monitoring wells both on-site and off-site. AECOM obtained measurements of surface water at well locations where standing water was present. In addition, AECOM obtained a surface water elevation from the pond on Concord Street east of the site and northeast of the STM-3 wells. Surface water was not present on September 8 at any of the staff gauges or wells in the wetlands north or east of the Eastern Parking Lot (EPL) nor adjacent to the Ipswich River on the Wilmington Masonry property. During this gauging event, AECOM measured depth to water in nine monitoring wells on the YRC Freight (YRC) property at 95 Concord Street including AE-106-S-D-R in the wetland, AE-111R adjacent to the wetland, and five YRC wells MW-1-S-R, MW-7S, and MW-13-S-R along the YRC property line with the International Family Church. AECOM did not measure depth to water in other YRC wells as YRC was actively pumping and recirculating groundwater as part of ongoing remedial activity in the southeast corner of the property. Table 2-1 presents a summary of water levels measured along with the resulting

groundwater and surface water elevations, including wells on the YRC property. AECOM purged the standard Water FLUTes™ on September 4, 2020 to equilibrate the water levels prior to the site-wide measurements on September 8, 2020. AECOM measured the water levels within the Shallow Water FLUTes™ using the procedure provided by FLUTe™. The field records from the site-wide water level measurement event are included in Appendix A. An evaluation of the measurements collected is included in Section 3 of this report.

2.1.2 Groundwater-Sampling Event – September 2020

From September 9 to 25, 2020, AECOM collected groundwater samples from a comprehensive list of the site-wide monitoring wells in accordance with the Post-temporary Solution OMM Plan. Table 2-2 details the September 2020 updated annual groundwater monitoring plan. This scope was executed with one deviation, in that the groundwater sample from AE-106R-3 was not analyzed for sulfide as it was inadvertently omitted from the chain-of-custody to the laboratory. Figure 1-3 shows all monitoring well locations sampled in September 2020.

All conventional monitoring wells along with shallow Water FLUTes^{TM} (AE-26R, AE-28R, and AE-29R) and continuous multi-channel tubing (AE-101R and TRC-301R) intervals were purged and sampled with either a peristaltic pump or a bladder pump using low-flow techniques. All standard Water FLUTe^{TM} intervals were purged and sampled using compressed gas. Purging and sampling was conducted in accordance with United States Environmental Protection Agency (USEPA) Region 1 *Low Stress (low flow) Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells* (USEPA, January 2010, revised September 2017).

Groundwater quality parameters (temperature, pH, specific conductance, dissolved oxygen, and oxidation-reduction potential) were measured during purging at all wells using a YSI water quality meter with flow through cell and a separate Geotech turbidity meter. These September 2020 groundwater quality parameter data are summarized in Table 2-3. Field records (water level forms, calibration logs, groundwater-sampling forms, and field logbook notes) from the sampling event are provided in Appendix A.

All samples were collected into laboratory-supplied glassware and either picked up by the lab courier or shipped to each laboratory in accordance with standard chain-of-custody procedures. All samples were analyzed for volatile organic compounds with select samples analyzed by area for

additional site chemical(s) of concern (COC), including 1,4-dioxane, total and dissolved arsenic, and extractable and volatile petroleum hydrocarbons. A focused group of samples was analyzed to evaluate monitored natural attenuation processes that may be affecting the COC at the site. These select samples were analyzed for some or all the following: chloride, the terminal electron acceptor processes (e.g., dissolved iron, manganese, nitrate, nitrite, sulfate, sulfide), total organic carbon, and dissolved gases including hydrogen, ethane, ethene, methane, propane, and acetylene. Groundwater analyses are detailed in Table 2-2. The analytical results are discussed in Section 5 of this report.

2.2 LIGHT NON-AQUEOUS PHASE LIQUID MONITORING AND PRODUCT RECOVERY

In accordance with the OMM Program, AECOM conducted quarterly light non-aqueous phase liquid (LNAPL) monitoring and product recovery from select monitoring wells in December 2020 and February 2021. These gauging events are summarized below. An evaluation of the LNAPL monitoring results is presented in Section 4.

2.2.1 December 2020 Gauging Event

On December 7, 2020, AECOM gauged seven overburden monitoring wells for depth to water and the presence of LNAPL: AE-3, AE-4, CW-1, CW-2, GZA-102S, PZ-2S, and TRC-101. At the time of the gauging, none of the wells contained an absorbent sock. LNAPL was not detected in any of the monitoring wells gauged. Based on the lack of measurable LNAPL, AECOM did not install absorbent socks in any of the wells. Monitoring wells gauged during this event are depicted on Figure 1-3, and Table 2-4 includes a summary of LNAPL gauging and removal data. A copy of the field record completed during the LNAPL-gauging event is included in Appendix B.

2.2.2 February 2021 Gauging Event

On February 17, 2021, AECOM gauged seven overburden monitoring wells for depth to water and the presence of LNAPL: AE-3, AE-4, CW-1, CW-2, GZA-102S, PZ-2S, and TRC-101. At the time of the gauging, none of the wells contained an absorbent sock. LNAPL was not detected in any of the monitoring wells gauged. Based on the lack of measurable LNAPL, AECOM did not install absorbent socks in any of the wells. Monitoring wells gauged during this event are depicted on Figure 1-3. Table 2-4 includes a summary of LNAPL gauging and removal data. A copy of the field record completed during the LNAPL-gauging event is included in Appendix B.

2.3 INVESTIGATION-DERIVED WASTE MANAGEMENT

During the groundwater-sampling event completed in September 2020, five 55-gallon drums of purge water and decontamination rinse water were generated. This investigation-derived waste (IDW) was properly containerized and temporarily stored at a central staging area on-site, pending characterization and off-site disposal in accordance with Lockheed Martin Corporation procedures. Similar to past years, this IDW was characterized as hazardous based on the elevated trichloroethene and tetrachloroethene concentrations. The drums were removed on November 20, 2020 under a uniform hazardous waste manifest by Clean Harbors Environmental Services (CHES). A copy of the manifest documenting receipt at the CHES Braintree, MA facility on November 20, 2020 is included in Appendix C.

2.4 INDOOR AIR SAMPLING

In accordance with the OMM Program, AECOM performed annual indoor air monitoring during the heating season in January 2021. The United Parcel Service (UPS) began occupation of Building 1, under a lease with Wilmington Realty Trust, in October 2017, and has conducted seasonal operations from October through December in 2017, 2018, and 2019. In September 2020 UPS began full-time occupancy within Building 1 with active operations six days-per-week Monday through Saturday. UPS operations were active during the indoor air sampling on January 26, 2021. In order to obtain samples as representative of the indoor air as possible, AECOM collected indoor air samples when the trucks were out on delivery between approximately 9:00 am and 5:00 pm.

AECOM reviewed meteorological data from the Weather.gov website. On January 26, 2021, the ambient temperature ranged from a low of 16 degrees Fahrenheit (°F) to a daytime high of 34°F. Building 1 indoor air temperatures ranged from 59 to 64°F on the first floor, and from 63 to 64°F on the second floor. The heating, ventilation, and air conditioning units were operational in Building 1 during the sampling event. The units were preset by UPS to maintain cool conditions and prevent freezing of pipes within the building. As a result, the heating units kicked on/off occasionally and were not continually running during the January 26, 2021 sampling event.

Barometric pressure readings on January 26, 2021 ranged from 762.2 to 765.2 millimeters of mercury according to Weather.gov online records.

Prior to and during the sample collection, on January 19 and 26, 2021, AECOM completed an indoor air quality building survey per WSC #16-435 Vapor Intrusion Guidance dated October 14, 2016 (MassDEP, 2016a). The purpose of the survey is to document general building information such as construction, structural integrity, utility, materials storage, operations, and occupancy information that could be relevant to the indoor air sampling event. The survey was completed based on visual inspection of the building and information contained in prior survey forms. A copy of the completed survey is included in Appendix D.

Indoor air screening for volatile organic compounds (VOCs) was conducted with a photoionization detector (PID) (miniRAE™ 3000 with 10.6 electron volt lamp) on January 26, 2021, concurrent with the sample collection. The PID readings were recorded at each of the indoor air sample locations, at holes, drains, trenches, or cracks in the floor, and near the materials that could potentially be sources of VOCs. The PID readings at the indoor and ambient air sample locations were all less than 1 part-per-million by volume (ppmv). Additionally, PID readings of less than 1 ppmv were noted at holes, drains, and joints in the floor, and near the materials that could potentially be sources of VOCs within Buildings 1 and 1A. These PID readings are all similar to past PID screening results conducted in Building 1.

The January 26, 2021 indoor air sampling event consisted of the collection of air samples from five locations (IA-2, IA-3, IA-4, IA-7, and IA-8) on the first floor and one (IA-9) second floor location of Building 1. All indoor air samples were co-located as best as possible (within approximately 10 to 20 feet) with the prior indoor air sample locations collected from 2009-2020. Historic sample locations IA-10 on the mezzanine of Building 1, IA-5 in Building 3, and IA-6 in the guard shack physically no longer exist. One field duplicate sample was collected at location IA-8 by collecting two canisters concurrently immediately adjacent to each other.

One ambient background air sample (21A-AA1-1) was collected outside the south end of Building 1 during the same period as the indoor air samples. The ambient air sample location south of Building 1 under the awning was selected to shield the canister from light rain/snow on January 26, 2021. All sample locations are shown in Figures 2-1 and 2-2. The field records, including indoor air sampling records and photographs are provided in Appendix D.

All samples were collected into 6-liter, batch-certified SUMMA® canisters using eight-hour calibrated regulators set by the laboratory. The SUMMA® canisters were submitted to Alpha

Analytical, located in Mansfield, Massachusetts under chain-of-custody within 24 hours of sampling. All samples were analyzed for Massachusetts Contingency Plan volatile organics in air via Method TO-15 with selective ion monitoring. Analytical results are discussed in Section 6 of this document.

2.5 ACTIVITY AND USE LIMITATION

On July 13, 2015, Wilmington Realty Trust placed a voluntary activity and use limitation (AUL) on the southwestern portion of the site, encompassing Buildings 1, 1A, and 2, and the EPL. A copy of the AUL is included in Appendix E. The AUL prevents uses of the site which would be inconsistent with maintaining a condition of No Substantial Hazard under the Massachusetts Contingency Plan. The prohibited uses include residential, school, playground, park, or daycare use, as well as activities that would result in exposure to or the disturbance of potentially contaminated soils, bedrock, groundwater, and indoor air, unless appropriate precautions to prevent human exposure are taken as described in the AUL.

The AUL does not restrict the use of groundwater for drinking water purposes. However, the Stickney Well in North Reading and the Reading municipal wells south of the Ipswich River remain inactive, and no drinking water wells exist within one half mile of the site. In March 2021, AECOM checked the Massachusetts online drinking water well data portal (https://eeaonline.eea.state.ma.us/portal#!/search/drinking-water) to confirm that no new drinking water wells have been installed within 0.5 mile of the site in the towns of Wilmington, Reading, or North Reading between January 21, 2020 and February 26, 2021.

Based on site inspections and monitoring activities conducted during this monitoring period, the conditions of the AUL are being met.

SECTION 3
GROUNDWATER FLOW EVALUATION

AECOM Technical Services, Inc. (AECOM) conducted a site-wide round of water level measurements on September 8, 2020, prior to commencing the groundwater-sampling event. Table 2-1 presents a summary of all water levels measured along with the resulting groundwater and surface water elevations.

Groundwater contours were developed for three depth intervals, 0 to 60 feet (ft) below ground surface (bgs), 61 to 121 ft bgs, and 122 to 250 ft bgs. These intervals were used for evaluation in prior reports submitted to the Massachusetts Department of Environmental Protection and will be used going forward to evaluate site groundwater flow for consistency. Although the 0 to 60 ft bgs interval includes both overburden and shallow bedrock groundwater elevations, this is consistent with the conceptual site model of shallow bedrock groundwater in the Eastern Parking Lot (EPL) discharging to the deep overburden beneath the wetlands. The deep interval contour consists of only bedrock groundwater elevations; the middle interval is predominantly bedrock groundwater elevations (except for well AE-105D, which is screened in deep overburden from 73 to 75 ft bgs). AECOM assigned the YRC Freight (YRC) overburden and bedrock wells to the same three depth intervals based on well screen depth and elevations. Groundwater piezometric contours for the three depth intervals generated from the groundwater elevations summarized in Table 2-1 are depicted on Figures 3-1, 3-2, and 3-3.

The groundwater contours are consistent with previous depictions that show shallow (0 to 60 ft bgs) groundwater generally flowing to the east-northeast on the subject property, then trending more eastward beneath the wetlands, and finally southeast at Concord Street towards the Ipswich River. The intermediate (61 to 121 ft bgs) and deep (122 to 250 ft bgs) intervals show groundwater flowing generally to the east-northeast from the EPL and to the east-southeast beneath the wetlands.

The groundwater contours include elevations from nine wells (AE-106-S-D-R, AE-111R, MW-1-S-R, MW-7S, and MW-13-S-R) on the YRC property on September 8, 2020. Therefore, the contours are based on a smaller data set from the YRC property compared to the groundwater

contours from 2018 and 2019 when YRC had conducted water level measurements of more wells on their property.

Because the YRC property is located on a bedrock knob that is higher in elevation than surrounding areas, natural radial groundwater flow is typically observed. The groundwater contours derived from the September 8, 2020 measurements are similar to previous years and indicate radial flow from the YRC property. As shown in Figures 3-1, 3-2, and 3-3, this radial flow from YRC causes diversion of flow from the eastern portion of the Wilmington Realty Trust property around the YRC property. A review of the January 2021 *Remedy Operation Status/Remedial Monitoring and RAM Status Report* for the YRC site (Release Tracking Number 3-2363) indicates that an active groundwater recirculation system was operational at YRC during the September 8, 2020 gauging event (CCC Environmental Services, 2021). On September 8, 2020, one extraction well was pumping from the YRC source area located southeast of the large YRC warehouse at a rate of 4.5 gpm and four injection wells were re-introducing treated groundwater downgradient (southeast) of the injection well at a combined total rate of 4.4 gpm. A groundwater contour map provided in the January 2021 *YRC Remedy Operation Status/Remedial Monitoring and RAM Status Report* indicates bedrock groundwater flow on October 10, 2020 within the treatment area was travelling to the southeast (CCC Environmental Services, 2021).

For the Former General Electric Company facility property, shallow groundwater elevations recorded in September 2020 were lower than in October 2019. Groundwater elevations in overburden and areas with shallow depth to bedrock were down approximately 0.25 ft from 2019 to 2020 and were the lowest groundwater elevations recorded at the site in the past five years.

SECTION 4
LIGHT NON-AQUEOUS PHASE LIQUID MONITORING AND PRODUCT RECOVERY

This section provides an evaluation of the current light non-aqueous phase liquid (LNAPL) conditions at the site.

4.1 LIGHT NON-AQUEOUS PHASE LIQUID FREE PRODUCT RECOVERY

Recovery of LNAPL free product is intermittently performed as detailed in the Temporary Solution Statement. During this reporting period, AECOM Technical Services, Inc. (AECOM) did not deploy any absorbent socks, as a measurable thickness of LNAPL was not detected in any monitoring wells gauged during the monitoring events completed in December 2020 and February 2021.

4.2 LIGHT NON-AQUEOUS PHASE LIQUID MONITORED NATURAL ATTENUATION PERFORMANCE

The sections below include details related to the presence of LNAPL at the site and the monitored natural attenuation (MNA) of site LNAPL.

4.2.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Light Non-Aqueous Phase Liquid

The decrease in measurable LNAPL is consistent with seasonal fluctuations observed since 2010, and the thicknesses and frequency of LNAPL detections appear to have decreased overall. The presence of LNAPL over the past 10 years has primarily been limited to wells CW-1 and CW-2 with occasional sheen in well PZ-2S. Wells CW-1 and CW-2 are shallow wells installed within a former excavation immediately downgradient of where the bedrock surface dips to the east beneath the Eastern Parking Lot (EPL). The presence of LNAPL in these wells typically results when increases in the depth to groundwater (i.e., a lower groundwater table) allow small amounts of residual LNAPL to weep from bedrock fractures into the unconsolidated aquifer and then into those wells. Table 2-4 includes a summary of the historical LNAPL measurements, and Figure 4-1 depicts the reduction of the LNAPL plume on-site from 1992 to the present.

Although the very limited LNAPL plume size has not changed significantly in some time, it continues to generate a dissolved plume of petroleum hydrocarbons. Changes in extractable petroleum hydrocarbon (EPH) and volatile petroleum hydrocarbon (VPH) fraction concentrations can be meaningful indicators of natural source-zone depletion. Long-term changes in these concentrations will be monitored in wells adjacent to the LNAPL plume to determine the effect MNA has on the plume. This monitoring may include additional parameters in the future. Further discussion of the EPH and VPH fractions associated with the LNAPL is presented in Section 5.7.3.

4.2.2 Change in Conditions Affecting Light Non-Aqueous Phase Liquid Monitored Natural Attenuation

During this reporting period, there have been no changes in conditions affecting LNAPL MNA. As shown in Figures 4-2 through 4-5, detectable LNAPL thicknesses generally coincide with increased depth to groundwater. Groundwater elevations from September 2020 in overburden and areas with shallow depth to bedrock were 0.25 feet (ft) lower than in October 2019. The depths to water measured in monitoring wells during this reporting period are similar to those measured in past periods when little to no measurable LNAPL was detected.

4.2.3 Verification that the Light Non-Aqueous Phase Liquid Plume is not Expanding

Response actions have been performed previously to assess LNAPL mobility and to meet the requirements of 310 Code of Massachusetts Regulation (CMR) 40.1003(7)(b). Based on the extensive measurement and evaluation of the LNAPL present at the site, it is apparent that the LNAPL is stable, as defined at 310 CMR 40.0006. The LNAPL footprint is not expanding as shown in Figure 4-1, nor is LNAPL migrating through any subsurface strata or discharging to a surface water body, structure, or utility. The extent of LNAPL has been well defined and measured regularly, with product removal through three historical recovery wells between 1992 and 2002 and through subsequent manual and passive measures from 1999 through November 2017, the last time absorbent socks were installed/removed. LNAPL at the site has micro-scale mobility, as it continues to be observed in small amounts intermittently in wells CW-1 and CW-2 when the water table is depressed sufficiently for residual LNAPL to weep from bedrock into soil.

Graphs of the depth to groundwater compared to LNAPL thickness over time in wells CW-1, CW-2, PZ-2S, and TRC-201R are presented in Figures 4-2 through 4-5. These graphs show that, in general,

greater LNAPL thickness tends to coincide with increased depth to groundwater. The amount of recoverable LNAPL has decreased over time due to the LNAPL removal efforts. The lack of LNAPL in monitoring wells TRC-101, AE-03, AE-04, and PZ-2S bounds the area around CW-1 and CW-2, where LNAPL is periodically detected. As a result, active LNAPL removal is no longer occurring and LNAPL removal via passive measures is currently minimal.

