RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Comment:

This batch consists of a Blank, LCS and LCSD.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ30888, CJ30889, CJ30890, CJ30891, CJ30892, CJ30893, CJ30894, CJ30895, CJ30896, CJ30897

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☑	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☐ Yes ☑ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Sections: EPH, VOA Narrations .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 12, 2021

SDG I.D.: GCJ30888

SDG Comments

CJ30895 - The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

Phoenix reporting levels may exceed those referenced in the CAM protocol. Please refer to criteria sheet for comparisons to requested MCP standards.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

Sample CJ30892, CJ30893, and CJ30897
Sample(s) required a dilution for Volatiles due to the presence of target and/or non-target compounds. This resulted in elevated reporting limits that exceed the requested criteria for one or more analytes.

CJ30897 required an additional dilution for Trichloroethene and was analyzed past hold time for Volatiles (SW8260C).

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 09/20/21-1 Adam Werner, Chemist 09/20/21

CJ30892 (1X), CJ30893 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0507):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/0920_04-DIOX_0507) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 592430 (CJ29232)

CJ30892, CJ30893

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 12, 2021

SDG I.D.: GCJ30888

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 592843 (Samples: CJ30889, CJ30894): -----

The LCSD recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (C36 - Hexatriacontane)

The LCS/LCSD RPD exceeds the method criteria for one analyte. This analyte was not reported in the sample(s). No significant variability is suspected. (C36 - Hexatriacontane)

Instrument:

AU-FID4 09/22/21-1 Adam Werner, Chemist 09/22/21

CJ30889 (1X), CJ30894 (1X)

The initial calibration (AL0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 592843 (CJ29233)

CJ30889, CJ30894

All LCS recoveries were within 40 - 140 with the following exceptions: None.
All LCSD recoveries were within 40 - 140 with the following exceptions: C36 - Hexatriacontane(154%)
All LCS/LCSD RPDs were less than 25% with the following exceptions: C36 - Hexatriacontane(32.5%)
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Instrument:

ARCOS 09/20/21 08:34 Cindy Pearce, Emily Kolominskaya, Chemist 09/20/21

CJ30895

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

ARCOS 09/21/21 08:04 Cindy Pearce, Emily Kolominskaya, Chemist 09/21/21

CJ30895

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.

MCP Certification Report

October 12, 2021

SDG I.D.: GCJ30888

SVOASIM Narration

All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional 8270 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593833 (Samples: CJ30888, CJ30891, CJ30892, CJ30893, CJ30894, CJ30895): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (1,2-Dibromo-3-chloropropane)

QC Batch 593847 (Samples: CJ30897): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (1,2-Dibromo-3-chloropropane)

The MS and/or the MSD recovery is above the upper range for analytes that were not reported in the sample(s). No significant bias is suspected. (1,1,1-Trichloroethane, Carbon tetrachloride, Chloroethane, Trichlorofluoromethane, Vinyl chloride)

The MSD recovery is above the upper range, therefore a high bias is possible. (1,1-Dichloroethene)

QC Batch 593886 (Samples: CJ30889, CJ30890, CJ30892, CJ30893, CJ30896): -----

The LCS/LCSD recovery is above the upper range for one or more analytes that were not reported in the sample(s), therefore no significant bias is suspected. (Chloroethane, Trichlorofluoromethane)

The LCS recovery is above the upper range, therefore a high bias is possible. (Vinyl chloride)

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

QC (Site Specific):

Batch 593847 (CJ30897) CHEM23 9/27/2021-3

CJ30897(20X)

All LCS recoveries were within 70 - 130 with the following exceptions: 1,2-Dibromo-3-chloropropane(140%)
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
All MS recoveries were within 70 - 130 with the following exceptions: Carbon tetrachloride(142%), Chloroethane(140%), Trichlorofluoromethane(153%), Vinyl chloride(140%)
All MSD recoveries were within 70 - 130 with the following exceptions: 1,1,1-Trichloroethane(131%), 1,1-Dichloroethene(133%), Chloroethane(140%), Trichlorofluoromethane(158%), Vinyl chloride(144%)
All MS/MSD RPDs were less than 20% with the following exceptions: None.
A matrix effect is suspected when a MS/MSD recovery is outside of criteria. No further action is required if LCS/LCSD compounds are within criteria.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

MCP Certification Report

October 12, 2021

SDG I.D.: GCJ30888

VOA Narration

Batch 594454 (CJ30897) CHEM23 9/27/2021-3

CJ30897(50X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
All MS recoveries were within 70 - 130 with the following exceptions: None.
All MSD recoveries were within 70 - 130 with the following exceptions: None.
All MS/MSD RPDs were less than 20% with the following exceptions: None.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

We attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

VPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

PIDFID 09/17/21-1 Raman Makol, Chemist 09/17/21

CJ30889 (1X), CJ30894 (1X)

Initial Calibration Evaluation (PIDFID/VPH_091621_T):
The following compounds exceeded %RSD criteria: None.

QC (Batch Specific):

Batch 592657 (CJ30902)

CJ30889(1X), CJ30894(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
This batch consists of a Blank, LCS and LCSD.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

% 2,5-Dibromotoluene (PID)	98	%	94	97	3.1				70 - 130	25
% 2,5-Dibromotoluene (FID)	99	%	96	95	1.0				70 - 130	25

Comment:

This batch consists of a Blank, LCS and LCSD.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ31565, CJ31566, CJ31567, CJ31568, CJ31569, CJ31570, CJ31571, CJ31572, CJ31573, CJ31574, CJ31575, CJ31576, CJ31577, CJ31578, CJ31579, CJ31580, CJ31581, CJ31582

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☐ Yes ☑ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Sections: EPH, SVOASIM, VOA Narrations .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 06, 2021

SDG I.D.: GCJ31565

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.
1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 09/24/21-1 Adam Werner, Chemist 09/24/21

CJ31573 (1X), CJ31574 (1X), CJ31575 (1X), CJ31579 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0507):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/0924_04-DIOX_0507) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 593240 (CJ31559)

CJ31573, CJ31574, CJ31575, CJ31579

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 06, 2021

SDG I.D.: GCJ31565

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593018 (Samples: CJ31572, CJ31574, CJ31575): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (C18 - Octadecane)

QC Batch 593413 (Samples: CJ31573): -----

The LCS/LCSD is below the method criteria. A low bias is possible. (C9 - Nonane)

One or more surrogates is above the upper range. No significant bias is suspected. (% 2-Bromonaphthalene (Fractionation), % 2-Fluorobiphenyl (Fractionation))

Instrument:

AU-FID3 09/23/21-1 Adam Werner, Chemist 09/23/21

CJ31572 (1X)

No significant modifications were made to the EPH method, as specified in Section 11.3 of the method.

The initial calibration (AR0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

AU-FID3 09/24/21-1 Adam Werner, Chemist 09/24/21

CJ31573 (1X)

No significant modifications were made to the EPH method, as specified in Section 11.3 of the method.

The initial calibration (AR0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

AU-FID4 09/22/21-1 Adam Werner, Chemist 09/22/21

CJ31572 (1X), CJ31574 (1X), CJ31575 (1X)

The initial calibration (AL0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

AU-FID4 09/24/21-1 Adam Werner, Chemist 09/24/21

CJ31573 (1X)

The initial calibration (AL0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 593018 (CJ31474)

CJ31572, CJ31574, CJ31575

All LCS recoveries were within 40 - 140 with the following exceptions: C18 - Octadecane(143%)
All LCSD recoveries were within 40 - 140 with the following exceptions: None.
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

Wet Chemistry Analysis

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

BECKMAN DU720 09/20/21-1 Greg Danielewski, Chemist 09/20/21

CJ31572 , CJ31573

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

BECKMAN DU720 09/23/21-2 Greg Danielewski, Chemist 09/23/21

CJ31574 , CJ31575

The initial calibration met all criteria including a standard run at the reporting level.
All method verification standards and blanks met criteria.

QC (Batch Specific):

Batch 592776 (CJ29233)

CJ31572, CJ31573

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 90-110% MS acceptance range 75-125%.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 593014 (CJ32216)

CJ31572, CJ31573, CJ31574, CJ31575

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Batch 593190 (CJ31574)

CJ31574, CJ31575

All LCS recoveries were within 85 - 115 with the following exceptions: None.
Additional: LCS acceptance range is 90-110% MS acceptance range 75-125%.
Additional: LCS acceptance range is 85-115% MS acceptance range 75-125%.

Certification Report

October 06, 2021

SDG I.D.: GCJ31565

ICP Metals Narration

The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration range.
The continuing calibration blanks were less than the reporting level for the elements reported.
The ICSA and ICSAB were analyzed at the beginning and end of the run and were within criteria.The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

QC (Batch Specific):

Batch 592755 (CJ31413)

CJ31566, CJ31572, CJ31573

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

Batch 592756 (CJ31574)

CJ31566, CJ31572, CJ31573, CJ31574, CJ31575, CJ31577

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

Batch 592915 (CJ31577)

CJ31574, CJ31575, CJ31577

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

SVOASIM Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593120 (Samples: CJ31572, CJ31573, CJ31574, CJ31575): -----

The LCSD recovery is below the method criteria. The LCS is acceptable. A low bias is possible. (Acenaphthylene, Benzo(a)pyrene, % Nitrobenzene-d5)

The LCS/LCSD RPD exceeds the method criteria for one or more analytes and a surrogate. These analytes were not reported in the sample(s). No significant variability is suspected. (Acenaphthylene, Benz(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(ghi)perylene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Pyrene, % Nitrobenzene-d5)

Instrument:

CJ31572 (1X), CJ31573 (1X), CJ31574 (1X), CJ31575 (1X)

Initial Calibration Evaluation (CHEM33/33_PAHSIM_0915):

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045
Tel. (860) 645-1102 Fax (860) 645-0823

ACCREDITED IN ACCORDANCE WITH nelac NY # 11301

MCP Certification Report

October 06, 2021

SDG I.D.: GCJ31565

SVOASIM Narration

100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM33/0923_03-33_PAHSIM_0915) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 593120 (CJ31144)

CJ31572, CJ31573, CJ31574, CJ31575

All LCS recoveries were within 40 - 140 with the following exceptions: None.
All LCSD recoveries were within 40 - 140 with the following exceptions: % Nitrobenzene-d5(38%), Acenaphthylene(17%), Benzo(a)pyrene(34%)
All LCS/LCSD RPDs were less than 20% with the following exceptions: % Nitrobenzene-d5(21.2%), Acenaphthylene(117.1%), Benz(a)anthracene(28.2%), Benzo(a)pyrene(86.7%), Benzo(b)fluoranthene(22.2%), Benzo(ghi)perylene(60.7%), Benzo(k)fluoranthene(49.4%), Indeno(1,2,3-cd)pyrene(66.7%), Pyrene(64.9%)
Additional 8270 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593833 (Samples: CJ31565, CJ31566, CJ31567): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (1,2-Dibromo-3-chloropropane)

QC Batch 593886 (Samples: CJ31568, CJ31569, CJ31571, CJ31574, CJ31576, CJ31577, CJ31579): -----

The LCS and/or the LCSD recovery is above the upper range for one or more analytes that were not reported in the sample(s), therefore no significant bias is suspected. (Chloroethane, Trichlorofluoromethane)

The LCS recovery is above the upper range, therefore a slight high bias is possible. (Vinyl chloride)

Sample ID#s: CJ32390 - CJ32398

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Elevated reporting limits for volatiles due to sample dilution.

Comment:

A blank MS/MSD was analyzed with this batch.

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEAD-WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ32390, CJ32391, CJ32392, CJ32393, CJ32394, CJ32395, CJ32396, CJ32397, CJ32398

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
8270 SVOC CAM II B ☑	7010 Metals CAM III C ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☐ Yes ☑ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 04, 2021

SDG I.D.: GCJ32390

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 09/27/21-1 Adam Werner, Chemist 09/27/21

CJ32395 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0507):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/0927_04-DIOX_0507) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 593466 (CJ31766)

CJ32395

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Instrument:

ARCOS 09/23/21 08:28 Cindy Pearce, Chemist 09/23/21

Certification Report

October 04, 2021

SDG I.D.: GCJ32390

ICP Metals Narration

CJ32394, CJ32395

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

BLUE 09/22/21 08:35 Cindy Pearce, Chemist 09/22/21

CJ32394, CJ32395

The initial calibration met criteria.
The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration range.
The continuing calibration blanks were less than the reporting level for the elements reported.
The ICSA and ICSAB were analyzed at the beginning and end of the run and were within criteria.The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

QC (Batch Specific):

Batch 592911 (CJ32351)

CJ32394, CJ32395

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

Batch 593108 (CJ33205)

CJ32394, CJ32395

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593886 (Samples: CJ32390): -----

The LCS and/or the LCSD recovery is above the upper range for one or more analytes that were not reported in the sample(s), therefore no significant bias is suspected. (Chloroethane, Trichlorofluoromethane, Vinyl chloride)

QC Batch 594641 (Samples: CJ32395, CJ32396): -----

The LCS/LCSD RPD exceeds the method criteria for one analyte. This analyte was not reported in the sample(s). No significant variability is suspected. (Di-isopropyl ether)

All LCS recoveries were within 70 - 130 with the following exceptions: Chloroethane(138%), Trichlorofluoromethane(149%), Vinyl chloride(137%)
All LCSD recoveries were within 70 - 130 with the following exceptions: Chloroethane(131%), Trichlorofluoromethane(140%)
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

Batch 594621 (CJ44285) CHEM15 10/1/2021-1

CJ32391(1X), CJ32392(2X), CJ32393(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
A blank MS/MSD was analyzed with this batch.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

Batch 594641 (CJ32395) CHEM23 10/1/2021-1

CJ32395(1X), CJ32396(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: Di-isopropyl ether(29.5%)
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.

MCP Certification Report

October 04, 2021

SDG I.D.: GCJ32390

VOA Narration

The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

Batch 594650 (CJ33721) CHEM23 10/3/2021-1

CJ32394(1X), CJ32397(1X), CJ32398(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

We attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C12 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude conc.s of any surrogate(s) and/or Int. std.s eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbon

Comment:

This batch consists of a Blank, LCS and LCSD.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED-WILMINGTON MA **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ33721, CJ33722, CJ33723, CJ33724, CJ33725, CJ33726, CJ33727, CJ33728, CJ33729, CJ33730, CJ33731, CJ33732, CJ33733

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☑	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☑ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Sections: EPH, SVOASIM, VOA Narrations .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 05, 2021

SDG I.D.: GCJ33721

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved.

EPH Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593018 (Samples: CJ33729): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (C18 - Octadecane)

Instrument:

AU-FID3 09/23/21-1 Adam Werner, Chemist 09/23/21

CJ33729 (1X)

No significant modifications were made to the EPH method, as specified in Section 11.3 of the method.

The initial calibration (AR0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

AU-FID4 09/22/21-1 Adam Werner, Chemist 09/22/21

CJ33729 (1X)

The initial calibration (AL0810BI) RSD for the compound list was less than 25% except for the following compounds: None.
The continuing calibration %D for the compound list was less than 25% except for the following compounds:None.

QC (Batch Specific):

Batch 593018 (CJ31474)

CJ33729

All LCS recoveries were within 40 - 140 with the following exceptions: C18 - Octadecane(143%)
All LCSD recoveries were within 40 - 140 with the following exceptions: None.
All LCS/LCSD RPDs were less than 25% with the following exceptions: None.
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional EPH fractionation criteria: Breakthrough criteria (BT) is 0 to 5%

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045

ICP Metals Narration

Instrument:

ARCOS 09/27/21 09:58 Emily Kolominskaya, Chemist 09/27/21

CJ33724, CJ33725, CJ33728

Additional criteria for CCV and ICSAB:
Sodium and Potassium are poor performing elements, the laboratory's in-house limits are 85-115% (CCV) and 70-130% (ICSAB).The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

BLUE 09/24/21 08:14 Cindy Pearce, Chemist 09/24/21

CJ33724, CJ33725, CJ33728

The initial calibration met criteria.
The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration range.
The continuing calibration blanks were less than the reporting level for the elements reported.
The ICSA and ICSAB were analyzed at the beginning and end of the run and were within criteria.The linear range is defined daily by the calibration range.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

QC (Batch Specific):

Batch 593314 (CJ33245)

CJ33724, CJ33725, CJ33728

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

Batch 593319 (CJ33139)

CJ33724, CJ33725, CJ33728

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

SVOASIM Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 593332 (Samples: CJ33729): -----

The LCS/LCSD RPD exceeds the method criteria for one or more analytes, therefore there may be variability in the reported result. (Benzo(b)fluoranthene, Dibenz(a,h)anthracene)

Instrument:

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06045

SVOASIM Narration

CHEM27 09/24/21-1 Wes Bryon, Chemist 09/24/21

CJ33729 (1X)

For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

Initial Calibration Evaluation (CHEM27/27_BNSIM18_0706):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM27/0924_03-27_BNSIM18_0706) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 593332 (CJ33048)

CJ33729

All LCS recoveries were within 40 - 140 with the following exceptions: None.
All LCSD recoveries were within 40 - 140 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: Benzo(b)fluoranthene(22.7%), Dibenz(a,h)anthracene(21.8%)
Additional 8270 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 594857 (Samples: CJ33731, CJ33732, CJ33733): -----

The MS recovery is above the upper range for one or more analytes that were not reported in the sample(s). No significant bias is suspected. (Carbon tetrachloride, Chloroethane, Trichlorofluoromethane)

The MS recovery is above the upper range, therefore a slight high bias is possible. (Vinyl chloride)

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ34744, CJ34745, CJ34746, CJ34747

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☑ Yes ☐ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 06, 2021

SDG I.D.: GCJ34744

SDG Comments

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

522 - DIOXANE

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? Yes.

Instrument:

CHEM34 09/27/21-1 Adam Werner, Chemist 09/27/21

CJ34747 (1X)

Initial Calibration Evaluation (CHEM34/DIOX_0507):
100% of target compounds met criteria.
The following compounds had %RSDs >20%: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet a minimum response factors: None.

Continuing Calibration Verification (CHEM34/0927_04-DIOX_0507) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet recommended response factors: None.
The following compounds did not meet minimum response factors: None.

QC (Batch Specific):

Batch 593466 (CJ31766)

CJ34747

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Subject: RE: Phoenix Labs - GCJ34744, LOCKHEED WILMINGTON MA 60552044.25 - COC Acknowledgement

Hello,

Although not listed on the COC submitted to the Lab, Dylan has confirmed that bottle(s) were submitted with this sample group yesterday for 1,4-dioxane for one sample AE104D. Please login this analysis.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ40162, CJ40163, CJ40164, CJ40165, CJ40166

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☐	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
8270 SVOC CAM II B ☐	7010 Metals CAM III C ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐
6010 Metals CAM III A ☐	6020 Metals CAM III D ☐	8082 PCB CAM V A ☐	9012 Total Cyanide/PAC CAM V1 A ☐	6860 Perchlorate CAM VIII B ☐	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☑ Yes ☐ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 06, 2021

SDG I.D.: GCJ40162

SDG Comments

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved. Please refer to the Sample Criteria Exceedances section of this report.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 595031 (Samples: CJ40162, CJ40163, CJ40164, CJ40165): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (Carbon tetrachloride)

The LCS/LCSD RPD exceeds the method criteria for one analyte, but this analytes was not reported in the sample(s). No significant variability is suspected. (Carbon tetrachloride)

Instrument:

CHEM23 10/04/21-2 Michael Hahn, Chemist 10/04/21

CJ40166 (1X)

Initial Calibration Evaluation (CHEM23/VOA23_100121):
99% of target compounds met criteria.
The following compounds had %RSDs >20%: Chloroethane 23% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum response factor of 0.05: None.

Continuing Calibration Verification (CHEM23/1004_34-VOA23_100121) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
99% of target compounds met criteria.
The following compounds did not meet % deviation criteria: Carbon tetrachloride 23%H (20%)
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum MCP response factor of 0.05: None.

CHEM23 10/05/21-1 Michael Hahn, Chemist 10/05/21

CJ40162 (1X), CJ40163 (1X), CJ40164 (1X), CJ40165 (1X)

Initial Calibration Evaluation (CHEM23/VOA23_100121):
99% of target compounds met criteria.
The following compounds had %RSDs >20%: Chloroethane 23% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum response factor of 0.05: None.

Continuing Calibration Verification (CHEM23/1005_03-VOA23_100121) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: None.

MCP Certification Report

October 06, 2021

SDG I.D.: GCJ40162

VOA Narration

The following compounds did not meet the minimum MCP response factor of 0.05: None.

QC (Batch Specific):

Batch 594862 (CJ40166) CHEM23 10/4/2021-2

CJ40166(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: None.
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

Batch 595031 (CJ47060) CHEM23 10/5/2021-1

CJ40162(1X), CJ40163(1X), CJ40164(1X), CJ40165(1X)

All LCS recoveries were within 70 - 130 with the following exceptions: Carbon tetrachloride(133%)
All LCSD recoveries were within 70 - 130 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: Carbon tetrachloride(31.3%)
A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.
Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 10%.
The RPD criteria for the LCS/LCSD is 20%,
The MS/MSD RPD criteria is listed above.

We attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

MassDEP Analytical Protocol Certification Form

Laboratory Name: Phoenix Environmental Laboratories, Inc. **Project #:**

Project Location: LOCKHEED WILMINGTON MA 6055204 **RTN:**

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

CJ34748, CJ34749, CJ34750, CJ34751, CJ34752

Matrices: ☑ Groundwater/Surface Water ☐ Soil/Sediment ☐ Drinking Water ☐ Air ☐ Other:

CAM Protocol (check all that apply below)

8260 VOC CAM II A ☑	7470/7471 Hg CAM III B ☑	MassDEP VPH CAM IV A ☐	8081 Pesticides CAM V B ☐	7196 Hex Cr CAM VI B ☐	MassDEP APH CAM IX A ☐
8270 SVOC CAM II B ☐	7010 Metals CAM III C ☐	MassDEP EPH CAM IV B ☐	8151 Herbicides CAM V C ☐	8330 Explosives CAM VIII A ☐	TO-15 VOC CAM IX B ☐
6010 Metals CAM III A ☑	6020 Metals CAM III D ☐	8082 PCB CAM V A ☐	9012 Total Cyanide/PAC CAM V1 A ☐	6860 Perchlorate CAM VIII B ☐	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature*) in the field or laboratory, and prepared/analyzed with method holding times? (* see narrative)	☑ Yes ☐ No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	☑ Yes ☐ No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes ☐ No
D	Does the laboratory report comply with all the reporting requirements speified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☑ Yes ☐ No
E	a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 methods only: Was the complete analyte list reported for each method?	☐ Yes ☐ No ☐ Yes ☐ No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	☑ Yes ☐ No

Responses to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☐ Yes ☑ No

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056(2)(k) and WSC-07-350

H	Were all QC performance standards specified in the CAM protocol(s) achieved? See Section: VOA Narration .	☐ Yes ☑ No
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes ☑ No

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

MCP Certification Report

October 07, 2021

SDG I.D.: GCJ34748

SDG Comments

Metals Analysis:
The client requested a shorter list of elements than the 6010 MCP list. The following analytes from the 6010 Metals list were not reported: Antimony, Beryllium, Nickel, Thallium, Vanadium, Zinc.

8260 Volatile Organics:
1,2-Dibromoethane doesn't meet GW-1 criteria, this compound is analyzed by GC/FID to achieve this criteria.

Volatile 8260 analysis:
1,4-Dioxane does not meet the GW-1. This compound is analyzed by method 522 or 8270SIM to achieve this criteria.

Not all requested reporting levels were achieved due to the presence of target and non target compounds. Please refer to the Sample Criteria Exceedances section of this report.

Mercury Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Instrument:

MERLIN 09/23/21 08:05 Alex Purdue, Chemist 09/23/21

CJ34748, CJ34749, CJ34750, CJ34751, CJ34752

The method preparation blank, ICB, and CCBs contain all of the acids and reagents as the samples.
The initial calibration met all criteria including a standard run at or below the reporting level.
All calibration verification standards (ICV, CCV) met criteria.
All calibration blank verification standards (ICB, CCB) met criteria.
The matrix spike sample is used to identify spectral interference for each batch of samples, if within 85-115%, no interference is observed and no further action is taken.
The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.

QC (Batch Specific):

Batch 593201 (CJ34748)

CJ34748, CJ34749, CJ34750, CJ34751, CJ34752

All LCS recoveries were within 75 - 125 with the following exceptions: None.
Additional Mercury criteria: LCS acceptance range for waters is 80-120% and for soils is 75-125%

ICP Metals Narration

Were all QA/QC performance criteria specified in the analytical method achieved? Yes.

Instrument:

BLUE 09/25/21 08:25 Cindy Pearce, Chemist 09/25/21

CJ34748, CJ34749, CJ34750, CJ34751, CJ34752

The initial calibration met criteria.
The continuing calibration standards met criteria for all the elements reported. The linear range is defined daily by the calibration range.
The continuing calibration blanks were less than the reporting level for the elements reported.
The ICSA and ICSAB were analyzed at the beginning and end of the run and were within criteria.The linear range is defined daily by the calibration range.

Certification Report

October 07, 2021

SDG I.D.: GCJ34748

ICP Metals Narration

The following Initial Calibration Verification (ICV) compounds did not meet criteria: None.
The following Continuing Calibration Verification (CCV) compounds did not meet criteria: None.
The following ICP Interference Check (ICSAB) compounds did not meet criteria: None.

QC (Batch Specific):

Batch 593498 (CJ39571)

CJ34748, CJ34749, CJ34750, CJ34751, CJ34752

All LCS recoveries were within 80 - 120 with the following exceptions: None.
All LCSD recoveries were within 80 - 120 with the following exceptions: None.
All LCS/LCSD RPDs were less than 20% with the following exceptions: None.
Additional: LCS acceptance range is 80-120% MS acceptance range 75-125%.

VOA Narration

Were all QA/QC performance criteria specified in the MADEP document CAM achieved? No.

QC Batch 595031 (Samples: CJ34749, CJ34750, CJ34751): -----

The LCS recovery is above the upper range for one analyte that was not reported in the sample(s). No significant bias is suspected. (Carbon tetrachloride)

The LCS/LCSD RPD exceeds the method criteria for one analyte. This analyte was not reported in the sample(s). No significant variability is suspected. (Carbon tetrachloride)

Instrument:

CHEM23 10/04/21-1 Michael Hahn, Chemist 10/04/21

CJ34748 (5X)

Initial Calibration Evaluation (CHEM23/VOA23_100121):
99% of target compounds met criteria.
The following compounds had %RSDs >20%: Chloroethane 23% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum response factor of 0.05: None.

Continuing Calibration Verification (CHEM23/1004_03-VOA23_100121) (MCP Compliance):
Internal standard areas were within 50 to 200% of the initial calibration with the following exceptions: None.
100% of target compounds met criteria.
The following compounds did not meet % deviation criteria: None.
The following compounds did not meet maximum % deviations: None.
The following compounds did not meet Table 4 recommended minimum response factors: Tetrachloroethene 0.186 (0.2)
The following compounds did not meet the minimum MCP response factor of 0.05: None.

CHEM23 10/04/21-2 Michael Hahn, Chemist 10/04/21

CJ34749 (5X), CJ34750 (10X), CJ34751 (20X), CJ34752 (1X)

Initial Calibration Evaluation (CHEM23/VOA23_100121):
99% of target compounds met criteria.
The following compounds had %RSDs >20%: Chloroethane 23% (20%)
The following compounds did not meet Table 4 recommended minimum response factors: None.
The following compounds did not meet the minimum response factor of 0.05: None.

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM - Chelmsford, MA **Report:** 221090918

Pace Analytical Gulf Coast received and analyzed the sample(s) listed
on the Report Sample Summary page of this report. Receipt of the sample(s) is documented
by the attached chain of custody. This applies only to the sample(s) listed in this report.
No sample integrity or quality control exceptions were identified unless noted below.

No anomalies were found for the analyzed sample(s).

