Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.

I = This parameter is outside laboratory LCS/LCSD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

MCP Certification Report

October 05, 2020

SDG I.D.: GCG83495

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

Volatile 8260 analysis:
1,4-Dioxane does not meet the GWP. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

Not all requested reporting levels were achieved due to the presence of target and non target compounds. Please refer to the Sample Criteria Exceedances section of this report.

Rebecca, Greg,

For this login confirmation, I think everything looks good, except GZA-105D should also be logged in for 1,4-dioxane. The MS/MSD is for VOCs and EPH/VPH, but not 1,4-D.

I am off tomorrow, so please clarify with Dylan via email, if needed.

Thank you.
Scott

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Semi-Volatile Comment:
Poor surrogate recovery was observed for one surrogate. The other surrogates associated with this sample were within QA/QC criteria. A slight low bias is possible.

Subject	Data Validation/Usability Summary Lockheed Martin-Wilmington, MA Site Phoenix Environmental Laboratories, Inc. SDG: GCG73379		
From	Lori Herberich		
Reviewed by	Paula DiMattei		60552044.19
Date	November 4, 2020		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 9, 2020 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCG73379.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, extractable petroleum hydrocarbons (EPH), select metals, total organic carbon (TOC), nitrate, nitrite, chloride, sulfate, and/or sulfide for the following samples was assessed:

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
*	GC/MS tuning[#]
	Initial calibration/initial calibration and continuing calibration verifications[#]
*	Laboratory blanks/equipment blanks/trip blanks
*	Surrogate recoveries (%Rs)
*	Labeled compound recovery (1,4-dioxane only)[#]
	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
*	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Interference check standard results[#]
NA	Serial dilution results[#]
*	Field duplicate results
*	Internal standard (IS) performance[#]
	General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

VOCs

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
ICAL for batch 545403	Acetone	0.088	≥ 0.100	J+/R
	Compound	**% RSD**	**QC limit**	**Actions (Detects/Nondetects)**
	1,2-Dibromo-3-chloropropane	25	≤ 20	J/UJ
	Bromoform	24	≤ 20	J/UJ
	Bromomethane	22	≤ 20	J/UJ
	Chloroethane	29	≤ 20	J/UJ
Associated samples: All samples				

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
CCAL for batch 545403	Tetrachloroethene	0.197	≥ 0.200	J+/R
	Acetone	0.093	≥ 0.100	J+/R
Associated samples: All samples				

MD/MS/MSD Results

All percent recoveries (%Rs) and relative percent differences (RPDs) met the QC acceptance limits with the following exceptions. Only nonconformances resulting in data qualification are listed below.

VOCs

Parent Sample	Compound	MS % Recovery	MSD % Recovery	Lower Limit	Upper Limit	Data Validation Actions (Detects/Nondetects)
20A-AE108R1-090920-1	Trichlorofluoromethane	145	155	70	130	J+/Accept
	1,1-Dichloroethene	ok	133	70	130	J+/Accept

	trans-1,2-Dichloroethene	ok	133	70	130	J+/Accept
	Trichlorotrifluoroethane	ok	137	70	130	J+/Accept
All samples in this data set except 20A-TB01-090920-1 are qualified.						

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

The dissolved results exceeded the total results by a moderate amount for manganese and iron in sample 20A-AE108R1-090920-1. The total and dissolved manganese and iron results in this sample are qualified as estimated (J).

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:
VOCs – 8260C
1,4-Dioxane - 8270D
TOC – SM5310-B
EPH - MADEP EPH 12/2019
Arsenic, manganese, and iron – 6010D
Nitrate, nitrite, chloride, and sulfate – 300.0
Sulfide – SM4500-S D

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted or do to elevated concentrations of non-target analytes. Sample quantitation limits were raised accordingly.