4.2.4 Verification of the Absence of Non-Stable Light Non-Aqueous Phase Liquid

Since December 2010, well CW-1 has had little evidence of LNAPL while CW-2 generally exhibits a sheen. Both wells have had periodic measurable LNAPL thickness generally ranging from 0.01 to 0.03 ft, with the thickest measurements of 0.12 ft in CW-1 observed in September 2016 and 0.08 ft in CW-2 in September 2015. The two thickest measurements were taken when the seasonal depth to groundwater was the greatest observed on-site in over 10 years. LNAPL has not been detected in TRC-101 since 2002. LNAPL has not been detected in wells AE-03 or AE-04 since their installation in 2012. It is apparent that the LNAPL remaining at the site is limited, stable, and only has micro-scale mobility , based on the behavior of the LNAPL in the wells.

4.2.5 Verification of Attainment of Remedial Objectives for Light Non-Aqueous Phase Liquid

The remedial objectives for LNAPL are being attained by continued monitoring and passive recovery (when possible), as detailed below and in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection (MassDEP) in May 2017. Given the intermittent presence of LNAPL in monitoring wells in the EPL area and the limited recoverability of LNAPL (approximately 2.81 gallons removed between December 2010 and November 2017), it has been demonstrated, in accordance with the MassDEP LNAPL Guidance (MassDEP, 2016a), that active LNAPL recovery is no longer feasible. However, based on data collected between 2010 and September 2020 (the last time trace LNAPL was present in a well), the potential for LNAPL with micro-scale mobility remains within the area adjacent to the former Tank Farm and EPL.

A remedial alternative evaluation was presented as Table 5-1 of the Phase III Remedial Action Plan (AECOM, 2017c) relating to residual petroleum contaminants at the aquifer capillary fringe in the former Tank Farm and EPL areas, where free product with micro-scale mobility has been observed. Continued monitoring of natural attenuation processes and passive recovery of product, if possible,

was selected as the alternative for LNAPL present in these areas. These areas have been shown to have low levels of volatile organic compounds in groundwater and soils, but contain EPH/VPH, particularly the C5-C8 aliphatic and C9-C10 aromatic fractions, above standards, in addition to the potential for free-phase LNAPL with micro-scale mobility.

The selected remedial alternative to continue to monitor and passively remove LNAPL (if present) to below observable levels in collection and monitoring wells in the area is being performed and appears to be proceeding toward attainment of the remedial objectives for LNAPL. Given the limited presence of measurable LNAPL from 2017 to 2021, active monitoring of LNAPL thickness in the EPL may no longer be necessary following completion of the initial five years of monitoring in 2022.

SECTION 5
EVALUATION OF GROUNDWATER QUALITY CONCENTRATION TRENDS

This section provides an evaluation of the concentration trends and distribution of the chemicals of concern (COC) in site groundwater: arsenic, 1,4-dioxane (1,4-D), petroleum hydrocarbons, and chlorinated volatile organic compounds (CVOCs).

The MassDEP has established three categories for groundwater within the MCP (310 CMR 40.0932) that relate to the following types of groundwater exposures:

- GW-1 applies to groundwater assumed to be a current or potential source of drinking water.
- GW-2 applies to groundwater considered to be a potential source of vapors that could migrate into building air.
- GW-3 applies to all groundwaters in the Commonwealth since it is assumed that it all eventually discharges to surface water.

The site is located within an IWPA for the inactive North Reading Stickney PWS well and a Zone II for nine emergency backup PWS wells in Reading (Revay Well #1, Well #2, Well #3, B Line Well, Town Forest, Well #82-20, Well #66-8, Well #13, and Well #15). Therefore, site groundwater is categorized as GW-1.

A portion of site groundwater, which has an average depth less than 15 ft bgs and is within 30 ft of Building 1/1A at 50 Fordham Road, is also categorized as GW-2. Similar site groundwater conditions are also present within 30 ft of the building located at 87 Concord Street (Howland Development) in North Reading. The average depth to shallow groundwater beneath these buildings is less than 15 ft. Therefore, site groundwater within 30 ft of occupied buildings along Concord Street is categorized as GW-2.

All site groundwater is categorized as GW-3.

5.1 QUALITY ASSURANCE AND QUALITY CONTROL

In September 2020, AECOM Technical Services, Inc. (AECOM) collected groundwater samples from 118 monitoring wells/screens. All samples were analyzed for volatile organic compounds (VOCs) with select samples analyzed for additional parameters, as detailed in Table 2-2. Upon receipt of the laboratory analytical reports, the data contained in each report was validated and reviewed for compliance with the Massachusetts Department of Environmental Protection (MassDEP) Compendium of Analytical Methods performance standards, as detailed in Policy WSC-02-3209 (MassDEP, 2010). Results of the validation are discussed in detail in the data validation memoranda prepared with each laboratory data package included in Appendix F.

The chemical data are valid as reported and may be used for decision-making purposes. Most of the data were accepted, with qualifiers added where required. Data for two VOCs (acetone and tetrachloroethane) were rejected at select monitoring wells due to laboratory analytical nonconformances, as noted in the data validation memoranda. Acetone is not a key COC, while tetrachloroethene (PCE) is a key COC for the site. The rejected data consisted of non-detect results that were rejected due to results of the laboratory quality assurance limit exceedances (initial and continuing calibrations, control samples and duplicates). A total of 16 acetone values (13%) and 40 PCE values (32%) were rejected.

The analytical results met the requirements for "presumptive certainty" status for all compounds for which there is a Compendium of Analytical Methods (CAM) protocol under the Massachusetts Contingency Plan (MCP), with one exception of 1,4-dioxane at well GZA-105D which was analyzed outside of hold time due to a miscommunication error with the laboratory. The result from GZA-105D was qualified as estimated. See Appendix F for further details.

5.2 ANALYTICAL RESULTS – ARSENIC

A summary of the 2016-2020 arsenic analytical results is presented in Table 5-1. The arsenic concentrations are consistent from 2016 through 2020. The total and dissolved arsenic results are similar in all wells analyzed indicating that the arsenic present is predominantly dissolved arsenic. Nine of the 36 wells sampled had dissolved and total arsenic concentrations above the GW-1 value of 10 micrograms per liter (µg/L) in 2020. The dissolved arsenic plume in groundwater at four intervals (overburden and upper, middle, and lower bedrock) is presented in Figures 5-1 through

5-4. These figures depict the 2016, 2017, 2018, 2019, and 2020 plumes from results in the wells sampled each year. The extent of the plumes is the same with concentrations on the same order of magnitude at each interval from 2016 to 2020 with insignificant differences.

Concentration trend graphs of the dissolved arsenic results from all wells sampled in September 2020 are presented in Appendix G. The graphs include all available historical dissolved arsenic results for these wells. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 5-2. Fourteen monitoring wells have enough data from which to generate statistical trends. A downward trend, at the 80% confidence level, is noted in overburden monitoring wells AE-03 and AE-102M in the Eastern Parking Lot (EPL), and AE-105S in the wetland. An upward trend, at the 80% confidence level, is noted in overburden monitoring well GZA-06; however, the dissolved arsenic concentration in this well over the past three years has remained at or just below the GW-1 concentration. The remaining ten monitoring wells (AE-102RR-6, AE-103S, GZA-10, GZA-101R, GZA-105S, GZA-14A, MW-4A, STM-8R-1, TRC-102, and TRC-301R-4) show no trend or non-significant trends.

Based on these results, dissolved arsenic concentrations are similar to past results. No significant upward trends are evident. The plume is identical from 2016 to 2020 and is stable in overburden and bedrock intervals.

5.3 ANALYTICAL RESULTS – 1,4-DIOXANE

A summary of the 2016-2020 (1,4-D) analytical results is presented in Table 5-3. The 1,4-D concentrations are of the same order of magnitude from 2016 to 2020 in all wells with the exception of well AE23R, which decreased to nondetectable concentrations (<0.20 µg/l) in 2020. Concentrations detected in AE23R from 2016 to 2019 ranged from 15 ug/l to 19 ug/l. A total of 40 wells show 1,4-D concentrations above the GW-1 value of 0.3 µg/L in 2020. The 1,4-D plume in groundwater at four intervals (overburden and upper, middle, and lower bedrock) is presented in Figures 5-5 through 5-8. These figures depict the 2016, 2017, 2018, 2019, and 2020 plumes from results in wells sampled each year. The extent of the plumes is the same with concentrations fluctuating within the same order of magnitude in each of the four intervals from 2016 to 2020.

Concentration trend graphs of the 1,4-D results from all wells sampled in September 2020 are included on the CVOC trend graphs presented in Appendix G. The graphs include all available

historical 1,4-D results for these wells that were analyzed via United States Environmental Protection Agency SW-846 Method 8270 or 8270 selective ion monitoring. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 5-8. Forty-one of the 45 monitoring wells sampled have enough data from which to generate statistical trends. Four wells at the edge of the EPL (AE-103R-1 AE-109R-5, AE-110R-6, and GZA-105D) show a downward trend. Five wells (AE-101R-6, AE-102RR-6, AE-104D, AE-109D, and AE29R-6) at the former Tank Farm and Building 1 source areas and at the edge of the EPL show an upward trend at the 80% and 90% confidence levels. Three wells (AE-100R-4, AE-102RR-2, and AE-103R-5) at the former Tank Farm and in the EPL show an upward trend at just the 80% confidence level. In each of these eight wells with upward trends the concentrations remain at the same order of magnitude. The remaining 29 of 41 wells show no trend or non-significant trends.

Based on these results, 1,4-D concentrations are of the same order of magnitude as past results with slightly increased concentrations in middle and lower bedrock, and to a lesser extent in overburden and upper bedrock. The 2020 plume geometry is like the 2016-2019 plumes and is stable in the overburden and bedrock intervals.

5.4 ANALYTICAL RESULTS – PETROLEUM HYDROCARBONS

A summary of the 2016-2020 extractable petroleum hydrocarbon (EPH) and volatile petroleum hydrocarbon (VPH) analytical results is presented in Table 5-4. The EPH and VPH concentrations are similar in 2016, 2017, 2018, 2019, and 2020 in all wells with changes discussed herein. As discussed in Section 4 above, petroleum light non-aqueous phase liquid (LNAPL) has been identified near the former Tank Farm and EPL. Since 2010, the periodic presence of LNAPL has been limited to wells CW-1 and CW-2 where the bedrock dips to the east beneath the EPL. Sampling for EPH and VPH is being conducted to monitor the levels of petroleum hydrocarbons present in a focused group of wells (AE-03, AE-04, GZA-105S, GZA-105D, and TRC-102 with five wells AE-100R-1, GZA-102S, PZ-2S, TRC-101, and TRC-102 added in 2018) immediately surrounding CW-1 and CW-2. Several EPH and VPH compounds including various polynuclear aromatic hydrocarbons (PAHs), benzene, toluene, ethylbenzene, xylenes (BTEX), naphthalene, and hydrocarbons have been detected at concentrations below the GW-1 standard. Detected concentrations above GW-1 standards include:

- C5-C8 hydrocarbons in 2016 and 2017 and C11-C22 hydrocarbons in 2017 in GZA-105D;

- C5-C8 hydrocarbons in 2018 in AE-100R-1;
- C9-C10 hydrocarbons in AE-03 from 2016-2020; and
- C9-C10 hydrocarbons in TRC-101 from 2018-2020, and C9-C18 hydrocarbons in 2020.

In addition, benzo(a)pyrene was detected in 2018 at concentrations just above the GW-1 standard in five wells, AE-03, PZ-2S, TRC-101, and TRC-102 in the EPL, and EMW-11R-2 at the edge of the wetland. Two PAHs, dibenzo(a,h)anthracene and indeno(123-cd)pyrene, exceeded the GW-1 standard in GZA-105D in the EPL in 2017. None of these PAH exceedances of GW-1 were observed in 2019 or 2020.

These localized fluctuations include a mixture of increases and decreases in 2020 dissolved phase petroleum hydrocarbon compound concentrations which coincide with a 0.25 feet (ft) decrease in the overburden and shallow bedrock groundwater elevations from 2019 to 2020.

The C5-C8 hydrocarbons also were detected above the GW-1 standard in one or multiple years from 2016-2020 in five wells along the eastern edge of the EPL at the wetland (AE-102RR-6, AE-103R-1, EMW-11R-2, AE-104R-4, and AE-109R-5) and in four wells beneath or near Building 1 (AE-23R, AE-26R-1, AE-28R-2, and AE-29R-6). The C11-C22 hydrocarbons also were detected above GW-1 standards in wells AE-106R-5, AE-109R-5, and EMW-11R-2 in 2017-2018. In each of these cases, with the exception of well AE-26R-1, the results in 2020 were similar to or lower than the 2016-2019 results in each of these wells. Well AE-26R-1 shows an increase in C5-C8 hydrocarbons in 2020. Toluene was detected above the GW-1 standard in well AE-23R beneath Building 1 from 2016-2020. As noted in section 5.5, exceedances in some of these wells may be due to false positive VPH results due to interference from elevated CVOC concentrations, particularly at depth in bedrock and away from source areas.

Figures 5-9 through 5-12 present the 2016-2020 petroleum plumes in groundwater at four intervals (overburden and upper, middle, and lower bedrock). A comparison shows that the plume is similar in size and shape at all four intervals from 2016-2020, with subtle differences:

- The overburden plume is the same size and shape with similar concentrations in the EPL and Tank Farm area from 2016 to 2020, with higher concentrations detected in 2017 and 2020 when groundwater elevations were lower than in 2016, 2018, and 2019.

- The upper bedrock plume is similar in size and shape from 2016 to 2020 beneath Building 1, in the Tank Farm area, and in the EPL. The concentrations are on the same order of magnitude in these areas.

- The middle bedrock plume has decreased in size and shape from 2016-2020 with lower concentrations in the wetland and in AE-110R. Beneath Building 1, concentrations increased one order of magnitude in AE-28R-2 in 2019-2020 than in 2016-2018.

- The lower bedrock plume has decreased in size and shape from 2017 to 2020 with decreased concentrations in AE-105R and AE-112R in the downgradient wetland.

Concentration trend graphs of the petroleum results from all wells sampled in September 2020 (whether analyzed for EPH/VPH or not) are presented in Appendix G. The graphs depict BTEX, methyl-tertiary-butyl ether (MTBE), naphthalene, and calculated VPH fractions of all available historical results for these wells. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 5-5. For the 46 wells with enough data to run statistics, upward trends at the 80% and 90% confidence levels are noted for calculated VPH fractions in AE-102RR-6, AE-26R-1, and TRC-101; toluene in AE-23R and MTBE in AE-105D, AE-105S, STM-8D, TRC-301R-2, and TRC-301R-4. Downward trends are noted in 30% of the data, for five compounds in 24 wells across the site. All other compounds show no trends or non-significant trends.

Based on these results, petroleum concentrations are like past results with fluctuations in concentrations of select compounds and some downward trends at this time. The 2020 petroleum plume geometry is similar to the 2016-2019 plume and is stable or shrinking in the overburden and bedrock intervals.

5.5 INTERFERENCE OF CHLORINATED VOLATILE ORGANIC COMPOUNDS WITH VOLATILE PETROLEUM HYDROCARBON ANALYSES

In the former Tank Farm EPL area and in the Building 1 former Tank F area, source materials were released directly into the overburden, which has limited thickness onsite, and into shallow fractured bedrock, the top of which ranges from 3 to 45 ft below ground surface beneath the former Tank Farm EPL area and in the Building 1 former Tank F area. Comingling with CVOCs may account for some of the hydrocarbon concentrations migrating deeper into bedrock; however, in the absence of significant downward gradients, lighter phase hydrocarbons are not expected and not typically detected at depth in bedrock in areas away from source zones. In contrast, in 2016-2019, elevated total petroleum impacts (particularly C5-C8 aliphatics) were observed in deep bedrock wells

EMW-11R-2, AE-102RR-6, and AE-104R-4 that also displayed elevated CVOC concentrations. There are no significant downward gradients observed at the site and these detections of petroleum hydrocarbons in deep bedrock away from source areas are circumspect.

In 2016, the MassDEP recognized potential interference issues associated with the 2004 VPH analytical method (MassDEP, 2004) known as VPH by the gas chromatography/photoionization detector/flame ionization detector (GC/PID/FID) Method (MassDEP, 2016b). In 2017, MassDEP issued an alternate method for quantifying VPH using gas chromatography/mass spectrometry (GC/MS) (MassDEP 2017). Certain organic compounds not associated with the release of petroleum products, including chlorinated solvents, alkyl benzenes, ketones (e.g., methyl ethyl ketone), and ethers, may be detected using the VPH by GC/PID/FID Method and may contribute to the collective response quantified within an aliphatic or aromatic hydrocarbon range. In 2018, MassDEP issued a new CAM referred to as WSC-CAM-IV A for the VPH by GC/MS Method to provide more detailed guidance regarding compliance with the quality control requirements and performance standards (MassDEP, 2018).

To better quantify petroleum hydrocarbon concentrations in groundwater, and to separate potential CVOC interferences, in September 2018, AECOM submitted groundwater samples from four wells for analysis of VOCs via Method 8260, VPH via the MassDEP GC/PID/FID Method at Eurofins Spectrum Laboratories, and VPH by MassDEP GC/MS Method at Alpha Analytical Laboratories. The laboratory data were included in Post-temporary Solution Status Report Number 4 submitted to the MassDEP in May 2019. In three of the four wells sampled, the VPH-GC/MS Method did not identify C5-C8 aliphatics or C9-C12 aliphatics where those compounds were identified using the VPH-FID/PID Method and clearly showed interference from tentatively identified non-VPH compounds. These results were supported by the VOC-8260 data (i.e., lack of identification of BTEX and alkyl-benzene compounds). A review of the data indicated that the interferences causing false positive results for C5-C8 aliphatics and C9-C12 aliphatics in the VPH-FID/PID Method were predominantly from CVOCs (tetrachloroethene [PCE], trichloroethene [TCE], 1,1-dichloroethane [1,1-DCA], 1,1-dichloroethene [1,1-DCE], cis-1,2-dichloroethene [cis-1,2-DCE], and trans-1,2-dichloroethene [trans-1,2-DCE]). One of the three samples did show the presence of many alkyl-benzene compounds and no CVOCs. The VPH-GC/MS and VPH-GC/FID/PID results were similar for this sample.

