SDG Comments

March 19, 2020

SDG I.D.: GCE14952

Phoenix reporting levels may exceed those referenced in the CAM protocol. Please refer to criteria sheet for comparisons to requested MCP standards.

Revision 2
The EPH acceptance ranges were modified.

Revision 3
This report has been revised to include the area of all peaks eluting within the retention time windows specified for the Unadjusted C5-C8 aliphatic range, excluding surrogates. The final concentration reported as C5-C8 aliphatic hydrocarbons may be biased high by the presence of non-petroleum compounds eluting in the range, primarily PCE & TCE.

Revision 4
This report has been revised to be consistent with Revision 2 for samples CE14959 & CE14962 VPH Targets.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH Analysis Comment:
8260 Identified compounds are included in the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH Analysis Comment:
8260 Identified compounds are included in the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

SDG I.D.: GCE16341

Phoenix reporting levels may exceed those referenced in the CAM protocol. Please refer to criteria sheet for comparisons to requested MCP standards.

Version 2:
Changes made to 1,4-Dioxane QC batch 498505.

Version 3:
VOC Batch 499706, QC Sample CE16348: cis-1,2-dichloroethene revised.
VOC Batch 500127, QC Sample CE16346: cis-1,2-dichloroethene revised.
EPH Target criteria revised.

Revision 4
This report has been revised to include the area of all peaks eluting within the retention time windows specified for the Unadjusted C5-C8 aliphatic range, excluding surrogates. The final concentration reported as C5-C8 aliphatic hydrocarbons may be biased high by the presence of non-petroleum compounds eluting in the range, primarily PCE & TCE.

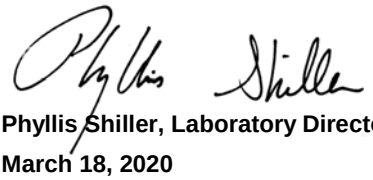
Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.



VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon, Nitrite Analysis comment:

VPH Analysis Comment:
8260 Identified compounds are included in the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

VPH Analysis Comment:
8260 Identified compounds are included in the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

SDG I.D.: GCE16341

SDG Comments

Metals Analysis: CE16341, CE16347, CE16348
The client requested a shorter list of elements than the 6010 MCP list. Only Arsenic, Iron and Manganese are reported as requested on the chain of custody.

8260 Volatile Organics:

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Subject: Incoming samples COC Correction Lockheed, Wilmington, MA 9-26-2019

Hi Rebecca,
For the incoming samples from Wilmington, there is a slight error on the chain:

19A-STM-8D-092619-1 should NOT be analyzed for total and dissolved As, Fe, and Mn.

19A-GZA10-092619-1 SHOULD be analysed for total and dissolved As, Fe, and Mn.

Sorry for the confusion.

Thanks,
Adam

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate

SDG Comments

Metals Analysis: CE23310
The client requested a shorter list of elements than the 6010 MCP list. Only Arsenic, Iron and Manganese are reported as requested on the chain of custody.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.
1,4-Dioxane does not meet the GW-1 criteria. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved due to the presence of target and non target compounds. Please refer to the Sample Criteria Exceedances section of this report.

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 500484 (Samples: CE23304, CE23305, CE23306, CE23307, CE23309, CE23311): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (2,2-Dichloropropane)

The MS/MSD RPD exceeds the method criteria for one or more analytes, therefore there may be variability in the reported result. (1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dibromoethane, 1,2-Dichloroethane, 2-Hexanone, 4-Methyl-2-pentanone, Acetone, Bromomethane, Carbon tetrachloride, Chloroethane, Chloromethane, Dibromochloromethane, Dichlorodifluoromethane, Hexachlorobutadiene, Trichlorofluoromethane, Trichlorotrifluoroethane, Vinyl chloride)

The QC recovery for one or more analytes is above the upper range but were not reported in the sample(s), therefore no significant bias is suspected. (Dichlorodifluoromethane, Trichlorofluoromethane)

Subject: Chain of Custody Error

Hi Rebecca,

On today's COC, sample ID 19A-TRC401-093019-1 should actually be 19A-TRC401R-093019-1. I forgot the "R" in the ID name.

Thank you!

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 12 and 13, 2019 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCE09538.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), and/or select metals for the following samples was assessed:

The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

VOCs

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), percent differences or percent drifts (%Ds) that did not meet the QC limits.

LCS/LCSD Results

All percent recoveries (%Rs) and relative percent differences (RPDs) met the QC acceptance limits with the following exceptions. Only nonconformances resulting in data qualification are listed below.

VOCs

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit	Upper Limit	Data Validation Actions (Detects/Nondetects)

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

VOCs

19A-IP1R2-091319-1, tetrachloroethene and trichloroethene 400x, all other compounds 40x

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, as noted above, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:

VOCs – 8260C
VPH – MADEP VPH 5/2004
EPH - MADEP EPH 5/2004
Arsenic, manganese, and iron – 6010C

EPH - MADEP EPH 5/2004

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 18 and 19, 2019 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCE13428.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), select metals, total organic carbon (TOC), nitrate, nitrite, chloride, sulfate, and/or sulfide for the following samples was assessed:

Surrogate Recoveries

The recovery of surrogate toluene-d8 exceeded the QC acceptance limits for the 20x analysis of sample 19A-AE103R3-091819-1. Positive results reported from the 20x analysis of sample 19A-AE103R3-091819-1 are qualified as estimated (J+), nondetects are not affected.

LCS/LCSD Results

VOCs

The LCS and/or LCSD percent recoveries fell below the QC acceptance limits for the compounds tabulated below. Only nonconformances resulting in qualification of sample results are tabulated below.

	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit	Upper Limit	Data Validation Actions (Detects/Nondetects)
Batch 498452	Ethyl ether	68	ok	70	130	J-/UJ
	Tetrahydrofuran	66	ok	70	130	J-/UJ
Associated samples: 19A-TB01-091819-1						

Field Duplicate Results

Relative percent differences (RPDs) met the QC criterion of <30% for all analytes in field duplicate pair 19A-MW4-091919-1/19A-MW4-091919-2. RPDs met the QC criterion of <30% for all analytes except trichloroethene in field duplicate pair 19A-AE109R7-091819-1/19A-AE109R7-091819-2. The positive results for trichloroethene in samples 19A-AE109R7-01819-1 and 19A-AE109R7-091819-2 are qualified as estimated. Only samples 19A-AE109R7-01819-1 and 19A-AE109R7-091819-2 were qualified since the RPD for trichloroethene was acceptable for field duplicate pair 19A-AE109R7-091819-1/19A-AE109R7-091819-2.

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

For samples 19A-AE103R1-091819-1, 19A-AE109R5-091819-1, and 19A-AE109R2-091819-1 the final concentration reported as C5-C8 aliphatic hydrocarbons may be biased high by the presence of non-petroleum compounds eluting in the range, primarily tetrachloroethene and trichloroethene.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, as noted above, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for "Presumptive Certainty" status for all parameters for which there is a CAM protocol.