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 14, 2020 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCG76574.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January 19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), select metals, total organic carbon (TOC), nitrate, nitrite, chloride, sulfate, and/or sulfide for the following samples was assessed:

An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for "Presumptive Certainty" status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

The dissolved results exceeded the total results by a moderate amount for manganese and iron in sample 20A-AE105R2-091720-1. The total and dissolved manganese and iron results in this sample are qualified as estimated (J).

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted or due to the presence of elevated concentrations of non-target analytes. The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

VOCs

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

Calibration	Compound	% RSD	QC limit	Actions (Detects/Nondetects)

LCS/LCSD Results

All percent recoveries (%Rs) and relative percent differences (RPDs) met the QC acceptance limits with the following exceptions. Only nonconformances resulting in data qualification are listed below.

VOCs

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit	Upper Limit	Data Validation Actions* (Detects/Nondetects)

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for "Presumptive Certainty" status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted or due to the presence of elevated concentrations of nontarget analytes. Sample quantitation limits were raised accordingly.

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol, with the exception of 1,4-dioxane in sample 20A-GZA105D-092420-1. The 7-day holding time was exceeded for the extraction of this sample for 1,4-dioxane, therefore, Presumptive Certainty status was not achieved for the reported result. The result is usable as an estimated concentration.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

*	General reporting issues

The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The PIANO data appear valid as reported, were qualified as indicated below, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

The initial calibration percent relative standard deviations (% RSDs) and the initial calibration and continuing calibration verification (ICV and CCV) percent differences (%Ds) were reviewed for conformance to the QC acceptance criteria. Nonconformances are tabulated below.

Calibration	Compound	%D	QC limit	Actions (Detects/Nondetects)
ICV 9/19/2020	Pentane	32.1	≤ 20%	J/UJ
	t-Butyl alcohol	32.3	≤ 20%	J/UJ
	Dodecane	28.6	≤ 20%	J/UJ
Associated samples: All samples				

General Reporting Issues

All sample results detected at concentrations less than the lowest calibration standard but greater than the MDL are qualified by the laboratory as estimated (J). This "J" qualifier is retained during data validation.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	YES
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2104188
Project Number:	60552044.24	**Report Date:**	02/08/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

This report replaces the one previously issued on February 3, 2021. The report has been amended to note the ICV outage that was omitted in the orginal submittal.

MCP Related Narratives

Canisters were released from the laboratory on January 25, 2021. The canister certification data is provided as an addendum.

MCP Volatile Organics in Air

In reference to question G:

One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The WG1460965-3 LCS recovery for 1,2,4-trichlorobenzene (161%) is above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of this analyte.

In reference to question H:

The continuing calibration standard, associated with L2104188-01 through -08, is outside the %D criteria for 1,2,4-Trichlorobenzene (61%D) and Hexachlorobutadiene (33%D); however, these targets are non-detect in the associated samples.

L2104188-01 through -08: The Total Ion Chromatographs were scanned for the ions associated with Methyl Acetate. This compound was not detected in these samples.

SAMPLE NARRATIVES

MCP-TO15-SIM L2104188-01 through -08: The Total Ion Chromatographs were scanned for the ions associated with Methyl Acetate. This compound was not detected in these samples.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

Subject	Data Validation Summary Lockheed Martin-Wilmington, MA Site Alpha Analytical SDG L2104188		
From	Lori Herberich		
Reviewed by	Kristin Rutherford		60552044.24
Date	February 8, 2021		

Data validation was performed on the data for seven indoor air samples and one ambient air sample collected at the Lockheed Martin site in Wilmington, MA on January 26, 2021. Alpha Analytical in Mansfield, MA analyzed the samples and reported the data in sample delivery group (SDG) L2104188.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January 19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the *Work Plan 2017-2022 Post-Temporary Solution Monitoring Program Former General Electric Site, 50 Fordham Road, Wilmington, MA, September 2017.* Current Region 1 data validation guidelines were also used as a reference during review of the data.