The VPH-GC/MS Method is suitable for volatile petroleum products, including gasoline and the volatile fractions of mineral spirits, kerosene, #2/diesel fuel oil, and jet fuels (MassDEP, 2017). The site petroleum hydrocarbon of interest is Stoddard Fuel which contains the shorter chain volatile hydrocarbons. In November 2020, AECOM submitted an LNAPL sample from well CW-2 collected in September 2020 to Alpha Analytical for fingerprint analysis. The laboratory data package is provided in Appendix F. Alpha provided qualitative information regarding the LNAPL sample based on tentative interpretation of chromatographic pattern recognition and boiling point ranges; the LNAPL is predominantly an unresolved complex petroleum hydrocarbon mixture eluting between n-Octane (C8) and n-Octadecane (C18) and is similar to a weathered mineral spirits or aviation fuel type product. Stoddard Fuel is also known as a mineral spirit.

The existing site groundwater data indicate that the petroleum hydrocarbons detected contain mostly VPH range (C5-C8 and C9-C10) hydrocarbons. Due to the presence of elevated CVOCs, which may interfere with analysis of VPH by the GC/PID/FID Method and cause artificially elevated VPH readings, the VPH by GC/MS Method is suitable for quantifying the VPH levels in site groundwater. Based on these results, Lockheed Martin Corporation proposed to switch the VPH analysis to the GC/MS Method under the Operations, Maintenance, and/or Monitoring (OMM) Program with EPH still to be analyzed by MassDEP EPH Method (GC/PID/FID). However, the lack of demand for the VPH-GC/MS method by the Licensed Site Professional community forced the only remaining laboratory (Alpha Analytical Laboratories) to discontinue running this method in July 2019. Therefore, Lockheed Martin Corporation evaluated alternate analytical methods to identify those wells currently being sampled for VPH using the GC/FID/PID method that lead to false positive VPH results.

In September 2020, AECOM submitted groundwater samples from six wells for PIANO analysis at Alpha Analytical Laboratories. A PIANO analysis is a forensic GC/MS analytical tool for fingerprinting light-end refined products, e.g., gasoline and jet fuel, in contaminated soil and groundwater. PIANO is an acronym for n-paraffins (P), iso-paraffins (I), aromatics (A), naphthenes (N) and olefins (O). This method identifies and measures 144 volatile petroleum hydrocarbon compounds. Two overburden wells AE-03 and TRC-101 were selected for PIANO analysis as they exhibit petroleum impacts and little to no CVOC impacts. Four bedrock wells AE-102RR-6, AE-103R-1, AE-104R-4, and EMW-11R2 were also selected for PIANO analysis as they are

screened in bedrock away from the source areas and exhibit elevated CVOC impacts. The results of the PIANO analyses are presented in Table 5-6.

The PIANO analytical results from Alpha indicate that all 144 compounds were below laboratory detection limits in two bedrock wells, AE-102RR-6 and AE-103R-1. In the other two bedrock wells, AE-104R-1 and EMW-11R-2, all compounds were below laboratory detection limits, except for low concentrations of toluene . In contrast, 19 and 25 light-end refined petroleum products were detected in both overburden wells AE-03 and TRC-101, respectively. For this subset of monitoring wells, these results support the hypothesis that, despite having comingled chlorinated VOCs and petroleum products in groundwater at the site, the petroleum products are not detected at depth in bedrock away from the source, and that elevated concentrations of chlorinated VOCs are causing false positives in the VPH GC analyses (VPH is a GC method with no MS). Lockheed Martin plans to analyze additional site wells with the PIANO method in 2021 to further confirm this observation and to support a reduction in monitoring for petroleum compounds in bedrock wells located away from the source areas onsite.

5.6 ANALYTICAL RESULTS – VOLATILE ORGANIC COMPOUNDS

A summary of the annual 2016 through 2020 VOC analytical results is presented in Table 5-7. The detected VOC concentrations are consistent from 2016 to 2020. Nine different CVOCs were detected in groundwater in 2020 at concentrations above MCP groundwater standards. These compounds include: 1,1,1-trichloroethane, 1,1-DCA, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, toluene, and vinyl chloride (VC). One or more of these nine constituents were detected above GW-1 standards at 76 different well screen/port locations. One or more of the following CVOCs (1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, and VC) were detected at concentrations greater than MCP GW-2 standards (within 30 ft of a building with depth to groundwater less than 15 ft) in the following wells sampled within 30 ft of or beneath Building 1 in 2020: AE-23R, AE-24, AE-26R1, AE-26R2, AE-26R5, AE-26S, AE-28R1, AE-28R2, AE-28R3, AE-28R4, and GZA-101R. Only PCE and TCE were detected at concentrations greater than GW-3 standards, TCE at 10 well screen/port locations under Building 1 and in the EPL, and PCE at one well screen/port location (AE-23R) beneath Building 1.

Consistent with observations from 2016-2019, the highest total CVOC concentration (189,670 µg/L) observed at the site in 2020 is in upper bedrock well AE-23R located beneath

Building 1. The concentration of TCE (130,000 µg/L) detected in 2020 exceeds the upper concentration limit (UCL) of 50,000 µg/L. Concentrations of TCE have historically exceeded the UCL in this well. This is the only UCL exceedance for any constituent at any monitoring well location in 2020. In 2020, the highest PCE concentration (54,000 µg/L) was detected in AE-23R, which is above the GW-3 standard but below the UCL for PCE. Although never detected in AE-23R when gauged, the potential exists for dense non-aqueous phase liquid (DNAPL) to be present near this well based on current and historical concentrations.

Figures 5-13 through 5-24 present the 2016-2020 PCE, TCE, and total CVOC plumes in groundwater at four intervals (overburden and upper, middle, and lower bedrock). These figures depict the 2016, 2017, 2018, 2019, and 2020 plumes from results in wells sampled each year. The 2016-2020 PCE, TCE, and total CVOC plumes are similar in size at all four intervals with the following order of magnitude differences in concentrations:

- One order of magnitude increase in overburden TCE concentration in AE-102D from 1.1 to 27 µg/L)
- One order of magnitude increase in lower bedrock vinyl chloride concentration in AE-109R-7 (from <1 to 11 µg/L)

Wells AE-102D and AE-104R-5 are located in the EPL downgradient of the former Tank Farm secondary source area where fluctuations in concentrations are not unexpected.

Well AE-109R-7 is located in the EPL and the edge of the wetland, downgradient of the former Tank Farm secondary source area, and on the southern property line. Concentrations of VC in well AE-109R-7 were below the detection limit from 2016 through 2019; <5 µg/L in 2016 and 2017, <2 µg/L in 2018, and <1 µg/L in 2019. The increase to 11 µg/L seen in 2020 suggests that natural degradation of cis-1,2-DCE may be occurring. Concentration trend graphs of the CVOC results from all wells sampled in 2020 are presented in Appendix G. The graphs depict all available historical PCE, TCE, cis-1,2-DCE, toluene, VC, and 1,4-D results for wells sampled in September 2020. A summary of Mann Kendall statistical analyses based on these trend graphs is presented in Table 5-8.

In September 2020, 118 monitoring well screen/port locations were sampled. Of those 118, 102 have enough data from which to generate statistical trends at this time. Sixty-six percent of the 2020 CVOC data (67 of 102 wells) show no trend or non-significant trends. Downward trends at the 90% confidence level for parent compounds (i.e., PCE and TCE) are noted in 31 well screens sampled

across the site in 2020 in the bedrock at Building 1, overburden and bedrock in the EPL and Tank F area, in the overburden in the downgradient wetland, in bedrock in Transect A and B and in overburden and bedrock in Transect C. Upward trends at the 90% confidence level of daughter products (e.g., cis-1,2-DCE, and VC) are noted in 41 well screens sampled in 2020 mainly in middle to lower bedrock and to a lesser extent in upper bedrock in Building 1, the EPL, and Transects A and B1/2, and also in overburden in the downgradient woods, wetland, and Transect C.

The Mann Kendall results indicate that twelve well screen/port locations have upward trends at the 90% confidence level for parent compounds (i.e., PCE and/or TCE). These include: AE-100R-4, AE-100R-6, AE-101R-1, AE-108R-3, AE-108R-5, AE-23R, AE-26R-5, AE-28R-1, AE-28R-4, EMW-11R1, EMW-11R-2, and GZA-105R. These wells are in areas of elevated CVOC concentrations and, therefore, fluctuations in concentrations are not unexpected.

The STM-8 well cluster is a key monitoring point since it is located at the furthest extent of the plume. The results from this well cluster are indicative of ongoing attenuation of parent compounds to daughter products at the tail end of the plume. At STM-8D, the concentration of cis-1,2-DCE over the last six sampling rounds in 2014-2019 has consistently been approximately one order of magnitude higher than PCE and TCE. In 2019, the PCE and the TCE concentrations were 1.3 µg/L each, whereas cis-1,2-DCE was 10 µg/L. In 2020, the concentration of cis-1,2-DCE decreased to 4.9 µg/L and the concentration of TCE decreased to non-detect (<1.0 µg/L). PCE was not detected at STM-8 wells in 2020; however, the 2020 PCE data was rejected as noted in Section 5.1. The concentration ratio of parent compounds to cis-1,2-DCE is consistently low, indicative of degradation.

5.7 MONITORED NATURAL ATTENUATION

This Post-temporary Solution monitoring period consists of active performance of a comprehensive monitored natural attenuation (MNA) groundwater sampling program for site management. Details for each COC are provided below.

5.7.1 Arsenic Monitored Natural Attenuation Performance

This section presents an evaluation of arsenic MNA performance.

5.7.1.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Arsenic

The presence of dissolved arsenic is considered to be a temporary deviation from the state of naturally-occurring conditions typical in this region. The presence of organic COC such as petroleum hydrocarbons and VOCs from the site has temporarily altered the natural redox conditions from aerobic to anaerobic, causing dissolution of naturally-occurring insoluble forms of arsenic in site soils/weathered rock to the dissolved state. Plume figures suggest that dissolved arsenic concentrations are related to localized conditions immediately downgradient from the former Tank Farm and former Tank K source areas and are not expansive in nature. It is anticipated that as the concentrations of organic COC decrease over time and the aquifer returns to its normal aerobic redox conditions, dissolved arsenic levels will decrease naturally. This appears to be the case based on the depictions of the limited arsenic plume, particularly downgradient where contaminant concentrations are lowest.

5.7.1.2 Changed Conditions Affecting Arsenic Monitored Natural Attenuation

There are no new data during this monitoring period that would indicate new environmental conditions or new releases of contaminants have occurred, which could reduce MNA efficiency for arsenic in groundwater.

5.7.1.3 Absence of Toxic Transformation Products of Arsenic

There are no toxic transformation products from natural attenuation of arsenic.

5.7.1.4 Verification that Arsenic Plume is not Expanding

As shown in Figures 5-1 through 5-4, the extent of the plumes is the same with concentrations on the same order of magnitude in each interval from 2016 to 2019. In addition, dissolved arsenic concentrations have decreased slightly in wells AE-03, AE-102M, and AE-105S.

5.7.1.5 Demonstration of Effective Institutional Controls

The institutional controls under the activity and use limitation (AUL) at the site remain effective in limiting potential exposure to arsenic in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the municipal wells near the site remain inactive and no drinking water wells exist within 0.5 miles of the site.

5.7.1.6 Verification of Attainment of Remedial Objective for Arsenic

The remedial objective for arsenic is reduction of arsenic concentrations in overburden and bedrock groundwater over time through MNA. Given the elevated concentrations of organic COC (petroleum hydrocarbons and VOCs) contributing to dissolved arsenic concentrations, the time frame for a general decrease in arsenic concentrations or a decrease to below applicable standards is on the order of decades. Based on groundwater data collected during this reporting period, the existing groundwater plume for dissolved arsenic is stable and not expanding. Therefore, the remedial objective for arsenic in groundwater is being met.

5.7.2 1,4-Dioxane Monitored Natural Attenuation Performance

This section presents an evaluation of 1,4-D MNA performance.

5.7.2.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for 1,4-Dioxane

It is understood that the presence of 1,4-D is related to the CVOC contamination as it was most likely a co-contaminant. The 1,4-D distribution appears consistent with the trends observed for the CVOCs during this sampling event (see Section 5.7.4). While the literature has identified the possibility of both metabolic (energy source) and co-metabolic (co-oxidation) degradation pathways of 1,4-D under certain conditions, these biological processes are unlikely to significantly affect the levels on-site in reaching the low-level regulatory criteria. A combination of these and physical attenuation processes would contribute to the long-term natural attenuation of 1,4-D.

5.7.2.2 Changed Conditions Affecting 1,4-Dioxane Monitored Natural Attenuation

There are no new data during this monitoring period that would indicate that new environmental conditions or new releases of contaminants have occurred, which could reduce MNA efficiency for 1,4-D in groundwater.

5.7.2.3 Absence of Toxic Transformation Products of 1,4-Dioxane

Although not considered a significant attenuation mechanism for 1,4-D at the site, current literature indicates that 1,4-D may biodegrade to various compounds such as ethylene glycol, glycolic acid, or oxalic acid (Rodriguez, 2016). These compounds are non-toxic and expected to biodegrade rapidly in the environment, and therefore, are not included in this monitoring program.

5.7.2.4 Verification that 1,4-Dioxane Plume is not Expanding

As shown in Figures 5-5 through 5-8, the extent of the 2016, 2017, 2018, 2019, and 2020 plumes is the same, with concentrations on the same order of magnitude in each of the four intervals. The plumes are therefore considered stable and not expanding.

5.7.2.5 Demonstration of Effective Institutional Controls

The institutional controls under the AUL at the site remain effective in limiting potential exposure to 1,4-D in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the municipal wells near the site remain inactive and no drinking water wells exist within 0.5 miles of the site.

5.7.2.6 Verification of Attainment of Remedial Objective for 1,4-Dioxane

Evaluation of 1,4-D is being addressed with continued sampling and analysis under the Post-temporary Solution OMM program. Recent monitoring data indicate increasing concentrations in some wells in middle and lower bedrock and to a lesser extent in overburden. This is likely related to fluctuations in CVOC concentrations, which along with 1,4-D concentrations are expected to fluctuate over time given the anticipated timeframe (decades or more) for MNA to reduce overall concentrations of CVOCs and 1,4-D. The groundwater remedial objective for 1,4-D will be attained through MNA as shown by long-term trend analysis. Based on groundwater data collected during this reporting period, there is evidence that the existing groundwater plume for 1,4-D is not expanding. Therefore, the remedial objective for 1,4-D in groundwater is being met.

5.7.3 Petroleum Hydrocarbons Monitored Natural Attenuation Performance

This section presents an evaluation of petroleum hydrocarbon MNA performance.

5.7.3.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for Petroleum Hydrocarbons

Relative to the LNAPL presence and distribution described in Section 4 above, the petroleum hydrocarbon plume has not changed significantly. While the LNAPL thickness has varied over the past decade and is only observed as sheen in wells CW-1 and CW-2, certain wells in the former Tank Farm/EPL area (AE-03, AE-04, GZA-105D, PZ-2S, and TRC-101) have shown recent fluctuations in both VPH and EPH fractions. This observation may be due to the continued

dissolution of LNAPL constituents into the aqueous phase, which would further decrease the LNAPL thickness and make the dissolved constituents more available to natural attenuation processes over time. Further evaluation of this process will be considered in future monitoring events.

5.7.3.2 Changed Conditions Affecting Petroleum Hydrocarbons

There are no new data during this monitoring period that would indicate that new environmental conditions or new releases of contaminants have occurred, which could reduce MNA efficiency for petroleum hydrocarbons in groundwater.

As detailed in Section 5.4, the 2020 groundwater data from the PIANO and SW8260 analytical methods confirm interferences from elevated CVOC concentrations, particularly in bedrock wells away from source areas onsite. Lockheed Martin plans to use this combination of methods further in 2021 to improve quantification of VPH compounds in groundwater by identifying and excluding CVOC interferences.

5.7.3.3 Absence of Toxic Transformation Products of Petroleum Hydrocarbons

Petroleum hydrocarbons typically degrade to less toxic forms as they undergo biological degradation in the environment. The most toxic petroleum hydrocarbons include PAHs and smaller aromatic compounds such as BTEX. Based on the 2020 analytical results, there have been some noted fluctuations in petroleum hydrocarbon concentrations but no significant increases in the amounts of PAHs or BTEX compounds.

5.7.3.4 Verification that Petroleum Hydrocarbons Plume is not Expanding

As shown in Figures 5-9 through 5-12, the 2016, 2017, 2018, 2019, and 2020 plumes of petroleum hydrocarbons in overburden and bedrock are nearly identical in shape in all four intervals from 2016 to 2020 with some minor reduction in size from 2017 to 2020. The plumes are therefore considered stable and not expanding.

5.7.3.5 Demonstration of Effective Institutional Controls

The institutional controls under the AUL at the site remain effective in limiting potential exposure to petroleum hydrocarbons in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the nearby municipal wells remain inactive and no drinking water wells exist within 0.5 miles of the site.

5.7.3.6 Verification of Attainment of Remedial Objective for Petroleum Hydrocarbons

The remedial objective for petroleum hydrocarbons is reduction of the concentrations in overburden and bedrock groundwater over time through MNA. Based on groundwater data collected during this reporting period, there is evidence of some biodegradation of petroleum hydrocarbons and the existing groundwater plume for petroleum hydrocarbons is stable and not expanding. Therefore, the remedial objective for petroleum hydrocarbons in groundwater is being met.

5.7.4 Chlorinated Volatile Organic Compounds Monitored Natural Attenuation Performance

This section presents an evaluation of CVOC MNA performance. A summary of the 2020 MNA parameters analyzed in groundwater is provided in Table 5-9.

5.7.4.1 Demonstration that Monitored Natural Attenuation is Occurring as Expected for CVOCs

A review of the 2020 CVOC and associated MNA data indicates that the site continues to be a complex and conflicting situation of locations where MNA is observed and other areas devoid of evidence of MNA. Some well locations show clear indications of MNA (both biological and abiotic), and other wells where select parameters suggest MNA but no clear predominance of data shows such convincing evidence. The main point that the plume shape and size has not increased or exhibited further migration is the overarching conclusion supporting attenuation.

Most wells monitored underneath Building 1 through Transects A, B, and C indicated strongly reducing conditions in the groundwater (dissolved oxygen [DO] levels below 1.0 milligrams per liter and oxidation-reduction potential values between +37 and -270 millivolts). These low redox conditions are also conducive to the reduction of CVOCs from reductive dechlorination processes (biological or abiotic), if other factors are also favorable. A possible exception to this is that the AE-103R bedrock well ports exhibited elevated and quite oxygenated DO readings. However, the Field Team Leader confirmed that the elevated DO measurements at AE-103R are likely due to the DO readings being recorded before achieving stable conditions; therefore, the DO measurements at AE-103R are not considered accurate. A summary of the 2020 geochemical parameters is provided in Table 2-1.