For samples 19A-AE26R1-092319-1, 19A-AE28R2-092319-1, and 19A-AE23R-092319-1 the final concentration reported as C5-C8 aliphatic hydrocarbons may be biased high by the presence of non-petroleum compounds eluting in the range, primarily tetrachloroethene and trichloroethene.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

VOCs

19A-AE26R5-092319-1: tetrachloroethene and trichloroethene 100x, 20x all others
19A-AE26S-092319-1: cis-1,2-dichloroethene 2x
19A-AE28R1-092319-1: tetrachloroethene and trichloroethene 500x, 100x all others
19A-AE28R2-092319-1: tetrachloroethene and trichloroethene 1000x, 100x all others
19A-AE28R3-092319-1: tetrachloroethene and trichloroethene 500x, 100x all others
19A-AE28R4-092319-1: tetrachloroethene and trichloroethene 500x, 100x all others
19A-AE23R-092319-1: tetrachloroethene and trichloroethene 10,000x, 1000x all others
19A-AE24-092319-1: tetrachloroethene 400x, 100x all others
19A-AE26R1-092319-1: cis-1,2-dichloroethene, tetrachloroethene and trichloroethene 20x, 5x all others
19A-AE26R2-092319-1: trichloroethene and cis-1,2-dichloroethene 5x, 2x all others

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

For samples 19A-AE29R6-092419-1 and 19A-AE102RR6-092419-1the final concentration reported as C5-C8 aliphatic hydrocarbons may be biased high by the presence of non-petroleum compounds eluting in the range, primarily tetrachloroethene and trichloroethene.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

VOCs

19A-AE102RR2-092419-1: 5x all compounds
19A-AE102RR4-092419-1: 20x for tetrachloroethene and trichloroethene, 20x all others
19A-AE102RR5-092419-1: 100x trichloroethene, 20x others
19A-AE102RR6-092419-1: 100x trichloroethene, 20x others
19A-AE29R6-092419-1: 5x all compounds

1,4-Dioxane

19A-AE29R6-092419-1: 5x
19A-AE102RR6-092419-1: 5x

Nitrite

19A-AE29R6-092419-1: 10x due to interference from elevated level of chloride.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, as noted above, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.
The following methods were used to analyze samples:

VOCs – 8260C
1,4-Dioxane - 8270D
TOC – SM5310-B
VPH – MADEP VPH 5/2004
EPH - MADEP EPH 5/2004
Arsenic, manganese, and iron – 6010C
Nitrate, nitrite, chloride, and sulfate – 300.0
Sulfide – SM4500-S D

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

The following samples were diluted at the noted dilution factor due to concentrations of one or more compounds which would have exceeded the calibration range if analyzed undiluted. Sample quantitation limits were raised accordingly.

VOCs

19A-AE101R6-093019-1: cis-1,2-dichloroethene and trichloroethene 200x, 20x all others
19A-AE101D-093019-1: cis-1,2-dichloroethene 20x
19A-EMW10D-093019-1: tetrachloroethene and trichloroethene 20x
19A-TRC401R-093019-1: tetrachloroethene and trichloroethene 400x, 20x all others

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, as noted above, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:

1,4-Dioxane - 8270D
Arsenic, manganese, and iron – 6010C

In addition to the low MSD recoveries tabulated above, the MS/MSD RPDs for the C9-C18 aliphatic hydrocarbon range, benzo(g,h,i)perylene, and dibenz(a,h) anthracene exceeded the QC limit. Further qualification is not required.

The following method was used to analyze the samples:

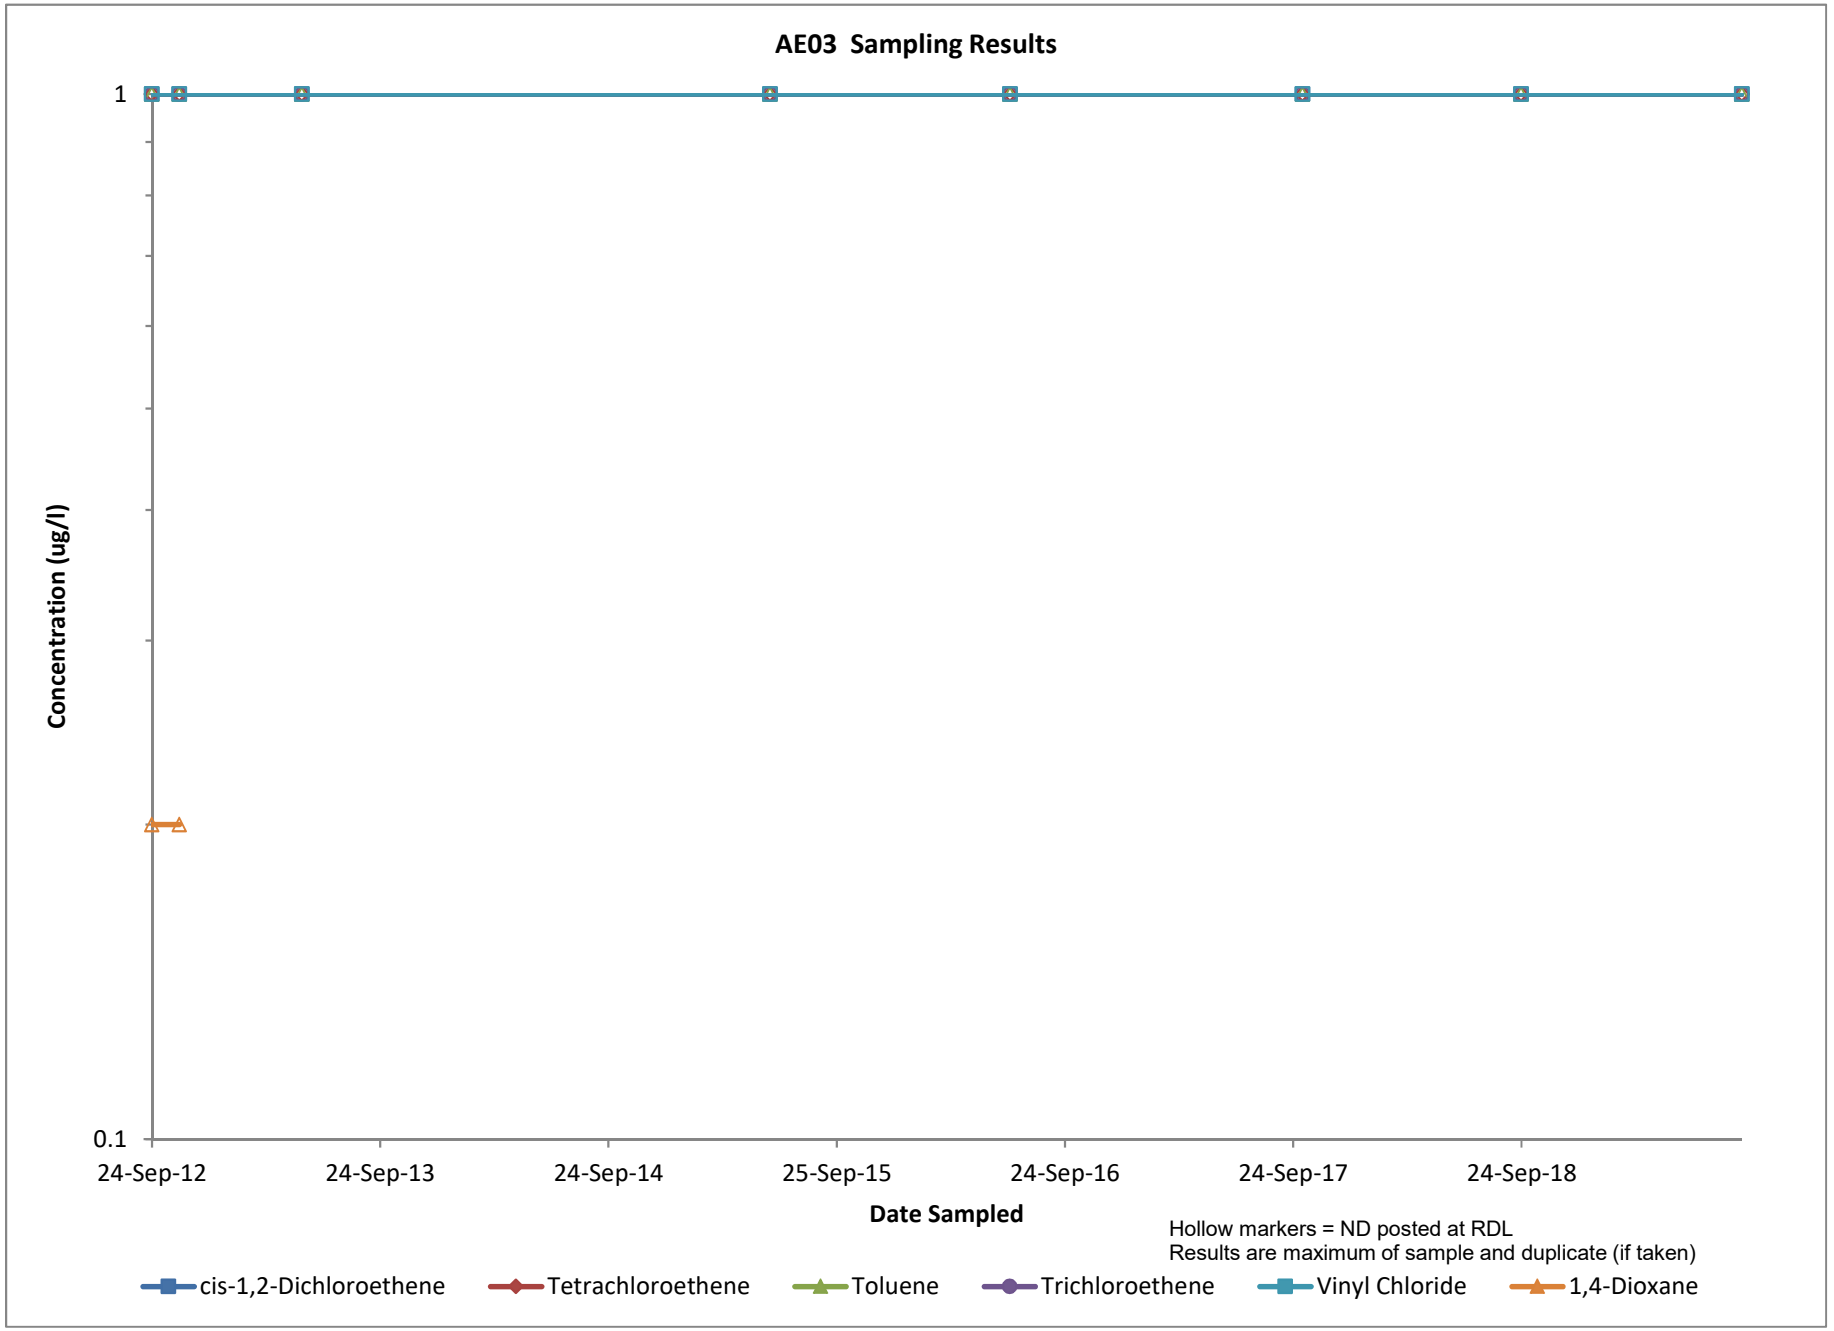
Dissolved Gases– Laboratory SOP AM20GAX based on RSK 175 [Hydrogen, Methane, Ethane, Ethene, Acetylene and Propane]

