Chris Stone
Vice President, Supply Chain

Feb. 28, 2022

TO: Lockheed Martin Suppliers

SUBJECT: Updated Mask Guidance at U.S.-Based Lockheed Martin Facilities

Effective March 1, Lockheed Martin will adopt modified guidance from the [U.S. Centers for Disease Control and Prevention \(CDC\)](#) to help sites determine whether onsite workers and visitors shall be required to wear masks. The CDC has introduced revised COVID-19 Community Levels (high, medium and low) that factor new cases, hospital admissions and community hospital occupancy into decision criteria.

If the COVID-19 Community Level at a Lockheed Martin site is low or medium, individuals working at or visiting that site are not required to wear a mask – regardless of their vaccination status. However, if the COVID-19 Community Level at a Lockheed Martin site is high, individuals working at or visiting that site are required to wear a mask, regardless of their vaccination status.

At all times and regardless of COVID-19 Community Level, individuals must also wear a mask following COVID-19 exposure or quarantine, per the safety protocol addressed in our Jan. 20 supplier communication.

If you have questions that are not covered on the [VisitLM Help Page](#) regarding this guidance or access to Lockheed Martin U.S. facilities, please contact LMSecurity at vms.lmsecurity@lmco.com or call (407) 306-7311 or toll-free at (866) 330-7311. You may additionally reference the [VisitLM Quick Reference Guide](#). Any additional questions should be brought forward to your Lockheed Martin procurement representative.

Your continued commitment to ensuring a safe work environment is greatly appreciated.

Thank you,

Chris