Based on data collected to date, limited reductive dechlorination of CVOCs appears to be occurring at certain locations of the site, in both the overburden and bedrock. Complete mineralization of CVOCs however is only evident in a few wells, based on the presence of ethene and ethane (such as in wells AE-103R-5 and EMW-11R-2). These products could be from either biological or abiotic reductive dechlorination. Methane is also present at increased levels in a few wells, indicating that redox conditions have progressed sufficiently for reductive dechlorination. Elevated sulfide levels were present in select wells indicating evidence of some sulfate reduction observed from the 2020 analytical data. The presence of some daughter products such as cis-1,2-DCE or VC, relative to their parent PCE and TCE concentrations, indicates biodegradation. While the aquifer has some capacity to support microbial degradation, it is not occurring over large areas, most likely due to the very limited microbial populations documented for the site and limited electron donors present. Generally speaking, biological attenuation does not appear to currently be playing a major role in CVOC reduction.

Abiotic degradation by reactive iron minerals may play a role in the natural transformation of certain CVOCs. Iron sulfides such as pyrite have been documented to react with PCE, TCE, and cis-1,2-DCE to cause a complete dechlorination transformation to acetylene and ethene without daughter products. Groundwater hydrogen levels indicate that sulfate reducing conditions could occur, and sulfate is observed at 10-50 milligrams per liter in the aquifer. Although hydrogen sulfide is only present in elevated levels in a few wells (notably AE-28R-2, AE-26R-1, AE-109R-5, and TRC-301R-4), sulfide may be sequestered by iron minerals in the soil and rock during the reduction process, generating the reactive minerals needed for abiotic transformation of CVOCs.

Acetylene is a signature product from the abiotic transformation process. Its presence may suggest that abiotic reductive dechlorination may play at least some role in transformation of CVOCs in specific areas of the site. The groundwater at all of these locations is reduced to some extent but noticeable concentrations of acetylene were not observed except in well AE-103R-5, likely due to an abiotic transformation process. Similarly, very low concentrations of ethane (0.57 to 6 µg/l) and ethene (1 to 10 µg/l) were observed. Although acetylene is short-lived in the environment, no appreciable demonstration of the abiotic dechlorination process is present in 2020 data.

Geochemical data (DO, manganese, iron, nitrate, sulfate, and methane) from the 2020 groundwater-sampling event for selected wells were plotted on radar plots shown on Figure 5-25.

Smaller sized colored hexagonal graph areas indicate more favorable conditions for reductive dechlorination biodegradation than larger hexagonal areas when comparing select well locations to background and other site wells. The figures for the wells evaluated indicate that wells AE-03 and AE-108R-1 show more favorable geochemical conditions than other wells evaluated.

Parent and daughter products related to the reductive dechlorination and/or abiotic transformation of chlorinated ethenes (PCE, TCE, cis-1,2-DCE, VC, ethene-ethane-acetylene, and chloride) observed during the 2020 groundwater-sampling event for selected wells were plotted on radar plots (Figure 5-26). Larger colored hexagonal areas indicate stronger evidence of biodegradation than smaller areas. The figures show that wells AE-108R-1, AE-106D, GZA-12, and AE-03 demonstrate that biodegradation and/or abiotic transformation processes are occurring to some extent in them, more than in other wells evaluated. As can be seen in Figures 5-21 through 5-24, there are a number of wells that contain concentrations of CVOCs below 100 µg/l. These not only include wells further downgradient in the plume, but also select wells in Transect A and the EPL. At these low concentrations, it is well known that reductive dechlorination may not continue, or stall at the cis-1,2-DCE by-product, without added electron donor (natural organic carbon, petroleum hydrocarbons, or remedial amendments) as the levels of the CVOCs are not significant enough to act as sufficient electron acceptors for the process.

Other natural attenuation processes affecting CVOCs at the former GE site are occurring in both the overburden and bedrock, as detailed in the Phase II Comprehensive Assessment (AECOM, 2017b). These include adsorption, volatilization, dispersion, and diffusion. Diffusion of CVOCs into rock matrix micro-fractures and micro-cracks is believed to be the predominant attenuation mechanism at the site for bedrock groundwater contamination. Diffusion modeling results discussed in the Phase II assessment show an 85% attenuation of PCE from Transect A to Transect B and are in general agreement with the mass flux calculations and groundwater monitoring data. Matrix diffusion assists in the retardation and storage of mass, with subsequent forward- and back-diffusion over specific periods of time.

In summary, based on the 2020 data, there is evidence of MNA occurring to a limited extent in select areas of the site to control the CVOC plume. The exact processes and their proportional contributions that are causing the attenuation are not clear. Biotic and abiotic degradation appear to occur in isolated areas and their contribution to attenuation of the CVOC plume is believed to be

much less than that of diffusion. The conceptual model shows that diffusion of CVOCs into the rock matrix micro-fractures and micro-cracks is believed to be the predominant attenuation mechanism at the site for bedrock groundwater contamination.

5.7.4.2 Changed Conditions Affecting CVOC Monitored Natural Attenuation

There are no new data during this monitoring period that would indicate new environmental conditions or new releases of contaminants have occurred, which could reduce MNA efficiency for CVOCs in groundwater.

5.7.4.3 Absence of Toxic Transformation Products of CVOCs

Although elevated VC concentrations in a few wells could be toxic (if ingested), they could be considered indicators of reductive dechlorination where it aligns with elevated parent concentrations. As discussed in Section 2.5, the groundwater at the site is not used for drinking water purposes.

Analytical data from many wells exhibit mixed behavior (upward and downward trends) and the fluctuations are likely the result of different influences, such as changes in water levels and high concentrations near source areas. Elevated concentrations of VC were observed in well AE-28R-1 (located in Building 1-Tank F area) and well AE-101R-6 (located in Transect A) for the 2020 sampling round. VC is the least susceptible to reductive dechlorination because it is the least oxidized of these compounds. Therefore, the rate of reductive dechlorination decreases as the degree of chlorination decreases. Additionally, the anaerobic reduction of VC to ethene is slow and inefficient under weak reducing conditions (that are present at both locations), which favors the persistence of VC in PCE and TCE plumes that are undergoing reductive dechlorination. However, as the vinyl chloride moves out of the anaerobic zone with ambient groundwater flow into more aerobic zones, the concentrations of vinyl chloride are expected to decrease since vinyl chloride is known to degrade under aerobic conditions.

5.7.4.4 Verification that CVOC Plume is not Expanding

Groundwater contamination has been documented at the site since the 1980s. Although groundwater monitoring wells have been sampled at this site for over 30 years, the number of monitoring wells over the entire MCP site has increased significantly over time, particularly between 2012 and 2016. For this reason, the volume of data available for any point in time in the past is not consistent with

the volume of data available currently, though the number of wells has not changed since 2016. This situation makes an analysis of changes over time difficult to interpret relative to historical data.

For the 2020 analytical data, occasional PCE and TCE and cis-1,2-DCE concentrations have increased in a few select wells. However, PCE and TCE have generally decreased in a large number of wells. Localized increases in concentrations noted in 2020 are primarily in wells at the presumptive source area underneath Building 1, where potential residual DNAPL may be present. Of the wells evaluated for trend statistics (Table 5-8), there are 59 individual cases in which wells (or well screens/ports) show decreasing trends in PCE, TCE, cis-1,2-DCE, or VC which would be an indication of improving conditions. There are another 26 cases in which cis-1,2-DCE trends appear to be increasing. It is believed that these well ports are exhibiting increased daughter product generation based on downward trends and reduction of PCE and TCE concentrations. Similarly, eight cases of increasing trends of VC were documented, which are likely due to some degradation of cis-1,2-DCE. A number of additional well port cases evaluated also exhibited stable trends.

Most of the trend graphs presented in Appendix G show that the visual trend of the groundwater CVOC concentrations are either stable or decreasing over time. This is believed to be the result of ongoing natural attenuation of the plume described above.

As shown in Figures 5-13 through 5-24, the extent of the 2016, 2017, 2018, and 2019 PCE, TCE, and total CVOC plumes are similar in each of the four depth intervals. The concentrations are generally on the same order of magnitude with fluctuations discussed herein. The plumes are therefore considered stable and not expanding.

Three-dimensional volumetric calculations of the total CVOC groundwater data were made using the Environmental Visualization System model to create a plume volume used to estimate the plume mass for five separate dates in 2016, 2017, 2018, 2019, and 2020. This is presented in Figure 5-27. The results of this calculation indicate that the plume mass was approximately 150 kilograms (kg) in 2016, 137 kg in 2017, 162 kg in 2018, 173 kg in 2019, and 160 kg in 2020.

The decrease in contaminant mass in 2020, which also corresponds to an upgradient movement of the center of plume mass, is consistent with historical data showing that the center of the mass is closer to the source area. These circumstances indicate that the plume is stable or shrinking while undergoing natural attenuation.

Although increased PCE and TCE concentrations have been observed in suspected source areas, which could be due to seasonal and localized changes in groundwater levels, this phenomenon is not unexpected within source areas that have shown historical fluctuations over time. The primary evidence for demonstration of MNA occurring at the site includes a continuing shift of parent to daughter product contaminant concentrations over time (Mann Kendall statistics) in conjunction with a stable groundwater plume. The data presented in this report show that, over time, the extent of the CVOC plume emanating from the former GE facility is stable and the mass of the plume is slowly shrinking.

5.7.4.5 Demonstration of Effective Institutional Controls

The institutional controls under the AUL at the site remain effective in limiting potential exposure to CVOCs in groundwater. Although there are no institutional controls regarding the restriction of groundwater as a drinking water source at the site, the Stickney Well remains inactive and no drinking water wells exist within one half mile of the site.

5.7.4.6 Verification of Attainment of Remedial Objective for CVOCs

The remedial objective for CVOCs is reduction of CVOC concentrations in overburden and bedrock groundwater over time through MNA. Given the elevated concentrations of CVOCs at the site, including mass within bedrock fractures and micro-fractures, the time frame for reduction in overall CVOC concentrations is on the order of decades. Based on groundwater data collected during this reporting period, the existing groundwater plumes for dissolved CVOC are stable and not expanding. Therefore, the remedial objective for CVOCs in groundwater is being met.

SECTION 6
INDOOR AIR SAMPLING RESULTS

Table 6-1 presents a summary of the historical laboratory analytical results for each of the air sample locations within Building 1. A copy of the Alpha Analytical Laboratory data package from the January 2021 sampling event is included as Appendix H. Results from the January 2021 air sampling event are summarized below.

6.1 QUALITY ASSURANCE AND QUALITY CONTROL

The quality of the analytical data from the January 26, 2021 sampling event is acceptable for decision-making purposes based on the data validation results. All sampling canisters were batch-certified by the laboratory prior to sampling. There was good precision in the data based on the close agreement of the parent and duplicate samples from IA-8, as observed in Table 6-1. The volatile organic compound (VOC) data were validated and are discussed in detail in the data validation summary memorandum included in Appendix H. Data were evaluated and all were accepted with select qualifications as noted in the data validation memorandum. All results complied with the applicable Massachusetts Department of Environmental Protection (MassDEP) Compendium of Analytical Methods performance standards listed in Policy WSC-02-320 (MassDEP, 2010).

6.2 INDOOR AIR ANALYTICAL RESULTS

The ambient air analytical sample results obtained outside of Building 1 detected several VOC compounds at low concentrations; however, none were above the MassDEP Commercial/Industrial (C/I) Threshold Values (*Vapor Intrusion Guidance WSC#16-435,* October 14, 2016).

The indoor air analytical sample results from Building 1 detected several solvent and petroleum-related VOCs at low concentrations. The detected compounds in Building 1 are consistent with compounds observed in previous indoor air sampling events from 2009 to 2020. The detected concentrations of these compounds in January 2021 are consistent for each sampling

location and are also consistent with concentrations detected in past indoor air sampling events with the changes noted below.

In January 2021, increased concentrations of acetone, styrene, and naphthalene, as well as benzene, toluene, ethylbenzene, and xylenes (BTEX) are present at sample locations in Building 1. The 2021 detected concentrations of these compounds are higher at the high bay sample locations than in sample locations in the southwest corner room and on the second floor. Each of these compounds were detected in sub-slab vapor samples collected beneath Building 1 between 2009-2013 at concentrations similar to or higher than detected in indoor air in Building 1. The BTEX compounds along with naphthalene and styrene are present in gasoline and/or exhaust from gasoline combustion engines such as the trucks in the high bay. Given that these compounds have historically been detected in Building 1 and were not increasing between 2009-2020, the sub-slab vapors are not considered to be the source of the increases in 2021 indoor air concentrations. Also, detected concentrations of other compounds such as chlorofluorocarbon halomethane, 1,1,2-trichloro-1,2,2-trifluoroethane, tetrachloroethene, and trichloroethene, historically present in sub-slab vapor, did not increase in indoor air in 2021. This, along with the timing of the increased concentrations in 2021 aligning with UPS starting full time operations in fall 2020, indicate that the source of the increased concentrations in indoor air is the gasoline contained in, and the exhaust from, the approximately 30 to 40 trucks that drive in and out of Building 1 daily and park within Building 1 each night during operations (Monday through Saturday).

The concentrations detected in indoor air at locations within Building 1 were compared to the MassDEP C/I Threshold Values, as shown in Table 6-1. All concentrations in Building 1 were below the current C/I Threshold Values and therefore, do not pose a risk to facility workers.

SECTION 7
DEMONSTRATION OF EFFECTIVE INSTITUTIONAL CONTROLS

The Temporary Solution for the site includes the implementation of an activity and use limitation (AUL) to eliminate potential human health risks. A copy of the AUL is included in Appendix E.

On July 13, 2015, Wilmington Realty Trust (WRT) placed an AUL on the portion of the site owned by WRT, encompassing Buildings 1, 1A, and 2 and the Eastern Parking Lot. This AUL was established to prevent uses of the property that would be inconsistent with maintaining a condition of No Substantial Hazard under the Massachusetts Contingency Plan (MCP). These prohibited uses include the following:

- Residential, school, playground, park, or daycare use
- Activities that would result in exposure to or the disturbance of potentially contaminated soils, bedrock, groundwater, and indoor air, unless appropriate precautions to prevent human exposure are taken, as described in the AUL

In addition, the AUL imposes certain obligations and conditions to maintain a condition of No Substantial Hazard, including maintenance of concrete floors, management of any excavated soil and/or bedrock under Soil Management Procedures set forth in 310 Code of Massachusetts Regulation (CMR) 40.0030, and appropriate management of any groundwater removed during dewatering activities. Lastly, any activities which could result in exposure to, or disturbance of soil, bedrock, or groundwater must be conducted in accordance with some or all of the following, as determined by a Licensed Site Professional:

- the performance standards for Release Abatement Measures set forth by the MCP at 310 CMR 40.0440 (Massachusetts Department of Environmental Protection [MassDEP], 2014)
- the soil management procedures pursuant to 310 CMR 40.0030, the Similar Soils Provisions Guidance (WSC# 13-500; MassDEP, 2014)
- Construction of Buildings in Contaminated Areas (Policy WSC# 00 425; MassDEP, 2000a)

- applicable health and safety procedures outlined in 310 CMR 40.0018

The objectives of the AUL are being met and the institutional controls in place at the site are effectively maintaining a condition of No Substantial Hazard.

SECTION 8
CONDITIONS OR PROBLEMS AFFECTING THE REMEDIAL ACTION

No conditions or problems were identified during this reporting period that may have the potential to affect the remedial action.

SECTION 9
MODIFICATIONS TO THE MONITORING PROGRAM

No modifications to the monitoring program occurred during this monitoring period. The wells and analytes monitored were as detailed in the updated Operations, Maintenance, and/or Monitoring Program groundwater monitoring plan submitted to the Massachusetts Department of Environmental Protection in September 2018, with one exception: analysis of sulfide was accidentally omitted at monitoring well AE-106R-3 due to a miscommunication with the laboratory.

SECTION 10
FUTURE MONITORING

The Post-temporary Solution Operations, Maintenance, and/or Monitoring Plan will continue to be implemented according to the schedule presented in Table 10-1, which includes activities described below to be completed up to the submittal of the first five-year review of the Temporary Solution.

- Annual indoor air monitoring of pertinent on-site buildings will continue to be conducted during the heating season (typically in January or February) until the first five-year review in May 2022. During this event, indoor air samples will be collected from approximately 7 to 10 locations in Building 1/1A. Samples will be collected following procedures contained in the Massachusetts Department of Environmental Protection (MassDEP) Vapor Intrusion Guidance Policy #WSC-16-435 dated October 14, 2016 (MassDEP, 2016c). One ambient air sample will be collected during each annual event. Samples will be analyzed for volatile organic compounds via method TO-15 selective ion monitoring including 1,1,2-trichloro-1,2,2-trifluoroethane. Meteorological data will be obtained from a weather station within a few miles of the site. The next indoor air-sampling event is scheduled to take place in January or February 2022.

- Quarterly light non-aqueous phase liquid (LNAPL) gauging of seven monitoring wells (i.e., AE-03, AE-04, CW-1, CW-2, GZA-102S, PZ-2S, and TRC-101) located in the western portion of the eastern parking lot will be conducted to monitor the presence/absence of LNAPL in this area. If LNAPL thickness of greater than 0.1 ft is detected in a well, an absorbent sock will be deployed to absorb the LNAPL for subsequent disposal. Gauging events will be conducted in March, June, September, and December, annually, with the December and March results presented in May, and the June and September results presented in November. The next quarterly LNAPL-gauging event is scheduled to take place in June 2021. The remedial alternative selected for LNAPL is monitored natural attenuation (MNA). To monitor the progress of LNAPL behavior more specifically, the dissolved phase petroleum hydrocarbon "halo" surrounding the LNAPL pool will be evaluated over time. This evaluation will provide a leading indicator of the potential dissolution of LNAPL and subsequent natural degradation of the associated dissolved phase plume.

- Annual groundwater sampling of select monitoring wells for analysis of site chemicals of concern (i.e., chlorinated volatile organic compounds, 1,4-dioxane, petroleum hydrocarbons, and arsenic) and relevant MNA parameters in overburden and bedrock groundwater will be conducted. Each groundwater-sampling event will include a site-wide water level measurement round. The next annual groundwater-sampling event will occur in September-October 2021. The scope of the annual groundwater monitoring will be expanded in 2021 to be similar to the scope of the monitoring event conducted in fall of 2016 and 2017

while maintaining some of the revisions and updates incorporated in 2018-2020. The 2021 groundwater sampling plan is detailed in Table 10-2.

- As noted in Section 5.4.1 and Table 10-2, Lockheed Martin plans to analyze volatile petroleum hydrocarbon samples from additional site wells with the PIANO method in 2021 to further confirm interference from chlorinated volatile organic compounds and to support a reduction in monitoring for petroleum compounds in bedrock wells away from the source areas onsite.

- Post-temporary Solution Status and Remedial Monitoring Reports will continue to be submitted semiannually. The next semiannual report is due to the MassDEP in November 2021.