Data for the following samples were assessed:

Sample ID	Parameter
21A-AA1-1	VOCs by EPA Method TO-15 SIM
21A-IA2-1	
21A-IA3-1	
21A-IA4-1	
21A-IA7-1	
21A-IA8-1	
21A-IA8-2*	
21A-IA9-1	

*Field duplicate of 21A-IA8-1

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

- * Chain-of-custody (COC)/sample integrity
- * Holding times and sample preservation
- * Laboratory method blanks
- * Canister certification
- * GC/MS tuning#
- * Initial calibration/initial calibration and continuing calibration verifications#
- * Surrogate recoveries (%Rs)
- * Matrix duplicate (MD) results
- * Laboratory control sample (LCS) results
- * Field duplicate results
- * Internal standard performance
- * General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements.

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status.

The total ion chromatograms were scanned for the ions associated with methyl acetate. This compound was not detected in the samples.

The Reporting Limits for the following compounds exceed the Project Action Limits, as indicated in the Work Plan:

Dibromochloromethane
1,2-Dibromoethane (Ethylene Dibromide)
Hexachlorobutadiene
1,1,2,2-Tetrachloroethane

Subject: Notification of Groundwater Sampling - YRC Freight at 95 Concord Street - North Reading, MA - September-October 2020
Attachments: BWSC-123_Notif GW Sampling_Sept-Oct-2020.pdf

Ruben,

Attached please find a copy of BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted on the property at 95 Concord Street in North Reading, MA.

- The activities detailed in the form will be conducted onsite between the approximate dates of **September 1 and October 31, 2020**.
- The activities will be conducted per the conditions of the Access Agreement between YRC Freight and Lockheed Martin Corporation.
- Wells that may be sampled include AE-106 S/M/D/R located in the woods/wetlands, and AE-111R located in the paved parking area at the facility.
- We will visit the wells periodically during the sampling event, specifically on **Friday September 4** to pre-purge Flute wells, and **Wednesday September 8** for site-wide water level measurements. We will then conduct the groundwater sampling of the wells on YRC property for 1-2 days [exact dates TBD] between **September 9 and October 1**.
- Access is only needed to the localized area at each well. Our personnel will place cones around the wells but will not disrupt traffic flow at the facility.
- Each visit will include 1-2 people with 1-2 vehicles for durations ranging from 1 to 8 hours.

We would like permission to measure the depth to groundwater in select monitoring wells on the property during our site-wide measurement round on **Wednesday September 8**.
If this is acceptable we can contact Chuck Castelluccio, whom I have copied on this email, to coordinate logistics for water level measurements as we have done in the past.

Dylan Potter (cell 508-333-2316) is the Field Lead for this work. He will notify Mike Day at the YRC Terminal of our work dates, and will coordinate the work directly with the Mike. If Mike Day is no longer the facility Manager, we will introduce ourselves to the new manager and explain the work that we do per the access agreement.

Nicole Callahan and I are available at the office should you have any questions.

Thank you.

This Notice is Related to Release Tracking Number 03-0518

(Supplemental Page to BWSC-123 Form)

D.4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

This written notice satisfies the notification requirement from the access agreement in place between Howland Development Corporation and Lockheed Martin Corporation.

The following activities will be conducted onsite between the approximate dates of September 1 and October 31, 2020:

- Groundwater sample collection for laboratory analyses from up to four monitoring wells, AE-112D, AE-112R, plus MW-2 and MW-3 which AECOM has identified as HOW-2 and HOW-3 so as to not confuse them with other MW-2 and MW-3 locations previously existing as part of other sites in the area.

- The wells are located in the paved parking area around the building. AECOM will visit the wells periodically during the sampling event with tentative dates of September 4 and 8 for water level measurements, plus 1-2 days in September - October for groundwater sampling.

- Access is only needed to the localized area at each well. Each visit will include 1-2 people with 1-2 vehicles for durations of 1-8 hours. At no time will we disrupt traffic flow at the property or impede occupants use of the property.