DATA REVIEW ELEMENTS

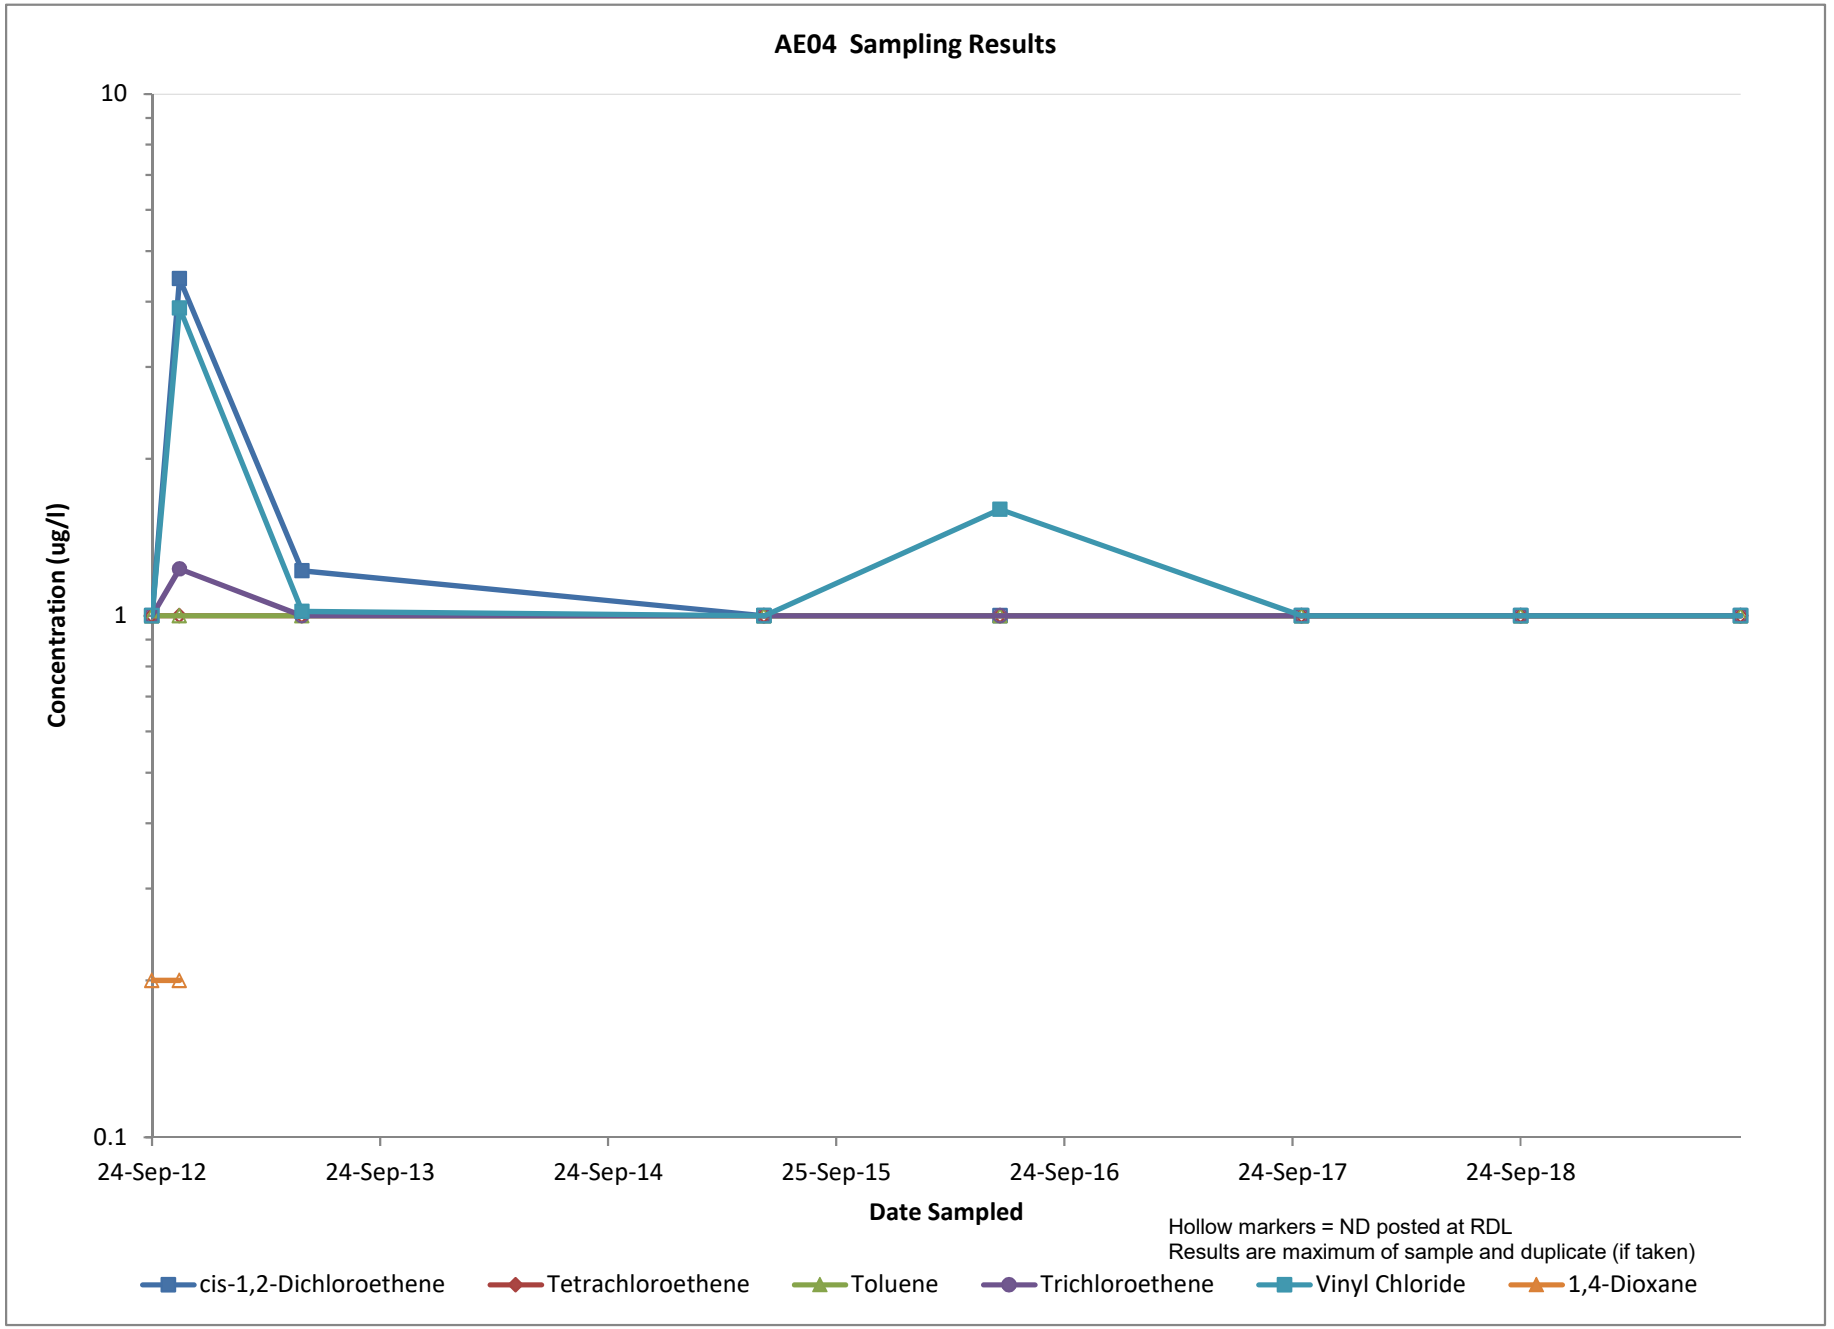
The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
NA	Initial calibration/initial calibration and continuing calibration verifications
*	Laboratory blanks
	Trip blank/Equipment blanks
	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
*	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Field duplicate results
*	General reporting issues