- Periodic reviews of site conditions will be conducted every five years to evaluate new technologies and their potential to achieve a Permanent Solution. The next five-year review of the Temporary Solution is due to the MassDEP in May 2022.

SECTION 11
LICENSED SITE PROFESSIONAL OPINION AND CONCLUSIONS

Comprehensive Response Actions at the site are limited to active remedial monitoring that includes monitored natural attenuation under Temporary Solution status. It is the opinion of AECOM Technical Services, Inc. that the Remedial Action Performance Standards are being accomplished as outlined in 310 Code of Massachusetts Regulation 40.0897, and as presented in the Temporary Solution Statement submitted to the Massachusetts Department of Environmental Protection by AECOM Technical Services, Inc. in May 2017. Based upon indoor air data collected to date, a critical exposure pathway or imminent hazard does not exist within Buildings 1 and 1A. Based upon light non-aqueous phase liquid gauging data collected during this reporting period, the existing light non-aqueous phase liquid has micro-scale mobility (can flow into a well); however, the light non-aqueous phase liquid is stable and not expanding. Based on groundwater data collected during this reporting period, the existing groundwater plumes for chlorinated volatile organic compounds, petroleum, and dissolved arsenic are stable and not expanding.

The seal and signature of the Licensed Site Professional who reviewed this Post-temporary Solution Status Report No. 4 are contained on the applicable Massachusetts Department of Environment Bureau of Waste Site Cleanup transmittal forms (BWSC-108) submitted via eDEP.

SECTION 12
PUBLIC NOTIFICATION

The former General Electric facility is part of a joint Public Involvement Plan (PIP) with other Potentially Responsible Parties that was prepared in 2000 by the Massachusetts Department of Environmental Protection. As a PIP site, the former General Electric facility must meet additional regulatory requirements above the minimum requirements of the Massachusetts Contingency Plan.

During the Post-temporary Solution period, Post-temporary Solution Status Reports are required by the Massachusetts Contingency Plan (MCP) to be submitted every six months to the Massachusetts Department of Environmental Protection (MassDEP). In accordance with the November 17, 2000 PIP (MassDEP, 2000b), these Status Reports are also required to be provided to the designated information repository established in the PIP (Flint Memorial Library, Town of North Reading). All members of the PIP mailing list, including the Chief Municipal Officer and Board of Health agents for the towns of Reading, North Reading, and Wilmington, have been notified of the availability of this report by mail. A copy of the letter sent to the PIP mailing list concerning the availability of documents in the repository, as required under the PIP (MassDEP, 2000b), was included in the initial Post-temporary Solution Status Report submitted to the MassDEP in November 2017. The 2017 PIP notice informed the mailing list of the availability of semiannual Post-temporary Solution Status Reports from November 2017 through May 2021.

Prior to groundwater sampling activities completed during this reporting period and after receipt of associated laboratory analytical results, AECOM Technical Services, Inc. (AECOM) submitted notifications using MassDEP Form BWSC-123 to the property owners listed below:

- Wilmington Realty Trust – 40-50 Fordham Road in Wilmington and North Reading
- Howland Development – 87 Concord Street in North Reading
- International Family Church – 99 Concord Street in Wilmington and North Reading
- Ed & Gail Melanson – 0 Furbish Pond Lane in North Reading
- North Reading Town Water – Wells along Concord Street in North Reading

- Wilmington Masonry – 62 Concord Street in North Reading
- YRC Freight – 95 Concord Street in North Reading

In addition, AECOM obtained verbal permission from the resident at 3 Furbish Pond Lane in North Reading to measure the depth to water in their private irrigation well, and subsequently provided the resident the groundwater elevation information.

Appendix I includes copies of the Bureau of Waste Site Cleanup forms and related notifications sent to property owners documenting the prior notification of the sampling event and the presentation of the analytical results resulting from that sampling event, as required by the MCP.

Notes:

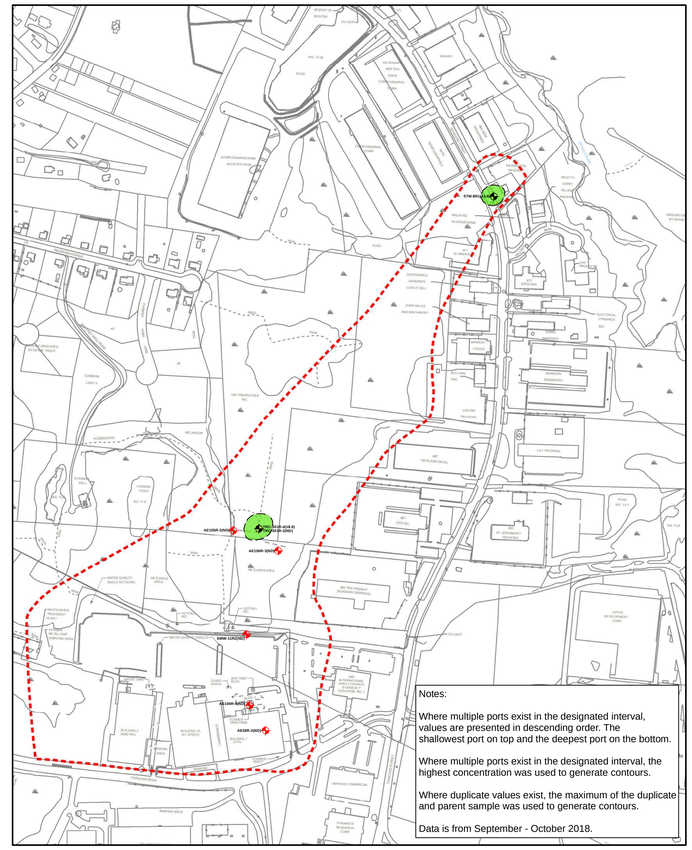
Where multiple ports exist in the designated interval, values are presented in decending order. The shallowest port on top and the deepest port on the bottom.

Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Data from June 2016.

2016 Dissolved Arsenic in Groundwater
Middle Bedrock (61 - 120 ft bgs)

Notes:



Where multiple ports exist in the designated interval, values are presented in decending order. The shallowest port on top and the deepest port on the bottom.

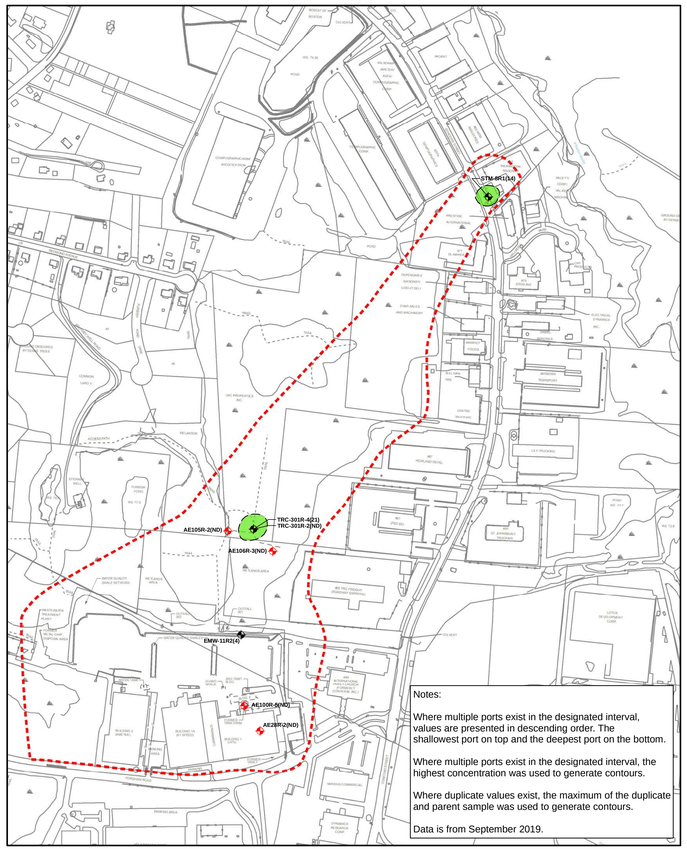
Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from October 2017.

2017 Dissolved Arsenic in Groundwater
Middle Bedrock (61 - 120 ft bgs)

Notes:



Where multiple ports exist in the designated interval, values are presented in descending order. The shallowest port on top and the deepest port on the bottom.

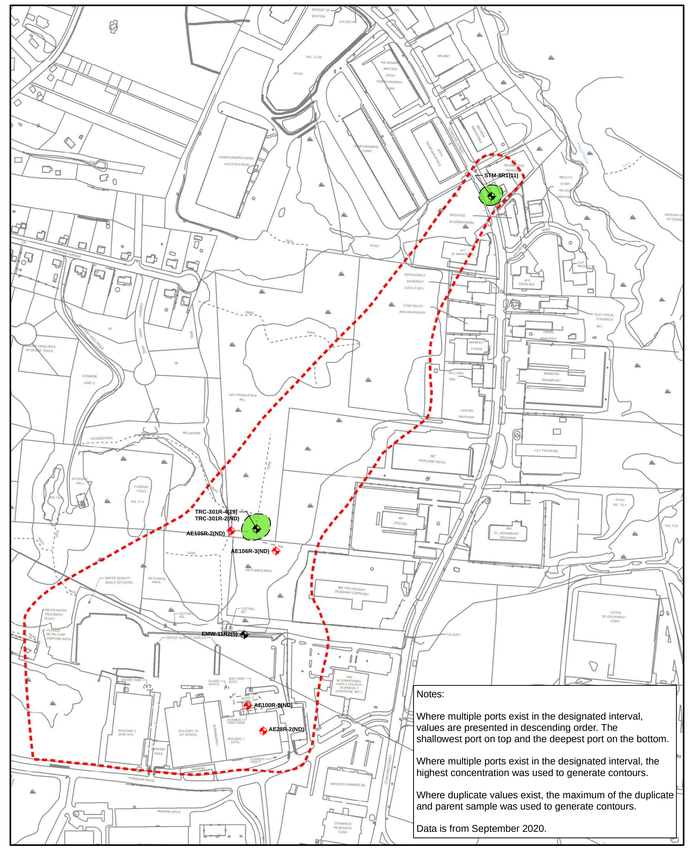
Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from September - October 2018.

2018 Dissolved Arsenic in Groundwater
Middle Bedrock (61 - 120 ft bgs)

Notes:



Where multiple ports exist in the designated interval, values are presented in descending order. The shallowest port on top and the deepest port on the bottom.

Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from September 2019.

2019 Dissolved Arsenic in Groundwater
Middle Bedrock (61 - 120 ft bgs)

Notes:

Where multiple ports exist in the designated interval, values are presented in descending order. The shallowest port on top and the deepest port on the bottom.

Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from September 2020.

Data is from September 2020.

2020 TCE in Groundwater
Upper Bedrock (0 - 60 ft bgs)

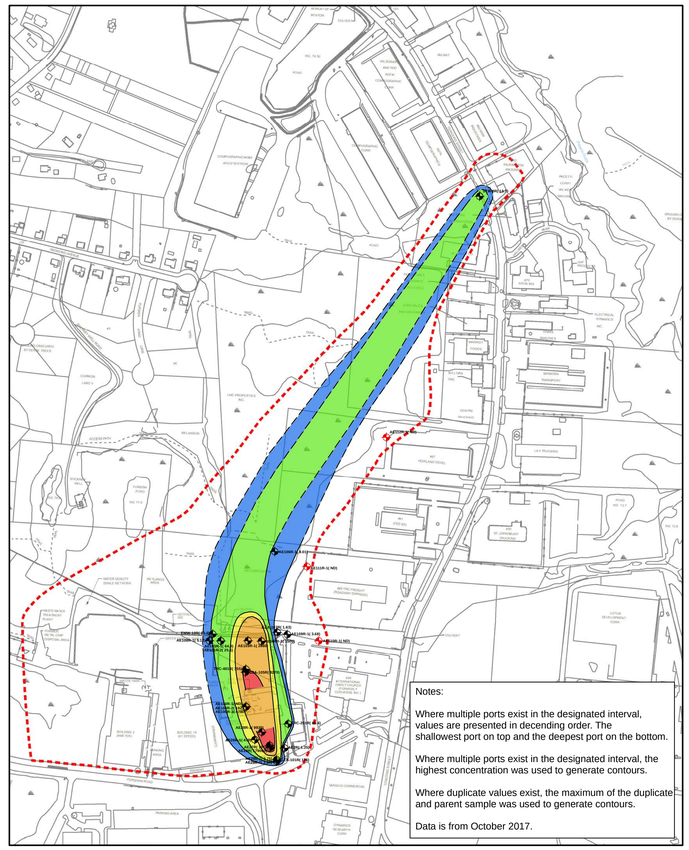
Notes:



Where multiple ports exist in the designated interval, values are presented in decending order. The shallowest port on top and the deepest port on the bottom.

Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from October 2017.

2017 TCE in Groundwater
Upper Bedrock (0 - 60 ft bgs)

Notes:

Where multiple ports exist in the designated interval, values are presented in decending order. The shallowest port on top and the deepest port on the bottom.

Where multiple ports exist in the designated interval, the highest concentration was used to generate contours.

Where duplicate values exist, the maximum of the duplicate and parent sample was used to generate contours.

Data is from September - October 2018.

Notes:
Summary presents the final stabilized reading at each well just prior to sampling.
C - Celsius
mV - millivolts
uS/cm - microsiemens per centimeter
NTU - nephelometric turbidity units
mg/l - milligrams per liter
NM - not measured - well purged dry with only sufficient recharge to fill sample bottles.
1. Readings taken before achieving stable conditions; therefore, the DO readings at AE-103R are not considered accurate.

Notes:

LNAPL gauging results above from 1994 through 2011 collected by TRC or others. Data collection by AECOM started in 2012.
Bgs – Below ground surface.
NA – Not Applicable.
NM – Not Measured.
* LNAPL gauging at monitoring well PZ-2S was conducted on a semi-annual basis from April 1994 through May 2000. TRC then increased gauging frequency to monthly. MA DEP then requested that monthly LNAPL gauging continue at PZ-2S, CW-1, and CW-2 as part of the requirements of the Phase V O&M program, beginning December 2000.

(1) Not documented by Emcon.
(2) No recoverable LNAPL present.
(3) Well not installed.
(4) Water level meter may have been unreliable due to low temperature.
(5) Four-inch diameter well installed on November 30, 2000 to replace existing PZ-2S 0.5-inch diameter well.
(6) Noted a sheen on water surface.
(7) Product was detected with interface probe but not a measurable amount (product thickness < 0.01 ft)
(8) It is not understood why in November and December of 2011 that 3 gallons were indicated as removed from wells PZ-2S and TRC-101R when no LNAPL was detected. These 3 gallons are not included in approximate total LNAPL volume removed from these wells.

Notes:

LNAPL gauging results above from 1994 through 2011 collected by TRC or others. Data collection by AECOM started in 2012.
Bgs – Below ground surface.
NA – Not Applicable.
NM – Not Measured.
* LNAPL gauging at monitoring well PZ-2S was conducted on a semi-annual basis from April 1994 through May 2000. TRC then increased gauging frequency to monthly. MA DEP then requested that monthly LNAPL gauging continue at PZ-2S, CW-1, and CW-2 as part of the requirements of the Phase V O&M program, beginning December 2000.

(1) Not documented by Emcon.
(2) No recoverable LNAPL present.
(3) Well not installed.
(4) Water level meter may have been unreliable due to low temperature.
(5) Four-inch diameter well installed on November 30, 2000 to replace existing PZ-2S 0.5-inch diameter well.
(6) Noted a sheen on water surface.
(7) Product was detected with interface probe but not a measurable amount (product thickness < 0.01 ft)
(8) It is not understood why in November and December of 2011 that 3 gallons were indicated as removed from wells PZ-2S and TRC-101R when no LNAPL was detected. These 3 gallons are not included in approximate total LNAPL volume removed from these wells.

Notes:

LNAPL gauging results above from 1994 through 2011 collected by TRC or others. Data collection by AECOM started in 2012.
Bgs – Below ground surface.
NA – Not Applicable.
NM – Not Measured.
* LNAPL gauging at monitoring well PZ-2S was conducted on a semi-annual basis from April 1994 through May 2000. TRC then increased gauging frequency to monthly. MA DEP then requested that monthly LNAPL gauging continue at PZ-2S, CW-1, and CW-2 as part of the requirements of the Phase V O&M program, beginning December 2000.

(1) Not documented by Emcon.
(2) No recoverable LNAPL present.
(3) Well not installed.
(4) Water level meter may have been unreliable due to low temperature.
(5) Four-inch diameter well installed on November 30, 2000 to replace existing PZ-2S 0.5-inch diameter well.
(6) Noted a sheen on water surface.
(7) Product was detected with interface probe but not a measurable amount (product thickness < 0.01 ft)
(8) It is not understood why in November and December of 2011 that 3 gallons were indicated as removed from wells PZ-2S and TRC-101R when no LNAPL was detected. These 3 gallons are not included in approximate total LNAPL volume removed from these wells.

Notes:
LNAPL gauging results above from 1994 through 2011 collected by TRC or others. Data collection by AECOM started in 2012.
Bgs – Below ground surface.
NA – Not Applicable.
NM – Not Measured.
NR – Not Recorded.
* LNAPL gauging at monitoring well PZ-2S was conducted on a semi-annual basis from April 1994 through May 2000. TRC then increased gauging frequency to monthly. MA DEP then requested that monthly LNAPL gauging continue at PZ-2S, CW-1, and CW-2 as part of the requirements of the Phase V O&M program, beginning December 2000.

(1) Not documented by Emcon.
(2) No recoverable LNAPL present.
(3) Well not installed.
(4) Water level meter may have been unreliable due to low temperature.
(5) Four-inch diameter well installed on November 30, 2000 to replace existing PZ-2S 0.5-inch diameter well.
(6) Noted a sheen on water surface.
(7) Product was detected with interface probe but not a measurable amount (product thickness < 0.01 ft)
(8) It is not understood why in November and December of 2011 that 3 gallons were indicated as removed from wells PZ-2S and TRC-101R when no LNAPL was detected. These 3 gallons are not included in approximate total LNAPL volume removed from these wells.
(9) Well not measured, or data has not been located in historical TRC reports.

TRC-301R-4	Arsenic (Diss)	6	6	-6	-6	7	Not Significant	9	Not Significant

Notes:
Datasets presented for wells that were included in the sampling program in September 2020
Field duplicates assigned the maximum value for the purposes of the trend test
The detection limit was used for non-detect concentrations for the purposes of the trend test.
Trend test results were interpreted using a confidence level of 80% and 90%. If the absolute value of the statistic is equal to or greater than the critical value, a significant trend is concluded. The direction of the trend is determined by the sign of the statistic with positive statistics indicating an upward trend and negative statistics indicating a downward trend.
* When sample size > 10, the normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners, EPA QA/G-9S. When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made

Notes:
Datasets presented for wells that were included in the sampling program in September 2020.
Field duplicates assigned the maximum value for the purposes of the trend test.
The detection limit was used for non-detect concentrations for the purposes of the trend test.
Trend test results were interpreted using a confidence level of 80% and 90%. If the absolute value of the statistic is equal to or greater than the critical value, a significan
concluded. The direction of the trend is determined by the sign of the statistic with positive statistics indicating an upward trend and negative statistics indicating a downv
* When sample size > 10, the normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners, EPA QA/G-9S.
used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made.