Hi Eric,

It is that time of year again!

This email provides notification of upcoming groundwater monitoring activities to be conducted at monitoring wells in the Reading Town Forest.

- In 2020 we only plan to collect water level measurements from two wells, TRC-402 and TRC-403.
- We should only need to visit the wells one time, on Wednesday September 8 for the water level measurements.
- We do not plan to collect groundwater samples from these wells in 2020.

Dylan Potter (cell 508-333-2316) will be the primary contact in the field and will call you soon to work out logistics for access to the wells on September 8.

Nicole Callahan and I are available at the office should you have any questions.

Dylan or I will follow up with a phone call if don't hear back from you.

Thank you.

Hi Mark,

I just wanted to let you know that we will be conducting our annual groundwater sampling event for the former GE facility in Wilmington and North Reading between the approximate dates of September 1 and October 31, 2020. Attached please find a copy of the BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted from monitoring wells along the edge of Concord Rd in North Reading.

As in past rounds, we plan to use the Stickney Well road to access the woods and wetlands from Redmond Avenue. Today 8/14/20, Dylan Potter contacted the Water Dept regarding the new lock on the gate. The Water Dept contacted the Highway Dept who provided the combination and the Water Dept opened the lock for us. They allowed us to add our own padlock so that both the Town and AECOM have access to open the chain at the gate, but maintain it locked when not in use. As in past years, our use of the access road will be minimal, just one to two SUVs or pickup trucks with two to four people at a time. No big trucks or heavy equipment. We will contact Water Dept to relock gate when we are done with annual sampling and are ready to remove our lock.

Dylan Potter (cell 508-333-2316) will be the Field Lead for this work. If you have any questions or issues with reports from residents in the area, feel free to contact Dylan or me.

Our crews will be out there on **September 4 and 8** for water level measurements and then for **select days (TBD) in September - October** to conduct the groundwater sampling.

We plan to contact the Fletchers at 3 Furbish Pond Lane to request permission to measure the depth to water from their well on September 8. They have permitted us to measure their well for the past 4-5 years without issue. Other than that, we do not plan to contact any of the other residents.

Any questions, please feel free to call or email.

Thank you.

Subject: Planning for Wilmington Annual Groundwater Sampling - September-October 2020

Hi Gary,

I hope this email finds you well during these times.

Please see the attached MassDEP form we are required to send to property owners to notify of our upcoming annual groundwater sampling event.

We plan to conduct the work between the dates of **September 1 and October 1, 2020**, with occasional brief site visits in August, and October – November 2020.

Same as in past years, the sampling requires us to access wells within Building 1 (UPS). We understand the need to coordinate work with your schedule. As in the past we will coordinate all indoor work to minimize the time we spend inside the building. We have the following tentative dates for work inside Building 1; please let us know if these dates work.

- water level measurements - **Wednesday September 8** - requires roughly 3 hrs to measure all wells inside
- groundwater sampling - **Monday-Tuesday September 14-15** – requires one full day, and a second day that we can hopefully limit to a partial day depending on the conditions.

I will follow up with a phone call next week to discuss with you the schedule for this sampling event.

Regards.
Scott

Attachments: BWSC-123_Notif GW Sampling_Sept-Oct-2020.pdf

Ruben,

Attached please find a copy of BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted on the property at 95 Concord Street in North Reading, MA.

- The activities detailed in the form will be conducted onsite between the approximate dates of **September 1 and October 31, 2020**.
- The activities will be conducted per the conditions of the Access Agreement between YRC Freight and Lockheed Martin Corporation.
- Wells that may be sampled include AE-106 S/M/D/R located in the woods/wetlands, and AE-111R located in the paved parking area at the facility.
- We will visit the wells periodically during the sampling event, specifically on **Friday September 4** to pre-purge Flute wells, and **Wednesday September 8** for site-wide water level measurements. We will then conduct the groundwater sampling of the wells on YRC property for 1-2 days [exact dates TBD] between **September 9 and October 1**.
- Access is only needed to the localized area at each well. Our personnel will place cones around the wells but will not disrupt traffic flow at the facility.
- Each visit will include 1-2 people with 1-2 vehicles for durations ranging from 1 to 8 hours.

