

LCS INTEGRATED SURFACE WARFARE SYSTEM

Dominating the Swarm Attack

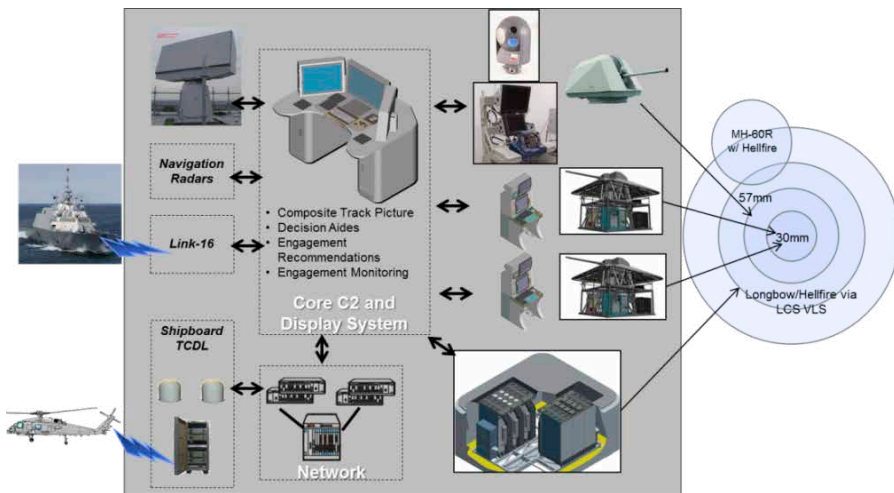

LCS VLS Supports both LCS Variants

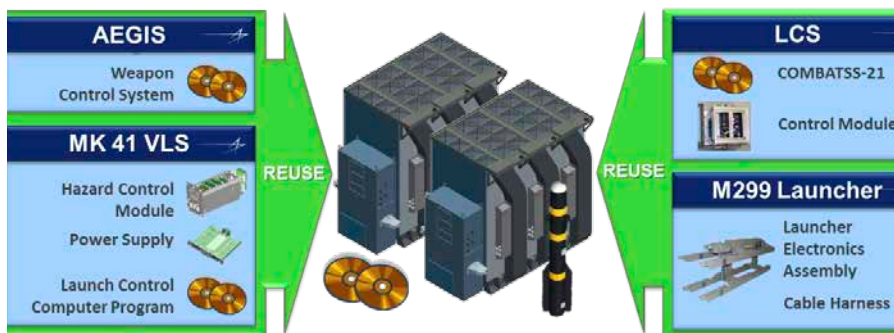

Layered Systems of Systems Defense in the Littorals

The LCS Integrated Surface Warfare System is being fielded to provide the U.S. Navy's newest ship class with an organic missile capability designed to counter the emergent and growing Fast Attack Craft and Fast Inshore Attack Craft threat.

This fully integrated system provides a long range, fire and forget, autonomous delivery, and high-volume of fire capability, necessary to counter a "swarm attack".

Complete end-to-end solution - from sensors to weapons

Low Risk Solution - Leverages Qualified, Combat Proven Components

Key System Features

- 48 missile capacity
- Maximizes missile packing density and saves topside weight with canister-less design
- Re-uses WSESRB certified / combat proven components
- Interfaces well-defined from CMS to the missile
- Compliant with mission package ICD
- Leverages existing supply chain and training

Specifications

Range	8/22 km
Guidance	Fire-and-forget/ Multi-mode capability
Warhead	Muti-purpose
Platform	Canister or rail launched
Diameter	17.8 cm (7 in)