Xylenes (Total)	10000	3000	5000	NE	4.00 U	4.00 U	4.00 U	4.00 U	4.00 U	4.00 U	

Notes:

1) Bolded results represent detections

2) Yellow highlighted results exceed GW standard(s)

3) U = Non-detect at laboratory detection limit

4) UJ = Non-detect at laboratory detection limit. Detection limit is estimated.

5) J = Estimated Value (J- biased low and J+ biased high)

6) NE = Not Established

7) Sample Type N = normal sample; FD = field duplicate

8) R = Rejected based on data validation results

9) GW standards listed for mp-xylenes and o-xylenes are for Total Xylenes

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R = rejected

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Downgradient Wetland													
				Location ID:	MW-7	MW-7	PS-1D	PS-1D	PS-1D	PS-1D	PS-1D	PS-1S	PS-1S	PS-1S	PS-1S	PS-1S	PS-2D	PS-2D	PS-2D

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Building 1_TankF (continued)								EPL

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	EPL (continued)

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	EPL (continued)

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Tank Farm (continued)

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Transect A (continued)														
				Location ID:	AE109R2	AE109R2	AE109R3	AE109R3	AE109R3	AE109R3	AE109R3	AE109R4	AE109R4	AE109R4	AE109R4	AE109R4	AE109R5	AE109R5	AE109R5

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Transect A (continued)													
				Location ID:	AE109R-5	AE109R-5	AE109R-6	AE109R-6	AE109R-6	AE109R-6	AE109R-6	AE109R-7	AE109R-7	AE109R-7	AE109R-7	AE109R-7	AE109R-7	AE109R-8

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Transect A (continued)														
				Location ID:	AE109R-8	AE109R-8	AE109R-8	AE109R-8	AE110R-1	AE110R-1	AE110R-1	AE110R-1	AE110R-1	AE110R-2	AE110R-2	AE110R-2	AE110R-2	AE110R-2	AE110R-4

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Transect B (continued)

Notes:
ft = feet
mg/l = miligrams per liter
µg/l = micrograms per liter
NE = not established

U - Non-detect at laboratory detection limit
J = Estimated Value, J+ = biased high, J- = biased low, R
Detects are bolded
Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Notes:

ft = feet — U - Non-detect at laboratory detection limit

mg/l = miligrams per liter — J = Estimated Value, J+ = biased high, J- = biased low, R

µg/l = micrograms per liter — **Detects are bolded**

NE = not established — Criteria exceedances are highlighted

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

				Location Group:	Transect B-1/2 (continued)		Transect C											
				Location ID:	AE112R-6	AE112R-6	STM-3D	STM-3D	STM-3D	STM-3D	STM-3D	STM-8D	STM-8D	STM-8D	STM-8D	STM-8D	STM-8R	STM-8R	STM-8R
				Sample ID:	9A-AE112R6-091319-	0A-AE112R6-091120-	16A-STM3D-062716-1	17A-STM3D-101317-1	18A-STM3D-092818-1	19A-STM3D-092619-1	20A-STM3D-092420-1	16A-STM8D-063016-1	17A-STM8D-101117-1	18A-STM8D-092818-1	19A-STM8D-092619-1	20A-STM8D-092320-1	16A-STM8R-063016-1	17A-STM8R-101117-1	18A-STM8R-092818-1

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Table 5-7
Summary of 2016 - 2020 Groundwater Analytical Results for Volatile Organic Compounds
Former GE Facility, 50 Fordham Road, Wilmington, MA

					Location Group:	Transect C (continued)								Upgradient				
					Location ID:	STM-8R	STM-8R	STM-8R1	STM-8R1	STM-8R1	STM-8R1	STM-8R1	STM-8R1	GZA-12	GZA-12	GZA-12	GZA-12	GZA-12

Notes:

ft = feet

mg/l = miligrams per liter

µg/l = micrograms per liter

NE = not established

U - Non-detect at laboratory detection limit

J = Estimated Value, J+ = biased high, J- = biased low, R

Detects are bolded

Criteria exceedances are highlighted

Notes:
Datasets presented for wells that were included in the sampling program in September 2020.
Field duplicates assigned the maximum value for the purposes of the trend test.
The detection limit was used for non-detect concentrations for the purposes of the trend test.
Trend test results were interpreted using a confidence level of 80% and 90%. If the absolute value of the statistic is equal to or greater than the critical value, a significant trend concluded. The direction of the trend is determined by the sign of the statistic with positive statistics indicating an upward trend and negative statistics indicating a downward tre
* When sample size > 10, the normal approximation is used and calculated per box 4-9 in Data Quality Assessment: Statistical Methods for Practitioners, EPA QA/G-9S.
When the normal approximation is used, the critical value is the standard normal distribution.
When S is 0, no critical value is calculated and a conclusion of no trend is made.

Low Flow Ground Water Sample Collection Record

Client: Lockheed Martin Corp. Date: 9/18/2020 Time: Start 1000 ~~am/pm~~
Project No: 60552044 Finish _____ am/pm
Site Location: 50 Fordham Rd Site, Wilmington, MA
Weather Conds: _____ Collector(s): S. Haggett, D. Potter

1. WELL & WATER LEVEL DATA: (measured in feet from Top of Casing unless noted)

a. Total Well Length 48' c. Screen Length 10 (38' - 48') 1.5" PVC Casing
b. Water Table Depth 2.28 d. Pump Intake 43'
c. Water Column (a-b) 45.72' e. Calculated System Purge Volume 2.16 L (calculation on page 2)

2. WELL PURGE DATA

a. Purge Method: peristaltic pump

b. Acceptance Criteria defined (see workplan)

- Temperature	3%	- D.O.	< 0.5 mg/L	-Drawdown	<0.3 ft
- pH	± 1.0 unit		>0.5 mg/L within 10%	-Turbidity	<10 NTU
- Sp. Cond.	3%	- ORP	± 10mV		>10NTU within 10%

c. Field Testing Equipment used:

Make	Model	Serial Number

		1			

Comments: Peristaltic pump had issues with reverse setting actually being in forward, caused the pump car into well, increasing DO. Final D.O. was different from last year, but accurate for PS-1S. results are accurate.

Low Flow Ground Water Sample Collection Record

Client: Lockheed Martin Corp. Date: 9/23/20 Time: Start 1010 am/pm
Project No: 60552044 Finish 1040 am/pm
Site Location: 50 Fordham Rd Site, Wilmington, MA
Weather Conds: 70's Sunny Collector(s): Floyd Burton

1. WELL & WATER LEVEL DATA: (measured in feet from Top of Casing unless noted)

a. Total Well Length 39.7' c. Screen Length 5 (34.7' - 39.7') 1" PVC Casing
b. Water Table Depth 6.41 d. Pump Intake 37.2'
c. Water Column (a-b) 33.29 e. Calculated System Purge Volume 1.99 L (calculation on page 2)

2. WELL PURGE DATA

a. Purge Method: peristaltic pump

b. Acceptance Criteria defined (see workplan)

- Temperature	3%	- D.O.	< 0.5 mg/L	-Drawdown	<0.3 ft
- pH	±1.0 unit		>0.5 mg/L within 10%	-Turbidity	<10 NTU
- Sp. Cond.	3%	- ORP	± 10mV		>10NTU within 10%

c. Field Testing Equipment used:

Make	Model	Serial Number
YSI	Pro Plus	10D101442

Time (24hr)	Volume Removed (Liters)	Temp. (°C)	pH	Spec. Cond. (µS/cm)	DO (mg/L)	ORP (mV)	Turbidity (NTU)	Flow Rate (ml/min)	Drawdown (feet)	Color/Odor
1015	0	16.1	6.44	948	3.25	-310.1	0	100	0.03	clear/none
1020	.5	15.1	6.16	953	0.88	-317.6	0	100	0.05	
1025	1.0	15.1	6.14	951	0.82	-315.9	0	100	0.07	
1030	1.5	15.1	6.13	951	0.81	-313.6	0	100	0.08	↓

d. Acceptance criteria pass/fail

	Yes	No	N/A
Has required volume been removed	☒	☐	☐
Has required turbidity been reached	☒	☐	☐
Have parameters stabilized	☒	☐	☐

If no or N/A - Explain below.

APPENDIX D
INDOOR AIR SAMPLING FIELD RECORDS

Indoor Air Quality Building Survey

Date: ~~1/14/2021~~, ~~1/24/2021~~ 1/14/2021, 1/26/2021 (visit, sampling) RTN: 3-0518

Address: 50 Fordham Rd, Wilmington, MA

Building Contact: Gary Stanicich Phone: Tel: _____ Cell: 603-860-8808 Work: _____

Current Occupants:

INITIALS	AGE	SEX (M/F)
UPS (United Parcel Service)		
unknown # of employees		

Building Construction Characteristics: (Circle or underline appropriate responses)

Single Family	Multiple Family	School	(Commercial)
Ranch	2-Family		Bldg age 45-50 years
Raised Ranch	Duplex		
Cape	Apartment House		
Colonial	# of units ____		
Split Level	Condominium		
Colonial	# of units ____		
Mobile Home	Other _____		
Other _____			

General Description of Building Construction Materials:

Wood (Brick) Stone (Metal) Other_____

How many occupied stories does the building have? 2

Has the building been weatherized with any of the following?

(Insulation) Storm Windows Energy-Efficient Windows Other _____

assume insulation present; Exterior of second floor was wrapped in 2018

Indoor Air Quality Building Survey, continued

What type of basement does the building have?

Full basement Crawlspace (Slab-on-Grade) Other _____

What are the characteristics of the basement? Finished Unfinished Other N/A

Basement Floor:	Foundation Walls:	Moisture:
Concrete	Poured Concrete	Wet
Dirt	Block	Damp
	Stone	Dry

Is a basement sump present? (Y/N) N/A

Does the basement have any of the following characteristics (i.e., preferential pathways into the building) that might permit soil vapor entry?

Cracks Pipes/Utility Conduits Foundation/slab drainage

Sump pumps Other N/A

Heating and Ventilation System(s):

What type(s) of heating system are used in this building?

(Hot Air Circulation) Heat Pump Wood Stove

Hot Air Radiation Unvented Kerosene Heater Electric Baseboard

Forced Hot Water Steam Radiation Other _____

What type(s) of fuel are used in this building?

(Natural Gas) (Electric) Coal Other _____

Fuel Oil Wood Solar

What type(s) of mechanical ventilation system are present and/or currently operating in this building? 2 cambridge units on the High Bay roof for fresh air
4 smaller units recirculating indoor air

Central Air Conditioning Mechanical Fan Bathroom Ventilation Fan

Kitchen Range Hood Open Window Individual Air Conditioning Unit

Air-to-Air Heat Exchange Other _____

Indoor temps (1/26)
1st Floor - 60°F
2nd floor - 64°F

Indoor Air Quality Building Survey, continued

Sources of Chemical Contaminants:

Potential VOC Source	Check if present in building prior to sampling	Location of Source	Removed 48 hours prior to sampling? (Yes/No/NA)
Paints or paint thinners		see photo log	
Gas-powered equipment		Indoor operations similar to 2020, but	
Gasoline storage cans		no longer seasonal as of Aug 2020 –	
Cleaning solvents		Full time currently	
Air fresheners			
Oven cleaners			
Carpet/upholstery cleaners			
Hairspray			
Nail polish/polish remover			
Bathroom cleaner			
Appliance cleaner			
Furniture/floor polish			
Moth balls			
Fuel tank			
Wood stove			
Fireplace			
Perfume/colognes			
Hobby supplies (e.g., solvents, paints, lacquers, glues, photographic darkroom chemicals)			
Scented trees, wreaths, potpourri, etc.			
Other			
Other			

☐ YES ☐ NO — Do one or more smokers occupy this building on a regular basis?
UPS workers observed smoking outside east entrance on 1/26

☐ YES ☐ NO — Has anybody smoked in the building in the last 48 hours?

☐ YES ☐ NO — Does the building have an attached garage?
Building High Bay area houses UPS trucks

☐ YES ☐ NO — If so, is the garage used for parking cars
Trucks are in high bay area - loaded in morning, leave before 9AM and return ~5 pm

Indoor Air Quality Building Survey, continued

☐ YES ☐ NO Do the occupants of the building frequently have their clothes dry-cleaned?
unknown

☑ YES ☐ NO Was there any recent remodeling or painting done in the building?
new walls being erected in SW room - currently insulation only

☑ YES ☐ NO Are there any new pressed wood products in the building (e.g., hardwood plywood, wall paneling, particleboard, fiberboard)?
~~unknown - Did not observe~~ plywood on 2nd floor, but old

☑ YES ☐ NO Are there any new upholstery, drapes or other textiles in the building?
cubicle walls in office area as of Aug 2020

☐ YES ☐ NO unk. Has the building interior been treated with any insecticides/pesticides?

If yes, what chemicals are used and how often are they applied?

Outdoor Sources of Contamination/Conditions:

Do any of the occupants apply pesticides/herbicides in the yard or garden? If yes, what chemicals are used and how often are they applied?
WRT has TruGreen treat lawn areas in a 5 step process during the spring and summer

Is there any stationary emission source in the vicinity of the building?
2 generators in Building 1, and a 2nd floor electrical substation area

Are there any mobile emission sources (e.g., highway, bus stop, high-traffic area) in the vicinity of the building?
High traffic of UPS trucks leaving (9AM) and entering (5PM) the building

Type of ground cover (e.g., grass, pavement, etc.) outside the building: grass and asphalt

Other Information:

Is there other information about the structural features of the building, habits of its occupants or potential sources of contaminants to the indoor air that may be of significance to the evaluation of the indoor air quality of the building?

Weather Conditions during Sampling:

Outside Temperature (°F): 20-30°F

Prevailing wind direction and approximate wind speed: <5mph, SW

Describe the general weather conditions (e.g., sunny, cloudy, rain): cloudy, possible snow in PM

Was there significant precipitation (≥ 0.1 inches) within 12 hours preceding the sampling? N

APPENDIX E
ACTIVITY AND USE LIMITATION

NOTICE OF ACTIVITY AND USE LIMITATION
M.G.L. c. 21E, §6 and 310 CMR 40.0000

Note: Pursuant to 310 CMR 40.1074(5), upon transfer of any interest in or a right to use the property or a portion thereof that is subject to this Notice of Activity and Use Limitation, the Notice of Activity and Use Limitation shall be incorporated either in full or by reference into all future deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer. Within 30 days of so incorporating the Notice of Activity and Use Limitation in a deed that is recorded or registered, a copy of such deed shall be submitted to the Department of Environmental Protection.

Disposal Site Name: 50 Fordham Road
DEP Release Tracking No.: 3-0000518

This Notice of Activity and Use Limitation ("Notice") is made as of this ____ day of _____, 2015, by Rosemarie Stanieich, Victoria J. Miyara, and Annette Maria Given as Trustees of the Wilmington Realty Trust, established by Declaration of Trust dated September 7, 1973, registered in the Middlesex North Registry District of the Land Court as Document No. 63541 and noted on Certificate of Title No. 19837 and registered further in the Middlesex South Registry of the Land Court as Document No. 515729 and noted on Certificate of Title No. 142138, together with their successors and assigns (collectively "Owner").

W I T N E S S E T H:

WHEREAS, the Wilmington Realty Trust, of Wilmington, Middlesex County, Massachusetts is the owner in fee simple of those certain parcels of land located at 40 and 50 Fordham Road in Wilmington, Middlesex County, Massachusetts, with the buildings and improvements thereon;

WHEREAS, said parcels of land, which are more particularly bounded and described in Exhibit A, attached hereto and made a part hereof ("Property"), are subject to this Notice of Activity and Use Limitation. The Property is shown on plans registered in the Middlesex County North Registry District of the Land Court as Land Court Plan Nos. 31713-C, 34588-B, 34588-E, and 36899-B, and in the Middlesex County South Registry District of the Land Court as Land Court Plan No. 31713-D;

WHEREAS, a portion of the Property ("Portion of the Property") is more specifically subject to this Notice of Activity and Use Limitation. This Portion of the Property is more particularly bounded and described in Exhibit A-1, attached hereto and made a part hereof. The Portion of the Property is shown on a sketch plan attached hereto and filed herewith for registration;

WHEREAS, the Portion of the Property comprises part of a disposal site as the result of a release of oil and/or hazardous materials. Exhibit B is a sketch plan showing the relationship of the Portion of the Property subject to this Notice of Activity and Use Limitation to the boundaries of said disposal site existing within the limits of the Property and to the extent such boundaries have been established. Exhibit B is attached hereto and made a part hereof; and

WHEREAS, one or more response actions have been selected for the Portion of the Disposal Site in accordance with M.G.L. c.21E ("Chapter 21E") and the Massachusetts Contingency Plan, 310 CMR 40.0000 ("MCP"). Said response actions are based upon (a) the restriction of human access to and contact with oil and/or hazardous material in soil and/or groundwater, and (b) the restriction of certain activities occurring in, on, through, over or under the Portion of the Property. A description of the basis for such restrictions, and the oil and/or hazardous material release event(s) or site history that resulted in the contaminated media subject to the Notice of Activity and Use Limitation is attached hereto as Exhibit C and made part hereof.

NOW, THEREFORE, Notice is hereby given that the activity and use limitations set forth in this Notice of Activity and Use Limitation are as follows:

1. Activities and Uses Consistent with Maintaining No Substantial Hazard Conditions. The following Activities and Uses are consistent with maintaining a condition of No Substantial Hazard and, as such, may occur on the Portion of the Property pursuant to 310 CMR 40.0000:

i. Industrial and commercial uses;

ii. Such other activities which, in the Opinion of a Licensed Site Professional, shall present no greater risk of harm to health, safety public welfare or the environment than the activities and uses set forth in this Paragraph; and

iii. Such other activities and uses not identified in Paragraph 2 as being Activities and Uses inconsistent with maintaining No Substantial Hazard Conditions.

2. Activities and Uses Inconsistent with Maintaining No Substantial Hazard. The following Activities and Uses are inconsistent with maintaining a condition of No Substantial Hazard pursuant to 310 CMR 40.0000, and, as such, may not occur on the Portion of the Property:

i. Residential, school, playground, park, or daycare use; and

ii. In the area as defined by the Activity and Use Limitation ("AUL") boundary presented in Figure 1 of the Activity and Use Limitation Opinion annexed hereto as Exhibit C, activities that would result in exposure to or the disturbance of potentially contaminated soils, bedrock, groundwater, and indoor air, unless appropriate precautions to prevent human exposure are taken as described in paragraph 3 below.