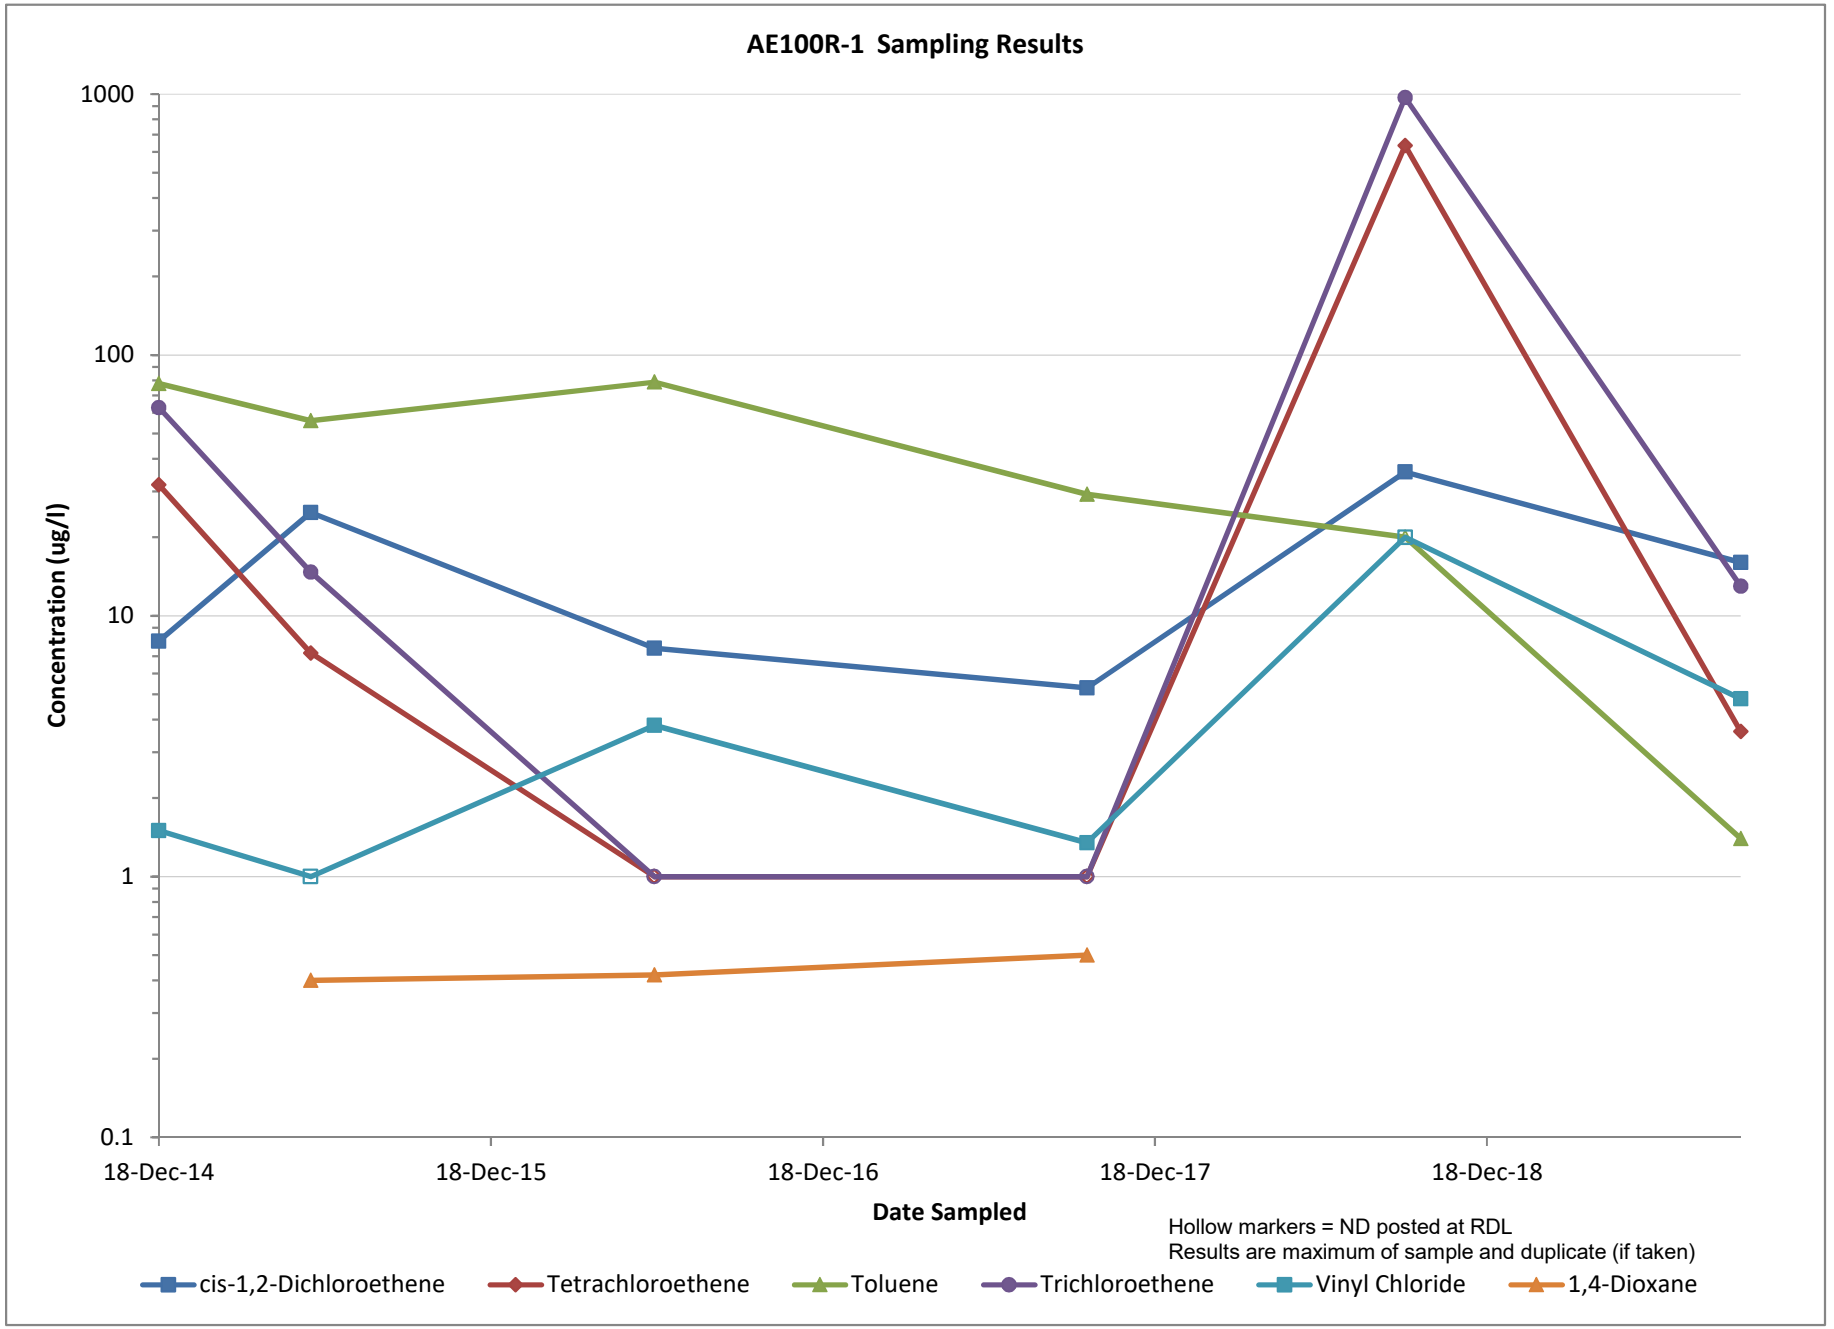
The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An “NA” indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.



