JASSM®-ER

JASSM-ER is an extended long-range, conventional, air-to-ground, precision-guided standoff missile designed to meet the needs of U.S. Warfighters. JASSM-ER shares the same powerful capabilities and stealthy characteristics of the baseline JASSM, but with more than two-and-a-half times the range. This additional reach allows Warfighters to deploy JASSM-ER against high-value, well-fortified, fixed and relocateable targets while remaining clear of highly defended airspace and long-range surface-to-air missiles.

A 2,000-pound class weapon with a dual-mode penetrator and blast fragmentation warhead, JASSM-ER can be employed in adverse weather conditions, day or night, using a state-of-the-art infrared seeker and enhanced digital anti-jam Global Positioning System (GPS) receiver to dial into specific target aimpoints. With unmatched performance, reliability and lethality, JASSM-ER provides best in class value.

FEATURES

- Extended distance standoff range
- Simple mission planning
- Highly survivable
- Adverse weather operable
- GPS/Inertial Measurement Unit inertial guidance
- Pinpoint accuracy
- High lethality
- Fully compatible with B-1B aircraft
- Current integration efforts on B-52, F-15E and F-16
- GPS jam resistant

SPECIFICATIONS

Length	168 in / 4.26m
Width	>25 in / >63.5 cm
Range	>500 nmi / >926 km
Warhead	1,000 lb Blast Fragmentation
Seeker	Infrared
Storage	15 years
