MK 41 Vertical Launching System – Training Services Equipped to Support VLS Equipment Configurations

MK 41 Vertical Launching System – Training Services

Lockheed Martin provides a full range of training services for the sustainment of fielded MK 41

Vertical Launching Systems (VLS).

Lockheed Martin recently developed a MK 41 VLS Training Facility to augment existing VLS training resources. The facility helps the total VLS community meet the growing demand for training by the expanding VLS user base. Lockheed Martin's training facility is equipped to support multiple VLS equipment configurations and is regularly upgraded for enhanced capabilities.

The facility consists of a dual-VLS Module configuration, functionally representing the installed configuration. The training launcher is fully powered and fully functional, with no simulation equipment, and is accessible for students from four levels.

The trainer classroom facility is located adjacent to the training launcher. The classroom incorporates the latest training

technology, including Smart boards, touch-screen displays and individual workstations for all students. The classroom facility is also equipped with VLS Launch Control Unit suites covering all fielded configurations, with

full communication links to the nearby training launcher. In addition, the VLS training facility also includes a Deluge and Sprinkler System Training Building for specialty training of this equipment.

Lockheed Martin offers a full range of VLS training courses, including

VLS Launcher and Magazine Sprinkler Operation & Maintenance Training, Installation & Checkout Training, In-Service Engineering Agent/Field Support Representative Training, Officer Familiarization Training, Refresher Training, and Depot Repair Training for select VLS Equipment.

VLS users can receive this training directly from Lockheed Martin at the company's training facility in Baltimore. Lockheed Martin's team of qualified instructors has more than 75 years of combined experience with the VLS system and together they have more than 50 years combined VLS instructional experience.