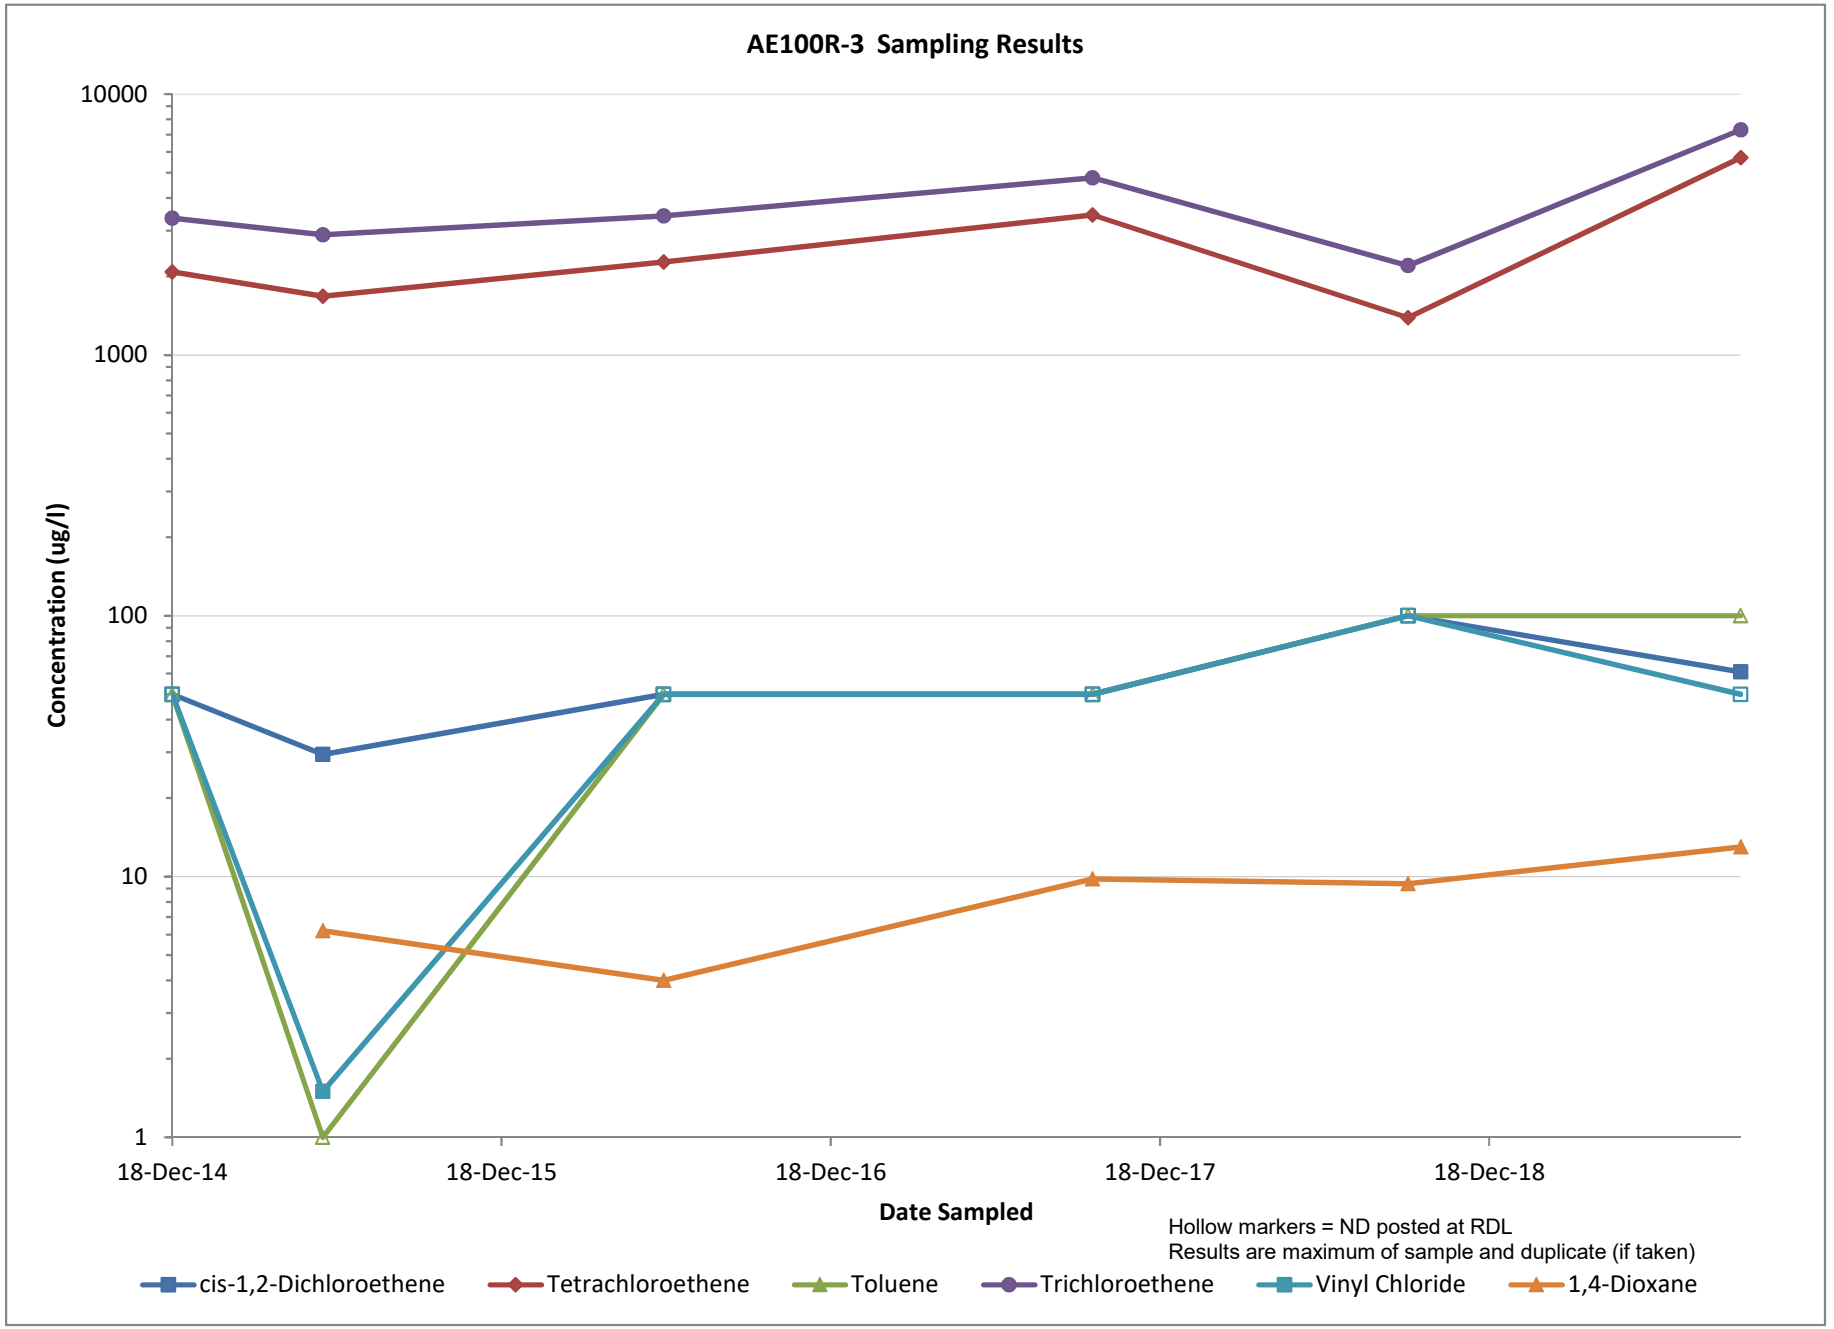
Trip Blanks/Equipment Blanks



Ethene was detected in trip blank sample 19A-TB01-092319-1. Results for ethene in associated samples 19A-GZA101R-092619-1 and 19A-STM8R1-092619-1 in work order 31567 were qualified as nondetect (U) at the reporting limit.



MS/MSD Results



The percent recoveries fell below the QC acceptance limits for the MS/MSD analyses performed on sample 19A-AE108R1-092419-1 reported in work order 31567. The positive methane results in all samples in work order 31567 were qualified as estimated with a low bias (J-).

Nathan and Lindsay Fletcher

Subject: 2019 Irrigation Well Groundwater Measurement Results

Dear Mr. and Mrs. Fletcher,

On September 13, and November 11, 2019, AECOM under contract to Lockheed Martin Corporation obtained groundwater elevation data with your permission from the irrigation well located on your property at 3 Furbish Pond Lane. This effort was performed as part of environmental monitoring that is being conducted associated with the former GE Facility at 50 Fordham Road, Wilmington, MA. This letter summarizes the information developed from that event.

Massachusetts environmental regulations require notification to a property owner when environmental data are collected at a property on behalf of someone other than the owner of the property. Therefore, we are providing you with the data that we collected, specifically the depth to groundwater measurements and the calculated groundwater elevations.