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Deliver To	***Additional Recipients***
Scott Olson AECOM 250 Apollo Drive Chelmsford, MA 01824 978.846.5238	Lori Herberich, AECOM Nicole Callahan, AECOM

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM - Chelmsford, MA **Report:** 221092013

Pace Analytical Gulf Coast received and analyzed the sample(s) listed
on the Report Sample Summary page of this report. Receipt of the sample(s) is documented
by the attached chain of custody. This applies only to the sample(s) listed in this report.
No sample integrity or quality control exceptions were identified unless noted below.

No anomalies were found for the analyzed sample(s).

SAMPLE RECEIVING CHECKLIST

SAMPLE DELIVERY GROUP 221092013	
Client **PM** RWe AECOM-Chelm - AECOM-Chelmsford, MA	**Transport Method** FEDEX
Profile Number 284674	**Received By** Roberts, George S.
Line Item(s) 1 - MEE, Propane, Acetylene	**Receive Date(s)** 09/18/21

CHECKLIST	YES	NO
Samples received with proper thermal preservation?	☑	☐
Radioactivity is <1600 cpm? If no, record cpm value in notes section.	☑	☐
COC relinquished and complete (including sampleIDs, collect times, and sampler)?	☑	☐
All containers received in good condition and within hold time?	☑	☐
All sample labels and containers received match the chain of custody?	☑	☐
Preservative added to any containers?	☐	☑
If received, was headspace for VOC water containers < 6mm?	☑	☐
Samples collected in containers provided by Pace Gulf Coast?	☑	☐

NOTES

Revision 1.6

LELAP CERTIFICATE NUMBER: 01955
DOD-ELAP ACCREDITATION NUMBER: 74960

ANALYTICAL RESULTS

PERFORMED BY

Pace Analytical Gulf Coast
7979 Innovation Park Dr.
Baton Rouge, LA 70820
(225) 769-4900

Report Date 09/24/2021

Report # 221092102

Project LMC Wilmington 60552044.25

Samples Collected 9/14/21 - 9/16/21

Deliver To	***Additional Recipients***
Scott Olson AECOM 250 Apollo Drive Chelmsford, MA 01824 978.846.5238	Lori Herberich, AECOM Nicole Callahan, AECOM

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM - Chelmsford, MA **Report:** 221092102

Pace Analytical Gulf Coast received and analyzed the sample(s) listed
on the Report Sample Summary page of this report. Receipt of the sample(s) is documented
by the attached chain of custody. This applies only to the sample(s) listed in this report.
No sample integrity or quality control exceptions were identified unless noted below.

COC ANOMALIES

COC Anomalies\Changes - All samples for SDG 221092102 were received outside of the prescribed temperature range. Please refer to the preservative checklist for details on the temperature upon receipt. (Ruth Welsh(Do Not 09/21/2021 13:08)

PROJECT MANAGER COMMENTS

Project Manager Comments - The samples were recollected for the dissolved gas analyses. These initial samples were canceled. (Ruth Welsh(Do Not 09/24/2021 14:17)

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with Pace Gulf Coast's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at Pace Gulf Coast is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of Pace Gulf Coast. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM - Chelmsford, MA **Report:** 221092428

Pace Analytical Gulf Coast received and analyzed the sample(s) listed
on the Report Sample Summary page of this report. Receipt of the sample(s) is documented
by the attached chain of custody. This applies only to the sample(s) listed in this report.
No sample integrity or quality control exceptions were identified unless noted below.

COC ANOMALIES

COC Anomalies\Changes - one container received broken for the MSD sample for 21A-AE103D-092221-1 (Ruth Welsh(Do Not 09/24/2021 13:46)

VOLATILES GAS CHROMATOGRAPHY

After the initial AM20_LHC analysis was completed on this work order, a second analysis was done for confirmation on a few of the samples. The failures exhibited in the MS/MSD for each of the referenced container IDs were consistent on both runs

In the AM20GAX analysis for analytical batch 722684, the MS/MSD exhibited sporadic recovery failures. The LCS recoveries were acceptable.

In the AM20GAX analysis for analytical batch 722684, the MS/MSD exhibited RPD failures.The LCS/LCSD recoveries are acceptable.

SAMPLE RECEIVING CHECKLIST

SAMPLE DELIVERY GROUP 221092428	
Client **PM** RWe AECOM-Chelm - AECOM-Chelmsford, MA	**Transport Method** FEDEX
Profile Number 284674	**Received By** McCune, Dodie N.
Line Item(s) 1 - MEE, Propane, Acetylene	**Receive Date(s)** 09/23/21

CHECKLIST	YES	NO
Samples received with proper thermal preservation?	☑	☐
Radioactivity is <1600 cpm? If no, record cpm value in notes section.	☑	☐
COC relinquished and complete (including sampleIDs, collect times, and sampler)?	☑	☐
All containers received in good condition and within hold time?	☐	☑
All sample labels and containers received match the chain of custody?	☑	☐
Preservative added to any containers?	☐	☑
If received, was headspace for VOC water containers < 6mm?	☑	☐
Samples collected in containers provided by Pace Gulf Coast?	☑	☐

COOLERS

Airbill	Thermometer ID: E34	Temp °C
284045931626		4.1

DISCREPANCIES

If the recipient of this material is not the intended recipient or if you have received this in error, please notify Microbial Insights, Inc. immediately. The data and other information in this report represent only the sample(s) analyzed and are rendered upon condition that it is not to be reproduced without approval from Microbial Insights, Inc. Thank you for your cooperation.

The QuantArray®-Chlor Approach

Quantification of *Dehalococcoides*, the only known bacterial group capable of complete reductive dechlorination of PCE and TCE to ethene, has become an indispensable component of assessment, remedy selection, and performance monitoring at sites impacted by chlorinated solvents. While undeniably a key group of halorespiring bacteria, *Dehalococcoides* are not the only bacteria of interest in the subsurface because reductive dechlorination is not the only potential biodegradation pathway operative at contaminated sites, and chlorinated ethenes are not always the primary contaminants of concern. The QuantArray®-Chlor not only includes a variety of halorespiring bacteria (*Dehalococcoides*, *Dehalobacter*, *Dehalogenimonas*, etc.) to assess the potential for reductive dechlorination of chloroethenes, chloroethanes, chlorobenzenes, chlorophenols, and chloroform, but also provides quantification of functional genes involved in aerobic (co)metabolic pathways for biodegradation of chlorinated solvents and even competing biological processes. Thus, the QuantArray®-Chlor will give site managers the ability to simultaneously yet economically evaluate the potential for biodegradation of a spectrum of common chlorinated contaminants through a multitude of anaerobic and aerobic (co) metabolic pathways to give a much more clear and comprehensive view of contaminant biodegradation.

The QuantArray®-Chlor is used to quantify specific microorganisms and functional genes to evaluate the following:

Anaerobic Reductive Dechlorination	Quantification of important halorespiring bacteria (e.g. *Dehalococcoides*, *Dehalobacter*, *Dehalogenimonas*, *Desulfitobacterium* spp.) and key functional genes (e.g. vinyl chloride reductases, TCE reductase, chloroform reductase) responsible for reductive dechlorination of a broad spectrum of chlorinated solvents.
Aerobic Cometabolism	Several different types of bacteria including methanotrophs and some toluene/phenol utilizing bacteria can co-oxidize TCE, DCE, and vinyl chloride. The QuantArray®-Chlor quantifies functional genes like soluble methane monooxygenase encoding enzymes capable of co-oxidation of chlorinated ethenes.
Aerobic (Co)metabolism of Vinyl Chloride	Ethene oxidizing bacteria are capable of cometabolism of vinyl chloride. In some cases, ethenotrophs can also utilize vinyl chloride as a growth supporting substrate. The QuantArray®-Chlor targets key functional genes in ethene metabolism.

How do QuantArrays® work?

The QuantArray®-Chlor in many respects is a hybrid technology combining the highly parallel detection of microarrays with the accurate and precise quantification provided by qPCR into a single platform. The key to highly parallel qPCR reactions is the nanoliter fluidics platform for low volume, solution phase qPCR reactions.

10515 Research Drive
Knoxville, TN 37932
Phone: 865.573.8188
Fax: 865.573.8133
Web: www.microbe.com

How are QuantArray® results reported?

One of the primary advantages of the QuantArray®-Chlor is the simultaneous quantification of a broad spectrum of different microorganisms and key functional genes involved in a variety of pathways for chlorinated hydrocarbon biodegradation. However, highly parallel quantification combined with the various metabolic and cometabolic capabilities of different target organisms can complicate data presentation. Therefore, in addition to Summary Tables, QuantArray® results will be presented as Microbial Population Summary and Comparison Figures to aid in data interpretation and subsequent evaluation of site management activities.

Types of Tables and Figures:

Microbial Population Summary	Figure presenting the concentrations of QuantArray®-Chlor target populations (e.g. *Dehalococcoides*) and functional genes (e.g. vinyl chloride reductase) relative to typically observed values.
Summary Tables	Tables of target population concentrations grouped by biodegradation pathway and contaminant type.
Comparison Figures	Depending on the project, sample results can be presented to compare changes over time or examine differences in microbial populations along a transect of the dissolved plume.

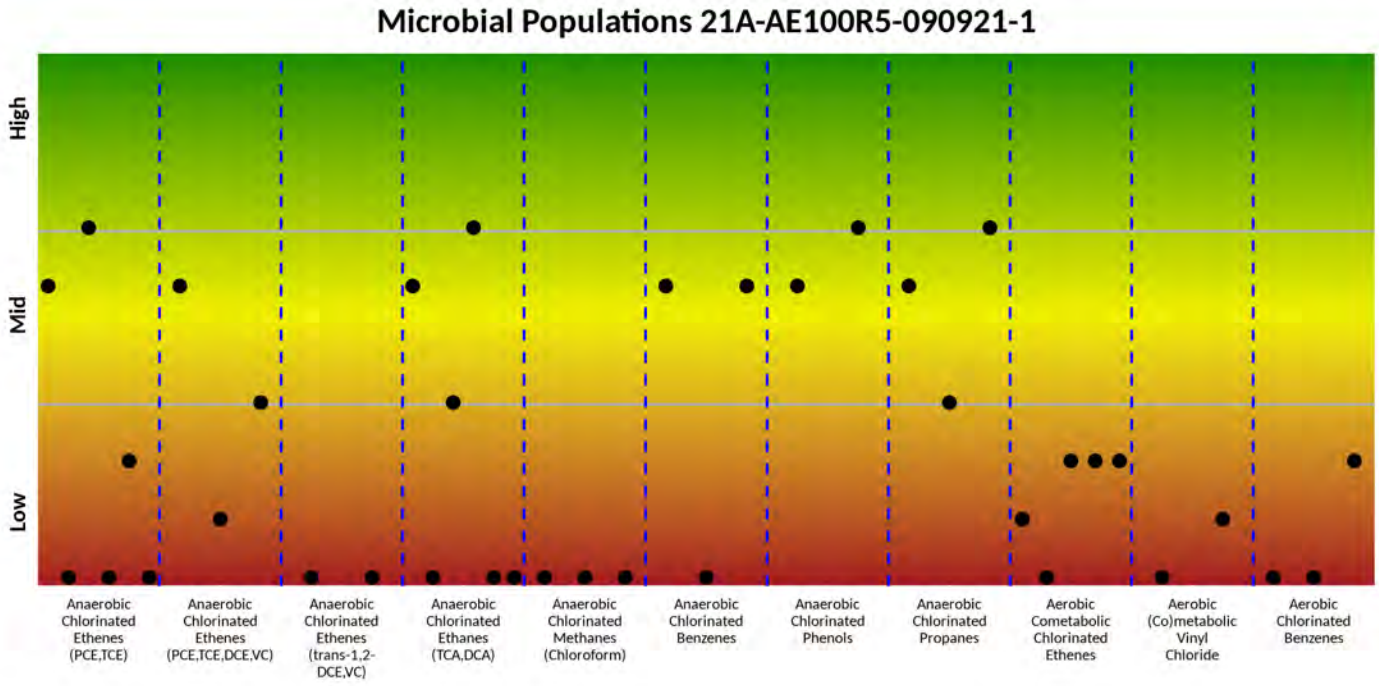

Figure 5: Microbial population summary to aid in evaluating potential pathways and biodegradation of specific contaminants.

Anaerobic - Reductive Dechlorination or Dichloroelimination		Aerobic - (Co)metabolism	
Chlorinated Ethenes (PCE, TCE)	DHC, DHBt, DSB, DSM, PCE-1, PCE-2	Chlorinated Ethenes (TCE,DCE,VC)	sMMO, TOD, PHE, RDEG, RMO
Chlorinated Ethenes (PCE, TCE, DCE, VC)	DHC, BVC, VCR	(Co)metabolic Vinyl Chloride	etnC, etnE
Chlorinated Ethenes (trans-1,2-DCE, VC)	TDR, CER	Chlorinated Benzenes	TOD, TCBO, PHE
Chlorinated Ethanes (TCA and 1,2-DCA)	DHC, DHBt, DHG, DSB[1], DCA, DCAR		
Chlorinated Methanes (Chloroform)	DHBt, DCM, CFR		
Chlorinated Benzenes	DHC, DHBt[2], DECO		
Chlorinated Phenols	DHC, DSB		
Chlorinated Propanes	DHC, DHG, DSB[1]		

[1] *Desulfitobacterium dichloroeliminans* DCA1. [2] Implicated in reductive dechlorination of dichlorobenzene and potentially chlorobenzene.

Interpretation

The overall purpose of the QuantArray®-Chlor is to give site managers the ability to simultaneously yet economically evaluate the potential for biodegradation of a spectrum of common chlorinated contaminants through a multitude of anaerobic and aerobic (co)metabolic pathways in order to provide a clearer and more comprehensive view of contaminant biodegradation. The following discussion describes the interpretation of results in general terms and is meant to serve as a guide.

Reductive Dechlorination - Chlorinated Ethenes: While a number of bacterial cultures including *Dehalococcoides*, *Dehalobacter*, *Desulfitobacterium*, and *Desulfuromonas* spp. capable of utilizing PCE and TCE as growth-supporting electron acceptors have been isolated [1–5], *Dehalococcoides* may be the most important because they are the only bacterial group that has been isolated to date which is capable of complete reductive dechlorination of PCE to ethene [6]. In fact, the presence of *Dehalococcoides* has been associated with complete reductive dechlorination to ethene at sites across North America and Europe [7], and Lu et al. [8] have proposed using a *Dehalococcoides* concentration of 1 x 10^4 cells/mL as a screening criterion to identify sites where biological reductive dechlorination is predicted to proceed at "generally useful" rates.

At chlorinated ethene sites, any "stall" leading to the accumulation of daughter products, especially vinyl chloride, would be a substantial concern. While *Dehalococcoides* concentrations greater than 1 x 10^4 cells/mL correspond to ethene production and useful rates of dechlorination, the range of chlorinated ethenes degraded varies by strain within the *Dehalococcoides* genus [6, 9], and the presence of co-contaminants and competitors can have complex impacts on the halorespiring microbial community [10–15]. Therefore, QuantArray®-Chlor also provides quantification of a suite of reductive dehalogenase genes (PCE, TCE, BVC, VCR, CER, and TDR) to more definitively confirm the potential for reductive dechlorination of all chlorinated ethene compounds including vinyl chloride.

Perhaps most importantly, QuantArray®-Chlor quantifies TCE reductase (TCE) and both known vinyl chloride reductase genes (BVC, VCR) from *Dehalococcoides* to conclusively evaluate the potential for complete reductive dechlorination of chlorinated ethenes to nontoxic ethene [16–18]. In addition, the analysis also includes quantification of reductive dehalogenase genes from *Dehalogenimonas* spp. capable of reductive dechlorination of chlorinated ethenes. More specifically, these are the trans-1,2-DCE dehalogenase gene (TDR) from strain WBC-2 [19] and the vinyl chloride reductase gene (CER) from GP, the only known organisms other than *Dehalococcoides* capable of vinyl chloride reduction [20]. Finally, PCE reductase genes responsible for sequential reductive dechlorination of PCE to *cis*-DCE by *Sulfurospirillum* and *Geobacter* spp. are also quantified. In mixed cultures, evidence increasingly suggests that partial dechlorinators like *Sulfurospirillum* and *Geobacter* may be responsible for the majority of reductive dechlorination of PCE to TCE and *cis*-DCE while *Dehalococcoides* functions more as *cis*-DCE and vinyl chloride reducing specialists [10, 21].

Reductive Dechlorination - Chlorinated Ethanes: Under anaerobic conditions, chlorinated ethanes are susceptible to reductive dechlorination by several groups of halorespiring bacteria including *Dehalobacter*, *Dehalogenimonas*, and *Dehalococcoides*. While the reported range of chlorinated ethanes utilized varies by genus, species, and sometimes at the strain level, several general observations can be made regarding biodegradation pathways and daughter product formation. *Dehalobacter* spp. have been isolated that are capable of sequential reductive dechlorination of 1,1,1-TCA through 1,1-DCA to chloroethane [13]. Biodegradation of 1,1,2-TCA by several halorespiring bacteria including *Dehalobacter* and *Dehalogenimonas* spp. proceeds via dichloroelimination producing vinyl chloride [22–24]. Similarly, 1,2-DCA biodegradation by *Dehalobacter*, *Dehalogenimonas*, and *Dehalococcoides* occurs via dichloroelimination producing ethene. While not utilized by many *Desulfitobacterium* isolates, at least one strain, *Desulfitobacterium dichloroeliminans* strain DCA1, is also capable of dichloroelimination of 1,2-DCA [25]. The 1,2-dichloroethane reductive dehalogenase gene (DCAR) from members of *Desulfitobacterium* and *Dehalobacter* is known to dechlorinate 1,2-DCA to ethene, while the 1,1-dichloroethane reductive dehalogenase (DCA) targets the gene responsible for 1,1-DCA dechlorination in some strains of *Dehalobacter*. In addition to chloroform,chloroform reductase (CFR) has also been shown to be responsible for reductivedechlorination of 1,1,1-TCA [26].

Reductive Dechlorination - Chlorinated Methanes: Chloroform is a common co-contaminant at chlorinated solvent sites and can inhibit reductive dechlorination of chlorinated ethenes. Grostern et al. demonstrated that a *Dehalobacter* population was capable of reductive dechlorination of chloroform to produce dichloromethane [27]. The *cfrA* gene encodes the reductase which catalyzes this initial step in chloroform biodegradation [26]. Justicia-Leon et al. have since shown that dichloromethane can support growth of a distinct group of *Dehalobacter* strains via fermentation [28]. The *Dehalobacter* DCM assay targets the 16S rRNA gene of these strains.

Reductive Dechlorination - Chlorinated Benzenes: Chlorinated benzenes are an important class of industrial solvents and chemical intermediates in the production of drugs, dyes, herbicides, and insecticides. The physical-chemical properties of chlorinated benzenes as well as susceptibility to biodegradation are functions of their degree of chlorination and the positions of chlorine substituents. Under anaerobic conditions, reductive dechlorination of higher chlorinated benzenes including hexachlorobenzene (HCB),

10515 Research Drive

Fax: 865.573.8133
Web: www.microbe.com

pentachlorobenzene (PeCB), tetrachlorobenzene (TeCB) isomers, and trichlorobenzene (TCB) isomers has been well documented [29], although biodegradation of individual compounds and isomers varies between isolates. For example, *Dehalococcoides* strain CBDB1 reductively dechlorinats HCB, PeCB, all three TeCB isomers, 1,2,3-TCB, and 1,2,4-TCB [9, 30]. *Dehalobium chlorocoercia* DF-1 has been shown to be capable of reductive dechlorination of HCB, PeCB, and 1,2,3,5-TeCB [31]. The dichlorobenzene (DCB) isomers and chlorobenzene (CB) were considered relatively recalcitrant under anaerobic conditions. However, new evidence has demonstrated reductive dechlorination of DCBs to CB and CB to benzene [32] with corresponding increases in concentrations of *Dehalobacter* spp. [33].

Reductive Dechlorination - Chlorinated Phenols: Pentachlorophenol (PCP) was one of the most widely used biocides in the U.S. and despite residential use restrictions, is still extensively used industrially as a wood preservative. Along with PCP, the tetrachlorophenol and trichlorophenol isomers were also used as fungicides in wood preserving formulations. 2,4-Dichlorophenol and 2,4,5-TCP were used as chemical intermediates in herbicide production (e.g. 2,4-D) and chlorophenols are known byproducts of chlorine bleaching in the pulp and paper industry. While the range of compounds utilized varies by strain, some *Dehalococcoides* isolates are capable of reductive dechlorination of PCP and other chlorinated phenols. For example, *Dehalococcoides* strain CBDB1 is capable of utilizing PCP, all three tetrachlorophenol (TeCP) congeners, all six trichlorophenol (TCP) congeners, and 2,3-dichlorophenol (2,3-DCP). PCP dechlorination by strain CBDB1 produces a mixture of 3,5-DCP, 3,4-DCP, 2,4-DCP, 3-CP, and 4-CP [34]. In the same study, however, *Dehalococcoides* strain 195 dechlorinated a more narrow spectrum of chlorophenols which included 2,3-DCP, 2,3,4-TCP, and 2,3,6-TCP, but no other TCPs or PCP. Similar to *Dehalococcoides*, some species and strains of *Desulfitobacterium* are capable of utilizing PCP and other chlorinated phenols. *Desulfitobacterium hafniense* PCP-1 is capable of reductive dechlorination of PCP to 3-CP [35]. However, the ability to biodegrade PCP is not universal among *Desulfitobacterium* isolates. *Desulfitobacterium* sp. strain PCE1 and *D. chlororespirans* strain Co23, for example, can utilize some TCP and DCP isomers, but not PCP for growth [2, 36].

Reductive Dechlorination - Chlorinated Propanes: *Dehalogenimonas* is a recently described bacterial genus of the phylum Chloroflexi which also includes the well-known chloroethene-respiring *Dehalococcoides* [23]. The *Dehalogenimonas* isolates characterized to date are also halorespiring bacteria, but utilize a rather unique range of chlorinated compounds as electron acceptors including chlorinated propanes (1,2,3-TCP and 1,2-DCP) and a variety of other vicinally chlorinated alkanes including 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, and 1,2-dichloroethane [23].

Aerobic - Chlorinated Ethene Cometabolism: Under aerobic conditions, several different types of bacteria including methane-oxidizing bacteria (methanotrophs), and many benzene, toluene, ethylbenzene, xylene, and (BTEX)-utilizing bacteria can cometabolize or co-oxidize TCE, DCE, and vinyl chloride [37]. In general, cometabolism of chlorinated ethenes is mediated by monooxygenase enzymes with "relaxed' specificity that oxidize a primary (growth supporting) substrate (*e.g.* methane) and co-oxidize the chlorinated compound (*e.g.*TCE). QuantArray®-Chlor provides quantification of a suite of genes encoding oxygenase enzymes capable of co-oxidation of chlorinated ethenes including soluble methane monooxygenase (sMMO). Soluble methane monooxygenases co-oxidize a broad range of chlorinated compounds [38–41] including TCE, *cis*-DCE, and vinyl chloride. Furthermore, soluble methane monooxygenases are generally believed to support greater rates of aerobic cometabolism [40]. QuantArray®-Chlor also quantifies aromatic oxygenase genes encoding ring hydroxylating toluene monooxygenase genes (RMO, RDEG), toluene dioxygenase (TOD) and phenol hydroxylases (PHE) capable of TCE co-oxidation [42–46]. TCE or a degradation product has been shown to induce expression of toluene monooxygenases in some laboratory studies [43, 47] raising the possibility of TCE cometabolism with an alternative (non-aromatic) growth substrate. Moreover, while a number of additional factors must be considered, recent research under ESTCP Project 201584 has shown positive correlations between concentrations of monooxygenase genes (soluble methane monooxygenase, ring hydroxylating monooxygenases, and phenol hydroxylase) and the rate of TCE degradation [48].

Aerobic - Chlorinated Ethane Cometabolism: While less widely studied than cometabolism of chlorinated ethenes, some chlorinated ethanes are also susceptible to co-oxidation. As mentioned previously, soluble methane monooxygenases (sMMO) exhibit very relaxed specificity. In laboratory studies, sMMO has been shown to co-oxidize a number of chlorinated ethanes including 1,1,1-TCA and 1,2-DCA [38, 40].

Aerobic - Vinyl Chloride Cometabolism: Beginning in the early 1990s, numerous microcosm studies demonstrated aerobic oxidation of vinyl chloride under MNA conditions without the addition of exogenous primary substrates. Since then, strains of

10515 Research Drive

Web: www.microbe.com

Mycobacterium, *Nocardioides*, *Pseudomonas*, *Ochrobactrum*, and *Ralstonia* species have been isolated which are capable of aerobic growth on both ethene and vinyl chloride (see Mattes et al. [49] for a review). The initial steps in the pathway are the monooxygenase (*etn*ABCD) catalyzed conversion of ethene and vinyl chloride to their respective epoxyalkanes (epoxyethane and chlorooxirane), followed by epoxyalkane:CoM transferase (*etn*E) mediated conjugation and breaking of the epoxide [50].

Aerobic - Chlorinated Benzenes: In general, chlorobenzenes with four or less chlorine groups are susceptible to aerobic biodegradation and can serve as growth-supporting substrates. Toluene dioxygenase (TOD) has a relatively relaxed substrate specificity and mediates the incorporation of both atoms of oxygen into the aromatic ring of benzene and substituted benzenes (toluene and chlorobenzene). Comparison of TOD levels in background and source zone samples from a CB-impacted site suggested that CBs promoted growth of TOD-containing bacteria [51]. In addition, aerobic biodegradation of some trichlorobenzene and even tetrachlorobenzene isomers is initiated by a group of related trichlorobenzene dioxygenase genes (TCBO). Finally, phenol hydroxylases catalyze the continued oxidation and in some cases, the initial oxidation of a variety of monoaromatic compounds. In an independent study, significant increases in numbers of bacteria containing PHE genes corresponded to increases in biodegradation of DCB isomers [51].

Aerobic - Chlorinated Methanes: Many aerobic methylotrophic bacteria, belonging to diverse genera (*Hyphomicrobium*, *Methylobacterium*, *Methylophilus*, *Pseudomonas*, *Paracoccus*, and *Alibacter*) have been isolated which are capable of utilizing dichloromethane (DCM) as a growth substrate. The DCM metabolic pathway in methylotrophic bacteria is initiated by a dichloromethane dehalogenase (DCMA) gene. DCMA is responsible for aerobic biodegradation of dichloromethane by methylotrophs by first producing formaldehyde which is then further oxidized [52]. As discussed in previous sections, soluble methane monooxygenase (sMMO) exhibits relaxed specificity and co-oxidizes a broad spectrum of chlorinated hydrocarbons. In addition to chlorinated ethenes, sMMO has been shown to co-oxidize chloroform in laboratory studies [38, 41].

Comments: VOC data for sample 1 received from client on 9/13/2021. VOC data for sample 2 received from client on 9/16/2021. VOC data for samples 7-9 received from client on 9/16/2021. VOC data for samples 3-6 and 10-11 received from client on 9/23/2021. VOC data for samples 12-17 and 21-22 received from client on 9/29/2021. Compounds that were expected to be above CSIA limit of detection (LOD) after required dilutions due to the given VOC data received from the client and were not found in the analysis have been listed as “Not Detected” (ND). Compounds expected to be below the CSIA limit of detection (LOD) after required dilutions were not analyzed (NA). Sample MI ID 020SI-8 (client ID # 21A-EMW10R-090821-1) results for 13C/12C Vinyl Chloride analysis revised 10/15/2021 from ND to NA.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2147615
Project Number:	60552044.25	**Report Date:**	09/17/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2147615
Project Number:	60552044.25	**Report Date:**	09/17/21

Case Narrative (continued)

MCP Related Narratives

Report Submission

All MCP required questions were answered with affirmative responses; therefore, there are no relevant protocol-specific QC and/or performance standard non-conformances to report.