3. Obligations and Conditions. The following obligations or conditions are necessary and shall be undertaken and/or maintained at the Portion of the Property to maintain a condition of No Substantial Hazard:

i. The concrete floors within the footprint of the AUL boundary, if present, must be maintained in a condition that will prevent potential exposure to potentially contaminated soil, groundwater, and soil gas. Interior building floors will be inspected annually with repairs made to seal cracks larger than one-fourth (1/4) inch in width. The penetration of and the subsequent repairs made to the concrete floor of any buildings within the AUL boundary will be evaluated by a Licensed Site Professional to maintain the safety of construction and on-site workers.

ii. Excavated soil and bedrock removed from the AUL area must be managed in accordance with the Soil Management Procedures pursuant to 310 CMR 40.0030.

a. If the soils and bedrock are suspected or are pre-determined by a Licensed Site Professional to be Remediation Waste as defined under 310 CMR 40.0006, then the soils and bedrock will be managed under a Release Abatement Measure ("RAM") set forth by the MCP at 310 CMR 40.0440, as determined by a Licensed Site Professional.

b. If the excavated soils and bedrock from the AUL area are determined not to be Remediation Waste, then they will be managed under a RAM or in accordance with the Similar Soils Provisions Guidance, WSC#-13-500, as determined by a Licensed Site Professional.

iii. If groundwater dewatering activities are required within the AUL area, then the groundwater will be managed appropriately as described here:

a. If the groundwater is determined to be a Remediation Waste, then it will be managed under a Release Abatement Measure ("RAM") set forth by the MCP at 310 CMR 40.0440, as determined by a Licensed Site Professional.

b. If the groundwater removed from the AUL area is not determined to be a Remediation Waste, then other appropriate options may be used to manage the water as determined by a Licensed Site Professional.

iv. Activities that could result in exposure to or the disturbance of soils, bedrock or groundwater in the AUL area, must be conducted in accordance with the performance standards for RAMs set forth by the MCP at 310 CMR 40.0440, the Soil Management Procedures pursuant to 310 CMR 40.0030, the Similar Soils Provisions Guidance (WSC#-13-500), Construction of Buildings in Contaminated Areas (Policy WSC#-00-425) and applicable Health and Safety

procedures outlined in 310 CMR 40.0018, as determined by a Licensed Site Professional.

4. Proposed Changes in Activities and Uses. Any proposed changes in activities and uses at the Portion of the Property which may result in higher levels of exposure to oil and/or hazardous material than currently exist shall be evaluated by a Licensed Site Professional who shall render an Opinion, in accordance with 310 CMR 40.1080 *et seq.*, as to whether the proposed changes are inconsistent with maintaining a condition of No Substantial Hazard. Any and all requirements set forth in the Opinion to meet the objective of this Notice shall be satisfied before any such activity or use is commenced.

5. Violation of the AUL. The activities, uses and/or exposures upon which this Notice is based shall not change at any time to cause a significant risk of harm to health, safety, public welfare, or the environment or to create substantial hazards due to exposure to oil and/or hazardous material without the prior evaluation by a Licensed Site Professional in accordance with 310 CMR 40.1080, and without additional response actions, if necessary, to maintain a condition of No Substantial Hazard.

If the activities, uses, and/or exposures upon which this Notice is based change without the prior evaluation and additional response actions determined to be necessary by a Licensed Site Professional in accordance with 310 CMR 40.1080, the owner or operator of the Portion of the Property subject to this Notice at the time the activities, uses and/or exposures change, shall comply with the requirements set forth in 310 CMR 40.0020.

6. Incorporation Into Deeds, Mortgages, Leases, and Instruments of Transfer. This Notice shall be incorporated either in full or by reference into all future deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer, whereby an interest in and/or a right to use the Property or a portion thereof is conveyed in accordance with 310 CMR 40.1074(5).

Owner herby authorizes and consents to the filing and recordation and/or registration of this Notice, said Notice to become effective when executed under seal by the undersigned Licensed Site Professional, and recorded and/or registered with the appropriate Registry(ies) of Deeds and/or Land Registration Office(s).

[Remainder of Page Intentionally Left Blank]

WITNESS the execution hereof under seal this 13th day of July, 2015.

DESCRIPTION OF PROPERTY SUBJECT TO THE AUL

LEGAL DESCRIPTION

LOT 4 and LOT 6

Two (2) certain parcels of land located in the Town of Wilmington, County of Middlesex, Massachusetts; said two (2) parcels of land located easterly of Fordham Road, in Wilmington, Massachusetts; and said two (2) parcels of land shown as Lot 4 and Lot 6 on "Plan of land in Wilmington, Mass." dated February 28, 1978, Dana F. Perkins & Assoc., Inc., Civil Engineers and Surveyors, Reading-Lowell, Massachusetts; which plan is filed in Middlesex North Registry District of the Land Court, as Plan No. 36899-B.

The said two (2) parcels of land are bounded and described as follows:

LOT 4 as shown on said plan.

NORTHWESTERLY:	by land now or formerly of Carl Realty, Inc., seven hundred thirty-one and 40/100 (731.40) feet;
NORTHEASTERLY:	by Lot 6 as shown on said plan, two hundred seventy-five and 02/100 (275.02) feet;
EASTERLY:	by Lot 3 as shown on said plan, ninety-two and 44/100 (92.44) feet; and
SOUTHEASTERLY:	by land now or formerly of George E. Dunn, along the Town Line dividing Wilmington and North Reading, seven hundred fifty-five and 87/100 (755.87) feet; and
SOUTHWESTERLY:	by land now or formerly of South Mass. Land Developers, Inc., two hundred thirty and 27/100 (230.27) feet.

LOT 6 as shown on said plan.

NORTHWESTERLY:	by land now or formerly of Carl Realty, Inc., two hundred ninety-seven and 00/100 (297) feet;
SOUTHEASTERLY:	by Lot 5 as shown on said plan, four hundred thirty-five and 67/100 (435.67) feet; and
NORTHEASTERLY:	by Lot 4 as shown on said plan, two hundred seventy-five and 02/100 (275.02) feet.

For title of Trustees of THE WILMINGTON REALTY TRUST to said Lot 4 and Lot 6, see Middlesex North Registry District of the Land Court, Certificate of Title No. 19842, recorded in Registration Book 102, Page 83.

LOT 7

A certain parcel of land, located in the Town of Wilmington, County of Middlesex, Commonwealth of Massachusetts, said parcel shown as Lot 7 upon a plan entitled "Plan of Land in NORTH READING & WILMINGTON, MASS.", dated September 21, 1983, DANA F. PERKINS and Assoc., Inc., Civil Engineers and Surveyors, and filed with the Engineering Division of the Land Court of Massachusetts as Plan 31713^{C} and Plan 31713^{D} bounded and described as follows:

NORTHWESTERLY	by the Northeasterly line of Fordham Road, eighty-four and 60/100 (84.60) feet;
NORTHWESTERLY	by a radius 1081.41 along the Northeasterly line of Fordham Road, six hundred fifty-nine and 84/100 (659.84) feet;
NORTHERLY	by the Northeasterly line of Fordham Road, two hundred (200) feet;
NORTHEASTERLY	by lands shown on said Plan as "Lot 30", six hundred twenty-one and 74/100 (621.74) feet;
NORTHERLY	by lands shown on said Plan as "Lot 30", ninety-two and 55/100 (92.55) feet;
NORTHEASTERLY	by lands shown on said Plan as "Lot 30", two hundred thirty and 29/100 (230.29) feet;
SOUTHWESTERLY	by the Town Line between Wilmington and North Reading, as shown on said plan, nine hundred seven and 9/100 (907.9) feet;
WESTERLY	by Lot 8, as shown on said Plan, eighty-eight and 69/100 (88.69) feet;
SOUTHEASTERLY	by Lot 8, as shown on said Plan, eighty (80) feet; and
SOUTHWESTERLY	by Lot 8 as shown on said Plan, two hundred fifty-five (255) feet.

Said Lot 7, all within the Town of Wilmington, comprises 12.63 acres, more or less, (549,973 square feet of land, more or less), as shown on said plan.

Said Lot 7 is a subdivision of certain lots, title to which is registered in the Land Registration Office, North Registry District of Middlesex County, and as follows:

- of Lot 31, as shown on Plan No. 34588-C (Certificate of Title No. 19837); Book 102-73

- ~~of Lot 35, as shown on Plan No. 34588-A (Certificate of Title No. 19841);~~ and

- of ~~Lots 4~~ 2 & 4, as shown on Plan No. 31713-A (Certificate of Title No. 19838), Book 102-75

For

LOT 10

A certain parcel of land, located in the Town of North Reading, County of Middlesex, Commonwealth of Massachusetts, said parcel shown as Lot 10 upon a plan entitled "Plan of Land in NORTH READING & WILMINGTON, MASS.", dated September 21, 1983, DANA F. PERKINS and Assoc., Inc., Civil Engineers and Surveyors, and filed with the Engineering Division of the Land Court of Massachusetts as Plan 31713C and Plan 31713D bounded and described as follows:

NORTHERLY	by the Town Line between North Reading and Wilmington, as shown on said Plan, nine hundred seven and 09/100 (907.09) feet;
NORTHWESTERLY	by land shown on said Plan as "Town of North Reading", ninety-eight and 43/100 (98.43) feet;
SOUTHEASTERLY	by Lot 9, as shown on said Plan, four hundred twenty-three and 16/100 (423.16) feet;
SOUTHWESTERLY	by Lot 9, as shown on said Plan, one hundred ten and 41/100 (110.41) feet;
SOUTHEASTERLY	by Lot 9, as shown on said Plan, three hundred ninety and 49/100 (390.49) feet; and
SOUTHWESTELRY	by Lot 9, as shown on said Plan, two hundred forty-eight and 36/100 (248.36) feet.

Said Lot 10, all within the town of North Reading, comprises 3.91 acres of land, more or less (170,477) square feet of land, more or less), as shown on said Plan.

Said Lot 10 is a subdivision of certain lots, title to which is registered in the Land Registration Office, South Registry District of Middlesex County, and as follows:

~~- of Lot 26, as shown on Plan No. 31508-A (Certificate of Title No. 142137)~~; and

Ø of Lot 6, as shown on Plan No. 31713-B (Certificate of Title No. 142138), Bk. 840-188

LOT 30

That certain parcel of land situate in Wilmington, County of Middlesex, Commonwealth of Massachusetts bounded and described as follows:

SOUTHWESTERLY	by the Northeasterly line of Fordham Road, two hundred fifty (250) feet;
NORTHWESTERLY	by land now or formerly of Carl Realty, Inc., six hundred seventy-two and 36/100 (672.36) feet;
EASTERLY	by land now or formerly of So. Mass. Land Developers, Inc., two hundred fifty-five and 07/100 (255.07) feet; and
SOUTHEASTERLY	by land now or formerly of Carl Realty, Inc., six hundred twenty-one and 74/100 (621.74) feet.

All of said boundaries are determined by the Land Court to be located as shown on subdivision plan 34588-B, drawn by Dana F. Perkins & Sons, Inc., Surveyors, dated April 9, 1968, as approved by the Court, filed in the Land Registration Office, a copy of a portion of which is filed with Certificate of title 16261, and said land is shown as Lot thirty (30) on said plan.

Being the same premises evidenced by Certificate of Title No. 19839 (Middlesex North Registry District). Bk. 702-77

LOT 33

That certain parcel of land situate in Wilmington, in the County of Middlesex Commonwealth of Massachusetts, bounded and described as follows:

WESTERLY	by the Easterly line of Fordham Rd. by several lines measuring together, eleven hundred eighty-seven and 97/100 (1,187.97) feet;
NORTHEASTERLY	by land now or formerly of Carl Realty, Inc., five hundred thirty-two and 01/100 (532.01) feet;
NORTHEASTERLY	again by land now or formerly of Max Siegel et al, two hundred ninety-seven (297) feet;
EASTERLY	by land now or formerly of So. Mass. Land Developers, Inc., five hundred ninety-nine and 28/100 (599.28) feet; and
SOUTHEASTERLY	by Lot 30, six hundred seventy-two and 36/100 (672.36) feet.

All of said boundaries are determined by the Land Court to be located as shown on subdivision plan 34588-E, drawn by Dana F. Perkins and Sons, Inc., Surveyors, dated January 27, 1969, as approved by the Court, filed in the Land Registration Office, a copy of a portion of which is filed with Certificate of Title 16620, and said land is shown as Lot thirty-three (33) on said plan.

Being the same premises evidenced by Certificate of Title No. 19840 (Middlesex North Registry District). Bk. 702-77

ACTIVITY AND USE LIMITATION OPINION

EXHIBIT C - ACTIVITY AND USE LIMITATION OPINION

Purpose of the AUL

This Notice of Activity and Use Limitation ("AUL") provides notice to current and future interest holders of the property commonly known as 50 Fordham Road (including the addresses of 40 and 50 Fordham Road), Wilmington, Massachusetts (the "Property") of residual contamination remaining at the Property. It should be noted that this AUL is being used voluntarily, in accordance with Section 40.1012(3)(h) of the Massachusetts Contingency Plan (MCP), 310 CMR 40.0000, and is not required by the MCP, to confirm certain assumptions regarding future uses at the Property for purposes of Risk Characterization of human health and ecological risks at the Disposal Site. This AUL describes certain restrictions upon the use of the Property to promote the ongoing protection of human health and the environment.

This AUL will serve as a notification, concerning appropriate health and safety measures to be taken during any future construction-related or other activities that disturb the subsurface, including (but not limited to) penetration of concrete building slabs, subsurface soil or bedrock excavations and groundwater dewatering activities. It will also be protective of human health and the environment by requiring that any contaminated media generated during construction activities be managed in accordance with Massachusetts Contingency Plan (MCP) Soil Management procedures as described in 310 CMR 40.0030 and the Massachusetts Department of Environmental Protection (MassDEP) guidance documents, including Construction of Buildings in Contaminated Areas (Policy WSC#-00-425) and the Similar Soils Provisions Guidance (WSC#-13-500), as determined by a Licensed Site Professional ("LSP").

Relevant Property History

Contamination of the Stickney Well, a currently inactive public supply well for the town of North Reading, was discovered in the late 1970s. Subsequent investigations of multiple surrounding properties, including the Property (formerly owned and operated by GE Aerospace (sometimes referred to as "GE" herein)), began in the early 1980s. The Property has been subject to remedial investigations and cleanup since 1986, when the MassDEP (then the Department of Environmental Quality Engineering or DEQE) issued GE a Notice of Responsibility. In 1987, the MassDEP

classified the former GE facility as a Priority Disposal Site,[1] and in 1994 the MassDEP assigned Release Tracking Number (RTN) RTN-3-0518 to the site.[2]

The Property has had a history of manufacturing processes that have contributed to releases of fuels, oils, solvents, and metals to the environment. Analytical data have shown that six primary types of organic and inorganic compounds are associated with RTN 3-0518. These include chlorinated volatile organic compounds (CVOCs); total petroleum hydrocarbons (TPH); benzene, toluene, ethyl benzene and xylenes (BTEX) compounds; methyl tertiary butyl ether (MTBE); several metals; and light non-aqueous phase liquids (LNAPL) identified as Stoddard fuel (solvent). Known impacted areas of the Property include four separate operating units (OU), as well as the Tank F and Building 1 Areas, and are summarized in the following table and shown on the attached Figure 1. These areas are designated "Restricted Areas."

Restricted Areas	Description	Affected Media	Compounds of Concern	Regulatory Status
OU-1	Former Tank Farm source area and adjacent Eastern Parking Lot (EPL). Tank Farm had 4 underground storage tanks (USTs) removed in 1987.	Vadose zone soils, and shallow groundwater	Stoddard Solvent LNAPL in groundwater and extractable petroleum hydrocarbons (EPH)-volatile petroleum hydrocarbons (VPH) in both soils and groundwater; associated arsenic	Open
OU-2	Former Tank Farm source area and down-gradient plume on- and off-property	Groundwater	CVOCs and 1,4-dioxane	Open
OU-3	Storm water/Waste water Outfalls 001 and 002	Sediment	Metals and petroleum hydrocarbons	Closed, Partial Class A-2 Response Action Outcome (RAO) (Submitted 2004)

[1] Under 310 CMR 40.0006 (1)(b), the term "Disposal Site" is used to refer to a place or area where an uncontrolled release of oil and/or hazardous material from or at a site or vessel has come to be located.

[2] Martin Marietta acquired GE Aerospace in 1993 and subsequently Martin Marietta and Lockheed merged to form Lockheed Martin Corporation.

Restricted Areas	Description	Affected Media	Compounds of Concern	Regulatory Status
OU-4	Former Tank K source area and immediately down-gradient of plume.	Vadose zone soils and shallow groundwater	Gasoline related petroleum hydrocarbons (VOCs) from former gasoline UST. UST was removed in 1986.	Closed, Partial Class A-2 RAO (Submitted 2010)
Tank F/Building 1 Area	Former Tank F area and area below concrete slab of Building 1	Vadose zone soils and groundwater	CVOCs and petroleum hydrocarbons	Open

OU-1 Area

The Response Actions taken at the Tank Farm/EPL Petroleum Area (OU-1) have included LNAPL recovery, removal of Building 3 and the Oil House/drum storage, and excavation and off-site disposal of petroleum contaminated soil. Since 2011, LNAPL gauging has indicated the absence of measurable LNAPL in any wells that have been gauged. Soil impacts in the OU-1 appear to be consistent with current MCP Industrial/Commercial standards; however, the deeper groundwater and down-gradient plume is impacted with the CVOCs emanating from the former Tank Farm OU-2 Area (see below).

OU-2 Area

The Response Actions taken at the Tank Farm CVOC Source Area (OU-2) have been extensive and included:

- Removal in 1987 of four Underground Storage Tanks ("USTs") at the Tank Farm (Tank D, a 10,000-gal "waste fuel" tank that received waste fuel and oil, thinners, and solvents; Tank G, a 10,000-gal tank used for storing jet fuel and oil; Tank H, a 1,000- gal tank used for storing JP-4 jet fuel; and Tank I, a 500-gal tank used for storing methanol).
- Groundwater pump and treat at the Tank Farm Area between 1993 and 2002. During operation, approximately 1.9 million gallons of groundwater were treated, and approximately 31 pounds of VOCs were removed from the groundwater.
- Groundwater pump and treat in a bedrock well (TRC-202R) located down-gradient of the Tank Farm Area between 2003 and 2008. During operation, approximately 4.3 million gallons of groundwater were treated, and approximately 159 pounds of VOCs were

removed from the groundwater. Groundwater data trends did not indicate significant reductions in contaminant concentrations. The system remains shut down at the present time.