Data from irrigation well located at #3 Furbish Pond Lane

Depth to water (from reference elevation) October 2, 2019: 47.73 ft (did not measure total depth)
Groundwater elevation on October 2, 2019 = 103.21 (Ref Elev.) – 47.73 ft = 55.48 ft NAVD29.

Depth to water (from reference elevation) Novemer 11, 2019: 13.91 ft (did not measure total depth)
Groundwater elevation on November 2, 2019 = 103.21 (Ref Elev.) – 13.91 ft = 89.30 ft NAVD29.

The groundwater elevations at your property are higher than those in the nearby wetlands and in the vicinity of the former GE Facility at 50 Fordham Road indicating that it would not be likely that any groundwater impacts from that site would come to be located beneath your property.

Should you be interested in more information, additional public involvement opportunities for this site are available by reviewing documents in the project repository located at the North Reading Flint Memorial Library (147 Park Street), on the Lockheed Martin project-specific website located at http://www.lockheedmartin.com/us/who-we-are/eesh/remediation/wilmington/archive.html., or on the MassDEP's website. If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Subject: September 2019 Groundwater Analytical Results
50 Fordham Road, Wilmington, MA

Dear Mr. Polk,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from 16 monitoring wells (MW-5, MW-7, GZA-14A, AE-109D, AE-109R (R1 through R8), and AE-110R (R1-R2-R4-R6) located on your property at 99 Concord Street in N. Reading, MA.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the owner of the property. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2019 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2019 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. Of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.
8260 Identified compounds were deleted from the C5-C8 Aliphatic Range.

Volatile Comment:

Subject: September 2019 Groundwater Sampling Analytical Results
Property at 87 Concord Street – North Reading, MA

Dear Mr. St. Pierre,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from five monitoring wells AE-112D and AE-112R (ports R1, R3, R5, R6) located on your property at 87 Concord Road in North Reading, MA. Monitoring wells HOW-2 and HOW-3 (also known as MW-2 and MW-3) were not sampled in September 2019.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2019 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September - September 2019 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Subject: September 2019 Groundwater Analytical Results
0 Furbish Pond Lane, North Reading, MA

Dear Ed and Gail,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from one monitoring well (PS-8D) located on your property at 0 Furbish Pond Lane in North Reading, MA.

The Site at 50 Fordham Rd, Wilmington, MA is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the owner of the property. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2019 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2019 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