Non-MCP Related Narratives

PIANO Volatile Organics

L2147615-02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2147615-05D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1546086-2/-3 LCS/LCSD recoveries, associated with L2147615-01, -02D, -03, -04, and -05D, are above the individual acceptance criteria for dodecane (c12) (157%/154%), but within the overall method allowances. The results of the associated samples are reported; however, all positive detects for these compounds are considered to have a potentially high bias.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2147615
Project Number:	60552044.25	**Report Date:**	09/17/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2147615
Project Number:	60552044.25	**Report Date:**	09/17/21

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2148922
Project Number:	60552044.25	**Report Date:**	09/21/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2148922
Project Number:	60552044.25	**Report Date:**	09/21/21

Case Narrative (continued)

MCP Related Narratives

Report Submission

All MCP required questions were answered with affirmative responses; therefore, there are no relevant protocol-specific QC and/or performance standard non-conformances to report.

Non-MCP Related Narratives

PIANO Volatile Organics

L2148922-01D and -02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG1546086-3/-4 LCS/LCSD recoveries, associated with L2148922-01D, -02D, -03, and -04, are above the individual acceptance criteria for dodecane (c12) (157%/154%), but within the overall method allowances. The results of the associated samples are reported; however, all positive detects for these compounds are considered to have a potentially high bias.

WG1546086-9, The continuing calibration standard associated with L2148922 and QC, had the response for Undecane (41%D), Dodecane (42.7%), Hexylbenzene (50.9%), 2-Methylnaphthalene (64.2%), and 1-Methylnaphthalene (55.9%) above the acceptance criteria for the method. The associated samples were non-detect; therefore, no further action was taken.

WG1546086-11:The continuing calibration standard, associated with L2148922 and QC, had the response for Undecane (50%D), Dodecane (45.4%), Hexylbenzene (52.9%), 2-Methylnaphthalene (64.2%), and 1-Methylnaphthalene (59.7%) above the acceptance criteria for the method. The associated samples were non-detect; therefore, no further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2148922
Project Number:	60552044.25	**Report Date:**	09/21/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2148922
Project Number:	60552044.25	**Report Date:**	09/21/21

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2150367
Project Number:	60552044.25	**Report Date:**	09/24/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2150367
Project Number:	60552044.25	**Report Date:**	09/24/21

Case Narrative (continued)

MCP Related Narratives

Report Submission

All MCP required questions were answered with affirmative responses; therefore, there are no relevant protocol-specific QC and/or performance standard non-conformances to report.

Non-MCP Related Narratives

PIANO Volatile Organics

L2150367-02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG1548764-3/-4 LCS/LCSD recoveries, associated with L2150367-01, -02D, -03, and -04, are above the acceptance criteria for dodecane (c12) (161%/156%); however, the associated samples are non-detect to the RL for these target analytes. The results of the original analysis are reported.

WG1548764: The continuing calibration standard, associated with L2150367 and QC, had the response for 1-Methylnaphthalene (36%D) above the acceptance criteria for the method. The associated samples were non-detect; therefore, no further action was taken.

WG1548764: The continuing calibration standard, associated with L2150367 and QC, had the response for Undecane (50.5%), Dodecane (39.3%), Hexylbenzene (59.8%), 2-Methylnaphthalene (79.6%), and 1-Methylnaphthalene (74.1%D) above the acceptance criteria for the method. The associated samples were non-detect; therefore, no further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2150367
Project Number:	60552044.25	**Report Date:**	09/24/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2150367
Project Number:	60552044.25	**Report Date:**	09/24/21

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

To	Scott Olson	Page	1
Subject	Data Validation/Usability Summary Lockheed Martin-Wilmington, MA Site Phoenix Environmental Laboratories, Inc. SDG: GCJ17882		
From	Lori Herberich		
Reviewed by	Paula DiMattei		60552044.25
Date	October 25, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 1, 2021 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCJ17882.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January 19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), select metals, total organic carbon (TOC), nitrate, nitrite, chloride, sulfate, and/or sulfide for the following samples was assessed:

Sample ID
21A-AE26R2-090121-1
21A-AE28R1-090121-1
21A-AE28R3-090121-1
21A-AE26R1-090121-1
21A-TB01-090121-1 (trip blank)
21A-AE28R4-090121-1

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

* Chain-of-custody (COC)/sample integrity

*	Holding times and sample preservation
*	GC/MS tuning#
	Initial calibration/initial calibration and continuing calibration verifications#
*	Laboratory blanks/equipment blanks/trip blanks
*	Surrogate recoveries (%Rs)
*	Labeled compound recovery (1,4-dioxane only)#
*	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
*	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Interference check standard results#
NA	Serial dilution results#
NA	Field duplicate results
*	Internal standard (IS) performance#
*	General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

VOCs

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
ICAL for batches 591383, 590973, 591863, 591823	Tetrachloroethene	0.191	≥ 0.200	J+/UJ
	Compound	**% RSD**	**QC limit**	**Actions (Detects/Nondetects)**
	1,2,4-Trimethylbenzene	21	≤ 20	J/UJ
	Isopropylbenzene	21	≤ 20	J/UJ
	Naphthalene	29	≤ 20	J/UJ
	p-Isopropyltoluene (cymene)	23	≤ 20	J/UJ
	sec-Butylbenzene (2-phenylbutane)	21	≤ 20	J/UJ

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
	Styrene	22	≤ 20	J/UJ
	tert-Butylbenzene	21	≤ 20	J/UJ
Associated samples: All samples				
CCAL for batch 591383	Tetrachloroethene	0.183	≥ 0.200	J+/UJ
Associated samples: 21A-AE26R2-090121-1, 21A-AE28R3-090121-1 (20x), 21A-AE26R1-090121-1 (2x), 21A-AE28R4-090121-1 (20x)				
CCAL for batch 591823	Tetrachloroethene	0.193	≥ 0.200	J+/UJ
Associated samples: 21A-AE28R1-090121-1 (100x)				
CCAL for batch 591863	Acetone	0.099	≥ 0.100	J+/UJ
Associated samples: 21A-AE28R1-090121-1 (10x)				

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:
VOCs – 8260C
1,4-Dioxane - 8270D
TOC – SM5310-B
VPH – MADEP VPH 2/2018
EPH - MADEP EPH 12/2019
Arsenic, manganese, and iron – 6010D
Nitrate, nitrite, chloride, and sulfate – 300.0
Sulfide – SM4500-S D

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), and/or select metals for the following samples was assessed:

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
*	GC/MS tuning#
	Initial calibration/initial calibration and continuing calibration verifications#
*	Laboratory blanks/equipment blanks/trip blanks
*	Surrogate recoveries (%Rs)
*	Labeled compound recovery (1,4-dioxane only)#
*	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Interference check standard results#
NA	Serial dilution results#
*	Field duplicate results
*	Internal standard (IS) performance#
*	General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

<u>VOCs</u>

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
ICAL for batches 591965, 591670,592004, 591692	Tetrachloroethene	0.191	≥ 0.200	J+/UJ
	Compound	**% RSD**	**QC limit**	**Actions (Detects/Nondetects)**
	1,2,4-Trimethylbenzene	21	≤ 20	J/UJ
	Isopropylbenzene	21	≤ 20	J/UJ
	Naphthalene	29	≤ 20	J/UJ
	p-Isopropyltoluene	23	≤ 20	J/UJ
	sec-Butylbenzene	21	≤ 20	J/UJ
	Styrene	22	≤ 20	J/UJ
	tert-Butylbenzene	21	≤ 20	J/UJ
Associated samples: All samples				
CCAL for batch 592004	Tetrachloroethene	0.193	≥ 0.200	J+/UJ
Associated samples: 21A-AE111R4-090721-1, 21A-AE111R7-090721-1				
CCAL for batch 591692	Tetrachloroethene	0.190	≥ 0.200	J+/UJ
Associated samples: 21A-AE101D-090721-1, 21A-AE101S-090721-1, 21A-TB01-090721-1, 21A-AE102RR5-090721-1 (100x), 21A-AE102RR6-090721-1 (100x), 21A-AE109D-090721-1, 21A-AE111R1-090721-1, 21A-AE111R3-090721-1				
CCAL for batch 591965	Tetrachloroethene	0.184	≥ 0.200	J+/UJ
Associated samples: 21A-AE102RR2-090721-1, 21A-AE102RR3-090721-1				
CCAL for batch 591823	Tetrachloroethene	0.180	≥ 0.200	J+/UJ
	Acetone	0.095	≥ 0.100	J+/UJ
Associated samples: 21A-AE102RR1-090721-1, 21A-TRC102-090721-1, 21A-AE102RR4-090721-1 (50x), 21A-AE111R1-090721-2, 21A-AE111R2-090721-1, 21A-AE111R5-090721-1, 21A-AE111R6-090721-1				

LCS/LCSD Results

All percent recoveries (%Rs) and relative percent differences (RPDs) met the QC acceptance limits with the following exceptions. Only nonconformances resulting in data qualification are listed below.

PAHs

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit % Recovery	Upper Limit % Recovery	Data Validation Actions (Detects/Nondetects)
Batch 590817	Acenaphthylene	30	24	40	140	J-/UJ
Associated samples: 21A-AE102RR6-090721-1, 21A-TRC102-090721-1						

VOCs

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit % Recovery	Upper Limit % Recovery	RPD	RPD Limit	Data Validation Actions (Detects/Nondetects)
Batch 592004	Hexachlorobutadiene	ok	69	70	130	ok	<20	J-/UJ
	Trichlorotrifluoroethane	ok	69	70	130	ok	<20	J-/UJ
Associated samples: 21A-AE111R4-090721-1, 21A-AE111R7-090721-1								

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:

VOCs – 8260C
1,4-Dioxane - 8270D
VPH – MADEP VPH 2/2018
EPH - MADEP EPH 12/2019
Arsenic, manganese, and/or iron – 6010D

Reviewed by	Paula DiMattei		60552044.25
Date	October 25, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 7 and 8, 2021 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCJ22041.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), select metals, total organic carbon (TOC), nitrate, nitrite, chloride, sulfate, and/or sulfide for the following samples was assessed:

Sample ID

EPH

Calibration	Compound	%D	QC limit	Actions (Detects/Nondetects
CCAL for batch 591278	Indeno(1,2,3-cd)pyrene	34 (high bias indicated)	<20	J+/Accept
Associated samples: 21A-AE100R1-090921-1, 21A-AE103R1-090921-1				

LCS/LCSD Results

All percent recoveries (%Rs) and relative percent differences (RPDs) met the QC acceptance limits with the following exceptions. Only nonconformances resulting in data qualification are listed below.

VOCs

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit % Recovery	Upper Limit % Recovery	RPD	RPD Limit	Data Validation Actions (Detects/Nondetects)
Batch 592876	Trichlorotrifluoroethane	68	ok	70	130	ok	<20	J-/UJ
Associated samples: 21A-AE100R1-090921-1, 21A-AE100R2-090921-1, 21A-AE100R3-090921-1, 21A-AE100R4-090921-1, 21A-AE108R3-090921-1, 21A-AE108R5-090921-1, 21A-AE108R1-090921-1								

General Reporting Issues

The results for dissolved iron and manganese exceeded the results for total iron and manganese in sample 21A-AE100R5-090921-1 by a significant amount. The results for total and dissolved results for iron and manganese in sample 21A-AE100R5-090921-1 are qualified as estimated (J). The concentrations were confirmed by the laboratory.

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for "Presumptive Certainty" status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:

VOCs – 8260C
1,4-Dioxane - 8270D
TOC – SM5310-B
VPH – MADEP VPH 2/2018
EPH - MADEP EPH 12/2019
Arsenic, manganese, and iron – 6010D
Nitrate, nitrite, chloride, and sulfate – 300.0
Sulfide – SM4500-S D

Subject	Data Validation/Usability Summary Lockheed Martin-Wilmington, MA Site Phoenix Environmental Laboratories, Inc. SDG: GCJ26085		
From	Lori Herberich		
Reviewed by	Paula DiMattei		60552044.25
Date	October 26, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 10, 2021 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCJ26085.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, and select metals for the following samples was assessed:

Sample ID
21A-AE29R1-091021-1
21A-AE29R2-091021-1
21A-AE29R3-091021-1

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
*	GC/MS tuning#
	Initial calibration/initial calibration and continuing calibration verifications#
*	Laboratory blanks/equipment blanks/trip blanks
*	Surrogate recoveries (%Rs)
*	Labeled compound recovery (1,4-dioxane only)#
*	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Interference check standard results#
NA	Serial dilution results#
NA	Field duplicate results
*	Internal standard (IS) performance#
*	General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

<u>VOCs</u>

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
ICAL for batches 593031, 593226	Tetrachloroethene	0.161	≥ 0.200	J+/UJ

General Reporting Issues

The results for dissolved iron and manganese exceed the results for total iron and manganese in sample 21A-AE105R1-091321-1 by a significant amount. The result for dissolved iron exceeds the result for total iron in sample 21A-GZA105R-091421-1. The total and dissolved results for iron and/or manganese in these samples are qualified as estimated (J). The concentrations were confirmed by the laboratory.

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for "Presumptive Certainty" status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:

VOCs – 8260C
1,4-Dioxane - 8270D
TOC – SM5310-B
VPH – MADEP VPH 2/2018
EPH - MADEP EPH 12/2019
Arsenic, manganese, and iron – 6010D
Nitrate, nitrite, chloride, and sulfate – 300.0
Sulfide – SM4500-S D

Subject	Data Validation/Usability Summary Lockheed Martin-Wilmington, MA Site Phoenix Environmental Laboratories, Inc. SDG: GCJ29227		
From	Lori Herberich		
Reviewed by	Paula DiMattei		60552044.25
Date	October 26, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 14 and 15, 2021 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCJ29227.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), select metals, total organic carbon (TOC), nitrate, nitrite, chloride, sulfate, and/or sulfide for the following samples was assessed:

Sample ID
21A-TRC101-091421-1
21A-GZA12-091421-1
21A-GZA101R-091421-1

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
*	GC/MS tuning[#]
	Initial calibration/initial calibration and continuing calibration verifications[#]
*	Laboratory blanks/equipment blanks/trip blanks
*	Surrogate recoveries (%Rs)
*	Labeled compound recovery (1,4-dioxane only)[#]
	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Interference check standard results[#]
NA	Serial dilution results[#]
*	Field duplicate results
*	Internal standard (IS) performance[#]
*	General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

VOCs

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

Calibration	Compound	RF	QC limit	Actions (Detects/Nondetects)
ICAL for batch 593684, 593727,	Tetrachloroethene	0.158	≥ 0.200	J+/UJ
	Acetone	0.082	≥ 0.100	J+/UJ

LCS/LCSD Results

All percent recoveries (%Rs) and relative percent differences (RPDs) met the QC acceptance limits with the following exceptions. Only nonconformances resulting in data qualification are listed below.

VOCs

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit % Recovery	Upper Limit % Recovery	RPD	RPD Limit	Data Validation Actions (Detects/Nondetects)
Batch 593886	Vinyl chloride	137	ok	70	130	ok	<20	J+/Accept
Associated samples: 21A-AE105D-091721-1, 21A-AE105S-091721-1, 21A-AE112R3-091621-1, 21A-AE112R4-091621-1, 21A-STM8R1-091621-2, 21A-AE112R5-091621-2, 21A-AE112R7-091621-1								

EPH (target compounds)

LCS ID	Compound	LCS % Recovery	LCSD % Recovery	Lower Limit % Recovery	Upper Limit % Recovery	RPD	RPD Limit	Data Validation Actions (Detects/Nondetects)
Batch 593120	Acenaphthylene	ok	17	70	130	117	<20	J/UJ
	Benzo(a)pyrene	ok	34	70	130	87	<20	J/UJ
Associated samples: 21A-AE112R6-091621-1, 21A-STM8R1-091621-1, 21A-STM8R1-091621-2, 21A-EB01-091621-1								

Field Duplicate Results

The relative percent difference (58) exceeded the QC limit of <30 for total iron in the field duplicate pair 21A-STM8R1-091621-1/21A-STM8R1-091621-2. The total iron results in all samples in this SDG except 21A-EB01-091621-1 are qualified as estimated (J).

General Reporting Issues

The MassDEP Analytical Protocol Certification Form was reviewed and indicates that the data have met the requirements for “Presumptive Certainty” status for all parameters for which there is a CAM protocol.

Laboratory quantitation limits exceed Project Action Limits (PALs) for several VOCs in the undiluted analyses. Analytical dilutions, if performed, will further elevate those quantitation limits and will cause additional quantitation limits to exceed the PALs. Review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have also been reviewed and are summarized, if applicable.

The following methods were used to analyze samples:

VOCs – 8260C
1,4-Dioxane - 8270D
TOC – SM5310-B
VPH – MADEP VPH 2/2018
EPH - MADEP EPH 12/2019
Arsenic, manganese, and iron – 6010D
Nitrate, nitrite, chloride, and sulfate – 300.0
Sulfide – SM4500-S D

Date	October 26, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 17 and 20, 2021 and tabulated below. Phoenix Environmental Laboratories, Inc. (Phoenix) in Manchester, CT analyzed the samples and reported the data in sample delivery group (SDG) GCJ32390.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the project-specific work plan. The current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

Data for volatile organic compounds (VOCs), 1,4-dioxane, and/or select metals for the following samples was assessed:

Sample ID
21A-TB01-091721-1 (trip blank)
21A-PS1S-091721-1
21A-PS1M-091721-1

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
*	GC/MS tuning[#]
	Initial calibration/initial calibration and continuing calibration verifications[#]
*	Laboratory blanks/equipment blanks/trip blanks
*	Surrogate recoveries (%Rs)
*	Labeled compound recovery (1,4-dioxane only)[#]
NA	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
*	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
*	Interference check standard results[#]
NA	Serial dilution results[#]
NA	Field duplicate results
*	Internal standard (IS) performance[#]
*	General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

Initial Calibration/Initial Calibration and Continuing Calibration Verifications

VOCs

The laboratory narrated the nonconformances tabulated below for the initial calibration and/or continuing calibration verification (CCV) response factors (RFs), percent relative standard deviations (% RSDs), and percent differences or percent drifts (%Ds) that did not meet the QC limits.

*Hydrogen analysis only **Dissolved gases analysis only

The following method was used to analyze the samples for dissolved gases and/or hydrogen:

Dissolved Gases– Laboratory SOP AM20GAX based on RSK 175 [Hydrogen, Methane, Ethane, Ethene, Acetylene and Propane]

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

* Chain-of-custody (COC)/sample integrity
* Holding times and sample preservation
* Laboratory blanks
* Trip blank/Equipment blank
  Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
* Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
* Field duplicate results
* General reporting issues

The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An “NA” indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.

MD/MS/MSD Results

MS/MSD analyses were performed on samples 21A-AE03-092221-1 and 21A-AE103D-092221-1 for dissolved gases. The QC acceptance criteria were met for sample 21A-AE03-092221-1. Dissolved gases were not recovered in the MS/MSD analyses of sample 21A-AE103D-092221-1. The analyses were repeated and yielded similar results. The nondetects reported for dissolved gases in sample 21A-AE103D-092221-1 are rejected and are considered unusable for project decisions.

Subject	Data Validation Summary Lockheed Martin-Wilmington, MA Site Microbial Insights Compound-Specific Isotope Analysis (CSIA) Center Report: 020SI-66582114		
From	Paula DiMattei		
Reviewed by	Lori Herberich		60552044.25
Date	November 9, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 1, 8, 9, 13, 14, 15, 16, and 22, 2021 and tabulated below. Microbial Insights in Knoxville, TN analyzed the samples and reported the data in laboratory report 020SI-66582114.

The data was reviewed for compliance with Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 1, January 19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007. In the absence of an applicable MADEP Compendium of Analytical Methods performance standard, the laboratory's CSIA method summary was referenced. Current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Laboratory blanks
*	Laboratory control sample (LCS) results
NA	Field duplicate results
*	General reporting issues

The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An “NA” (Not applicable) indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The CSIA data appear valid as reported and may be used for decision making purposes.

General Reporting Issues

For the CSIA results, the “U” qualifier associated with the delta results in the project database is used to signify that either there was no peak corresponding to the target analyte or that the peak did not produce a reliable CSIA result. Reporting limits are not applicable to this analysis.

An ”NA” (Not Analyzed) in the project database signifies that the compound results were either not detected in the volatile organic compound (VOC) results analyzed by SW-846 Method 8260 and therefore not analyzed for CSIA, or that the VOC compound was expected to be below CSIA limit of detection (LOD) after the required dilutions were performed and therefore, not analyzed for CSIA.

Memorandum

To	Scott Olson	Page	1
Subject	Data Validation Summary Lockheed Martin-Wilmington, MA Site Alpha Analytical Laboratory: L2147615, L2148922 and L2150367		
From	Paula DiMattei		
Reviewed by	Lori Herberich		60552044.25
Date	November 10, 2021		

Data validation was performed on the data for samples collected at the Lockheed Martin site in Wilmington, MA on September 1-3, 7-9 and 14-15, 2021 and tabulated below. Alpha Analytical Laboratory (ALPHA) in Mansfield, MA analyzed the samples and reported the data in laboratory reports L2147615, L2148922 and L2150367.

The data were reviewed for compliance with Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 1, January 19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007.

In the absence of an applicable MADEP Compendium of Analytical Methods performance standard, the laboratory's PIANO (Parafinic, Isoparafinic, Aromatic, Naphthenic, Olefinic) method was referenced. Current EPA Region I Data Validation Guidelines were used as a reference for evaluating the data.