- Addition of a remedial treatment solution known as Emulsified Zero Valent Iron (EZVI) in 2005 through 2006. EZVI was injected directly into bedrock fractures and into the overburden-bedrock interface within the Tank Farm Area. The EZVI treatment was not considered successful.

- Analysis of monitored natural attenuation (MNA) geochemical and microbiological parameters in 2012 for groundwater, indicating conditions supportive of limited enhanced reductive dechlorination. A review of plume geometry and other trends indicate that the off-site CVOC impacts appear to be stable or shrinking.

- Additional groundwater investigation activities from 2012 through 2014 in the Tank Farm, the EPL and off-site in the adjacent wetland areas. This work is on-going and the data will be evaluated and presented in a Supplemental Phase II report in the future.

OU-3 and OU-4 Areas

Areas within OU-3 and OU-4 have been remediated and closed under the MCP in 2004 and 2010, respectively. Response Actions taken at OU-3 included excavation of metal-impacted sediments and wetland restoration. Response Actions taken at OU-4 have included UST removal, soil excavation, and biosparge/soil vapor extraction. Although these areas have been closed under the MCP, it should be noted that contaminated media were cleaned up to Industrial/Commercial standards and that low level impacts may remain. That is, the soil, sediments and groundwater have not been cleaned up to conditions such that these locations would be suitable for Residential, Institutional, or park/playground land use without first completing further response actions.

Tank F and Building 1 Areas

Tank F, formerly located on the southwest side of Building 1 on the former GE facility property, which received acid and caustic wastes plus other degreasing solvent and fuel wastes through floor drains from Building 1, was removed from the Property in 1990. No obvious impacts were

observed during its removal or from samples obtained from soils and other liquids associated with the tank prior to its removal. No remedial efforts have been associated with this tank area.

Investigation results suggest CVOC impacts in the southwestern area of Building 1 and/or the former Tank F area. Shallow groundwater in the overburden does not exhibit elevated CVOC concentrations; however, bedrock wells in this area exhibited much higher concentrations of both PCE and TCE. In June 1987, a small tank was removed adjacent to Tank F and field screening levels of VOCs ranging from 100 to 200 parts per million (ppm) were encountered near the bottom of the excavation. In addition, sampling of sediment from within the chase troughs in Building 1 exhibited petroleum hydrocarbon and CVOC impacts. Soils within the top foot under the metals finishing floor sumps indicated low levels of CVOCs.

Sub-slab and indoor air sampling has been conducted within Building 1 between 2009 through 2014. Elevated levels of petroleum hydrocarbons and CVOCs have been detected below the concrete slab of Building 1. Low levels of CVOCs have also been detected in indoor air samples, however, they have consistently been below MassDEP available MA Commercial/Industrial (C/I) Threshold Values and do not pose a risk to industrial/ commercial workers. It is therefore the opinion of the LSP that industrial and commercial use is a permissible use under the AUL.

In 2013 and 2014, additional soil and groundwater investigation activities have been performed underneath Building 1. This work is on-going and the data will be evaluated and presented in a Supplemental Phase II report in the future.

Nature and Extent of Contamination

The lateral extent of the MCP Disposal Site encompasses a large portion of the Property as shown on the attached **Figure 1**. Within this site boundary, residual levels of contaminants are likely present within soil or groundwater or both. Higher concentrations are expected within the Operable Units and the Tank F/Building 1 Areas than in areas outside of these designated areas. However, low level residual contamination above applicable MCP standards may be present in areas outside of these areas within the Disposal Site boundary. The AUL boundary has been set to encompass a large portion of the Property, including the Restricted Areas, but exclusive of the

northern wetland areas where future construction-related activities are considered to be highly unlikely, and exclusive of the areas beneath and between Buildings 1A and 2.

Recommendations

It is the opinion of the LSP that the restrictions on Activities and Uses of the Property and the Obligations and Conditions contained in the AUL are appropriate, based on the foregoing.

NOTES:

1. SOURCE: "BASE MAP" (TRC ENVIRONMENTAL CORP., 2003). THE ACCURACY OF THE SURVEY INFORMATION PRESENTED HEREIN, INCLUDING THE HORIZONTAL COORDINATE SYSTEM AND THE HORIZONTAL AND VERTICAL DATUMS HAVE BEEN PARTIALLY VERIFIED BY AECOM.
2. TOPOGRAPHIC AND PLANIMETRIC FEATURES SHOWN WERE COMPILED PHOTOGRAMMETRICALLY FROM AERIAL PHOTOGRAPHY DATED APRIL 16, 1992 BY EAST COAST MAPPING INC., CONCORD, NEW HAMPSHIRE. MAPPING GROUND CONTROL ESTABLISHED BY FIELD SURVEYS CONDUCTED IN APRIL 1992.
3. THE GRID SYSTEM DEPICTED ON THIS PLAN IS BASED ON THE MASSACHUSETTS STATE PLAN COORDINATE SYSTEM NORTH AMERICAN DATUM OF 1929.
4. ELEVATIONS ARE BASED ON THE NATIONAL GEODETIC VERTICAL DATUM OF 1929.
5. PROPERTY AND TOWN LINE BOUNDARIES WERE ADAPTED FROM:
   A) "REGIONAL EXPLORATION PLAN", GENERAL ELECTRIC COMPANY, 50 FORDHAM ROAD PROPERTY, WILMINGTON/NORTH READING, MASSACHUSETTS, BY GOLDBERG – ZOINO & ASSOCIATES, INC., DATED APRIL 1990;
   B) MODIFIED PER NORTH READING GIS DATA, JUNE 2002; AND
   C) DIGITIZED BY MASSGIS FROM A SET OF STABLE BASED FILM PRINTS OF THE 125:000 7.5' QUADRANGLES PURCHASED FROM THE USGS BY THE MASSACHUSETTS DEPARTMENT OF PUBLIC WORKS.

TRUSTEE CERTIFICATE

WILMINGTON REALTY TRUST
TRUSTEES' CERTIFICATE

The undersigned, Rosemarie Stanieich, Victoria J. Maiyara, and Annette Maria Given, as Trustees of Wilmington Realty Trust under Declaration of Trust dated September 7, 1973, registered in the Middlesex North Registry District of the Land Court as Document No. 63541 and noted on Certificate of Title No. 19837 and registered further in the Middlesex South Registry of the Land Court as Document No. 515729 and noted on Certificate of Title No. 142138 (the "Trust"), hereby certify as follows:

1. That they are all of the current Trustees of the Trust;

2. That the Trust is in full force and effect and has not been revoked, terminated or rescinded in whole or in part;

3. That the undersigned Trustees have been duly authorized and specifically directed by all of the beneficiaries of the Trust to execute, acknowledge and deliver that certain Activity and Use Limitation with respect to the property owned by the Trust and having an address of 50 Fordham Road in Wilmington, Massachusetts, and:

4. No beneficiary of the Trust is a minor, a Massachusetts corporation selling all or substantially of all its Massachusetts assets, or a personal representative of an estate subject to an estate tax lien, deceased, or under any other legal incapacity.

EXECUTED as a sealed instrument this 13th day of July, 2015

WILMINGTON REALTY TRUST

Rosemarie Stanieich, as Trustee and not individually

APPENDIX F
LABORATORY ANALYTICAL AND DATA VALIDATION REPORTS – GROUNDWATER

PHOENIX
Environmental Laboratories, Inc.

Friday, September 25, 2020

Attn: Mr Scott Olson
AECOM
250 Apollo Drive
Chelmsford, MA 01824

Project ID: LOCKHEED WILMINGTON MA 60552044.19
SDG ID: GCG73379
Sample ID#s: CG73379 - CG73385

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

Semi-Volatile Comment:
Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Comment:

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CG73379, CG73380, CG73381, CG73382, CG73383, CG73384, CG73385

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

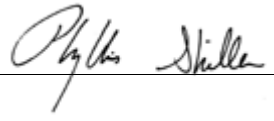
CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
8270 SVOC CAM II B ☑	7010 Metals CAM III C ☐	MassDEP EPH CAM IV B ☑	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐
6010 Metals CAM III A ☑	6020 Metals CAM III D ☐	8082 PCB CAM V A ☐	9012 Total Cyanide/PAC CAM V1 A ☐	6860 Perchlorate CAM VIII B ☐	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Sections: EPH, LACHAT, SVOASIM, VOA Narrations .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

September 25, 2020

SDG I.D.: GCG73379

SDG Comments

CG73379 - The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

CG73382 - The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 544984 (Samples: CG73384): -----

One or more analytes is below the method criteria. A low bias for these analytes is possible. (C-10 Decane, C9 - Nonane)

The LCS and/or the LCSD recovery is below the method criteria. All of the other QC is acceptable, therefore no significant bias is suspected. (C12 - Dodecane, C14 - Tetradecane)

The LCS/LCSD RPD exceeds the method criteria for one or more analytes, but these analytes were not reported in the sample(s) so no variability is suspected. (C-10 Decane, C12 - Dodecane, C9 - Nonane)

The LCS/LCSD RPD exceeds the method criteria for one or more surrogates, therefore there may be variability in the reported result. (% 1-chlorooctadecane (aliphatic))

Instrument:

AU-FID4 09/10/20-1 Adam Werner, Chemist 09/10/20

CG73384 (1X)

The initial calibration (AL709BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 544984 (CG73356)

CG73384

All LCS recoveries were within 40 - 140 with the following exceptions: C-10 Decane(36%), C9 - Nonane(26%)
All LCSD recoveries were within 40 - 140 with the following exceptions: C-10 Decane(19%), C12 - Dodecane(24%), C14 - Tetradecane(38%), C9 - Nonane(13%)
All LCS/LCSD RPDs were less than 25% with the following exceptions: % 1-chlorooctadecane (aliphatic)(25.8%), C-10 Decane(61.8%), C12 - Dodecane(56.7%), C9 - Nonane(66.7%)
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Wet Chemistry Analysis

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

SDG I.D.: GCG73379

Wet Chemistry Analysis

BECKMAN DU720 09/14/20-1 Greg Danielewski, Chemist 09/14/20

CG73379 , CG73382 , CG73383 , CG73384

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Site Specific):

Batch 544964 (CG73379)

CG73379, CG73382, CG73383

All LCS recoveries were within 85 - 115 with the following exceptions: None.
All MS recoveries were within 75 - 125 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 545270 (CG73379)

CG73379, CG73382, CG73383, CG73384

All LCS recoveries were within 85 - 115 with the following exceptions: None.
All MS recoveries were within 75 - 125 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

IC

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

IC 09/09/20-2 Brian Sheriden, Greg Danielewski, Chemist 09/09/20

CG73379 , CG73382 , CG73383 , CG73384

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

IC 09/10/20-1 Brian Sheriden, Greg Danielewski, Chemist 09/10/20

CG73379 , CG73382 , CG73383 , CG73384

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

IC 09/11/20-2 Brian Sheriden, Greg Danielewski, Chemist 09/11/20

CG73384

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

MCP Certification Report

September 25, 2020

SDG I.D.: GCG73379

VOA Narration

QC (Site Specific):

Batch 545403 (CG73379) CHEM23 9/14/2020-1

CG73379(1X), CG73380(1X), CG73381(1X), CG73382(1X), CG73383(1X), CG73385(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: 1,2-Dibromo-3-chloropropane(133%)
All LCSD recoveries were within 70 - 130 with the following exceptions: 1,2-Dibromo-3-chloropropane(133%)
All LCS/LCSD RPDs were less than 30% with the following exceptions: None.
All MS recoveries were within 70 - 130 with the following exceptions: Trichlorofluoromethane(145%)
All MSD recoveries were within 70 - 130 with the following exceptions: 1,1-Dichloroethene(133%), Carbon Disulfide(132%), trans-1,2-Dichloroethene(133%), Trichlorofluoromethane(155%), Trichlorotrifluoroethane(137%)
All MS/MSD RPDs were less than 30% with the following exceptions: None.
A matrix effect is suspected when a MS/MSD recovery is outside of criteria. No further action is required if LCS/LCSD compounds are within criteria.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

October 21, 2020

SDG I.D.: GCG76015

Phoenix reporting levels may exceed those referenced in the CAM protocol. Please refer to criteria sheet for comparisons to requested MCP standards.

Ver. 2:

This report has been revised to correct MS/MSD %Recoveries in batch 545550 for VPH analysis.

Ver. 3:

This report has been revised to include a narrative for 1,4-Dioxane MS/MSD %Recoveries in batch 545444 and analyst comments for Nitrite dilutions.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH diluted run
Elevated reporting limits for VPH due to the presence of target and/or non-target compounds.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Comments:

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

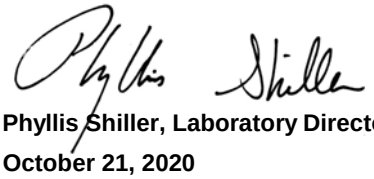
RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.



VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH diluted run
Elevated reporting limits for VPH due to the presence of target and/or non-target compounds.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH diluted run
Elevated reporting limits for VPH due to the presence of target and/or non-target compounds.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CG76015, CG76016, CG76017, CG76018, CG76019, CG76020, CG76021, CG76022, CG76023, CG76024, CG76025, CG76026, CG76027, CG76028, CG76029, CG76030, CG76031, CG76032, CG76033, CG76034, CG76035, CG76036, CG76037, CG76038, CG76039, CG76040, CG76041, CG76042, CG76043, CG76044, CG76045

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

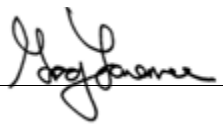
Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status



G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Sections: EPH, SVOASIM, VOA Narrations .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 21, 2020

SDG I.D.: GCG76015

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 545363 (Samples: CG76027, CG76028, CG76037, CG76041): -----

One or more analytes is below the method criteria. A low bias for these analytes is possible. (C-10 Decane, C12 - Dodecane, C9 - Nonane)

The LCS/LCSD RPD exceeds the method criteria for one or more analytes. A slight variability is possible. (C-10 Decane, C9 - Nonane)

Instrument:

AU-FID3 09/16/20-1 Adam Werner, Chemist 09/16/20

CG76027 (1X), CG76028 (1X), CG76037 (1X), CG76041 (1X)

No significant modifications were made to the EPH method, as specified in Section 11.3 of the method.

The initial calibration (AR708BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

AU-FID4 09/16/20-1 Adam Werner, Chemist 09/16/20

CG76027 (1X), CG76028 (1X), CG76037 (1X), CG76041 (1X)

The initial calibration (AL709BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 545363 (CG75672)

CG76027, CG76028, CG76037, CG76041

All LCS recoveries were within 40 - 140 with the following exceptions: C-10 Decane(23%), C12 - Dodecane(32%), C9 - Nonane(19%)
All LCSD recoveries were within 40 - 140 with the following exceptions: C-10 Decane(31%), C12 - Dodecane(36%), C9 - Nonane(25%)
All LCS/LCSD RPDs were less than 25% with the following exceptions: C-10 Decane(29.6%), C9 - Nonane(27.3%)
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Wet Chemistry Analysis

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045
Tel. (860) 645-1102 Fax (860) 645-0823

ACCREDITED IN ACCORDANCE WITH nelac NY # 11301

MCP Certification Report

October 21, 2020

SDG I.D.: GCG76015

Wet Chemistry Analysis

BECKMAN DU720 09/16/20-1 Greg Danielewski, Chemist 09/16/20

CG76021 , CG76023 , CG76028 , CG76031

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 545540 (CG76153)

CG76016, CG76021, CG76028, CG76031

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 545589 (CG76021)

CG76021, CG76023, CG76028, CG76031

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

IC

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

IC 09/11/20-1 Brian Sheriden, Greg Danielewski, Chemist 09/11/20

CG76021 , CG76023 , CG76028 , CG76031

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 545308 (CG75771)

CG76021, CG76023, CG76028, CG76031

All LCS recoveries were within 90 - 110 with the following exceptions: None.

Batch 545309 (CG75775)

CG76021, CG76023, CG76028, CG76031

All LCS recoveries were within 90 - 110 with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Batch 545326 (CG76038)

CG76038

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

Batch 545441 (CG76785)

CG76022, CG76023, CG76028, CG76031, CG76033, CG76038, CG76041

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

SVOA-Dioxane

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM22 09/16/20-1 Adam Werner, Chemist 09/16/20

CG76016 (1X), CG76018 (1X), CG76019 (1X), CG76020 (1X), CG76021 (1X), CG76024 (1X), CG76025 (1X), CG76026 (1X), CG76028 (1X), CG76030 (1X), CG76031 (1X), CG76037 (1X), CG76042 (1X), CG76043 (1X), CG76045 (1X)

Initial Calibration Evaluation (CHEM22/DIOX_0818):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM22/0916_06-DIOX_0818) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Site Specific):

Batch 545444 (CG76018)

MCP Certification Report

October 21, 2020

SDG I.D.: GCG76015

VOA Narration

The MS/MSD RPD criteria is listed above.

Batch 546217 (CG76018) CHEM23 9/18/2020-1

CG76016(100X), CG76017(100X), CG76018(5X), CG76019(5X), CG76021(1X), CG76023(20X), CG76024(10X), CG76026(100X), CG76028(10X), CG76029(10X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
All MS recoveries were within 70 - 130 with the following exceptions: Carbon tetrachloride(134%)
All MSD recoveries were within 70 - 130 with the following exceptions: Carbon tetrachloride(150%), Trichlorofluoromethane(136%)
All MS/MSD RPDs were less than 20% with the following exceptions: Trichloroethene(32.0%)
A matrix effect is suspected when a MS/MSD recovery is outside of criteria. No further action is required if LCS/LCSD compounds are within criteria.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

We attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

VPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

PIDFID 09/15/20-1 Raman Makol, Chemist 09/15/20

CG76016 (5X), CG76027 (1X), CG76028 (5X), CG76037 (5X), CG76041 (1X)

QC (Batch Specific):

Batch 545550 (CG76041)

CG76016(5X), CG76027(1X), CG76028(5X), CG76037(5X), CG76041(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
A blank MS/MSD was analyzed with this batch.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Subject: Bottle Pickup 9-11-20

Hi Rebecca,

One bottle didn't make it with the pickup today. It's the total metals bottle for sample 20A-AE112R1-091120-1. I will keep the bottle on ice and it will be ready for the pickup on Monday.

Thank you,

Dylan Potter

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

VPH diluted run
Elevated reporting limits for VPH due to the presence of target and/or non-target compounds.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

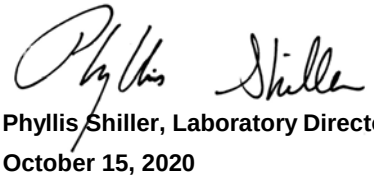
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:



MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH diluted run
Elevated reporting limits for VPH due to the presence of target and/or non-target compounds.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.