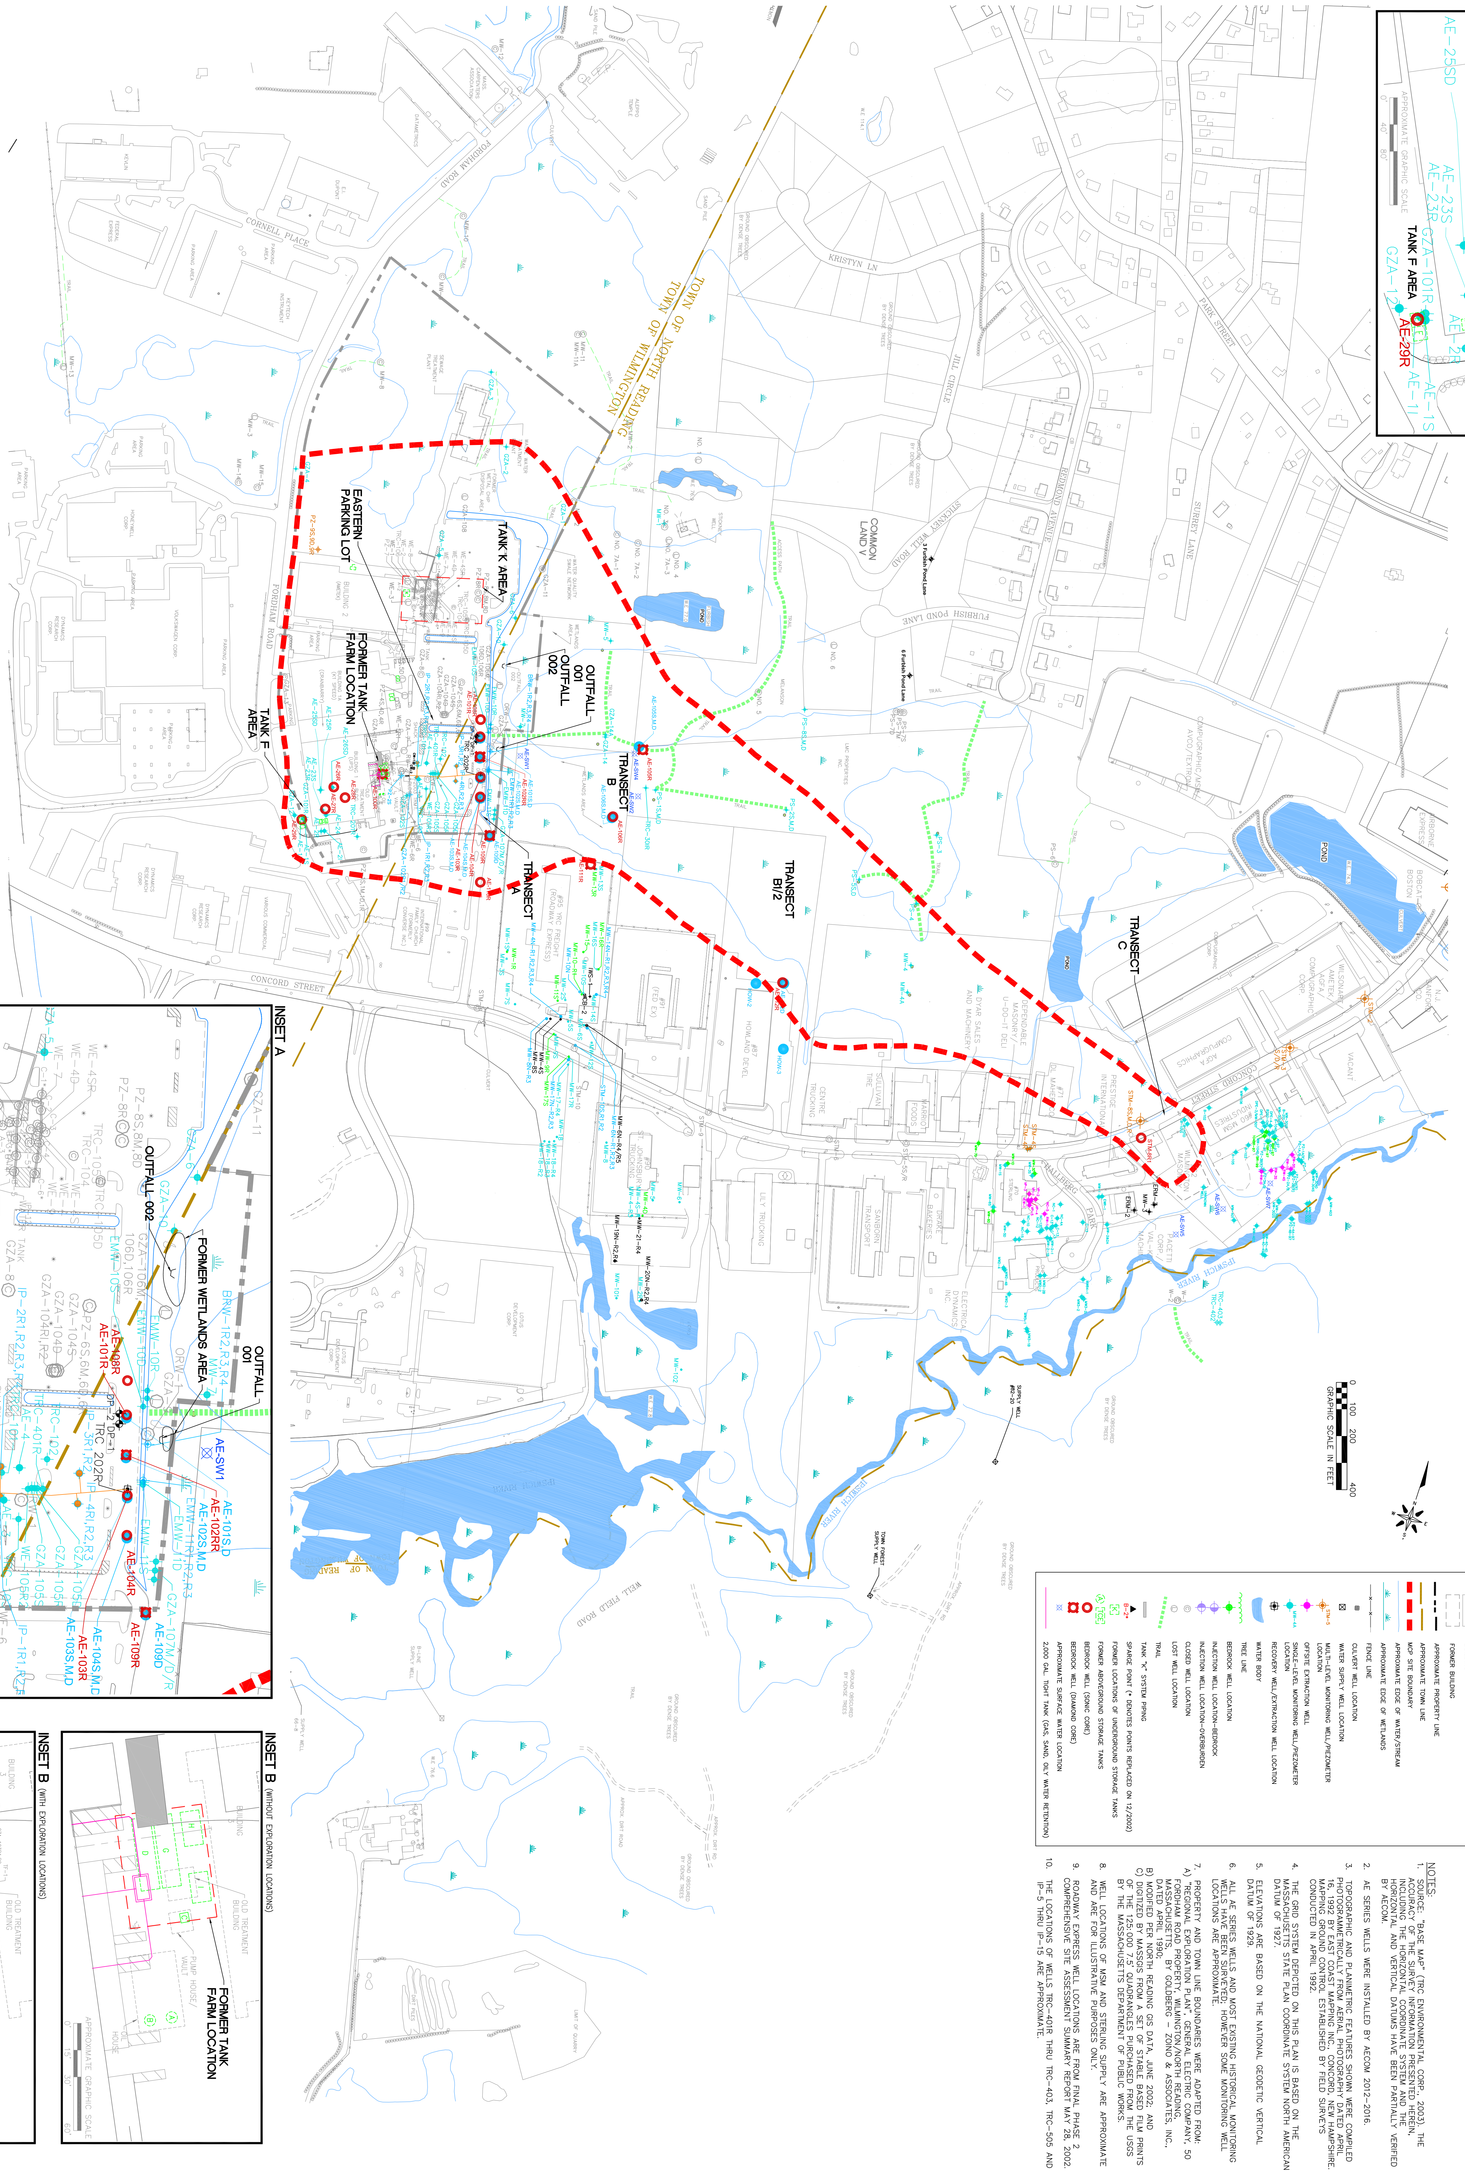
PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION



Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Subject: September 2019 Groundwater Analytical Results
Former GE Facility – 50 Fordham Road, Wilmington, MA

Dear Mr. Clark,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from 3 monitoring wells (STM-3D and STM-8D/R) located within the right-of-way along Concord St in North Reading.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the groundwater sampling, and a map of the sampling locations close to your property lines. We have included summary tables of the September 2019 groundwater analytical results with a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Subject: September 2019 Groundwater Analytical Results
62 Concord Street, Wilmington, MA

Dear Mr. Gagne,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected a groundwater sample from one monitoring well (STM-8R1) located on your property as part of the ongoing work relating to the former GE facility formerly located at 50 Fordham Rd in Wilmington, MA.

The former GE facility is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2019 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2019 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Subject: September 2019 Groundwater Analytical Results
50 Fordham Road, Wilmington, MA

Dear Mr. Stanieich,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from 72 monitoring well [screen intervals] located on your property at 40-50 Fordham Road in Wilmington and North Reading, MA. This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP).

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2019 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2019 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. Of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.
8260 Identified compounds were deleted from the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon
8260 Identified compounds were deleted from the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon, Nitrite Analysis comment:
8260 Identified compounds were deleted from the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Nitrite Analysis comment:
Due to interference from a large amount of chloride in the sample, a dilution was required causing the reporting level to be elevated.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon
8260 Identified compounds were deleted from the C5-C8 Aliphatic Range.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Subject: September 2019 Groundwater Sampling Analytical Results
YRC Freight Property at 95 Concord Street – N. Reading, MA

Dear Mr. Byerley,

In September 2019, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from nine monitoring wells (AE-106S, AE-106D, AE-106-R1-R3-R5 and AE-111-R1-R3-R5-R7) located on your property at 95 Concord Street in N. Reading, MA.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2019 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2019 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.