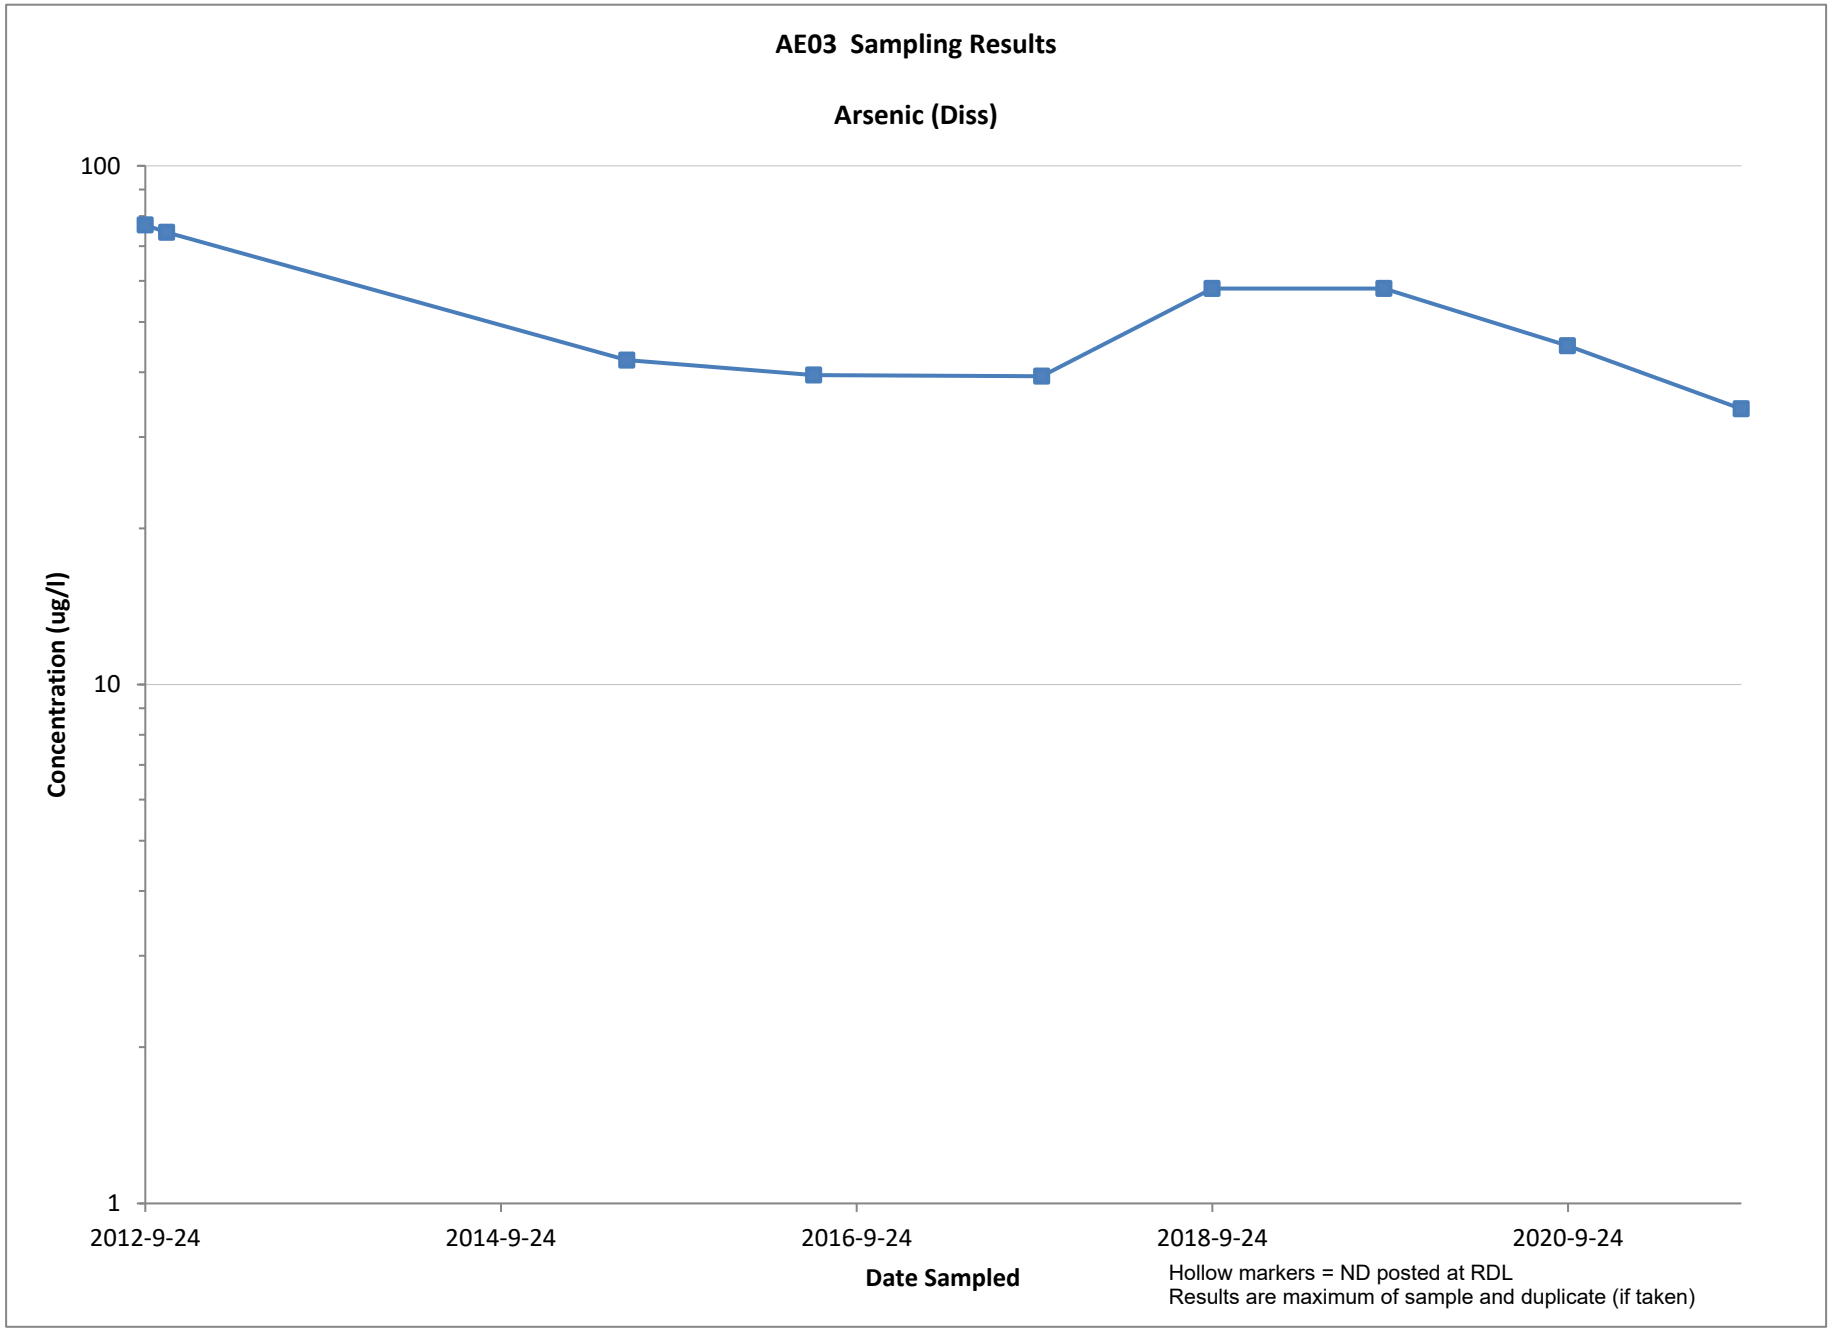
	21A-GZA105S-091521-1

DATA REVIEW ELEMENTS

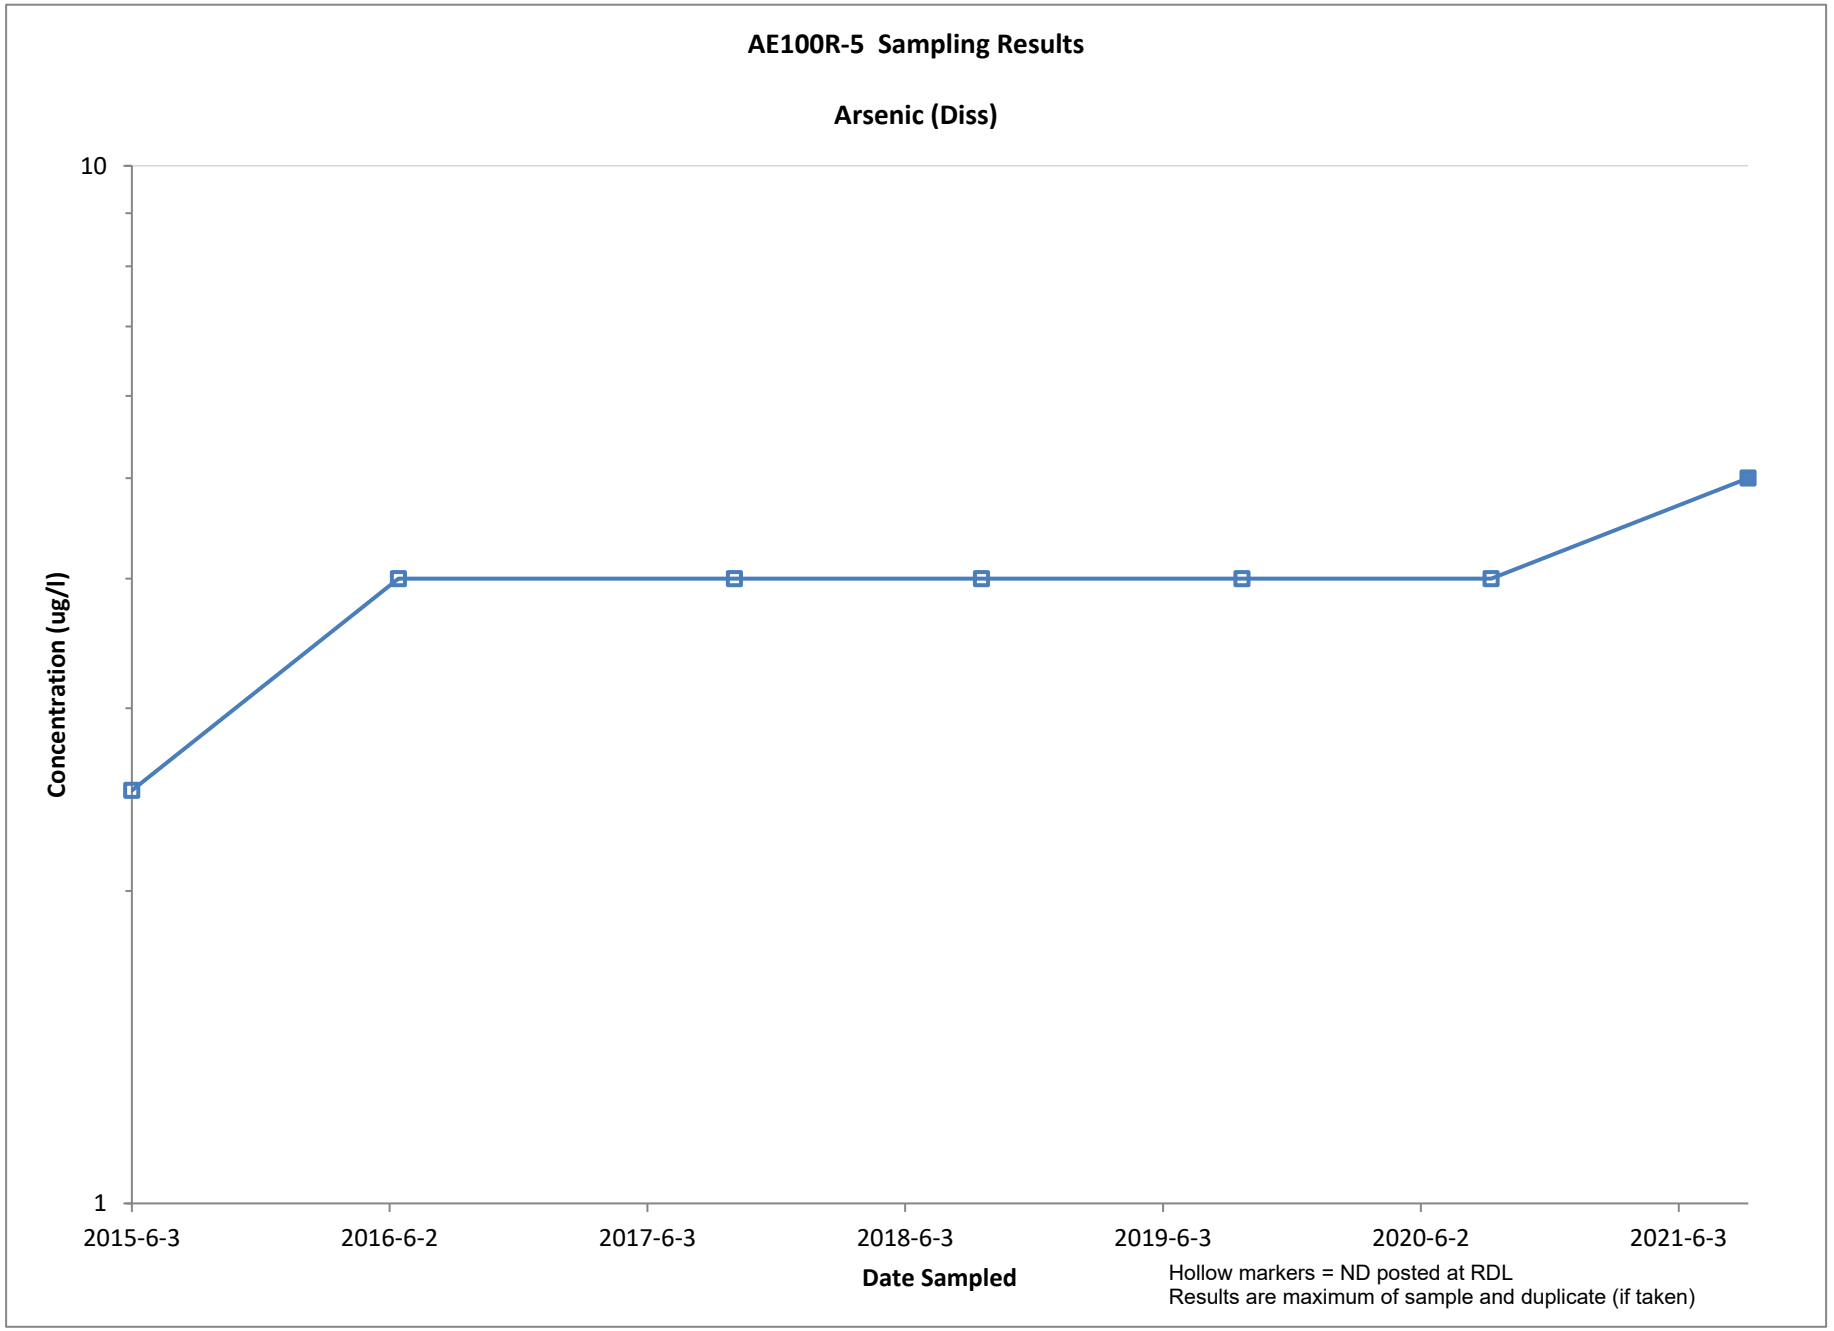
The assessment was based on the following review elements:

*	Chain-of-custody (COC)/sample integrity
*	Holding times and sample preservation
*	GC/MS tuning#
*	Initial calibration/initial calibration and continuing calibration verifications#
*	Laboratory blanks/equipment blanks
*	Surrogate recoveries (%Rs)
NA	Matrix duplicate (MD)/matrix spike (MS) and/or matrix spike duplicate (MSD) results
*	Laboratory control sample/laboratory control duplicate sample (LCS/LCSD) results
NA	Field duplicate results
*	Internal standard performance#
*	General reporting issues

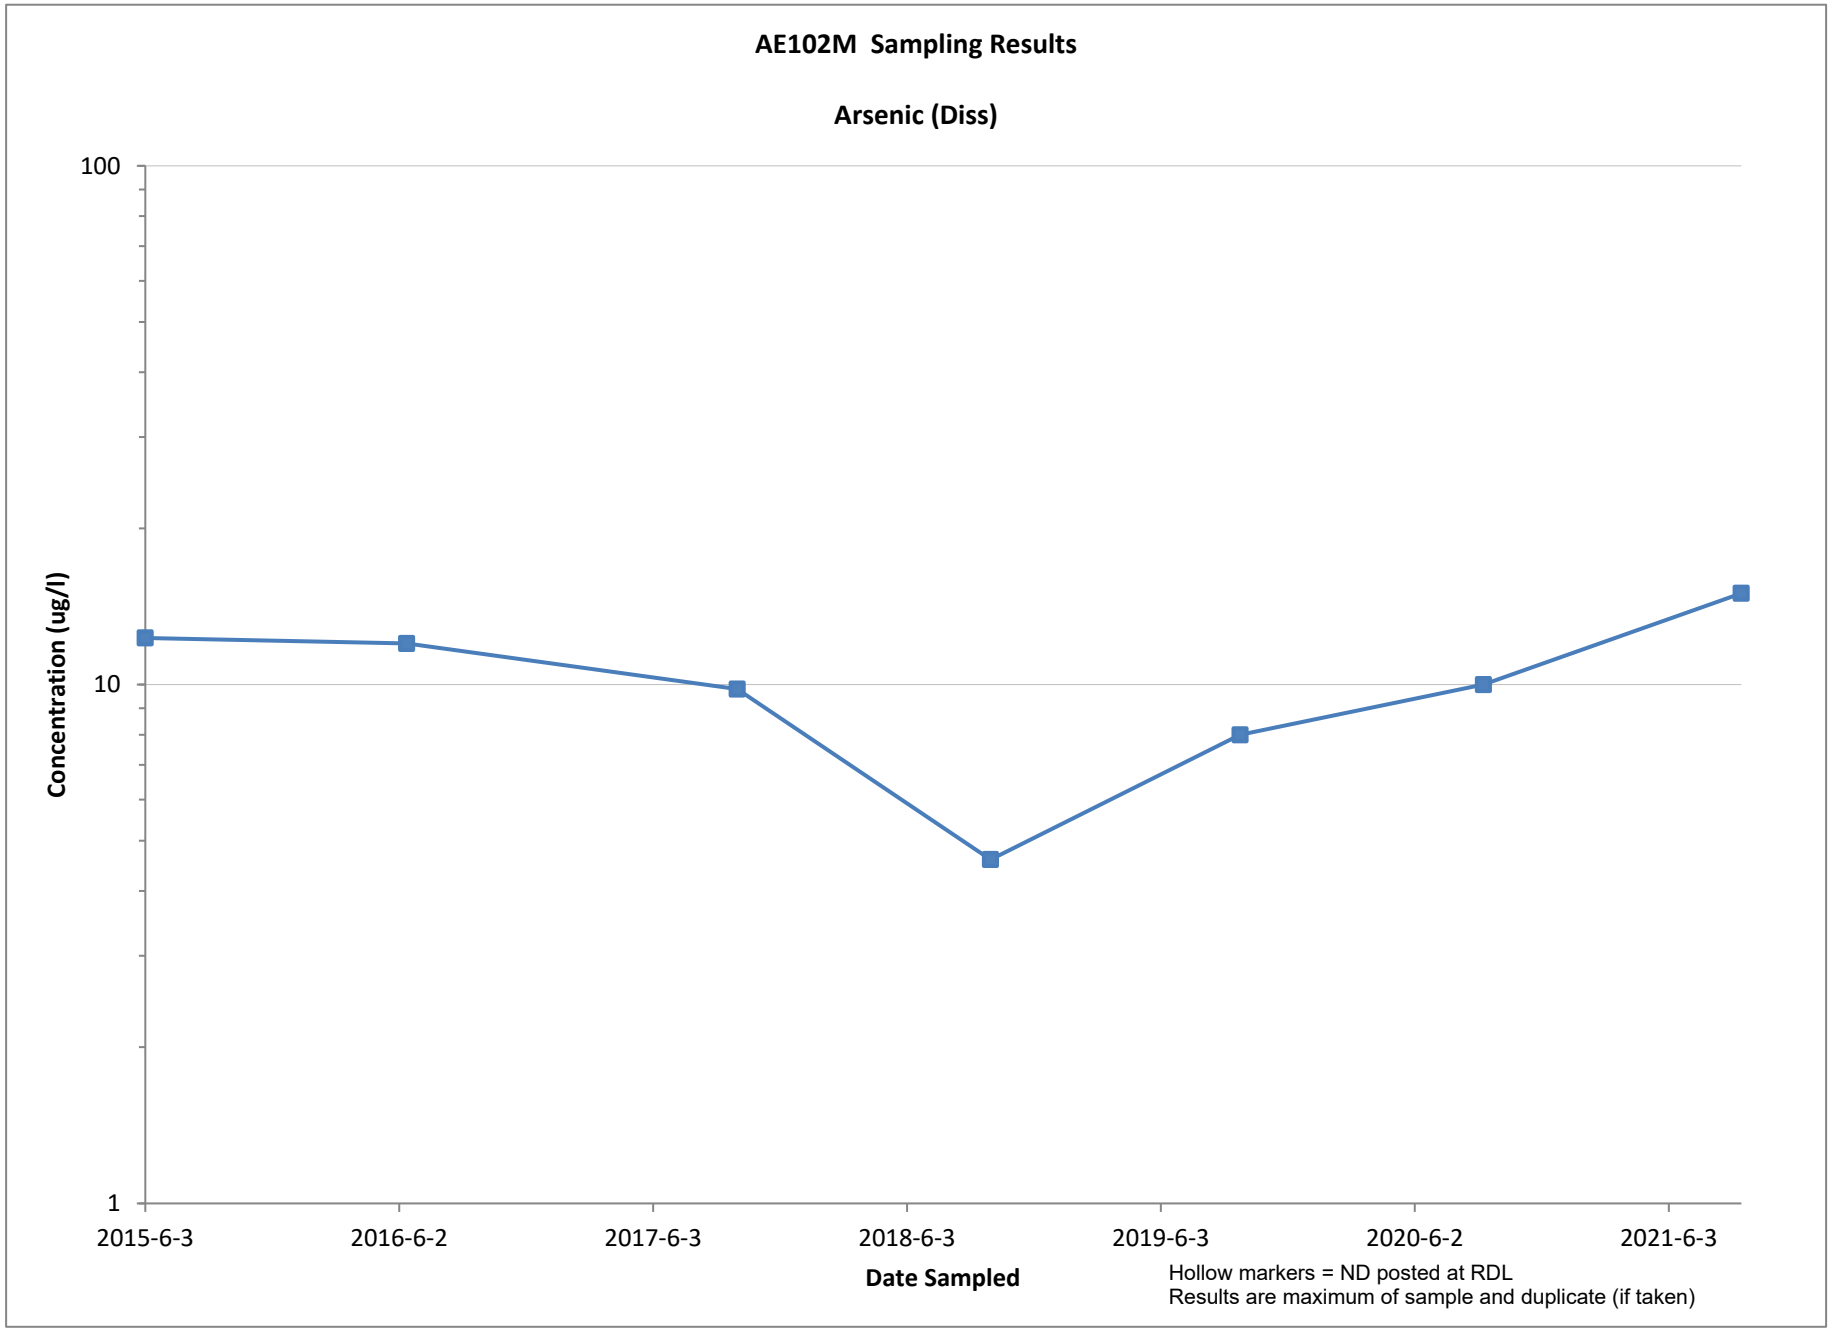
The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements. An "NA" indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The data appear valid as reported, were qualified as indicated below if required, and may be used for decision making purposes.



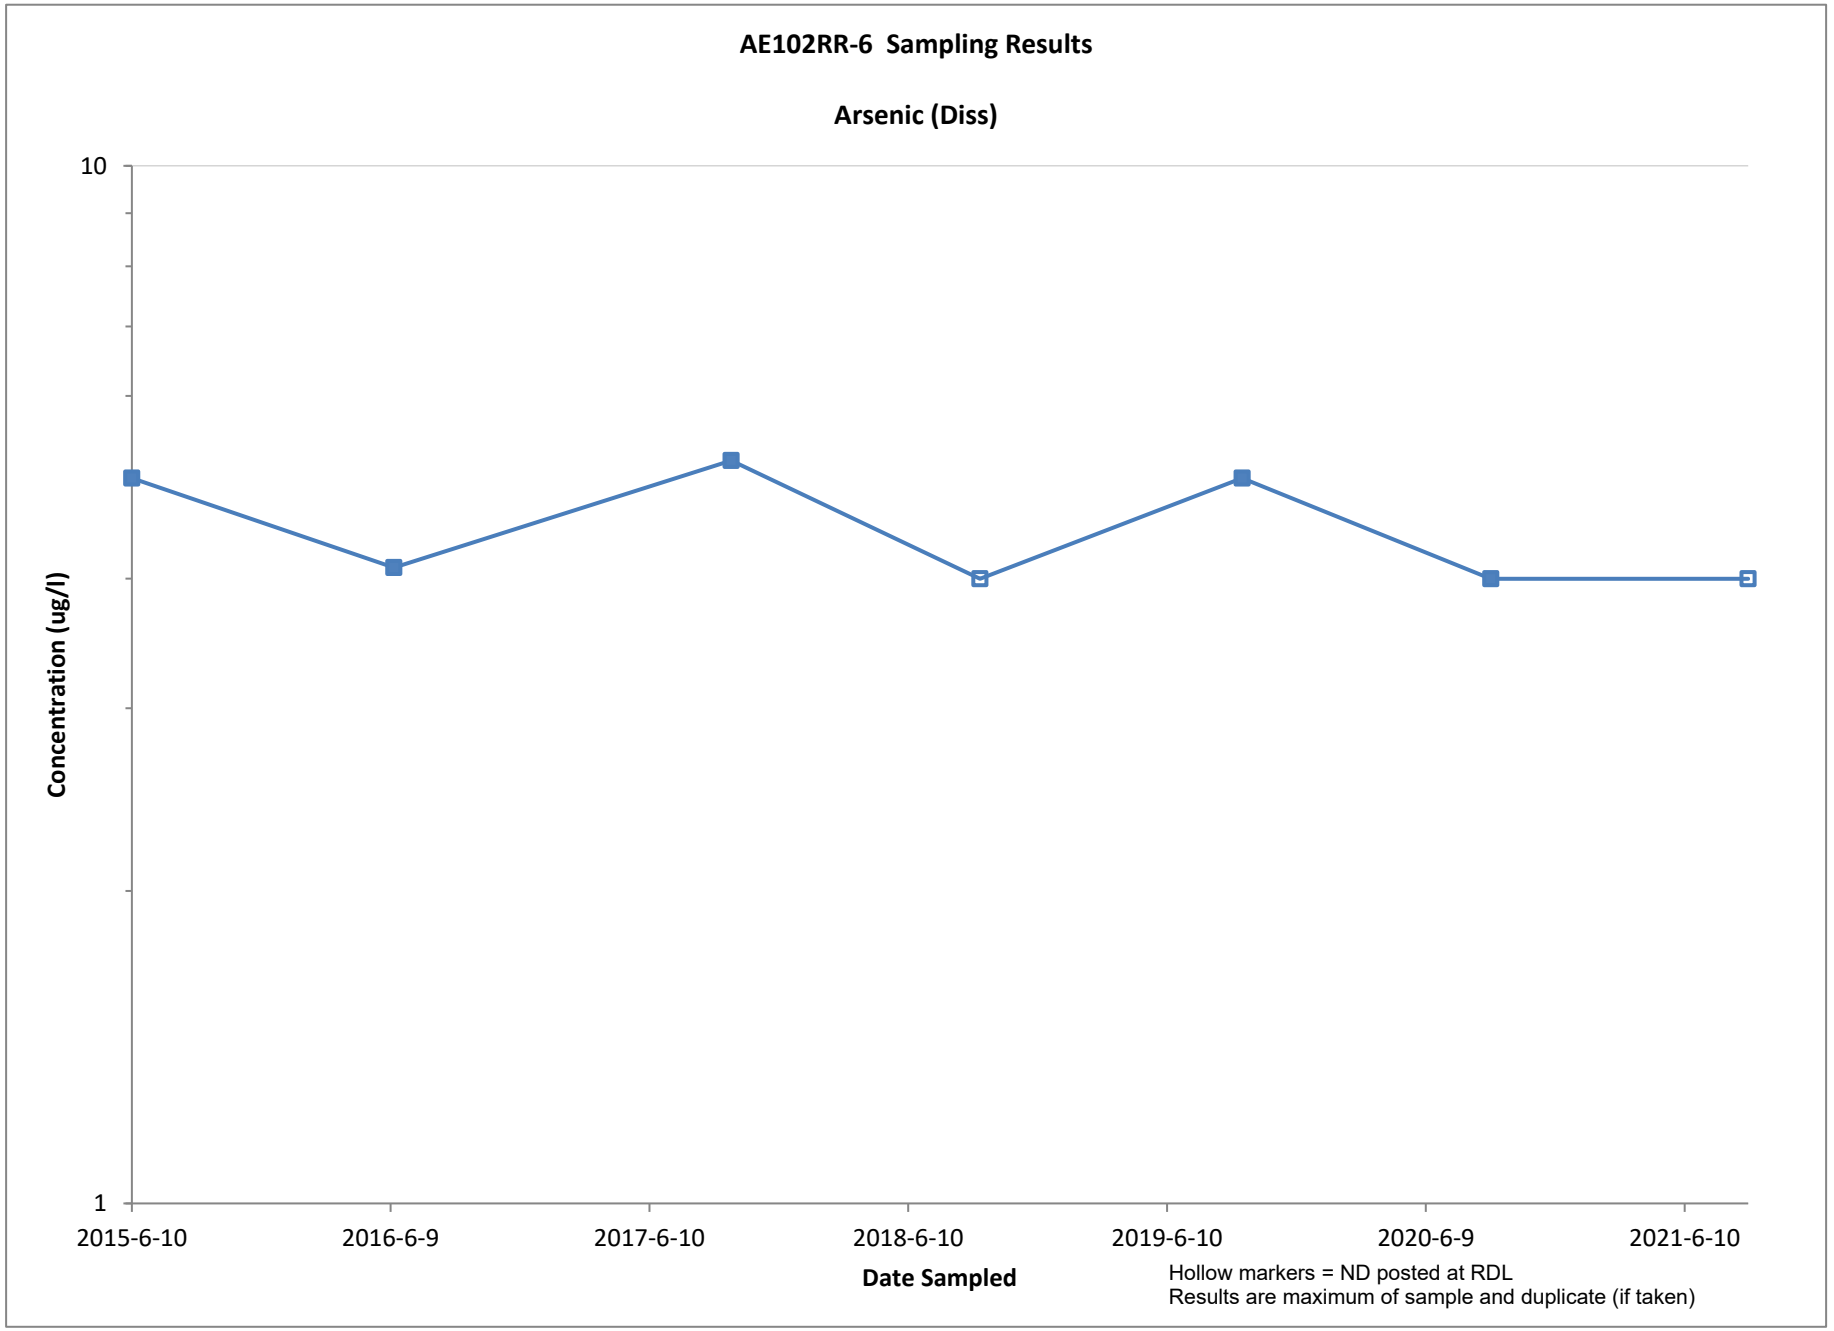
General Reporting Issues



When applicable, all sample results detected at concentrations less than the lowest calibration standard but greater than the MDL are qualified by the laboratory as estimated (J). This "J" qualifier is retained during data validation.



The following samples required dilutions, listed in parentheses, prior to analysis because of the presence of elevated concentrations of target or non-target compounds: 21A-AE2R2-090121-1 (5x), 21A-AE23R-090321-1 (20x), 21A-AE102RR6-00721-1 (5x), 21A-EMW11R2-090821-1 (5x) and 21A-GZA105R-091421-1 (5x).



It should be noted that all project action limits may not have been met for all target compounds. As part of the data validation, review elements which may impact sensitivity (i.e., laboratory and field blanks or sample dilutions) have been reviewed and are noted, if applicable. Sample results have not been compared to any project action limits as part of this data quality/usability assessment process.

µg/L	micrograms per liter
NA	not applicable
ND	non-detect
PCE	tetrachloroethene
S	Mann-Kendall statistic

SCI	Spatial Change Indicator™
TCE	trichloroethene
USEPA	United States Environmental Protection Agency
VOCs	volatile organic compounds

SECTION 1
INTRODUCTION AND PURPOSE

WSP USA Inc. (WSP) prepared this report for Lockheed Martin Corporation (Lockheed Martin) to document the results of a Groundwater Plume Analytics® Services project conducted for the former General Electric Company Facility at 50 Fordham Road in Wilmington, Massachusetts (Site). WSP performed the plume analytics described herein to help provide Lockheed Martin with an understanding of the overall stability of the various constituent plumes at the Site. The Groundwater Plume Analytics® Services results are presented graphically in the interactive PowerPoint presentation entitled *LMC Wilmington Plume Analytics 2021-12-20.pptx*, which is included as **Appendix A**. Reference is made in this document to the interactive PowerPoint presentation in which results and summaries can be accessed through a series of menu screens.

WSP performed this plume analytics evaluation using groundwater analytical and elevation data collected from 1989 to 2021 for the following four aquifer units monitored at the Site:

- Overburden
- Upper Bedrock
- Middle Bedrock
- Lower Bedrock

This evaluation included the following elements:

- Ricker Method® Plume Stability Analysis
- Spatial Change Indicator™ Analysis (US Pat. No. 10,400,583)
- Mass Flux Evaluation
- Ricker Method® Well Sufficiency Analysis™ (US Pat. No. 10,304,223)

The plume analytics analyses were conducted for the following constituents:

- Tetrachloroethene (PCE)
- Trichloroethene (TCE)
- cis-1,2-Dichloroethene (cis-1,2-DCE)
- Vinyl chloride (VC)
- 1,4-Dioxane
- Total Chloroethenes (molar basis)

The complete analyses including graphical displays for each the above constituents and groundwater elevation data are provided in **Appendix A**.

SECTION 2
GROUNDWATER PLUME ANALYTICS® METHODOLOGY

This section presents the methodologies of the elements of the Groundwater Plume Analytics® services. Results of the Ricker Method® plume stability analyses are available in **Appendix A**.