We would like permission to measure the depth to groundwater in select monitoring wells on the property during our site-wide measurement round on **Wednesday September 8**.
If this is acceptable we can contact Chuck Castelluccio, whom I have copied on this email, to coordinate logistics for water level measurements as we have done in the past.

Dylan Potter (cell 508-333-2316) is the Field Lead for this work. He will notify Mike Day at the YRC Terminal of our work dates, and will coordinate the work directly with the Mike. If Mike Day is no longer the facility Manager, we will introduce ourselves to the new manager and explain the work that we do per the access agreement.

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Nathan and Lindsay Fletcher

Subject: 2020 Irrigation Well Groundwater Measurement Results

Dear Mr. and Mrs. Fletcher,

On September 8, 2020, AECOM under contract to Lockheed Martin Corporation obtained groundwater elevation data with your permission from the irrigation well located on your property at 3 Furbish Pond Lane. This effort was performed as part of environmental monitoring that is being conducted associated with the former GE Facility at 50 Fordham Road, Wilmington, MA. This letter summarizes the information developed from that event.

Massachusetts environmental regulations require notification to a property owner when environmental data are collected at a property on behalf of someone other than the owner of the property. Therefore, we are providing you with the data that we collected, specifically the depth to groundwater measurements and the calculated groundwater elevations.

Data from irrigation well located at #3 Furbish Pond Lane

Depth to water (from reference elevation) September 8, 2020: 25.26 ft (did not measure total depth)
Groundwater elevation on September 8, 2020 = 103.21 (Ref Elev.) – 25.26 ft = 77.95 ft NAVD29.

The groundwater elevations at your property are higher than those in the nearby wetlands and in the vicinity of the former GE Facility at 50 Fordham Road indicating that it would not be likely that any groundwater impacts from that site would come to be located beneath your property.

Should you be interested in more information, additional public involvement opportunities for this site are available by reviewing documents in the project repository located at the North Reading Flint Memorial Library (147 Park Street), on the Lockheed Martin project-specific website located at http://www.lockheedmartin.com/us/who-we-are/eesh/remediation/wilmington/archive.html., or on the MassDEP's website. If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

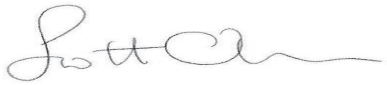
YRC Freight Property at 95 Concord Street – N. Reading, MA



Dear Mr. Byerley,

In September 2020, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from nine monitoring wells (AE-106S, AE-106D, AE-106-R1-R3-R5 and AE-111-R1-R3-R5-R7) located on your property at 95 Concord Street in N. Reading, MA.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2020 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2020 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

(Supplemental Page to BWSC-123 Form)

D.4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

The following activities will be conducted onsite:

- Indoor air sampling will be conducted at 7 locations within Building 1, with five locations on the main level and one on the second leve. One ambient air sample will be collected outside of Building 1. These samples will be *collected* over an 8-hour duration during normal business day-time hours, between approximately 9:00 or 10:00 am to 5:00 or 6:00 pm. AECOM will conduct one brief (up to one 1 hour) site visit on January 19 to observe current UPS operations, and then conduct the sampling on January 26. We will update you via electronic mail and/or phone call if there is any need to change dates.

- For the indoor air sampling, regulations require the building heating system to be in operation for the 72 hrs prior sample collection. Tenants should operate their heating systems as they normally would during their occupancy in Building 1 at this time of year. We understand that UPS may have the heating system set to maintain temperatures lower than for typical occupancy based on the nature of their operations.