2.1 RICKER METHOD® PLUME STABILITY ANALYSIS

WSP performed the Ricker Method® plume stability analysis using procedures described in *A Practical Method to Evaluate Ground Water Contaminant Plume Stability* (Ricker, 2008). The Ricker Method® plume stability analysis compares relative changes in contaminant plume characteristics over time, including area, average concentration, and mass indicator. The term “mass indicator” does not necessarily represent the entire mass in the subsurface but rather an expression of it based on a fixed assumption of aquifer thickness and porosity to serve as a meaningful way of combining plume area and average concentration into one metric. Calculation of the actual constituent subsurface mass is often a very complicated exercise, and typically more data/inputs are needed than are incorporated in this analysis. Because the plume mass value is not necessarily an indication of actual contaminant mass, the term “mass indicator” is used to describe this plume characteristic. Since the main purpose of the plume stability analysis is to observe relative changes in plume characteristics between sampling events, applying constants (i.e., porosity and aquifer thickness) to the mass calculation has no bearing on the usefulness of the output of the analysis (i.e., relative rate of change in plume mass).

To demonstrate that a plume is decreasing or stable, temporal changes in the calculated values of area, average concentration, and mass indicator should result in an overall decreasing or stable trend. An increasing trend in any of these values may indicate that the plume is not stable and/or is possibly expanding. Further details concerning trend analysis and determination of a trend conclusion are provided in ***Section 2.1.3 Statistical Methodology***.

2.1.1 Data Assessment and Input File Development

Data used in the Ricker Method® plume stability analysis for the constituents listed above are tabulated in **Appendix B**. Groundwater analytical data were provided from 1989 through 2021 and groundwater elevation data were provided from 2014 through 2021. Analytical data was consolidated into semi-annual events where the maximum value (or lowest non-detect limit, if all non-detect) during the semi-annual period (per well and constituent), was retained for the analysis. The first semi-annual period consisted of the months January through June and was assigned an analysis month of March. The second semi-annual period consisted of the months July through December and was assigned an analysis month of September. In years where only annual data was available (notably in recent years) the analysis month assigned was September. Not all wells were sampled during each semi-annual or annual period, and data gaps were filled by interpolating between those events with available data. Other scientific and/or statistical assumptions and adjustments to the data, consistent with the Ricker Method®, were necessary to complete the analysis. These adjustments are identified in the Ricker Method® input data set summarized in **Appendix B**. The assumptions and adjustments used in the analysis include the following:

- Monitoring wells, in which 100 percent of the data collected were non-detect for a particular constituent, were assumed always to be non-detect for that constituent for sampling events in which no analytical data were reported.
- Control Points (i.e., non-detect locations) were used in instances where there was insufficient well coverage. Control points were generally used in known non-impacted areas such as side-gradient and up-gradient locations based on professional judgement. Control points are designated on the plume maps in **Appendix A** as blue dots.
- In most cases non-detect concentrations were evaluated with an assigned concentration value of the stated detection limit or, in some cases, a fraction of the detection limit (e.g., wells located far from known impacted areas). Also, in cases where non-detect concentrations with elevated detection limits were encountered, professional judgment was used. A consistent algorithm for evaluating elevated detection limits is provided in **Appendix C**. For every case in which a sample was

collected the assigned value was based on actual results (detectable value or non-detect at a lower detection limit). Assigned values for non-detect concentrations are noted in **Appendix B**.

- For sampling events in which a monitoring well was not sampled, but prior and subsequent analytical data were available, the events were assigned values by interpolating between the closest prior and subsequent sampling event. Instances where these values are assigned are indicated by orange shading in **Appendix B.**

Several monitoring wells in which historical data have been collected have not been sampled in recent years. In this instance, in lieu of extrapolating values forward for these wells, the wells missing recent data are removed from the analysis. When this occurs, we term these wells “hanging wells”, and they are denoted by orange colored well symbols in the plume map videos in **Appendix A.** In the plume videos in **Appendix A**, wells with black symbols signify actual or interpolated data. Once a well becomes “hanging” (i.e., no longer sampled), the well symbol turns orange signaling that data are no longer used for that well location. This allows the viewer to observe where historical data were collected and where potential data gaps may exist. Plotting “hanging” wells on the maps allows the viewer to quickly assess if data gaps can be resolved using the existing well network by sampling a “hanging” well again.

Groundwater elevation input data were compiled with similar methods listed above; however, no extrapolation, interpolation, or assignment of values to non-gauged wells was performed. Therefore, isopleth maps for each respective gauging event are based only on wells that were measured for that event. For the map videos of the piezometric surface, orange wells simply mean that a water level was not collected for that particular event. For these map videos, well symbols change between black and orange coloring depending on whether water elevations were available for a given monitoring event.

2.1.2 Groundwater Plume Map Development

As part of the Ricker Method® plume stability analysis, constituent concentration isopleth maps, or plume maps, were developed using input data from the procedures described above. Plume maps for each constituent were delineated to values at or below their

respective Massachusetts Contingency Plan (MCP) GW-1 standards. The plume base contour values for each of the constituents evaluated are listed below.

Constituent	Base Contour (µg/L)
PCE	5
TCE	5
Cis-1,2-DCE	5
Vinyl Chloride	2
1,4-Dioxane	0.3

Total chloroethenes plume maps were developed by adding together the individual molar concentrations of PCE, TCE, cis-1,2-DCE, and vinyl chloride at or above their respective base contour levels. The constituent-specific plume area for each sampling event was calculated using the mathematical features of the contouring software used to develop the isopleth maps (i.e., Surfer® by Golden Software, Inc.). The kriging gridding method was used with the default linear variogram to develop the isopleth maps. Wells that were always non-detect for a constituent once installed were assumed to be non-detect for that constituent prior to installation. Consistent with generally accepted scientific practices, these wells were used as control points to conceptualize the plume behavior during earlier periods where there was not enough data to delineate the plume. The wells used as control points are denoted by a blue dot on the plume maps (see locations in **Appendix A**). Surfer® was also used for the computation of the average concentration of each plume as described in Ricker (2008). The plume area and average concentrations were then used to calculate the plume mass indicator for each year. To calculate the plume mass indicator, values for aquifer thickness and porosity were used as listed below.

Hydrogeologic Zone	Thickness (ft.)	Porosity
Overburden	40	25%
Upper Bedrock	20	2.35%
Middle Bedrock	60	2.35%
Lower Bedrock	120	2.35%

Concentration isopleth maps for each of the constituents and hydrogeologic zones listed above are included in the PowerPoint presentation in **Appendix A**. Plume stability characteristics were calculated for each of the sampling events included in the analysis.

The plume stability characteristics of area, average concentration, and mass indicator, as well as the location of the center of mass, are also provided on each isopleth map.

2.1.3 Statistical Methodology

To evaluate the stability of each constituent plume, the area, average concentration, and mass indicator for each event were plotted to observe changes in each parameter from event to event. Temporal trends of the characteristics for each plume were also evaluated statistically. The characteristics that were trended are tabulated in **Appendix D**.

The temporal trends in the plume characteristic values were statistically evaluated using both linear regression techniques and the Mann-Kendall Test. Linear regression analyses were conducted using the regression analysis utility in Microsoft Excel. The Mann-Kendall Tests were conducted using procedures described in Gilbert (1987). Linear regression is a parametric statistical procedure that is typically used for analyzing trends in data over time. The Mann-Kendall Test is a non-parametric statistical test; therefore, it is not dependent upon the magnitude of the data, assumptions of distribution, or regularly spaced sampling events.

The Mann-Kendall Test is used to assess whether a data set exhibits an increasing or decreasing trend at a predetermined level of significance (α). The test requires the calculation of a statistic "S" which is the difference between the number of paired differences that are positive, minus the number that are negative. If S is a large positive value, then there is evidence of an increasing trend in the data. If S is a large negative value, then there is evidence of a decreasing trend in the data. The null hypothesis, H_0, for the Mann-Kendall Test is that there is no temporal trend in the data. The alternative hypothesis, H_A, is that of either an upward trend or a downward trend.

If the null hypothesis is not rejected (i.e., no trend could be established statistically), it is expected that the plume is stable. However, a stable plume may not in fact be evident because the statistical test does not consider magnitude or variation in the data. For example, a data set can exhibit a large amount of scatter, yet the test could conclude that the plume is stable. A methodology to counter the problem of scatter in the data involves comparing the calculated S statistic, a calculated confidence factor (1-α), and the

coefficient of variation for the data set. The S statistic indicates the direction of the trend, the confidence factor shows how strong the trend is, and the coefficient of variation indicates the degree of scatter in the data.

When evaluating trends using linear regression, trends may be obscured by scatter in the data. This condition is typically indicated by a low coefficient of determination (R^2) value. Even with low R^2 values (i.e., high degree of scatter) a confidence interval can still be constructed on the slope of the regression line. As described in AFCEE (2006), assuming the sign (i.e., positive or negative) of the estimated log-slope is correct, a level of confidence that the slope is not zero can be easily determined. The overall trend in the data may thus still be determined, where low levels of confidence correspond to stable or indeterminate trends and higher levels of confidence (e.g., > 90%) indicate the stronger likelihood of a trend.

For the plume stability analysis, significant trends are concluded when the calculated confidence factor is greater than 90%. If the confidence factor is less than 90%, the plume is considered stable (i.e., no trend) or indeterminate.

In many cases the statistical results for both linear regression and Mann-Kendall Test agree with each other. In the case where two different results are obtained (e.g., one stable trend and one decreasing trend), visual analysis and professional judgment are used to determine the overall trend result.

2.1.4 Plume Center of Mass Evaluation

In addition to temporal trend analyses of plume characteristics, the center of plume mass (COM) is calculated. Evaluation of COM movement should be considered in conjunction with the other plume characteristics to assess the overall stability of a plume. For example, a stable or decreasing plume may show migration of COM in the downgradient direction in instances when focused remediation occurred in a source area of a site. In this case, this downgradient COM shift is due to the rapid loss of mass in the upgradient portion of the plume, as opposed to a gradual migration resulting from advective transport. Conversely, a COM that shows little or no migration over time may be an indication that the plume is not migrating.

The plume COM is plotted on each plume map in ***Appendix A***. In these figures, the COM data for each constituent are evaluated by plotting the COM for multiple events on a single site map, where each COM (representing a discrete sampling event) is color coded according to event date to allow for visual assessment of movement in COM location through time. The date range chosen for this analysis is the period representing the most recent consistent monitoring network for that constituent. This provides a true depiction of COM behavior unaffected by changes to the monitoring network. Additionally, each pair of events is represented by a vector that indicates the direction and distance of COM movement from one sampling event to the next. The COM vectors are plotted together with each vector tail anchored at a common point to show variability in COM movement (similar to a wind rose diagram). COM vectors that are generally scattered through all four quadrants of the radial chart indicate a stable plume (random movement through time), whereas COM vectors that are generally together in the same quadrant indicate that a plume may be migrating or changes in the COM could be due to mass reduction from remediation or mass additions due to sourcing.

2.2 SPATIAL CHANGE INDICATOR™ METHODOLOGY

The Spatial Change Indicator™ evaluation (US Pat. No. 10,400,583) shows relative changes in the plume over time. For this analysis, each plume map in a particular series is compared to the first plume map in the series by subtracting from the original plume to create a new isopleth map that shows areas of the plume that decreased in concentration (indicated by blue shading) or increased in concentration (indicated by red shading). The visual aspect of this analysis allows the viewer to observe patterns of plume behavior over time.

This analysis also has a quantitative component. Each Spatial Change Indicator™ map includes the percent change (increase or decrease) of the plume between each event and the baseline event in terms of area, average concentration, and mass indicator as calculated using Ricker Method® procedures. Additionally, for areas that increased or decreased in concentration, representative magnitudes of mass increase (red shaded areas) and mass decrease (blue shaded areas) are also included on each map. Spatial

Change Indicator™ analyses for total chloroethenes and 1,4-dioxane for each of the four hydrogeologic units are included in **Appendix A**.

2.3 MASS FLUX METHODOLOGY

Mass flux is an estimate of the mass of a constituent that passes through a defined cross-sectional area of the plume over time. As defined in ITRC (2010), mass flux combines two key features of a contaminant plume: how much contaminant is in the groundwater and how fast the groundwater is moving through a defined cross-sectional area. The units of mass flux are mass per unit time per unit area. However, if the unit area can be defined for a particular site, then the net mass discharge (in units of mass per unit time, e.g. lbs/yr) can be estimated. In this report, we use the term “mass flux” to describe mass discharge through a defined cross-sectional area. The defined area is a cross-section of the plume that has a width based on the plume boundary value and the same thicknesses used for the Ricker Method® plume stability analysis.

For this analysis, two transects were constructed as shown in **Appendix A**. Transect A runs perpendicular to the plume along the western property boundary and Transect B is located approximately 500 feet downgradient from Transect A. The mass flux for each sampling event for both transects was calculated by discretizing the transect line into segments and calculating discrete mass flux values for each segment. The discrete mass flux values were then summed for a net mass flux for each sampling event. Discrete mass flux values were calculated by multiplying the concentration by a groundwater velocity and thickness and segment width at each discrete location along the transect. The width used for each discrete mass flux estimate is based distance between concentration nodes in the constituent concentration contour as described in Section 2.1.2. The sum of the segment widths represents the width of the plume at the transect line.

The groundwater velocity, or Darcy velocity, is determined by multiplying hydraulic conductivity by the hydraulic gradient. For the overburden, a site-specific hydraulic conductivity value of 78 feet per day and gradient of 0.001 ft/ft were used for the mass flux calculations. For the upper, middle, and lower bedrock, a site-specific hydraulic conductivity value of 0.5 feet per day and gradient of 0.001 ft/ft were used for the mass flux calculations.

2.4 RICKER METHOD® WELL SUFFICIENCY ANALYSIS™ METHODOLOGY

The Ricker Method® Well Sufficiency Analysis™ (US Pat. No. 10,304,223) is a statistical method to determine if a monitoring well network can be removed from the monitoring program while maintaining confidence in the ability of the network to monitor plume behavior. The analysis uses the plume stability characteristics of area, average concentration and mass indicator from the entire network as a baseline to compare the respective plume stability characteristics from a reduced, or optimized, network. These comparisons are made for each of the plume stability characteristics using Mann-Kendall trend, linear regression trend, average relative percent difference and correlation coefficient. For a reduced network to be acceptable, the trend conclusions for the reduced network trends should match the conclusion of the original network trends; the average relative percent difference between the reduced network trends and original network trends should be minimized; and the correlation coefficient of the reduced network trend and original network trend should be maximized. The correlation coefficient is a statistical measure of the strength of the relationship between the relative movements of two variables, or in this case, two trends (original vs. optimized). The values range between -1.0 and 1.0, with 1.0 being a perfect positive correlation. In general, a correlation coefficient greater than 0.5 indicates a moderate correlation, and values above 0.8 indicate a strong correlation.

SECTION 3
GROUNDWATER PLUME ANALYTICS® RESULTS

This section of the report provides a summary of the results of the Groundwater Plume Analytics® evaluation. The full graphical display and analysis, including plume map videos, COM evaluation maps, the Spatial Change Indicator™ results, and mass flux analysis results, are included in **Appendix A**. The results are discussed for each of the hydrogeologic units individually below.

3.1 OVERBURDEN

Plume map videos and plume stability analysis results for each of the constituents evaluated in the overburden are included in **Appendix A**. As observed in the trend charts in Appendix A, trend analyses were conducted for the most recent data using a mostly consistent well network. For the chloroethene compounds, plume stability trends were conducted for the period of 2014 to 2021 and plume stability trends for 1,4-dioxane were conducted for the period of 2018 to 2021. The Ricker Method® plume stability analysis trend conclusions for each of the constituents evaluated in the overburden are summarized below.

Overburden Ricker Method® Plume Stability Trends			
Constituent	**Area**	**Average Concentration**	**Mass Indicator**
PCE	No Trend[1]	Decreasing Trend	Decreasing Trend
TCE	No Trend[1]	Decreasing Trend	Decreasing Trend
cis-1,2-DCE	Decreasing Trend	Decreasing Trend	Decreasing Trend
Vinyl Chloride	No Trend[1]	Decreasing Trend	Decreasing Trend
Chloroethenes	Decreasing Trend	Decreasing Trend	Decreasing Trend
1,4-Dioxane	No Trend[1]	Decreasing Trend	Decreasing Trend

[1] Observed decreasing trend, not statistically significant

As observed above, the constituent plumes in the overburden are all decreasing or stable. The Spatial Change Indicator™ evaluation for chloroethenes shows that the plume has attenuated significantly in upgradient source areas, as well as in the non-contiguous downgradient plume area. Increases are observed in the immediate downgradient portions of the plume. Trend charts for selected wells (MW-7, MW-5, EMW-10D, and AE106S) in areas of increase are shown in **Appendix A**. As observed in **Appendix A**, the total chloroethenes plume decreased from approximately 95 mols (22.5 lbs.) in 2014 to approximately 30 mols (7.9 lbs.) in 2021. The 1,4-dioxane plume exhibited a decrease from 0.55 lbs. in 2018 to 0.31 lbs. in 2021.

The mass flux analysis resulted in relatively stable trends for both Transects A and B for the chloroethenes plume and the 1,4-dioxane plume in the overburden. Following is a summary of the 2021 mass flux values and percent reduction from Transect A to Transect B. The average percent reduction from Transect A to Transect B during the period of 2015 to 2021 is also provided for reference.

2021 Overburden Mass Flux		
	Chloroethenes	1,4-Dioxane
Transect A	5.58 mol/yr	0.035 lbs/yr
Transect B	3.88 mol/yr	0.014 lbs/yr
Percent Reduction from A-B	30.6%	58.6%
Average Percent Reduction (2015-2021)	28.5%	14.3%

Overall, Site data support a clear reduction in both total chloroethenes and 1,4-dioxane in the overburden. Based on the observation that the predominant chloroethene plume fraction is cis-1,2-DCE, it is apparent that biodegradation and/or abiotic degradation is occurring in the overburden and likely accounts for some portion of the observed decrease in plume mass.

3.2 BEDROCK

As discussed above, the Ricker Method® plume stability analysis was conducted for the upper, middle, and lower bedrock zones. Analysis results for each of the zones are discussed separately below. Section 3.2.4 includes a discussion of the entire bedrock unit that incorporates each of the three bedrock zones.

3.2.1 Upper Bedrock

Plume map videos and plume stability analysis results for each of the constituents evaluated in the upper bedrock are included in **Appendix A**. As observed in the trend charts in Appendix A, trend analyses were conducted for the most recent data using a mostly consistent well network. For the chloroethene compounds, plume stability trends were conducted for the period of 2014 to 2021 and plume stability trends for 1,4-dioxane were conducted for the period of 2017 to 2021. The Ricker Method® plume stability analysis trend conclusions for each of the constituents evaluated in the upper bedrock are summarized below.

Upper Bedrock Ricker Method® Plume Stability Trends			
Constituent	**Area**	**Average Concentration**	**Mass Indicator**
PCE	Decreasing Trend	Increasing Trend	No Trend[2]
TCE	Decreasing Trend	No Trend[2]	No Trend[1]
cis-1,2-DCE	Increasing Trend	Increasing Trend	Increasing Trend
Vinyl Chloride	Increasing Trend	Increasing Trend	Increasing Trend
Chloroethenes	No Trend[1]	Increasing Trend	No Trend[2]
1,4-Dioxane	No Trend[1]	No Trend[1]	No Trend[1]

[1] Observed decreasing trend, not statistically significant
[2] Observed increasing trend, not statistically significant

As observed above, the chloroethene plumes in the upper bedrock are generally increasing or stable. The total chloroethenes plume mass indicator likewise resulted in an observed increasing trend; however, the overall trend appears to be stable. In fact, the 2021 mass indicator value is lower than both the 2020 and 2019 values. The 1,4-dioxane

plume stability analysis in the upper bedrock resulted in decreasing, but not statistically significant, trends for all three plume metrics.

The Spatial Change Indicator™ evaluation for chloroethenes shows that the upper bedrock plume has attenuated in upgradient source areas, but also shows area of increase in the core of the plume. The total chloroethenes plume area has not increased from 2014 to 2021, in fact it has decreased by approximately 8 percent. Increases in plume mass are observed in the core of the plume and slight increases are observed in the leading edge of the plume. Trend charts for selected wells (AE23R, AE27R, AE100R-3, AE102RR-1, AE104R-1, and AE106R-1) in areas of increase are shown in **Appendix A**. Notably, the furthest downgradient well in the plume, AE106R-1, has only slightly increased in concentration (210 nmol/l in 2014 to 236 nmol/l in 2021), but it exhibits a very reducing signature. That is, the molar fractions of parent compounds PCE and TCE are decreasing as the molar fraction of daughter compound cis-1,2-DCE is increasing. This is evidence that intrinsic biodegradation and/or abiotic degradation is occurring at the Site. As observed in **Appendix A**, the total chloroethenes plume increased from approximately 42 mols (12.2 lbs.) in 2014 to approximately 49 mols (14.3 lbs.) in 2021. The 1,4-dioxane plume in the upper bedrock exhibited a decrease from 0.048 lbs. in 2017 to 0.045 lbs. in 2021.

The total chloroethenes mass flux analysis resulted in an apparent decreasing trend in Transect A and stable trend in Transect B. The 1,4-dioxane mass flux analysis in the upper bedrock resulted in relatively stable trends in both Transects A and B. Following is a summary of the 2021 mass flux values and percent reduction from Transect A to Transect B. The average percent reduction from Transect A to Transect B during the period of 2015 to 2021 is also provided for reference.

2021 Upper Bedrock Mass Flux		
	Chloroethenes	1,4-Dioxane
Transect A	0.286 mol/yr	0.0006 lbs/yr
Transect B	0.002 mol/yr	0 lbs/yr
Percent Reduction from A-B	99.0%	100%
Average Percent Reduction (2015-2021)	99.1%	98.6%

3.2.2 Middle Bedrock

Plume map videos and plume stability analysis results for each of the constituents evaluated in the middle bedrock are included in **Appendix A**. As observed in the trend charts in Appendix A, trend analyses were conducted for the most recent data using a mostly consistent well network. For the chloroethene compounds, plume stability trends were conducted for the period of 2016 to 2021 and plume stability trends for 1,4-dioxane were conducted for the period of 2017 to 2021. The Ricker Method® plume stability analysis trend conclusions for each of the constituents evaluated in the upper bedrock are summarized below.

Middle Bedrock Ricker Method® Plume Stability Trends			
Constituent	**Area**	**Average Concentration**	**Mass Indicator**
PCE	Decreasing Trend	No Trend[1]	No Trend[1]
TCE	Decreasing Trend	No Trend[1]	No Trend[1]
cis-1,2-DCE	Increasing Trend	Increasing Trend	Increasing Trend
Vinyl Chloride	Increasing Trend	Increasing Trend	Increasing Trend
Chloroethenes	Increasing Trend	No Trend[1]	No Trend[1]
1,4-Dioxane	No Trend[1]	No Trend[1]	No Trend[1]

[1] Observed decreasing trend, not statistically significant

As observed above, the parent chloroethene plumes (PCE and TCE) in the middle bedrock are generally decreasing or stable, whereas the daughter chloroethene plumes

are increasing. The total chloroethenes plume mass indicator likewise resulted in an increasing trend; however, the average concentration and mass indicator are observed to be decreasing, but not at a statistical level of significance. It is also observed that the plume-wide molar fractions exhibit a slight decreasing trend in TCE fraction coupled with an increasing trend in cis-1,2-DCE fraction, indicating biodegradation and/or abiotic degradation may be occurring. Similar to the upper bedrock, the 1,4-dioxane plume stability analysis in the middle bedrock resulted in decreasing, but not statistically significant, trends for all three plume metrics.

The Spatial Change Indicator™ evaluation for chloroethenes shows that the middle bedrock plume has attenuated in the core of the plume and in the leading edge of the plume. There are observed areas of increase primarily in the Site source area. The total chloroethenes plume area has increased slightly from 2016 to 2021; however, the plume mass indicator has decreased by approximately 5 percent during the same period. Trend charts for selected wells (AE29R-3, AE29R-5, AE26R-2, AE26R-4, AE28R-2, AE100R-4, AE108R-3, and AE112R-4) in areas of increase are shown in **Appendix A**. Although these wells exhibit increases in concentration since 2016, many of them also exhibit reducing signatures with decreasing trends in parent compound molar fractions coupled with increasing trends in daughter compound molar fractions. This is further evidence that intrinsic biodegradation and/or abiotic degradation is occurring at the Site. As observed in **Appendix A**, the total chloroethenes plume in the middle bedrock decreased from approximately 179 mols (52.1 lbs.) in 2016 to approximately 169 mols (49.4 lbs.) in 2021. The 1,4-dioxane plume in the upper bedrock exhibited a decrease from 0.226 lbs. in 2017 to 0.217 lbs. in 2021.

The total chloroethenes mass flux analysis resulted in an apparent decreasing trend in Transect A and stable trend in Transect B. The 1,4-dioxane mass flux analysis in the middle bedrock resulted in relatively stable trends in both Transects A and B. Following is a summary of the 2021 mass flux values and percent reduction from Transect A to Transect B in the middle bedrock. The average percent reduction from Transect A to Transect B during the period of 2015 to 2021 is also provided for reference.

2021 Middle Bedrock Mass Flux		
	Chloroethenes	1,4-Dioxane
Transect A	2.61 mol/yr	0.0021 lbs/yr
Transect B	0.12 mol/yr	0.0005 lbs/yr
Percent Reduction from A-B	95.4%	77.5%
Average Percent Reduction (2015-2021)	95.4%	75.6%

3.2.3 Lower Bedrock

Plume map videos and plume stability analysis results for each of the constituents evaluated in the lower bedrock are included in **Appendix A**. As observed in the trend charts in Appendix A, trend analyses were conducted for the most recent data using a mostly consistent well network. For the chloroethene compounds, plume stability trends were conducted for the period of 2016 to 2021 and plume stability trends for 1,4-dioxane were conducted for the period of 2017 to 2021. The Ricker Method® plume stability analysis trend conclusions for each of the constituents evaluated in the upper bedrock are summarized below.

Lower Bedrock Ricker Method® Plume Stability Trends			
Constituent	**Area**	**Average Concentration**	**Mass Indicator**
PCE	Decreasing Trend	Decreasing Trend	Decreasing Trend
TCE	No Trend[1]	Decreasing Trend	Decreasing Trend
cis-1,2-DCE	Increasing Trend	No Trend[2]	No Trend[2]
Vinyl Chloride	Increasing Trend	Increasing Trend	Increasing Trend
Chloroethenes	No Trend[1]	Decreasing Trend	Decreasing Trend
1,4-Dioxane	No Trend[1]	Decreasing Trend	Decreasing Trend

[1] Observed decreasing trend, not statistically significant

[2] Observed increasing trend, not statistically significant

As observed above, the parent chloroethene plumes (PCE and TCE) in the lower bedrock are decreasing, whereas the daughter chloroethene plumes are stable to increasing. The total chloroethenes plume, however, exhibits a strong decreasing trend. The 1,4-dioxane

plume stability analysis in the lower bedrock likewise resulted in stable or decreasing trends for all three plume metrics.

The Spatial Change Indicator™ evaluation for chloroethenes shows that the lower bedrock plume has attenuated in the core of the plume. There are observed areas of increase primarily in the Site source area and portions of the downgradient plume. The total chloroethenes plume area has increased slightly from 2016 to 2021; however, the plume mass indicator has decreased by approximately 15 percent during the same period. Trend charts for selected wells (AE28R-4, AE101R-5, AE105R-5, AE108R-5, and AE112R-6) in areas of increase are shown in **Appendix A**. Although these wells exhibit increases in concentration since 2016, many of them also exhibit reducing signatures with decreasing trends in parent compound molar fractions coupled with increasing trends in daughter compound molar fractions. This is further evidence that intrinsic biodegradation and/or abiotic degradation is occurring at the Site. As observed in **Appendix A**, the total chloroethenes plume in the lower bedrock decreased from approximately 380 mols (112 lbs.) in 2016 to approximately 322 mols (94.9 lbs.) in 2021. The 1,4-dioxane plume in the lower bedrock exhibited a decrease from 0.63 lbs. in 2017 to 0.56 lbs. in 2021.

The total chloroethenes mass flux analysis in the lower bedrock resulted in an apparent decreasing trend in Transect A and stable trend in Transect B. The 1,4-dioxane mass flux analysis in the middle bedrock resulted in relatively stable trends in both Transects A and B. Following is a summary of the 2021 mass flux values and percent reduction from Transect A to Transect B in the lower bedrock. The average percent reduction from Transect A to Transect B during the period of 2015 to 2021 is also provided for reference.

2021 Middle Bedrock Mass Flux		
	Chloroethenes	1,4-Dioxane
Transect A	9.47 mol/yr	0.0036 lbs/yr
Transect B	0.28 mol/yr	0.0004 lbs/yr
Percent Reduction from A-B	97.0%	88.7%
Average Percent Reduction (2015-2021)	97.5%	91.2%

3.2.4 Bedrock Discussion

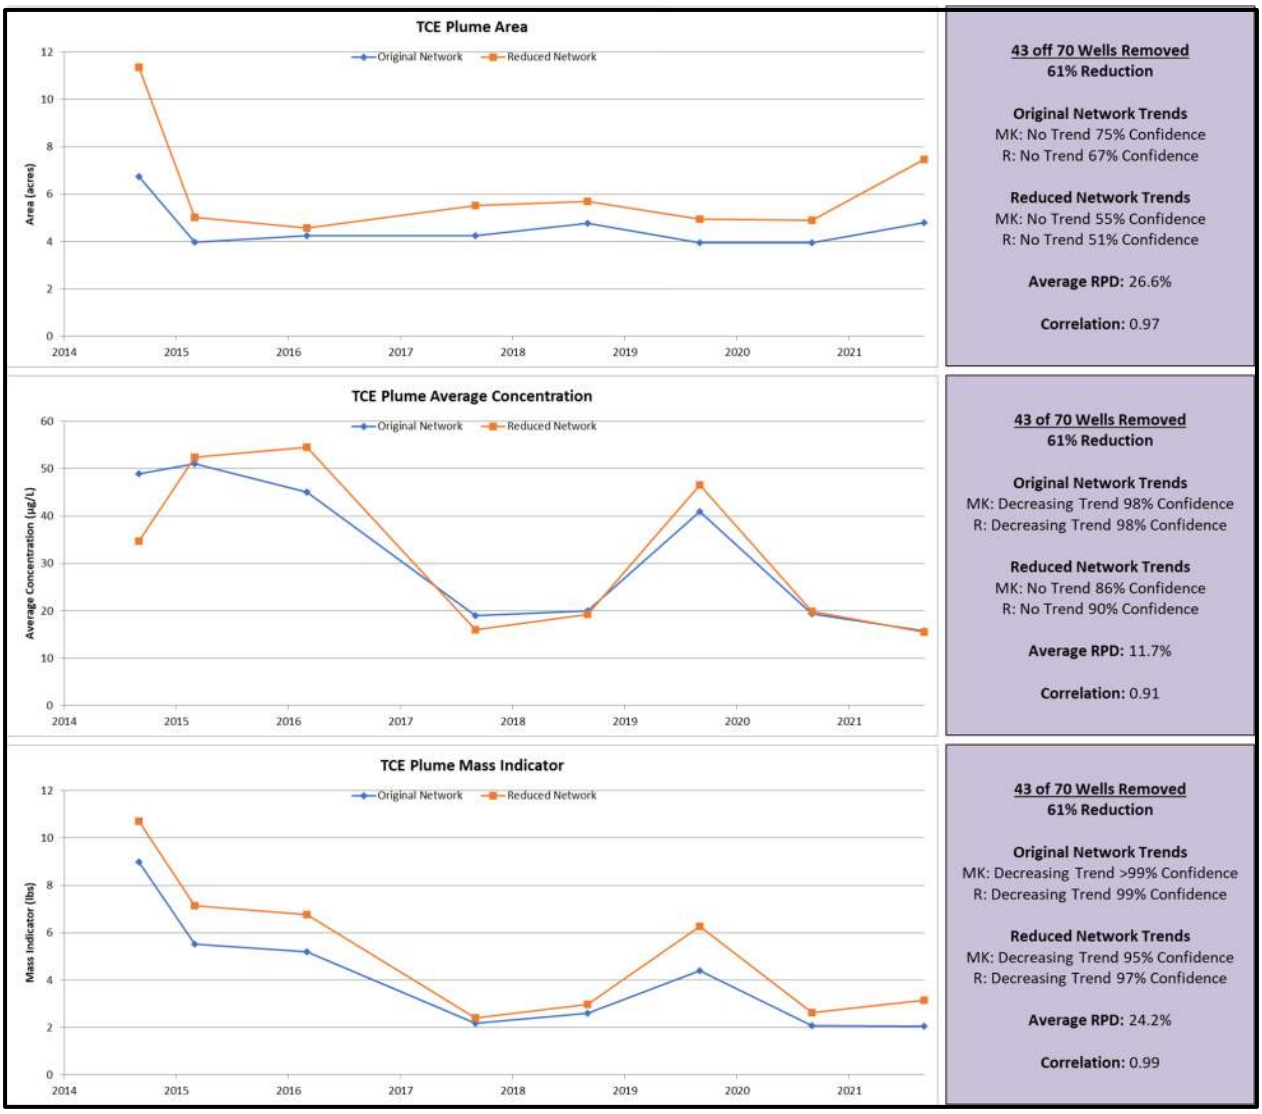
Although some increasing tends in individual constituents are observed in the bedrock plumes, the overall trend over the three bedrock zones is decreasing. Following is a summary of the total chloroethenes plume mass in the bedrock in 2016 compared to 2021 and the 1,4-dioxane plume mass in the bedrock in 2017 compared to 2021.

Total Chloroethene Plume in Bedrock			
Bedrock Zone	**2016**	**2021**	**% Reduction**
Upper	14.4 lbs	14.3 lbs	
Middle	52.1 lbs	49.4 lbs	
Lower	112 lbs	94.9 lbs	
Total Bedrock	179 lbs	159 lbs	11.2%

1,4-Dioxane Plume in Bedrock			
Bedrock Zone	**2017**	**2021**	**% Reduction**
Upper	0.048 lbs	0.045 lbs	
Middle	0.226 lbs	0.217 lbs	
Lower	0.631 lbs	0.559 lbs	
Total Bedrock	0.905 lbs	0.821 lbs	9.3%

In addition to observed overall decreases in the bedrock, many of the monitoring wells exhibit reducing signatures characterized by decreasing trends in parent compound molar fractions coupled with increasing trends in daughter compound molar fractions, and some wells exhibit predominantly cis-1,2-DCE. Overall, there appears to be some level of biodegradation and/or abiotic degradation occurring in the bedrock hydrogeologic zone.

SECTION 4
WELL SUFFICIENCY ANALYSIS™



A Ricker Method® Well Sufficiency Analysis™ was conducted as part of the groundwater optimization program for the Site. The Well Sufficiency Analysis™ was conducted as described in Section 2.4 for each of the chloroethene constituents in all four hydrogeologic zones evaluated above. The analysis was conducted with input from the Lockheed Martin project team. Final recommended monitoring well networks for each monitoring zone are summarized below.

Overburden

For the overburden, the Ricker Method® plume stability analysis was conducted with a total of 126 discrete sampling screens for the period of 1989 to 2021 (see input data in **Appendix B**). There have been many wells added and removed from the program over the years, and the current monitoring network for the past several years consisted of 70 discrete sampling locations. The results of the Well Sufficiency Analysis™ are summarized in the interactive PowerPoint file entitled *LMC Wilmington Well Sufficiency Analysis.pptx*, which is included as **Appendix D**.

As part of the analysis, through trial and error and professional judgement, 43 wells were removed from the network of 70 wells. **Figure 1** is a summary of the TCE trend comparisons for the original network of 70 wells compared to the reduced network of 27 wells in the overburden. Similar evaluations for the other chloroethene constituents are included in **Appendix D**. As observed in **Figure 1** below, the trends resulting from the reduced network provide a comparable understanding of plume behavior and is adequate for the next five-year monitoring period.

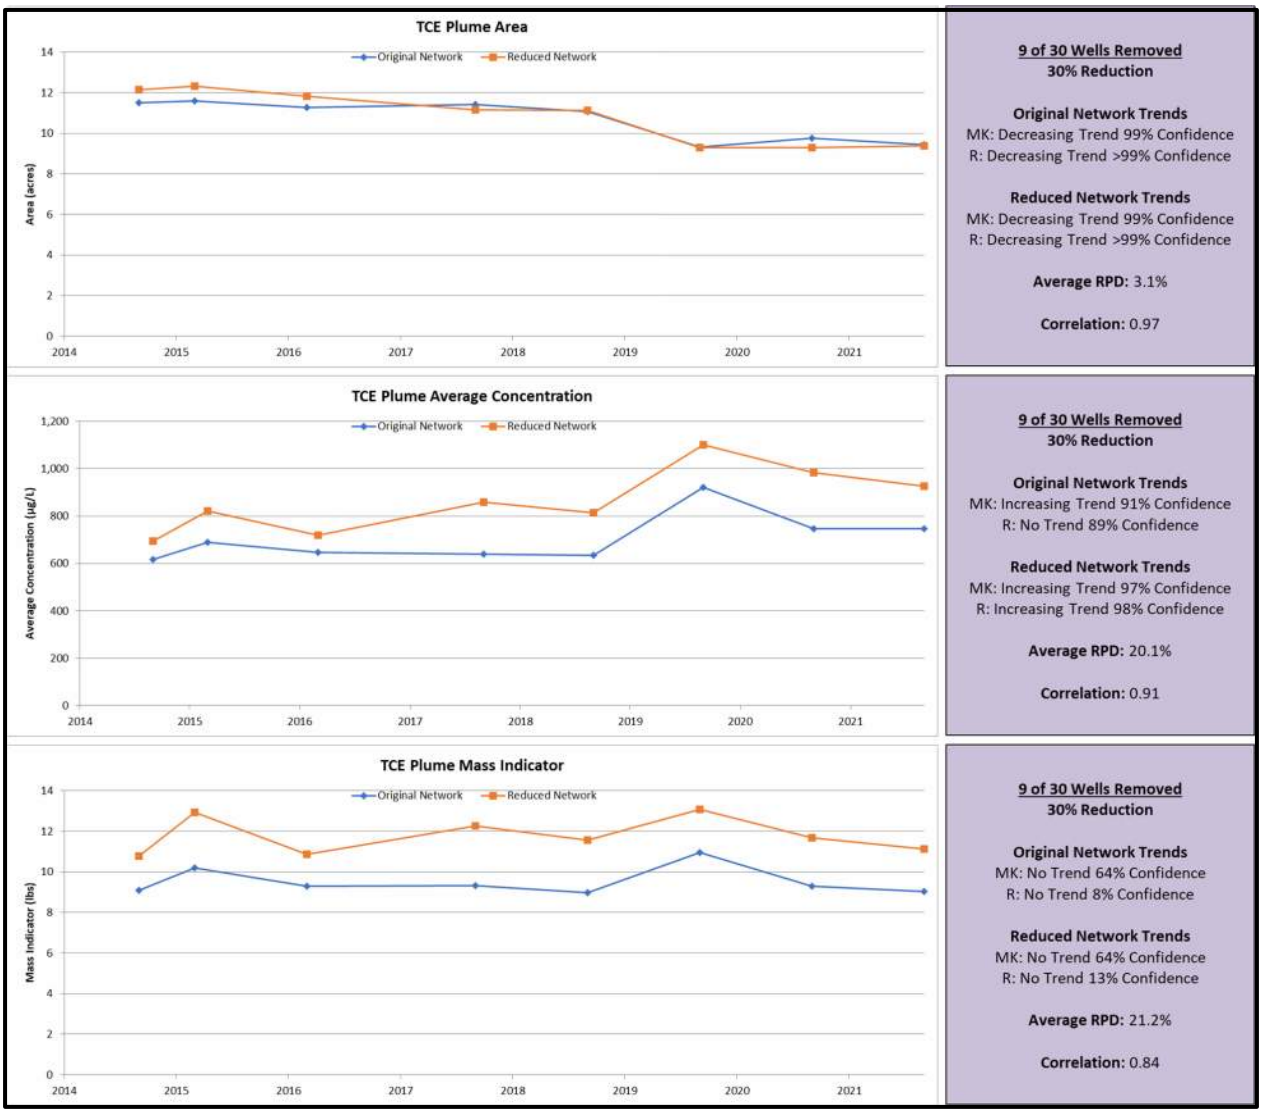
Figure 1. Summary of Well Sufficiency Outcome for TCE in Overburden

Below is a summary of the Well Sufficiency Analysis™ for each chloroethene compound in the overburden.

Overburden Well Sufficiency Summary (43 Wells Removed)									
	RPD			Correlation			Trend Conclusion		
Constituent	Area	Conc	Mass	Area	Conc	Mass	Area	Conc	Mass
PCE	27.5%	11.6%	24.8%	0.96	0.92	0.99	Same	Decreasing Trend - No Trend	Same
TCE	26.6%	11.7%	24.2%	0.97	0.91	0.99	Same	Decreasing Trend - No Trend	Same
cis-1,2-DCE	29.3%	9.0%	33.2%	0.9	0.92	0.96	Same	Same	Same
Vinyl Chloride	27.0%	15.6%	28.7%	0.03	0.61	0.32	Same	Same	Decreasing Trend - No Trend

For reference, the mass flux trends were also recalculated based on the reduced network, and the comparisons are provided in the PowerPoint File in **Appendix D**. The final recommended monitoring network for the overburden is summarized below.

Overburden Recommended Well Network



AE101D	AE24	MW-5

AE112D	GZA-12	STM-8D
AE23S	MW-4A	TRC-102

Upper Bedrock

For the upper bedrock, the Ricker Method® plume stability analysis was conducted with a total of 59 discrete sampling screens for the period of 1989 to 2021 (see input data in **Appendix B**). The current monitoring network in the upper bedrock for the past several years consisted of 30 discrete sampling locations. The results of the Well Sufficiency Analysis™ are summarized in the interactive PowerPoint file entitled *LMC Wilmington Well Sufficiency Analysis.pptx*, which is included as **Appendix D**.

As part of the analysis, through trial and error and professional judgement, 9 wells were removed from the network of 30 wells. **Figure 2** is a summary of the TCE trend comparisons for the original network of 30 wells compared to the reduced network of 21 wells in the upper bedrock. Similar evaluations for the other chloroethene constituents are included in **Appendix D**. As observed in **Figure 2** below, the trends resulting from the reduced network provide a comparable understanding of plume behavior and is adequate for the next five-year monitoring period.

Figure 2. Summary of Well Sufficiency Outcome for TCE in Upper Bedrock

Below is a summary of the Well Sufficiency Analysis™ for each chloroethene compound in the upper bedrock.

Upper Bedrock Well Sufficiency Summary (9 Wells Removed)									
	RPD			Correlation			Trend Conclusion		
Constituent	Area	Conc	Mass	Area	Conc	Mass	Area	Conc	Mass
PCE	6.2%	21.9%	18.7%	0.81	0.94	0.97	Same	Same	Same

AE108R-1	AE27R	TRC-201R

Middle Bedrock

For the middle bedrock, the Ricker Method® plume stability analysis was conducted with a total of 49 discrete sampling screens for the period of 1992 to 2021 (see input data in **Appendix B**). The current monitoring network in the upper bedrock for the past several years consisted of 43 discrete sampling locations. The results of the Well Sufficiency Analysis™ are summarized in the interactive PowerPoint file entitled *LMC Wilmington Well Sufficiency Analysis.pptx*, which is included as **Appendix D**.

As part of the analysis, through trial and error and professional judgement, 17 wells were removed from the network of 43 wells. **Figure 3** is a summary of the TCE trend comparisons for the original network of 43 wells compared to the reduced network of 26 wells in the middle bedrock. Similar evaluations for the other chloroethene constituents are included in **Appendix D**. As observed in **Figure 3** below, the trends resulting from the reduced network provide a comparable understanding of plume behavior and is adequate for the next five-year monitoring period.

Figure 3. Summary of Well Sufficiency Outcome for TCE in Middle Bedrock

Below is a summary of the Well Sufficiency Analysis™ for each chloroethene compound in the middle bedrock.

Middle Bedrock Well Sufficiency Summary (17 Wells Removed)									
	RPD			Correlation			Trend Conclusion

AE10R5-3	AE28R-3	

Lower Bedrock

For the lower bedrock, the Ricker Method® plume stability analysis was conducted with a total of 41 discrete sampling screens for the period of 1998 to 2021 (see input data in **Appendix B**). The current monitoring network in the upper bedrock for the past several years consisted of 40 discrete sampling locations. The results of the Well Sufficiency Analysis™ are summarized in the interactive PowerPoint file entitled *LMC Wilmington Well Sufficiency Analysis.pptx*, which is included as **Appendix D**.

As part of the analysis, through trial and error and professional judgement, 18 wells were removed from the network of 40 wells. **Figure 3** is a summary of the TCE trend comparisons for the original network of 40 wells compared to the reduced network of 22 wells in the lower bedrock. Similar evaluations for the other chloroethene constituents are included in **Appendix D**. As observed in **Figure 4** below, the trends resulting from the reduced network provide a comparable understanding of plume behavior and is adequate for the next five-year monitoring period.

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Well not installed. Extrapolated from a sampling event.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Well not installed. Extrapolated from a sampling event.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

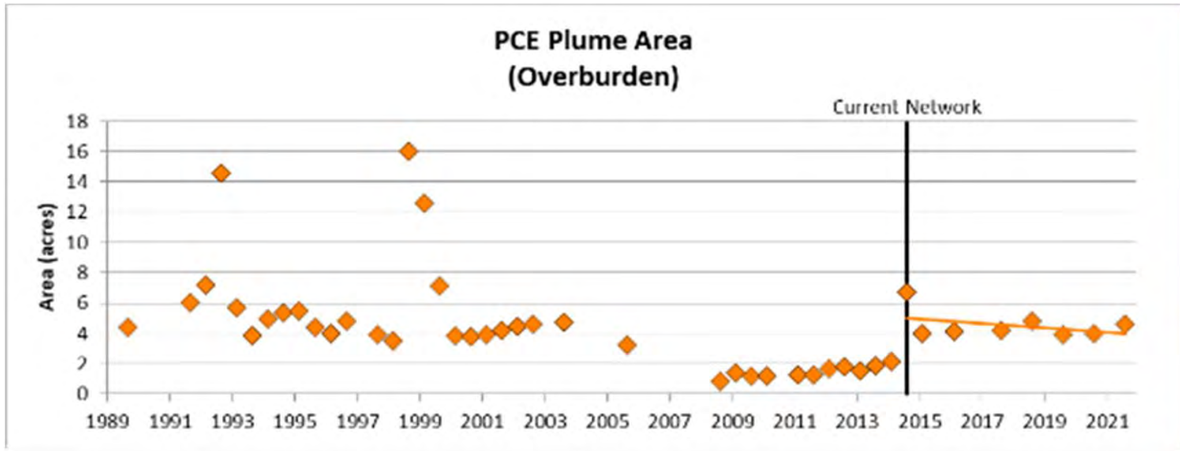
Plume Characteristics



Plume Area: **4.4 acres**
Plume Average Concentration: **13.7 µg/L**
Plume Mass Indicator: **1.6 lbs**

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

Plume Characteristics

Plume Area: **2.1 acres**
Plume Average Concentration: **0.48 µg/L**
Plume Mass Indicator: **0.027 lbs**

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

Plume Characteristics

Plume Area: **4.0 acres**
Plume Average Concentration: **46.2 µg/L**
Plume Mass Indicator: **0.23 lbs**

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

Plume Characteristics

Plume Area: **8.6 acres**
Plume Average Concentration: **3.0 µg/L**
Plume Mass Indicator: **0.100 lbs**

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

Plume Mass Indicator: **54.8 moles**

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

MCP Site Boundary

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Well not installed. Extrapolated from a sampling event.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Well not installed. Extrapolated from a sampling event.

Non-Sampled Well

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

<100 (21.0): Analyte not detected. Elevated detection limit, interpolated or extrapolated value shown.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

Notes:

All concentrations in µg/l

NA: Well not installed or abandoned.

<5.00: Analyte not detected. Detection limit used.

NS (21.0): Well not sampled, interpolated or extrapolated value shown - refer to shading for more specific explanation.

Interpolated between two sampling events.

Non-Sampled Well

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

This analysis requires fixed data points within a fixed area for the purposes of assessing relative changes of area, average concentration, and mass indicator over time. Therefore, any created isopleth maps are not intended to be a depiction or model of the actual plume but rather is meant to show conceptual behavior of the aforementioned metrics over time.

APPENDIX I
MASS FLUX EVALUATION – 2021

Mass Flux Model Input and Assumptions

Introduction

The mass flux of tetrachloroethylene (PCE) and trichloroethylene (TCE) in overburden and bedrock was calculated across four transects with the Mass Flux Toolkit Version 2.0 (GSI Environmental Inc., 2011). These two compounds were chosen as they represent the majority of the contamination at the former GE facility. Transects consist of wells aligned relatively perpendicular to the apparent groundwater glow path identified by piezometric head observations. Evaluated transects and the wells included in each transect in overburden and bedrock are summarized in **Tables 1 and 2**.

Table 1: Transects and Locations Included in Transects Evaluated within Overburden

A	AE-101R, AE-102RR, AE-103R, AE-104R, AE-108R, AE-109R
B	AE-105R, AE-106R, TRC-301R
C	STM-8R

Equations and Inputs

The Mass Flux Toolkit calculates mass flux using the following equation:

$$w = C * A * q$$

where
w = mass flux
C = concentration of constituent
A = cross sectional area perpendicular to flow
q = specific discharge, calculated using:

$$q = K * i$$

where
K= hydraulic conductivity
i = hydraulic gradient

In applying the evaluation to overburden, the mass flux was calculated across a cross-sectional area with thickness defined from the water table to top of bedrock and width based on conservative limits of the 2021 PCE plume in lower bedrock for the transects except C. The limits of the 2021 PCE plume in lower bedrock were used as the basis for the widths of the Building 1 Transect, Transect A, and Transect B, as those limits are the widest compared with other 2021 plumes for PCE and TCE in bedrock. The width of Transect C was defined by the edges of the MCP site boundary. Additional inputs used for overburden were entered for each well screen as summarized in **Table 3**.

Table 3: Inputs Used To Calculate Mass Flux in Overburden

Variable	Input
C	- September 2021 sampling results for each well. - A value of half the detection limit was assigned to non detected concentrations. - The maximum value was used for duplicates. - A concentration value equal to zero was used when select wells were dropped from the routine groundwater monitoring program. The well was left as a placeholder in the Mass Flux Toolkit model for potential future evaluation if needed.
K	- Slug testing analysis results for each well screen.
i	- The following hydraulic gradients used for each transect based on August 2021 piezometric monitoring results . Building 1: 0.0016 feet (ft)/ft Transect A: 0.0004 ft/ft Transect B: 0.0004 ft/ft Transect C: 0.002 ft/ft

In applying the evaluation to bedrock, the mass flux was only calculated across cross-sectional areas that include port intervals. Since port intervals were installed in the most conductive zones of bedrock, it was assumed that most of the mass flux in bedrock would occur over the length of these intervals. For TRC-201R, which does not have port intervals, mass flux was calculated from the intervals of 109.5-115 ft below ground surface (bgs) and 40-44.5 ft bgs. These intervals represent fracture zones that yielded water during heat pulse flow meter (HPFM) testing. The deepest well ports used in each transect were from 140 to 146 ft bgs in the Building 1 Transect, from 245 to 250 ft bgs in Transect A, from 164 to 169 ft bgs in Transect B, and from 85 to 90 ft bgs in Transect C.

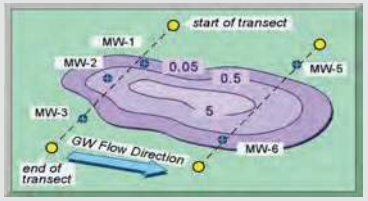
The width of the cross-sectional area used for bedrock was based on the limits of the 2021 PCE plume in lower bedrock for all transects except C. The limits of the 2021 PCE plume in lower bedrock were used as the basis for the widths of the Building 1 Transect, Transect A, and Transect B, as the limits are the widest compared with other areas for PCE and TCE in bedrock. The width of Transect C was defined by the edges of the MCP site boundary. Additional inputs used for bedrock were entered for each port interval as summarized in **Table 4**.

Table 4: Inputs Used To Calculate Mass Flux in Bedrock

Variable	Input
C	- September 2021 sampling results for each port interval. - A value of half the detection limit was assigned to non detected concentrations. - The maximum value was used for duplicates. - A concentration value equal to zero was used when select wells were dropped from the routine groundwater monitoring program. The well was left as a placeholder in the Mass Flux Toolkit model for potential future evaluation if needed.
K	- Average result calculated from transmissivity measured every foot by FLUTe across the depth interval for each port interval. For port intervals without FLUTe measurements, the following hydraulic conductivity was assigned: AE-101R-1: hydraulic conductivity from AE-101R-2 AE-101R-6: hydraulic conductivity from AE-101R-5 AE-102RR-1: hydraulic conductivity from AE-102RR-2 STM-8R: hydraulic conductivity from STM-8R-1 AE-25R: 0.5 ft/day AE-23R: 0.5 ft/day AE-2R: 0.5 ft/day TRC-201R: 0.5 ft/day
i	- Uniform hydraulic gradient of 0.001 ft/day used for all transects based on average gradients measured site-wide based on multiple rounds over a three year period.

Transect Gridding and Data Interpolation

Following data input, transect planes were divided into grids within the Mass Flux Toolkit by specifying the number of rows and columns of the grid. The number of rows was set to 10 and 100 for overburden and bedrock, respectively. The number of rows was chosen so that resulting grids would include depth intervals similar to the start and end depths of well screens or port intervals. The number of columns was set to the number of wells comprising a transect for both overburden and bedrock.



In order to calculate mass flux for each grid in overburden, concentrations and hydraulic conductivities from screened intervals were used for grids overlapping the start and end depths of screens. For grids above, between, or below screen intervals in overburden, logarithmic interpolation was used to assign concentrations and hydraulic conductivities.

For the calculations of mass flux in bedrock, concentrations and hydraulic conductivities were not interpolated for grids above, between, or below port intervals. A “user specified value” equal to zero was used. Mass flux in bedrock was only calculated across cross-sectional areas that include port intervals.

Grid Completion: Hydraulic Gradient

Transect A Time Period 1. Constant Gradient: No Interpolation Required

Step 10: Interpolate i Horizontally | Export i Grid | Import i Grid | **Next Step: Calculate Mass Flux**

Back to Data Input | Back to Conc Grid | Back to K Grid | Print | HELP

Data Input Instructions

10.80 — Enter value directly. (Values in italics represent interpolated values.)

Top/Bottom of plume. (Don't enter any data).

Mass Flux Result

TOTAL MASS FLUX 1.95E+00 (g/day) 7.12E-01 (kg/yr)

Data Representation

1. Bold values represent calculations based on given values.
2. Values in italics represent calculations based on interpolation.
3. Black shaded cells represent the top and bottom of the plume.

Mass Flux Result

TOTAL MASS FLUX 1.62E-03 (g/day) 5.92E-04 (kg/yr)

Data Representation

1. Bold values represent calculations based on given values.
2. Values in italics represent calculations based on interpolation.
3. Black shaded cells represent the top and bottom of the plume.

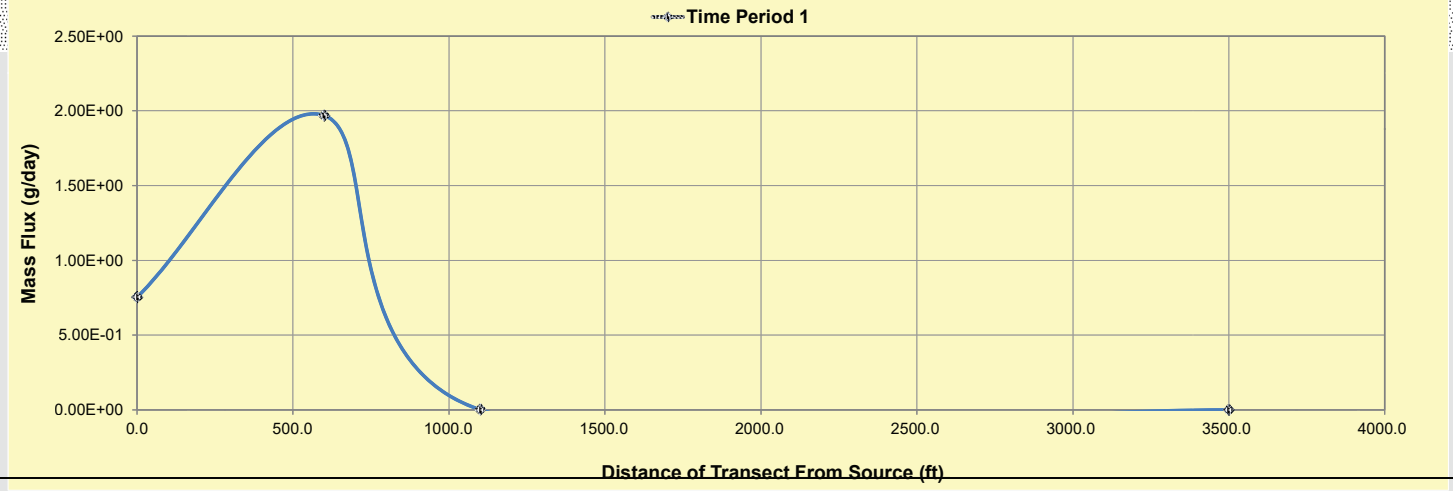
Transect Calculator: Mass Flux Summary



Version 2.01

Site Location and I.D.: LMC Wilmington
Description: PCE and TCE in Bedrock Aquifer

Mass Flux Summary for PCE

	Distance from Source (ft)	Mass Flux (g/day) Time Period 1	Time Period 2	Time Period 3	Time Period 4	Time Period 5
Transect 1	0	7.54E-01				
Transect 2	600	1.97E+00				
Transect 3	1100	1.62E-03				
Transect 4	3500	7.79E-10				
Transect 5						

85th percentile from Advanced Uncertainty Analysis
Maximum of the three Toolkit interpolation schemes
Value using selected interpolation schemes
Minimum of the three Toolkit interpolation schemes
15th percentile from Advanced Uncertainty Analysis

Transect 1: Building 1
Transect 2: Transect A
Transect 3: Transect B
Transect 4: Transect C

Grid Completion: Hydraulic Gradient

Transect A Time Period 1. Constant Gradient: No Interpolation Required

Step 10: Interpolate i Horizontally | Export i Grid | Import i Grid | **Next Step: Calculate Mass Flux**

Back to Data Input | Back to Conc Grid | Back to K Grid | Print | HELP

Data Input Instructions

10.80 — Enter value directly. (Values in italics represent interpolated values.)

Top/Bottom of plume. (Don't enter any data).

Mass Flux Result

TOTAL MASS FLUX 1.71E+00 (g/day) 6.26E-01 (kg/yr)

Data Representation

1. Bold values represent calculations based on given values.
2. Values in italics represent calculations based on interpolation.
3. Black shaded cells represent the top and bottom of the plume.

Mass Flux Result

TOTAL MASS FLUX 3.09E+00 (g/day) 1.13E+00 (kg/yr)

Data Representation

1. Bold values represent calculations based on given values.
2. Values in italics represent calculations based on interpolation.
3. Black shaded cells represent the top and bottom of the plume.

Subject: *CRAFLUSH Model Simulation of Matrix Diffusion Process Between Transects A and B, Wilmington, MA Site*

Introduction and Objective

Groundwater monitoring data along Transects A and B show that chlorinated ethene (primarily PCE and TCE) concentrations in the apparent core of the groundwater plume are 90 to 99% less in Transect B than in Transect A; Transect B is approximately 5oo feet downgradient of Transect A. Given the apparent lack of dechlorination and contaminant degradation observed, it is hypothesized that diffusion into the rock matrix is responsible for this large difference in contaminant concentration as groundwater migrates from Transect A to Transect B. To test this hypothesis, the CRAFLUSH model (Sudicky and Frind 1982; Davis and Johnston 1984; Sudicky and Frind 1984) was employed using site-specific input parameters. The overall objective for employing this screening model was to determine if the difference in concentration between Transects A and B could be explained by diffusive uptake into the rock matrix.

CRAFLUSH assumes 1-dimension flow through a single fracture plane, bounded above and below by the rock matrix. Contaminant advection through the fracture is coupled with contaminant diffusion into the rock matrix. Adsorption and reaction processes, both in the fracture and rock matrix, can also be simulated in the CRAFLUSH model. It is important to note that the CRAFLUSH model likely provides a very conservative estimate of contaminant attenuation because 1) no attenuation of the source is assumed, and 2) no dilution of the contaminant due to mixing into other fracture zones is

included. However, CRAFLUSH serves as a useful tool to determine if the decreases in contaminant levels between Transects A and B can be explained by diffusive uptake into the rock matrix.

Model Parameter Values

The CRAFLUSH model, which assumes a constant source concentration, was used to conduct a preliminary estimate of the diffusion of PCE from groundwater into the rock matrix between Transects A and B at the Wilmington, MA site, and the subsequent impact of this matrix diffusion process on dissolved PCE concentrations in the fractures.

The following input parameters were used:

Fracture spacing: 40 cm. This estimate is based on the fracture spacing of fractures ranked 2 and 3 by Hager-Richter Geosciences in the geophysical logging at borehole TRC-202R conducted for AECOM (Appendix Q). The interval from 62 to 182 ft bgs is considered. As indicated in Appendix T, both high and low transmissivity fractures contribute to the contaminant mass flux, thus both small and large aperture fractures should be considered in the fracture spacing.

Matrix Porosity: 0.023. This is based on the data presented in the Stone Environmental report for matrix diffusion sampling conducted at the site (Appendix K[1]).

Matrix PCE Linear Adsorption Coefficient: 0.08 L/kg (based on rock matrix TOC values measured in the Stone Environmental report in Appendix K). Assuming a rock density of 2.6 kg/L, and the matrix porosity of 0.023, a rock matrix PCE retardation factor of 10 is estimated. No sorption and retardation was conservatively assumed in the fracture.

Effective PCE diffusion coefficient: 6.5 x 10^{-9} cm^2/sec based on diffusion testing presented in Golder report – average of replicates excluding one outlier (Appendix L). Note that this effective diffusion coefficient value is multiplied by the matrix porosity, and therefore must be divided by the matrix porosity prior to entering it into the CRAFLUSH model.

Seepage velocity through fracture: 1873 cm/day (based on calculations presented in Appendix R)

Fracture aperture: 0.0007 cm (based on calculations presented in Appendix R, and considering both fractures ranked 2 and 3 by Hager-Richter Geosciences in the geophysical logging at borehole TRC-202R conducted for AECOM). The interval from 62 to 182 ft bgs is considered.

Exposure time: 40 years (this is a conservative assumption based on time of PCE/TCE release).

Length: A travel distance of 500 feet (Transect A to Transect B) is assumed.

---

[1] Appendices are provided in the Phase II report prepared by AECOM

Contaminant degradation: No PCE degradation in both the fractures and rock matrix was conservatively assumed.

Source concentration: A dimensionless source concentration of 1 was used, thus the model simply looked at the fractional decrease in concentration between Transects A and B.

No dispersion was assumed in the model.

Screening Model Results

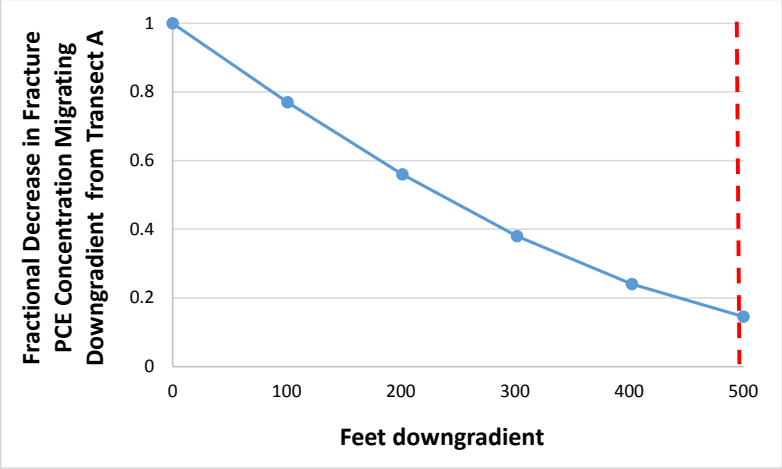

Figure 1
CRAFLUSH simulation results using the listed model parameter values. The dashed line indicates the location of Transect B, which is approximately 500 feet downgradient of Transect A.

Comparison Between model and Observed PCE Concentrations

The CRAFLUSH model, using site-specific input parameters, indicates that PCE concentrations (or, mass discharge) will decrease by approximately 85% between Transect A and B (Transect B is approximately 500 feet downgradient of Transect A). This simulation result is in reasonable agreement with field data along Transects A and B, which show approximately a 90 to 99% decrease in PCE groundwater concentrations as PCE migrates from Transect A to Transect B. The CRAFLUSH simulation likely underestimates the PCE attenuation because dilution and dispersion processes, including spreading due to entry into additional fracture zones during migration from Transect A to Transect B, is not considered in the model.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	YES
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2202814
Project Number:	60552044.30	**Report Date:**	03/07/22

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

March 7, 2022 the report has been amended to correct the answer to questions E b and I.

MCP Related Narratives

Canisters were released from the laboratory on January 17, 2022. The canister certification data is provided as an addendum.

MCP Volatile Organics in Air

In reference to question G:

One or more of the target analytes did not achieve the requested CAM reporting limits.

L2202814-01 through -08: The Total Ion Chromatograph was scanned for the ions associated with methyl acetate. This compound was not detected in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L2202814
Project Number:	60552044.30	**Report Date:**	03/07/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Project Number:	60552044.30	**Report Date:**	03/07/22

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Memorandum

To	Scott Olson	Page	1
Subject	Data Validation Summary Lockheed Martin-Wilmington, MA Site Alpha Analytical SDG L2202814		
From	Lori Herberich		
Reviewed by	Paula DiMattei		60552044.30
Date	February 14, 2022		

Data validation was performed on the data for seven indoor air samples and one ambient air sample collected at the Lockheed Martin site in Wilmington, MA on January 18, 2022. Alpha Analytical in Mansfield, MA analyzed the samples and reported the data in sample delivery group (SDG) L2202814.

The data review was performed with reference to Massachusetts Department of Environmental Protection (MADEP) document WSC-CAM-VIIA, *Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data in Support of Response Actions Conducted Under the Massachusetts Contingency Plan (MCP)*, Revision 2, January 19, 2017, MADEP Bureau of Waste Site Cleanup; MADEP *MCP Representativeness Evaluations and Data Usability Assessments*; Policy #WSC-07-350; September 19, 2007; the applicable MADEP Compendium of Analytical Methods performance standards; and the *Work Plan 2017-2022 Post-Temporary Solution Monitoring Program Former General Electric Site, 50 Fordham Road, Wilmington, MA, September 2017.* Current Region 1 data validation guidelines were also used as a reference during review of the data.

Data for the following samples were assessed:

Sample ID	Parameter
22A-AA1-1	VOCs by EPA Method TO-15 SIM
22A-IA2-1	
22A-IA3-1	
22A-IA4-1	
22A-IA7-1	
22A-IA8-1	
22A-IA8-2*	
22A-IA9-1	

*Field duplicate of 22A-IA8-1

DATA REVIEW ELEMENTS

The assessment was based on the following review elements:

- * Chain-of-custody (COC)/sample integrity
- * Holding times and sample preservation
- * Laboratory method blanks
- * Canister certification
- * GC/MS tuning#
- * Initial calibration/initial calibration and continuing calibration verifications#
- * Surrogate recoveries (%Rs)
- * Matrix duplicate (MD) results
- * Laboratory control sample (LCS) results
- * Field duplicate results
- * Internal standard performance
- General reporting issues

The laboratory is required to completely and accurately narrate all quality control exceptions. The symbol (#) indicates that nonconformances concerning this review element are only described in the SDG case narrative since complete results for these review elements are not a required report deliverable. The symbol (*) indicates that all criteria were met, no issues were narrated, and/or no qualifications were required for these review elements.

General Reporting Issues

MassDEP "Presumptive Certainty" status was achieved for the data as indicated on the MADEP MCP Response Action Analytical Report Certification form.

The total ion chromatograms were scanned for the ions associated with methyl acetate. This compound was not detected in the samples.

The Reporting Limits for the following compounds exceed the Project Action Limits, as indicated in the Work Plan:

Dibromochloromethane
1,2-Dibromoethane (Ethylene Dibromide)
Hexachlorobutadiene
1,1,2,2-Tetrachloroethane

APPENDIX L
PUBLIC NOTIFICATION DOCUMENTATION

Olson, Scott (Chelmsford)

Subject: Planning for Wilmington Annual Groundwater Sampling - August - September 2021
Attachments: BWSC_WRT_Aug-2021.pdf

Hi Gary,

I hope this email finds you well.

Please see the attached MassDEP form that we are required to send to property owners to notify of our upcoming annual groundwater sampling event.

We plan to conduct the work between the dates of **August 30 and September 24, 2021**, with occasional brief site visits in August, and October 2021.

Same as in past years, the sampling requires us to access wells within Building 1 (UPS). We understand the need to coordinate work with you and UPS.

As in the past we will coordinate all indoor work to minimize the time we spend inside the building. We do have an expanded sampling round this year so the time spent at each of the wells is more than in past years. The following are our dates for work inside Building 1, which we have scheduled such that we only need to be inside the building between 10:00 am and 4:00 pm to avoid UPS trucks.

- water level measurements – **Tuesday August 31** – requires roughly 3 hours to measure all wells inside
- groundwater sampling – **Wednesday through Friday September 1-3, and Wednesday September 22**.

I will follow up with a phone call to discuss details, as needed.

Regards.
Scott

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

BWSC 123

This Notice is Related to Release Tracking Number

03 | 0518

A. The address of the disposal site related to this Notice and Release Tracking Number (provided above):

1. Street Address: 50 Fordham Road

City/Town: Wilmington, MA Zip Code: 01887

B. This notice is being provided to the following party:

1. Name: Gary Stanieich

2. Street Address: 424 Broadway

City/Town: Somerville, MA Zip Code: 02145

C. This notice is being given to inform its recipient (the party listed in Section B):

☑ 1. That environmental sampling will be/has been conducted at property owned by the recipient of this notice.

☐ 2. Of the results of environmental sampling conducted at property owned by the recipient of this notice.

☐ 3. Check to indicate if the analytical results are attached. (If item 2. above is checked, the analytical results from the environmental sampling must be attached to this notice.)

D. Location of the property where the environmental sampling will be/has been conducted:

1. Street Address: 40 Fordham Rd (site formerly #50, but is now #40 Fordham Rd)

City/Town: Wilmington, MA Zip Code: 01887

2. MCP phase of work during which the sampling will be/has been conducted:

☐ Immediate Response Action
☐ Release Abatement Measure
☐ Utility-related Abatement Measure
☐ Phase I Initial Site Investigation
☐ Phase II Comprehensive Site Assessment
☐ Phase III Feasibility Evaluation
☐ Phase IV Remedy Implementation Plan
☐ Phase V/Remedy Operation Status
☐ Post-Class C Operation, Maintenance and Monitoring
☑ Other Post-Temporary Solution OM (specify)

3. Description of property where sampling will be/has been conducted:

☐ residential ☑ commerical ☑ industrial ☐ school/playground ☐ Other _____ (specify)

4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

See attached supplemental page for details of environmental work to be conducted August 30 and mid-October 2021.

E. Contact information related to the party providing this notice:

Contact Name: Scott Olson

Street Address: AECOM - 250 Apollo Drive

City/Town: Chelmsford, MA Zip Code: 01824

Telephone: (978) 846-5238 Email: scott.olson@aecom.com

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Notice of Environmental Sampling – BWSC 123

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

This Notice is Related to Release Tracking Number 03-0518

(Supplemental Page to BWSC-123 Form)

D.4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

The following groundwater monitoring activities will be conducted onsite between the dates of August 30 and mid-October 2021:

- Groundwater sampling for laboratory analyses from numerous overburden and bedrock monitoring wells located at 40 and 50 Fordham Rd at:
    - Up to 11 monitoring locations within Building 1, and
    - Approximately 40-60 monitoring wells outside of the Building at various locations on the property. Approximately 30 of these wells are located within the parking lot.
- Although unlikely, surface water samples may also be collected for laboratory analyses from select locations in the wetland.

Subject: Notification of Groundwater Sampling - 87 Concord Street - North Reading, MA - August - September 2021
Attachments: BWSC_Howland_Aug-2021.pdf

Patrick,

Attached please find a copy of BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted on the property at 87 Concord Street in North Reading, MA.

- The activities detailed in the form will be conducted onsite between the approximate dates of August 30 and mid-October 2021.
- Activities will be conducted per the conditions of the access agreement in place between Howland Development Corporation and Lockheed Martin Corporation.
- Wells to be sampled include AE-112D and AE-112R, plus water levels from wells MW-2 and MW-3 (AECOM IDs HOW-2 and HOW-3) which are located in the paved parking area around the building.
- We will visit the wells periodically during the sampling event with tentative dates of **August 30 - September 1** for water level measurements, **plus 1-2 days (TBD) in September** for groundwater sampling.
- Access is only needed to the localized area at each well. Our personnel will place cones around the wells but will not disrupt traffic flow around the building.
- Each visit will include 1-2 people with 1-2 vehicles for durations ranging from 1 to 8 hours.
- We will have no need to enter the building or interact with any of the tenants.

Dylan Potter (cell 508-333-2316) will lead the work in the field and may be contacted, if needed, during the work.

Nicole Callahan (cell 631-806-9411) and I are also available should you have any questions.

A copy of this notification is being mailed to your office. I will also attempt to fax a copy to Thomas A. Mackie at Mackie Shea O'Brien, P.C. as required per the access agreement.

Regards.
Scott

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Notice of Environmental Sampling – BWSC 123

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

This Notice is Related to Release Tracking Number 03-0518

(Supplemental Page to BWSC-123 Form)

D.4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

This written notice satisfies the notification requirement from the access agreement in place between Howland Development Corporation and Lockheed Martin Corporation.

The following activities will be conducted onsite between the approximate dates of August 30 and mid October 2021:

- Groundwater sample collection for laboratory analyses from up to four monitoring wells, AE-112D, AE-112R, plus MW-2 and MW-3 which AECOM has identified as HOW-2 and HOW-3 so as to not confuse them with other MW-2 and MW-3 locations previously existing as part of other sites in the area.

- The wells are located in the paved parking area around the building. AECOM will visit the wells periodically during the sampling event with tentative dates of August 30 – September 1 for water level measurements, plus 1-2 days in September for groundwater sampling.

- Access is only needed to the localized area at each well. Each visit will include 1-2 people with 1-2 vehicles for durations of 1-8 hours. At no time will we disrupt traffic flow at the property or impede occupants use of the property.

Subject: Notification of Groundwater Sampling - August 30 to mid-October 2021
Attachments: BWSC_Church_Aug-2021.pdf

Hi Ken,

I hope this email finds you well.

Attached please find a copy of BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted on your property at 99 Concord Street in North Reading, MA. The activities detailed in the form will be conducted onsite between the approximate dates of August 30 and mid-October 2021. The work will be conducted in the parking lot and the wooded portions of your property. When sampling wells in the parking lot, our personnel will barricade the immediate area around the well and will not entirely block the lane for traffic. All work will be done between 7:00 am – 6:00 pm on weekdays.

A hard copy of this notification is in the mail to your office.

Dylan Potter (cell 508-333-2316) will be leading the work in the field and may check in with you periodically, as needed. Otherwise, Nicole Callahan (cell 631-806-9411) and I are available should you have any questions.

Regards.

The following activities will be conducted onsite between the approximate dates of August 30 and mid October 2021:

- Groundwater sampling for laboratory analyses from up to seven monitoring wells (MW-5, MW-7, GZA-14, GZA-14A, AE-109D, AE-109R, and AE-110R) which are located in the parking lot and wooded portions of the property at 99 Concord Street in N. Reading, MA. The wells will be accessed from the parking lot of the former GE property at 40 Fordham Rd which abuts the 99 Concord Street property.

- Surface water samples may also be collected for laboratory analyses from the wooded portions of the property during this time.

Olson, Scott (Chelmsford)

From: Olson, Scott (Chelmsford)
Sent: Friday, August 06, 2021 3:24 PM
To: Mark Clark (mclark@northreadingma.gov)
Cc: Callahan, Nicole A.; Potter, Dylan (Chelmsford)
Subject: Notice of Groundwater Sampling Activity - August 30 - mid-October 2021
Attachments: BWSC_N-Reading_Aug-2021.pdf

Hi Mark,

I hope this email finds you well.

I just wanted to let you know that we will be conducting our annual groundwater sampling event for the former GE facility in Wilmington and North Reading between the dates of **August 30 and mid-October 2021**.
Attached please find a copy of the BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted from monitoring wells along the edge of Concord Rd in North Reading.

As in past rounds, we plan to use the Stickney Well road to access the woods and wetlands from Redmond Avenue. Dylan Potter (cell 508-333-2316) will be the Field Lead for this work. Dylan will contact the Water Dept and/or Highway Dept as necessary to gain access if the gate is locked. They typically allow us to add our own padlock so that both the Town and AECOM have access to open the chain at the gate, but maintain it locked when not in use. Same as in past years, our use of the access road will be minimal, just one to two SUVs or pickup trucks with two to four people at a time. No big trucks or heavy equipment. We will contact Water Dept to relock gate when we are done with annual sampling and are ready to remove our lock.

If you have any questions or issues with reports from residents in the area, feel free to contact Dylan or me.

Our crews will be out there on **August 30 and 31** for water level measurements and then for **select days (TBD) in September - October** to conduct the groundwater sampling.

We plan to contact the Fletchers at 3 Furbish Pond Lane to request permission to measure the depth to water from their well on **August 31**. They have permitted us to measure their well for the past 4-5 years without issue. Other than that, we do not plan to contact any of the other residents.

Any questions, please feel free to call or email.

Thank you.
Scott

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Notice of Environmental Sampling – BWSC 123

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

This Notice is Related to Release Tracking Number 03-0518

(Supplemental Page to BWSC-123 Form)

D.4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

The following activities will be conducted onsite between the approximate dates of August 30 and October 31, 2021:

- Groundwater sample collection for laboratory analyses from up to seven monitoring wells, STM-3-S-D-R, and STM-8-S-M-D-R.

- The wells are located along the edge of Concord Rd in North Reading near the DL Maher and Richelieu Hardware properties. AECOM will visit the wells periodically during the sampling event with tentative dates of August 30 – September 1 for water level measurements, plus 1-2 days in September for groundwater sampling.

- Access is only needed to the localized area at each well. At no time will we disrupt traffic flow along Concord Street, although we typically hire a North Reading Police detail for sampling STM-3 wells as they are close to the edge of the road.

Hi Roland,

I hope this email finds you well.

Please see the attached form which we are required to send to property owners as notification of upcoming environmental work to be conducted on your property. A hard copy of this form is in the mail to you.

We plan to conduct water level measurements on **August 31** and then conduct groundwater sampling on your property for two days between **September 1 and 24, 2021**.

Dylan Potter (cell 508-333-2316) will lead the work in the field and will provide you updates regarding specific days that we will be on your property and need to access monitoring well STM-8R1 in your employee parking lot.

Thank you.
Scott

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

BWSC 123

This Notice is Related to Release Tracking Number

03 | 0518

A. The address of the disposal site related to this Notice and Release Tracking Number (provided above):

1. Street Address: 50 Fordham Road

City/Town: Wilmington, MA Zip Code: 01887

B. This notice is being provided to the following party:

1. Name: Roland Gagne - Wilmington Masonry

2. Street Address: 62 Concord Street

City/Town: North Reading, MA Zip Code: 01864

C. This notice is being given to inform its recipient (the party listed in Section B):

☑ 1. That environmental sampling will be/has been conducted at property owned by the recipient of this notice.

☐ 2. Of the results of environmental sampling conducted at property owned by the recipient of this notice.

☐ 3. Check to indicate if the analytical results are attached. (If item 2. above is checked, the analytical results from the environmental sampling must be attached to this notice.)

D. Location of the property where the environmental sampling will be/has been conducted:

1. Street Address: 62 Concord Street

City/Town: North Reading, MA Zip Code: 01864

2. MCP phase of work during which the sampling will be/has been conducted:

☐ Immediate Response Action
☐ Release Abatement Measure
☐ Utility-related Abatement Measure
☐ Phase I Initial Site Investigation
☐ Phase II Comprehensive Site Assessment
☐ Phase III Feasibility Evaluation
☐ Phase IV Remedy Implementation Plan
☐ Phase V/Remedy Operation Status
☐ Post-Class C Operation, Maintenance and Monitoring
☑ Other Post-Temporary Solution (specify)

3. Description of property where sampling will be/has been conducted:

☐ residential ☑ commerical ☑ industrial ☐ school/playground ☐ Other _____ (specify)

4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

See attached supplemental page for details of environmental work to be completed August 30 to mid October 2021.

E. Contact information related to the party providing this notice:

Contact Name: Scott Olson

Street Address: AECOM - 250 Apollo Drive

City/Town: Chelmsford, MA Zip Code: 01824

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Notice of Environmental Sampling – BWSC 123

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

This Notice is Related to Release Tracking Number 03-0518

(Supplemental Page to BWSC-123 Form)

D.4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

The following activities will be conducted onsite between the approximate dates of August 30 and October 31, 2021:

- Groundwater sampling for laboratory analyses from one monitoring well (STM-8R1) located in the parking lot of the property at 62 Concord Street in North Reading, MA.
- Water levels will be obtained at locations along the Ipswich River through the back of the property at 62 Concord Street.
- Although unlikely, surface water samples may also be collected for laboratory analyses from along the Ipswich River during this time.

Olson, Scott (Chelmsford)

Cc: Callahan, Nicole A.; Potter, Dylan (Chelmsford)
Subject: Notification of Groundwater Sampling - YRC Freight at 95 Concord Street - North Reading, MA - August 30 - September 24, 2021
Attachments: BWSC_YRC_Aug-20201.pdf

Ruben,

Attached please find a copy of BWSC-123 form providing notification of upcoming water level and groundwater sampling activities to be conducted on the property at 95 Concord Street in North Reading, MA.

- The activities detailed in the form will be conducted onsite between the approximate dates of **August 30 and September 24, 2021**.
- The activities will be conducted per the conditions of the Access Agreement between YRC Freight and Lockheed Martin Corporation.
- Wells that may be sampled include AE-106 S/M/D/R located in the woods/wetlands, and AE-111R located in the paved parking area at the facility.
- We will visit the wells periodically during the sampling event, specifically on **Monday August 30** to pre-purge Flute wells, and **Tuesday August 31** for site-wide water level measurements. We will then conduct the groundwater sampling of the wells on YRC property for 1-2 days [exact dates TBD] between **September 1-24**.
- Each visit will include 1-2 people with 1-2 vehicles for durations ranging from 1 to 8 hours.
- Access is only needed to the localized area at each well. Our personnel will place cones around the wells but will not disrupt traffic flow at the facility.

We would like permission to measure the depth to groundwater in select monitoring wells on the property during our site-wide measurement round on **Tuesday August 31**. If this is acceptable we can contact Chuck Castelluccio, whom I have copied on this email, to coordinate logistics for water level measurements as we have done in the past.

Dylan Potter (cell 508-333-2316) is the Field Lead for this work. He will notify Mike Day at the YRC Terminal of our work dates, and will coordinate the work directly with the Mike. If Mike Day is no longer the facility Manager, Dylan will introduce himself to the new manager and explain the work that we do per the access agreement.

Nicole Callahan (cell 631-806-9411) and I are also available should you have any questions.

Thank you.

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1403(10). The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party who is addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form. (The regulations refer to the area where the oil or hazardous material is present as the "disposal site".)

PURPOSE OF THIS NOTICE

When environmental samples are taken as part of an investigation under the Massachusetts Contingency Plan at a property on behalf of someone other than the owner of the property, the regulations require that the property owner (listed in **Section B** on the reverse side of this form) be given notice of the environmental sampling. The regulations also require that the property owner subsequently receive the analytical results following the analysis of the environmental samples.

Section C on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time. If you are receiving this notice to inform you of the analytical results following the analysis of the environmental samples, you should also have received, as an attachment, a copy of analytical results. These results should indicate the number and type(s) of samples (e.g., soil, groundwater) analyzed, any chemicals identified, and the measured concentrations of those chemicals.

Section D on the reverse side of this form identifies the property where the environmental sampling will be/has been conducted, provides a description of the sampling locations within the property, and indicates the phase of work under the Massachusetts Contingency Plan regulatory process during which the samples will be/were collected.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/dep/cleanup/oview.htm. For more information regarding this notice, you may contact the party listed in **Section E** on the reverse side of this form. Information about the disposal site identified in Section A is also available in files at the Massachusetts Department of Environmental Protection. See http://mass.gov/dep/about/region/schedule.htm if you would like to make an appointment to see these files. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.

Mr. Eric Darci
Vice President
Hilco Redevelopment Partners (HRP)
99 Summer Street, Suite 1110
Boston, MA 02110

Subject: September 2021 Groundwater Analytical Results
50 Fordham Road, Wilmington, MA

Dear Mr. Darci,

In September 2021, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from 96 monitoring well [screen intervals] located on your property at 40-50 Fordham Road in Wilmington and North Reading, MA.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2021 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2021 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

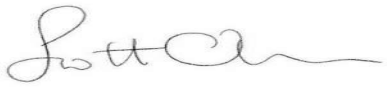
Mr. Patrick St. Pierre
Howland Development
155 West Street
Wilmington, MA 01887

Subject: September 2021 Groundwater Sampling Analytical Results
Property at 87 Concord Street – North Reading, MA



Dear Mr. St. Pierre,

In September 2021, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from eight monitoring wells AE-112D and AE-112R (ports R1 through R7) located on your property at 87 Concord Road in North Reading, MA. Monitoring wells HOW-2 and HOW-3 (also known as MW-2 and MW-3) were not sampled in September 2021.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. Mr. Mark Clark
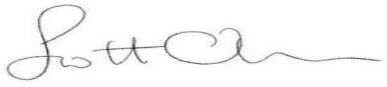
Town of N. Reading
235 North Street
N. Reading, MA 01864

Subject: September 2021 Groundwater Analytical Results
Former GE Facility – 50 Fordham Road, Wilmington, MA



Dear Mr. Clark,

In September 2021, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from seven monitoring wells (STM-3D, -3R, -3S, and STM-8D, -8M, -8R, and -8S) located within the right-of-way along Concord St in North Reading.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the groundwater sampling, and a map of the sampling locations close to your property lines. We have included summary tables of the September 2021 groundwater analytical results with a comparison to the applicable Massachusetts groundwater criteria.

Mr. Roland Gagne
Manager, Wilmington Masonry
62 Concord Street
North Reading, MA 01889

Subject: September 2021 Groundwater Analytical Results
62 Concord Street, Wilmington, MA

Dear Mr. Gagne,

In September 2021, AECOM under contract to Lockheed Martin Corporation (LMC) collected a groundwater sample from one monitoring well (STM-8R1) located on your property as part of the ongoing work relating to the former GE facility formerly located at 50 Fordham Rd in Wilmington, MA.

The former GE facility is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2021 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2021 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

NOTICE OF ENVIRONMENTAL SAMPLING

As required by 310 CMR 40.1403(10) of the Massachusetts Contingency Plan

BWSC 123

This Notice is Related to Release Tracking Number

03 | 0518

A. The address of the disposal site related to this Notice and Release Tracking Number (provided above):

1. Street Address: 50 Fordham Road

City/Town: Wilmington, MA Zip Code: 01887

B. This notice is being provided to the following party:

1. Name: Roland Gagne - Wilmington Masonry

2. Street Address: 62 Concord Street

City/Town: North Reading, MA Zip Code: 01864

C. This notice is being given to inform its recipient (the party listed in Section B):

☐ 1. That environmental sampling will be/has been conducted at property owned by the recipient of this notice.

☑ 2. Of the results of environmental sampling conducted at property owned by the recipient of this notice.

☑ 3. Check to indicate if the analytical results are attached. (If item 2. above is checked, the analytical results from the environmental sampling must be attached to this notice.)

D. Location of the property where the environmental sampling will be/has been conducted:

1. Street Address: 62 Concord Street

City/Town: North Reading, MA Zip Code: 01864

2. MCP phase of work during which the sampling will be/has been conducted:

☐ Immediate Response Action
☐ Release Abatement Measure
☐ Utility-related Abatement Measure
☐ Phase I Initial Site Investigation
☐ Phase II Comprehensive Site Assessment
☐ Phase III Feasibility Evaluation
☐ Phase IV Remedy Implementation Plan
☐ Phase V/Remedy Operation Status
☐ Post-Class C Operation, Maintenance and Monitoring
☑ Other Post-Temporary Solution (specify)

3. Description of property where sampling will be/has been conducted:

☐ residential ☑ commerical ☑ industrial ☐ school/playground ☐ Other _____ (specify)

4. Description of the sampling locations and types (e.g., soil, groundwater) to the extent known at the time of this notice.

STM-8R1, groundwater

Mr. Ruben Byerley
YRC Freight
10990 Roe Avenue
Overland Park, KS 66211-1213

Subject: September 2021 Groundwater Sampling Analytical Results
YRC Freight Property at 95 Concord Street – N. Reading, MA

Dear Mr. Byerley,

In September 2021, AECOM under contract to Lockheed Martin Corporation (LMC) collected groundwater samples from fifteen monitoring wells (AE-106D, AE-106M, AE-106R (ports R1 through R5), AE-106S, and AE-111R (ports R1 through R7) located on your property at 95 Concord Street in N. Reading, MA.

This site is a Tier 1A Site (Permit No. 83052) as regulated by the Massachusetts Department of Environmental Protection (MassDEP). Massachusetts environmental regulations require notification to a property owner when environmental samples are collected at a property on behalf of someone other than the property owner. In addition, the property owner must receive a copy of the analytical results following the laboratory analysis of the environmental samples. In accordance with the Massachusetts Contingency Plan, 310 CMR 1403 (10), enclosed is a copy of the analytical results from the September 2021 groundwater sampling, as well as a copy of the required Bureau of Waste Site Cleanup (BWSC) Form 123, and a map of the sampling locations on your property. We have included summary tables of the September 2021 groundwater analytical results, and have included a comparison to the applicable Massachusetts groundwater criteria. We have also provided a summary table of water level measuresments from wells on YRC property on August 31, 2021.

Should you be interested in more information, additional public involvement opportunities are available under 310 CMR 40.1403(9). If you have any questions or comments regarding the results, please contact me at 978-905-2351 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

December 8, 2021

Nathan and Lindsay Fletcher
3 Furbish Pond Lane
N. Reading, MA 01864

Subject: 2021 Irrigation Well Groundwater Elevation Results

Dear Mr. and Mrs. Fletcher,

On August 31, 2021, AECOM under contract to Lockheed Martin Corporation obtained groundwater elevation data, with your permission, from the irrigation well located on your property at 3 Furbish Pond Lane. This effort was performed as part of environmental monitoring that is being conducted associated with the former GE Facility at 50 Fordham Road, Wilmington, MA. This letter summarizes the information developed from that event.

Massachusetts environmental regulations require notification to a property owner when environmental data are collected at a property on behalf of someone other than the owner of the property. Therefore, we are providing you with the data that we collected, specifically the depth to groundwater measurements and the calculated groundwater elevations.

Data from irrigation well located at #3 Furbish Pond Lane

Depth to water (from reference elevation) August 31, 2021: 18.62 ft (did not measure total depth)
Groundwater elevation on August 31, 2021 = 103.21 (Ref Elev.) – 18.62 ft = 84.59 ft NAVD29.

The groundwater elevations at your property are higher than those in the nearby wetlands and in the vicinity of the former GE Facility at 50 Fordham Road indicating that it would not be likely that any groundwater impacts from that site would come to be located beneath your property.

Should you be interested in more information, additional public involvement opportunities for this site are available by reviewing documents in the project repository located at the North Reading Flint Memorial Library (147 Park Street), on the Lockheed Martin project-specific website located at http://www.lockheedmartin.com/us/who-we-are/eesh/remediation/wilmington/archive.html., or on the MassDEP's website. If you have any questions or comments regarding the results, please contact me at 978-846-5238 or scott.olson@aecom.com.

Yours sincerely,

Scott Olson
Project Manager

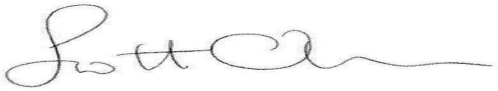
May 3, 2022

Subject: **NOTIFICATION OF DOCUMENT AVAILABILITY**
Post-Temporary Solution Status Reports Periodic Review of the Temporary Solution
May 2022 through May 2027
Former General Electric Facility, 50 Fordham Road, Wilmington, MA, RTN 3-0000518

Dear Community Members:

Pursuant to the Massachusetts Contingency Plan (MCP) 310 CMR 40.1405 and the Public Involvement Plan (PIP) for the site dated November 17, 2000, AECOM has prepared this letter on behalf of Lockheed Martin Corporation ("Lockheed Martin") to inform you that the *Post-temporary Solution Status Report No. 10 and Periodic Review of the Temporary Solution* was submitted to the Massachusetts Department of Environmental Protection (MassDEP) on May 2, 2022. This report was submitted to the MassDEP for Release Tracking Number (RTN) 3-0000518, located at the former General Electric Facility, 50 Fordham Road, Wilmington, Massachusetts (the site).



This tenth Status Report includes the first five-year review of the Temporary Solution achieved for the site in 2017. Additionally, Post-temporary Solution Status Reports will continue to be submitted to the MassDEP and the designated public repository every six-months in May and November with the next five-year Review in May 2027.

Should you wish to view copies of the Post-temporary Solution Status Reports and five-year Periodic Reviews, electronic copies are available at the designated information repository in the Flint Memorial (North Reading) Library, 147 Park Street, North Reading, MA (telephone 978-664-4942). Library hours are as follows: Monday, Tuesday and Thursday 10 AM to 8 PM; Wednesday, Friday, and Saturday 10 AM to 5 PM; closed on Sundays.

The historical disposal site files can also be accessed several ways as detailed in the enclosed May 2022 Fact Sheet for the site.

If you have questions or require additional information related to these submittals, please contact the undersigned at (978) 905-2100.

Yours sincerely,

Scott Olson

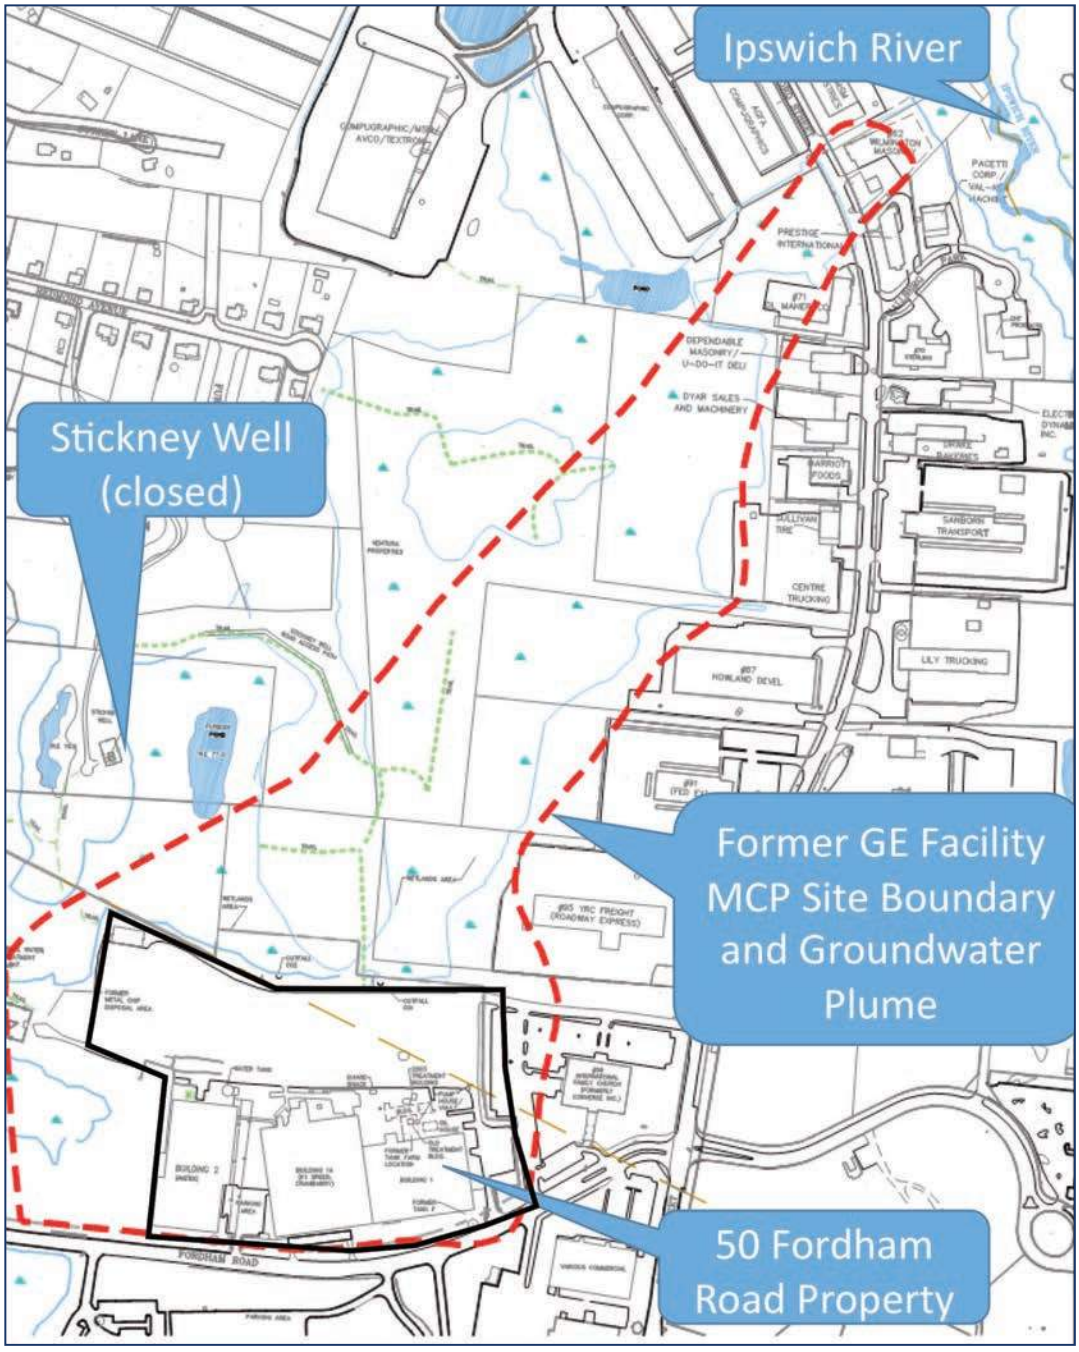
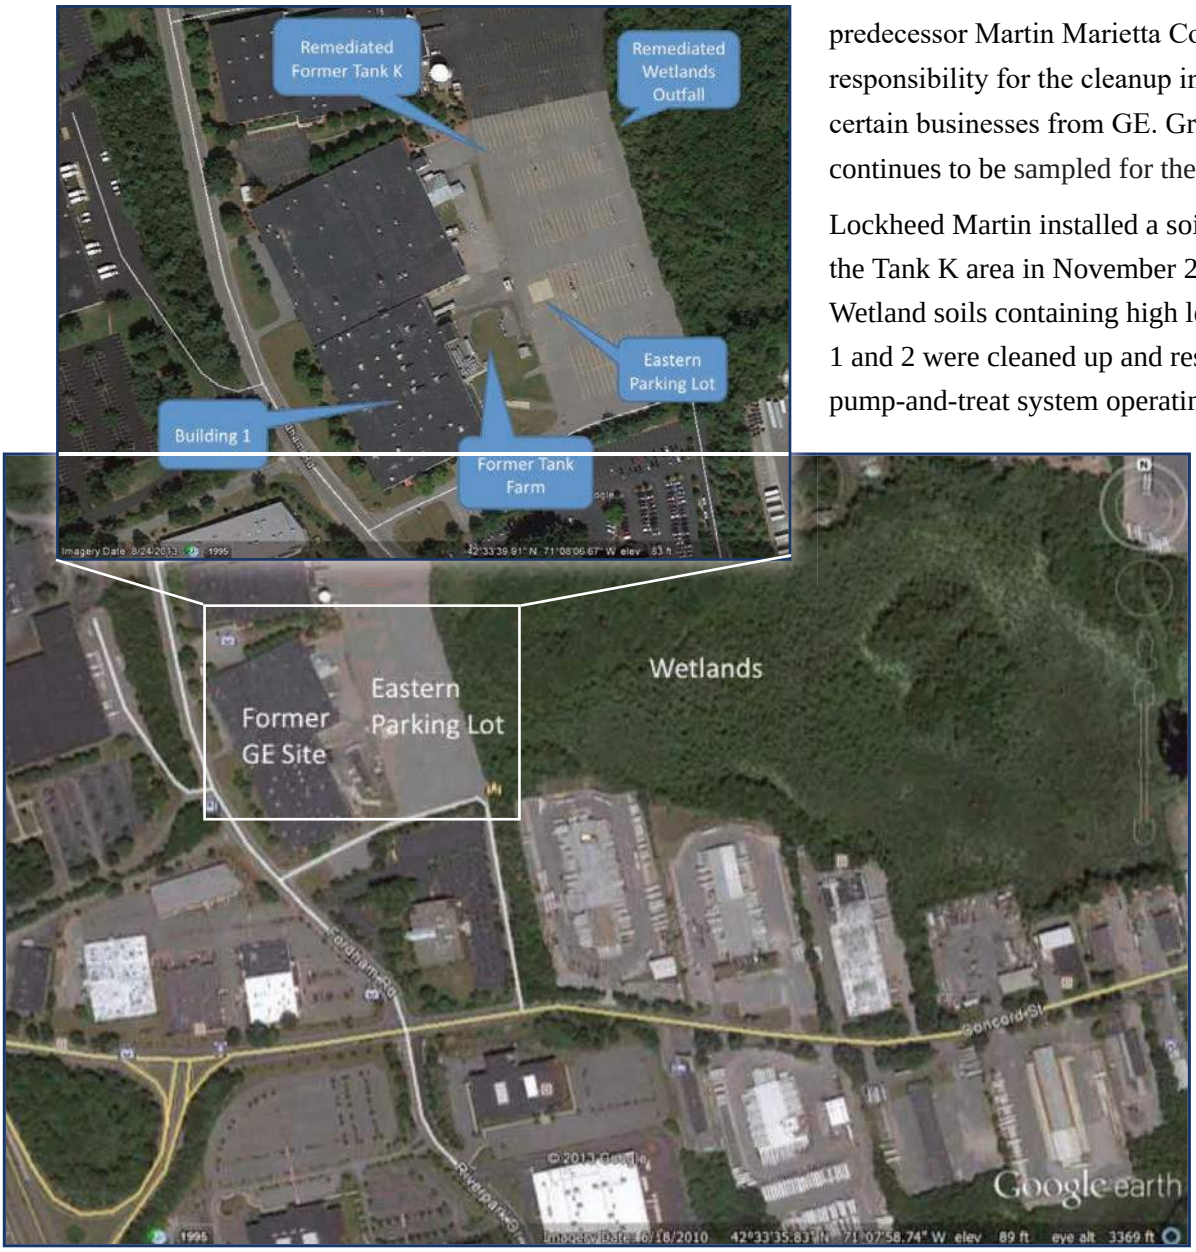
Fact Sheet for the Former GE Site 50 Fordham Road, Wilmington, MA



May 2022

Site History



GE Aerospace's Instruments Control Systems Department operated from 1970 to 1989 at 50 Fordham Rd. in Wilmington, Massachusetts, which property it leased from Wilmington Realty Trust from 1969 to 1989. The 13-acre industrial park, currently owned by Hilco Redevelopment Partners, spans the towns of Wilmington and North Reading, Massachusetts. In 1986, a Massachusetts Department of Environmental Protection (MassDEP) environmental investigation found that the Fordham Road site was the source of contaminants in the Stickney public water supply well. The well is 500 feet east of the site in North Reading. The well currently is inactive with no known plans to be used again.

The investigation noted four areas of concern at the industrial park:

- An underground storage tank farm near Building 1, which had leaked into groundwater chlorinated solvents used for degreasing
- The Eastern Parking Lot area, which had soil impacted by Stoddard solvent – a light oil – and chlorinated solvents

Groundwater plume and site boundary according to the Massachusetts Contingency Plan (MCP)

Former GE Site

- Outfalls 1 and 2 in the site wetlands, which had high levels of metals in wetland soils
- An area near underground storage Tank K, which had high levels of gasoline in soil and groundwater

GE began cleaning up the site in 1986, removing two of the underground storage tanks. The cleanup effort removed six more tanks the following June, and one more in 1991. That year, GE also fixed the pipeline to the last underground storage tank, Tank E. GE began extracting and treating (pump and treat) groundwater in the tank farm area in 1992. At the same time, the corporation began removing oil and solvents from the soil in the Eastern Parking Lot. Lockheed Martin predecessor Martin Marietta Corporation assumed responsibility for the cleanup in 1993, when it acquired certain businesses from GE. Groundwater in this area continues to be sampled for the presence of contaminants.

Lockheed Martin installed a soil-vapor extraction system in the Tank K area in November 2000 to remove the gasoline. Wetland soils containing high levels of metals near Outfalls 1 and 2 were cleaned up and restored in 2004. In 2002, a pump-and-treat system operating further east, at the edge of the parking lot and the wetland, replaced the 1992 tank farm pump-and-treat system. The site team also injected an iron-based solution into the area to help break down the chlorinated solvents. Lockheed Martin shut down the second pump-and-treat system in 2008 to monitor the results of the iron-based solution. In 2011, Building 3 and the oil house at the site were demolished. Rubble from the removal was appropriately recycled, and underlying solvent-impacted soil was removed and disposed of offsite at a licensed facility.

Recent Site Activity

In 2013, Lockheed Martin proposed to MassDEP and the community that it use specific techniques to further investigate the extent, potential movement, and possible impact of the groundwater contaminants to human health and the environment. Upon MassDEP approval, Lockheed Martin installed additional monitoring wells around the site and in the wetlands east of the site in North Reading in 2014. The wells were installed into shallow and deep soil and the bedrock underneath. Lockheed Martin also installed wells in

Bldg1 – Treatment Shed – Former Source Area Onsite behind Building 1

Treatment Shed – Former Groundwater Remediation System Shed Onsite

the Eastern Parking Lot and within Building 1 to learn more about the contaminants under the building. In addition, wells were installed along Concord Street to learn if the contamination was moving from the wetlands towards the Ipswich River.

During well installation, soil and rock samples were analyzed for contaminants. Lockheed Martin also studied boreholes to understand how contaminants might move through fractures in the bedrock. Using this information, Lockheed Martin installed liners in each borehole to obtain groundwater samples at multiple levels.

These investigations helped Lockheed Martin develop a full understanding of the site and the potential risks for humans and the environments exposed to the contaminants. The investigations showed that while some contaminants remain in site groundwater, the contaminant plume is not moving and is shrinking. The risks to human health are limited because no one drinks the groundwater: most area residents use municipal water, and there are no private wells within the underground contamination plume. The investigations also found no indoor air issues at the site. While some light oil contaminants remain under the Eastern Parking Lot, there is no direct way for humans to contact the contaminants under the pavement. Any excavation requires a soil management plan to mitigate potential exposures to contaminated soils.

Lockheed Martin's Phase II Report of May 2017 presents the foregoing findings. Based on the investigations' results, the corporation developed a Phase III Remedial Action Plan (RAP), which evaluated cleanup options for the contaminated groundwater beneath the Eastern Parking Lot. Lockheed

Hydrogen sampling – Collecting samples for dissolved hydrogen analysis

Gauging FLUTe Wells – Measuring depth to groundwater in FLUTe™ well

Martin chose to use monitored natural attenuation, which relies on natural processes to help clean up contaminants over time. The corporation also prepared a Temporary Solution Statement outlining a monitoring program until a Permanent Solution can be achieved.

Under the temporary solution, from 2017-2022, Lockheed Martin sampled groundwater from site monitoring wells every year to learn if the contamination was naturally decreasing. Contaminant concentrations and the total amount of contamination in groundwater have decreased. The overall contaminant area is stable and not increasing. In addition, Lockheed Martin monitored the light oil under the Eastern Parking Lot every quarter. This oil is not moving, and petroleum concentrations in shallow groundwater are decreasing.

As part of the required 5-Year Periodic Review, Lockheed Martin reviewed the Temporary Solution in May 2022 to learn if it could take any steps toward a permanent solution. The review did not find any new technologies that could feasibly achieve a permanent solution at this time. The contaminant concentration reductions and observed stability means the ongoing Temporary Solution (monitored natural attenuation) is an appropriate remedy for the site. The periodic review also showed that over the last five years, risks to humans or the environment are acceptable under current conditions, constituting a No Substantial Hazard condition.

Over the next five years, from 2022 to 2027, Lockheed Martin will document monitoring well results in publicly available status reports every six months.

Public Involvement

In November 1999, private citizens petitioned the MassDEP to designate the 50 Fordham Rd. site as a Public Involvement Plan (PIP) site under state law. Lockheed Martin partnered with the agency to hold public meetings in April 2000 to explain cleanup plans and work-to-date at the Fordham Road site. The site team provided an update on cleanup activities in May 2006. In December 2013, the site team held a public meeting about cleanup progress. On Sept. 3, 2015, Lockheed Martin held another public meeting to present the next phase of planned site activities.

Lockheed Martin held a public meeting on May 11, 2017, to inform the community about the most current work at the Fordham Road site through May 2017. No further public meetings have occurred or are planned, unless conditions change. The public is periodically updated through mailings and fact sheets such as this one.

If you have questions, comments, or concerns, please contact Lockheed Martin Communications at 800-449-4486 or Adriane.Tish@lmco.com.

More information about this site is on the Lockheed Martin site-specific website: www.lockheedmartin.com/wilmington.

You can view the site files in the following ways:

- Visit the Lockheed Martin site-specific website: www.lockheedmartin.com/wilmington
- Visit the MassDEP website: https://eeaonline.eea.state.ma.us/portal#!/search/wastesite
    - In the RTN box, type “3-0000518” and click Search
    - Click on 3-0000518
    - Click on Supporting Documents to access and view historical site reports

Call MassDEP at 978-694-3320 to review the files in person at the MassDEP Northwest Regional Office, 205B Lowell Street, Wilmington, MA 01887; calling first is recommended.
